Subject: Invitation to participate in virus risk ranking assessment

Dear Dr. Zhengli Shi,

We write today to solicit your expert opinion and request your participation in a short multidisciplinary process to assess spillover risk from newly detected viruses. As you may have heard, the USAID-supported PREDICT project (<a href="www.predict.global">www.predict.global</a>) has identified short sequences from nearly 1000 unique viral taxonomic units (by consensus PCR followed by sanger sequencing) from viral families known to have members that cause zoonotic diseases. These viruses have been detected in samples collected from animals in more than 20 countries in tropical regions considered to be hotspots for emerging zoonotic disease risk.

As a globally renowned scientist in the field of infectious diseases, we would like to incorporate your expert opinion into an evaluation of the relative impact that select host, environmental, and viral factors contribute to the risk of a new human viral spillover or epidemic event that might originate from novel or known viruses of animal origin. At this point, we are primarily interested in how much each parameter contributes to the overall risk of such an event occurring. The levels of severity within each of the parameters will be evaluated through a different process. We anticipate the time allocation to this exercise will be 10 to 20 minutes.

The expert opinion you provide will be combined with that of other top experts in the field and is intended to contribute to a risk ranking module that will be distributed to and evaluated by the scientific community both through the peer-reviewed publication process and via an interactive web application. All contributions to this exercise are voluntary, and identifying information will not be published or be otherwise made available unless you let us know that it is acceptable/desirable to acknowledge you. We are only soliciting opinions from a select group of professionals with relevant expertise; therefore, we ask that the attached worksheet remain confidential and not to be shared with others.

## **Instructions:**

- 1. Please open and save the worksheet with your initials in the title (i.e. RiskRankingPartipantWorksheet\_ZG.xlsx)
- 2. Complete the 'Demographic Information' at the top of the spreadsheet
- Answer all categories for 'CONTRIBUTION TO THE RISK OF A NEW HUMAN VIRAL SPILLOVER OR EPIDEMIC EVENT OF ANIMAL-ORIGIN' and 'LEVEL OF EXPERTISE' using provided dropdown options
- 4. Please return your completed worksheet to zlgrange@ucdavis.edu by April 28<sup>th</sup> 2017.

We sincerely hope that we can count on your important involvement in the process and that you will accept our gratitude for your time and contribution to scientific collaboration.

Sincerely,

Prof. Jonna Mazet

13	EXPLANATION	LEVEL OF EXPERTISE
14	The number of host species the virus is known to infect	
15	The diversity (i.e number of orders) of hosts the virus is known to infect	
16	The total number of habitats the host(s) occupies, as recognized by the IUCN, i.e. Forest, Savanna, Shrubland. Habitat is the place or environment where a plant or animal naturally or normally lives and grows	
17	The total number of food items in the diet of the host(s), as described in PANtheria database (Jones et al. 2009)	
18	The conservation status of a species is an indicator of how likely it is to remain alive at present or in the near future	
19		

	D	E
20	Known global range size of the host(s). The range of a species is the geographical area within which that species can be found	
21	Protected areas are zones allocated for the conservation of the environment, habitat or animals	
22	Phylogenetic distance is a measure of genetic relatedness between organisms.	
23	The Baltimore classification clusters viruses into families according to type of genome.	
24	Whether the virus has an envelope surrounding the genome	
25	Whether the viral genome is broken up into segments	
26	Is the virus known to infect humans? Infection is defined as the invasion and multiplication of viruses that are not normally present within the body. An infection may cause no symptoms and be subclinical, or it may cause symptoms and be clinically apparent.	
27	Is the virus known to infect terrestrial mammals? Infection is defined as the invasion and multiplication of viruses that are not normally present within the body. An infection may cause no symptoms and be subclinical, or it may cause symptoms and be clinically apparent.	
28	Is the virus known to infect birds? Infection is defined as the invasion and multiplication of viruses that are not normally present within the body. An infection may cause no symptoms and be subclinical, or it may cause symptoms and be clinically apparent.	
29	Is the virus known to infect other animal species (excluding humans, terrestrial mammals, birds)? Infection is defined as the invasion and multiplication of viruses that are not normally present within the body. An infection may cause no symptoms and be subclinical, or it may cause symptoms and be clinically apparent.	

	D	E
30	Infection is defined as the invasion and multiplication of viruses that are not normally present within the body. An infection may cause no symptoms and be subclinical, or it may cause symptoms and be clinically apparent.	
31	Infection is defined as the invasion and multiplication of viruses that are not normally present within the body. An infection may cause no symptoms and be subclinical, or it may cause symptoms and be clinically apparent.	
32	Infection is defined as the invasion and multiplication of viruses that are not normally present within the body. An infection may cause no symptoms and be subclinical, or it may cause symptoms and be clinically apparent.	
33	Infection is defined as the invasion and multiplication of viruses that are not normally present within the body. An infection may cause no symptoms and be subclinical, or it may cause symptoms and be clinically apparent.	
34	Infection is defined as the invasion and multiplication of viruses that are not normally present within the body. An infection may cause no symptoms and be subclinical, or it may cause symptoms and be clinically apparent.	
35	A pathogen is defined as a viral agent that causes disease in it's host	
36	Virulence refers to the degree of damage caused by a virus to its host	
37	Virulence refers to the degree of damage caused by a virus to its host	
38	Virulence refers to the degree of damage caused by a virus to its host	
39	Virulence refers to the degree of damage caused by a virus to its host	

	D	E
40	Phylogenetic distance is a measure of genetic relatedness between organisms	
41	Phylogenetic distance is a measure of genetic relatedness between organisms	
42	Phylogenetic distance is a measure of genetic relatedness between organisms	
43	Phylogenetic distance is a measure of genetic relatedness between organisms	
44	Phylogenetic distance is a measure of genetic relatedness between organisms	
45	Whether the virus been implicated in epidemics/pandemics in humans, animals, or both	
46	Was the virus detected in an ill human with unknown cause of illness?	
47	How the virus is transmitted between hosts	
48	Is the virus known to be transmitted between animals and people	
49	Is the virus known to be transmitted between humans	

	D	E
50	Number of sample types the virus has been found in	
51	Whether the virus chronically or acutely infects humans	
52	Detection of the virus on a scale of global, regional, national	
53	High-risk disease transmission interfaces are settings where viral spillover/transmission may occur between animals and people	
54	How often people and domestic animals interact at the interface where the hosts were sampled	
55	How closely people and domestic animals interact at the interface where the hosts were sampled	
56	How often people and wild animals interact at the interface where the hosts were sampled	
57	How closely people and wild animals interact at the interface where the hosts were sampled	
58	How is the land being used at the location where the hosts were sampled. Examples include urban, forest, crops etc.	
59	Density of livestock animals at the location where the hosts were sampled	

	D	E
60	Density of humans at the location where the hosts were sampled	
61	Has deforestation occurred at the location where the hosts were sampled	
62	Has the location where the hosts were sampled has been affected by urbanisation	
63	Has agricultural intensification occurred at the location where the hosts were sampled

Subject: Jordan mission funds obligated to Predict

Hi Liz,

Can you verify if the \$200,000 of additional funding for Jordan has been obligated to Predict?

Thanks!

Andrew

Subject: Follow up on questions about PREDICT's Ebola study on animals in Guinea

Hi Kendra,

Can you share with the Guinea Mission this final version of PREDICT's responses to the CDC suggestions? We can discuss in more detail on the phone call next week.

Thanks!

Andrew

## PREDICT responses to CDC suggestions in Guinea

<u>CDC</u> suggestion 1: Specimens that have been received for this animal study have been stored in a -20 freezer that is different from the -80 freezer that contains human blood Ebola samples. This is good news from a safety perspective. The -80 freezer with Ebola specimen is locked and should not be opened as it contains positive samples that have not been neutralized. PREDICT might want to quickly acquire a -80 freezer (recommended temperature for blood samples for better conservation) to ensure proper storage of their samples.

<u>PREDICT response:</u> This is being addressed. We are happy that Dr. Magassouba could assist us in arranging a temporary storage solution for the PREDICT specimens that is separate from the human outbreak specimen collection. We agree that -80C storage is preferable, and the team has purchased two -80C freezers to upgrade the ultra-cold storage capacity at the VHF laboratory for all PREDICT specimens, which will remain locked with very limited key access at all times. These should be delivered during the second week of April. Action item: the PREDICT team will notify the USAID Mission when the freezers arrive in-country.

Until that time, storage at -20C will be adequate for our primary diagnostic specimens which are stored *inactivated* in Trizol (guanidine isothiocyanate and phenol) as this will not affect the results of any subsequent molecular testing. Short term storage at -20C of our secondary specimens in virus-transport media, while not ideal, will be sufficient for potential subsequent analyses if necessary, especially since these will be transferred to the new, locked -80C freezer soon.

<u>CDC suggestion 2:</u> Dr. Magassouba did not seem to have total clarity of what PREDICT would provide (freezer/generator) or the specifics of the study. I would recommend meeting with him, go over supplies and study, and do the same with Dr. Sakoba and Prof. Lamine.

PREDICT response: This is being addressed. The purpose of the global PREDICT team's visit was to explore incountry capabilities and possibilities for collaboration for testing of PREDICT samples in Guinea. Dr. Magassouba and our PREDICT country coordinator (Professor Camara) recently reviewed and reached an agreement (currently with the University of California Davis for final PREDICT approvals) that more clearly states exactly what each partner is responsible for in terms of sample storage and equipment for this purpose. In this document, it is clear that PREDICT will supply the two -80C freezers (due for delivery in April) and cost share the fuel for the generators required for this equipment. We will be happy to provide Dr. Sakoba and Professor Lamine an update to clarify their concerns or questions as soon as desirable. Plans for testing in Guinea are currently being developed and are dependent on resources available. The plans are being discussed with Professor Camara and Dr. Magassouba to assess feasibility. The PREDICT team offered to share PREDICT testing protocols with Dr. Magassouba in the interim, so that he may have them available to pilot with pre-PREDICT samples in his archive. Action item: the PREDICT team will follow up further with Professor Camara and Dr. Magassouba.

<u>CDC suggestion 3:</u> PREDICT should have a Memorandum of Understanding (MOU) signed by the MOH and Ministry of Livestock that explains the method used to ensure proper handling, neutralization, storage, and shipping of specimen. This was requested by the GoG for the human samples and is a hot topic of conversation right now because of direct safety concerns expressed by both the President and the Minister of Health.

<u>PREDICT</u> response: This is being addressed. The PREDICT team was granted permits for our work by the Ministry of Environment, Water, and Forests and the Ministry of Livestock and Animal Production prior to the initiation of any work in Guinea. These permits were granted in part because the team utilizes standardized protocols used by PREDICT teams project-wide to train staff on these issues including the safe collection, handling, storage, and shipping of specimens. As an added step specifically for Guinea, we are also following the recommendation of Dr. Sakoba to have our approved animal sampling Institutional Animal Care and Use (IACUC) protocol (which includes further details on sampling and safe handling of animals and specimens) be reviewed and approved through the joint Guinean Ethics Committee that also includes members of the Ministry of Health. We are in the process of translating this master document into French for submission to

this committee. We look forward to addressing any concerns they may have to ensure their concurrence with our activities. **Action item:** the PREDICT team is following up with the GEC.

<u>CDC</u> suggestion 4: The principal investigator on the ground should also be able to demonstrate that proper measures are being taken to ensure the prevention of human infection from potentially infected animal blood. In addition to PPE, proper training, and Trizol being used at the collection sites, it might be advisable to consider additional measures. No vaccine is available at this time. Possible measures:

- a. daily temperature monitoring of all collectors and their immediate family
- b. use of a sheet that records who collected which sample and link lab results to this line list of collectors after confirmation of PCR test in California. This should be regularly shared with MOH and time between collection and testing minimized as much as possible for rapid confirmation.
- c. Field incidents (needle pricks, bites from bats, spill of test tubes or fluids should be well documented and shared

<u>PREDICT response</u>: This has already been addressed; no further action required. The in-country PREDICT teams are trained to follow well-established biosafety and animal and specimen handling protocols that have been used over the past 7 years in a variety of settings and including work with animal reservoirs of other high-consequence pathogens, such as Nipah, Lassa, SARS-like, and MERS viruses. The single greatest risk to PREDICT staff is rabies virus infection, and all staff are required to obtain rabies vaccination before beginning any field work activities. An additional and very significant threat to the health of our staff is venomous snake bite. It would be very informative to hear if the CDC has any guidance or availability of anti-venoms that could be obtained by the in-country teams on an emergency basis if needed.

## For the additional concerns:

- a) It is highly unlikely that PREDICT team members, as part of their routine activities, are at increased risk of exposure to pathogens from the animals being sampled above the background level of the local community who actively hunt and consume many of the animal species being sampled. In the absence of a specific high-risk exposure, daily temperature monitoring of ecological field staff, where appropriate PPE and adherence to biosafety protocols have been maintained, does not seem warranted and is not standard practice, even for CDC teams collecting similar animal samples in neighboring countries. However, if a more significant exposure risk occurs (such as an animal bite that penetrates all layers of PPE), enhanced monitoring may be warranted on a case-by-case basis (see c below).
- b) During each day/night of work, a record is generated of who participated in the sampling activities. However, PREDICT does not, by design, operate as a rapid response diagnostic laboratory, but is rather at its core a capacity building effort. The turnaround time from field-collection to virus detection and confirmation in animal samples could range from weeks to several months. As in-country laboratory testing capacity continues to build, we anticipate these turn-around times to shorten, but they will almost certainly always be beyond the short incubation time of most viral and bacterial infections. However, if there is a subsequent positive test for a known or suspected pathogen, we can use the log of participants from the animal sampling to follow up on the participants' health status.
- c) Adverse incidents (e.g., bites, scratches, needle sticks) are recorded by the PREDICT team as part of our ongoing occupational health program and are reported to the supervisor of the injured employee. Staff members and partners are also required to train on immediate response procedures for all such incidents. Consistent with best practices in public health, if any illness is reported by or observed in a staff member by a supervisor, individuals are encouraged to not participate in any team activities until their illness is resolved. When an illness occurs subsequent to an adverse event, the situation is brought to the attention

of the staff member's employer for implementation of their occupational health program, as well as to the PREDICT country coordinator and the global team for further action. If a significant illness does occur that may require immediate rule-out testing, the PREDICT team will contact the MoH and our CDC partners for guidance.

<u>CDC suggestion 5</u>: More clarification should be given as to why one aliquot is kept in Guinea. For what research will the samples be used? By whom? These should be captured in a research protocol shared with both MOH and Ministry of Livestock.

PREDICT response: This has already been addressed; no further action required. As standard best practice, PREDICT teams across the world archive aliquots with the in-country government to build up local bio-banks of specimens. For example, this practice is also followed by the CDC Viral Special Pathogens teams doing similar work as PREDICT in Sierra Leone. It is at the discretion of the host country government, in conjunction with PREDICT staff, to determine what research plans they have with the specimens, as these aliquots are necessarily the biological and intellectual property of the country. This best practice is outlined as part of the agreement between PREDICT and the host country government. PREDICT strives to leave behind in-country technical expertise and a collection of specimens so that every country has the capacity to engage in further research work with other partners long after the PREDICT program has ended. We also encourage best practices and training in biosafety and security, as well as report any positive samples that should be transported, according to the in-country government protocols, to the most-biosecure facility in the country if the sample is considered high-risk to human health or livestock.

CDC suggestion 6: The chain of custody, etc. should be documented in an SOP.

<u>PREDICT response</u>: This has already been addressed; no further action required. PREDICT already has SOPs for maintaining records and inventories of the collected PREDICT specimens, which includes freezer map locations, and all specimens stored in locked freezers. The SOPs also state that if a potential high-consequence pathogen is detected, any remaining potentially infectious specimen will be transferred as soon as possible to the appropriate national or international reference laboratory, depending on the pathogen and the in-country capacity, with host-government approval and concurrence.

CDC suggestion 7: All of these items should be discussed openly with the MOH and the Ministry of Livestock

<u>PREDICT response</u>: This has already been addressed; no further action required. Our team reports having already discussed these items with both Ministries, and PREDICT POCs from Ministry of Livestock (Dr. Ramadan Diallo) and from MOH (Dr. Alpha Mamadou Diallo) are always invited and/or have participated already with the team in our community engagement and sampling activities. As a rule, the PREDICT teams in all countries where the project is implemented strive to have open and transparent communication with all relevant government Ministries. Without their continued approval and support the goals of the PREDICT program would not be possible. If necessary, the PREDICT team in Guinea is happy to discuss these issues further with the appropriate government representatives.

Subject: Re: [predict] Re: Change to Approved ITA: N. Ross travel to Italy rescheduled, participant

change

Thanks, David.

Approved.

On Thu, Apr 20, 2017 at 9:13 PM, David J Wolking <<u>djwolking@ucdavis.edu</u>> wrote: Hi Andrew,

See the request below for Carlos. Also, please let me know if you need anything else, I'm pitching in for Katie and Liz while they are on vacation.

Cheers,

David

<u>EcoHealth Alliance</u> would like to request travel approval for <u>Mr. Carlos Zambrana-Torrelio</u> to travel <u>from New York, NY</u>, to <u>Rome, Italy from May 3-5, 2017</u> to collaborate with Ugo Pica Ciamarra at the Food and Agriculture Organization (FAO).

