Hello all. I just did a brief scan of the list Monsanto sent us. There are 91 of pages here containing studies of all sorts; some published and some not, acutes, repeated dose, mutas and genos, etc. Just to be clear on our strategy here, we want to see which of these we have or don't have, and we also want to see if there are any formulation studies that will help our analysis. Does that sound right?
