Jenny and John,

I will add both Sonic and Surveil to the website this week, unless either of you have concerns.

Thanks
Jerry

Jerry,

Here is the surveil data. Xtendimax and Xtend plus Surveil are ok. The tank mix of Powermax + Xtendimax + Surveil is numerically higher but within the error of the study. My recommendation is to approve per our third party approval guidelines and process.

John

Sue is the study director since I was out at Battelle, but below are the LC-MS results. Viktar will need to finalize the lower level samples on the LC-MS/MS so these are preliminary results. Surveil does appear to increase volatility relative to non-Surveil treatments.

Preliminary LC-MS results. Lower level samples are being reanalyzed on LC-MS/MS.