**Trip purpose:** Mr. Zambrana-Torrelio will work with Mr. Pica Ciamarra on the Africa Sustainable Livestock 2050 dynamic modeling.

Airfare cost is expected to be \$2,000 roundtrip/\$471 Rome max daily per diem.

On Thu, Apr 20, 2017 at 12:38 AM, Andrew Clements <a href="mailto:aclements@usaid.gov">aclements@usaid.gov</a>> wrote: Hi Katie,

Ross traveled still approved.

Will there be a separate approval request for Carlos?

Andrew

Hi Andrew. Due to scheduling conflicts, Noam Ross's travel to Italy (previously approved ITA below for reference) has been rescheduled to May 3-5, 2017. Mr. Carlos Zambrana-Torrelio has also been added as a participant. All other details of the trip remain the same, including departure/destination points and purpose. Our apologies for the late notice; we were just made aware of this change. Please let me know if you have any questions. Thanks!

EcoHealth Alliance would like to request travel approval for <u>Dr. Noam Ross</u> to travel from <u>New York, NY, USA</u> to <u>Rome, Italy</u> from <u>March 27-30, 2017</u> to <u>collaborate with Ugo Pica Ciamarra at the Food and Agriculture</u> Organization (FAO).

**Trip purpose**: Dr. Ross will work with Mr. Pica Ciamarra on the Africa Sustainable Livestock 2050 dynamic modeling.

Airfare cost: \$2,000 each/\$471 (Rome) max daily per diem

Please find below international travel requests for your review and approval. Please let me know if you have any questions. Thanks!!

- 1. Monagin (Senegal): \$1,350 airfare/\$251 (Dakar) max daily per diem
- 2. Euren (Laos): \$1,200 airfare/\$212 (Vientiane) max daily per diem
- 3. McIver (Laos): \$1,400 airfare/\$212 (Vientiane) max daily per diem
- 4. Olival (Thailand): \$2,500 airfare/\$246 (Bangkok) max daily per diem

## Travel Requests -

1. <u>UC Davis</u> would like to request travel approval for <u>Dr. Corina Monagin</u> to travel from <u>Los Angeles</u>, <u>CA, USA</u> to <u>Dakar, Senegal</u> from <u>May 27 to June 10, 2017</u> for <u>meetings with partners</u>, and training and roll-out of human syndromic surveillance activities.

<u>Trip purpose:</u> Dr. Monagin will be traveling to Dakar, Senegal to have working meetings with PREDICT-2 program partners at the Interstate School of Veterinary Medicine and Sciences of Dakar (EISMV), the University Cheikh Anta Diop (UCAD), and the Senegalese Institute of Agricultural Research (ISRA). These working meetings will focus on preparations for the roll-out of surveillance activities in the country. Dr. Monagin will also be leading a training for human syndromic surveillance in preparation for roll-out of activities.

2. <u>Metabiota</u> would like to request travel approval for <u>Mr. Jason Euren, Research and Implementation Coordinator</u>, to travel from <u>San Francisco</u>, <u>CA</u>, <u>USA</u> to <u>Vientiane</u>, <u>Laos</u> from <u>May 27 to June 5</u>, <u>2017</u> to <u>complete human surveillance training in both hospital and community settings, as well as provide additional trainings on animal field data collection.</u>

<u>Trip purpose:</u> In Vientiane, Jason Euren will join Dr. David McIver, Asia Regional Coordinator, to complete an intensive, week-long training on human surveillance for the PREDICT program. Part of this training will occur at the Khong District Hospital, in Champasak Province, and part of it will take place in the village of Na Pa Kieb, Champasak Province. This training will cover the selection and enrollment of participants to the PREDICT program, data collection and interviewing techniques, data upload to the EIDITH database, and biological sample collection in the community setting. Trainings for animal surveillance will include introducing updates to field data collection tools, biosafety and biosecurity updates and re-trainings, sample management and storage, updated blood collection techniques, and EIDITH data upload overview and re-training. These trainings will take place both at the PREDICT office in Vientiane, at the National Animal Health Laboratory, as well as on-site in Na Pa Kieb Village, Champasak Province.

3. <u>Metabiota</u> would like to request travel approval for <u>Dr. David McIver</u>, <u>Asia Regional Coordinator</u>, to travel from <u>Nanaimo</u>, <u>British Columbia</u>, <u>Canada</u> to <u>Vientiane</u>, <u>Laos</u> from <u>May 27 to June 5, 2017</u> to <u>complete human surveillance training in both hospital and community settings, as well as provide additional trainings on animal field data collection</u>.

<u>Trip purpose:</u> In Vientiane, Dr. McIver will join Jason Euren, Research and Implementation Coordinator, to complete an intensive, week-long training on human surveillance for the PREDICT program. Part of this training will occur at the Khong District Hospital, in Champasak Province, and part of it will take place in the village of Na Pa Kieb, Champasak Province. This training will cover the selection and enrollment of participants to the PREDICT program, data collection and interviewing techniques, data upload to the EIDITH database, and biological sample collection in the community setting. Trainings for animal surveillance will include introducing updates to field data collection tools, biosafety and biosecurity updates and re-trainings, sample management and storage, updated blood collection techniques, and EIDITH data upload overview and re-training. These trainings will take place both at the PREDICT office in Vientiane, at the National Animal Health Laboratory, as well as on-site in Na Pa Kieb Village, Champasak Province.

4. <u>EcoHealth Alliance</u> would like to request travel approval for Dr. <u>Kevin Olival</u> to travel from <u>New York, NY, USA</u> to <u>Bangkok, Thailand</u> from <u>May 24 - May 28, 2017</u> to participate in team <u>meetings, sampling trips, and community surveillance</u>.

<u>Trip purpose:</u> Dr. Olival will join the PREDICT team in conducting human community surveillance in Chonburi province, and meet with PREDICT implementing partners. Meetings with the team will occur on May 25; the sampling trips are planned for May 26-27.

Subject: Re: Bullets on what assistance PREDICT can provide in DRC

### Hi Angela,

Dennis let us know that have received our info on the 400 count for PPE that we have available from Prime and our local team. He said that you were also coordinating to get more from Dubai.

Consistent with your email, he also asked bullets on how Predict could provide assistance, for which I have sent out a request to our team to collect ideas. Prime is currently completing a meeting at MOH, so he will let us know what is reasonable to offer in support from his perspective. Do you all have more info than I do currently regarding necessary/appropriate assistance? From working with DRC on multiple Ebola outbreaks. our experience has been that they have good plans in place, are capable of the diagnosis and control plans (as evidenced by current progress), and are proactive when it comes to reducing travel/transport to control spread. Our most current information is that there are/were 9 sick people 19 days ago. Do you know that this is still an ongoing and/or escalating situation?

For previous Ebola outbreaks in DRC, we have certainly provided technical assistance with genetic analysis of strains. Much earlier, we also provided field assistance with sampling when the outbreak was ongoing. In other countries, we have helped with diagnostics and field investigations, especially for host identification and spillover risk. Please let us know if you have an idea of scope/scale of what you are hoping to offer, as that will have administrative planning ramifications.

Thanks, Jonna

Thanks, Jonna.

We don't have any specific ideas on what might be requested or expected. I agree with you that DRC generally knows what to do and only usually needs a little assistance, so I don't expect you will have to do much (if this behaves like a normal outbreak).

However, I'm not above using the urgency of the situation to our advantage regarding the country cap impasse.

Andrew

Hi Andrew,

On the call, after you dropped off I think, I mentioned that we are currently spending above the existing cap in DRC and that those need to be fixed ASAP, especially if USAID will be asking us to expend more funds on

another outbreak. The proposed new caps are estimated based on normal operations, not outbreak surge numbers in a particular country. We have a small amount of room for things on the order of PPE, but caps will not be sufficient if we are asked to scale-up, as in the YF situation. I have no idea how to estimate that, without more information for caps. Country level caps make planning for outbreak responses impossible unless you allocate fresh money with a cap change each time. As it is now, our outbreak funds are estimated and distributed across country budgets and caps because we never know in what country they will need to be used.

On your other question re using outbreak reserve or regular budget, I have no idea what anyone is thinking/requesting in terms of assistance, so I will contact Angela. The only pseudo request we have is for PPE on hand, which can be covered in our normal budget. Dennis and Angela have asked for bullets on how we can assist, which I have sent out to the team for ideas. Do you all have more info than I regarding necessary/appropriate assistance? From working with DRC on multiple Ebola outbreaks. our experience has been that they have good plans in place, are capable of the diagnosis and control plans (as evidenced by current progress), and are proactive when it comes to reducing travel/transport to control spread. Subject: Global Virome Project

To: Chris Somerville <crsomerville@berkeley.edu>, Chris Somerville <crs@berkeley.edu>

Bcc: Rada (Calaba

Dear Chris,

Hope that this finds you well.

I have been working with the US Agency for International Development (USAID) on helping to launch a large international project called the Global Virome Project (GVP). This project is focused on capturing the metadata and sequences of a significant fraction of the viruses that exist in wildlife that have the potential to jump to humans. A bit similar but a lot more complicated than the Human Genome Project involving large-scale sample collection and screening for viruses in wildlife in the world's "hot zone" regions. The project's central aim is to convert virology into a data rich field so that we can begin to proactively plan for viral outbreaks and pandemics. It has so far been championed by the USAID Pandemic Threat Program, who have already invested ~180 million in a successful proof of principle pilot project. For the projects next stage, it needs to become a global project completely separate from the US Government with a coordinating non-governmental center or "hub" linked to national virome projects. The hub will contain components of the project that need to be centralized such as organizational components/ governing structures/ advisory boards/ data platform...

We are now looking to foundations to support the hub and Open Philanthropy is one that is on our list. Please let me know if you think this falls at all in Open Philanthropy's domain and if so who within the organization we should talk with. The project appears to be moving faster than expected, with a China component already funded and poised to generate data, with others poised to follow suite.

The post JGI life as Chief Scientific Officer at the SF start up Metabiota is quite interesting. The company's focus is on data modeling and analytics for infectious disease risk. Learning lots of new science and aspects of how the tech/ for profit world operates.

Hope that your post EBI experience has been a good one and send my regards to Shauna.

Best,

Eddy

Subject: retooled message and ask to funders
Sent: Sat, 12 Aug 2017 00:01:26 +0000

Hi Dennis, Peter, Nathan and Jonna,

As I mentioned on this weeks call I think we should knock on the Science Philanthropy Alliance door again as well as the doors of other potential funders that we may have already visited (Vulcan, Skool) with a retooled message and ask. (I believe we got the initial invite to Science Philanthropy through Nathan's connection to Harvey Feinberg, who is on their board.) When we visited them Jan 2017 in Palo Alto with an eye popping 3 Billion \$ plus ask we met with Marc Kaster (President) and Valerie Conn (Executive Dir). Below is a draft note to see if they have any interest in engaging the new version of GVP with any of their donners. A mature version of the "hub" ask note might also serve as a model to pitch to other philanthropies.

Eddy

Dear Valeria and Marc,

In January of this a year we visited you at the Science Philanthropy Alliance to discuss an international project called the Global Virome Project (GVP). As a reminder, the project is focused on capturing the metadata and sequences of a significant fraction of the viruses that exist in wildlife that have the potential to jump to humans. The project's central aim is to convert virology into a data rich field so that we can be in position in the future to proactively plan for viral outbreaks and pandemics.

Since the visit in January the project has progressed with several national virome projects linked to GVP already funded (China) or with efforts under way to secure funding (Canada, Costa Rica...). What has become clear is that as the project moves forward, we need to develop a coordinating non-governmental center or "hub" linked to the national virome projects that are emerging. The hub will contain components of the project that need to be centralized such as governing organization / advisory boards/ legal and coordinating activities/ data platform...When we visited the Science Philanthropy Alliance at the beginning of the year we had not specifically defined our needs. As the project moves along it has become clear that we need to acquire support specifically for the hub.

We would appreciate if you would consider again GVP and whether it fits with the interests of any of your funding partners.

Regards....

### Hi all,

Just letting you know that Mark Smolinski will be in Boston on September, so Skoll is unfortunately off the table for this visit. I am setting up another meeting with him to keep him engaged in the meantime. Have a good day,

Jonna

Hi everyone,

Here are the meeting minutes from our call today.

## **Agenda**

Science Paper - Deadline for comments is Aug 14

GVP Business Plan - Conference line will be set up

BCG: 8/23 11am-12pmMcKinsey: 8/23 2-3pm

• Dalberg: 8/25 11:30am-12:30pm

# **Outreach - Readouts**

- Canada
  - o Interested in waterfowl projects. Eddy and Dennis will be in Canada to share information on GVP.
  - Canada could be the model for high-income country with a self-funded program. Upcoming deadline for Canadian funding is December.
- Merieux
  - o Jonna and Eri met with Guy Vernet and Jon Andrus (Board of Merieux USA). They do not have funds but are excited to be involved through utilizing their lab network (GABRIEL).
  - o GVP will continue stewarding relationship and potentially meet with them at PMAC.
- British Consulate in SF
  - o Jonna will meet today and inform then about GVP, because they are connected to Wellcome Trust.

#### **Outreach - Planned**

- Peter Bogner at GISAID Call on Aug 14, 11.30am EST
  - Referred by Bill Steiger

- o GISAID is six years old, work on global data management on viruses, particularly influenza.
- o Peter is based in Germany but will be in SF for the next few weeks. Peter also has his own foundation.
- San Francisco BioHub confirmed 10am PDT, others TBD
  - Open Philanthropy Chris Sommerville is the chief. Eddy will reach out.
  - o Iconic Similar to Vulcan. Under Zuckerberg umbrella but with several other groups. Oversees venture capital, BioHub etc.
  - o Skoll Jonna contacted Mark and Larry for potential morning meeting on 9/15 before BioHub
  - Richard Feachem Jeremy messaged Eddy. Not able to commit substantially at this point.

Richard could be the voice for GVP for UK colleagues. How to involved Richard is TBD.

- o Science Philanthropy Alliance (not to be confused with Open Philanthropy) potential follow- up may be beneficial
- China/HK Meet with George, Keiji, Embassy, CAS, HKU, etc.
  - Embassy is interested in GVP and whether it fits with the US-China scientific partnership
- Seattle (potential)
  - MSR/Vulcan Main focus is vector-borne diseases (WNV, Zika etc.) Brooke shared meeting notes on Aug 10.

### **Communications**

- Website has been updated and has new section titled "archived".
- 2 pager redesigned and has a new look. This will be circulated with the team and uploaded soon.

## **Technical Updates**

- Waterfowl Mapping status work in progress.
- Budget/lab related
  - o Jonna and spoke with Ian Lipkin and Thomas Briese at CII. Good conversation.
  - o CII team will send us feedback on costs next week (regarding cost, pros and cons for different lab options).
  - o First step is to train people from China, Thailand or both, when they have samples. End of 2019-Early 2018?
  - o No funding required until next fiscal year.

# **Working Group Updates**

- ELSI Co-chair update Ana Ayala has moved to HHS. Ana's position to be succeeded by Sam Halabi (O'Neill, Georgetown U Law and U Missouri Law) who is highly recommended by members. Anna will be our advocate at ASPR.
- Surveillance Chris KJ is helping with SOP review and distribution
- General Operations Communications team is helping with website and two-pager
- Metadata platform Eddy spoke with John Brownstein to plan an EIDITH-like platform. This will overlap with two of the lab-related working groups.

## Action items

Eddy – pass arounds notes for Chris Sommerville to GVP team, send to Chris

Brooke - circulate notes from Vulcan call (done)

Enjoy the rest of your week!

Subject: Year 4 revised budget

Hi Liz and David,

Thanks for all your comments and the quick chat today. Attached please find our revised Year 4 budget based on your feedback and below bullets on what we modified:

- EHA HQ costs were reduced by \$193,529 (including salary, fringe, and indirect) by reducing time from Billy and Jon as well as our Modelling and Analytic Team (Kevin, Noam, and Anna's). Peter asked me to mention that he does not think this is ideal and he hopes this will not be a red flag for USAID, but we have done this specifically to reduce our Global and Administrative costs. He also wanted to assure you that all staff who have been reduced will remain engaged with PREDICT at the same level
- In-country testing budgets for RoC and CIV were increased by \$193,529 (amount of HQ reduction) (note that only salary from Billy and Jon previously allocated to Ebola Money was used in CIV)
- Bangladesh hospitals have been reduced to only two and the funds allocated to diagnostic costs in RoC
- Core funds being rolled over from Year 3, totaling \$232,194 are obligated to cover our sample testing costs in Bangladesh, China, and Egypt. These assays will be completed in Q1 of Year 4 (\$62.071 of Year 3 GVP funds will go towards planned salary & travel in Year 4)
- We project a rollover of \$804.193 in EHP funds. In terms of Year 3 costs, \$160,000 is earmarked for the 1.850 Liberia samples that have just arrived at Simon's lab (that's \$50/sample plus 60% overhead), and the rest will go to cover Year 4 costs
- IRB approval has already been obtained for India and will definitely be secured in Bangladesh before the start of Year 4
  - RoC and Ivory Coast IRBs will be amended to transfer from Metabiota to EHA before Year 4 begins.
- Our team is developing the entry tool for the Malaysia human surveillance data, and the updated survey will be sent to CKJ next week.

Please let Aleksei and me know (cc to Evelyn and Ava) if there are any questions or if you'd like to talk through any details in the budget.

