BENBROOK MAY NOT OFFER VS. 22 Hon. Judge Suzanne R. Bolanos MONSANTO COMPANY. 23 Defendant. Department: 504 24 Trial Date: June 18.2018 25 26 27 28

Farella Braun + Martel LLP 235 Montgomery Street, 17th Floor San Francisco, California 94104 (415) 954-4400 35352\6814120.1

In his *Sargon* ruling, Judge Karnow all but excluded Dr. Benbrook from this case, accepting only a single facet of his proposed testimony. Judge Karnow ruled that Dr. Benbrook could testify about the general framework of the EPA regulatory decision-making process: "I'm sure he can provide some sort of general overview as to how that works. I'm not sure where it gets you in the case, but he may have the background to be able to do that." *See* Tr. of Proceedings 60:24-61:5 (May 10, 2018)<sup>1</sup>; Order on (1) Monsanto's Omnibus *Sargon* Mot.; (2) Monsanto's Mot. for Summ. J.; (3) Pl.'s Omnibus *Sargon* Mot.; (4) Pl.'s Mot. for Summ. Adjudication at 30 (May 17, 2018) ("5/17/18 *Sargon* Order") ("He does have some experience tracking the rise of glyphosate-based herbicides and some experience with the regulatory regime applicable to herbicides. Based on this experience, Dr. Benbrook may testify as to the general framework of the EPA regulatory decision making process."). Monsanto files this trial brief well in advance of Dr. Benbrook's testimony to ensure that the parameters Judge Karnow set are clear and to limit the necessity to object during his testimony.

## I. Dr. Benbrook May Not Offer An Opinion About Six Things

Judge Karnow specifically *excluded* Dr. Benbrook's testimony as to six broad categories which encompass the vast majority of his proposed testimony:

- 1) "Dr. Benbrook may not offer any opinions as to the proper interpretation of documents, such as emails, or to argue that inferences of knowledge or intent can be derived from those documents." 5/17/18 Sargon Order at 30.
- 2) "Dr. Benbrook may not opine on Monsanto's legal obligations." Id.
- 3) "Dr. Benbrook may not relate case-specific facts asserted in hearsay statements unless they are independently proven by competent evidence or are covered by a hearsay exception." *Id*.
- 4) "Dr. Benbrook may not offer an opinion as to whether the EPA would have approved an amendment to the Roundup label." *Id*.

35352\6814120.1

<sup>&</sup>lt;sup>1</sup> See Decl. of Sandra A. Edwards In Support of Defendant Monsanto Co.'s Trial Brief Regarding Opinions Dr. Benbrook May Not Offer ("Edwards Decl.") at ¶ 3, Ex. 1 ("5/10/18 Hearing Tr.").

- 5) "[W]hile Dr. Benbrook might have experience regarding industry standards and stewardship obligations, at argument Johnson agreed these were irrelevant." 5/17/18 Sargon Order at 30.
- 6) Dr. Benbrook may not testify Monsanto misled the EPA." Id. at 31.

## II. Explanation Regarding the Six Things Judge Karnow Ruled That Dr. Benbrook Could Not Testify About.

Dr. Benbrook's expert report is filled with many examples of the six things that Judge Karnow ruled were impermissible for Dr. Benbrook to offer opinions about. Examples of the types of opinions and statements from Dr. Benbrook's report that are excluded under the *Sargon* order are illustrated below.

# A. Proper interpretation of documents, such as emails or knowledge and intent based on review of emails / documents. 5/17/18 Sargon Order at 30.

First, Dr. Benbrook cannot testify about the proper interpretation of documents, such as emails, or argue that inferences of knowledge or intent can be derived from such documents. At the Sargon hearing, Plaintiff's counsel said he wanted to have a "witness sort of walk through the story." Judge Karnow responded, "[t]hat's the problem." See 5/10/2018 Hearing Tr. at 60:11-21. Judge Karnow also stated with respect to Dr. Benbrook and his "interpretation" of emails "[h]ow would he possibly have a basis to know that, and what expertise would he bring to the question... You give the jury the documentation. You don't have an expert. Is he an expert in email reading? Surely not." Id. at 59:5-18. Much of Dr. Benbrook's expert report was about his interpretation of Monsanto company documents, such as emails, a fact which he admitted at deposition. See Edwards Decl. at ¶ 2, Ex. 2 (Dep. of Charles Benbrook at 451:15-25 (Feb. 9, 2018)) ("Much of my report – there's something over 1,000 paragraphs – I would say 400 of them simply restate what Monsanto employees or scientists say to each other . . .").

