CLAUSES INCORPORATED BY FULL TEXT

252.201-9002 CONTRACTING OFFICER'S REPRESENTATIVE (MAY 2007)

a. The Contracting Officer's Representative (COR) for this contract is:

X (Reference COR Designation Letter)
Defense Threat Reduction Agency/J9CBA
8725 John J. Kingman Rd, MS 6201
Fort Belvoir VA 22060-6201
WAWF Acceptor DoDAAC: HDTRA1

b. The COR will act as the Contracting Officer's Representative for technical matters providing technical direction and discussion as necessary with respect to the specification/statement of work and monitoring the progress and quality of the Contractor's performance. The COR is NOT an Administrative Contracting Officer (ACO) and does not have the authority to take any action, either directly or indirectly that would change the pricing, quality, quantity, place of performance, delivery schedule, or any other terms and conditions of the contract, or to direct the accomplishment of effort, which goes beyond the scope of the specifications/statement of work in the contract.

c. When, in the opinion of the contractor, the COR requests effort outside the existing scope of the contract, the contractor shall promptly notify the Contracting Officer in writing. No action shall be taken by the contractor under such direction until the Contracting Officer has issued a modification to the contract or has otherwise resolved the issue.

252.204-9002 PAYMENT INSTRUCTIONS FOR MULTIPLE ACCOUNTING CLASSIFICATION CITATIONS (MAY 2012)

In accordance with DFARS 204.7108 Payment Instructions, payment shall be made by the numbered payment instruction identified below:

____ (1) Line item specific: single funding.
252.204-0001 Line Item Specific: Single Funding. (SEP 2009)

If there is only one source of funding for the contract line item (i.e., one ACRN), the payment office will make payment using the ACRN funding of the line item being billed.

__X___ (2) Line item specific: sequential ACRN order.
252.204-0002 Line Item Specific: Sequential ACRN Order. (SEP 2009)

If there is more than one ACRN within a contract line item, the payment office will make payment in sequential ACRN order within the line item, exhausting all funds in the previous ACRN before paying from the next ACRN using the following sequential order: Alpha/Alpha; Alpha/Numeric; Numeric/Alpha; and Numeric/Numeric.

_____ (3) Line item specific: contracting officer specified ACRN order.
252.204-0003 Line Item Specific: Contracting Officer Specified ACRN Order. (SEP 2009)

If there is more than one ACRN within a contract line item,
The payment office shall make payment within the line item in the sequence ACRN order specified below, exhausting all funds in the previous ACRN before paying from the next ACRN.
Line Item ACRN Order

_____ _____
_____ _____

_____ (4) Line item specific: by fiscal year.
252.204-0004 Line Item Specific: by Fiscal Year. (SEP 2009)

If there is more than one ACRN within a contract line item, the payment office will make payment using the oldest fiscal year appropriations first, exhausting all funds in the previous fiscal year before disbursing from the next fiscal year. In the event there is more than one ACRN associated with the same fiscal year, the payment amount shall be disbursed from each ACRN within a fiscal year in the same proportion as the amount of funding obligated for each ACRN within the fiscal year.

_____ (5) Line item specific: by cancellation date.
252.204-0005 Line Item Specific: by Cancellation Date. (SEP 2009)

If there is more than one ACRN within a contract line item, the payment office will make payment using the ACRN with the earliest cancellation date first, exhausting all funds in that ACRN before disbursing funds from the next. In the event there is more than one ACRN associated with the same cancellation date, the payment amount shall be disbursed from each ACRN with the same cancellation date in the same proportion as the amount of funding obligated for each ACRN with the same cancellation date.

_____ (6) Line item specific: proration.
252.204-0006 Line Item Specific: Proration. (SEP 2009)

If there is more than one ACRN within a contract line item, the payment office will make payment from each ACRN in the same proportion as the amount of funding currently unliquidated for each ACRN.

_____ (7) Contract-wide: sequential ACRN order.

252.204-0007 Contract-wide: Sequential ACRN Order. (SEP 2009)

The payment office will make payment in sequential ACRN order within the contract or order, exhausting all funds in the previous ACRN before paying from the next ACRN using the following sequential order: alpha/alpha; alpha/numeric; numeric/alpha; and numeric/numeric.

_____ (8) Contract-wide: contracting officer specified ACRN order
252.204-0008 Contract-wide: Contracting Officer Specified ACRN Order. (SEP 2009)

The payment office will make payment in sequential ACRN order within the contract or order, exhausting all funds in the previous ACRN before paying from the next ACRN in the sequence order specified by the contracting officer.

ACRN Order

_____

_____

_____ (9) Contract-wide: by fiscal year.
252.204-0009 Contract-wide: by Fiscal Year. (SEP 2009)

The payment office will make payment using the oldest fiscal year appropriations first, exhausting all funds in the previous fiscal year before disbursing from the next fiscal year. In the event there is more than one ACRN associated with the same fiscal year, the payment amount shall be disbursed from each ACRN within a fiscal year in the same proportion as the amount of funding obligated for each ACRN within the fiscal year.

_____ (10) Contract-wide: by cancellation date.
252.204-0010 Contract-wide: by Cancellation Date. (SEP 2009)

The payment office will make payment using the ACRN with the earliest cancellation date first, exhausting all funds in that ACRN before disbursing funds from the next. In the event there is more than one ACRN associated with the same cancellation date, the payment amount shall be disbursed from each ACRN with the same cancellation date in the same proportion as the amount of funding obligated for each ACRN with the same cancellation date.

_____ (11) Contract-wide: proration.
252.204-0011 Contract-wide: Proration. (SEP 2009)

The payment office will make payment from each ACRN within the contract or order in the same proportion as the amount of funding currently unliquidated for each ACRN.

_____ (12) Other.

If none of the standard payment instructions identified in paragraphs (d)(1) through (11) of this section are appropriate, the contracting officer may insert other payment instructions, provided the other payment instructions--
(i) Provide a significantly better reflection of how funds will be expended in support of contract performance; and
(ii) Are agreed to by the payment office and the contract administration office.

CLAUSES INCORPORATED BY FULL TEXT

252.216-9005 PROFIT OR FEE ON TRAVEL COSTS (JUL 2008)

Travel shall not be a profit or fee bearing cost element.

(End of clause)

CLAUSES INCORPORATED BY FULL TEXT

252.232-9012 WIDE AREA WORK FLOW (WAWF) – RECEIPT AND ACCEPTANCE (RA) INSTRUCTIONS (November 2011)

(a) As prescribed in DFARS clause 252.232-7003 Electronic Submission of Payment Requests (Jan 2004), Contractors must submit payment requests in electronic form. Paper copies will no longer be accepted or processed for payment unless the conditions of DFARS clause 252.232-7003(c) apply. To facilitate this electronic submission, the Defense Threat Reduction Agency (DTRA) has implemented the DoD sanctioned Wide Area Workflow-Receipt and Acceptance (WAWF-RA) for contractors to submit electronic payment requests and receiving reports. The contractor shall submit electronic payment requests and receiving reports via WAWF-RA. **Vendors shall send an email notification to the Contracting Officer Representative (COR), Program/Project Manager or other government acceptance official identified in the contract by clicking on the Send Additional Email Notifications link upon every submission of an invoice/cost voucher in WAWF-RA. To access WAWF, go to https://wawf.eb.mil.**

**** For questions, contact the DTRA WAWF Team at wawfhelp@dtra.mil ****

(b) Definitions:

Acceptor: Contracting Officer's Representative, Program/Project Manager, or other government acceptance official as identified in the contract/order.

Pay Official: Defense Finance and Accounting Service (DFAS) payment office identified in the contract/order.

SHIP To/Service Acceptor DoDAAC: Acceptor DoDAAC or DCMA DoDAAC (as specified in the contract/order).

DCAA Auditor DoDAAC: Needed when invoicing on cost-reimbursable contracts. (Go to www.dcaa.mil and click on the appropriate link under the Audit Office Locator to search for your DCAA DoDAAC.)

>>>>> For contracts that are administered by the **Office of Naval Research (ONR)**: <<<<<
Enter the ONR DoDAAC in the DCAA Auditor DoDAAC field in WAWF.

(c) WAWF Contractor Input Information:

The contractor shall use the following information in creating electronic payment requests in WAWF:

Invoice Type in WAWF:

If billing for Cost Type/Reimbursable contracts (including T&M and LH), select "Cost Voucher"
If billing for Firm-Fixed Price (FFP) Materials Only, select "Combo"
If billing for FFP Materials and Service, select "Combo"
If billing for FFP Services Only, select "2-n-1 (Services Only)"

** If the contract contains both FFP and Cost Type (including T&M and LH) line items, they must be invoiced separately on appropriate types mentioned above. Upon the written approval of the Project Manager or Contracting Officer's Representative, the contractor may invoice both line items in one type of invoice.

For WAWF Routing Information, See Table Below:

Description	SF 26	SF 33	SF 1449	DD 1155

Services or Supplies	Based on majority of requirement as determined by monetary value			
Final Invoice?	Do not change "N" (no) to "Y" (yes) unless this is the last invoice and the contract is ready for closeout.			

(d) Final Invoices/Vouchers -Final Payment shall be made in accordance with the Federal Acquisition Regulation (FAR) 52.216-7, entitled "Allowable Cost and Payment."

Invoices - Invoice 2-n-1 (Services Only) and Invoice and Receiving Report (Combo)
Select the ***"Y"*** selection from the "***Final Invoice?"*** drop-down box when submitting the final invoice for payment for a contract. Upon successful submission of the final invoice, click on the ***Send Additional Email Notifications*** link to send an additional email notification to the Contracting Officer Representative (COR), Program/Project Manager or other government acceptance official identified in the contract.

Cost Vouchers - Once the final DCAA audit is complete for cost reimbursable contracts and authorization is received to submit the final cost voucher, select the ***"Y"*** selection from the "***Final Voucher"*** drop-down box when submitting the final cost voucher. Upon successful submission of the final cost voucher, click on the ***Send Additional Email Notifications*** link to send an additional email notification to the following email address: finalcostvouchers@dtra.mil

(e) WAWF Training may be accessed online at http://www.wawftraining.com. To practice creating documents in WAWF, visit the practice site at https://wawftraining.eb.mil. General DFAS information may be accessed using the DFAS website at http://www.dfas.mil/. Payment status information may be accessed using the myInvoice system at https://myinvoice.csd.disa.mil. Your contract number and shipment/invoice number will be required to check status of your payment.
Note: For specific invoice related inquiries email: vendorpay@dtra.mil. Vendors shall forward any additional DTRA related WAWF questions to wawfhelp@dtra.mil.

252.242-9003 - ASSIGNMENT OF CONTRACT ADMINISTRATION SERVICES (CAS) FUNCTIONS (FEB 2012)

a. The contract administration functions stated in FAR 42.302(a) are assigned to: See Page 1, Section A, Block 6 of this contract.

b. Notwithstanding that assignment, in accordance with FAR 42.202(b)(2), the following functions are determined to be best performed by the PCO and are retained by the DTRA Contracting Office:

(1) FAR 42.302(a)(3) Conduct post-award orientation conferences.

(2) FAR 42.302(a)(20) Ensure processing and execution of duty-free entry certificates.

(3) FAR 42.302(a)(40) Perform engineering surveillance to assess compliance with contractual terms for schedule, cost, and technical performance in the areas of design, development, and production.

(4) FAR 42.302(a)(51) Consent to the placement of subcontracts.

(5) Approval or disapproval of the data items listed on Exhibit A, DD Form 1423, Contract Data Requirements List.

(END OF CLAUSE)

Section H - Special Contract Requirements

CLAUSES INCORPORATED BY FULL TEXT

252.201-9003 LIMITATION OF AUTHORITY (JUN 2009)

No person in the Government, other than a Contracting Officer, has the authority to provide direction to the Contractor, which alters the Contractor's obligations or changes this contract in any way. If any person representing the Government, other than a Contracting Officer, attempts to alter contract obligations, change the contract specifications/statement of work or tells the contractor to perform some effort which the Contractor believes to be outside the scope of this contract, the Contractor shall immediately notify the Procuring Contracting Officer (PCO). Contractor personnel shall not comply with any order or direction which they believe to be outside the scope of this contract unless the order or direction is issued by a Contracting Officer.

CLAUSES INCORPORATED BY FULL TEXT

252.203-9000 Prohibition on the Use of Senior Mentors (JUNE 2010)

(a) The use of senior mentors by the Defense Threat Reduction Agency (DTRA) enhances the readiness of the Agency across a wide range of strategic, operational, joint, functional, technical, management and development mission areas. The relevant prior service, joint force experience, and unique expertise of these senior consultants provide senior leadership with valuable insights and contribute to the continuous improvement of the Agencies' operations.

(b) For the purposes of this clause, Senior Mentor is defined as a retired flag, general or other military officers (O-6) or retired senior civilian official (Senior Executive Service (SES), Senior Level (SL), Scientific and Professional (ST)) who provides expert experience-based mentoring, teaching, training, advice, and recommendations to senior military officers, staffs and students as they participate in war games, warfighting courses, operational planning, operational exercises, and decision-making exercises.

(c) In accordance with Secretary of Defense Memorandum entitled "Policy on Senior Mentors" dated April 1, 2010, DTRA will hire all senior mentors as highly qualified experts (HQE) under 5 U.S.C. 9903. This policy balances the need for DTRA to secure the specialized knowledge required for these operational exercises with the need to hire such experts in a manner that promotes public trust and confidence.

(d) The Contractor shall not include the use of senior mentors in bids or proposals for services/supplies offered to DTRA.

(e) The Contractor shall include the substance of this clause in all subcontracts.

(End of Clause)

CLAUSES INCORPORATED BY FULL TEXT

252.203-9004 ETIOLOGIC AGENTS—BIOLOGICAL DEFENSE RESEARCH PROGRAM (FEB 2008)

a. For purpose of this contract etiologic agent--biological defense program is defined as: any viable microorganism, or its toxin which causes or may cause human disease, including those agents listed in 42 CFR 73, 9 CFR 121, and 7 CFR 331, of the Department of Health and Human Services and Department of Agriculture regulations, respectively, and any agent of biological origin that poses a degree of hazard to those agents and is further identified by the US Army. The contractor shall comply with the following when working with etiologic agents:
   (1) 29 Code of Federal Regulations 1910, Occupational Health and Safety;
   (2) US Department of Health and Human Services (DHHS) and US Department of Agriculture, Select Agent Program(s), 42 CFR 73, 9 CFR 121, and 7 CFR 331; and
   (3) DHHS Publication No. 93-8395, Biosafety in Microbiological and Biomedical Laboratories, latest edition.

b. Etiologic agents shall be packaged, labeled, shipped, and transported in accordance with applicable Federal, State, and local laws and regulations, to include:
   (1) 42 CFR 72 (Interstate Shipment of Etiologic Agents);
   (2) 49 CFR 172 and 173 (Department of Transportation);
   (3) 9 CFR 122 (USDA Restricted Animal Pathogens);
   (4) International Air Transport Association Dangerous Goods Regulations;
   (5) The United States Postal Service shall not be used for transportation of BDRP related etiologic agents; and
   (6) If performance is outside of the United States, any additional procedures required by the nation where the work is to be performed.

252.209-9002 NON-GOVERNMENT SUPPORT PERSONNEL (JAN 2008)

The following companies may have access to contractor information, technical data or computer software that may be marked as proprietary or otherwise marked with restrictive legends: Suntiva LLC (contract specialist support); Systems Research and Analysis (SRA, managing JPRAS); ITT Corporation (DTRIAC Technical Engineering Services); and TASC (advisory and assistance services). Each contract contains organizational conflict of interest provisions and/or includes contractual requirements for non-disclosure of proprietary contractor information or data/software marked with restrictive legends. The contractor, by submitting a proposal or entering into this contract, is deemed to have consented to the disclosure of its information to Suntiva LLC, SRA, ITT Corp., and TASC under the conditions and limitations described herein.

CLAUSES INCORPORATED BY FULL TEXT

252.215-9004 KEY PERSONNEL (AUG 2012)

The personnel listed below are considered essential to the work being performed hereunder. Prior to removing, replacing, or diverting any of the specified individuals, the Contractor shall notify the Contracting Officer reasonably in advance and shall submit justification (including proposed substitutions) in sufficient detail to permit evaluation of the impact on this Contract. No deviation shall be made by the Contractor without the prior written consent of the Contracting Officer; provided, that the Contracting Officer authorizes in writing the change, such authorization shall constitute the consent of the Contracting Officer required by this paragraph. The personnel listed below may, with the consent of the contracting parties, be amended from time to time during the course of the Contract to either add or delete personnel as appropriate:

- Principal Investigator

252.216-9003 CONSULTANTS (OCT 1998)

Services of consultants shall be at rates and for periods approved in advance by the Contracting Officer. Requests for approval shall be submitted to the Contracting Officer sufficiently in advance of the need to use a consultant under this Contract. The request shall include (a) a copy of the proposed consultant agreement, (b) a brief biography of the consultant, and (c) an indication of the area(s) in which consultant's expertise will be utilized and why it is essential for contract performance. In addition, significant deviations from the dollar amount approved for consultant services, or changes in the consultants to be utilized, must likewise be approved in advance upon submission of adequate justification.

252.235-9000 SOURCES OF INFORMATION (JULY 2000)

a. The results of the research to be delivered to the Government under this Contract shall embody the most recent reliable information in the field which is available to the Contractor from private and governmental sources, and the Contractor agrees to utilize all sources of such information available to it. In this connection, information in this field which is in the control of DTRA shall, with the consent of the Contracting Officer's Representative (COR) and under such safeguards and procedures as he/she may prescribe, be made available to the Contractor on request. Additionally, the Contractor is encouraged to make use of the resources available through the Defense Threat Reduction Information Analysis Center (DTRIAC), 1680 Texas Street, Southeast, Kirtland AFB, New Mexico 87117.

b. Reasonable assistance in obtaining access to information, or in obtaining permission to use Government or private facilities, will be given to the Contractor by DTRA. Specifically, the Contractor must register with the Defense Technical Information Center, ATTN: DTIC, 8725 John J. Kingman Road, Suite 0944, Fort Belvoir, VA 22060-6218, in accordance with Defense Logistics Agency (DLA) Regulation 4185.10, Certification and Registration for Access to DoD Defense Technical Information. DD Form 1540, the registration form, shall be forwarded to the DTRA Contracting Officer for approval (DFARS 35.010(b)).
(End of clause)

252.235-9001 PROHIBITION OF USE OF LABORATORY ANIMALS (JULY 2010) (DTRA)

The contractor shall obtain approval from the US Army Medical Research and Material Command (MRMC), Animal Care and Use Review Office (ACURO) prior to conducting research on live nonhuman vertebrates. Studies involving non-human primates, dogs, cats, or marine mammals will require a site visit by an ACURO laboratory animal veterinarian as a condition of approval. DoD may also conduct site visits involving research on other animals when deemed appropriate. The animal research facility is responsible for notifying the DoD sponsor if Association for the Assessment and Accreditation of Laboratory Animal Care accreditation is lost or the facility is under USDA inspection. DoD also has the right to a site inspection under these circumstances.

The contractor (including subcontractors) is expressly forbidden to use laboratory animals in any manner whatsoever without the express written approval of MRMC ACURO.

The contractor shall complete the ACURO Animal Use Appendix for Research Involving Animals found at the following web site: https://mrmc-www.army.mil/index.cfm?pageid=Research_Protections.acuro_AnimalAppendix. Submit the completed ACURO appendix, contact information, the DTRA contract number and a copy of the contract for processing to the email address listed at the ACURO website. Once ACURO approves the effort, the contractor will receive written approval to begin animal use from the US Army MRMC ACURO by separate email. The contractor shall promptly provide a copy of the approval to the contracting officer and contracting officer representative. After approval, changes or protocol amendments must be submitted to and approved by ACURO before implementation.

The contractor, or subcontractors as appropriate, shall submit the most recent U.S. Department of Agriculture Animal Care Inspection Report annually in accordance with the CDRL.

Non-compliance with any provision of this clause may result in the termination of the contract.

(End of Clause)

252.247-9000 GOVERNMENT CONTRACTOR TRAVEL (JUL 2007)

The Joint Travel Regulation (JTR), Appendix E, Part I.A.1.b., states invitational travel applies to individuals acting in a capacity that is related directly to, or in connection with, official DOD activities; however, this does not include a contractor's employee traveling in the performance of the contract. Appendix E, Part I.B.4. RESTRICTIONS, further states invitational travel must not be authorized for contractors. Appendix E, Part III states neither the JFTR nor the JTR may be used as official contractor travel regulations as they apply to uniformed personnel and Defense Department civilian employees and contain provisions, the use of which is illegal by contractors. The JTR can be viewed at https://secureapp2.hqda.pentagon.mil/perdiem

Discounts may be obtained for some travel related services (identified below); however, commercial vendors are under no obligation to extend Government rates for the Government's travel and transportation programs to contractors working on behalf of the Federal Government. Contractors must contact their Contracting Officer Representative (COR) to obtain a Government Contractor Official Travel Letter of Identification, signed by the authorizing Contracting Officer.

Contract City-Pair Air Passenger Transportation Program and Other Government Fares. Use of GSA contract city-pair air passenger fares is governed by GSA's contracts with the airlines and

by the Defense Transportation Regulation (DOD 4500.9-R), Part I, Chapter 103. Use of other airfares reserved for Government employees on official business is governed by the airline fare structure and rules. Government contractors are not eligible to participate in the GSA city-pairs program for air passenger transportation services as of October 1, 1998.

Rail Service. Commercial passenger rail vendors may voluntarily offer discount rates to contractors traveling who are on official Government business at the vendor's discretion.

Lodging Programs. GSA and Services' lodging programs may voluntarily offer discount rates to contractors who are on official Government business at the vendor's discretion.

Car Rental Program. Military Surface Deployment and Distribution Command (SDDC) negotiates special rate agreements with car rental companies available to all Government employees and uniformed personnel while traveling on official Government business. Some commercial car rental companies may voluntarily offer similar discount rates to Government contractors at the vendor's discretion.