Best, Molly

I thought that Valerie was very knowledgeable and would at least offer us some advise. Below is a draft not that if you thought it is useful you might send.

Eddy

A draft of a possible note to Marc Kassner President and Valerie Conn Executive Director

Dear Marc & Valerie

A group of us visited with you at the Science Philanthropy Alliance earlier this year in late January to discuss the Global Virome Project. To refresh your memory, this is a large project focused on capturing the metadata and sequences of a significant fraction of the viruses that exist in wildlife that have the potential to jump to humans. The project's central aim is to convert virology into a data rich field so that we can begin to proactively plan for viral

outbreaks and pandemics. The project has advanced and in some ways morphed since we met and I thought that the changes might serve as a reason for us to talk again.

While we had initially expected that it would be a global project funded from a central source several countries have decided that they want to participate and are poised to begin national virome projects and China has already funded and is soon to be generating data for a Chinese Virome Project. What there is now a need for is no longer the funding of the data generation but rather a coordinating non-governmental center or "hub" linked to the national virome projects that are emerging. This is necessary so that the national virome activities are deeply linked to the global project to ensure that the standardization and synergy of the massive data collection is maximized. The hub will contain components of the project that needs to be centralized such as organizational components, governing structures, advisory boards, legal and ethical activities, technology and standards committees and data platforms.

We are now looking to foundations to support the hub and wonder whether playing a leadership role in the Global Virome Project might fit the agenda of any of the Science Philanthropy Alliance's partners. If you have additional questions or thoughts I would be very happy to follow up

Best,

Dennis

Subject: RE: Year 4 revised budget

The Y4 template that I sent you to revise was for \$12,237,199, but we asked you to cut back HQ costs (Global/Admin Management) and make sure country budgets are appropriate for planned Y4 activities. The budget you submitted on 8/15, had somewhat reduced HQ costs and an overall reduction of \$87K, but there were some concerns with diagnostic testing budgets in some countries. This most recent version further reduces HQ costs as requested, but the \$87K reduction from the 8/15 submission was lost. I thought our direction had been to at least stay within the reduced overall figure from the 8/15 submission (\$12,149,975), but it sounds like that was not made clear.

Since we're still waiting on guidance on USAID to move forward with core budgeting, I'm really only addressing Ebola funding at this time. For the Ebola budget specifically, there was a \$426K increase from the 8/15 version and a \$393K increase from the Ebola amount in the template I sent to you to revise. I'm just trying to understand where the increase came from, hence my question about whether or not there is carryover funded included in any of your numbers. It sounds like there aren't based on your response, so I'll move forward with my review.

Thanks, Liz

On Fri, Aug 25, 2017 at 5:35 PM, David J Wolking < <a href="mailto:djwolking@ucdavis.edu">djwolking@ucdavis.edu</a> wrote: Hey Molly and team,

A few quick questions (I hope) on CIV, Bangladesh, and India budgets after finalizing the GHSA country briefs today.

For CIV it looks pretty good given plans, though I'm concerned that the \$50/specimen at LANADA is unrealistic for a lab in Africa (IPCI is listed as \$150/specimen for comparison; in TZ we go with a likely under budgeted rate of \$120/specimen). Any idea how that rate was generated?

For Bangladesh and India, it looks like viral testing costs for both countries are extremely low for the planned number of sites with the exception of IEDCR which now seems on target and justifiable.

Could you reach out to Jon for an explanation on how it is reasonable to expect PREDICT wildlife surveillance at 4 sites in Bangladesh (one of which an intensive macaque longitudinal site) to be adequately covered by a \$89K viral testing budget? With that many sites and taxa planned and using the extremely low estimate of \$32/sample for extraction and PCRs - this is half what it costs us at UC Davis) I'm getting a ballpark of \$140K (\$286K if using the UC Davis rate).

Likewise for India, the SPIPMS rate for testing is \$37/specimen and states that it only covers extraction and 2 PCRs. That would only allow for testing of one PREDICT viral family as most of our viral testing requires at least 2 PCR reactions to complete. If using the UCD rate the cost jumps to over \$300K for the planned work at all sites.

Nothing on Liberia at this time, I'm not an Ebola Host Project expert as the way sample testing is financed through CII and UCD throughs my methods out the window:-)

I'm sure I'll have questions on the other countries as well but we are prioritizing just the GHSA ones at this time.

Cheers and enjoy the weekend!

David

One more clarification -- since EHA took on MB's role in China and Indonesia (as well as CdI & RoC), we would expect their budgets to go up commensurate with the MB decrease.

Making sure that MB went down commensurately and that those potential increases in scope were considered in the EHA targets. Liberia would also go up to match EHP funding coming in, but we need to deal with their rollover and cap there.

Sorry, I know some of this is obvious, but I want to make sure we are on the same page and providing the same messages,

Subject: Re: Year 4 revised budget

Hi David,

I just spoke with Jon and Simon, and we determined that this cost can reasonably be increased to \$57/sample to account for testing the same sample for an additional four viral families (they tell me that fortunately the most expensive part of the process is the initial extraction and RT; additional family testing is about \$5/additional PCR at CU). Jon is going to speak with the India team further as we think there's simply some misunderstanding on this point, as you suggest. Thank you for catching that.

I've made this change in the attached, with some corresponding reductions to the Thailand and Indonesia budgets, again all highlighted in blue.

On Mon, Aug 28, 2017 at 7:34 PM, David J Wolking <a href="mailto:djwolking@ucdavis.edu">djwolking@ucdavis.edu</a> wrote: Thanks Molly, this is sounding good, I'll take a look with fresh eyes tomorrow. On the SG testing costs, it looks like the budget line item for testing is 2 PCR reactions. I'm not surprised if \$37 covers extraction and 2 PCRs, just wondering if it is sufficient to cover costs for all five planned viral families (7 protocols in total and some of them nested PCR reactions which is a fancy way of saying lots of PCRs likely upwards of 10+). We might just want to check that all of that is factored in since our testing platform is so weird for most labs used to a specific pathogen costing exercise.

Cheers,

D

On Mon, Aug 28, 2017 at 2:08 PM, Molly Turner < <u>turner@ecohealthalliance.org</u>> wrote: Hi David.

As we're still ironing out details with LANADA, \$50/sample was a rough estimate based on costs at Simon's lab and the amount of Ebola money we were able to reallocate from global staff salaries. You're right, it's not enough, so I've moved some things around in the Liberia budget so that we can increase to \$150/sample while keeping the overall Ebola-funded amount consistent with the last revision.

For Bangladesh, that was my error; I've added back in the Columbia University portion of the Bangladesh budget in the attached, which is where the additional macaque testing takes place. As for the low cost of testing the 2400 samples to be done at icddr,b (the remaining 1740 macaque samples will be done at Columbia), Mindy tells me that Zia is able to get a reduced bulk rate on reagents, which is why the cost per sample is so low. (I was able to reduce some costs in China in order to fund this).

Finally, the cost of testing in India is consistent with what USAID reviewed and approved when they approved our proposed subaward to Sanjay Gandhi, and our lead lab technician there has consistently said this is the cost of testing at his lab in discussions with Jon and Ava. Unfortunately Jon is not in the office today so I couldn't inquire as to why these costs are relatively low, but I can try to find out from him tomorrow when he's back. Harjeet (the lead lab technician at SG) has also provided us with a breakdown of this cost which we are happy to share with you.

Note that I also further increased the RoC testing costs in the attached.

All changes are highlighted in blue.

Best, Molly

Sorry for the delay, I'm just checking into a few things and will get back to you ASAP.

On Fri, Aug 25, 2017 at 5:35 PM, David J Wolking < <a href="mailto:djwolking@ucdavis.edu">djwolking@ucdavis.edu</a>> wrote: Hey Molly and team,

A few quick questions (I hope) on CIV, Bangladesh, and India budgets after finalizing the GHSA country briefs today.

For CIV it looks pretty good given plans, though I'm concerned that the \$50/specimen at LANADA is unrealistic for a lab in Africa (IPCI is listed as \$150/specimen for comparison; in TZ we go with a likely under budgeted rate of \$120/specimen). Any idea how that rate was generated?

For Bangladesh and India, it looks like viral testing costs for both countries are extremely low for the planned number of sites with the exception of IEDCR which now seems on target and justifiable.

Could you reach out to Jon for an explanation on how it is reasonable to expect PREDICT wildlife surveillance at 4 sites in Bangladesh (one of which an intensive macaque longitudinal site) to be adequately covered by a \$89K viral testing budget? With that many sites and taxa planned and using the extremely low estimate of \$32/sample for extraction and PCRs - this is half what it costs us at UC Davis) I'm getting a ballpark of \$140K (\$286K if using the UC Davis rate).

Likewise for India, the SPIPMS rate for testing is \$37/specimen and states that it only covers extraction and 2 PCRs. That would only allow for testing of one PREDICT viral family as most of our viral testing requires at least 2 PCR reactions to complete. If using the UCD rate the cost jumps to over \$300K for the planned work at all sites.

Nothing on Liberia at this time, I'm not an Ebola Host Project expert as the way sample testing is financed through CII and UCD throughs my methods out the window:-)

I'm sure I'll have questions on the other countries as well but we are prioritizing just the GHSA ones at this time.

Cheers and enjoy the weekend!

On Fri, Aug 18, 2017 at 6:14 PM, Molly Turner < turner@ecohealthalliance.org wrote: Hi Liz and David,

Thanks for all your comments and the quick chat today. Attached please find our revised Year 4 budget based on your feedback and below bullets on what we modified:

- EHA HQ costs were reduced by \$193,529 (including salary, fringe, and indirect) by reducing time from Billy and Jon as well as our Modelling and Analytic Team (Kevin, Noam, and Anna's). Peter asked me to mention that he does not think this is ideal and he hopes this will not be a red flag for USAID, but we have done this specifically to reduce our Global and Administrative costs. He also wanted to assure you that all staff who have been reduced will remain engaged with PREDICT at the same level
- In-country testing budgets for RoC and CIV were increased by \$193,529 (amount of HQ reduction) (note that only salary from Billy and Jon previously allocated to Ebola Money was used in CIV)
- Bangladesh hospitals have been reduced to only two and the funds allocated to diagnostic costs in RoC
- Core funds being rolled over from Year 3, totaling \$232,194 are obligated to cover our sample testing costs in Bangladesh, China, and Egypt. These assays will be completed in Q1 of Year 4 (\$62,071 of Year 3 GVP funds will go towards planned salary & travel in Year 4)
- We project a rollover of \$804,193 in EHP funds. In terms of Year 3 costs, \$160,000 is earmarked for the 1,850 Liberia samples that have just arrived at Simon's lab (that's \$50/sample plus 60% overhead), and the rest will go to cover Year 4 costs
- IRB approval has already been obtained for India and will definitely be secured in Bangladesh before the start of Year 4
- RoC and Ivory Coast IRBs will be amended to transfer from Metabiota to EHA before Year 4 begins.
- Our team is developing the entry tool for the Malaysia human surveillance data, and the updated survey will be sent to CKJ next week.

Please let Aleksei and me know (cc to Evelyn and Ava) if there are any questions or if you'd like to talk through any details in the budget.

Best, Molly

Subject: Re: Year 4 revised budget

Sorry, that's \$5/additional family.

On Tue, Aug 29, 2017 at 4:04 PM, Molly Turner < <u>turner@ecohealthalliance.org</u>> wrote: Hi David,

I just spoke with Jon and Simon, and we determined that this cost can reasonably be increased to \$57/sample to account for testing the same sample for an additional four viral families (they tell me that fortunately the most expensive part of the process is the initial extraction and RT; additional family testing is about \$5/additional PCR at CU). Jon is going to speak with the India team further as we think there's simply some misunderstanding on this point, as you suggest. Thank you for catching that.

I've made this change in the attached, with some corresponding reductions to the Thailand and Indonesia budgets, again all highlighted in blue.

Thanks Molly, this is sounding good, I'll take a look with fresh eyes tomorrow. On the SG testing costs, it looks like the budget line item for testing is 2 PCR reactions. I'm not surprised if \$37 covers extraction and 2 PCRs, just wondering if it is sufficient to cover costs for all five planned viral families (7 protocols in total and some of them nested PCR reactions which is a fancy way of saying lots of PCRs likely upwards of 10+). We might just want to check that all of that is factored in since our testing platform is so weird for most labs used to a specific pathogen costing exercise.

Cheers,

D

On Mon, Aug 28, 2017 at 2:08 PM, Molly Turner < <a href="mailto:turner@ecohealthalliance.org">turner@ecohealthalliance.org</a> wrote: Hi David,

As we're still ironing out details with LANADA, \$50/sample was a rough estimate based on costs at Simon's lab and the amount of Ebola money we were able to reallocate from global staff salaries. You're right, it's not enough, so I've moved some things around in the Liberia budget so that we can increase to \$150/sample while keeping the overall Ebola-funded amount consistent with the last revision.

For Bangladesh, that was my error; I've added back in the Columbia University portion of the Bangladesh budget in the attached, which is where the additional macaque testing takes place. As for the low cost of

testing the 2400 samples to be done at icddr,b (the remaining 1740 macaque samples will be done at Columbia), Mindy tells me that Zia is able to get a reduced bulk rate on reagents, which is why the cost per sample is so low. (I was able to reduce some costs in China in order to fund this).

Finally, the cost of testing in India is consistent with what USAID reviewed and approved when they approved our proposed subaward to Sanjay Gandhi, and our lead lab technician there has consistently said this is the cost of testing at his lab in discussions with Jon and Ava. Unfortunately Jon is not in the office today so I couldn't inquire as to why these costs are relatively low, but I can try to find out from him tomorrow when he's back. Harjeet (the lead lab technician at SG) has also provided us with a breakdown of this cost which we are happy to share with you.

Note that I also further increased the RoC testing costs in the attached.

All changes are highlighted in blue.

Best, Molly

Sorry for the delay, I'm just checking into a few things and will get back to you ASAP.

On Fri, Aug 25, 2017 at 5:35 PM, David J Wolking < <a href="mailto:djwolking@ucdavis.edu">djwolking@ucdavis.edu</a>> wrote: Hey Molly and team,

A few quick questions (I hope) on CIV, Bangladesh, and India budgets after finalizing the GHSA country briefs today.

For CIV it looks pretty good given plans, though I'm concerned that the \$50/specimen at LANADA is unrealistic for a lab in Africa (IPCI is listed as \$150/specimen for comparison; in TZ we go with a likely under budgeted rate of \$120/specimen). Any idea how that rate was generated?

For Bangladesh and India, it looks like viral testing costs for both countries are extremely low for the planned number of sites with the exception of IEDCR which now seems on target and justifiable.

Could you reach out to Jon for an explanation on how it is reasonable to expect PREDICT wildlife surveillance at 4 sites in Bangladesh (one of which an intensive macaque longitudinal site) to be adequately covered by a \$89K viral testing budget? With that many sites and taxa planned and using the extremely low estimate of \$32/sample for extraction and PCRs - this is half what it costs us at UC Davis) I'm getting a ballpark of \$140K (\$286K if using the UC Davis rate).

Likewise for India, the SPIPMS rate for testing is \$37/specimen and states that it only covers extraction and 2 PCRs. That would only allow for testing of one PREDICT viral family as most of our viral testing requires at least 2 PCR reactions to complete. If using the UCD rate the cost jumps to over \$300K for the planned work at all sites.

Nothing on Liberia at this time, I'm not an Ebola Host Project expert as the way sample testing is financed through CII and UCD throughs my methods out the window:-)

I'm sure I'll have questions on the other countries as well but we are prioritizing just the GHSA ones at this

Cheers and enjoy the weekend!
David
On Fri, Aug 18, 2017 at 6:14 PM, Molly Turner < turner@ecohealthalliance.org > wrote: Hi Liz and David,
Thanks for all your comments and the quick chat today. Attached please find our revised Year 4 budget based on your feedback and below bullets on what we modified:
- EHA HQ costs were reduced by \$193,529 (including salary, fringe, and indirect) by reducing time from Billy and Jon as well as our Modelling and Analytic Team (Kevin, Noam, and Anna's). Peter asked me to mention that he does not think this is ideal and he hopes this will not be a red flag for USAID, but we have done this specifically to reduce our Global and Administrative costs. He also wanted to assure you that all staff who have been reduced will remain engaged with PREDICT at the same level
- In-country testing budgets for RoC and CIV were increased by \$193,529 (amount of HQ reduction) (note that only salary from Billy and Jon previously allocated to Ebola Money was used in CIV)
- Bangladesh hospitals have been reduced to only two and the funds allocated to diagnostic costs in RoC
- Core funds being rolled over from Year 3, totaling \$232,194 are obligated to cover our sample testing costs in Bangladesh, China, and Egypt. These assays will be completed in Q1 of Year 4 (\$62,071 of Year 3 GVP funds will go towards planned salary & travel in Year 4)
- We project a rollover of \$804,193 in EHP funds. In terms of Year 3 costs, \$160,000 is earmarked for the 1,850 Liberia samples that have just arrived at Simon's lab (that's \$50/sample plus 60% overhead), and the rest will go to cover Year 4 costs
- IRB approval has already been obtained for India and will definitely be secured in Bangladesh before the start of Year 4
- RoC and Ivory Coast IRBs will be amended to transfer from Metabiota to EHA before Year 4 begins.
- Our team is developing the entry tool for the Malaysia human surveillance data, and the updated survey will be sent to CKJ next week.
Please let Aleksei and me know (cc to Evelyn and Ava) if there are any questions or if you'd like to talk through any details in the budget.
Best, Molly

Subject: RE: EHA Y3/Y4 comparison by country
Sent: Wed, 30 Aug 2017 17:23:47 +0000

The EHA targets provided for Y4 during the ceiling increase process accounted for increases to in-country budgets for CDI, RoC, China, and Indonesia (estimated based on what MB had budgeted for these countries previously), but did not include anticipated but TBD increases to Global costs commensurate with the additional work/countries being taken on. We had determined that they should simply add what they thought they would need to their budgets rather than us trying to estimate what those costs should be on their behalf.

