**New Gramoxone[®]
Super.
It's Paraquat
At Its Best.**

The Herbicide Growers Have Trusted For Over Twenty Years Is Now Even Better.

Paraquat. It's the herbicide growers in over 100 countries worldwide have grown to trust. The herbicide used on over 10 million acres of U.S. cropland every year. The herbicide used in the production of over 50 different crops. It's the product growers have used for over 20 years, for effectiveness and economy. And now it's even better.

Paraquat, the product you know you can trust, is now known as GRAMOXONE® SUPER herbicide. The name has changed. The dependability hasn't.

How It Works.

GRAMOXONE SUPER is a fast-acting, broad-spectrum herbicide that kills vegetation on contact. Absorbed rapidly by the plant. GRAMOXONE SUPER affects only the green growth that is thoroughly covered. Unlike systemic herbicides, small amounts of GRAMOXONE SUPER that accidentally fall on crop leaves won't kill the plant. And it has no effect on mature bark, so it can be used in established trees or vines, or even in young orchards and vineyards if a shielded sprayer is used.

Whether you have broadleaf weeds or grasses, GRAMOXONE SUPER will kill them—fast. So fast that you'll see weed knockdown in just 48 hours.

Spray GRAMOXONE SUPER on weeds, and within as little as 30 minutes, the GRAMOXONE SUPER is rainfast. No other contact herbicide is as effective in rainy conditions or works faster against a broad spectrum of weeds.

Save Money With Gramoxone Super.

When you use GRAMOXONE SUPER in a conservation tillage program, you can reduce or eliminate

cultivation for weed control before planting. In fact, no-till farming can save you up to 50% of the time you need to have your tractors in the field. That means you save on equipment and manpower costs.

GRAMOXONE SUPER works quickly, so there's less competition from weeds for water and nutrients. This gets your crops off to a faster start.

GRAMOXONE SUPER does the job more cost-effectively than other burndown herbicides.

The Perfect Foundation For Any Herbicide Program.

Have a weed problem that requires fast action *and* residual control? Eliminate seedling weed competition and provide extended weed control by tank-mixing economical GRAMOXONE SUPER with one or more of the many residual herbicides that are compatible with it.

The new, dark green color alerts you if product gets on clothing or skin.

Help Your Crops Grow Better.

GRAMOXONE SUPER is the product you can trust for the production of corn, soybeans, tree and vine crops, vegetables, cotton, and many other crops.

Use it in no-till and double cropping, as a harvest aid, in orchard vegetation management, or for farmstead clean-up. GRAMOXONE SUPER is the herbicide for any season.

Gramoxone Super.

Working With The Environment.

When GRAMOXONE SUPER reaches the ground, it's bound to clay particles in the soil within minutes and is biologically deactivated. Then, it decomposes in the soil. Any soil containing GRAMOXONE SUPER that washes into streams or ponds will not affect aquatic plants or animals.

When you use GRAMOXONE SUPER instead of tillage, you can actually help protect the environment. Less tillage helps reduce erosion, while a mulch of dead weeds can help maintain the soil's moisture. And GRAMOXONE SUPER when used properly should not adversely affect wildlife, earthworms, or other beneficial soil organisms.

Gramoxone Super.

See How It's Changed.

What's new about GRAMOXONE SUPER? Plenty. It's a new formulation, with new rates. It's thinner, so it pours more easily with less waste. And GRAMOXONE SUPER mixes well with other herbicides, for greater flexibility in your weed control program. The color has been changed from brown to dark green to alert users if product gets on clothing or skin.

Pouring from an ordinary jug (on left) can cause splashing. Our new 1-gallon jug (on right) has a vented spout to reduce splashing.

This coloring plus a new, distinctive odor reduces the chance of accidental swallowing. In the unlikely event of swallowing, the emetic in GRAMOXONE SUPER will induce vomiting.

Packaging At Its Best.

Increased safety features have gone into the new GRAMOXONE SUPER, too. Each molded plastic jug is individually tested to minimize the chance of "leakers." The 1-gallon jug is designed with a vented spout to reduce splashing and is fitted with a child-resistant cap.

The container label is permanently affixed so it's always on hand for your ready reference.

When You Want Paraquat, Ask For Gramoxone Super.

It's the new name for paraquat...the new product that growers have trusted for over 20 years.

When you want broad-spectrum weed control, fast knockdown, economy, and convenience, ask for GRAMOXONE SUPER. It's paraquat at its best.