Section I - Contract Clauses

52.232-99

52.232-99 – Providing Accelerated Payment to Small Business Subcontractors (DEVIATION)
The contracting officer shall insert the following clause in all solicitations and resultant contracts.
Providing Accelerated Payments to Small Business Subcontractors (DEVIATION 2012-00014) (August 2012)
This clause implements the temporary policy provided by OMB Policy Memorandum M-12-16, Providing Prompt Payment to Small Business Subcontractors, dated July 11, 2012.
(a) Upon receipt of accelerated payments from the Government, the contractor is required to make accelerated payments to small business subcontractors to the maximum extent practicable after receipt of a proper invoice and all proper documentation from the small business subcontractor.
(b) Include the substance of this clause, including this paragraph (b), in all subcontracts with small business concerns.
(c) The acceleration of payments under this clause does not provide any new rights under the Prompt Payment Act.
(End of Clause)

CLAUSES INCORPORATED BY FULL TEXT

52.216-7 ALLOWABLE COST AND PAYMENT (JUN 2011)

(a) Invoicing.

(1) The Government will make payments to the Contractor when requested as work progresses, but (except for small business concerns) not more often than once every 2 weeks, in amounts determined to be allowable by the Contracting Officer in accordance with Federal Acquisition Regulation (FAR) subpart 31.2 in effect on the date of this contract and the terms of this contract. The Contractor may submit to an authorized representative of the Contracting Officer, in such form and reasonable detail as the representative may require, an invoice or voucher supported by a statement of the claimed allowable cost for performing this contract.

(2) Contract financing payments are not subject to the interest penalty provisions of the Prompt Payment Act. Interim payments made prior to the final payment under the contract are contract financing payments, except interim payments if this contract contains Alternate I to the clause at 52.232-25.

(3) The designated payment office will make interim payments for contract financing on the (Contracting Officer insert day as prescribed by agency head; if not prescribed, insert "30th") day after the designated billing office receives a proper payment request.

In the event that the Government requires an audit or other review of a specific payment request to ensure compliance with the terms and conditions of the contract, the designated payment office is not compelled to make payment by the specified due date.

(b) Reimbursing costs. (1) For the purpose of reimbursing allowable costs (except as provided in subparagraph (b)(2) of the clause, with respect to pension, deferred profit sharing, and employee stock ownership plan contributions), the term "costs" includes only--

(i) Those recorded costs that, at the time of the request for reimbursement, the Contractor has paid by cash, check, or other form of actual payment for items or services purchased directly for the contract;

(ii) When the Contractor is not delinquent in paying costs of contract performance in the ordinary course of business, costs incurred, but not necessarily paid, for--

(A) Supplies and services purchased directly for the contract and associated financing payments to subcontractors, provided payments determined due will be made--

(1) In accordance with the terms and conditions of a subcontract or invoice; and

(2) Ordinarily within 30 days of the submission of the Contractor's payment request to the Government;

(B) Materials issued from the Contractor's inventory and placed in the production process for use on the contract;

(C) Direct labor;

(D) Direct travel;

(E) Other direct in-house costs; and

(F) Properly allocable and allowable indirect costs, as shown in the records maintained by the Contractor for purposes of obtaining reimbursement under Government contracts; and

(iii) The amount of financing payments that have been paid by cash, check, or other forms of payment to subcontractors.

(2) Accrued costs of Contractor contributions under employee pension plans shall be excluded until actually paid unless--

(i) The Contractor's practice is to make contributions to the retirement fund quarterly or more frequently; and

(ii) The contribution does not remain unpaid 30 days after the end of the applicable quarter or shorter payment period (any contribution remaining unpaid shall be excluded from the Contractor's indirect costs for payment purposes).

(3) Notwithstanding the audit and adjustment of invoices or vouchers under paragraph (g) of this clause, allowable indirect costs under this contract shall be obtained by applying indirect cost rates established in accordance with paragraph (d) of this clause.

(4) Any statements in specifications or other documents incorporated in this contract by reference designating performance of services or furnishing of materials at the Contractor's expense or at no cost to the Government shall be disregarded for purposes of cost-reimbursement under this clause.

(e) Small business concerns. A small business concern may receive more frequent payments than every 2 weeks.

(d) Final indirect cost rates. (1) Final annual indirect cost rates and the appropriate bases shall be established in accordance with Subpart 42.7 of the Federal Acquisition Regulation (FAR) in effect for the period covered by the indirect cost rate proposal.

(2)(i) The Contractor shall submit an adequate final indirect cost rate proposal to the Contracting Officer (or cognizant Federal agency official) and auditor within the 6-month period following the expiration of each of its fiscal years. Reasonable extensions, for exceptional circumstances only, may be requested in writing by the Contractor and granted in writing by the Contracting Officer. The Contractor shall support its proposal with adequate supporting data.

(ii) The proposed rates shall be based on the Contractor's actual cost experience for that period. The appropriate Government representative and the Contractor shall establish the final indirect cost rates as promptly as practical after receipt of the Contractor's proposal.

(iii) An adequate indirect cost rate proposal shall include the following data unless otherwise specified by the cognizant Federal agency official:

(A) Summary of all claimed indirect expense rates, including pool, base, and calculated indirect rate.

(B) General and Administrative expenses (final indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts).

(C) Overhead expenses (final indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts) for each final indirect cost pool.

(D) Occupancy expenses (intermediate indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts) and expense reallocation to final indirect cost pools.

(E) Claimed allocation bases, by element of cost, used to distribute indirect costs.

(F) Facilities capital cost of money factors computation.

(G) Reconciliation of books of account (i.e., General Ledger) and claimed direct costs by major cost element.

(H) Schedule of direct costs by contract and subcontract and indirect expense applied at claimed rates, as well as a subsidiary schedule of Government participation percentages in each of the allocation base amounts.

(I) Schedule of cumulative direct and indirect costs claimed and billed by contract and subcontract.

(J) Subcontract information. Listing of subcontracts awarded to companies for which the contractor is the prime or upper-tier contractor (include prime and subcontract numbers; subcontract value and award type; amount claimed during the fiscal year; and the subcontractor name, address, and point of contact information).

(K) Summary of each time-and-materials and labor-hour contract information, including labor ategories, labor rates, hours, and amounts; direct materials; other direct costs; and, indirect expense applied at claimed rates.

(L) Reconciliation of total payroll per IRS form 941 to total labor costs distribution.

(M) Listing of decisions/agreements/approvals and description of accounting/organizational changes.

(N) Certificate of final indirect costs (see 52.242-4,
Certification of Final Indirect Costs).

(O) Contract closing information for contracts physically completed in this fiscal year (include contract number, period of performance, contract ceiling amounts, contract fee computations, level of effort, and indicate if the contract is ready to close).

(iv) The following supplemental information is not required to determine if a proposal is adequate, but may be required during the audit process:

(A) Comparative analysis of indirect expense pools detailed by account to prior fiscal year and budgetary data.

(B) General Organizational information and Executive compensation for the five most highly compensated executives. See 31.205-6(p). Additional salary reference information is available at http://www.whitehouse.gov/omb/procurement_index_exec_comp/.

(C) Identification of prime contracts under which the contractor performs as a subcontractor.

(D) Description of accounting system (excludes contractors required to submit a CAS Disclosure Statement or contractors where the description of the accounting system has not changed from the previous year's submission).

(E) Procedures for identifying and excluding unallowable costs from the costs claimed and billed (excludes contractors where the procedures have not changed from the previous year's submission).

(F) Certified financial statements and other financial data (e.g., trial balance, compilation, review, etc.).

(G) Management letter from outside CPAs concerning any internal control weaknesses.

(H) Actions that have been and/or will be implemented to correct the weaknesses described in the management letter from subparagraph G) of this section.

(I) List of all internal audit reports issued since the last disclosure of internal audit reports to the Government.

(J) Annual internal audit plan of scheduled audits to be performed in the fiscal year when the final indirect cost rate submission is made.

(K) Federal and State income tax returns.

(L) Securities and Exchange Commission 10-K annual report.

(M) Minutes from board of directors meetings.

(N) Listing of delay claims and termination claims submitted which contain costs relating to the subject fiscal year.

(O) Contract briefings, which generally include a synopsis of all pertinent contract provisions, such as: Contract type, contract amount, product or service(s) to be provided, contract performance period, rate ceilings, advance approval requirements, pre-contract cost allowability limitations, and billing limitations.

(v) The Contractor shall update the billings on all contracts to reflect the final settled rates and update the schedule of cumulative direct and indirect costs claimed and billed, as required in paragraph (d)(2)(iii)(I) of this section, within 60 days after settlement of final indirect cost rates.

(3) The Contractor and the appropriate Government representative shall execute a written understanding setting forth the final indirect cost rates. The understanding shall specify (i) the agreed-upon final annual indirect cost rates, (ii) the bases to which the rates apply, (iii) the periods for which the rates apply, (iv) any specific indirect cost items treated as direct costs in the settlement, and (v) the affected contract and/or subcontract, identifying any with advance agreements or special terms and the applicable rates. The understanding shall not change any monetary ceiling, contract obligation, or specific cost allowance or disallowance provided for in this contract. The understanding is incorporated into this contract upon execution.

(4) Failure by the parties to agree on a final annual indirect cost rate shall be a dispute within the meaning of the Disputes clause.

(5) Within 120 days (or longer period if approved in writing by the Contracting Officer) after settlement of the final annual indirect cost rates for all years of a physically complete contract, the Contractor shall submit a completion invoice or voucher to reflect the settled amounts and rates. The completion invoice or voucher shall include settled subcontract amounts and rates. The prime contractor is responsible for settling subcontractor amounts and rates included in the completion invoice or voucher and providing status of subcontractor audits to the contracting officer upon request.

(6)(i) If the Contractor fails to submit a completion invoice or voucher within the time specified in paragraph (d)(5) of this clause, the Contracting Officer may--

(A) Determine the amounts due to the Contractor under the contract; and

(B) Record this determination in a unilateral modification to the contract.

(ii) This determination constitutes the final decision of the Contracting Officer in accordance with the Disputes clause.

(e) Billing rates. Until final annual indirect cost rates are established for any period, the Government shall reimburse the Contractor at billing rates established by the Contracting Officer or by an authorized representative (the cognizant auditor), subject to adjustment when the final rates are established. These billing rates--

(1) Shall be the anticipated final rates; and

(2) May be prospectively or retroactively revised by mutual agreement, at either party's request, to prevent substantial overpayment or underpayment.

(f) Quick-closeout procedures. Quick-closeout procedures are applicable when the conditions in FAR 42.708(a) are satisfied.

(g) Audit. At any time or times before final payment, the Contracting Officer may have the Contractor's invoices or vouchers and statements of cost audited. Any payment may be (1) Reduced by amounts found by the Contracting Officer not to constitute allowable costs or (2) Adjusted for prior overpayments or underpayments.

(h) Final payment. (1) Upon approval of a completion invoice or voucher submitted by the Contractor in accordance with paragraph (d)(4) of this clause, and upon the Contractor's compliance with all terms of this contract, the Government shall promptly pay any balance of allowable costs and that part of the fee (if any) not previously paid.

(2) The Contractor shall pay to the Government any refunds, rebates, credits, or other amounts (including interest, if any) accruing to or received by the Contractor or any assignee under this contract, to the extent that those amounts are properly allocable to costs for which the Contractor has been reimbursed by the Government. Reasonable expenses incurred by the Contractor for securing refunds, rebates, credits, or other amounts shall be allowable costs if approved by the Contracting Officer. Before final payment under this contract, the Contractor and each assignee whose assignment is in effect at the time of final payment shall execute and deliver--

(i) An assignment to the Government, in form and substance satisfactory to the Contracting Officer, of refunds, rebates, credits, or other amounts (including interest, if any) properly allocable to costs for which the Contractor has been reimbursed by the Government under this contract; and

(ii) A release discharging the Government, its officers, agents, and employees from all liabilities, obligations, and claims arising out of or under this contract, except--

(A) Specified claims stated in exact amounts, or in estimated amounts when the exact amounts are not known;

(B) Claims (including reasonable incidental expenses) based upon liabilities of the Contractor to third parties arising out of the performance of this contract; provided, that the claims are not known to the Contractor on the date of the execution of the release, and that the Contractor gives notice of the claims in writing to the Contracting Officer within 6 years following the release date or notice of final payment date, whichever is earlier; and

(C) Claims for reimbursement of costs, including reasonable incidental expenses, incurred by the Contractor under the patent clauses of this contract, excluding, however, any expenses arising from the Contractor's indemnification of the Government against patent liability.

(End of clause)

52.222-2 PAYMENT FOR OVERTIME PREMIUMS (JUL 1990)

(a) The use of overtime is authorized under this contract if the overtime premium cost does not exceed $0.00 or the overtime premium is paid for work --

(1) Necessary to cope with emergencies such as those resulting from accidents, natural disasters, breakdowns of production equipment, or occasional production bottlenecks of a sporadic nature;

(2) By indirect-labor employees such as those performing duties in connection with administration, protection, transportation, maintenance, standby plant protection, operation of utilities, or accounting;

(3) To perform tests, industrial processes, laboratory procedures, loading or unloading of transportation conveyances, and operations in flight or afloat that are continuous in nature and cannot reasonably be interrupted or completed otherwise; or

(4) That will result in lower overall costs to the Government.

(b) Any request for estimated overtime premiums that exceeds the amount specified above shall include all estimated overtime for contract completion and shall--

(1) Identify the work unit; e.g., department or section in which the requested overtime will be used, together with present workload, staffing, and other data of the affected unit sufficient to permit the Contracting Officer to evaluate

the necessity for the overtime;

(2) Demonstrate the effect that denial of the request will have on the contract delivery or performance schedule;

(3) Identify the extent to which approval of overtime would affect the performance or payments in connection with other Government contracts, together with identification of each affected contract; and

(4) Provide reasons why the required work cannot be performed by using multishift operations or by employing additional personnel.

* Insert either "zero" or the dollar amount agreed to during negotiations. The inserted figure does not apply to the exceptions in paragraph (a)(1) through (a)(4) of the clause.

(End of clause)

52.252-2 CLAUSES INCORPORATED BY REFERENCE (FEB 1998)

This contract incorporates one or more clauses by reference, with the same force and effect as if they were given in full text. Upon request, the Contracting Officer will make their full text available. Also, the full text of a clause may be accessed electronically at this/these address(es):

https://www.acquisition.gov/far/index.html

(End of clause)

252.204-9001 UNIVERSITIES DISCLOSURE OF INFORMATION (JUL 2009)

(a) The Contractor shall not release to anyone outside the Contractor's organization any unclassified information, regardless of medium (e.g. film, tape, document) pertaining to any part of this contract or any program related to this contract, unless the information results from fundamental research, as defined below:

> "Fundamental research" as used in this clause, means basic and applied research in science and engineering, the results of which ordinarily are published and shared broadly within the scientific community, as distinguished from proprietary research and from industrial development, design, production, and product utilization, the results of which ordinarily are restricted for proprietary or national security reasons.

(b) The Contractor shall confer and consult with DTRA on technical aspects of its research and submit technical documents intended for publication to the cognizant DTRA technical representative(s) for review, a minimum of 45 days prior to publication or other dissemination. The purpose of the DTRA review period is to ensure the government ample opportunity to provide comments and suggestions for the researchers' consideration.

(End of clause)

252.223-9004 Environmental, Radiation, Safety Notification, Compliance and Liability (JUN 2013)

(a) Environmental, Radiation, and Safety Notification: The Contractor shall notify the Contracting Officer (CO) and Contracting Officer Representative (COR) of any occurrence of non-compliance with Environmental, Radiation, and Safety regulations that occur at any of the Contractor's facilities at which government property is located as soon as practicable, but not later than 24 hours after identification of an incident. The Contractor shall make initial notification by telephone or email. Then, shall follow-up with a written report within 10 business days.

(b) The Contractor shall notify the CO/COR of any external Environmental, Radiation, and Safety audits or inspections conducted at the facility and provide any reports resulting from the audit. The final report shall be provided to the CO/COR within 30 days following the audit.

(c) The Contractor shall comply with all Federal, State, and local Environmental, Radiation, and Safety regulations, including, without limitation, statutes, ordinances, court orders, consent decrees, administrative orders, or compliance agreements applicable to the facilities where the Government Property is located.

(d) The Contractor shall acquire all necessary permits, and licenses.

(e) DTRA will not be responsible, financially or otherwise, for the investigation, monitoring, cleanup, containment, restoration, removal, or other remedial activity with respect to any hazardous substances present in the soil, ground water, or building(s) that (i) results from activities conducted by entities other than DTRA during the term of this contract, or (ii) results from activities conducted pursuant to any contract, lease, or occupancy agreement that is not associated with DTRA-owned property or activities.

(End of Clause)

252.237-9001 - Enterprise-wide Contractor Manpower Reporting Application (APR 2013)

(a) In accordance with Section 2330a of title 10, United States Code (10 USC 2330a), Contractors shall report ALL contractor labor hours (including subcontractor labor hours) required for performance of services provided under this contract via a secure data collection site. The contractor shall completely fill in all required data fields using the following web address: http://www.ecmra.mil/.

(b) Reporting inputs will be for the labor executed during the period of performance during each Government fiscal year (FY), which runs October 1 through September 30. While inputs may be reported any time during the FY, all data shall be reported no later than October 31 of each calendar year, beginning with 2013. Contractors may direct questions to the help desk at: http://www.ecmra.mil.

(End of Clause)

252.242-9000 CONTRACTOR PERFORMANCE ASSESSMENT REPORTING SYSTEM (CPARS)

1. As required by FAR Part 42.1503, and DTRA policy for the Contractor Performance Assessment Reporting System (CPARS) and Past Performance Automated Information System (PPAIS) effective July, 2001, the Government shall complete a CPAR each year of the period of performance of this contract. The contractor will have an opportunity to provide their comments in each CPAR before it is finalized. In accordance with DTRA CPARS policy the completed CPARs will be entered into the Department of Defense Past Performance Automated Information System (PPAIS), a retrieval system for source selection teams to access the CPARs of contractors' performance. The DTRA CPARS and PPAIS policy includes an explanation of the process and procedures that will be utilized under this contract. A copy is available for contractor reference via the DTRAlink (www.dtra.mil) by accessing Acquisition, How We Do Business.

2. The CPARs shall occur annually in accordance with the schedule established below:

(i) Initial CPAR: 12 months after contract start date (date performance begins)
TBD (by PCO)

(ii) Interim CPAR(s) will be performed annually on the anniversary of the contract start date according to the following schedule:
TBD (by PCO)

(iii) A Final CPAR will be completed upon contract termination, transfer of program management/contract management responsibility outside of DTRA, the delivery of the final end item on contract and/or the completion of the performance period.

(iv) An Out-of-Cycle CPAR may be required when there is a significant change in performance that alters the assessment in one or more evaluation area(s). An Out-of-Cycle CPAR is optional and shall be processed in accordance with Attachment___

3. Each CPAR shall only cover the period elapsing from the last annual CPAR. The final CPAR shall not be used to summarize or "roll-up" the contractor's performance under the entire contract. Each annual CPAR and the final CPAR together will comprise a total picture of contractor performance.

4. At the request of the Government, a verbal, informal review of the Contractor's performance may be held 3-6 months before the completion of the Interim or Final Evaluation periods. This review entails discussing any problems or areas of concern regarding the Contractor's performance to date. No written evaluation form or other formal documentation is required for this evaluation. It may be conducted with the Contractor by telephone, teleconference or face-to-face. This is designed to offer the Contractor an opportunity to correct known deficiencies or weaknesses prior to the formal written evaluation.

5. As set forth in DTRA CPARS policy, any disagreements between the Contractor and the Program Manager regarding the CPAR(s) that cannot be resolved shall be reviewed by the designated Reviewing Official prior to finalization of the CPAR.

6. Special Requirements for Indefinite Delivery Contracts (IDIQ and Requirements type), CPARs shall be processed (select one)

____ for all existing orders (combined) at the time the CPAR is processed

____ on an order-by-order basis

____ on a grouped order basis

7. The policy and procedures set forth in this clause and DTRA CPARS policy are not subject to "Disputes" as described in FAR Part 33.

52.204-99

52.204-99 -- System for Award Management Registration (DEVIATION)

System for Award Management Registration (August 2012) (DEVIATION)

(a) *Definitions.* As used in this clause-

"Central Contractor Registration (CCR) database" means the retired primary Government repository for Contractor information required for the conduct of business with the Government.

"Commercial and Government Entity (CAGE) code" means-

(1) A code assigned by the Defense Logistics Agency (DLA) Logistics Information Service to identify a commercial or Government entity; or

(2) A code assigned by a member of the North Atlantic Treaty Organization that DLA records and maintains in the CAGE master file. This type of code is known as an "NCAGE code."

"Data Universal Numbering System (DUNS) number" means the 9-digit number assigned by Dun and Bradstreet, Inc. (D&B) to identify unique business entities.

"Data Universal Numbering System+4 (DUNS+4) number" means the DUNS number means the number assigned by D&B plus a 4-character suffix that may be assigned by a business concern. (D&B has no affiliation with this 4-character suffix.) This 4-character suffix may be assigned at the discretion of the business concern to establish additional SAM records for identifying alternative Electronic Funds Transfer (EFT) accounts (see the FAR at Subpart 32.11) for the same concern.

"Registered in the **SAM** database" means that-

(1) The Contractor has entered all mandatory information, including the DUNS number or the DUNS+4 number, into the **SAM** database;

(2) The Contractor's CAGE code is in the **SAM** database; and

(3) The Government has validated all mandatory data fields, to include validation of the Taxpayer Identification Number (TIN) with the Internal Revenue Service (IRS), and has marked the record "Active". The Contractor will be required to provide consent for TIN Attachment, Page 1 of 4 validation to the Government as a part of the **SAM** registration process.

"System for Award Management (**SAM**)" means the primary Government repository for prospective federal awardee information and the centralized Government system for certain contracting, grants, and other assistance related processes. It includes-

(1) Data collected from prospective federal awardees required for the conduct of business with the Government;

(2) Prospective contractor submitted annual representations and certifications in accordance with FAR Subpart 4.12; and

(3) The list of all parties suspended, proposed for debarment, debarred, declared ineligible, or excluded or disqualified under the nonprocurement common rule by agencies, Government corporations , or by the Government Accountability Office.

(b)

(1) The Contractor shall be registered in the **SAM** database prior to submitting an invoice and through final payment of any contract, basic agreement, basic ordering agreement, or blanket purchasing agreement resulting from this solicitation.

(2) The SAM registration shall be for the same name and address identified on the contract, with its associated CAGE code and DUNS or DUNS+4.