Metabiota's Y4 budget is \$291K less than the Y4 targets we provided them for the ceiling increase. Their core budget is \$449K less than the target we provided and they are \$158K over the Ebola budget target we provided.

EHA's most recent Y4 budget is \$806K over the core target we provided and \$986K under the Ebola target provided during the ceiling (which was based on full-funding of EHP at about \$1.5M in Y4).

Subject: Re: EHA Y3/Y4 comparison by country

One more clarification -- since EHA took on MB's role in China and Indonesia (as well as CdI & RoC), we would expect their budgets to go up commensurate with the MB decrease.

Making sure that MB went down commensurately and that those potential increases in scope were considered in the EHA targets. Liberia would also go up to match EHP funding coming in, but we need to deal with their rollover and cap there. Sorry, I know some of this is obvious, but I want to make sure we are on the same page and providing the same messages, J

 Outstanding P-2 Items

Hi Liz,

As a follow up to your update for Andrew on the Lao NCLE, I wanted to check in on the other OAA-related items that we had previously discussed.

The management team on this end reached out to OAA to ensure that these would be followed up on and resolved, so I wanted to check in with you to see if any were still outstanding? With the obvious exception of #1, if there are any others which remain, as well as others to add (particularly which are not dependent on the ceiling increase), please let us know so that we can make sure we don't lose track of them.

## Here's the old list:

- 1. Ceiling Increase
- 2. Kenya Response on Suspension of Activities questions, as per June 8th request
- 3. VAT Items 2-3 pending (China, Viet Nam, and Egypt)
- 4. Myanmar Responses to questions regarding the provision, as per April 11th email.

Thanks Cara

Hello Sudarat,

Unfortunately, I don't think there is much we can do about this from our end. To my understanding, there are many of these agreements that USAID Washington is working on right now, for many different countries. I think we just need to wait until we get some sort of confirmation from the Washington office, which will come to us through UC Davis. Thank you very much for the offer.

Thanks,
Dave

Subject: Re: EPT-2 Meeting in Lao PDR

Hi Andy and Sudarat,

Sudarat is correct, in that the MOU was signed between Metabiota and the DLF/MoAF with the intention that they would subcontract to NCLE as the coordinator of the human surveillance portion of the program. To the best of my understanding, no further MOUs are required and human surveillance in the Khong District Hospital is ready to begin as soon as we have final approval from USAID Washington.

We do plan to make a visit to Champasack while I am in Laos, but we are not certain yet of the days - it will likely be the last week of September. I will work on processing a USAID Mission Concurrence Request and send that along to Alex. And of course, we'll be more than happy to be at an EPT meeting and give everyone an update on the PREDICT program.

Thanks very much, Dave

Hello Eddy,

I discussed the GVP with my colleagues several times and have concluded there is not a quorum of interest in the project in Open Phil. Thanks for the information about the project and good luck with it.

Best wishes Chris

On Tue, Aug 29, 2017 at 1:16 PM, Edward Rubin < emrubin@lbl.gov > wrote:

Hi Chris.

Any thoughts about whether the Global Virome Project and supporting the project's "Hub" aligns with the interests of Open Philanthropy?

Regards

Eddy

#### Hi Chris.

Attached is a pitch deck and a white paper on the project that I hope will give you a high level perspective on the goals, design and costs.

Dennis Carroll Director of US AID's Pandemic Threat Program and who has really been the champion of the Global Virome Project (GVP) will be in the Bay Area September 14th and 15th. If GVP at all aligns with the interests of Open Philanthropy we might arrange a visit then.

Best regards,

Eddy

On Fri, Aug 11, 2017 at 4:07 PM, Christopher Somerville <a href="mailto:crsomerville@berkeley.edu">crsomerville@berkeley.edu</a> wrote: Hi Eddy,

I am the right contact person for something like this. We have an interest in antiviral drugs so this overlaps a bit with that. I sent your note on to the relevant people in this org as a prelude to a discussion about it. If you have any documents that describe the goals and project design and costs etc please send them and we will give it some thought.

I took an unpaid leave last year to work at Open Philanthropy and retired from Berkeley in June so the "ships have been burned". The work here is interesting in many ways and overall it is an interesting change from the University. I have no administrative obligations and spend my days reading and writing science. And i commute by boat from Tiburon so that is nice also. I assume that you have also found the change refreshing.

Best wishes, Chris

On Fri, Aug 11, 2017 at 3:33 PM, Edward Rubin < emrubin@lbl.gov > wrote:

Dear Chris,

Hope that this finds you well.

I have been working with the US Agency for International Development (USAID) on helping to launch a large international project called the Global Virome Project (GVP). This project is focused on capturing the metadata and sequences of a significant fraction of the viruses that exist in wildlife that have the potential to jump to humans. A bit similar but a lot more complicated than the Human Genome Project involving large-scale sample collection and screening for viruses in wildlife in the world's "hot zone" regions. The project's central aim is to convert virology into a data rich field so that we can begin to proactively plan for viral outbreaks and pandemics. It has so far been championed by the USAID Pandemic Threat Program, who have already invested ~180 million in a successful proof of principle pilot project. For the projects next stage, it needs to become a global project completely separate from the US Government with a coordinating non-governmental center or "hub" linked to national virome projects. The hub will contain components of the project that need to be centralized such as organizational components/ governing structures/ advisory boards/ data platform...

We are now looking to foundations to support the hub and Open Philanthropy is one that is on our list. Please let me know if you think this falls at all in Open Philanthropy's domain and if so who within the organization we should talk with. The project appears to be moving faster than expected, with a China component already funded and poised to generate data, with others poised to follow suite.

The post JGI life as Chief Scientific Officer at the SF start up Metabiota is quite interesting. The company's focus is on data modeling and analytics for infectious disease risk. Learning lots of new science and aspects of how the tech/ for profit world operates.

Hope that your post EBI experience has been a good one and send my regards to Shauna.

Best,

Eddy

Subject: Summary of October 24th /25th GVP meetings in Beijing.

## Hi GVPers

Below is a summary, that Hongying and I put together, of the October 24th /25th GVP meetings in Beijing.

The skinny is: a) State Dept and Embassy science staff are well briefed on and very enthusiastic about GVP and its potential for something positive that China and US could do together. b) General view is that we do not want China to take a leadership role in isolation in fear of their reluctance to share data, c) They are looking for something to discuss when Trump meets with Xi later next months and as such this may be a very opportune time to elevate GVP's profile connected to GHSA, c) Need to get interagency engagement in GVP in addition to USAID (NIH, USDA, Commerce...), d) US China Ambassador, Terry Branstad has Trumps ear and he knows about GVP. e) The present US administration very receptive to anything that smells of commerce (support of GVP by tech companies' good) f) other countries, Australia, Norway... view GVP as a possible way to both contribute to GHSA as well as interface with China.

Eddy

October 24, 2017

# **Arrival Evening Meeting at Beijing Marriott NW**

## Attendees:

Nancy Sung, Director of the US National Science Foundation, Head China Office

Miles Toder, Development Counselor, US Embassy

Eddy Rubin, Metabiota

Hongying Li, EcoHealth Alliance

## Discussions:

- Very enthusiastic about GVP and its potential for something positive that China and US could do together.
- Do not want China to take a leadership role in isolation as fear of their reluctance to share data
- Looking for something to discuss when Trump meets with Xi later next months. How the world's 2 largest economies could contribute to GHSA
- Need to get interagency engagement in GVP in addition to USAID (NIH, USDA, Commerce...)
- The present US administration very receptive to anything that smells of commerce. Support of GVP by tech companies' good
- The UC China Ambassador has Trumps ear.
- The Belt and Road Initiative has expanded to include GHSA issues
- Need to add to GVP pitch examples: Where PREDICT surveillance-detection-response info lead to changes in public health approaches. Best examples that we can find of specific insights connected to China (We may need to bend things but we do have examples)

# **US Embassy, Beijing**

October 25, 2017

# A) Meeting with the staff from other agencies with interest in GHSA and GVP Attendees:

Russell Harwood, Head of Development Cooperation, Australian Embassy Beijing

Mads Friborg, Health Counselor, Royal Danish Embassy

Jan Grythe, Development Counselor, Royal Norwegian Embassy

Adrienne Fuentes, Health Attaché HHS, US Embassy

Miles Toder, USAID Development Counselor, US Embassy

Nancy Sung, Director of the US National Science Foundation China Office

Sarah Ong, HHS US Embassy

FDA, US Embassy

Eddy Rubin, Metabiota

Hongying Li, EcoHealth Alliance

## **Discussions:**

The US as well as others (Norway, Denmark Australia) should get involved in the GVP because

- It's an opportunity for engagement with China
- There is a concern about data sharing and access if only China takes the lead
- It could have economic/commercial impacts for the US companies in China
- Science is a good way to collaborate with China

## Opportunities:

- <u>Australian Government call for research under the Indo-Pacific Center for Health Security</u> *Australia's new investment in health security*
- 25-27 October 2017 Kampala, Uganda: 4th High Level GHSA Ministerial Meeting People are trying to do something difference, wait to see the plan for the next 5 years' GHSA
- 8 November 2017, Beijing/APEC: Meeting of Presidents Xi and Trump US Embassy try to get "pandemic disease" related to GHSA into their conversation agenda, currently working with the China side
- **21 November 2017 Beijing:** CEPI (Coalition for Epidemic Preparedness Innovations)/Norwegian representatives visiting China for Global Health & Health dialogue *Agenda TBD, but there is a possibility to mention GVP*
- November 2017, Beijing: Africa CDC Union meeting with the National Health and Family Health Commission, following the <u>China-US Social and Culture Dialogue</u> on September 28, 2017

Time and agenda TBD, but there will be a meeting with the National Health and Family Health Commission and/or China CDC (HYL will get the slides translated into Chinese)

## Questions:

- Is GVP a scientific project, or incorporating local development?
- What will be the public health impact of GVP? (e.g. public health measurements)
- How GVP will fit into the GHSA?
- How the China National Virome Project fit into the Global Virome Project?
- Ownership of the GVP? (given the multiple stakeholders and partners)
- Where GVP take money from if supported by the US government?
- **B)** Meeting with the Acting Deputy Chief of Mission Jonathan Fritz (Acting Deputy Chief of Staff) Leon Skarshinski Commercial Attaché Export Trade Dept of Commerce Eddy Rubin, Miles Toder,
- The senior leadership at the embassy really understand and are enthusiastic about GVP and its potential for something positive China and US could do together.
- The UC China Ambassador Terry Branstad understands GVP and has Trumps ear.
- Looking for something to discuss when Trump meets with Xi later next months. How the world's 2 largest economies could contribute to GHSA
- C) Meeting with Members of Embassy Health Working Group. (An internal embassy group that meets regularly to discuss health related topics. They had heard GVP presented previously Discussions:
- A discussion of scientific concerns about GVP

Please find below international travel requests for your review and approval. Please let me know if you have any questions. Thanks!

- 1. Montecino (Ghana): \$2500 airfare/\$331 (Accra) max daily per diem
- 2. Karesh (Sweden, France): \$7500 airfare \*business class required due to (Stockholm), \$608 (Paris) max daily per diems
- 3. O'Rourke, O'Rourke (USA): \$579 airfare each/\$296 (San Francisco), \$181 (Davis) max daily per diems
- 4. Francisco, Hagan, Sullivan, Epstein (India): \$1550 airfare each/\$400 (New Delhi), \$291 (Lucknow) max daily per diems
- 5. Gutierrez-Jimenez (India): \$2600 airfare/\$400 (New Delhi), \$291 (Lucknow) max daily per diems

## Travel Requests –

1. <u>UC Davis</u> would like to request travel approval for <u>Dr. Diego Montecino</u> to travel from <u>Sacramento, CA, USA</u> to <u>Accra, Ghana</u> from <u>November 25 to December 2, 2017</u> to <u>continue to train the in-country team and assess quality of the ongoing bat census and guano collection, as well as bring supplies from the United States and organize for use over the next 4 months.</u>

**Trip purpose**: The trip will facilitate the year-round monthly guano sampling at the urban *Eidolon* 

helvum colony in Accra to assess longitudinal shedding of viruses in this highly-trafficked urban environment. Supplies will be left ready for its use for the in-country team over the remaining 4 months. Moreover, Dr. Montecino will join and trouble-shoot the activities of November: guano collection with the team for 3 nights and the monthly census of the colony. About 200 specimens will be collected during the trip, while supplies transported and prepared will allow collection of 600 more between December 2017 and February 2018.

EcoHealth Alliance would like to request travel approval for <u>Dr. William Karesh</u> to travel from <u>New York, New York, USA</u> to <u>Stockholm, Sweden</u> from <u>December 9-11, 2017</u> to <u>speak at the ECDC Expert Consultation on One Health Preparedness in Europe</u>. From <u>Stockholm, Sweden</u>, he will travel to <u>Paris, France</u> from <u>December 11-16, 2017</u> to <u>speak at the World Organisation for Animal Health's (OIE) Working Group on Wildlife Meeting.
</u>

<u>Trip purpose: Sweden</u> – Dr. Karesh is to participate in the ECDC Expert Consultation on One Health Preparedness in Europe. Dr. Karesh will present in the first plenary session titled "Towards One Health preparedness for emerging infectious diseases: Insights from the PREDICT project." As EPT Liaison, it is important for Dr. Karesh to continue to promote and optimize collaborations of the PREDICT-2 objectives. <u>France</u> – Following that meeting, Dr. Karesh will participate in the World Organisation for Animal Health's (OIE) Working Group on Wildlife Meeting, for which he serves as Chairman. The OIE Working Group on Wildlife advises the OIE on all health problems relating to wild animals, including emerging disease events and reporting guidelines. Dr. Karesh will have the opportunity to meet with OIE staff to discuss these and other priority topics. \* As an invited speaker at both events, the ECDC and OIE will provide funds for Dr. Karesh's economy fare and per diem expenses for these meetings.

3. Metabiota would like to request travel approval for <u>Tammie O'Rourke</u> and <u>Daniel O'Rourke</u> to travel from <u>Nanaimo</u>, <u>British Columbia</u>, <u>Canada</u> to <u>San Francisco</u>, <u>California</u>, <u>USA</u> on <u>December 5</u>, <u>2017</u> to <u>meet with PREDICT Senior Management</u>. From <u>San Francisco</u>, <u>California</u>, <u>USA</u> they will travel to <u>Davis</u>, <u>California</u>, <u>USA</u> from <u>December 6-8</u>, <u>2017</u> to <u>meet with the UCD global team to discuss USAID reporting and data extracts</u>, and <u>prepare for the Annual General Meeting in Brussels in January 2018</u>.

<u>Trip purpose:</u> In San Francisco, meet with PREDICT Senior Management to discuss PREDICT Information Management concerns, progress and issues. In Davis, meet with the UCD global team to discuss USAID reporting, data extracts and prepare for the Annual General Meeting in Brussels in January 2018.

4. <u>Ecohealth Alliance</u> would like to request travel approval for <u>Dr. Leilani Francisco</u>, <u>Emily Hagan</u>, <u>Ava Sullivan</u>, <u>and Dr. Jon Epstein</u> to travel from <u>New York</u>, <u>NY</u>, <u>USA</u> to <u>New Delhi and Lucknow</u>, <u>India</u> from <u>December 2-9</u>, <u>2017</u> to conduct human surveillance site visits and additional training with the local PREDICT partners.

Trip Purpose: In their roles as Global Director of Behavioral Risk Surveillance for PREDICT-2, Behavioral Research Coordinator, PREDICT-2 EcoHealth Alliance Country Liaison to India, and Scientific Lead, respectively, Dr. Francisco, Ms. Hagan, Ms. Sullivan, and Dr. Epstein will be meeting with PREDICT implementing partners in India to lead in-depth planning sessions on project implementation, human sampling coordination, and behavioral research. During this trip, Dr. Francisco, Ms. Hagan, and Ms. Sullivan will provide support and further training in topics surrounding human sampling and behavioral risk to ensure the successful continuation of the human-focused components of the program. Dr. Epstein will support the trip in his capacity as Scientific Lead, providing technical assistance for laboratory work and protocols.

5. <u>EcoHealth Alliance</u> would like to request travel approval for <u>Dr. Leticia Gutiérrez Jiménez</u> to travel from <u>New York, NY, USA</u> to <u>New Delhi and Lucknow, India</u> from <u>December 1-23, 2017</u> to <u>conduct field site exploration, training and field sampling, and meet with the PREDICT-2 India team. \*Dr. Gutierrez-Jimenez will stay 1 night in New Delhi on both legs of her trip as part of her <u>connecting flights.</u></u>

<u>Trip purpose</u>: In Delhi, Dr. Gutiérrez-Jiménez will meet with PREDICT-2 India's Country Coordinator, Rajesh Bhatia, and in Lucknow will meet with implementing partners at Sanjay Gandhi Postgraduate Institute of Medical Sciences to coordinate surveillance activities. In Maharajganj, Uttar Pradesh, Dr. Gutiérrez-Jiménez will conduct disease ecology and wildlife surveillance training. She and PREDICT-2 India Field Coordinator, Debapriyo Chakraborty, will also carry out bat and rodent sampling.

