PARAQUAT FATALITIES - ESTIMATED EFFECT OF EMETIC

Thank you for your memo of 23 February. I appreciate that the workings are on the basis of a number of assumptions.

We are worried that based on the minimum lethal dose being increased as assumed the recoveries will not be all that significant. It is probably not worth doing a great deal more work on that side for the present.

There is some uncertainty still about whether the quoted increase in minimum lethal dose may be realistic. I know that Peter Slade and David Foulkes will be having further discussion about this with Dr Howard.