(3) If indicated by the Government during performance, registration in an alternate system may be required in lieu of **SAM**.

(c) If the Contractor does not have a DUNS number, it should contact Dun and Bradstreet directly to obtain one.

(1) A contractor may obtain a DUNS number-

(i) Via the internet at http://fedgov.dnb.com/webform or if the contractor does not have internet access, it may call Dun and Bradstreet at 1-866-705-5711 if located within the United States; or

(ii) If located outside the United States, by contacting the local Dun and Bradstreet office. The contractor should indicate that it is a contractor for a U.S. Government contract when contacting the local Dun and Bradstreet office.

(2) The Contractor should be prepared to provide the following information:

(i) Company legal business name.

(ii) Tradestyle, doing business, or other name by which your entity is commonly recognized.

(iii) Company physical street address, city, state and Zip Code.

(iv) Company mailing address, city, state and Zip Code (if separate from physical).

(v) Company telephone number.

(vi) Date the company was started.

(vii) Number of employees at your location.

(viii) Chief executive officer/key manager.

(ix) Line of business (industry).

(x) Company Headquarters name and address (reporting relationship within your entity).

(d) Reserved.

(e) Processing time for registration in **SAM**, which normally takes five business days, should be taken into consideration when registering. Contractors who are not already registered should consider applying for registration at least two weeks prior to invoicing.

(f) The Contractor is responsible for the accuracy and completeness of the data within the **SAM** database, and for any liability resulting from the Government's reliance on inaccurate or incomplete data. To remain registered in the **SAM** database after the initial registration, the Contractor is required to review and update on an annual basis from

the date of initial registration or subsequent updates its information in the **SAM** database to ensure it is current, accurate and complete. Updating information in the **SAM** does not alter the terms and conditions of this contract and is not a substitute for a properly executed contractual document.

(g)

(1)

(i) If a Contractor has legally changed its business name, "doing business as" name, or division name (whichever is shown on the contract), or has transferred the assets used in performing the contract, but has not completed the necessary requirements regarding novation and change-of-name agreements in Subpart 42.12, the Contractor shall provide the responsible Contracting Officer sufficient documentation to support the legally changed name with a minimum of one business day's written notification of its intention to-

(A) Change the name in the SAM database;

(B) Comply with the requirements of subpart 42.12 of the FAR; and

(C) Agree in writing to the timeline and procedures specified by the responsible Contracting Officer.

(ii) If the Contractor fails to comply with the requirements of paragraph (g) (1) (i) of this clause, or fails to perform the agreement at paragraph (g) (1) (i) (C) of this clause, and, in the absence of a properly executed novation or change-of-name agreement, the **SAM** information that shows the Contractor to be other than the Contractor indicated in the contract will be considered to be incorrect information within the meaning of the "Suspension of Payment" paragraph of the electronic funds transfer (EFT) clause of this contract.

(2) The Contractor shall not change the name or address for EFT payments or manual payments, as appropriate, in the **SAM** record to reflect an assignee for the purpose of assignment of claims (see FAR Subpart 32.8, Assignment of Claims). Assignees shall be separately registered in the **SAM** database. Information provided to the Contractor's **SAM** record that indicates payments, including those made by EFT, to an ultimate recipient other than that Contractor will be considered to be incorrect information within the meaning of the "Suspension of payment" paragraph of the EFT clause of this contract.

(h) Contractors may obtain information on registration and annual confirmation requirements via the **SAM** accessed through https://www.acquisition.gov or by calling 866-606-8220, or 334-206-7828 for international calls.

(End of Clause)

Global Rapid Identification Tool Set (GRITS) for Infectious Disease Events

Statement of Work (SOW)

1.0 - Objective:

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool Set (GRITS) for undiagnosed outbreaks of emerging infectious diseases (EIDs). GRITS will facilitate rapid, high probability diagnosis of outbreaks to pinpoint disease threats more rapidly than current public health systems and diagnostics. This specialty area combines digital disease surveillance, network analysis, zoonotic disease, and epidemiology. This tool will be a powerful ally for combating the overarching threat of Weapons of Mass Destruction (WMDs) and provide critical early warning necessary for reducing, eliminating, and countering biological threats posed by EIDs to America and its allies.

2.0 - Scope:

The **technology areas** to be investigated are mathematical disease models, disease detection, web data mining, scientific application development, digital surveillance, and information storage and retrieval.

The **primary objective** is deliver an application that facilitates rapid, high probability diagnosis of outbreaks to pinpoint disease threats more rapidly than current public health systems and diagnostics.

Major milestones:

1. Enhance the performance of the GRITS Media Diagnostic tool (GRITS.md)
2. Integrate a network of experts (GRITS.net)
3. Build capabilities for the GRITS platform to handle high-volume, real-time data feeds (GRITS.db)
4. Develop the geospatial capabilities of GRITS (GRITS.geo)
5. Connect GRITS to the EcoHealth Global Repository of Infectious Disease Data (GRID)
6. Develop global geographic and information network models and visualizations for diagnostics (GRITS.path)
7. Develop an interface from the BSVE that allows BSVE users to interact with the GRITS Media Diagnostic tool (GRITS.md)

8. Support the Global Rapid Identification Tool Set (GRITS) on the cloud

3.0 - Background:

This is a new research initiative. Relevant documents can be found in the references section of the technical proposal.

4.0 - Tasks/Technical Requirements:

1. The contractor shall enhance the performance of the GRITS Media Diagnostic tool (GRITS.md)
1.1 Expand the capabilities of the expert annotator to a broad spectrum of disease characteristics (e.g. symptoms, signs, findings, time, location, host, pathogen, drivers and impact)
1.2 Advance the automatic natural language processing tools to accommodate the annotation of expanded disease characteristics
1.3 Develop a GRITS ontology for infectious disease diagnostics and outbreak detection
1.4 Improve diagnostic accuracy with rigorous statistical approach to machine learning
1.5 Integrate methods from activity models and computer vision classifiers
1.6 Develop multilingual support for annotation and diagnosis.

2. The contractor shall integrate a network of experts (GRITS.net)
2.1 Build interface to GRITS web app(s) for experts (e.g. EcoHealth, Epidemico and ISID) to annotate media
2.2 Build interface into ProMED editor platform for editors to interact with the GRITS app and submit media for diagnosis
2.3 Create data filtering mechanism that uses the diagnostic tools to redirect documents to appropriate experts and/or recommend an expert
2.4 Create API for receiving requests for expertise from BSVE
2.5 Develop dialogue mechanisms for discussions with an expert
2.6 Build system for multilingual support from regional EcoHealth, Epidemico, and ProMed experts.

3. The contractor shall build capabilities for the GRITS platform to handle high-volume, real-time data feeds (GRITS.db)
3.1 Develop capacity of Kitware's Girder database to handle big data
3.2 Enhance geospatial capabilities of Girder
3.3 Develop server stack to process data for filtering and recommendation
3.4 Create infrastructure to diagnose media in a high-volume data stream
3.5 Build API for processing high-volume, real-time data to support the BSVE
3.6 Build mechanism for BSVE users to connect local datasets to GRITS.db
3.7 Formalize provenance information (W3C PROV) and standardize metadata
3.8 Generalize data hosting capabilities to support capacity to mine, diagnose, filter, prioritize, visualize, connect, and recommend data feeds for the BSVE or other platforms.

4. The contractor shall develop the geospatial capabilities of GRITS (GRITS.geo)
4.1 Develop geospatial framework for disease diagnostics (integrating WebGL, image tiles, 2D Canvas, and SVG layering)
4.2 Integrate geospatial visualization framework into the GRITS diagnostic dashboard
4.3 Build out a flexible and easy-to-use multi-dimensional visualization framework for diagnostics (integrating geographic, temporal, spatial, and disease characteristics)
4.4 Develop diagnostic geo-visualization tool for integration into the BSVE
4.5 Develop API to recommend and filter layers from EcoHealth Data Store (EcoHD)
4.6 Integrate ParaViewWeb for visualization of large datasets.

5. The contractor shall connect GRITS to the EcoHealth Global Repository of Infectious Disease Data (GRID)
5.1 Create recommendations to match media with historic disease outbreaks from GRID
5.2 Create portal in GRITS web app to the GRID community data editor
5.3 Connect GRID portfolios of historic disease media to GRITS web app
5.4 Develop API to recommend and filter historic outbreak data for BSVE.

6. The contractor shall develop global geographic and information network models and visualizations for diagnostics (GRITS.path)
6.1 Create scalable models of the geographic, ecological, and information structure of infectious disease networks for diagnostic purposes
6.2 Create interactive web visualizations of geographic, ecological, and information networks using Tangelo and D3
6.3 Develop API to connect media with geo/eco/info networks for diagnosis.

7. The contractor shall develop an interface from the BSVE that allows BSVE users to interact with the GRITS Media Diagnostic tool (GRITS.md)
7.1 Develop a robust GRITS API to receive data and return diagnoses
7.2 Build an interface to GRITS.md from BSVE for users to submit media for diagnosis
7.3 Develop interface for experts to test and improve the accuracy of the diagnoses
7.4 Develop mechanism for submitting additional training and test data
7.5 In consultation with DTRA, integrate additional components of GRITS into the BSVE interface, e.g. geo-visualizations (GRITS.geo), data recommendations (EcoHD), historic data (GRID), and expert networks (GRITS.net).

8. Support the Global Rapid Identification Tool Set (GRITS) on the cloud
8.1 Develop a software process infrastructure for the GRITS developer community
8.2 Build a robust server network to ensure uptime of the GRITS platform
8.3 Develop a test suite to identify issues and ensure compatibility with the BSVE
8.4 Develop user and developer documentation for the platform
8.5 Maintain the software via a ticketing system.

5.0 - CDRLs/Other Deliverables:

Reports

- Monthly Status Reports (6)
- Monthly Cost Status Reports (6)
- Quarterly Status Reports (2)
- Final Report (1)

Software Release Versions (V)

(V.0.9) - GRITS Interface for network of experts EcoHealth, ProMED-mail, and Healthmap (GRITS.net)
(V.1.0) - Robust Girder database backend (GRITS.db)
(V.1.1) - Advanced prototype of diagnostic app (GRITS.md)
(V.1.2) - Prototype of data recommendation and filtering powered by diagnostic app
(V.2.0) - Geospatial visualization support in GRITS app (Grits.geo)
(V.2.2) - Geospatial visualization tools for BSVE
(V.2.3) - Integrate geospatial resources into API and connect with EcoHealth Data (EcoHD)
(V.2.4) - Geospatial diagnostic dashboard
(V.3.0) - Integration with EcoHealth Global Repository of Infectious Disease Data (GRID)
(V.4.0) - Beta release of diagnostic app (GRITS.md) and API for BSVE
(V.4.1) - Enhanced natural language tagger/annotator for disease characteristics (TagV3)
(V.4.2) - Multidimensional diagnostic visualization tool
(V.5.0) - Support for processing high-volume, real time data
(V.6.0) - Deployable stand-alone GRITS web application (GRITS.web), with BSVE app extension (GRITS.app) for digital disease surveillance, visualization, diagnosis, prioritization, and filtering.

Miscellaneous data submissions:

1. Disease outbreak reports for South Asia (diagnosed and undiagnosed)
2. Global disease outbreak reports (diagnosed and undiagnosed)
3. Disease outbreaks spanning multiple sources
4. Cloud-hosted, Girder-based data store with infectious disease reports and GRITS-generated metadata.

Test results:

1. Network models (algorithms, stress tests, specificity, specificity, data types, scalability)
2. Automated data collection
3. Data storage (flat files, SQL, and NoSQL)
4. Data prioritization, filtering and visualization apps
5. Web app browser interoperability with BSVE prototype(s)
6. User experience
7. Disease diagnosis (disease types, regions, data sources).

Documentation:

1. Analyst and programmer documentation for the Global Rapid Identification Tool Set
2. User Guide for the Global Rapid Identification Tool Set to include detailed information on data

prioritization, diagnosis, filtering and visualization applications.

AWARD/CONTRACT

1. THIS CONTRACT IS A RATED ORDER UNDER DPAS (15 CFR 700)		RATING	PAGE OF PAGES 1 | 37
2. CONTRACT (Proc. Inst. Ident.) NO HDTRA1-15-C-0041	3. EFFECTIVE DATE 09 Apr 2015	4. REQUISITION/PURCHASE REQUEST/PROJECT NO J90BA14212	

5. ISSUED BY CODE HDTRA1

17. [X] CONTRACTOR'S NEGOTIATED AGREEMENT (Contractor is required to sign this document and return 1 copies to issuing office.) Contractor agrees to furnish and deliver all items or perform all the services set forth or otherwise identified above and any continuation sheets for the consideration stated herein. The rights and obligations of the parties to this contract shall be subject to and governed by the following documents: (a) this award/contract, (b) the solicitation, if any, and (c) such provisions, representations, certifications, and specifications, as are attached or incorporated by reference herein. (Attachments are listed herein.)

18. [ ] AWARD (Contractor is not required to sign this document.) Your offer on Solicitation Number _____ including the additions or changes made by you which additions or changes are set forth in full above, is hereby accepted as to the items listed above and on any continuation sheets. This award consummates the contract which consists of the following documents: (a) the Government's solicitation and your offer, and (b) this award/contract. No further contractual document is necessary.

252.201-9002 CONTRACTING OFFICER'S REPRESENTATIVE (MAY 2007)

a. The Contracting Officer's Representative (COR) for this contract is:
__X__ SEE SEPARATE LETTER

____ _____
Defense Threat Reduction Agency/_____
1680 Texas St SE
Kirtland AFB NM 87117-5669
Telephone number (505) ___-____
e-mail address_____@abq.dtra.mil.
WAWF Acceptor DoDAAC: HDTRA2

b. The COR will act as the Contracting Officer's Representative for technical matters providing technical direction and discussion as necessary with respect to the specification/statement of work and monitoring the progress and quality of the Contractor's performance. The COR is NOT an Administrative Contracting Officer (ACO) and does not have the authority to take any action, either directly or indirectly that would change the pricing, quality, quantity, place of performance, delivery schedule, or any other terms and conditions of the contract, or to direct the accomplishment of effort, which goes beyond the scope of the specifications/statement of work in the contract.

c. When, in the opinion of the contractor, the COR requests effort outside the existing scope of the contract, the contractor shall promptly notify the Contracting Officer in writing. No action shall be taken by the contractor under such direction until the Contracting Officer has issued a modification to the contract or has otherwise resolved the issue.

252.204-9002 PAYMENT INSTRUCTIONS FOR MULTIPLE ACCOUNTING CLASSIFICATION CITATIONS (MAY 2012)

In accordance with DFARS 204.7108 Payment Instructions, payment shall be made by the numbered payment instruction identified below:

Line item specific: sequential ACRN order.
252.204-0002 Line Item Specific: Sequential ACRN Order. (SEP 2009)

If there is more than one ACRN within a contract line item, the payment office will make payment in sequential ACRN order within the line item, exhausting all funds in the previous ACRN before paying from the next ACRN using the following sequential order: Alpha/Alpha; Alpha/Numeric; Numeric/Alpha; and Numeric/Numeric.

CLAUSES INCORPORATED BY FULL TEXT

252.232-9000 CONTRACT FUNDING PROFILE (OCT 1998)

Subject to FAR Clause 52.232-22, Limitation of Funds, the amount of $2,117,486.21 is obligated for work to be performed during the period beginning with contract award and continuing through the end of the base period. Additional incremental funding planned, but not obligated, is: $99,551.79.

(End of clause)

252.232-9001 PRICES/COST

a. Subject to the provisions of the Clauses of this Contract entitled LIMITATION OF FUNDS, ALLOWABLE COST AND PAYMENT, and FIXED FEE, the total allowable cost under this Contract shall not exceed $_____ A_____, which is the total estimated cost of the Contractor's performance hereunder, exclusive of fixed fee. In addition, the Government shall pay the Contractor a fixed fee of $_____B_____ for the performance of this Contract. It is understood and agreed that the Government's obligation is limited to INCREMENTAL FUNDING in the amount of S_____C_____. Within this amount (S_____C_____), the fixed fee shall bear the same relationship to the total fixed fee, as the costs incurred bear to the total estimated cost.

b. Interim payment vouchers may be submitted for provisional payment pursuant to the Clauses of this Contract entitled ALLOWABLE COST AND PAYMENT and FIXED FEE.

Fill in the dollar amounts as applicable:

252.232-9012 WIDE AREA WORK FLOW (WAWF) – RECEIPT AND ACCEPTANCE (RA) INSTRUCTIONS (November 2011)

(a) As prescribed in DFARS clause 252.232-7003 Electronic Submission of Payment Requests (Jan 2004), Contractors must submit payment requests in electronic form. Paper copies will no longer be accepted or processed for payment unless the conditions of DFARS clause 252.232-7003(c) apply. To facilitate this electronic submission, the Defense Threat Reduction Agency (DTRA) has implemented the DoD sanctioned Wide Area Workflow-Receipt and Acceptance (WAWF-RA) for contractors to submit electronic payment requests and receiving reports. The contractor shall submit electronic payment requests and receiving reports via WAWF-RA. **Vendors shall send an email notification to the Contracting Officer Representative (COR), Program/Project Manager or other government acceptance official identified in the contract by clicking on the Send Additional Email Notifications link upon every submission of an invoice/cost voucher in WAWF-RA. To access WAWF, go to https://wawf.eb.mil.**

**** For questions, contact the DTRA WAWF Team at wawfhelp@dtra.mil ****

(b) Definitions:

Acceptor: Contracting Officer's Representative, Program/Project Manager, or other government acceptance official as identified in the contract/order.

Pay Official: Defense Finance and Accounting Service (DFAS) payment office identified in the contract/order.

SHIP To/Service Acceptor DoDAAC: Acceptor DoDAAC or DCMA DoDAAC (as specified in the contract/order).

DCAA Auditor DoDAAC: Needed when invoicing on cost-reimbursable contracts. (Go to www.dcaa.mil and click on the appropriate link under the Audit Office Locator to search for your DCAA DoDAAC.)

>>>>> For contracts that are administered by the **Office of Naval Research (ONR)**: <<<<<
Enter the ONR DoDAAC in the DCAA Auditor DoDAAC field in WAWF.

(c) WAWF Contractor Input Information:

The contractor shall use the following information in creating electronic payment requests in WAWF:

Invoice Type in WAWF:

If billing for Cost Type/Reimbursable contracts (including T&M and LH), select "Cost Voucher"
If billing for Firm-Fixed Price (FFP) Materials Only, select "Combo"
If billing for FFP Materials and Service, select "Combo"
If billing for FFP Services Only, select "2-n-1 (Services Only)"

** If the contract contains both FFP and Cost Type (including T&M and LH) line items, they must be invoiced separately on appropriate types mentioned above. Upon the written approval of the Project Manager or Contracting Officer's Representative, the contractor may invoice both line items in one type of invoice.

For WAWF Routing Information, See Table Below:

General DFAS information may be accessed using the DFAS website at http://www.dfas.mil/. Payment status information may be accessed using the myInvoice system at https://myinvoice.csd.disa.mil. Your contract number and shipment/invoice number will be required to check status of your payment.

Note: For specific invoice related inquiries email: vendorpay@dtra.mil. Vendors shall forward any additional DTRA related WAWF questions to wawfhelp@dtra.mil.

252.242-9003 - ASSIGNMENT OF CONTRACT ADMINISTRATION SERVICES (CAS) FUNCTIONS (FEB 2012)

a. The contract administration functions stated in FAR 42.302(a) are assigned to: See Page 1, Section A, Block 6 of this contract.

b. Notwithstanding that assignment, in accordance with FAR 42.202(b)(2), the following functions are determined to be best performed by the PCO and are retained by the DTRA Contracting Office:

(1) FAR 42.302(a)(3) Conduct post-award orientation conferences.

(2) FAR 42.302(a)(20) Ensure processing and execution of duty-free entry certificates.

(3) FAR 42.302(a)(40) Perform engineering surveillance to assess compliance with contractual terms for schedule, cost, and technical performance in the areas of design, development, and production.

(4) FAR 42.302(a)(51) Consent to the placement of subcontracts.

(5) Approval or disapproval of the data items listed on Exhibit A, DD Form 1423, Contract Data Requirements List.

(END OF CLAUSE)

Section H - Special Contract Requirements

CLAUSES INCORPORATED BY FULL TEXT

252.201-9003 LIMITATION OF AUTHORITY (JUN 2009)

No person in the Government, other than a Contracting Officer, has the authority to provide direction to the Contractor, which alters the Contractor's obligations or changes this contract in any way. If any person representing the Government, other than a Contracting Officer, attempts to alter contract obligations, change the contract specifications/statement of work or tells the contractor to perform some effort which the Contractor believes to be outside the scope of this contract, the Contractor shall immediately notify the Procuring Contracting Officer (PCO). Contractor personnel shall not comply with any order or direction which they believe to be outside the scope of this contract unless the order or direction is issued by a Contracting Officer.

CLAUSES INCORPORATED BY FULL TEXT

252.203-9000 Prohibition on the Use of Senior Mentors (JUNE 2010)

(a) The use of senior mentors by the Defense Threat Reduction Agency (DTRA) enhances the readiness of the Agency across a wide range of strategic, operational, joint, functional, technical, management and development mission areas. The relevant prior service, joint force experience, and unique expertise of these senior consultants provide senior leadership with valuable insights and contribute to the continuous improvement of the Agencies' operations.

(b) For the purposes of this clause, Senior Mentor is defined as a retired flag, general or other military officers (O-6) or retired senior civilian official (Senior Executive Service (SES), Senior Level (SL), Scientific and Professional (ST)) who provides expert experience-based mentoring, teaching, training, advice, and recommendations to senior military officers, staffs and students as they participate in war games, warfighting courses, operational planning, operational exercises, and decision-making exercises.

(c) In accordance with Secretary of Defense Memorandum entitled "Policy on Senior Mentors" dated April 1, 2010, DTRA will hire all senior mentors as highly qualified experts (HQE) under 5 U.S.C. 9903. This policy balances the need for DTRA to secure the specialized knowledge required for these operational exercises with the need to hire such experts in a manner that promotes public trust and confidence.

(d) The Contractor shall not include the use of senior mentors in bids or proposals for services/supplies offered to DTRA.

(e) The Contractor shall include the substance of this clause in all subcontracts.