Hello Katie,

Apologies, for the oversight. I was not in the office on Friday. I will send out concurrence shortly.

## Andrew, please approve the remaining travel requests.

Best,

Cassandra Louis Duthil
Program Assistant
Emerging Threats Division
U.S. Agency for International Development (USAID)

Telephone: 202-712-5583 Cell: 407-731-3155 | clouisduthil@usaid.gov

Hi Andrew,

I haven't seen a request for concurrence to the Tanzania mission, so not sure if Cassandra is out of the office. I've sent her a couple of follow-up emails regarding the status of this request, but have not heard back. As Benard's planned travel date is fast approaching, it's important that we receive mission concurrence ASAP.

I have also not seen concurrence requests for the Jennie Lane (Ethiopia) and Ohnmar Aung (Thailand) travel approved by you on November 10. Dr. Aung's travel is less time sensitive (for PMAC in late January), but Dr. Lane's travel is also scheduled for early December.

If Cassandra is currently unavailable, please let me know if there is an alternate contact I should coordinate with on requests for concurrence.

Thank you,

Katie

Please find below an international travel request for your review and approval. Please let me know if you have any questions. Thanks!

1. Ssebide (Tanzania): \$500 airfare/\$240 (Arusha) max daily per diem

Travel Request -

1. <u>UC Davis</u> would like to request travel approval for <u>Dr. Benard Ssebide</u> to travel from <u>Entebbe, Uganda</u> to <u>Arusha, Tanzania</u> from <u>December 5-9, 2017</u> to <u>participate in the Wildlife Disease Association (Africa – Middle East Section) Symposium.</u>

Trip purpose: The Wildlife Disease Association (WDA) Africa and Middle East Section (AME) has organized a WDA-AME Wildlife Disease Symposium as part of the 11<sup>th</sup> Tanzania Wildlife Research Institute (TAWIRI) Scientific Conference that will be held at the Arusha International Conference Centre in Arusha, Tanzania from December 6-8. The special WDA-AME Wildlife Symposium will be under the sub-theme: "Wildlife Diseases and Ecosystem Health", and the WDA-AME Wildlife Disease Symposium is entitled: "The role of Wildlife Health Professionals and the increasing trend of emerging and re-emerging diseases at the wildlife-livestock-human interface." The objectives of the symposium include mobilizing wildlife health professionals to proactively engage in investigation and outbreak responses of infectious diseases of wildlife origin; equipping wildlife health professionals with advances in one health approaches to disease investigation and outbreak responses. The objectives of this symposium will be important in enhancing Dr. Ssebide's knowledge and capacity for wildlife diseases surveillance under the PREDICT-2 project.

Subject: For JM review: Q1Y4 USAID Expenditure by Country/Category report (due 2/14/18)

Hi Jonna. The Q1Y4 Expenditure by Country/Category report for Andrew is attached for your review/approval. The Q4Y3 report is also attached for comparison purposes. Unfortunately, we're down \$1.76M overall from the previous quarter, with \$1.09M of this amount being core and \$670K being Ebola. I expect the delay in new subaward/subcontract approvals through the ceiling increase and the country transitions are the main cause of this drop in expenditures. The countries that dropped \$100K or more are listed below for your reference and potential follow up. Let me know if you have any questions. Thanks!

- China and Indonesia are down significantly (\$166K & \$153K, respectively) due to Metabiota pulling out of these countries.
- Liberia, Jordan, and Malaysia are down (\$171K, \$148K, & \$112K, respectively). Their services (subawards/subcontracts) billings were down \$230K in Liberia, \$138K in Jordan, and \$98K in Malaysia, while the rest of their expenses were consistent or went up a bit. The cause is likely either irregular billings from their consultants and in-country partners (an ongoing issue), cash-flow limitations due to late invoice payments, or both.
- DRC decreased \$100K primarily due to a drop in Metabiota's billings (\$70K) from the previous quarter. We also revised how we distributed global costs to reduce the allocation to DRC.
- Guinea is down \$134K. The Guinea field/lab supply and travel costs were down \$42K overall from last quarter, as we were pushing hard to spend at the end of the year to get our numbers up. The VHF subaward also took some time to get online. The wire transfer was probably delayed due to the staffing transition, and there is usually a delay in getting financial reporting going after the first wire transfer is received.
- Senegal is down \$134K. One-time equipment purchases (\$42K total), lots of travel before Corina went on maternity leave, and large supply purchases resulted in the Q4Y3 being quite high at \$358K. \$224K isn't too bad, though there is room for improvement. Delays in wire transfer and/or subaward amendments due to the staffing transition may have played a role.
- Tanzania is down \$156K. SUA had a big billing in September (\$90K), then their expenses dropped back down to \$10-15K. Domestic travel, supply, and personnel costs dropped markedly from the previous guarter, as well. \$280K is still respectable.
- Vietnam is down \$200K, most likely due to delays in sub approvals through the ceiling increase and the delay in obligating Y4 funds.

Subject: RE: For JM review: Q1Y4 USAID Expenditure by Country/Category report (due 2/14/18)

**Sent:** Wed, 14 Feb 2018 16:59:46 +0000

Sounds like a plan. I'll send you a summary of the January expenditures once I have all of the invoices in.

Thanks, Liz

Subject: Re: For JM review: Q1Y4 USAID Expenditure by Country/Category report (due 2/14/18)

Well, that really sucks -- I'll call Peter about the EHA activities and billings.

If there is something to report, I'll call Andrew.

Nothing we can do about this one, but we'll need to keep on top of billings monthly this quarter to avoid next quarter ending up at this level without time to fix it.

Thanks,

J

On Tue, Feb 13, 2018 at 7:50 PM, Elizabeth Leasure < ealeasure@ucdavis.edu > wrote:

Hi Jonna. The Q1Y4 Expenditure by Country/Category report for Andrew is attached for your review/approval. The Q4Y3 report is also attached for comparison purposes. Unfortunately, we're down \$1.76M overall from the previous quarter, with \$1.09M of this amount being core and \$670K being Ebola. I expect the delay in new subaward/subcontract approvals through the ceiling increase and the country transitions are the main cause of this drop in expenditures. The countries that dropped \$100K or more are listed below for your reference and potential follow up. Let me know if you have any questions. Thanks!

- China and Indonesia are down significantly (\$166K & \$153K, respectively) due to Metabiota pulling out of these countries.
- Liberia, Jordan, and Malaysia are down (\$171K, \$148K, & \$112K, respectively). Their services (subawards/subcontracts) billings were down \$230K in Liberia, \$138K in Jordan, and \$98K in Malaysia, while the rest of their expenses were consistent or went up a bit. The cause is likely either irregular billings from their consultants and incountry partners (an ongoing issue), cash-flow limitations due to late invoice payments, or both.
- DRC decreased \$100K primarily due to a drop in Metabiota's billings (\$70K) from the previous quarter. We also revised how we distributed global costs to reduce the allocation to DRC.
- Guinea is down \$134K. The Guinea field/lab supply and travel costs were down \$42K overall from last quarter, as we were pushing hard to spend at the end of the year to get our numbers up. The VHF subaward also took some time to get

online. The wire transfer was probably delayed due to the staffing transition, and there is usually a delay in getting financial reporting going after the first wire transfer is received.

- Senegal is down \$134K. One-time equipment purchases (\$42K total), lots of travel before Corina went on maternity leave, and large supply purchases resulted in the Q4Y3 being quite high at \$358K. \$224K isn't too bad, though there is room for improvement. Delays in wire transfer and/or subaward amendments due to the staffing transition may have played a role.
- Tanzania is down \$156K. SUA had a big billing in September (\$90K), then their expenses dropped back down to \$10-15K. Domestic travel, supply, and personnel costs dropped markedly from the previous quarter, as well. \$280K is still respectable.
- Vietnam is down \$200K, most likely due to delays in sub approvals through the ceiling increase and the delay in obligating Y4 funds.

# **Ambitious Global Virome Project Could Mark**

## End of Pandemic Era

By Kat Kerlin on February 22, 2018, in Human & Animal Health

Rather than wait for viruses like Ebola, SARS and Zika to

# **Quick Summary**

become outbreaks Global Virome Project to dramatically scale up PREDICT's efforts and accelerate viral discoveries

that force the world to

Most recent pandemics began when disease was transmitted from animals to humans

react, a new

1.6 million viral species are yet to be discovered in animal populations

global initiative seeks to proactively identify,

Of those, up to 840,000 likely have capacity to cause disease in humans

prepare for and stop viral threats before they become pandemics.

The Global Virome Project, described in an article of the same name to be published Feb. 23 in the journal Science, is an international partnership to identify and halt the spread of the majority of the planet's unknown viruses. Such an approach could mark the end of the "Pandemic Era," the authors say.

"We now have the ability to understand viral threats before they cause outbreaks," said Dr. Jonna Mazet, the paper's anchor author and Executive Director of the One Health Institute at the University of California, Davis, School of Veterinary Medicine. "It is time to move from reactionary mode, chasing the last horrible virus, to a proactive one. We can and will finally be able to identify future threats and take the steps necessary to prevent the next pandemic."

# 1.6 million viral species yet to be discovered

Most recent pandemics have animal origins, where diseases are transmitted from animals to people. The paper says an estimated 1.6 million viral species are yet to be discovered in mammal and bird populations. Of those, an estimated 650,000 to 840,000 have the capacity to infect and cause disease in humans.

Finding most of them is an ambitious but reachable goal. The proof of concept was validated through USAID's **PREDICT** program, which has found more than 1,000 unique viruses in animals and humans. This viral discovery program is led by the UC Davis One Health Institute and directed by Mazet. Having operated in more than 35 countries. PREDICT focuses on high-risk areas, where people and wildlife share changing landscapes and increasing pathogen transmission risks.

The Global Virome Project is designed to dramatically scale up PREDICT's efforts and accelerate viral discoveries.

"As the Global Virome Project builds up a picture of every virus's ecologic profile -- which species it infects, where on the planet it's found, which communities and their livestock are exposed to it -- we can target our vaccines and drugs to the people on the front line of the next emerging disease," said lead author Dr. Dennis Carroll, director of USAID's Emerging Threats Program in the Bureau for Global Health.

# Prevention less costly than reaction

Preventing outbreaks can cost less than reacting to one. For instance, the global economic impacts of the 2003 SARS epidemic was an estimated \$10 billion to \$30 billion. Yet, the cost of identifying the viruses in advance and preparing for them remains a significant challenge.

The Global Virome Project estimates that discovering most of the remaining viral threats and characterizing their risk of spillover would cost less than 10 percent of responding to just one major outbreak, like the West African Ebola epidemic.

The authors compare the effort to the Human Genome Project in the 1980s, which led to new technologies that ushered in an era of personalized genomics and precision medicine. Similarly, the Global Virome Project could spur development of pathogen discovery technologies, provide a wealth of publicly accessible data and lead to unanticipated discoveries, perhaps viruses that cause cancers, mental health or behavioral disorders. It could also greatly improve the ability to identify vulnerable populations and prevent global pandemics.

## International effort

The idea for the Global Virome Project <u>began in 2016</u> when stakeholders from Asia, Africa, the Americas and Europe spanning industry, academia, intergovernmental agencies, nongovernmental organizations and the private sector began to design a framework for the project. Fieldwork in China and Thailand is expected to begin this year.

"I'm incredibly excited to be working with like-minded scientists and policy-makers from around the world, who are fed up with our inability to predict the next strain of deadly viruses," Mazet said. "We are ready to work together to stop the current vicious disease cycle and identify and stop viral threats at their sources."

The paper's authors come from leading institutions of the initiative. Lead author is USAID Director Dennis Carroll. Co-authors, in addition to Mazet, include Peter Daszak from EcoHealth Alliance; Nathan Wolfe from Metabiota; George Fu Gao from the Chinese Academy of Sciences; Carlos Morel of the Brazilian National Institute of Science and Technology for Innovation in Neglected Diseases; Subhash Morzaria from the Food and Agriculture Organization of the United Nations; Ariel Pablos-Mendez from Columbia University Medical Center; and Oyewale Tomoro of the World Academy of Sciences, Nigerian Academy of Sciences and University of Lagos.

Subject: PREDICT International Travel Requests

Please find below international travel requests for your review and approval. Please let me know if you have any questions. Thanks!

- 1. O'Rourke, Edison (USA): \$579 each airfare/\$234 (Napa) max daily per diem
- 2. Lange (USA): \$579 airfare/\$350 (San Francisco), \$234 (Napa) max daily per diems
- 3. Chmura (China): \$2531 airfare/\$402 (Shanghai), \$262 (Dali), \$377 (Beijing), \$415 (Guangzhou) max daily per diems
- 4. Kelly (Ghana): \$2000 airfare/\$331 (Accra) max daily per diem
- Gutierrez-Jimenez (United Kingdom, India): \$2,800 airfare/\$522 (London), \$291 (Other), \$400 (New Delhi) max daily per diems

#### Travel Requests -

Metabiota would like to request travel approval for <u>Tammie O'Rourke and Beth Edison</u> to travel from <u>Nanaimo</u>, <u>British Columbia</u>, <u>Canada</u> to <u>Napa</u>, <u>California</u>, <u>USA</u> from <u>April 9 - 12</u>, <u>2018</u> to <u>attend the PREDICT 2 semi-annual meeting</u>.

<u>Trip purpose:</u> To meet with PREDICT- 2 consortium members for the Semi-Annual Meeting on April 10 and 11.

Metabiota would like to request travel approval for <u>Dr. Christian Lange</u> to travel from <u>Kiev, Ukraine</u> to <u>San Francisco, California, USA</u> from <u>April 7-9, 2018</u> to <u>meet with Metabiota PREDICT Senior</u>
 <u>Management on April 8.</u> From <u>San Francisco, California, USA</u> he will travel to <u>Napa, California, USA</u> from April 9-12, 2018 to attend the PREDICT-2 Semi Annual meeting.

**Trip purpose:** In San Francisco, Dr. Lange will meet with Metabiota PREDICT Senior Management to discuss PREDICT concerns, progress and issues. In Napa, Dr. Lange will meet with the PREDICT-2 consortium at the Semi-Annual meeting on April 10 and 11, 2018. \*Dr. Lange will be travelling from Ukraine as he will be travelling there for a different project. After the Semi-Annual meeting, he will travel back to Nanaimo, Canada. Travel costs will be split between the two programs.

3. <u>EcoHealth Alliance</u> would like to request travel approval for <u>Mr. Aleksei Chmura</u> to travel from <u>New York, New York, USA</u> to <u>Shanghai, Dali, Beijing, and Guangzhou, China</u> from <u>April 16 to May 18, 2018</u> for <u>meetings with in-country partners, field work, behavioral surveillance, and site selection work.</u>

<u>Trip purpose</u>: Mr. Aleksei Chmura will meet with PREDICT-2 Field Coordinator, Dr. Guangjian Zhu, in Shanghai for PREDICT-2 Y4 wildlife sampling operation discussion, and visit PREDICT sites in Yunnan province (Dali), meeting with local partner from Yunnan Institute of Endemic Diseases Control and Prevention for community human surveillance. Mr. Chmura will also meet with new lab partner in Beijing at the Institute of Microbiology, Chinese Academy of Sciences for Y4/Y5 laboratory testing planning, and meet with wildlife sampling field team in Guangzhou for Tyvek and other Biosafety refresh training.

4. <u>UC Davis</u> would like to request travel approval for <u>Dr. Terra Kelly</u> to travel from <u>Flagstaff, Arizona, USA</u> to <u>Accra, Ghana</u> from <u>April 21-27, 2018</u> for <u>meetings and training with in-country partners</u>.

<u>Trip purpose</u>: Dr. Kelly will be traveling to Accra to meet with PREDICT implementing partners. Dr. Kelly will also be conducting training for PREDICT laboratory personnel on data entry and management in the EIDITH database and PCR product/sample shipping.

5. EcoHealth Alliance would like to request travel approval for <u>Dr. Leticia Gutiérrez-Jiménez</u> to travel from <u>New York</u>, <u>New York</u>, <u>USA</u> to <u>New Delhi and Lucknow</u>, <u>India</u> from <u>April 23 to May 31, 2018</u> to conduct field site exploration, training and field sampling, and meet with the <u>PREDICT-2 India team</u>. \*Dr. Gutierrez-Jimenez will stay 1 night in <u>London</u>, <u>United Kingdom</u> and <u>New Delhi</u>, <u>India</u> on both legs

#### of her trip as part of her connecting flights.

<u>Trip purpose:</u> In New Delhi, Dr. Gutierrez-Jimenez will meet with Country Coordinator, Dr. Rajesh Bhatia. In Lucknow, she will meet with PREDICT-2 India's Field Coordinator, Dr. Debapriyo Chakraborty, and with implementing partners at Sanjay Gandhi Postgraduate Institute of Medical Sciences to coordinate concurrent surveillance activities. In Maharajganj, Uttar Pradesh, Dr. Gutiérrez-Jiménez will conduct wildlife surveillance and disease ecology training. She and PREDICT-2 India Field Coordinator, Debapriyo Chakraborty, will carry out bat, rodent and non-human primate sampling.

