Dear Hans,

Thank you for your letters of October 10 and 13 plus enclosures.

The response from EPA regarding Chevron's attempts to reactivate the emetic position really is pathetic. ICI now has five well documented cases of paraquat ingestion in which we believe the emetic may have contributed to saving life. We will be furnishing Dick Cavalli with the details and you may consider using this new evidence as a means of applying further pressure to EPA.

We will be discussing the EPA letters on the various PQ petitions and reports attached to your October 10 letter with Dick Cavalli, and I will write to you later about them.

Yours sincerely,

Debbie Cole