(End of Clause)

252.209-9002 NON-GOVERNMENT SUPPORT PERSONNEL (JAN 2008)

The following companies may have access to contractor information, technical data or computer software that may be marked as proprietary or otherwise marked with restrictive legends: JAB Solutions (Contract Specialist support); Quanterion Solutions, Inc. (DTRIAC Technical Engineering Services); Booz Allen Hamilton (administrative support); TASC (advisory and assistance services); Kforce Government Solutions, Inc. (Accounting and Financial Systems Support). Each contract contains organizational conflict of interest provisions and/or includes contractual requirements for non-disclosure of proprietary contractor information or data/software marked with restrictive legends. The contractor, by submitting a proposal or entering into this contract, is deemed to have consented to the disclosure of its information to JAB Solutions, Quanterion Solutions, Inc., Booz Allen Hamilton, TASC, and Kforce Government Solutions, Inc. under the conditions and limitations described herein.

CLAUSES INCORPORATED BY FULL TEXT

252.215-9004 KEY PERSONNEL (AUG 2012)

The personnel listed below are considered essential to the work being performed hereunder. Prior to removing, replacing, or diverting any of the specified individuals, the Contractor shall notify the Contracting Officer reasonably in advance and shall submit justification (including proposed substitutions) in sufficient detail to permit evaluation of the impact on this Contract. No deviation shall be made by the Contractor without the prior written consent of the Contracting Officer; provided, that the Contracting Officer authorizes in writing the change, such authorization shall constitute the consent of the Contracting Officer required by this paragraph. The personnel listed below may, with the consent of the contracting parties, be amended from time to time during the course of the Contract to either add or delete personnel as appropriate.

Principal Investigator

CLAUSES INCORPORATED BY FULL TEXT

252.216-9003 CONSULTANTS (OCT 1998)

Services of consultants shall be at rates and for periods approved in advance by the Contracting Officer. Requests for approval shall be submitted to the Contracting Officer sufficiently in advance of the need to use a consultant under this Contract. The request shall include (a) a copy of the proposed consultant agreement, (b) a brief biography of the consultant, and (c) an indication of the area(s) in which consultant's expertise will be utilized and why it is essential for contract performance. In addition, significant deviations from the dollar amount approved for consultant services, or changes in the consultants to be utilized, must likewise be approved in advance upon submission of adequate justification.

CLAUSES INCORPORATED BY FULL TEXT

252.223-9004 – Environmental, Radiation, Safety Notification, Compliance and Liability (JUN 2013)

(a) Environmental, Radiation, and Safety Notification: The Contractor shall notify the Contracting Officer (CO) and Contracting Officer Representative (COR) of any occurrence of non-compliance with Environmental, Radiation, and Safety regulations that occur at any of the Contractor's facilities at which government property is located as soon as practicable, but not later than 24 hours after identification of an incident. The Contractor shall make initial notification by telephone or email. Then, shall follow-up with a written report within 10 business days.

(b) The Contractor shall notify the CO/COR of any external Environmental, Radiation, and Safety audits or inspections conducted at the facility and provide any reports resulting from the audit. The final report shall be provided to the CO/COR within 30 days following the audit.

(c) The Contractor shall comply with all Federal, State, and local Environmental, Radiation, and Safety regulations, including, without limitation, statutes, ordinances, court orders, consent decrees, administrative orders, or compliance agreements applicable to the facilities where the Government Property is located.

(d) The Contractor shall acquire all necessary permits, and licenses.

(e) DTRA will not be responsible, financially or otherwise, for the investigation, monitoring, cleanup, containment, restoration, removal, or other remedial activity with respect to any hazardous substances present in the soil, ground water, or building(s) that (i) results from activities conducted by entities other than DTRA during the term of this contract, or (ii) results from activities conducted pursuant to any contract, lease, or occupancy agreement that is not associated with DTRA-owned property or activities.

(End of Clause)

CLAUSES INCORPORATED BY FULL TEXT

252.235-9000 SOURCES OF INFORMATION (JULY 2000)

a. The results of the research to be delivered to the Government under this Contract shall embody the most recent reliable information in the field which is available to the Contractor from private and governmental sources, and the Contractor agrees to utilize all sources of such information available to it. In this connection, information in this field which is in the control of DTRA shall, with the consent of the Contracting Officer's Representative (COR) and under such safeguards and procedures as he/she may prescribe, be made available to the Contractor on request. Additionally, the Contractor is encouraged to make use of the resources available through the Defense Threat Reduction Information Analysis Center (DTRIAC), 1680 Texas Street, Southeast, Kirtland AFB, New Mexico 87117.

b. Reasonable assistance in obtaining access to information, or in obtaining permission to use Government or private facilities, will be given to the Contractor by DTRA. Specifically, the Contractor must register with the Defense Technical Information Center, ATTN: DTIC, 8725 John J. Kingman Road, Suite 0944, Fort Belvoir, VA 22060-6218, in accordance with Defense Logistics Agency (DLA) Regulation 4185.10, Certification and Registration for Access to DoD Defense Technical Information. DD Form 1540, the registration form, shall be forwarded to the DTRA Contracting Officer for approval (DFARS 35.010(b)).
(End of clause)

CLAUSES INCORPORATED BY FULL TEXT

252.237-9001 - Enterprise-wide Contractor Manpower Reporting Application (APR 2013)

(a) In accordance with Section 2330a of title 10, United States Code (10 USC 2330a), Contractors shall report ALL contractor labor hours (including subcontractor labor hours) required for performance of services provided under this contract via a secure data collection site. The contractor shall completely fill in all required data fields using the following web address: http://www.ecmra.mil/.

(b) Reporting inputs will be for the labor executed during the period of performance during each Government fiscal year (FY), which runs October 1 through September 30. While inputs may be reported any time during the FY, all data shall be reported no later than October 31 of each calendar year, beginning with 2013. Contractors may direct questions to the help desk at: http://www.ecmra.mil.

(End of Clause)

252.242-9000 CONTRACTOR PERFORMANCE ASSESSMENT REPORTING SYSTEM (CPARS) (NOV 2002)

1. As required by FAR Part 42.1503, and DTRA policy for the Contractor Performance Assessment Reporting System (CPARS) and Past Performance Automated Information System (PPAIS) effective July, 2001, the Government shall complete a CPAR each year of the period of performance of this contract. The contractor will have an opportunity to provide their comments in each CPAR before it is finalized. In accordance with DTRA CPARS policy the completed CPARs will be entered into the Department of Defense Past Performance Automated Information System (PPAIS), a retrieval system for source selection teams to access the CPARs of contractors' performance. The DTRA CPARS and PPAIS policy includes an explanation of the process and procedures that will be utilized under this contract. A copy is available for contractor reference via the DTRAlink (www.dtra.mil) by accessing Acquisition, How We Do Business.

2. The CPARs shall occur annually in accordance with the schedule established below:

(i) Initial CPAR: 12 months after contract start date (date performance begins)
TBD (by PCO)

(ii) Interim CPAR(s) will be performed annually on the anniversary of the contract start date according to the following schedule:
TBD (by PCO)

(iii) A Final CPAR will be completed upon contract termination, transfer of program management/contract management responsibility outside of DTRA, the delivery of the final end item on contract and/or the completion of the performance period.

(iv) An Out-of-Cycle CPAR may be required when there is a significant change in performance that alters the assessment in one or more evaluation area(s). An Out-of-Cycle CPAR is optional and shall be processed in accordance with Attachment___

3. Each CPAR shall only cover the period elapsing from the last annual CPAR. The final CPAR shall not be used to summarize or "roll-up" the contractor's performance under the entire contract. Each annual CPAR and the final CPAR together will comprise a total picture of contractor performance.

4. At the request of the Government, a verbal, informal review of the Contractor's performance may be held 3-6 months before the completion of the Interim or Final Evaluation periods. This review entails discussing any problems or areas of concern regarding the Contractor's performance to date. No written evaluation form or other formal documentation is required for this evaluation. It may be conducted with the Contractor by telephone, teleconference or face-to-face. This is designed to offer the Contractor an opportunity to correct known deficiencies or weaknesses prior to the formal written evaluation.

5. As set forth in DTRA CPARS policy, any disagreements between the Contractor and the Program Manager regarding the CPAR(s) that cannot be resolved shall be reviewed by the designated Reviewing Official prior to finalization of the CPAR.

6. Special Requirements for Indefinite Delivery Contracts (IDIQ and Requirements type), CPARs shall be processed (select one)

____ for all existing orders (combined) at the time the CPAR is processed

____ on an order-by-order basis

____ on a grouped order basis

7. The policy and procedures set forth in this clause and DTRA CPARS policy are not subject to "Disputes" as described in FAR Part 33.

CLAUSES INCORPORATED BY FULL TEXT

52.216-7 ALLOWABLE COST AND PAYMENT (JUN 2013)

(a) Invoicing.

(1) The Government will make payments to the Contractor when requested as work progresses, but (except for small business concerns) not more often than once every 2 weeks, in amounts determined to be allowable by the Contracting Officer in accordance with Federal Acquisition Regulation (FAR) subpart 31.2 in effect on the date of this contract and the terms of this contract. The Contractor may submit to an authorized representative of the Contracting Officer, in such form and reasonable detail as the representative may require, an invoice or voucher supported by a statement of the claimed allowable cost for performing this contract.

(2) Contract financing payments are not subject to the interest penalty provisions of the Prompt Payment Act. Interim payments made prior to the final payment under the contract are contract financing payments, except interim payments if this contract contains Alternate I to the clause at 52.232-25.

(3) The designated payment office will make interim payments for contract financing on the 30th day after the designated billing office receives a proper payment request.

In the event that the Government requires an audit or other review of a specific payment request to ensure compliance with the terms and conditions of the contract, the designated payment office is not compelled to make payment by the specified due date.

(b) Reimbursing costs. (1) For the purpose of reimbursing allowable costs (except as provided in subparagraph (b)(2) of the clause, with respect to pension, deferred profit sharing, and employee stock ownership plan contributions), the term "costs" includes only--

(i) Those recorded costs that, at the time of the request for reimbursement, the Contractor has paid by cash, check, or other form of actual payment for items or services purchased directly for the contract;

(ii) When the Contractor is not delinquent in paying costs of contract performance in the ordinary course of business, costs incurred, but not necessarily paid, for--

(A) Supplies and services purchased directly for the contract and associated financing payments to subcontractors, provided payments determined due will be made--

(1) In accordance with the terms and conditions of a subcontract or invoice; and

(2) Ordinarily within 30 days of the submission of the Contractor's payment request to the Government;

(B) Materials issued from the Contractor's inventory and placed in the production process for use on the contract;

(C) Direct labor;

(D) Direct travel;

(E) Other direct in-house costs; and

(F) Properly allocable and allowable indirect costs, as shown in the records maintained by the Contractor for purposes of obtaining reimbursement under Government contracts; and

(iii) The amount of financing payments that have been paid by cash, check, or other forms of payment to subcontractors.

(2) Accrued costs of Contractor contributions under employee pension plans shall be excluded until actually paid unless--

(i) The Contractor's practice is to make contributions to the retirement fund quarterly or more frequently; and

(ii) The contribution does not remain unpaid 30 days after the end of the applicable quarter or shorter payment period (any contribution remaining unpaid shall be excluded from the Contractor's indirect costs for payment purposes).

(3) Notwithstanding the audit and adjustment of invoices or vouchers under paragraph (g) of this clause, allowable indirect costs under this contract shall be obtained by applying indirect cost rates established in accordance with paragraph (d) of this clause.

(4) Any statements in specifications or other documents incorporated in this contract by reference designating performance of services or furnishing of materials at the Contractor's expense or at no cost to the Government shall be disregarded for purposes of cost-reimbursement under this clause.

(c) Small business concerns. A small business concern may receive more frequent payments than every 2 weeks.

(d) Final indirect cost rates. (1) Final annual indirect cost rates and the appropriate bases shall be established in accordance with Subpart 42.7 of the Federal Acquisition Regulation (FAR) in effect for the period covered by the indirect cost rate proposal.

(2)(i) The Contractor shall submit an adequate final indirect cost rate proposal to the Contracting Officer (or cognizant Federal agency official) and auditor within the 6-month period following the expiration of each of its fiscal years. Reasonable extensions, for exceptional circumstances only, may be requested in writing by the Contractor and granted in writing by the Contracting Officer. The Contractor shall support its proposal with adequate supporting data.

(ii) The proposed rates shall be based on the Contractor's actual cost experience for that period. The appropriate Government representative and the Contractor shall establish the final indirect cost rates as promptly as practical after receipt of the Contractor's proposal.

(iii) An adequate indirect cost rate proposal shall include the following data unless otherwise specified by the cognizant Federal agency official:

(A) Summary of all claimed indirect expense rates, including pool, base, and calculated indirect rate.

(B) General and Administrative expenses (final indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts).

(C) Overhead expenses (final indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts) for each final indirect cost pool.

(D) Occupancy expenses (intermediate indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts) and expense reallocation to final indirect cost pools.

(E) Claimed allocation bases, by element of cost, used to distribute indirect costs.

(F) Facilities capital cost of money factors computation.

(G) Reconciliation of books of account (i.e., General Ledger) and claimed direct costs by major cost element.

(H) Schedule of direct costs by contract and subcontract and indirect expense applied at claimed rates, as well as a subsidiary schedule of Government participation percentages in each of the allocation base amounts.

(I) Schedule of cumulative direct and indirect costs claimed and billed by contract and subcontract.

(J) Subcontract information. Listing of subcontracts awarded to companies for which the contractor is the prime or upper-tier contractor (include prime and subcontract numbers; subcontract value and award type; amount claimed during the fiscal year; and the subcontractor name, address, and point of contact information).

(K) Summary of each time-and-materials and labor-hour contract information, including labor categories, labor rates, hours, and amounts; direct materials; other direct costs; and, indirect expense applied at claimed rates.

(L) Reconciliation of total payroll per IRS form 941 to total labor costs distribution.

(M) Listing of decisions/agreements/approvals and description of accounting/organizational changes.

(N) Certificate of final indirect costs (see 52.242-4,
Certification of Final Indirect Costs).

(O) Contract closing information for contracts physically completed in this fiscal year (include contract number, period of performance, contract ceiling amounts, contract fee computations, level of effort, and indicate if the contract is ready to close).

(iv) The following supplemental information is not required to determine if a proposal is adequate, but may be required during the audit process:

(A) Comparative analysis of indirect expense pools detailed by account to prior fiscal year and budgetary data.

(B) General organizational information and limitation on allowability of compensation for certain contractor personnel. See 31.205-6(p). Additional salary reference information is available at http://www.whitehouse.gov/omb/procurement_index_exec_comp/.

(C) Identification of prime contracts under which the contractor performs as a subcontractor.

(D) Description of accounting system (excludes contractors required to submit a CAS Disclosure Statement or contractors where the description of the accounting system has not changed from the previous year's submission).

(E) Procedures for identifying and excluding unallowable costs from the costs claimed and billed (excludes contractors where the procedures have not changed from the previous year's submission).

(F) Certified financial statements and other financial data (e.g., trial balance, compilation, review, etc.).

(G) Management letter from outside CPAs concerning any internal control weaknesses.

(H) Actions that have been and/or will be implemented to correct the weaknesses described in the management letter from subparagraph G) of this section.

(I) List of all internal audit reports issued since the last disclosure of internal audit reports to the Government.

(J) Annual internal audit plan of scheduled audits to be performed in the fiscal year when the final indirect cost rate submission is made.

(K) Federal and State income tax returns.

(L) Securities and Exchange Commission 10-K annual report.

(M) Minutes from board of directors meetings.

(N) Listing of delay claims and termination claims submitted which contain costs relating to the subject fiscal year.

(O) Contract briefings, which generally include a synopsis of all pertinent contract provisions, such as: Contract type, contract amount, product or service(s) to be provided, contract performance period, rate ceilings, advance approval requirements, pre-contract cost allowability limitations, and billing limitations.

(v) The Contractor shall update the billings on all contracts to reflect the final settled rates and update the schedule of cumulative direct and indirect costs claimed and billed, as required in paragraph (d)(2)(iii)(I) of this section, within 60 days after settlement of final indirect cost rates.

(3) The Contractor and the appropriate Government representative shall execute a written understanding setting forth the final indirect cost rates. The understanding shall specify (i) the agreed-upon final annual indirect cost rates, (ii) the bases to which the rates apply, (iii) the periods for which the rates apply, (iv) any specific indirect cost items treated as direct costs in the settlement, and (v) the affected contract and/or subcontract, identifying any with advance agreements or special terms and the applicable rates. The understanding shall not change any monetary ceiling, contract obligation, or specific cost allowance or disallowance provided for in this contract. The understanding is incorporated into this contract upon execution.

(4) Failure by the parties to agree on a final annual indirect cost rate shall be a dispute within the meaning of the Disputes clause.

(5) Within 120 days (or longer period if approved in writing by the Contracting Officer) after settlement of the final annual indirect cost rates for all years of a physically complete contract, the Contractor shall submit a completion invoice or voucher to reflect the settled amounts and rates. The completion invoice or voucher shall include settled subcontract amounts and rates. The prime contractor is responsible for settling subcontractor amounts and rates included in the completion invoice or voucher and providing status of subcontractor audits to the contracting officer upon request.

(6)(i) If the Contractor fails to submit a completion invoice or voucher within the time specified in paragraph (d)(5) of this clause, the Contracting Officer may--

(A) Determine the amounts due to the Contractor under the contract; and

(B) Record this determination in a unilateral modification to the contract.

(ii) This determination constitutes the final decision of the Contracting Officer in accordance with the Disputes clause.

(e) Billing rates. Until final annual indirect cost rates are established for any period, the Government shall reimburse the Contractor at billing rates established by the Contracting Officer or by an authorized representative (the cognizant auditor), subject to adjustment when the final rates are established. These billing rates--

(1) Shall be the anticipated final rates; and

(2) May be prospectively or retroactively revised by mutual agreement, at either party's request, to prevent substantial overpayment or underpayment.

(f) Quick-closeout procedures. Quick-closeout procedures are applicable when the conditions in FAR 42.708(a) are satisfied.

(g) Audit. At any time or times before final payment, the Contracting Officer may have the Contractor's invoices or vouchers and statements of cost audited. Any payment may be (1) Reduced by amounts found by the Contracting Officer not to constitute allowable costs or (2) Adjusted for prior overpayments or underpayments.

(h) Final payment. (1) Upon approval of a completion invoice or voucher submitted by the Contractor in accordance with paragraph (d)(5) of this clause, and upon the Contractor's compliance with all terms of this contract, the Government shall promptly pay any balance of allowable costs and that part of the fee (if any) not previously paid.

(2) The Contractor shall pay to the Government any refunds, rebates, credits, or other amounts (including interest, if any) accruing to or received by the Contractor or any assignee under this contract, to the extent that those amounts

are properly allocable to costs for which the Contractor has been reimbursed by the Government. Reasonable expenses incurred by the Contractor for securing refunds, rebates, credits, or other amounts shall be allowable costs if approved by the Contracting Officer. Before final payment under this contract, the Contractor and each assignee whose assignment is in effect at the time of final payment shall execute and deliver--

(i) An assignment to the Government, in form and substance satisfactory to the Contracting Officer, of refunds, rebates, credits, or other amounts (including interest, if any) properly allocable to costs for which the Contractor has been reimbursed by the Government under this contract; and

(ii) A release discharging the Government, its officers, agents, and employees from all liabilities, obligations, and claims arising out of or under this contract, except--

(A) Specified claims stated in exact amounts, or in estimated amounts when the exact amounts are not known;

(B) Claims (including reasonable incidental expenses) based upon liabilities of the Contractor to third parties arising out of the performance of this contract; provided, that the claims are not known to the Contractor on the date of the execution of the release, and that the Contractor gives notice of the claims in writing to the Contracting Officer within 6 years following the release date or notice of final payment date, whichever is earlier; and

(C) Claims for reimbursement of costs, including reasonable incidental expenses, incurred by the Contractor under the patent clauses of this contract, excluding, however, any expenses arising from the Contractor's indemnification of the Government against patent liability.

(End of clause)

52.216-7 ALLOWABLE COST AND PAYMENT (JUN 2013) -- ALTERNATE IV (AUG 2012)
(a) Invoicing.

(1) The Government will make payments to the Contractor when requested as work progresses, but not more often than once every two weeks, in amounts determined to be allowable by the Contracting Officer in accordance with FAR subpart 31.7 in effect on the date of this contract and the terms of this contract. The Contractor may submit to an authorized representative of the Contracting Officer, in such form and reasonable detail as the representative may require, an invoice or voucher supported by a statement of the claimed allowable cost for performing this contract.

(2) Contract financing payments are not subject to the interest penalty provisions of the Prompt Payment Act. Interim payments made prior to the final payment under the contract are contract financing payments, except interim payments if this contract contains Alternate I to the clause at 52.232-25.

(3) The designated payment office will make interim payments for contract financing on the 30th day after the designated billing office receives a proper payment request.

In the event that the Government requires an audit or other review of a specific payment request to ensure compliance with the terms and conditions of the contract, the designated payment office is not compelled to make payment by the specified due date.

(b) Reimbursing costs. (1) For the purpose of reimbursing allowable costs (except as provided in subparagraph (b)(2) of the clause, with respect to pension, deferred profit sharing, and employee stock ownership plan contributions), the term "costs" includes only--

(i) Those recorded costs that, at the time of the request for reimbursement, the Contractor has paid by cash, check, or other form of actual payment for items or services purchased directly for the contract;

(ii) When the Contractor is not delinquent in paying costs of contract performance in the ordinary course of business, costs incurred, but not necessarily paid, for--

(A) Supplies and services purchased directly for the contract and associated financing payments to subcontractors, provided payments determined due will be made--

(1) In accordance with the terms and conditions of a subcontract or invoice; and

(2) Ordinarily within 30 days of the submission of the Contractor's payment request to the Government;

(B) Materials issued from the Contractor's inventory and placed in the production process for use on the contract;

(C) Direct labor;

(D) Direct travel;

(E) Other direct in-house costs; and

(F) Properly allocable and allowable indirect costs, as shown in the records maintained by the Contractor for purposes of obtaining reimbursement under Government contracts; and

(iii) The amount of financing payments that have been paid by cash, check, or other forms of payment to subcontractors.