Subject: [predict] Re: GENTLE REMINDER: Deadline GHSA/EPT-2 FY2018 Reporting (Guidance and Template)

#### Hi David,

Thanks for letting us know you've received this request from the Cameroon Mission. Missions are taking more control of their reporting, so I wondered if this would be the case for centrally managed awards. It's up to the AOR management team if they want to receive it first centrally before sending out to the field as we have done in the past. I know Andrew is on leave, but maybe others could like to weigh in?

We could treat it the way we do workplans where the reports are worked on together but ultimately submitted to Washington, but I think continuing the way we have been is fine as well. The Mission would understand if the AOR team wants to vet the reports before sending to the field. But a decision should come From the AOR team.

Hi Andrew and Mandy,

Just wanted to share that the Embassy in Cameroon is expecting the ghsa report on the same deadline as you all in DC. We typically pass through to you first so would appreciate your guidance on this request. We are happy to share the Cameroon report with the mission when we submit to you, but also do not want to overstep or violate your protocol violate

So far this is the only mission I have seen the request from.

Thanks in advance for your guidance,

David

To: David Wolking < djwolking@ucdavis.edu>

#### Hi David.

Moctar was in touch in February about the local mission providing a deadline for the GHSA report. It looks like they are still expecting it. I'm not sure that we will want to share it locally at the same time - as I assume DC sometimes makes some edits and may want to control distribution.

Do you want us to share the final version, or do you want to ask DC to reach out to the local mission about it?

thanks!
Beth

Thanks Moctar

As the embassy deadline is the same as the deadline for UCDavis to submit to USAID we need to make sure that David sends us the submitted version when he submits to USAID so that you can also submit to the embassy the same day or early next morning.

Thanks for sharing Moctar,

We received the same from the GHSA team in Washington. We will be reporting using our traditional mechanism first to HQ in Davis and then onwards as a unified consortium packet to USAID/Washington. As we draw nearer the report deadline I will be in touch with instructions and our own internal deadlines.

Best,

David

Subject: PREDICT International Travel Requests

Please find below international travel requests for your review and approval. Please let me know if you have any questions. Thanks!

- 1. Leasure, Chale (Tanzania, Ethiopia): \$2500 airfare/\$309 (Dar es Salaam), \$197 (Morogoro), \$400 (Addis Ababa) max daily per diems
- 2. McIver (Laos): \$300 airfare/\$212 (Vientiane) max daily per diem
- Li (China): \$2525 airfare/\$377 (Beijing), \$262 (Kunming), \$415 (Guangzhou) max daily per diems

#### Travel Requests -

UC Davis would like to request travel approval for Elizabeth Leasure and Hannah Chale to travel from Sacramento, CA, USA to Dar es Salaam and Morogoro, Tanzania from May 23-May 30, 2018 (Leasure) and May 25-30, 2018 (Chale) and to Addis Ababa, Ethiopia from May 31-June 2, 2018 for meetings with in-country partners and to conduct on-site subrecipient reviews.

<u>Trip purpose:</u> Ms. Leasure and Ms. Chale will meet with in-country partner staff at Sokoine University of Agriculture (SUA) and Ifakara Health Institute (IHI) in Tanzania and Addis Ababa University in Ethiopia regarding administrative and financial management procedures and to conduct a review of internal controls and financial records. On-site reviews are a critical component of UC Davis's subrecipient monitoring plan, which was developed to ensure adequate oversight and compliance with all applicable regulations. SUA, IHI, and AAU are partners with UC Davis on multiple projects, and costs will be split between projects, as appropriate. \*Please note that Ms. Leasure will undertake personal travel from May 25-27 while in Tanzania; no costs associated with this travel will be billed to project funds.

2. <u>Metabiota</u> would like to request travel approval for <u>Dr. David McIver</u>, PREDICT Epidemiologist, to travel from <u>Bangkok</u>, <u>Thailand</u> to <u>Vientiane</u>, <u>Lao PDR</u> from <u>June 1-8</u>, <u>2018</u> to <u>meet with the in-country team</u>, <u>assess ongoing human surveillance activities</u>, and help coordinate ongoing laboratory activities.

<u>Trip purpose:</u> While in Lao PDR, Dr. McIver will meet with in-country PREDICT team members, assess ongoing human surveillance activities, and help coordinate ongoing laboratory activities at both the National Animal Health Laboratory and the National Center for Laboratory and Epidemiology.

 EcoHealth Alliance would like to request travel approval for Hongying Li to travel from New York, NY, USA to Beijing, Kunming, and Guangzhou, China from June 4-21, 2018 for field coordination work and meetings with in-country partners in China.

<u>Trip purpose:</u> Hongying Li will meet with country field coordinator, Dr. Guangjian Zhu, in Yunnan and Guangzhou provinces to assist with fieldwork. She will also meet with PREDICT lab partners in Beijing to follow-up with lab testing.

# China to help ID unknown lethal viruses

Quarantine workers at Qingdao airport in Shandong province test samples for the Ebola virus on Aug 11, 2014.[Xie Hao/For China Daily]

Global effort aims to find disease vectors that can jump from animals to humans

China will help lead a project to identify unknown viruses from wildlife to better prepare humans for major epidemics – if not global pandemics. The project is to be launched this year, according to one of the country's top health officials.

The Global Virome Project will start in China and Thailand with field work to collect samples from wild animals and analyze the viruses detected, said Gao Fu, head of the Chinese Center for Disease Control and Prevention.

"Scientists will collect virus samples from animals such as bats and rats for study using techniques like next generation (DNA) sequencing to find whether new viruses exist," he said.

The project, estimated to cost up to \$1.2 billion, is expected to take 10 years and involves many countries including the United States, Brazil and Nigeria.

Through more intensive and extensive study of viruses from animals that could infect humans, it may be possible to deal with viruses using preemptive controls and prevention instead of passive, reactive measures, Gao said.

"We all know there are almost certainly new viruses that could cause the next global pandemic, but based on the existing early warning capacity for diseases, we do not know, for example, which virus will cause an epidemic," Gao said.

"We are sure that new virus strains will appear in the future along with changes in our ecology, environment and human behaviors."

For instance, humans' abuse of antibiotics has lead to the potential development of superbugs.

"There are many viruses living in wild animals, so we can identify viruses and thoroughly study those that could pass to humans," Gao said. "Ideally we can develop vaccines and a diagnosis for such viruses even before they cause human epidemics."

It is known that 263 viruses can infect humans, but scientists estimate there may be more than half a million viruses that live in birds and mammals and that are unknown to humans that may be capable of infecting humans, and they are the primary subject of the project's research, Gao said.

Even if a large number of such unknown viruses are identified, it is possible that just a small fraction of them have the ability to cause major epidemics that cause human deaths, he said.

However, considering the huge cost of a major epidemic like SARS to human health and economies, the findings of the project still have the potential to greatly reduce losses through improved early diagnosis and identification of hosts vulnerable to a new virus after an outbreak, according to Gao.

A similar project carried out by the US Agency for International Development proved the feasibility of the Global Virome Project and provides helpful experience, he said.

The USAID project, known as Predict and launched in 2009, with China a participant, led to findings of more than 1,000 viruses previously unknown to humans. The project cost was over \$170 million, he said.

Some of the technologies used for that project have proved reliable and economically affordable and can be used for the Global Virome Project, Gao said.

Thanks for the information and questions. We didn't specifically address them on EB call, but they will need to go into this year's workplan. Hopefully, Tammie already did that for the IM section, but we will double check.

On Mon, Jul 9, 2018 at 12:31 PM, Eddy Rubin <erubin@metabiota.com> wrote:

Hi Jonna,

First of all hope that you are having a good summer so far.

Attached is a document that Tammie put together concerning options for maintenance of PREDICT data after PREDICT 2 ends. We can discuss this on the call we have scheduled for this Wednesday morning.

Some of Tammie's questions about the conclusion of PREDICT 2 include:

- how long will we be accepting data from the countries? End of PREDICT or hard deadline?
- how long will we be producing government reports?
- We expect that there will be some data cleaning efforts, would that be after all data is in
- Does the Geneious server needs to be kept active beyond the end of the project?

Best

Eddy and Karen

ps On a separate but related topic I sent the description of a GVP data platform to the GVP core group a while back. It could be used to as the GVP contemplates beginning generating data China and Thailand. "Working with the EIDITH Team we have developed the attached high-level description of a GVP information management system (GIMS). GIMS is based on what has already been developed for EIDITH and is to provide the members of the Global Virome Project as a starting point a safe and secure way to store and share data generated by GVP surveillance and lab activities. GIMS would provide a data warehouse to store the data and would include 5 main functions: account creation and maintenance, data entry & upload, data extracts & reporting, and data sharing. Within this document is a description of the a GVP Lab Module. Also attached is a data dictionary that includes potential data fields for inclusion. While this was shaped generically it could be targeted toward the specific needs and interactions with initial countries such as Thailand and China. (FYI, I have also attached budget information that was developed and shared a while back to support getting started with development and implementation of the described systems.)

Any input/ suggestions appreciated"

Best,

Eddy

Hi Anchalee,

The PREDICT2 Year 5 workplans have been shared with UC Davis and will soon be sent to the AOR (Andrew Clements) for final approval. We have been instructed that this is the direction in which USAID preferred to handle the work plan submission and approvals. With that being said, we would be more than happy to set up a meeting to discuss plans for year 5, and do our best to incorporate any suggestions.

Will anyone from RDMA be in Vientiane in the near future? If so, Ko would easily be able to sit down and have a discussion about the plan that we have submitted. Or, we could have a phone call if that works better.

Thanks very much, Dave

Thanks, J

On Wed, Aug 8, 2018 at 3:24 PM, Elizabeth Leasure <ealeasure@ucdavis.edu> wrote:

Hi Jonna. In reviewing EHA Global budget for Y4 and for Y5 (see detail attached), I found that the primary reasons for the increase from last year are additional personnel costs (\$220K), All Country meeting travel for EHA folks (\$69K), and acquisition of AMR datasets (\$50K). Everyone got a 5% increase from Y4, and LOE for Carlos and Allison White went up significantly from last year. Peter's LOE didn't change, but his compensation increased by 24% from last year.

David doesn't think the AMR datasets acquisition relates to anything in the Global workplan, so that is likely an easy cut unless you think otherwise.

Thanks,

Liz

Subject: [predict] For JM Review: Y5 PREDICT Budget

Hi Jonna. A draft of the Y5 budget and an updated GHSA budget picture workbook are attached and on Box (see link below) ready for your review. Partner-specific budgets for EHA, Metabiota, WCS, and SI are also on Box in separate folders along with other pertinent informational files, such as a Y4/Y5 comparison by country (for EHA and MB only), responses to questions and clarifications, etc. Right now the budget is setup to include projected carryover, which I think is the easiest way to structure it so it best aligns with the workplan and facilitates a quick and easy review. Given that carryover is integral to our Y5 budget, I think it would be

in our best interest to include the carryover (clearly identified) in the budget we provide to Andrew. I will, of course, do whatever you think best, so please let me know your thoughts on the matter after you have had a chance to review the budget in its current form.

https://ucdavis.box.com/s/hijfmw68g7lauwh8i3hta3pvibc6705b

Please note that I have not yet had a chance to finish my LOP review of cost share targets by partner, so there is currently no target for cost share included in the Y5 budget draft. The proposed cost share commitments are included in the budget, but I haven't yet confirmed that each partner's Y5 commitment gets them where we need them to be relative to previous years' commitments. I'll work on this tomorrow and let you know if there are any issues with the current amounts budgeted.

#### Some key points to keep in mind as you review:

- When asked to cut the CDI and Liberia budgets, EHA requested to reduce their Global costs by the same amount in order to keep their CDI and Liberia budgets as high as possible. I went ahead and allowed them to do it, as I felt that not to do so would be going against the guidance we have consistently given them (and others) to keep Global costs low and focus on in-country needs. As a result, the CDI and Liberia budgets are higher than the figures we used when developing the revised caps. I've already advised them that additional changes may be needed after then next phase of review, so they are prepared to be asked to revise, as needed.
- When reviewing the Y4/Y5 comparison for EHA, you will see that their Global budget has increased by \$460K from last year. My suggestion is to ask them to cut their Global budget back down to their Y4 figure (or close to it) and put that money towards UCD Dx, which is currently only budgeted at \$545K.
- There are several EHA countries (China and Jon's countries primarily) where EHA is budgeting for continued sampling in Y5. I advised them that it was my understanding that sampling should be concluded by the end of Y4, but that they could provide additional justification to have these costs/activities considered for Y5, as I didn't feel it was my place to make that decision. So, in the EHA-specific budget workbook, you will see text boxes in some countries that include the additional justification provided by EHA.
- Dx needs for Y5 (and covered only by core funds) include:
  - o Testing of 300 extracted human and 100 raw wildlife samples to be shipped to UCD from Rwanda plus sequencing of PCR products (estimated at \$15K)
  - o Testing of 1,000 samples from DRC (estimated at \$29K)
  - o Purchase of testing/lab supplies for Ethiopia (\$65K).
  - o Cloning and sequencing for Nepal samples are to be done at UCD, but I don't have a number of samples or an approximate cost yet. I spoke with Tracey today, but she wasn't able to provide any additional information on the estimated cost for this.
  - o Testing costs for Guinea and Sierra Leone, which are not included in the VHF or UNIMAK budgets. Total number of samples left to collect in Y4/test in Y5 not yet know. I asked Tracey, but she indicated she needs to follow up with Brian and Corina on this.
- Brian also indicated that the UNIMAK budget could potentially be trimmed back if needed, as he budgeted for UNIMAK irrespective of the DARPA award that will start 10/1/18. Some current staff/other

costs will be moved to DARPA once the subaward is in place, so those freed up funds could be reallocated to other countries or testing, as needed.

Note that the PREDICT LOEs budgeted for me, Brian, and David account for our budgeted time on DARPA starting 10/1. I noted this in the budget workbook on the UCD Personnel tab for your reference.

I think I have covered the key points above, but let me know if you have any questions. Happy reviewing!

Thanks,

Liz

ThNks for exploring — either mechanism will probably be fine. Cool to figure out the IOC, though. Have a good weekend,

On Fri, Aug 31, 2018 at 1:59 PM Elizabeth Leasure < ealeasure@ucdavis.edu > wrote:

Hi Jonna. We'll need to setup a multi-campus agreement (which would require AOR approval) to transfer funds to UCSF. A basic interlocation fund transfer cannot be used with Extramural funds, unfortunately. Only Andrew would need to approve, so we could most likely turn it around quickly if we have to. With an MCA, UCD will not take any indirects on the first \$25K, but UCSF will be able to bill full indirects at their negotiated rate.

Another possibility is an Intercampus Order/Charge (IOC) document to reimburse UCSF for costs incurred, which would require UCSF to basically "invoice" us monthly or semi-monthly for payment. I've only used this type of document for supplies and travel previously, so I'll need to confirm whether or not this document can be used for payroll costs. I don't see anything indicating using an IOC to reimburse payroll costs is restricted, but it's probably best to confirm. I'll also need to confirm with Nikki whether or not there are any restrictions on the use of a sponsored account an IOC document. With this mechanism, UCD will take full indirects on all reimbursed costs, but UCSF will not be able to claim any.

We can discuss more next week, and hopefully I'll have more information at that point. Have a great weekend!

Thanks,

Liz

Subject: Re: Benefit-cost analysis of the Global Virome Project

Thanks to you both. That all makes sense to me. Only potential change is adding a bit of budget for one or two trips or parts of trips to China, per our other email chain, Dean.

I am looping in Liz Leasure, who is our financial and contractural guru here. She is aware of the general idea, but I will also get with her to solidify mechanisms from our end. We will likely just need a paragraph or so describing the scope of work that we can get from Ben and Nita, as well as a budget for salary and travel. Should be super straight forward.

Have a nice day,

Jonna

On Wed, Aug 29, 2018 at 3:09 PM Dean Jamison < djamison@uw.edu> wrote:

Thanks, Colin

Jonna, what I have been thinking about — but this could certainly change as you develop budget with Ben and Nita — is about 2 days per month for 12 months or 10% time. I would see a little over half of this in SF with 1 trip to NY and/or DC. The rest would be at home. It would probably be simplest for Matt to manage my travel at UCSF. For initial budgeting I would think of 8 round trips, Palm Springs - SF and one rt PS to DC. 2 nights each for the SF travel and 3 nights for DC. Maybe Matt and one of your staff could develop a budget and agreement on that basis but we could slot different numbers in before finalizing if that seems to make sense?

Copying Ben and Nita for their views on whether this seems about right, too much or enough.

**Best**

> Dennis Carrol at USAID is commissioning a BCA of the Global Virome Project. This will be funded through USAID PREDICT at Jonna's institute at UCD. I will be involved on the economics side. Several staff of Metabiota who were responsible for the DCP3 pandemics chapter will be involved on the modeling side. There will be others (although the project is modest) involved on the scientific side, hopefully including Jonna, which would be particularly convenient in light of of her forthcoming sabbatical with IGHS.

>

> Jonna tells me that inter-campus funds transfer is relatively easy and that UCD could send the money to cover my involvement to UCSF. What I envision would be a funds transfer in two parts. One would cover XX% of my time from October through December. The other would cover YY% of my time from January 1 through September 31, 2019. I expect the money required for my travel on the project would also be transferred to UCSF.