Dr. Benbrook's expert report is replete with examples of interpretation of Monsanto and EPA documents. Some of these are:

 "In my opinion, Monsanto did not want to test their formulated glyphosate-based herbicides because they expected such studies to produce positive evidence of

- genotoxicity." Edwards Decl. ¶ 3, Ex. 3 (Report of Charles Benbrook at ¶ 121 (Dec. 21, 2017)) ("Benbrook Rpt.").
- "Monsanto had displayed to the OPP that it would always be willing and able to take whatever next step was necessary to raise new scientific issues in need of exploration." *Id.* at ¶ 87.
- "Monsanto's abuse of science is so systematic and consistent that it seems to track some, perhaps unstated, internal company policy." *Id.* at ¶ 149.
- "Clearly, in this final paragraph, Parry was delivering to Monsanto a 'good newsbad news' message. The 'bad news' is glyphosate is likely genotoxic via induction of oxidation damage in cells, and likely other modes of action. The 'good news' is that Monsanto might be able to convince regulators that one or more of these mechanisms might be subject to threshold effects, leading to the possibility that Monsanto could show that the effects are not likely under real-world exposure scenarios." *Id.* at ¶ 684.
- "Monsanto continued to resist EPA's call for a new mouse oncogenicity study, and indeed still has not redone that study as requested by EPA. The primary reason is clear legitimate concern in the company that the results of such a study would affirm the key finding in the original Bio/dynamics study mouse oncogenicity study, and result in EPA classifying glyphosate as a 'possible human carcinogen.'" *Id.* at ¶¶ 506-07.
- "This Houseneger email to Jenkins reads like a status report from a junior staff person to his/her manager. It reflects a desire to be helpful to Monsanto that is fundamentally at odds with Housenger's role as the senior manager of the EPA's Office of Pesticide Programs." *Id.* at ¶ 627.
- "The implication is clear. The number one goal driving Monsanto's assessment of evolving EPA science policies and regulatory procedures is minimizing the impact on FTO and sale of Monsanto products." Benbrook Rpt. at ¶ 992.

The time for Plaintiff to assemble the emails and documents in the case into a "story" and present it to the jury as such is closing. Dr. Benbrook reviewed many Monsanto and EPA emails and other documents because counsel wanted to have a "witness sort of walk through the story" during their case in chief, a trial role that Judge Karnow has rejected. *See* 5/10/18 Hearing Tr. at 60:11-21. Dr. Benbrook may *not* offer opinions and interpretations about what emails and other documents mean, *see* 5/17/18 *Sargon* Order at 30. Because there is then no other purpose in Dr. Benbrook *identifying and reading* internal emails and documents before the jury, he should not be permitted to do that either.

### B. Monsanto's legal obligations. 5/17/18 Sargon Order at 30.

Dr. Benbrook also cannot testify about Monsanto's legal obligations. *Summers v. A.L. Gilbert Co.*, 69 Cal. App. 4th 1155, 1178 (1999) ("There are limits to expert testimony, not the least of which is the prohibition against admission of an expert's opinion on a question of law.").

Thus, for example, Dr. Benbrook may not opine on the following:

- Whether Monsanto violated FIFRA 6(a)(2) by not reporting the results of the TNO rat skin dermal penetration study, 5/17/18 Sargon Order at 30 (citing Benbrook Rpt. at ¶ 1084);
- Whether Monsanto violated FIFRA 6(a)(2) by not providing Dr. Parry's report to the EPA, Benbrook Rpt. at ¶ 706;
- That Monsanto was responsible for four things: (1) assuring that specific herbicides products sold to the school district for which Mr. Johnson worked were as safe as they could be, given existing knowledge and technology; (2) the content, scope, and effectiveness of the label directions for use, use restrictions, warnings about high-risk scenarios, and worker-safety requirements on the RangerPro and Roundup ProConcentrate labels; (3) drawing on its extensive field testing and scientific resources to improve the utility and safety of its products through safer formulations and label directions and worker-safety provisions; and (4) to work cooperatively and openly with the EPA to assure that both the company's internal assessments of risk are as accurate as possible, id. at ¶¶ 17-22;

- Whether the hypothetical classification of glyphosate as a potential oncogene would have required "the establishment of dozens of Section 409 food-additive tolerances to cover the residues that would be present in certain fractions of grains and oilseed crops," *id.* at ¶ 106;
- That the hypothetical submission of genotoxic studies would have "almost certainly led to new, EPA-mandated restrictions on where and how Roundup herbicides could be used," *id.* at ¶ 122; and
- Whether "[p]esticide companies bear an obligation vested in various laws and regulations, and common corporate decency, to assure that the products they bring to market are safe and will reliably produce the benefits for which they are registered," *id.* at ¶ 971.

The above examples are all statements from Dr. Benbrook's expert report regarding some purportedly legal obligation he claims Monsanto had to consumers. Such opinions are not permissible bases for Dr. Benbrook's expert testimony.