(2) Accrued costs of Contractor contributions under employee pension plans shall be excluded until actually paid unless--

(i) The Contractor's practice is to make contributions to the retirement fund quarterly or more frequently; and

(ii) The contribution does not remain unpaid 30 days after the end of the applicable quarter or shorter payment period (any contribution remaining unpaid shall be excluded from the Contractor's indirect costs for payment purposes).

(3) Notwithstanding the audit and adjustment of invoices or vouchers under paragraph (g) of this clause, allowable indirect costs under this contract shall be obtained by applying indirect cost rates established in accordance with paragraph (d) of this clause.

(4) Any statements in specifications or other documents incorporated in this contract by reference designating performance of services or furnishing of materials at the Contractor's expense or at no cost to the Government shall be disregarded for purposes of cost-reimbursement under this clause.

(c) Small business concerns. A small business concern may receive more frequent payments than every 2 weeks.

(d) Final indirect cost rates. (1) Final annual indirect cost rates and the appropriate bases shall be established in accordance with Subpart 42.7 of the Federal Acquisition Regulation (FAR) in effect for the period covered by the indirect cost rate proposal.

(2)(i) The Contractor shall submit an adequate final indirect cost rate proposal to the Contracting Officer (or cognizant Federal agency official) and auditor within the 6-month period following the expiration of each of its fiscal years. Reasonable extensions, for exceptional circumstances only, may be requested in writing by the Contractor and granted in writing by the Contracting Officer. The Contractor shall support its proposal with adequate supporting data.

(ii) The proposed rates shall be based on the Contractor's actual cost experience for that period. The appropriate Government representative and the Contractor shall establish the final indirect cost rates as promptly as practical after receipt of the Contractor's proposal.

(iii) An adequate indirect cost rate proposal shall include the following data unless otherwise specified by the cognizant Federal agency official:

(A) Summary of all claimed indirect expense rates, including pool, base, and calculated indirect rate.

(B) General and Administrative expenses (final indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts).

(C) Overhead expenses (final indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts) for each final indirect cost pool.

(D) Occupancy expenses (intermediate indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts) and expense reallocation to final indirect cost pools.

(E) Claimed allocation bases, by element of cost, used to distribute indirect costs.

(F) Facilities capital cost of money factors computation.

(G) Reconciliation of books of account (i.e., General Ledger) and claimed direct costs by major cost element.

(H) Schedule of direct costs by contract and subcontract and indirect expense applied at claimed rates, as well as a subsidiary schedule of Government participation percentages in each of the allocation base amounts.

(I) Schedule of cumulative direct and indirect costs claimed and billed by contract and subcontract.

(J) Subcontract information. Listing of subcontracts awarded to companies for which the contractor is the prime or upper-tier contractor (include prime and subcontract numbers; subcontract value and award type; amount claimed during the fiscal year; and the subcontractor name, address, and point of contact information).

(K) Summary of each time-and-materials and labor-hour contract information, including labor ategories, labor rates, hours, and amounts; direct materials; other direct costs; and, indirect expense applied at claimed rates.

(L) Reconciliation of total payroll per IRS form 941 to total labor costs distribution.

(M) Listing of decisions/agreements/approvals and description of accounting/organizational changes.

(N) Certificate of final indirect costs (see 52.242-4,
Certification of Final Indirect Costs).

(O) Contract closing information for contracts physically completed in this fiscal year (include contract number, period of performance, contract ceiling amounts, contract fee computations, level of effort, and indicate if the contract is ready to close).

(iv) The following supplemental information is not required to determine if a proposal is adequate, but may be required during the audit process:

(A) Comparative analysis of indirect expense pools detailed by account to prior fiscal year and budgetary data.
(B) General organizational information and limitation on allowability of compensation for certain contractor personnel. See 31.205-6(p). Additional salary reference information is available at http://www.whitehouse.gov/omb/procurement_index_exec_comp/.

(C) Identification of prime contracts under which the contractor performs as a subcontractor.

(D) Description of accounting system (excludes contractors required to submit a CAS Disclosure Statement or contractors where the description of the accounting system has not changed from the previous year's submission).

(E) Procedures for identifying and excluding unallowable costs from the costs claimed and billed (excludes contractors where the procedures have not changed from the previous year's submission).

(F) Certified financial statements and other financial data (e.g., trial balance, compilation, review, etc.).

(G) Management letter from outside CPAs concerning any internal control weaknesses.

(H) Actions that have been and/or will be implemented to correct the weaknesses described in the management letter from subparagraph G) of this section.

(I) List of all internal audit reports issued since the last disclosure of internal audit reports to the Government.

(J) Annual internal audit plan of scheduled audits to be performed in the fiscal year when the final indirect cost rate submission is made.

(K) Federal and State income tax returns.

(L) Securities and Exchange Commission 10-K annual report.

(M) Minutes from board of directors meetings.

(N) Listing of delay claims and termination claims submitted which contain costs relating to the subject fiscal year.

(O) Contract briefings, which generally include a synopsis of all pertinent contract provisions, such as: Contract type, contract amount, product or service(s) to be provided, contract performance period, rate ceilings, advance approval requirements, pre-contract cost allowability limitations, and billing limitations.

(v) The Contractor shall update the billings on all contracts to reflect the final settled rates and update the schedule of cumulative direct and indirect costs claimed and billed, as required in paragraph (d)(2)(iii)(I) of this section, within 60 days after settlement of final indirect cost rates.

(3) The Contractor and the appropriate Government representative shall execute a written understanding setting forth the final indirect cost rates. The understanding shall specify (i) the agreed-upon final annual indirect cost rates, (ii) the bases to which the rates apply, (iii) the periods for which the rates apply, (iv) any specific indirect cost items treated as direct costs in the settlement, and (v) the affected contract and/or subcontract, identifying any with advance agreements or special terms and the applicable rates. The understanding shall not change any monetary ceiling, contract obligation, or specific cost allowance or disallowance provided for in this contract. The understanding is incorporated into this contract upon execution.

(4) Failure by the parties to agree on a final annual indirect cost rate shall be a dispute within the meaning of the Disputes clause.

(5) Within 120 days (or longer period if approved in writing by the Contracting Officer) after settlement of the final annual indirect cost rates for all years of a physically complete contract, the Contractor shall submit a completion invoice or voucher to reflect the settled amounts and rates. The completion invoice or voucher shall include settled subcontract amounts and rates. The prime contractor is responsible for settling subcontractor amounts and rates

included in the completion invoice or voucher and providing status of subcontractor audits to the contracting officer upon request.

(6)(i) If the Contractor fails to submit a completion invoice or voucher within the time specified in paragraph (d)(5) of this clause, the Contracting Officer may--

(A) Determine the amounts due to the Contractor under the contract; and

(B) Record this determination in a unilateral modification to the contract.

(ii) This determination constitutes the final decision of the Contracting Officer in accordance with the Disputes clause.

(e) Billing rates. Until final annual indirect cost rates are established for any period, the Government shall reimburse the Contractor at billing rates established by the Contracting Officer or by an authorized representative (the cognizant auditor), subject to adjustment when the final rates are established. These billing rates--

(1) Shall be the anticipated final rates; and

(2) May be prospectively or retroactively revised by mutual agreement, at either party's request, to prevent substantial overpayment or underpayment.

(f) Quick-closeout procedures. Quick-closeout procedures are applicable when the conditions in FAR 42.708(a) are satisfied.

(g) Audit. At any time or times before final payment, the Contracting Officer may have the Contractor's invoices or vouchers and statements of cost audited. Any payment may be (1) Reduced by amounts found by the Contracting Officer not to constitute allowable costs or (2) Adjusted for prior overpayments or underpayments.

(h) Final payment. (1) Upon approval of a completion invoice or voucher submitted by the Contractor in accordance with paragraph (d)(5) of this clause, and upon the Contractor's compliance with all terms of this contract, the Government shall promptly pay any balance of allowable costs and that part of the fee (if any) not previously paid.

(2) The Contractor shall pay to the Government any refunds, rebates, credits, or other amounts (including interest, if any) accruing to or received by the Contractor or any assignee under this contract, to the extent that those amounts are properly allocable to costs for which the Contractor has been reimbursed by the Government. Reasonable expenses incurred by the Contractor for securing refunds, rebates, credits, or other amounts shall be allowable costs if approved by the Contracting Officer. Before final payment under this contract, the Contractor and each assignee whose assignment is in effect at the time of final payment shall execute and deliver--

(i) An assignment to the Government, in form and substance satisfactory to the Contracting Officer, of refunds, rebates, credits, or other amounts (including interest, if any) properly allocable to costs for which the Contractor has been reimbursed by the Government under this contract; and

(ii) A release discharging the Government, its officers, agents, and employees from all liabilities, obligations, and claims arising out of or under this contract, except--

(A) Specified claims stated in exact amounts, or in estimated amounts when the exact amounts are not known;

(B) Claims (including reasonable incidental expenses) based upon liabilities of the Contractor to third parties arising out of the performance of this contract; provided, that the claims are not known to the Contractor on the date of the execution of the release, and that the Contractor gives notice of the claims in writing to the Contracting Officer within 6 years following the release date or notice of final payment date, whichever is earlier; and

(C) Claims for reimbursement of costs, including reasonable incidental expenses, incurred by the Contractor under the patent clauses of this contract, excluding, however, any expenses arising from the Contractor's indemnification of the Government against patent liability.

(End of clause)

52.217-9 OPTION TO EXTEND THE TERM OF THE CONTRACT (MAR 2000)

(a) The Government may extend the term of this contract by written notice to the Contractor prior to the end of the Base Period; provided that the Government gives the Contractor a preliminary written notice of its intent to extend at least 30 days before the contract expires. The preliminary notice does not commit the Government to an extension.

(b) If the Government exercises this option, the extended contract shall be considered to include this option clause.

(c) The total duration of this contract, including the exercise of any options under this clause, shall not exceed 24 months.

(End of clause)

52.219-28 POST-AWARD SMALL BUSINESS PROGRAM REREPRESENTATION (JULY 2013)

(a) Definitions. As used in this clause--

Long-term contract means a contract of more than five years in duration, including options. However, the term does not include contracts that exceed five years in duration because the period of performance has been extended for a cumulative period not to exceed six months under the clause at 52.217-8, Option to Extend Services, or other appropriate authority.

Small business concern means a concern, including its affiliates, that is independently owned and operated, not dominant in the field of operation in which it is bidding on Government contracts, and qualified as a small business under the criteria in 13 CFR part 121 and the size standard in paragraph (c) of this clause. Such a concern is ``not dominant in its field of operation'' when it does not exercise a controlling or major influence on a national basis in a kind of business activity in which a number of business concerns are primarily engaged. In determining whether dominance exists, consideration shall be given to all appropriate factors, including volume of business, number of employees, financial resources, competitive status or position, ownership or control of materials, processes, patents, license agreements, facilities, sales territory, and nature of business activity.

(b) If the Contractor represented that it was a small business concern prior to award of this contract, the Contractor shall rerepresent its size status according to paragraph (e) of this clause or, if applicable, paragraph (g) of this clause, upon the occurrence of any of the following:

(1) Within 30 days after execution of a novation agreement or within 30 days after modification of the contract to include this clause, if the novation agreement was executed prior to inclusion of this clause in the contract.

(2) Within 30 days after a merger or acquisition that does not require a novation or within 30 days after modification of the contract to include this clause, if the merger or acquisition occurred prior to inclusion of this clause in the contract.

(3) For long-term contracts--

(i) Within 60 to 120 days prior to the end of the fifth year of the contract; and

(ii) Within 60 to 120 days prior to the date specified in the contract for exercising any option thereafter.

(c) The Contractor shall rerepresent its size status in accordance with the size standard in effect at the time of this rerepresentation that corresponds to the North American Industry Classification System (NAICS) code assigned to this contract. The small business size standard corresponding to this NAICS code can be found at http://www.sba.gov/content/table-small-business-size-standards.

(d) The small business size standard for a Contractor providing a product which it does not manufacture itself, for a contract other than a construction or service contract, is 500 employees.

(e) Except as provided in paragraph (g) of this clause, the Contractor shall make the representation required by paragraph (b) of this clause by validating or updating all its representations in the Representations and Certifications section of the System for Award Management (SAM) and its other data in SAM, as necessary, to ensure that they reflect the Contractor's current status. The
Contractor shall notify the contracting office in writing within the timeframes specified in paragraph (b) of this clause that the data have been validated or updated, and provide the date of the validation or update.

(f) If the Contractor represented that it was other than a small business concern prior to award of this contract, the Contractor may, but is not required to, take the actions required by paragraphs (e) or (g) of this clause.

(g) If the Contractor does not have representations and certifications in SAM, or does not have a representation in SAM for the NAICS code applicable to this contract, the Contractor is required to complete the following rerepresentation and submit it to the contracting office, along with the contract number and the date on which the rerepresentation was completed:

The Contractor represents that it ( ) is, (X) is not a small business concern under NAICS Code 541711- assigned to contract number HDTRA1-15-C-0041.

(Contractor to sign and date and insert authorized signer's name and title).

(End of clause)

52.222-2 PAYMENT FOR OVERTIME PREMIUMS (JUL 1990)

(a) The use of overtime is authorized under this contract if the overtime premium cost does not exceed $0.00 or the overtime premium is paid for work --

(1) Necessary to cope with emergencies such as those resulting from accidents, natural disasters, breakdowns of production equipment, or occasional production bottlenecks of a sporadic nature;

(2) By indirect-labor employees such as those performing duties in connection with administration, protection, transportation, maintenance, standby plant protection, operation of utilities, or accounting;

(3) To perform tests, industrial processes, laboratory procedures, loading or unloading of transportation conveyances, and operations in flight or afloat that are continuous in nature and cannot reasonably be interrupted or completed otherwise; or

(4) That will result in lower overall costs to the Government.

(b) Any request for estimated overtime premiums that exceeds the amount specified above shall include all estimated overtime for contract completion and shall--

(1) Identify the work unit; e.g., department or section in which the requested overtime will be used, together with present workload, staffing, and other data of the affected unit sufficient to permit the Contracting Officer to evaluate the necessity for the overtime;

(2) Demonstrate the effect that denial of the request will have on the contract delivery or performance schedule;

(3) Identify the extent to which approval of overtime would affect the performance or payments in connection with other Government contracts, together with identification of each affected contract; and

(4) Provide reasons why the required work cannot be performed by using multishift operations or by employing additional personnel.

* Insert either "zero" or the dollar amount agreed to during negotiations. The inserted figure does not apply to the exceptions in paragraph (a)(1) through (a)(4) of the clause.

(End of clause)

52.244-2 SUBCONTRACTS (OCT 2010)

(a) Definitions. As used in this clause--

Approved purchasing system means a Contractor's purchasing system that has been reviewed and approved in accordance with Part 44 of the Federal Acquisition Regulation (FAR).

Consent to subcontract means the Contracting Officer's written consent for the Contractor to enter into a particular subcontract.

Subcontract means any contract, as defined in FAR Subpart 2.1, entered into by a subcontractor to furnish supplies or services for performance of the prime contract or a subcontract. It includes, but is not limited to, purchase orders, and changes and modifications to purchase orders.

(b) When this clause is included in a fixed-price type contract, consent to subcontract is required only on unpriced contract actions (including unpriced modifications or unpriced delivery orders), and only if required in accordance with paragraph (c) or (d) of this clause.

(c) If the Contractor does not have an approved purchasing system, consent to subcontract is required for any subcontract that—

(1) Is of the cost-reimbursement, time-and-materials, or labor-hour type; or

(2) Is fixed-price and exceeds—

(i) For a contract awarded by the Department of Defense, the Coast Guard, or the National Aeronautics and Space Administration, the greater of the simplified acquisition threshold or 5 percent of the total estimated cost of the contract; or

(ii) For a contract awarded by a civilian agency other than the Coast Guard and the National Aeronautics and Space Administration, either the simplified acquisition threshold or 5 percent of the total estimated cost of the contract.

(d) If the Contractor has an approved purchasing system, the Contractor nevertheless shall obtain the Contracting Officer's written consent before placing the following subcontracts:

(e)(1) The Contractor shall notify the Contracting Officer reasonably in advance of placing any subcontract or modification thereof for which consent is required under paragraph (b), (c), or (d) of this clause, including the following information:

(i) A description of the supplies or services to be subcontracted.

(ii) Identification of the type of subcontract to be used.

(iii) Identification of the proposed subcontractor.

(iv) The proposed subcontract price.

(v) The subcontractor's current, complete, and accurate certified cost or pricing data and Certificate of Current Cost or Pricing Data, if required by other contract provisions.

(vi) The subcontractor's Disclosure Statement or Certificate relating to Cost Accounting Standards when such data are required by other provisions of this contract.

(vii) A negotiation memorandum reflecting—

(A) The principal elements of the subcontract price negotiations;

(B) The most significant considerations controlling establishment of initial or revised prices;

(C) The reason certified cost or pricing data were or were not required;

(D) The extent, if any, to which the Contractor did not rely on the subcontractor's certified cost or pricing data in determining
the price objective and in negotiating the final price;

(E) The extent to which it was recognized in the negotiation that the subcontractor's certified cost or pricing data were not accurate, complete, or current; the action taken by the Contractor and the subcontractor; and the effect of any such defective data on the total price negotiated;

(F) The reasons for any significant difference between the Contractor's price objective and the price negotiated; and

(G) A complete explanation of the incentive fee or profit plan when incentives are used. The explanation shall identify each critical performance element, management decisions used to quantify each incentive element, reasons for the incentives, and a summary of all trade-off possibilities considered.

(2) The Contractor is not required to notify the Contracting Officer in advance of entering into any subcontract for which consent is not required under paragraph (c), (d), or (e) of this clause.

(f) Unless the consent or approval specifically provides otherwise, neither consent by the Contracting Officer to any subcontract nor approval of the Contractor's purchasing system shall constitute a determination—

(1) Of the acceptability of any subcontract terms or conditions;

(2) Of the allowability of any cost under this contract; or

(3) To relieve the Contractor of any responsibility for performing this contract.

(g) No subcontract or modification thereof placed under this contract shall provide for payment on a cost-plus-a-percentage-of-cost basis, and any fee payable under cost-reimbursement type subcontracts shall not exceed the fee limitations in FAR 15.404-4(c)(4)(i).

(h) The Contractor shall give the Contracting Officer immediate written notice of any action or suit filed and prompt notice of any claim made against the Contractor by any subcontractor or vendor that, in the opinion of the Contractor, may result in litigation related in any way to this contract, with respect to which the Contractor may be entitled to reimbursement from the Government.

(i) The Government reserves the right to review the Contractor's purchasing system as set forth in FAR Subpart 44.3.

(j) Paragraphs (c) and (e) of this clause do not apply to the following subcontracts, which were evaluated during negotiations:

Kitware, Inc.
International Society for Infectious Diseases

(End of clause)

52.252-2 CLAUSES INCORPORATED BY REFERENCE (FEB 1998)

This contract incorporates one or more clauses by reference, with the same force and effect as if they were given in full text. Upon request, the Contracting Officer will make their full text available. Also, the full text of a clause may be accessed electronically at this/these address(es):

http://farsite.hill.af.mil

(End of clause)

52.252-6 AUTHORIZED DEVIATIONS IN CLAUSES (APR 1984)

(a) The use in this solicitation or contract of any Federal Acquisition Regulation (48 CFR Chapter 1) clause with an authorized deviation is indicated by the addition of "(DEVIATION)" after the date of the clause.

(b) The use in this solicitation or contract of any Defense Acquisition Regulations System, Department Of Defense (48 CFR Chapter 2) clause with an authorized deviation is indicated by the addition of "(DEVIATION)" after the name of the regulation.

(End of clause)

252.204-9004 IMPLEMENTATION OF DISCLOSURE OF INFORMATION (AUG 2014)

In accordance with DFARS 252.204-7000 Disclosure of Information, any information to be released shall be submitted at least 10 days before the proposed release date, for security and policy review. Submit one copy to each below:

(a) Office of Public Affairs, DTRA/J0XGP, 8725 John J. Kingman Dr, MS 6201, Ft Belvoir VA 22060-6201.

(b) Contracting Officer, Brian Nuckols, DTRA/J4CRC, 8725 John J. Kingman Dr, MS 6201, Ft Belvoir VA 22060-6201.

(c) Program Manager, Christopher Kiley, DTRA/J9CB, 8725 John J. Kingman Dr, MS 6201, Ft Belvoir VA 22060-6201.

(End of Clause)

252.235-7010 Acknowledgment of Support and Disclaimer. (MAY 1995)

(a) The Contractor shall include an acknowledgment of the Government's support in the publication of any material based on or developed under this contract, stated in the following terms: This material is based upon work supported by the Defense Threat Reduction Agency under Contract No. HDTRA1-15-C-0041.

(b) All material, except scientific articles or papers published in scientific journals, must, in addition to any notices or disclaimers by the Contractor, also contain the following disclaimer: Any opinions, findings and conclusions or recommendations expressed in this material are those of the author(s) and do not necessarily reflect the views of the Defense Threat Reduction Agency.

(End of clause)

252.245-9000 Government Property (MAY 2013)

(a) In accordance with FAR 52.245-1(b), Property Management, and FAR 52.245-1(f), Contractor Plans and Systems, the Contractor shall have a system to manage (control, use, preserve, protect, repair and maintain) Government property in its possession.

(b) The Contractor shall complete and return the applicable attachment(s) electronically:

(c) The Government Site Visits/Physical Inventory – The DTRA will annually verify the Property in the Possession of the Contractor. The Contactor's Point of Contact shall coordinate with the Program Manager/Contracting Officer Representative or DTRA Accountable Property Officer (APO) on prearranged site visits upon request.

(d) The physical inventory report shall be validated/confirmed via signature by both the Contractor's Property Administrator and the DTRA's Government Representative (i.e. COR, APO, etc.). Inventory discrepancies must be reported immediately to the Contracting Officer, COR/Program Manager and resolved by the DTRA APO.

(e) Inventory Disposal Schedule – When applicable, the Contractor shall submit the inventory disposal schedule to the DTRA Logistics Office (DTRA J4L) for approval 45 days prior to submission of an inventory disposal schedule to the Plant Clearance Officer.