Please find below international travel requests for your review and approval. Please let me know if you have any questions. Thanks!

- 1. Karesh, Machalaba, Carlin: \$1500 airfare each (Economy)/\$6500 airfare (Business)\*business class required for Dr. Karesh due to REDACTED \$387 (Sydney) max daily per diem
- 2. Smith (Ethiopia, Uganda): \$3500 airfare/\$400 (Addis Ababa), \$245 (Entebbe) max daily per diems
- 3. Fine (USA): \$1700 airfare, \$100 train fare/\$241 (Philadelphia) max daily per diem \*M&IE while traveling between Viet Nam and the USA estimated at \$50/day X 2; total = \$100.

Travel Requests -

1. <u>EcoHealth Alliance</u> would like to request travel approval for <u>Dr. William Karesh and Ms. Catherine Machalaba, and Dr. Ellen Carlin</u> to travel from <u>New York, NY, USA</u> to <u>Sydney, Australia</u> from <u>June 16-22, 2019</u> to <u>participate in the 2019 Global</u> Health Security Conference.

<u>Trip purpose:</u> Participants will attend the inaugural Global Health Security conference which aims to bring together stakeholders working in global health security to measure progress, determine gaps, and identify new opportunities to enhance national, regional and global health security as well as provide a venue for government officials and International Organizations to share policy developments, hear from the research community, and create a space for side meetings that advance the health security agenda.

Each individual named above will be presenting. Dr. Karesh will present on "Integrating environment for global health security gains" to deliver findings of USAID EPT Programs of risk factors of disease emergence including existing gaps in developing countries policy framework. He will illustrate the One Health policy work generated by PREDICT 2, such as the One Health economic work.

Ms. Machalaba will present on "One Health economics to inform investments in zoonotic disease prevention and control" based on PREDICT 2 One Health economic work examining cost effectiveness of multi-sectoral strategies.

Dr. Carlin will present on an abstract co-authored by Dr. Dennis Carroll "Prevention through Recovery: Multisectoral Core Global Health Security Preparedness Needs", on findings of gaps in unmet core needs of global health security. The talk will highlight the importance of risk reduction in line with PREDICT 2. \*A portion of Dr. Carlin's conference registration will be covered on other funds.

2. <u>UC Davis</u> would like to request travel approval for <u>Dr. Woutrina Smith</u> to travel from <u>Davis</u>, <u>California</u>, <u>USA</u> to <u>Addis Ababa</u>, <u>Ethiopia</u> from <u>July 20-24</u>, <u>2019</u> and then on to <u>Kampala</u>, <u>Uganda</u> from <u>July 24-26</u>, <u>2019</u> for <u>meetings and training</u> <u>with the PREDICT Ethiopia teams</u>, as well as presenting <u>PREDICT Project findings and perspectives at an invited EPT OHCEA</u> plenary talk in Kampala on July 25, 2019.

Trip purpose: Dr. Smith is the PREDICT global Capacity Team and Ethiopia lead who works closely with country coordinators and

implementing teams on project planning. Her visit to Addis Ababa, Ethiopia will provide an opportunity to work with project teams on 2019 project wrap up tasks that maximize capacity strengthening activities in East Africa. In Kampala, Uganda, Dr. Smith will be speaking at the EPT annual One Health Central and Eastern Africa university network conference representing the PREDICT Project. \*A portion of the Ethiopia trip will also be to work on USAID Livestock Systems Innovation Lab REACH project activities, so travel costs will split between the two projects for the Ethiopia portion.

3. <u>Wildlife Conservation Society</u> would like to request travel approval for <u>Amanda Fine</u> to travel from <u>Hanoi, Viet Nam</u> to <u>Pennsylvania, PA, USA</u>, from <u>July 21 to August 10, 2019</u> for <u>Home Leave and meetings with PREDICT colleagues at the WCS Bronx Zoo headquarters.</u>

<u>Trip purpose:</u> Amanda Fine will travel to Philadelphia, Pennsylvania from July 21 to August 10 for Home Leave, with travel to New York for meetings with PREDICT colleagues at the WCS Bronx Zoo headquarters from July 23-25, to finalize details of PREDICT project close out in Viet Nam and Mongolia, and progress PREDICT manuscripts.

Subject: [predict] PREDICT International Travel Request - J. Ayukekbong to DRC May 18-30

Hi Andrew. Please find below an international travel request for your review and approval. Our apologies for the late submission of this request. The DRC Country Coordinator is recovering from illness and in need of additional support, as his Project Coordinator is going on leave for a month. Please let me know if you have any questions. Thanks!

1. Ayukekbong (DRC): \$2,147 airfare/\$394 (Kinshasa) max daily per diem

## Travel Request:

1. Metabiota would like to request travel approval for <u>Dr. James Ayukekbong, Central Africa Regional Coordinator</u>, to travel from <u>Nanaimo, British Columbia, Canada</u> to <u>Kinshasa, Democratic Republic of Congo</u> from <u>May 18-30, 2017</u> to <u>provide support to the Country Coordinator while the Project Coordinator is on leave, and provide onsite assistance regarding the Metabiota sample and data quality risk and corrective action plan.</u>

<u>Trip purpose</u>: Dr. Ayukekbong will provide support to Country Coordinator, Dr. Prime Mulembakani, while Project Coordinator, Dr. Placide Mbala, is on leave. Dr. Kamenga Asiley has been brought in to replace Dr. Mbala while he is on leave. Dr. Ayukekbong will provide orientation and intensive training to Dr. Asiley on his responsibilities and deliverables, and support the implementation of a supervision plan for Dr. Asiley. He will also provide onsite assistance regarding the Metabiota sample and data quality risk and corrective action plan.

Subject: Re: Bullets on what assistance PREDICT can provide in DRC

Thanks, Jonna.

We don't have any specific ideas on what might be requested or expected. I agree with you that DRC generally knows what to do and only usually needs a little assistance, so I don't expect you will have to do much (if this behaves like a normal outbreak).

However, I'm not above using the urgency of the situation to our advantage regarding the country cap impasse.

Andrew

On Fri, May 12, 2017 at 9:38 PM, Jonna Mazet < jkmazet@ucdavis.edu > wrote: Hi Andrew,

On the call, after you dropped off I think, I mentioned that we are currently spending above the existing cap in DRC and that those need to be fixed ASAP, especially if USAID will be asking us to expend more funds on another outbreak. The proposed new caps are estimated based on normal operations, not outbreak surge numbers in a particular country. We have a small amount of room for things on the order of PPE, but caps will not be sufficient if we are asked to scale-up, as in the YF situation. I have no idea how to estimate that, without more information for caps. Country level caps make planning for outbreak responses impossible unless you allocate fresh money with a cap change each time. As it is now, our outbreak funds are estimated and distributed across country budgets and caps because we never know in what country they will need to be used.

On your other question re using outbreak reserve or regular budget, I have no idea what anyone is thinking/requesting in terms of assistance, so I will contact Angela. The only pseudo request we have is for PPE on hand, which can be covered in our normal budget. Dennis and Angela have asked for bullets on how we can assist, which I have sent out to the team for ideas. Do you all have more info than I regarding necessary/appropriate assistance? From working with DRC on multiple Ebola outbreaks. our experience has been that they have good plans in place, are capable of the diagnosis and control plans (as evidenced by current progress), and are proactive when it comes to reducing travel/transport to control spread. Our most current information is that there are/were 9 sick people 19 days ago. Do you know that this is still an ongoing and/or escalating situation? Prime is currently completing a meeting at MOH, so he will let us know what is reasonable to offer in support from his end, as well.

More soon, I'm sure, Jonna

On Fri, May 12, 2017 at 11:17 AM, Andrew Clements <a clements@usaid.gov> wrote: Related to this, do you have DRC Ebola budget to cover any assistance requested or will you need to dip into the regular budget outbreak reserve?

And BTW, I may have suggested to others today that your ability to respond may be compromised by the existing country caps. Are the previously submitted country caps adjustments still valid or do you need to make some additional revisions. I've been asked to submit the revised cap numbers. Thanks!

Confirmed appropriateness of caps if keeping most/all countries active, as discussed on call -- short version of implications of \$4M out of \$11.9M for EHP coming to you tomorrow.

Running out of steam for the day,

On May 12, 2017, at 11:29 PM, Jonna Mazet < jkmazet@ucdavis.edu> wrote:

My best call on this is to leave DRC at \$6M. We estimated it at the top of the country caps. If we raise it again, we will have to decrease other country budgets with anticipated needs over the rest of the project. I would also find it reasonable to reduce CDI if there is an option to scaleout there. I didn't think that would be palatable, given in-country USAID staffing. I reduced that one already to just \$1M over the rest of the life of the project. Going down much further would mean leaving.

Best fairly-uninformed guess for this outbreak is that we can handle minor activities within the proposed \$6M cap, but I defer to your decision.

Fingers crossed,

J

On Fri, May 12, 2017 at 1:48 PM, Andrew Clements <aclements@usaid.gov> wrote:

Exactly, which is why I told people you may not be able to respond if asked because of the caps. A gentle reminder for them to do it. But the ball is back in our court because I need to provide them with budgets for current and future needs by country (for those countries where obligated funds are nearly expended). That's DRC for right now. I want to make sure we get the country cap information correct this time so we don't have to change it again.

On Fri, May 12, 2017 at 10:38 PM, Jonna Mazet <jkmazet@ucdavis.edu> wrote:

Very true! -- just don't know if we can/should spend even more acceleratedly without a cap conversation, since the close to \$1M YF DRC outbreak expenditure got us up to the cap. Not sure if there could now be an in-country expectation that we can foot a bill. Have a nice weekend, Jonna

<luciano@ecohealthalliance.org>, Ava Sullivan <sullivan@ecohealthalliance.org>

PREDICT-2 Budget Year 4 draft 7-28-17 EHA EHA revised August 18 revision final xlsx

Hi Liz and David,

Thanks for all your comments and the quick chat today. Attached please find our revised Year 4 budget based on your feedback and below bullets on what we modified:

- EHA HQ costs were reduced by \$193,529 (including salary, fringe, and indirect) by reducing time from Billy and Jon as well as our Modelling and Analytic Team (Kevin, Noam, and Anna's). Peter asked me to mention that he does not think this is ideal and he hopes this will not be a red flag for USAID, but we have done this specifically to reduce our Global and Administrative costs. He also wanted to assure you that all staff who have been reduced will remain engaged with PREDICT at the same level
- In-country testing budgets for RoC and CIV were increased by \$193,529 (amount of HQ reduction) (note that only salary from Billy and Jon previously allocated to Ebola Money was used in CIV)
- Bangladesh hospitals have been reduced to only two and the funds allocated to diagnostic costs in RoC
- Core funds being rolled over from Year 3, totaling \$232,194 are obligated to cover our sample testing costs in Bangladesh, China, and Egypt. These assays will be completed in Q1 of Year 4 (\$62,071 of Year 3 GVP funds will go towards planned salary & travel in Year 4)
- We project a rollover of \$804,193 in EHP funds. In terms of Year 3 costs, \$160,000 is earmarked for the 1,850 Liberia samples that have just arrived at Simon's lab (that's \$50/sample plus 60% overhead), and the rest will go to cover Year 4 costs
- IRB approval has already been obtained for India and will definitely be secured in Bangladesh before the start of Year 4
- RoC and Ivory Coast IRBs will be amended to transfer from Metabiota to EHA before Year 4 begins.
- Our team is developing the entry tool for the Malaysia human surveillance data, and the updated survey will be sent to CKJ next week.

Please let Aleksei and me know (cc to Evelyn and Ava) if there are any questions or if you'd like to talk through any details in the budget.

Best, Molly

Sent: Subject: RE: Year 4 revised budget

Hi Molly and Aleksei. Can one of you please confirm whether or not the budget you sent actually includes rollover funds? I haven't looked at it in detail (I'm working on that now), but it seems that your overall budget went up by \$90K from the 8/15 version submitted, and I had thought we discussed trying to reduce. Please clarify,

Thanks, Liz

Subject: Year 4 revised budget

Hi Liz and David,

Thanks for all your comments and the quick chat today. Attached please find our revised Year 4 budget based on your feedback and below bullets on what we modified:

- EHA HQ costs were reduced by \$193,529 (including salary, fringe, and indirect) by reducing time from Billy and Jon as well as our Modelling and Analytic Team (Kevin, Noam, and Anna's). Peter asked me to mention that he does not think this is ideal and he hopes this will not be a red flag for USAID, but we have done this specifically to reduce our Global and Administrative costs. He also wanted to assure you that all staff who have been reduced will remain engaged with PREDICT at the same level
- In-country testing budgets for RoC and CIV were increased by \$193,529 (amount of HQ reduction) (note that only salary from Billy and Jon previously allocated to Ebola Money was used in CIV)
- Bangladesh hospitals have been reduced to only two and the funds allocated to diagnostic costs in RoC
- Core funds being rolled over from Year 3, totaling \$232,194 are obligated to cover our sample testing costs in Bangladesh, China, and Egypt. These assays will be completed in Q1 of Year 4 (\$62,071 of Year 3 GVP funds will go towards planned salary & travel in Year 4)
- We project a rollover of \$804,193 in EHP funds. In terms of Year 3 costs, \$160,000 is earmarked for the 1,850 Liberia samples that have just arrived at Simon's lab (that's \$50/sample plus 60% overhead), and the rest will go to cover Year 4 costs
- IRB approval has already been obtained for India and will definitely be secured in Bangladesh before the start of Year 4
- RoC and Ivory Coast IRBs will be amended to transfer from Metabiota to EHA before Year 4 begins.
- Our team is developing the entry tool for the Malaysia human surveillance data, and the updated survey will be sent to CKJ next week.

Please let Aleksei and me know (cc to Evelyn and Ava) if there are any questions or if you'd like to talk through any details in the budget.

Best, Molly

Subject: Re: Year 4 revised budget

Hi David,

As we're still ironing out details with LANADA, \$50/sample was a rough estimate based on costs at Simon's lab and the amount of Ebola money we were able to reallocate from global staff salaries. You're right, it's not enough, so I've moved some things around in the Liberia budget so that we can increase to \$150/sample while keeping the overall Ebola-funded amount consistent with the last revision.

For Bangladesh, that was my error; I've added back in the Columbia University portion of the Bangladesh budget in the attached, which is where the additional macaque testing takes place. As for the low cost of testing the 2400 samples to be done at icddr,b (the remaining 1740 macaque samples will be done at Columbia), Mindy tells me that Zia is able to get a reduced bulk rate on reagents, which is why the cost per sample is so low. (I was able to reduce some costs in China in order to fund this).

Finally, the cost of testing in India is consistent with what USAID reviewed and approved when they approved our proposed subaward to Sanjay Gandhi, and our lead lab technician there has consistently said this is the cost of testing at his lab in discussions with Jon and Ava. Unfortunately Jon is not in the office today so I couldn't inquire as to why these costs are relatively low, but I can try to find out from him tomorrow when he's back. Harjeet (the lead lab technician at SG) has also provided us with a breakdown of this cost which we are happy to share with you.

Note that I also further increased the RoC testing costs in the attached.

All changes are highlighted in blue.

Best, Molly

Sorry for the delay, I'm just checking into a few things and will get back to you ASAP.

On Fri, Aug 25, 2017 at 5:35 PM, David J Wolking < <a href="mailto:djwolking@ucdavis.edu">djwolking@ucdavis.edu</a>> wrote: Hey Molly and team,

A few quick questions (I hope) on CIV, Bangladesh, and India budgets after finalizing the GHSA country briefs today.

For CIV it looks pretty good given plans, though I'm concerned that the \$50/specimen at LANADA is unrealistic for a lab in Africa (IPCI is listed as \$150/specimen for comparison; in TZ we go with a likely under budgeted rate of \$120/specimen). Any idea how that rate was generated?

For Bangladesh and India, it looks like viral testing costs for both countries are extremely low for the planned number of sites with the exception of IEDCR which now seems on target and justifiable.

Could you reach out to Jon for an explanation on how it is reasonable to expect PREDICT wildlife surveillance at 4 sites in Bangladesh (one of which an intensive macaque longitudinal site) to be adequately covered by a \$89K viral testing budget? With that many sites and taxa planned and using the extremely low estimate of \$32/sample for extraction and PCRs - this is half what it costs us at UC Davis) I'm getting a ballpark of \$140K (\$286K if using the UC Davis rate).

Likewise for India, the SPIPMS rate for testing is \$37/specimen and states that it only covers extraction and 2 PCRs. That would only allow for testing of one PREDICT viral family as most of our viral testing requires at least 2 PCR reactions to complete. If using the UCD rate the cost jumps to over \$300K for the planned work at all sites.

Nothing on Liberia at this time, I'm not an Ebola Host Project expert as the way sample testing is financed through CII and UCD throughs my methods out the window:-)

I'm sure I'll have questions on the other countries as well but we are prioritizing just the GHSA ones at this time.

Cheers and enjoy the weekend!

David

I see. Let me check in with Jon today.

Molly

On Mon, Aug 28, 2017 at 7:34 PM, David J Wolking < djwolking@ucdavis.edu > wrote:

Thanks Molly, this is sounding good, I'll take a look with fresh eyes tomorrow. On the SG testing costs, it looks like the budget line item for testing is 2 PCR reactions. I'm not surprised if \$37 covers extraction and 2 PCRs, just wondering if it is sufficient to cover costs for all five planned viral families (7 protocols in total and some of them nested PCR reactions which is a fancy way of saying lots of PCRs likely upwards of 10+). We might just want to check that all of that is factored in since our testing platform is so weird for most labs used to a specific pathogen costing exercise.

