**Subject:** Inteon Submission

**Attachments:** Inteon Document for EPA 5-31-06.doc; Paraquat Human poisonings and emetic 150805 (2).doc; Sir Colin Berry Declaration.pdf; Increased Emetic Study.pdf

All,  
Attached is the submission made to EPA today. Hope indicated an e-mail submission would be fine. She will let me know if HED decides we should send anything through the front end screen at a later date. They may wish to have the emetic study MRID'd. As you can see, the study was marked confidential on every page as it had not been formatted for submission to EPA as a required study for review. Thanks again for everyone's great help in pulling this together.  
Kind regards,  
Jerry

**Subject:** Gramoxone Inteon Report

Dear Hope,  
I have attached the follow-up document we promised to send after our meeting on April 24. I have also attached three additional files relating to data we discussed at the meeting. I expect to send additional updates on the Sri Lanka observational monitoring soon.  
As I mentioned last week, we have been made aware of an incident where an individual intentionally consumed Gramoxone Inteon. The information provided to me indicates that a 26 year old male farm worker purposefully drank Gramoxone Inteon on May 18. He had consumed a large amount, estimated by the physician to be 4-5 oz (120-150 ml). While this is a very unfortunate incident, fortunately he is still alive which gives an opportunity for medical intervention which according to our toxicologists would almost certainly not be the case had he ingested that volume of Gramoxone Max. I will keep you posted on what I hope to be continued improvement.
