JUN 2 1977

J.N. Ospenson, Manager
Research and Development
Chevron Chemical Company
940 Hensley Street
Richmond, Calif. 94804

Dear Mr. Ospenson:

Our toxicology staff has examined your April 1, 1977 request for the exemption of 2-amino-4,5-dihydro-6-methyl-4-propyl-5 triazolo-(1,5-a) pyrimidin-5-one from the requirements of a tolerance.

Prior to further consideration of this proposal the material must be approved as New Drug pursuant to provisions of the Federal Food, Drug and Cosmetic Act. Inquiries may be directed to:

Richard J. Crout, M.D., Director
Bureau of Drugs
U.S. Food and Drug Administration
5600 Fisher's Lane
Rockville, Maryland 20852

Additionally, EPA will need to establish a policy to deal with requests such as this, i.e., whether adding an emetic drug to a pesticide formulation is appropriate in light of the fact that the need for induction of emes in pesticide ingestion situations should be a decision best left to those in the field. There are better ways of inducing vomiting - tickling the throat with a finger for example. Moreover, there are situations in which induction of vomiting may be contraindicated - when the victim is unconscious or when the formulation contains petroleum distillates.

We will hold the data for a reasonable time.

Sincerely,

John A. Shaughnessy