C. Discussion of case-specific facts in hearsay statements. 5/17/18 Sargon Order at 30.

Further, Dr. Benbrook may not relate as true, case-specific facts related to Mr. Johnson asserted in hearsay statements unless those facts are independently proven by competent evidence or are covered by a hearsay exception. In *People v. Sanchez*, 63 Cal. 4th 665, 686 (2016), the California Supreme Court adopted the following rule: "when any expert relates to the jury case-specific out-of-court statements, and treats the contents of those statements as true and accurate to support the expert's opinion, the statements are hearsay."

D. Whether EPA would have approved an amendment to the Roundup label. 5/17/18 Sargon Order at 30.

Dr. Benbrook also may not offer an opinion regarding whether EPA would have approved an amendment to the Roundup label. 5/17/18 Sargon Order at 30. Judge Karnow explained "Dr. Benbrook has no specific expertise pertaining to the EPA's approval of amended labels" citing to paragraph 61 of Dr. Benbrook's report. Benbrook Rpt. at ¶ 61 ("Had Monsanto amended the label"

17 18 19

21

22 23

24

25

26

27

to include a risk of NHL in 2002, the EPA would have approved that amendment."); see also id. at ¶ 37 ("EPA almost always approves such requests for label amendments, and in most cases, quickly.").

#### E. Industry standards. 5/17/18 Sargon Order at 30.

Plaintiff's counsel agreed at the May 10, 2018 Sargon hearing that testimony regarding industry standards and product stewardship were irrelevant. See 5/10/18 Hearing Tr. at 62:5-24. Accordingly, statements such as those below, are also irrelevant: "The actions of Monsanto 'are inconsistent with applicable industry standards and do not comport with how a reasonable company would act with respect to tapping outside scientific expertise in the hope of elucidating and preventing human health risks." Benbrook Rpt. at ¶ 102.

- The term 'product stewardship' is used within the industry and regulatory agencies to describe and encompass the actions pesticide manufacturers should take on an ongoing basis in the interest of product stewardship, before and after a new use of a pesticide is approved." *Id.* at ¶ 972.
- "A company selling a pesticide to the public is responsible for the testing of its product to ensure it can be used safely." *Id.* at ¶ 30.
- "After receiving Dr. Parry's expert report, a reasonable and prudent pesticide manufacturer would have added a genotoxicity warning to Roundup labels." Benbrook Rpt. at ¶ 58.
- "A reasonable and prudent manufacturer that repeatedly pledges allegiance to sound science would not engage in a campaign to 'orchestrate outcry,' 'invalidate the relevance,' and cut the funding of IARC." *Id.* at ¶ 64.

#### F. Whether Monsanto misled EPA. 5/17/18 Sargon Order at 31.

Dr. Benbrook may not testify that Monsanto misled the EPA. See, e.g., Benbrook Rpt. at pg. 185 ("Protecting 'Freedom to Operate' and Scientific Deceit Characterize Monsanto's Assessments of and Response to Glyphosate-Related Risks"). According to Judge Karnow, Dr. Benbrook brings "no relevant expertise to the table on that issue." 5/17/18 Sargon Order at 31.

## 1 Ш. Many Statements in Dr. Benbrook's Report Also Violate Motions In Limine Already Ruled Upon. 2 In addition to the six things that Dr. Benbrook may not offer an opinion on, many 3 4 statements in his expert report also violate motions in limine that have already been ruled upon. 5 Dr. Benbrook should not and cannot offer such statements and should be instructed by his counsel not to violate any motions in limine. For example, many of the paragraphs in Dr. Benbrook's 6 7 report go to post-use corporate conduct, Benbrook Rpt. at ¶¶ 959-60 ("In a March 10, 2016 email, 8 Dan Goldstein, Monsanto's "Lead, Medical Sciences and Outreach," contacts a colleague, Allister 9 Vale, a consulting clinical pharmacologist and director of the National Poisons Information System (Birmingham Unit), in the U.K. Dr. Vale is active in several organizations that convene 10 11 meetings of medical toxicologists, a group that Monsanto is striving to engage in the ongoing 12 reaction to IARC and debate over glyphosate safety"), the "magic tumor" Dr. Benbrook claims 13 was found in the 1983 mouse study, id. at ¶¶ 90-91, IBT, id. at ¶ 109 ("The first round of mutagenicity and genotoxicity studies on glyphosate were commissioned by Monsanto in the 14 15 1970s, conducted by IBT, and were found to be invalid and/or fraudulent"); ¶¶ 263-273 (discussing IBT); and Seralini, id. at ¶ 807 ("The Seralini study was the first, independent two-16 17 year rat feeding study designed to sort out the individual and combined impacts of long-term 18 exposure to a GE corn (NK603) and formulated Roundup herbicide"). 19 Dated: July 23, 2018 Respectfully submitted, 20 21 FARELLA BRAUN + MARTEL LLP 22 Sandra A. Edwards By: 23 24 Attorneys for Defendant 25 MONSANTO COMPANY 26 27