(End of Clause)

252.203-7999
Prohibition on Contracting with Entities that Require Certain Internal Confidentiality Agreements. (DEVIATION 2015-O0010)(FEB 2015)

(a) The Contractor shall not require employees or subcontractors seeking to report fraud, waste, or abuse to sign or comply with internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or contactors from lawfully reporting such waste, fraud, or abuse to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information.

(b) The Contractor shall notify employees that the prohibitions and restrictions of any internal confidentiality agreements covered by this clause are no longer in effect.

(c) The prohibition in paragraph (a) of this clause does not contravene requirements applicable to Standard Form 312, Form 4414, or any other form issued by a Federal department or agency governing the nondisclosure of classified information.

(d)(1) In accordance with section 743 of Division E, Title VIII, of the Consolidated and Further Continuing Resolution Appropriations Act, 2015, (Pub. L. 113-235), use of funds appropriated (or otherwise made available) under that or any other Act may be prohibited, if the Government determines that the Contractor is not in compliance with the provisions of this clause.

(2) The Government may seek any available remedies in the event the Contractor fails to perform in accordance with the terms and conditions of the contract as a result of Government action under this clause.

(End of clause)

16. REMARKS

The contractor will deliver software that can interface with the Biosurveillance Ecosystem (BSVE) and should include both source and executable codes. The software deliverables will be the following:

Within 12 months of contract award:

- Connect GRITS Girder database to the BSVE
- Prototype GRITS event recommendations and filtering
- Connect GRITS diagnostic and text-mining APIs to the BSVE
- Build BSVE interface to GRITS with the SDK
- Build mechanisms to crowdsource annotations
- Incorporate disease network graphs to assist diagnostics
- Support diagnostic algorithm development with dashboard
- Populated EDIR database
- Crowdsourced labels and annotations

Within 24 months of contract award:

- Expand diagnostic capability to arbitrary data feeds
- Connect GRITS to EIDR/Mantle
- Update diagnostic model in near-realtime
- Use text mining to extend network graphs/ontologies
- Connect EIDR collective intelligence editor to the BSVE
- Connect GRITS diagnostic data filtering to the BSVE
- Generate disease summary reports from diagnostics
- Forecast disease emergence
- Expanded EDIR database

Blk 4-5: Per DID referenced elements, contractor format is acceptable. Report shall detail all work performed under this effort, including the results of analysis, and appropriate conclusions and/or recommendations. Dataset compatible with Microsoft Excel or contractor recommended database application.

A final technical report is required by the end of the base period. Updates to this report will be required at the end of the Option Year, if exercised. The report should include the following elements:

1) A description of the research and development processes used to arrive at the results of the study
2) A detailed compilation of the results generated
3) A description of the performance characteristics of the developed software and an analysis of its likely utility for additional development and deployment
4) Recommendations for the next stages of development
5) Description of what data are required to feed the delivered alorithms and an approach for the Government to maintain access to those data feeds.

Additionally, the contractor will deliver:

- Feedback on diagnostic dashboard (Updates provided each 12 months)
- Documentation on near-realtime architecture (24 months after contract award)
- Documentation for GRITS APIs (Updates provided each 12 months)

Blk 14: Submission by electronic media is preferred; E-mail, or CD ROM in a current version of Microsoft or Adobe products readable by the COR.

Statement of Work

1.0 - Objective:
EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) for diagnosing infectious disease bioevents. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. We propose scaling this system to handle large data volumes in near-real-time, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor live data feeds for diseases or disease characteristics of interest. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data; all connected to our network of experts from digital surveillance, disease ecology, and open source communities.

2.0 - Scope:
The **technology areas** to be investigated are mathematical disease models, disease detection, web data mining, scientific application development, digital disease surveillance, animal and human biosurveillance data, spatial environmental health data, and information storage and retrieval.

The **primary objective** is to deliver an application that facilitates rapid and accurate diagnosis of outbreaks to identify disease threats more rapidly than current methods of digital disease surveillance and to help BSVE analysts constrain complex infectious disease outbreak scenarios.

Major milestones:
1. Build BSVE interface to GRITS with the SDK
2. Build mechanisms to crowd source annotations
3. Expand diagnostic capability to arbitrary data feeds
4. Connect GRITS to EIDR and Mantle
5. Crowd source improvements to the GRITS media diagnostic tool
6. Connect GRITS diagnostic data filtering to the BSVE
7. Enrich diagnostic dashboard with dynamic visualizations
8. Forecast disease emergence spatially

3.0 - Background:

This is an extension of a previously funded DTRA initiative. Relevant documents can be found in the references section of the technical proposal.

4.0 - Tasks/Technical Requirements:
Task 1: Connect GRITS Girder database to the BSVE (Base Period)
1. Solicit feedback on GRITS data API from BSVE team
2. Create API key generation and assignment infrastructure for GRITS
3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API

5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities (Base Period)

1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords
3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article
7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE (Base Period)

1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Build BSVE interface to GRITS with the SDK (Base Period)

1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy application

Task 5: Build mechanisms to crowd source annotations (Base Period)

1. Prepare annotation interface to allow correcting annotations
2. Write documentation of annotation interface
3. Test annotation interface and incorporate feedback
4. Develop infrastructure to identify and assign annotation tasks
5. Integrate annotation interface into Mechanical Turk or similar platform
6. Integrate and deploy citizen science platform
7. Evaluate obtained annotations and report on quality (e.g., inter-annotator agreement)

Task 6: Incorporate disease network graphs to assist diagnostics (Base Period)

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blind spots' in the information network

Task 7: Support diagnostic algorithm development with dashboard (Base Period)

1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 8: Expand diagnostic capability to arbitrary data feeds (Option Year 1)

1. Build a submission interface for users to submit arbitrary feed
2. Integrate article-processing pipeline with a translation service to process non-English articles in near real time.

Task 9: Connect GRITS to EIDR/Mantle (Option Year 1)

1. Evaluate existing EIDR/Mantle API against needs of recommendation system
2. Develop capacity of EIDR/Mantle API to deliver historic event matches
3. Recommend EIDR/Mantle events (e.g., current event is similar to past outbreak)
4. Use EIDR/Mantle media to improve diagnostics and recommendation quality
5. Match GRITS data to events in EIDR and Mantle (expanding from EIDs to all outbreaks)

Task 10: Update diagnostic model in near real time (Option Year 1)

1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 11: Use text mining to extend network graphs/ontologies (Option Year 1)

1. Infer set of subjects (e.g., EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g., novel diseases, viral strains that have mutated, bacteria that have developed antibiotic resistance).

Task 12: Connect EIDR collective intelligence editor to the BSVE (Option Year 1)

1. Evaluate and implement changes to EIDR API for of GRITS diagnostic needs
2. Generate keywords and rules from EIDR data to incorporate into GRITS text mining
3. Incorporate EIDR data into diagnostic model training
4. Design user interface for expert review and editing of EIDR events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with EIDR

Task 13: Connect GRITS diagnostic data filtering to the BSVE (Option Year 1)

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 14: Generate disease summary reports from diagnostics (Option Year 1)

1. Create algorithms for generating statistics (e.g., case counts) and visualizations (e.g., epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 15: Forecast disease emergence (Option Year 1)

1. Build a mathematical model of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

5.0 - CDRLs/Other Deliverables:

- Project Spend Plan (In accordance with Exhibt A Contract Data Requirements List)
- Meeting and Teleconference Minutes (In accordance with Exhibt A Contract Data Requirements List)
- Monthly Progress & Cost Status Reports (In accordance with Exhibt A Contract Data Requirements List)
- Software (In accordance with Exhibt A Contract Data Requirements List)
- Reports (In accordance with Exhibt A Contract Data Requirements List)

March 26, 2015

EcoHealth Alliance Subcontracting Plan for HDTRA114-AMD1-CBA-03-2-0022

Per FAR 19.704, we have detailed below our individual subcontracting plan to maximize small business potential in our contracting efforts for Base Year, Option Year 1.

Table 1. Estimated Proposed Subcontracting Amounts for Base Year of Contract

Socioeconomic Concern	Base Year Amount Subcontracted to Small Business	Option 1 Amount Subcontracted to Small Business	Base Year Percentage of overall value of total Base Year contract (Small business subcontracted amount /Total contract amount)	Option Year 1 Percentage of overall value of total Option 1 Year contract (Small business subcontracted amount /Total contract amount)
Small Business (including ANC and Indian Tribes)	$506,686.72	$521,887.33	21%	21%
Veteran-owned small business	$0	$0	0%	0%
Service-Disabled Veteran Owned Small Business -	$0	$0	0%	0%
Service-Disabled Veteran Owned Small Business	$0	$0	0%	0%
HUBZone Small Business -	$0	$0	0%	0%
Small Disadvantaged Business (including ANCs and Indian tribes)	$0	$0	0%	0%
Women-Owned Small Business Concerns	$0	$0	0%	0%

1) The breakdown of our percentage goals for subcontracted dollars for the **Base Year** is as follows

- Small Business (including ANCs and Indian Tribes)- 20%
- Veteran-owned small business - 0%
- Service-Disabled Veteran owned Small Businesses- 0%
- HUBzone Small Business - 0%
- Small Disadvantaged Business (including ANCs and Indian tribes) - 0%
- Women-owned Small Business Concerns - 0%

The breakdown of our percentage goals for subcontracted dollars for **Option Year 1** is as follows

- Small Business (including ANCs and Indian Tribes)- 20%
- Veteran-owned small business - 0%
- Service-Disabled Veteran owned Small Businesses- 0%
- HUBzone Small Business - 0%
- Small Disadvantaged Business (including ANCs and Indian tribes) - 0%
- Women-owned Small Business Concerns - 0%

2) The total amount of dollars to be subcontracted for this proposal in the **Base year** is $631,208.71. EcoHealth Alliance (EHA) plans to subcontract $506, 686.72 in the Base Year to Small Businesses (Kitware). This is approximately 80% of all subcontracted dollars. This small business is not an ANC or Indian Tribe. EHA plans to subcontract $0 to veteran-owned small business, service-disabled veteran-owned small business, HUBZone small business, small disadvantaged business (including ANCs and Indian tribes) and women-owned small business concerns.

The total amount of dollars to be subcontracted for this proposal in **Option Year 1** is $650,144.98. EHA plans to subcontract $521,887.33 in the Option Year 1 to Small Businesses (Kitware). This is approximately 80% of all subcontracted dollars. This small business is not an ANC or Indian Tribe. EHA plans to subcontract $0 to veteran-owned small business, service-disabled veteran-owned small business, HUBZone small business, small disadvantaged business (including ANCs and Indian tribes) and women-owned small business concerns.

(3) Supplies and services to be contracted to our small business subcontractor (Kitware) includes machine learning, text analysis, software development, data management, and data visualization. Kitware is a unique scientific organization, selected on the basis of the nature of the work, good faith efforts to identify capable small business firms, and the precedent of successful prior collaborations with EHA. Specifically, they were selected on the basis of professional accomplishments, niche expertise, proven track record, and the precedent of previously having developed custom biosurveillance products to interfaced with their products and expertise.

(4) The total and categorical percentage awards are lower than DoD's goals due to the specialized work to be completed the proposed work and the previous collaboration with subcontractors on previous and related research and development contracts with EHA (funded by DTRA). These methods are used to develop subcontracting goals:

The Principal Investigator (PI; Dr. Andrew G. Huff) will consult with the Chief Financial Officer (CFO; Mr. Harvey Kasdan), to clearly identify the goods and services that will be subcontracted and will search source lists to identify small, disadvantaged, women-owned, SBA HUBzone, veteran owned, and service disabled veteran owned firms that can provide these goods and services. EHA will investigate the identified firms' capabilities and the past performance of these firms to determine if they are qualified to provide the goods and services required. If there are qualified small, disadvantaged, women-owned, SBA HUBzone, veteran owned, or service disabled veteran owned firms that offer the needed goods or services, they will be used whenever possible. Reasonable goals are established before considering the value of the needed subcontracts and the after identifying the pool of qualified firms.

(5) The internal identification and selection process for subcontractors are as follows:

1. Senior scientists survey and interview institutions and individuals recommended by our science staff, colleagues, industry groups, funders and, for in-country partner recommendations, local, regional and national governments and institutions.
2. Site visits are made as necessary, particularly for partners with whom we have not worked previously, to determine their capacity, and their local relationships. Extensive review includes CV's of principal investigators and their staff, organizational and administrative capacity, annual report and audit report reviews, indirect cost rate review, and history of the institution.
3. We conduct a complete review of prospective subcontractors among senior staff, with a recommendation to the President for final decision.
4. Source lists used in making the determinations:
    - www.pro-net.sba.gov, the SBA online database of small businesses
    - www.sba.gov/hubzone, the SBA online database of locations that qualify as HUBZones
    - Local Office of the Small Business Administration

(6) Indirect costs were not included in our goals. Kitware and ISDS have their own approved overhead and indirect rates. Their sub-award contains overhead and indirect rates.

(7)

Name:	Dr. Andrew G. Huff
Title:	Senior Scientist
Address:	460 West 34th Street 17th Floor New York, NY 10001
Telephone Number:	1.212.380.4497 (direct)
Email:	huff@ecohealthalliance.org

Specific duties as they relate to EHA's subcontracting program are:

- Identifies potential subcontractors based on the methods described above
- Survey's SB, HUBZone SB, SDB, WOSB and veteran owned or service disabled veteran owned businesses for potential inclusion in all solicitations for products or services which they are capable of providing
- Works with finance and administration departments to identify future subcontracting goals
- Coordinates with subcontractors and assures subcontracting reports are submitted in accordance with EHA and U.S. government policies
- Prepares and submits periodic subcontracting reports as outlined in this plan

(8) EHA gives careful consideration to small businesses that could provide the services we require. On this basis, we identified one recognized small business entity in the field (Kitware) that had the ability, expertise and the capacity to accomplish these goals and that would be able to compliment the expertise of our organization to accomplish the tasks detailed in our statement of work (SOW). Per FAR 19.703 (2)(b), we rely on written documentation to confirm a subcontractor's status as a small business. Due to the scientifically specific nature of the work that is proposed, we were unable, to the best of our ability, to identify areas of the work that could be further subcontracted, or qualified firms that could help EHA achieve our broader small business goals (e.g., veteran, disadvantaged, HUB, women, disabled). Beyond the specific goals of this proposal, EHA makes every effort to provide opportunities for small businesses.

(9) EHA will include the clause at 52.219-8, Utilization of Small Business Concerns (see 19.708(a)), in all subcontracts that offer further subcontracting opportunities, and will require all subcontractors (except small business concerns) that receive subcontracts in excess of $650,000 ($1.5 million for construction) to adopt a plan that complies with the requirements of the clause at 52.219-9, Small Business Subcontracting Plan (see 19.708(b));

(10) EHA agrees to cooperate in any studies or surveys that may be required. EHA agrees to submit periodic reports (annually, or when requested by DTRA) so the government can determine the extent of compliance by EHA to the subcontracting plan.

- EHA will submit an Individual Subcontract Report (ISR) and a Summary Subcontract Report (SSR) using eSRS when required.
- EHA will submit a ISR semi-annually and within 30 days of contract completion. We will use the eSRS system and follow the instructions detailed on the eSRS system
- EHA will submit an SSR annuals for the twelve month period ending September 30th. We will use the eSRS system and follow the instructions detailed on the eSRS system.
- EHA does not currently have, or plan to have subcontractors with subcontracting plans. None of EHA's subcontractors have subcontractors of their own.

(11) EHA agrees that it will maintain at least the following types of records to document compliance with the subcontracting plan:

- Source list, guides, and other data identifying SB, HUBZone SB, SDB, WOSB and veteran owned or service disabled veteran owned concerns.
- Organizations contacted to locate SB, HUBZone SB, SDB, WOSB and veteran owned or service disabled veteran owned concerns.
- On a contract-by-contract basis, records on all subcontract solicitations over $100,000, indicating for each solicitation (1) whether SB concerns were solicited, and if not, why not; (2) whether HUBZone SB concerns were solicited, and if not, why not; (3) whether SDB concerns were solicited, and if not, why not; (4) whether WOSB concerns were solicited, and if not, why not, (5) whether veteran owned or service disabled veteran concerns were solicited and if not, why not; and (6) reasons for the failure of solicited SB, HUBZone SB, SDB, WOSB and veteran owned or service disabled veteran owned concerns to receive the subcontract award.

Based upon the above criteria, we have selected our small business contractor in accordance with our plan. We are committed to the small business goals as outlined in FAR 19.702 and will continue to administer our subcontracting program, inclusive of contractual agreements and monthly invoices and reports, in accordance with these regulations.

Cheers,

Andrew G. Huff, Ph.D., M.S.

DATA RIGHTS ASSERTION LIST

Identification and Assertion of Restrictions on the Government's Use, Release, or Disclosure of Technical Data or Computer Software

The Offeror asserts for itself, or the persons identified below, that the Government's rights to use, release, or disclose the following technical data or computer software should be restricted

Technical data or computer software to be furnished with restrictions*	Basis for assertion**	Asserted rights category***	Name of person asserting restrictions****
None	None	None	None

*For technical data (other than computer software documentation) pertaining to items, components, or processes developed at private expense, identify both the deliverable technical data and each such item, component, or process. For computer software or computer software documentation identify the software or documentation

**Generally, development at private expense, either exclusively or partially, is the only basis for asserting restrictions. For technical data, other than computer software documentation, development refers to development of the item, component, or process to which the data pertain. The Government's rights in computer software documentation generally may not be restricted. For computer software, development refers to the software. Indicate whether development was accomplished exclusively or partially at private expense. If development was not accomplished at private expense, or for computer software documentation, enter the specific basis for asserting restrictions

***Enter asserted rights category (e.g., government purpose license rights from a prior contract, rights in SBIR data generated under another contract, limited, restricted, or government purpose rights under this or a prior contract, or specially negotiated licenses)

****Corporation, individual, or other person, as appropriate

*****Enter "none" when all data or software will be submitted without restrictions.

13. THIS ITEM APPLIES ONLY TO MODIFICATIONS OF CONTRACTS/ORDERS.
IT MODIFIES THE CONTRACT/ORDER NO. AS DESCRIBED IN ITEM 14.

☐ A. THIS CHANGE ORDER IS ISSUED PURSUANT TO: (Specify authority) THE CHANGES SET FORTH IN ITEM 14 ARE MADE IN THE CONTRACT ORDER NO. IN ITEM 10A.

☐ B. THE ABOVE NUMBERED CONTRACT/ORDER IS MODIFIED TO REFLECT THE ADMINISTRATIVE CHANGES (such as changes in paying office, appropriation date, etc.) SET FORTH IN ITEM 14, PURSUANT TO THE AUTHORITY OF FAR 43.103(B).

☐ C. THIS SUPPLEMENTAL AGREEMENT IS ENTERED INTO PURSUANT TO AUTHORITY OF:

X D. OTHER (Specify type of modification and authority)
52.232-22 Limitation of Funds

E. IMPORTANT: Contractor ☒ is not, ☐ is required to sign this document and return _____ copies to the issuing office.

14. DESCRIPTION OF AMENDMENT/MODIFICATION (Organized by UCF section headings, including solicitation/contract subject matter where feasible.)
Modification Control Number: bishopb151339

The purpose of this modification is to:

1. Add incremental funding to CLIN 0001 in the amount of $99,550.79 under Sub-Clin 000101.
2. Update clauses 252.232-9000 and 252.232-9001.

Except as provided herein, all terms and conditions of the document referenced in Item 9A or 10A, as heretofore changed, remains unchanged and in full force and effect.

SECTION G - CONTRACT ADMINISTRATION DATA

Accounting and Appropriation

Summary for the Payment Office

As a result of this modification, the total funded amount for this document was increased by $99,550.79 from $2,117,486.21 to $2,217,037.00.

SUBCLIN 000101:
Funding on SUBCLIN 000101 is initiated as follows:

ACRN: AB

CIN: J9CBA16659000101

Acctng Data: 044315 097 0400 000 N 20152016 D 2620 0602384BP_CB_CBA_RC 1516_0400_2620_TM2DN DTRA 255

Increase: $99,550.79

Total: $99,550.79

The following have been modified:

252.232-9000 CONTRACT FUNDING PROFILE (OCT 1998)

Subject to FAR Clause 52.232-22, Limitation of Funds, the amount of $2,217,037.00 is obligated for work to be performed during the period beginning with contract award and continuing through the end of the base period. Additional incremental funding planned, but not obligated, is: $0.00.

(End of clause)

252.232-9001 PRICES/COST

a. Subject to the provisions of the Clauses of this Contract entitled LIMITATION OF FUNDS, ALLOWABLE COST AND PAYMENT, and FIXED FEE, the total allowable cost under this Contract shall not exceed S_____ A_____, which is the total estimated cost of the Contractor's performance hereunder, exclusive of fixed fee. In addition, the Government shall pay the Contractor a fixed fee of S_____B_____ for the performance of this Contract. It is understood and agreed that the Government's obligation is limited to INCREMENTAL FUNDING in the amount of $_____C_____. Within this amount (S_____C_____), the fixed fee shall bear the same relationship to the total fixed fee, as the costs incurred bear to the total estimated cost.

b. Interim payment vouchers may be submitted for provisional payment pursuant to the Clauses of this Contract entitled ALLOWABLE COST AND PAYMENT and FIXED FEE.

Fill in the dollar amounts as applicable:

CLIN 0001

A: $2,217,037.00
B: $0
C: $2,217,037.00

E. IMPORTANT: Contractor ☐ is not, ☒ is required to sign this document and return 1 copies to the issuing office.

14. DESCRIPTION OF AMENDMENT/MODIFICATION (Organized by UCF section headings, including solicitation/contract subject matter where feasible.)
Modification Control Number: duncank171066

J4CRJ9CBA172109

The purpose of this modification is to:

1. Extend Option Period 1, CLINs 1001 and 1002 through to September 30, 2017 at no additional cost to the Government. As consideration for this extension, the Contractor shall develop and provide to the Government, at the Contractor's expense, a diagnostic engine that will create a summary report of separate articles that are linked to a single disease event.
2. Update CLINs 0002 and 1002 to identify them as not separately priced with a quantity of 1, and add ship to addresses in order to comply with DoD Procurement Data Standard requirements.
3. Realign ACRN AB funding from SLIN 000101 to CLIN 0001 in order to correct an issue wherein funding was incorrectly assigned to both the CLIN and SubCLIN. This realignment does not affect the total funding amount allocated to, or available for vouchers against, CLIN 0001.
4. Remove FOB and inspection terms from funding SubCLINs.
5. Replace Section G DFAS payment instruction clause 252.204-9002 with 252.204-0002.

