PARAQUAT : TREATMENT, EMETIC, CTL WORK

I believe that the issues raised in your report about paraquat poisoning (MED/78/4C) justify a full discussion within PPD and with CTL to make sure that we are all agreed on the implications and possible courses of action. At the same time I think it worth reviewing the present attitudes to the emetic formulation to make sure that we are all speaking with one voice. These issues are also relevant to Mike Rose's research programme for 1979, which we want to make sure is understood and agreed by all in PPD who have an interest in it.

Alan Calderbank had already arranged a session at CTL for September 8 to discuss progress with all the current paraquat and diquat toxicological work. Alan and Mike agree that it would be very helpful if you could also be there that day to discuss the topics I have outlined above. It seems important to make sure that we have such a discussion before you depart for Malaysia which I believe is on September 12. If you agree, Mike is keen that we make an early start on the 8th and has already made a hotel booking on your behalf for the night of September 7 !