Cheers,

D

On Mon, Aug 28, 2017 at 2:08 PM, Molly Turner < <u>turner@ecohealthalliance.org</u>> wrote: Hi David,

As we're still ironing out details with LANADA, \$50/sample was a rough estimate based on costs at Simon's lab and the amount of Ebola money we were able to reallocate from global staff salaries. You're right, it's not enough, so I've moved some things around in the Liberia budget so that we can increase to \$150/sample while keeping the overall Ebola-funded amount consistent with the last revision.

For Bangladesh, that was my error; I've added back in the Columbia University portion of the Bangladesh budget in the attached, which is where the additional macaque testing takes place. As for the low cost of testing the 2400 samples to be done at icddr,b (the remaining 1740 macaque samples will be done at Columbia), Mindy tells me that Zia is able to get a reduced bulk rate on reagents, which is why the cost per sample is so low. (I was able to reduce some costs in China in order to fund this).

Finally, the cost of testing in India is consistent with what USAID reviewed and approved when they approved our proposed subaward to Sanjay Gandhi, and our lead lab technician there has consistently said this is the cost of testing at his lab in discussions with Jon and Ava. Unfortunately Jon is not in the office today so I couldn't inquire as to why these costs are relatively low, but I can try to find out from him tomorrow when he's back. Harjeet (the lead lab technician at SG) has also provided us with a breakdown of this cost which we are happy to share with you.

Note that I also further increased the RoC testing costs in the attached.

All changes are highlighted in blue.

Best, Molly

Sorry for the delay, I'm just checking into a few things and will get back to you ASAP.

On Fri, Aug 25, 2017 at 5:35 PM, David J Wolking < <a href="mailto:djwolking@ucdavis.edu">djwolking@ucdavis.edu</a>> wrote: Hey Molly and team,

A few quick questions (I hope) on CIV, Bangladesh, and India budgets after finalizing the GHSA country briefs today.

For CIV it looks pretty good given plans, though I'm concerned that the \$50/specimen at LANADA is unrealistic for a lab in Africa (IPCI is listed as \$150/specimen for comparison; in TZ we go with a likely under budgeted rate of \$120/specimen). Any idea how that rate was generated?

For Bangladesh and India, it looks like viral testing costs for both countries are extremely low for the planned number of sites with the exception of IEDCR which now seems on target and justifiable.

Could you reach out to Jon for an explanation on how it is reasonable to expect PREDICT wildlife surveillance at 4 sites in Bangladesh (one of which an intensive macaque longitudinal site) to be adequately covered by a \$89K viral testing budget? With that many sites and taxa planned and using the extremely low estimate of \$32/sample for extraction and PCRs - this is half what it costs us at UC Davis) I'm getting a ballpark of \$140K (\$286K if using the UC Davis rate).

Likewise for India, the SPIPMS rate for testing is \$37/specimen and states that it only covers extraction and 2 PCRs. That would only allow for testing of one PREDICT viral family as most of our viral testing requires at least 2 PCR reactions to complete. If using the UCD rate the cost jumps to over \$300K for the planned work at all sites.

Nothing on Liberia at this time, I'm not an Ebola Host Project expert as the way sample testing is financed through CII and UCD throughs my methods out the window:-)

I'm sure I'll have questions on the other countries as well but we are prioritizing just the GHSA ones at this time.

Cheers and enjoy the weekend!

David

On Fri, Aug 18, 2017 at 6:14 PM, Molly Turner < turner@ecohealthalliance.org wrote: Hi Liz and David,

Thanks for all your comments and the quick chat today. Attached please find our revised Year 4 budget based on your feedback and below bullets on what we modified:

- EHA HQ costs were reduced by \$193,529 (including salary, fringe, and indirect) by reducing time from Billy and Jon as well as our Modelling and Analytic Team (Kevin, Noam, and Anna's). Peter asked me to mention that he does not think this is ideal and he hopes this will not be a red flag for USAID, but we have done this specifically to reduce our Global and Administrative costs. He also wanted to assure you that all staff who have been reduced will remain engaged with PREDICT at the same level

- In-country testing budgets for RoC and CIV were increased by \$193,529 (amount of HQ reduction) (note that only salary from Billy and Jon previously allocated to Ebola Money was used in CIV)
- Bangladesh hospitals have been reduced to only two and the funds allocated to diagnostic costs in RoC
- Core funds being rolled over from Year 3, totaling \$232,194 are obligated to cover our sample testing costs in Bangladesh, China, and Egypt. These assays will be completed in Q1 of Year 4 (\$62,071 of Year 3 GVP funds will go towards planned salary & travel in Year 4)
- We project a rollover of \$804,193 in EHP funds. In terms of Year 3 costs, \$160,000 is earmarked for the 1,850 Liberia samples that have just arrived at Simon's lab (that's \$50/sample plus 60% overhead), and the rest will go to cover Year 4 costs
- IRB approval has already been obtained for India and will definitely be secured in Bangladesh before the start of Year 4
- RoC and Ivory Coast IRBs will be amended to transfer from Metabiota to EHA before Year 4 begins.
- Our team is developing the entry tool for the Malaysia human surveillance data, and the updated survey will be sent to CKJ next week.

Please let Aleksei and me know (cc to Evelyn and Ava) if there are any questions or if you'd like to talk through any details in the budget.

Best, Molly

**Sent:** Tue, 31 Oct 2017 16:04:25 +0000

Thank you Eddy and Hongying for the update.

This is great news.

# REDACTED

Fellow One Health Institute School of Veterinary Medicine University of California, Davis

From: Eddy Rubin [mailto REDACTED

Subject: Summary of October 24th /25th GVP meetings in Beijing.

#### Hi GVPers

Below is a summary, that Hongying and I put together, of the October 24th /25th GVP meetings in Beijing.

The skinny is: a) State Dept and Embassy science staff are well briefed on and very enthusiastic about GVP and its potential for something positive that China and US could do together. b) General view is that we do not want China to take a leadership role in isolation in fear of their reluctance to share data, c) They are looking for something to discuss when Trump meets with Xi later next months and as such this may be a very opportune time to elevate GVP's profile connected to GHSA, c) Need to get interagency engagement in GVP in addition to USAID (NIH, USDA, Commerce...), d) US China Ambassador, Terry Branstad has Trumps ear and he knows about GVP. e) The present US administration very receptive to anything that smells of commerce (support of GVP by tech companies' good) f) other countries, Australia, Norway... view GVP as a possible way to both contribute to GHSA as well as interface with China.

Eddy

# October 24, 2017

# **Arrival Evening Meeting at Beijing Marriott NW**

# Attendees:

Nancy Sung, Director of the US National Science Foundation, Head China Office

Miles Toder, Development Counselor, US Embassy

Eddy Rubin, Metabiota

Hongying Li, EcoHealth Alliance

## **Discussions:**

- Very enthusiastic about GVP and its potential for something positive that China and US could do together.
- Do not want China to take a leadership role in isolation as fear of their reluctance to share data

- Looking for something to discuss when Trump meets with Xi later next months. How the world's 2 largest economies could contribute to GHSA
- Need to get interagency engagement in GVP in addition to USAID (NIH, USDA, Commerce...)
- The present US administration very receptive to anything that smells of commerce. Support of GVP by tech companies' good
- The UC China Ambassador has Trumps ear.
- The Belt and Road Initiative has expanded to include GHSA issues
- Need to add to GVP pitch examples: Where PREDICT surveillance-detection-response info lead to changes in public health approaches. Best examples that we can find of specific insights connected to China (We may need to bend things but we do have examples)

# US Embassy, Beijing

October 25, 2017

# A) Meeting with the staff from other agencies with interest in GHSA and GVP Attendees:

Russell Harwood, Head of Development Cooperation, Australian Embassy Beijing Mads Friborg, Health Counselor, Royal Danish Embassy Jan Grythe, Development Counselor, Royal Norwegian Embassy Adrienne Fuentes, Health Attaché HHS, US Embassy Miles Toder, USAID Development Counselor, US Embassy Nancy Sung, Director of the US National Science Foundation China Office Sarah Ong, HHS US Embassy FDA, US Embassy Eddy Rubin, Metabiota Hongying Li, EcoHealth Alliance

# **Discussions:**

The US as well as others (Norway, Denmark Australia) should get involved in the GVP because

- It's an opportunity for engagement with China
- There is a concern about data sharing and access if only China takes the lead
- It could have economic/commercial impacts for the US companies in China
- Science is a good way to collaborate with China

# Opportunities:

- Australian Government call for research under the Indo-Pacific Center for Health Security

  Australia's new investment in health security
- **25-27 October 2017 Kampala, Uganda**: 4th High Level GHSA Ministerial Meeting People are trying to do something difference, wait to see the plan for the next 5 years' GHSA
- 8 November 2017, Beijing/APEC: Meeting of Presidents Xi and Trump
   US Embassy try to get "pandemic disease" related to GHSA into their conversation

agenda, currently working with the China side

- **21 November 2017 Beijing:** CEPI (Coalition for Epidemic Preparedness Innovations)/Norwegian representatives visiting China for Global Health & Health dialogue *Agenda TBD, but there is a possibility to mention GVP*
- November 2017, Beijing: Africa CDC Union meeting with the National Health and Family Health Commission, following the <u>China-US Social and Culture Dialogue</u> on September 28, 2017

Time and agenda TBD, but there will be a meeting with the National Health and Family Health Commission and/or China CDC (HYL will get the slides translated into Chinese)

# Questions:

- Is GVP a scientific project, or incorporating local development?
- What will be the public health impact of GVP? (e.g. public health measurements)
- How GVP will fit into the GHSA?
- How the China National Virome Project fit into the Global Virome Project?
- Ownership of the GVP? (given the multiple stakeholders and partners)
- Where GVP take money from if supported by the US government?
- **B)** Meeting with the Acting Deputy Chief of Mission Jonathan Fritz (Acting Deputy Chief of Staff) Leon Skarshinski Commercial Attaché Export Trade Dept of Commerce Eddy Rubin, Miles Toder,
- The senior leadership at the embassy really understand and are enthusiastic about GVP and its potential for something positive China and US could do together.
- The UC China Ambassador Terry Branstad understands GVP and has Trumps ear.
- Looking for something to discuss when Trump meets with Xi later next months. How the world's 2 largest economies could contribute to GHSA
- **C) Meeting with Members of Embassy Health Working Group.** (An internal embassy group that meets regularly to discuss health related topics. They had heard GVP presented previously **Discussions:**
- A discussion of scientific concerns about GVP

Hi Andrew. Please find below an amendment to the GVP Bangkok ITA for those participants who will also be attending the Prince Mahidol Award Conference (per verbal discussion with Dennis Carroll). Thanks!

#### **AMENDMENT**

The Global Virome Project requests approval for the individuals listed below to travel from their respective departure locations to Bangkok, Thailand from January 28 to February 4, 2018 to participate in the Global Virome Project meeting on January 29, and the Prince Mahidol Award Conference (PMAC 2018) January 29 to February 3.

Trip purpose: The GVP meeting will bring together the core croup, working group chairs and global stakeholders for presentations and meetings regarding various critical topics to move the project forward, including best practices for implementation, country coordination and governance. This will enable GVP to coordinate global planning and project implementation for the coming years, and will provide the unique opportunity to bring all stakeholders and key personnel from around the world to one location. This meeting is key to implementing the project successfully. The Prince Mahidol Award Conference 2018, "Making the World Safe from the Threats of Emerging Infectious Diseases," will provide a sharing and learning forum for multisectoral experts in zoonosis, AMR, climate change and related environmental fields, as well as the opportunity to engage in side meetings with partners and collaborators.

## 2. Mission communications roundup

- Liberia Mission Director meeting and USAID/GHSA team visit updates
- Senegal update on planned Ambassador trip to field site
- Guinea lab training update and upcoming USAID meetings
- Ghana feedback for One Health brief by FAO
- ROC update from calls with Mission
- · Others as needed

- 3. Outbreak updates (if any)
- 4. EPT partner collaboration/coordination updates (Billy)
- 5. GVP updates (Jonna)
- 6. Publication, media, and conference updates
  - Al Jazeera <u>feature on PREDICT/Thailand</u>
  - Discovery Channel "Invisible Killers" launch party in DC March 22, airing March 29, 2018
  - National Geographic TV segment inquiry (production timeline March-June)
  - "Outbreak: Epidemics in a Connected World" exhibit at NMNH (May 18, 2018)
  - NIH Changing Relevance of Material Transfer Agreements for Infectious Diseases, Georgetown (May 3-4, 2018)
  - One Health Congress Saskatoon (June 22-25, 2018)
  - International Conference on Emerging Infectious Diseases (ICEID) in Atlanta (August 26–29, 2018)
  - International Meeting on Emerging Diseases and Surveillance (IMED) 2018 in Vienna, Austria (November 9-12, 2018)
  - International Symposium of Veterinary Epidemiology and Economics (ISVEE) Thailand (November 12-16, 2018).
  - Others?

Subject: RE: Benefit-cost analysis of the Global Virome Project

Hi Jonna. We'll need to setup a multi-campus agreement (which would require AOR approval) to transfer funds to UCSF. A basic interlocation fund transfer cannot be used with Extramural funds, unfortunately. Only Andrew would need to approve, so we could most likely turn it around quickly if we have to. With an MCA, UCD will not take any indirects on the first \$25K, but UCSF will be able to bill full indirects at their negotiated rate.

Another possibility is an Intercampus Order/Charge (IOC) document to reimburse UCSF for costs incurred, which would require UCSF to basically "invoice" us monthly or semi-monthly for payment. I've only used this type of document for supplies and travel previously, so I'll need to confirm whether or not this document can be used for payroll costs. I don't see anything indicating using an IOC to reimburse payroll costs is restricted, but it's probably best to confirm. I'll also need to confirm with Nikki whether or not there are any restrictions on the use of a sponsored account an IOC document. With this mechanism, UCD will take full indirects on all reimbursed costs, but UCSF will not be able to claim any.

We can discuss more next week, and hopefully I'll have more information at that point. Have a great weekend!

Thanks, Liz

Subject: Re: Benefit-cost analysis of the Global Virome Project

Thanks to you both. That all makes sense to me. Only potential change is adding a bit of budget for one or two trips or parts of trips to China, per our other email chain, Dean.

I am looping in Liz Leasure, who is our financial and contractural guru here. She is aware of the general idea, but I will also get with her to solidify mechanisms from our end. We will likely just need a paragraph or so describing the scope of work that we can get from Ben and Nita, as well as a budget for salary and travel. Should be super straight forward.

Have a nice day,

Jonna

On Wed, Aug 29, 2018 at 3:09 PM Dean Jamison <<u>djamison@uw.edu</u>> wrote: Thanks, Colin

Jonna, what I have been thinking about — but this could certainly change as you develop budget with Ben and Nita — is about 2 days per month for 12 months or 10% time. I would see a little over half of this in SF with 1 trip to NY and/or DC. The rest would be at home. It would probably be simplest for Matt to manage my travel at UCSF. For initial budgeting I would think of 8 round trips, Palm Springs - SF and one rt PS to DC. 2 nights each for the SF travel and 3 nights for DC. Maybe Matt and one of your staff could develop a budget and agreement on that basis but we could slot different numbers in before finalizing if that seems to make sense?

Copying Ben and Nita for their views on whether this seems about right, too much or enough.

Best

Dean

>
> Dear Colin
> Dennis Carrol at USAID is commissioning a BCA of the Global Virome Project. This will be funded through
USAID PREDICT at Jonna's institute at UCD. I will be involved on the economics side. Several staff of
Metabiota who were responsible for the DCP3 pandemics chapter will be involved on the modeling side.
There will be others (although the project is modest) involved on the scientific side, hopefully including Jonna,
which would be particularly convenient in light of of her forthcoming sabbatical with IGHS.
>
> Jonna tells me that inter-campus funds transfer is relatively easy and that UCD could send the money to
cover my involvement to UCSF. What I envision would be a funds transfer in two parts. One would cover
XX% of my time from October through December. The other would cover YY% of my time from January 1
through September 31, 2019. I expect the money required for my travel on the project would also be
transferred to UCSF.

Please find below an international travel request for your review and approval. Please let me know if you have any questions. Thanks!

1. Commey, Dogbey (USA): \$1900 airfare each/\$198 max daily per diem

## Travel Request –

Email: aclements@usaid.gov

1. <u>UC Davis</u> would like to request approval for <u>Abraham Commey and Judith (Otilia) Dogbey</u> to travel from <u>Accra, Ghana</u> to <u>Davis, California, USA</u> from <u>October 19-27, 2019</u> for <u>training with the PREDICT UC</u> Davis lab team.

<u>Trip purpose</u>: Abraham Commey and Otilia Dogbey are laboratory personnel in the Accra Veterinary Lab of the Veterinary Services Directorate, Ministry of Food and Agriculture. Abraham and Otilia will be traveling to Davis to participate in a PREDICT virus detection protocol training in the PREDICT laboratory under the direction of Dr. Tracey Goldstein. The Veterinary Services Directorate is incorporating the PREDICT viral family PCR protocols into their diagnostic platforms in Ghana and this training will assist with strengthening that capacity.