Except as provided herein, all terms and conditions of the document referenced in Item 9A or 10A, as heretofore changed, remains unchanged and in full force and effect.

252.201-9002 CONTRACTING OFFICER'S REPRESENTATIVE (MAY 2007)

a. The Contracting Officer's Representative (COR) for this contract is:
__X__ SEE SEPARATE LETTER

____ _____
Defense Threat Reduction Agency/_____
1680 Texas St SE
Kirtland AFB NM 87117-5669
Telephone number (505) ___-____
e-mail address_____@abq.dtra.mil.
WAWF Acceptor DoDAAC: HDTRA2

b. The COR will act as the Contracting Officer's Representative for technical matters providing technical direction and discussion as necessary with respect to the specification/statement of work and monitoring the progress and quality of the Contractor's performance. The COR is NOT an Administrative Contracting Officer (ACO) and does not have the authority to take any action, either directly or indirectly that would change the pricing, quality, quantity, place of performance, delivery schedule, or any other terms and conditions of the contract, or to direct the accomplishment of effort, which goes beyond the scope of the specifications/statement of work in the contract.

c. When, in the opinion of the contractor, the COR requests effort outside the existing scope of the contract, the contractor shall promptly notify the Contracting Officer in writing. No action shall be taken by the contractor under such direction until the Contracting Officer has issued a modification to the contract or has otherwise resolved the issue.

252.204-9002 PAYMENT INSTRUCTIONS FOR MULTIPLE ACCOUNTING CLASSIFICATION CITATIONS (MAY 2012)

In accordance with DFARS 204.7108 Payment Instructions, payment shall be made by the numbered payment instruction identified below:

Line item specific: sequential ACRN order.
252.204-0002 Line Item Specific: Sequential ACRN Order. (SEP 2009)

If there is more than one ACRN within a contract line item, the payment office will make payment in sequential ACRN order within the line item, exhausting all funds in the previous ACRN before paying from the next ACRN using the following sequential order: Alpha/Alpha; Alpha/Numeric; Numeric/Alpha; and Numeric/Numeric.

252.232-9000 CONTRACT FUNDING PROFILE (OCT 1998)

Subject to FAR Clause 52.232-22, Limitation of Funds, the amount of $2,117,486.21 is obligated for work to be performed during the period beginning with contract award and continuing through the end of the base period. Additional incremental funding planned, but not obligated, is: $99,551.79.

(End of clause)

252.232-9001 PRICES/COST

a. Subject to the provisions of the Clauses of this Contract entitled LIMITATION OF FUNDS, ALLOWABLE COST AND PAYMENT, and FIXED FEE, the total allowable cost under this Contract shall not exceed $_____ A_____, which is the total estimated cost of the Contractor's performance hereunder, exclusive of fixed fee. In addition, the Government shall pay the Contractor a fixed fee of $_____B_____ for the performance of this Contract. It is understood and agreed that the Government's obligation is limited to INCREMENTAL FUNDING in the amount of S_____C_____. Within this amount (S_____C_____), the fixed fee shall bear the same relationship to the total fixed fee, as the costs incurred bear to the total estimated cost.

b. Interim payment vouchers may be submitted for provisional payment pursuant to the Clauses of this Contract entitled ALLOWABLE COST AND PAYMENT and FIXED FEE.

Fill in the dollar amounts as applicable:

252.232-9012 WIDE AREA WORK FLOW (WAWF) – RECEIPT AND ACCEPTANCE (RA) INSTRUCTIONS (November 2011)

(a) As prescribed in DFARS clause 252.232-7003 Electronic Submission of Payment Requests (Jan 2004), Contractors must submit payment requests in electronic form. Paper copies will no longer be accepted or processed for payment unless the conditions of DFARS clause 252.232-7003(c) apply. To facilitate this electronic submission, the Defense Threat Reduction Agency (DTRA) has implemented the DoD sanctioned Wide Area Workflow-Receipt and Acceptance (WAWF-RA) for contractors to submit electronic payment requests and receiving reports. The contractor shall submit electronic payment requests and receiving reports via WAWF-RA. **Vendors shall send an email notification to the Contracting Officer Representative (COR), Program/Project Manager or other government acceptance official identified in the contract by clicking on the Send Additional Email Notifications link upon every submission of an invoice/cost voucher in WAWF-RA. To access WAWF, go to https://wawf.eb.mil.**

**** For questions, contact the DTRA WAWF Team at wawfhelp@dtra.mil ****

(b) Definitions:

Acceptor: Contracting Officer's Representative, Program/Project Manager, or other government acceptance official as identified in the contract/order.

Pay Official: Defense Finance and Accounting Service (DFAS) payment office identified in the contract/order.

SHIP To/Service Acceptor DoDAAC: Acceptor DoDAAC or DCMA DoDAAC (as specified in the contract/order).

DCAA Auditor DoDAAC: Needed when invoicing on cost-reimbursable contracts. (Go to www.dcaa.mil and click on the appropriate link under the Audit Office Locator to search for your DCAA DoDAAC.)

>>>>> For contracts that are administered by the **Office of Naval Research (ONR)**: <<<<<
Enter the ONR DoDAAC in the DCAA Auditor DoDAAC field in WAWF.

(c) WAWF Contractor Input Information:

The contractor shall use the following information in creating electronic payment requests in WAWF:

Invoice Type in WAWF:

If billing for Cost Type/Reimbursable contracts (including T&M and LH), select "Cost Voucher"
If billing for Firm-Fixed Price (FFP) Materials Only, select "Combo"
If billing for FFP Materials and Service, select "Combo"
If billing for FFP Services Only, select "2-n-1 (Services Only)"

** If the contract contains both FFP and Cost Type (including T&M and LH) line items, they must be invoiced separately on appropriate types mentioned above. Upon the written approval of the Project Manager or Contracting Officer's Representative, the contractor may invoice both line items in one type of invoice.

For WAWF Routing Information, See Table Below:

Final Invoice?	Do not change "N" (no) to "Y" (yes) unless this is the last invoice and the contract is ready for closeout.			

(d) Final Invoices/Vouchers -Final Payment shall be made in accordance with the Federal Acquisition Regulation (FAR) 52.216-7, entitled "Allowable Cost and Payment."

Invoices - Invoice 2-n-1 (Services Only) and Invoice and Receiving Report (Combo)
Select the ***"Y"*** selection from the ***"Final Invoice?"*** drop-down box when submitting the final invoice for payment for a contract. Upon successful submission of the final invoice, click on the ***Send Additional Email Notifications*** link to send an additional email notification to the Contracting Officer Representative (COR), Program/Project Manager or other government acceptance official identified in the contract.

Cost Vouchers - Once the final DCAA audit is complete for cost reimbursable contracts and authorization is received to submit the final cost voucher, select the ***"Y"*** selection from the ***"Final Voucher"*** drop-down box when submitting the final cost voucher. Upon successful submission of the final cost voucher, click on the ***Send Additional Email Notifications*** link to send an additional email notification to the following email address: finalcostvouchers@dtra.mil

(e) WAWF Training may be accessed online at http://www.wawftraining.com. To practice creating documents in WAWF, visit the practice site at https://wawftraining.eb.mil. General DFAS information may be accessed using the DFAS website at http://www.dfas.mil/. Payment status information may be accessed using the myInvoice system at https://myinvoice.csd.disa.mil. Your contract number and shipment/invoice number will be required to check status of your payment.

Note: For specific invoice related inquiries email: vendorpay@dtra.mil. Vendors shall forward any additional DTRA related WAWF questions to wawfhelp@dtra.mil.

252.242-9003 - ASSIGNMENT OF CONTRACT ADMINISTRATION SERVICES (CAS) FUNCTIONS (FEB 2012)

a. The contract administration functions stated in FAR 42.302(a) are assigned to: See Page 1, Section A, Block 6 of this contract.

b. Notwithstanding that assignment, in accordance with FAR 42.202(b)(2), the following functions are determined to be best performed by the PCO and are retained by the DTRA Contracting Office:

(1) FAR 42.302(a)(3) Conduct post-award orientation conferences.

(2) FAR 42.302(a)(20) Ensure processing and execution of duty-free entry certificates.

(3) FAR 42.302(a)(40) Perform engineering surveillance to assess compliance with contractual terms for schedule, cost, and technical performance in the areas of design, development, and production.

(4) FAR 42.302(a)(51) Consent to the placement of subcontracts.

(5) Approval or disapproval of the data items listed on Exhibit A, DD Form 1423, Contract Data Requirements List.

(END OF CLAUSE)

Section H - Special Contract Requirements

CLAUSES INCORPORATED BY FULL TEXT

252.201-9003 LIMITATION OF AUTHORITY (JUN 2009)

No person in the Government, other than a Contracting Officer, has the authority to provide direction to the Contractor, which alters the Contractor's obligations or changes this contract in any way. If any person representing the Government, other than a Contracting Officer, attempts to alter contract obligations, change the contract specifications/statement of work or tells the contractor to perform some effort which the Contractor believes to be outside the scope of this contract, the Contractor shall immediately notify the Procuring Contracting Officer (PCO). Contractor personnel shall not comply with any order or direction which they believe to be outside the scope of this contract unless the order or direction is issued by a Contracting Officer.

CLAUSES INCORPORATED BY FULL TEXT

252.203-9000 Prohibition on the Use of Senior Mentors (JUNE 2010)

(a) The use of senior mentors by the Defense Threat Reduction Agency (DTRA) enhances the readiness of the Agency across a wide range of strategic, operational, joint, functional, technical, management and development mission areas. The relevant prior service, joint force experience, and unique expertise of these senior consultants provide senior leadership with valuable insights and contribute to the continuous improvement of the Agencies' operations.

(b) For the purposes of this clause, Senior Mentor is defined as a retired flag, general or other military officers (O-6) or retired senior civilian official (Senior Executive Service (SES), Senior Level (SL), Scientific and Professional (ST)) who provides expert experience-based mentoring, teaching, training, advice, and recommendations to senior military officers, staffs and students as they participate in war games, warfighting courses, operational planning, operational exercises, and decision-making exercises.

(c) In accordance with Secretary of Defense Memorandum entitled "Policy on Senior Mentors" dated April 1, 2010, DTRA will hire all senior mentors as highly qualified experts (HQE) under 5 U.S.C. 9903. This policy balances the need for DTRA to secure the specialized knowledge required for these operational exercises with the need to hire such experts in a manner that promotes public trust and confidence.

(d) The Contractor shall not include the use of senior mentors in bids or proposals for services/supplies offered to DTRA.

(e) The Contractor shall include the substance of this clause in all subcontracts.

(End of Clause)

CLAUSES INCORPORATED BY FULL TEXT

252.209-9002 NON-GOVERNMENT SUPPORT PERSONNEL (JAN 2008)

The following companies may have access to contractor information, technical data or computer software that may be marked as proprietary or otherwise marked with restrictive legends: JAB Solutions (Contract Specialist support); Quanterion Solutions, Inc. (DTRIAC Technical Engineering Services); Booz Allen Hamilton (administrative support); TASC (advisory and assistance services); Kforce Government Solutions, Inc. (Accounting and Financial Systems Support). Each contract contains organizational conflict of interest provisions and/or includes contractual requirements for non-disclosure of proprietary contractor information or data/software marked with restrictive legends. The contractor, by submitting a proposal or entering into this contract, is deemed to have consented to the disclosure of its information to JAB Solutions, Quanterion Solutions, Inc., Booz Allen Hamilton, TASC, and Kforce Government Solutions, Inc. under the conditions and limitations described herein.

CLAUSES INCORPORATED BY FULL TEXT

252.215-9004 KEY PERSONNEL (AUG 2012)

The personnel listed below are considered essential to the work being performed hereunder. Prior to removing, replacing, or diverting any of the specified individuals, the Contractor shall notify the Contracting Officer reasonably in advance and shall submit justification (including proposed substitutions) in sufficient detail to permit evaluation of the impact on this Contract. No deviation shall be made by the Contractor without the prior written consent of the Contracting Officer; provided, that the Contracting Officer authorizes in writing the change, such authorization shall constitute the consent of the Contracting Officer required by this paragraph. The personnel listed below may, with the consent of the contracting parties, be amended from time to time during the course of the Contract to either add or delete personnel as appropriate.

Principal Investigator

CLAUSES INCORPORATED BY FULL TEXT

252.216-9003 CONSULTANTS (OCT 1998)

Services of consultants shall be at rates and for periods approved in advance by the Contracting Officer. Requests for approval shall be submitted to the Contracting Officer sufficiently in advance of the need to use a consultant under this Contract. The request shall include (a) a copy of the proposed consultant agreement, (b) a brief biography of the consultant, and (c) an indication of the area(s) in which consultant's expertise will be utilized and why it is essential for contract performance. In addition, significant deviations from the dollar amount approved for consultant services, or changes in the consultants to be utilized, must likewise be approved in advance upon submission of adequate justification.

CLAUSES INCORPORATED BY FULL TEXT

252.223-9004 – Environmental, Radiation, Safety Notification, Compliance and Liability (JUN 2013)

(a) Environmental, Radiation, and Safety Notification: The Contractor shall notify the Contracting Officer (CO) and Contracting Officer Representative (COR) of any occurrence of non-compliance with Environmental, Radiation, and Safety regulations that occur at any of the Contractor's facilities at which government property is located as soon as practicable, but not later than 24 hours after identification of an incident. The Contractor shall make initial notification by telephone or email. Then, shall follow-up with a written report within 10 business days.

(b) The Contractor shall notify the CO/COR of any external Environmental, Radiation, and Safety audits or inspections conducted at the facility and provide any reports resulting from the audit. The final report shall be provided to the CO/COR within 30 days following the audit.

(c) The Contractor shall comply with all Federal, State, and local Environmental, Radiation, and Safety regulations, including, without limitation, statutes, ordinances, court orders, consent decrees, administrative orders, or compliance agreements applicable to the facilities where the Government Property is located.

(d) The Contractor shall acquire all necessary permits, and licenses.

(e) DTRA will not be responsible, financially or otherwise, for the investigation, monitoring, cleanup, containment, restoration, removal, or other remedial activity with respect to any hazardous substances present in the soil, ground water, or building(s) that (i) results from activities conducted by entities other than DTRA during the term of this contract, or (ii) results from activities conducted pursuant to any contract, lease, or occupancy agreement that is not associated with DTRA-owned property or activities.

(End of Clause)

CLAUSES INCORPORATED BY FULL TEXT

252.235-9000 SOURCES OF INFORMATION (JULY 2000)

a. The results of the research to be delivered to the Government under this Contract shall embody the most recent reliable information in the field which is available to the Contractor from private and governmental sources, and the Contractor agrees to utilize all sources of such information available to it. In this connection, information in this field which is in the control of DTRA shall, with the consent of the Contracting Officer's Representative (COR) and under such safeguards and procedures as he/she may prescribe, be made available to the Contractor on request. Additionally, the Contractor is encouraged to make use of the resources available through the Defense Threat Reduction Information Analysis Center (DTRIAC), 1680 Texas Street, Southeast, Kirtland AFB, New Mexico 87117.

b. Reasonable assistance in obtaining access to information, or in obtaining permission to use Government or private facilities, will be given to the Contractor by DTRA. Specifically, the Contractor must register with the Defense Technical Information Center, ATTN: DTIC, 8725 John J. Kingman Road, Suite 0944, Fort Belvoir, VA 22060-6218, in accordance with Defense Logistics Agency (DLA) Regulation 4185.10, Certification and Registration for Access to DoD Defense Technical Information. DD Form 1540, the registration form, shall be forwarded to the DTRA Contracting Officer for approval (DFARS 35.010(b)).
(End of clause)

CLAUSES INCORPORATED BY FULL TEXT

252.237-9001 - Enterprise-wide Contractor Manpower Reporting Application (APR 2013)

(a) In accordance with Section 2330a of title 10, United States Code (10 USC 2330a), Contractors shall report ALL contractor labor hours (including subcontractor labor hours) required for performance of services provided under this contract via a secure data collection site. The contractor shall completely fill in all required data fields using the following web address: http://www.ecmra.mil/.

(b) Reporting inputs will be for the labor executed during the period of performance during each Government fiscal year (FY), which runs October 1 through September 30. While inputs may be reported any time during the FY, all data shall be reported no later than October 31 of each calendar year, beginning with 2013. Contractors may direct questions to the help desk at: http://www.ecmra.mil.

(End of Clause)

252.242-9000 CONTRACTOR PERFORMANCE ASSESSMENT REPORTING SYSTEM (CPARS) (NOV 2002)

1. As required by FAR Part 42.1503, and DTRA policy for the Contractor Performance Assessment Reporting System (CPARS) and Past Performance Automated Information System (PPAIS) effective July, 2001, the Government shall complete a CPAR each year of the period of performance of this contract. The contractor will have an opportunity to provide their comments in each CPAR before it is finalized. In accordance with DTRA CPARS policy the completed CPARs will be entered into the Department of Defense Past Performance Automated Information System (PPAIS), a retrieval system for source selection teams to access the CPARs of contractors' performance. The DTRA CPARS and PPAIS policy includes an explanation of the process and procedures that will be utilized under this contract. A copy is available for contractor reference via the DTRAlink (www.dtra.mil) by accessing Acquisition, How We Do Business.

2. The CPARs shall occur annually in accordance with the schedule established below:

(i) Initial CPAR: 12 months after contract start date (date performance begins)
TBD (by PCO)

(ii) Interim CPAR(s) will be performed annually on the anniversary of the contract start date according to the following schedule:
TBD (by PCO)

(iii) A Final CPAR will be completed upon contract termination, transfer of program management/contract management responsibility outside of DTRA, the delivery of the final end item on contract and/or the completion of the performance period.

(iv) An Out-of-Cycle CPAR may be required when there is a significant change in performance that alters the assessment in one or more evaluation area(s). An Out-of-Cycle CPAR is optional and shall be processed in accordance with Attachment___

3. Each CPAR shall only cover the period elapsing from the last annual CPAR. The final CPAR shall not be used to summarize or "roll-up" the contractor's performance under the entire contract. Each annual CPAR and the final CPAR together will comprise a total picture of contractor performance.

4. At the request of the Government, a verbal, informal review of the Contractor's performance may be held 3-6 months before the completion of the Interim or Final Evaluation periods. This review entails discussing any problems or areas of concern regarding the Contractor's performance to date. No written evaluation form or other formal documentation is required for this evaluation. It may be conducted with the Contractor by telephone, teleconference or face-to-face. This is designed to offer the Contractor an opportunity to correct known deficiencies or weaknesses prior to the formal written evaluation.

5. As set forth in DTRA CPARS policy, any disagreements between the Contractor and the Program Manager regarding the CPAR(s) that cannot be resolved shall be reviewed by the designated Reviewing Official prior to finalization of the CPAR.

6. Special Requirements for Indefinite Delivery Contracts (IDIQ and Requirements type), CPARs shall be processed (select one)

____ for all existing orders (combined) at the time the CPAR is processed

____ on an order-by-order basis

____ on a grouped order basis

7. The policy and procedures set forth in this clause and DTRA CPARS policy are not subject to "Disputes" as described in FAR Part 33.

CLAUSES INCORPORATED BY FULL TEXT

52.216-7 ALLOWABLE COST AND PAYMENT (JUN 2013)

(a) Invoicing.

(1) The Government will make payments to the Contractor when requested as work progresses, but (except for small business concerns) not more often than once every 2 weeks, in amounts determined to be allowable by the Contracting Officer in accordance with Federal Acquisition Regulation (FAR) subpart 31.2 in effect on the date of this contract and the terms of this contract. The Contractor may submit to an authorized representative of the Contracting Officer, in such form and reasonable detail as the representative may require, an invoice or voucher supported by a statement of the claimed allowable cost for performing this contract.

(2) Contract financing payments are not subject to the interest penalty provisions of the Prompt Payment Act. Interim payments made prior to the final payment under the contract are contract financing payments, except interim payments if this contract contains Alternate I to the clause at 52.232-25.

(3) The designated payment office will make interim payments for contract financing on the 30th day after the designated billing office receives a proper payment request.

In the event that the Government requires an audit or other review of a specific payment request to ensure compliance with the terms and conditions of the contract, the designated payment office is not compelled to make payment by the specified due date.

(b) Reimbursing costs. (1) For the purpose of reimbursing allowable costs (except as provided in subparagraph (b)(2) of the clause, with respect to pension, deferred profit sharing, and employee stock ownership plan contributions), the term "costs" includes only--

(i) Those recorded costs that, at the time of the request for reimbursement, the Contractor has paid by cash, check, or other form of actual payment for items or services purchased directly for the contract;

(ii) When the Contractor is not delinquent in paying costs of contract performance in the ordinary course of business, costs incurred, but not necessarily paid, for--

(A) Supplies and services purchased directly for the contract and associated financing payments to subcontractors, provided payments determined due will be made--

(1) In accordance with the terms and conditions of a subcontract or invoice; and

(2) Ordinarily within 30 days of the submission of the Contractor's payment request to the Government;

(B) Materials issued from the Contractor's inventory and placed in the production process for use on the contract;

(C) Direct labor;

(D) Direct travel;

(E) Other direct in-house costs; and

(F) Properly allocable and allowable indirect costs, as shown in the records maintained by the Contractor for purposes of obtaining reimbursement under Government contracts; and

(iii) The amount of financing payments that have been paid by cash, check, or other forms of payment to subcontractors.

(2) Accrued costs of Contractor contributions under employee pension plans shall be excluded until actually paid unless--

(i) The Contractor's practice is to make contributions to the retirement fund quarterly or more frequently; and

(ii) The contribution does not remain unpaid 30 days after the end of the applicable quarter or shorter payment period (any contribution remaining unpaid shall be excluded from the Contractor's indirect costs for payment purposes).

(3) Notwithstanding the audit and adjustment of invoices or vouchers under paragraph (g) of this clause, allowable indirect costs under this contract shall be obtained by applying indirect cost rates established in accordance with paragraph (d) of this clause.

(4) Any statements in specifications or other documents incorporated in this contract by reference designating performance of services or furnishing of materials at the Contractor's expense or at no cost to the Government shall be disregarded for purposes of cost-reimbursement under this clause.

(c) Small business concerns. A small business concern may receive more frequent payments than every 2 weeks.

