JAPAN - PREGLOX, PP796 LEVEL

Thank you for your support to the 0.1% emetic level in your note 6 January. You requested information on the following points:

Evidence on relevant efficacy of emetic levels.

Lewis Smith's papers on his dog work are now with the Division for approval. Their formal release is expected last week January or first week February and will be accompanied by a "two page" overview by Lewis. By copy of this note I shall remind him to include you on the distribution list. I also enclose a copy of Lewis's reply of 8 January to TAL's queries on PP796.

Experimental protocol for acute toxicological tests on Preeglox.

The final protocols for comparison of paraquat, diquat and paraquat + diquat are still in preparation; a copy will be sent to you as soon as they are available. Studies at CTL will compare (1) acute toxicities and (2) tissue levels and distribution in rats. Study (1) will be repeated at IET along with extra investigations of pathology of certain tissues. Both studies will be single dose only ie there will be no sub-acute study.