(d) Final indirect cost rates. (1) Final annual indirect cost rates and the appropriate bases shall be established in accordance with Subpart 42.7 of the Federal Acquisition Regulation (FAR) in effect for the period covered by the indirect cost rate proposal.

(2)(i) The Contractor shall submit an adequate final indirect cost rate proposal to the Contracting Officer (or cognizant Federal agency official) and auditor within the 6-month period following the expiration of each of its fiscal years. Reasonable extensions, for exceptional circumstances only, may be requested in writing by the Contractor and granted in writing by the Contracting Officer. The Contractor shall support its proposal with adequate supporting data.

(ii) The proposed rates shall be based on the Contractor's actual cost experience for that period. The appropriate Government representative and the Contractor shall establish the final indirect cost rates as promptly as practical after receipt of the Contractor's proposal.

(iii) An adequate indirect cost rate proposal shall include the following data unless otherwise specified by the cognizant Federal agency official:

(A) Summary of all claimed indirect expense rates, including pool, base, and calculated indirect rate.

(B) General and Administrative expenses (final indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts).

(C) Overhead expenses (final indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts) for each final indirect cost pool.

(D) Occupancy expenses (intermediate indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts) and expense reallocation to final indirect cost pools.

(E) Claimed allocation bases, by element of cost, used to distribute indirect costs.

(F) Facilities capital cost of money factors computation.

(G) Reconciliation of books of account (i.e., General Ledger) and claimed direct costs by major cost element.

(H) Schedule of direct costs by contract and subcontract and indirect expense applied at claimed rates, as well as a subsidiary schedule of Government participation percentages in each of the allocation base amounts.

(I) Schedule of cumulative direct and indirect costs claimed and billed by contract and subcontract.

(J) Subcontract information. Listing of subcontracts awarded to companies for which the contractor is the prime or upper-tier contractor (include prime and subcontract numbers; subcontract value and award type; amount claimed during the fiscal year; and the subcontractor name, address, and point of contact information).

(K) Summary of each time-and-materials and labor-hour contract information, including labor categories, labor rates, hours, and amounts; direct materials; other direct costs; and, indirect expense applied at claimed rates.

(L) Reconciliation of total payroll per IRS form 941 to total labor costs distribution.

(M) Listing of decisions/agreements/approvals and description of accounting/organizational changes.

(N) Certificate of final indirect costs (see 52.242-4,
Certification of Final Indirect Costs).

(O) Contract closing information for contracts physically completed in this fiscal year (include contract number, period of performance, contract ceiling amounts, contract fee computations, level of effort, and indicate if the contract is ready to close).

(iv) The following supplemental information is not required to determine if a proposal is adequate, but may be required during the audit process:

(A) Comparative analysis of indirect expense pools detailed by account to prior fiscal year and budgetary data.

(B) General organizational information and limitation on allowability of compensation for certain contractor personnel. See 31.205-6(p). Additional salary reference information is available at http://www.whitehouse.gov/omb/procurement_index_exec_comp/.

(C) Identification of prime contracts under which the contractor performs as a subcontractor.

(D) Description of accounting system (excludes contractors required to submit a CAS Disclosure Statement or contractors where the description of the accounting system has not changed from the previous year's submission).

(E) Procedures for identifying and excluding unallowable costs from the costs claimed and billed (excludes contractors where the procedures have not changed from the previous year's submission).

(F) Certified financial statements and other financial data (e.g., trial balance, compilation, review, etc.).

(G) Management letter from outside CPAs concerning any internal control weaknesses.

(H) Actions that have been and/or will be implemented to correct the weaknesses described in the management letter from subparagraph G) of this section.

(I) List of all internal audit reports issued since the last disclosure of internal audit reports to the Government.

(J) Annual internal audit plan of scheduled audits to be performed in the fiscal year when the final indirect cost rate submission is made.

(K) Federal and State income tax returns.

(L) Securities and Exchange Commission 10-K annual report.

(M) Minutes from board of directors meetings.

(N) Listing of delay claims and termination claims submitted which contain costs relating to the subject fiscal year.

(O) Contract briefings, which generally include a synopsis of all pertinent contract provisions, such as: Contract type, contract amount, product or service(s) to be provided, contract performance period, rate ceilings, advance approval requirements, pre-contract cost allowability limitations, and billing limitations.

(v) The Contractor shall update the billings on all contracts to reflect the final settled rates and update the schedule of cumulative direct and indirect costs claimed and billed, as required in paragraph (d)(2)(iii)(I) of this section, within 60 days after settlement of final indirect cost rates.

(3) The Contractor and the appropriate Government representative shall execute a written understanding setting forth the final indirect cost rates. The understanding shall specify (i) the agreed-upon final annual indirect cost rates, (ii) the bases to which the rates apply, (iii) the periods for which the rates apply, (iv) any specific indirect cost items treated as direct costs in the settlement, and (v) the affected contract and/or subcontract, identifying any with advance agreements or special terms and the applicable rates. The understanding shall not change any monetary ceiling, contract obligation, or specific cost allowance or disallowance provided for in this contract. The understanding is incorporated into this contract upon execution.

(4) Failure by the parties to agree on a final annual indirect cost rate shall be a dispute within the meaning of the Disputes clause.

(5) Within 120 days (or longer period if approved in writing by the Contracting Officer) after settlement of the final annual indirect cost rates for all years of a physically complete contract, the Contractor shall submit a completion invoice or voucher to reflect the settled amounts and rates. The completion invoice or voucher shall include settled subcontract amounts and rates. The prime contractor is responsible for settling subcontractor amounts and rates included in the completion invoice or voucher and providing status of subcontractor audits to the contracting officer upon request.

(6)(i) If the Contractor fails to submit a completion invoice or voucher within the time specified in paragraph (d)(5) of this clause, the Contracting Officer may--

(A) Determine the amounts due to the Contractor under the contract; and

(B) Record this determination in a unilateral modification to the contract.

(ii) This determination constitutes the final decision of the Contracting Officer in accordance with the Disputes clause.

(e) Billing rates. Until final annual indirect cost rates are established for any period, the Government shall reimburse the Contractor at billing rates established by the Contracting Officer or by an authorized representative (the cognizant auditor), subject to adjustment when the final rates are established. These billing rates--

(1) Shall be the anticipated final rates; and

(2) May be prospectively or retroactively revised by mutual agreement, at either party's request, to prevent substantial overpayment or underpayment.

(f) Quick-closeout procedures. Quick-closeout procedures are applicable when the conditions in FAR 42.708(a) are satisfied.

(g) Audit. At any time or times before final payment, the Contracting Officer may have the Contractor's invoices or vouchers and statements of cost audited. Any payment may be (1) Reduced by amounts found by the Contracting Officer not to constitute allowable costs or (2) Adjusted for prior overpayments or underpayments.

(h) Final payment. (1) Upon approval of a completion invoice or voucher submitted by the Contractor in accordance with paragraph (d)(5) of this clause, and upon the Contractor's compliance with all terms of this contract, the Government shall promptly pay any balance of allowable costs and that part of the fee (if any) not previously paid.

(2) The Contractor shall pay to the Government any refunds, rebates, credits, or other amounts (including interest, if any) accruing to or received by the Contractor or any assignee under this contract, to the extent that those amounts

are properly allocable to costs for which the Contractor has been reimbursed by the Government. Reasonable expenses incurred by the Contractor for securing refunds, rebates, credits, or other amounts shall be allowable costs if approved by the Contracting Officer. Before final payment under this contract, the Contractor and each assignee whose assignment is in effect at the time of final payment shall execute and deliver--

(i) An assignment to the Government, in form and substance satisfactory to the Contracting Officer, of refunds, rebates, credits, or other amounts (including interest, if any) properly allocable to costs for which the Contractor has been reimbursed by the Government under this contract; and

(ii) A release discharging the Government, its officers, agents, and employees from all liabilities, obligations, and claims arising out of or under this contract, except--

(A) Specified claims stated in exact amounts, or in estimated amounts when the exact amounts are not known;

(B) Claims (including reasonable incidental expenses) based upon liabilities of the Contractor to third parties arising out of the performance of this contract; provided, that the claims are not known to the Contractor on the date of the execution of the release, and that the Contractor gives notice of the claims in writing to the Contracting Officer within 6 years following the release date or notice of final payment date, whichever is earlier; and

(C) Claims for reimbursement of costs, including reasonable incidental expenses, incurred by the Contractor under the patent clauses of this contract, excluding, however, any expenses arising from the Contractor's indemnification of the Government against patent liability.

(End of clause)

52.216-7 ALLOWABLE COST AND PAYMENT (JUN 2013) -- ALTERNATE IV (AUG 2012)
(a) Invoicing.

(1) The Government will make payments to the Contractor when requested as work progresses, but not more often than once every two weeks, in amounts determined to be allowable by the Contracting Officer in accordance with FAR subpart 31.7 in effect on the date of this contract and the terms of this contract. The Contractor may submit to an authorized representative of the Contracting Officer, in such form and reasonable detail as the representative may require, an invoice or voucher supported by a statement of the claimed allowable cost for performing this contract.

(2) Contract financing payments are not subject to the interest penalty provisions of the Prompt Payment Act. Interim payments made prior to the final payment under the contract are contract financing payments, except interim payments if this contract contains Alternate I to the clause at 52.232-25.

(3) The designated payment office will make interim payments for contract financing on the 30th day after the designated billing office receives a proper payment request.

In the event that the Government requires an audit or other review of a specific payment request to ensure compliance with the terms and conditions of the contract, the designated payment office is not compelled to make payment by the specified due date.

(b) Reimbursing costs. (1) For the purpose of reimbursing allowable costs (except as provided in subparagraph (b)(2) of the clause, with respect to pension, deferred profit sharing, and employee stock ownership plan contributions), the term "costs" includes only--

(i) Those recorded costs that, at the time of the request for reimbursement, the Contractor has paid by cash, check, or other form of actual payment for items or services purchased directly for the contract;

(ii) When the Contractor is not delinquent in paying costs of contract performance in the ordinary course of business, costs incurred, but not necessarily paid, for--

(A) Supplies and services purchased directly for the contract and associated financing payments to subcontractors, provided payments determined due will be made--

(1) In accordance with the terms and conditions of a subcontract or invoice; and

(2) Ordinarily within 30 days of the submission of the Contractor's payment request to the Government;

(B) Materials issued from the Contractor's inventory and placed in the production process for use on the contract;

(C) Direct labor;

(D) Direct travel;

(E) Other direct in-house costs; and

(F) Properly allocable and allowable indirect costs, as shown in the records maintained by the Contractor for purposes of obtaining reimbursement under Government contracts; and

(iii) The amount of financing payments that have been paid by cash, check, or other forms of payment to subcontractors.

(2) Accrued costs of Contractor contributions under employee pension plans shall be excluded until actually paid unless--

(i) The Contractor's practice is to make contributions to the retirement fund quarterly or more frequently; and

(ii) The contribution does not remain unpaid 30 days after the end of the applicable quarter or shorter payment period (any contribution remaining unpaid shall be excluded from the Contractor's indirect costs for payment purposes).

(3) Notwithstanding the audit and adjustment of invoices or vouchers under paragraph (g) of this clause, allowable indirect costs under this contract shall be obtained by applying indirect cost rates established in accordance with paragraph (d) of this clause.

(4) Any statements in specifications or other documents incorporated in this contract by reference designating performance of services or furnishing of materials at the Contractor's expense or at no cost to the Government shall be disregarded for purposes of cost-reimbursement under this clause.

(c) Small business concerns. A small business concern may receive more frequent payments than every 2 weeks.

(d) Final indirect cost rates. (1) Final annual indirect cost rates and the appropriate bases shall be established in accordance with Subpart 42.7 of the Federal Acquisition Regulation (FAR) in effect for the period covered by the indirect cost rate proposal.

(2)(i) The Contractor shall submit an adequate final indirect cost rate proposal to the Contracting Officer (or cognizant Federal agency official) and auditor within the 6-month period following the expiration of each of its fiscal years. Reasonable extensions, for exceptional circumstances only, may be requested in writing by the Contractor and granted in writing by the Contracting Officer. The Contractor shall support its proposal with adequate supporting data.

(ii) The proposed rates shall be based on the Contractor's actual cost experience for that period. The appropriate Government representative and the Contractor shall establish the final indirect cost rates as promptly as practical after receipt of the Contractor's proposal.

(iii) An adequate indirect cost rate proposal shall include the following data unless otherwise specified by the cognizant Federal agency official:

(A) Summary of all claimed indirect expense rates, including pool, base, and calculated indirect rate.

(B) General and Administrative expenses (final indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts).

(C) Overhead expenses (final indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts) for each final indirect cost pool.

(D) Occupancy expenses (intermediate indirect cost pool). Schedule of claimed expenses by element of cost as identified in accounting records (Chart of Accounts) and expense reallocation to final indirect cost pools.

(E) Claimed allocation bases, by element of cost, used to distribute indirect costs.

(F) Facilities capital cost of money factors computation.

(G) Reconciliation of books of account (i.e., General Ledger) and claimed direct costs by major cost element.

(H) Schedule of direct costs by contract and subcontract and indirect expense applied at claimed rates, as well as a subsidiary schedule of Government participation percentages in each of the allocation base amounts.

(I) Schedule of cumulative direct and indirect costs claimed and billed by contract and subcontract.

(J) Subcontract information. Listing of subcontracts awarded to companies for which the contractor is the prime or upper-tier contractor (include prime and subcontract numbers; subcontract value and award type; amount claimed during the fiscal year; and the subcontractor name, address, and point of contact information).

(K) Summary of each time-and-materials and labor-hour contract information, including labor ategories, labor rates, hours, and amounts; direct materials; other direct costs; and, indirect expense applied at claimed rates.

(L) Reconciliation of total payroll per IRS form 941 to total labor costs distribution.

(M) Listing of decisions/agreements/approvals and description of accounting/organizational changes.

(N) Certificate of final indirect costs (see 52.242-4,
Certification of Final Indirect Costs).

(O) Contract closing information for contracts physically completed in this fiscal year (include contract number, period of performance, contract ceiling amounts, contract fee computations, level of effort, and indicate if the contract is ready to close).

(iv) The following supplemental information is not required to determine if a proposal is adequate, but may be required during the audit process:

(A) Comparative analysis of indirect expense pools detailed by account to prior fiscal year and budgetary data.
(B) General organizational information and limitation on allowability of compensation for certain contractor personnel. See 31.205-6(p). Additional salary reference information is available at http://www.whitehouse.gov/omb/procurement_index_exec_comp/.

(C) Identification of prime contracts under which the contractor performs as a subcontractor.

(D) Description of accounting system (excludes contractors required to submit a CAS Disclosure Statement or contractors where the description of the accounting system has not changed from the previous year's submission).

(E) Procedures for identifying and excluding unallowable costs from the costs claimed and billed (excludes contractors where the procedures have not changed from the previous year's submission).

(F) Certified financial statements and other financial data (e.g., trial balance, compilation, review, etc.).

(G) Management letter from outside CPAs concerning any internal control weaknesses.

(H) Actions that have been and/or will be implemented to correct the weaknesses described in the management letter from subparagraph G) of this section.

(I) List of all internal audit reports issued since the last disclosure of internal audit reports to the Government.

(J) Annual internal audit plan of scheduled audits to be performed in the fiscal year when the final indirect cost rate submission is made.

(K) Federal and State income tax returns.

(L) Securities and Exchange Commission 10-K annual report.

(M) Minutes from board of directors meetings.

(N) Listing of delay claims and termination claims submitted which contain costs relating to the subject fiscal year.

(O) Contract briefings, which generally include a synopsis of all pertinent contract provisions, such as: Contract type, contract amount, product or service(s) to be provided, contract performance period, rate ceilings, advance approval requirements, pre-contract cost allowability limitations, and billing limitations.

(v) The Contractor shall update the billings on all contracts to reflect the final settled rates and update the schedule of cumulative direct and indirect costs claimed and billed, as required in paragraph (d)(2)(iii)(I) of this section, within 60 days after settlement of final indirect cost rates.

(3) The Contractor and the appropriate Government representative shall execute a written understanding setting forth the final indirect cost rates. The understanding shall specify (i) the agreed-upon final annual indirect cost rates, (ii) the bases to which the rates apply, (iii) the periods for which the rates apply, (iv) any specific indirect cost items treated as direct costs in the settlement, and (v) the affected contract and/or subcontract, identifying any with advance agreements or special terms and the applicable rates. The understanding shall not change any monetary ceiling, contract obligation, or specific cost allowance or disallowance provided for in this contract. The understanding is incorporated into this contract upon execution.

(4) Failure by the parties to agree on a final annual indirect cost rate shall be a dispute within the meaning of the Disputes clause.

(5) Within 120 days (or longer period if approved in writing by the Contracting Officer) after settlement of the final annual indirect cost rates for all years of a physically complete contract, the Contractor shall submit a completion invoice or voucher to reflect the settled amounts and rates. The completion invoice or voucher shall include settled subcontract amounts and rates. The prime contractor is responsible for settling subcontractor amounts and rates

included in the completion invoice or voucher and providing status of subcontractor audits to the contracting officer upon request.

(6)(i) If the Contractor fails to submit a completion invoice or voucher within the time specified in paragraph (d)(5) of this clause, the Contracting Officer may--

(A) Determine the amounts due to the Contractor under the contract; and

(B) Record this determination in a unilateral modification to the contract.

(ii) This determination constitutes the final decision of the Contracting Officer in accordance with the Disputes clause.

(e) Billing rates. Until final annual indirect cost rates are established for any period, the Government shall reimburse the Contractor at billing rates established by the Contracting Officer or by an authorized representative (the cognizant auditor), subject to adjustment when the final rates are established. These billing rates--

(1) Shall be the anticipated final rates; and

(2) May be prospectively or retroactively revised by mutual agreement, at either party's request, to prevent substantial overpayment or underpayment.

(f) Quick-closeout procedures. Quick-closeout procedures are applicable when the conditions in FAR 42.708(a) are satisfied.

(g) Audit. At any time or times before final payment, the Contracting Officer may have the Contractor's invoices or vouchers and statements of cost audited. Any payment may be (1) Reduced by amounts found by the Contracting Officer not to constitute allowable costs or (2) Adjusted for prior overpayments or underpayments.

(h) Final payment. (1) Upon approval of a completion invoice or voucher submitted by the Contractor in accordance with paragraph (d)(5) of this clause, and upon the Contractor's compliance with all terms of this contract, the Government shall promptly pay any balance of allowable costs and that part of the fee (if any) not previously paid.

(2) The Contractor shall pay to the Government any refunds, rebates, credits, or other amounts (including interest, if any) accruing to or received by the Contractor or any assignee under this contract, to the extent that those amounts are properly allocable to costs for which the Contractor has been reimbursed by the Government. Reasonable expenses incurred by the Contractor for securing refunds, rebates, credits, or other amounts shall be allowable costs if approved by the Contracting Officer. Before final payment under this contract, the Contractor and each assignee whose assignment is in effect at the time of final payment shall execute and deliver--

(i) An assignment to the Government, in form and substance satisfactory to the Contracting Officer, of refunds, rebates, credits, or other amounts (including interest, if any) properly allocable to costs for which the Contractor has been reimbursed by the Government under this contract; and

(ii) A release discharging the Government, its officers, agents, and employees from all liabilities, obligations, and claims arising out of or under this contract, except--

(A) Specified claims stated in exact amounts, or in estimated amounts when the exact amounts are not known;

(B) Claims (including reasonable incidental expenses) based upon liabilities of the Contractor to third parties arising out of the performance of this contract; provided, that the claims are not known to the Contractor on the date of the execution of the release, and that the Contractor gives notice of the claims in writing to the Contracting Officer within 6 years following the release date or notice of final payment date, whichever is earlier; and

(C) Claims for reimbursement of costs, including reasonable incidental expenses, incurred by the Contractor under the patent clauses of this contract, excluding, however, any expenses arising from the Contractor's indemnification of the Government against patent liability.

(End of clause)

52.217-9 OPTION TO EXTEND THE TERM OF THE CONTRACT (MAR 2000)

(a) The Government may extend the term of this contract by written notice to the Contractor prior to the end of the Base Period; provided that the Government gives the Contractor a preliminary written notice of its intent to extend at least 30 days before the contract expires. The preliminary notice does not commit the Government to an extension.

(b) If the Government exercises this option, the extended contract shall be considered to include this option clause.

(c) The total duration of this contract, including the exercise of any options under this clause, shall not exceed 24 months.

(End of clause)

52.219-28 POST-AWARD SMALL BUSINESS PROGRAM REREPRESENTATION (JULY 2013)

(a) Definitions. As used in this clause--

Long-term contract means a contract of more than five years in duration, including options. However, the term does not include contracts that exceed five years in duration because the period of performance has been extended for a cumulative period not to exceed six months under the clause at 52.217-8, Option to Extend Services, or other appropriate authority.

Small business concern means a concern, including its affiliates, that is independently owned and operated, not dominant in the field of operation in which it is bidding on Government contracts, and qualified as a small business under the criteria in 13 CFR part 121 and the size standard in paragraph (c) of this clause. Such a concern is ``not dominant in its field of operation'' when it does not exercise a controlling or major influence on a national basis in a kind of business activity in which a number of business concerns are primarily engaged. In determining whether dominance exists, consideration shall be given to all appropriate factors, including volume of business, number of employees, financial resources, competitive status or position, ownership or control of materials, processes, patents, license agreements, facilities, sales territory, and nature of business activity.

(b) If the Contractor represented that it was a small business concern prior to award of this contract, the Contractor shall rerepresent its size status according to paragraph (e) of this clause or, if applicable, paragraph (g) of this clause, upon the occurrence of any of the following:

(1) Within 30 days after execution of a novation agreement or within 30 days after modification of the contract to include this clause, if the novation agreement was executed prior to inclusion of this clause in the contract.

(2) Within 30 days after a merger or acquisition that does not require a novation or within 30 days after modification of the contract to include this clause, if the merger or acquisition occurred prior to inclusion of this clause in the contract.

(3) For long-term contracts--

(i) Within 60 to 120 days prior to the end of the fifth year of the contract; and

(ii) Within 60 to 120 days prior to the date specified in the contract for exercising any option thereafter.

(c) The Contractor shall rerepresent its size status in accordance with the size standard in effect at the time of this rerepresentation that corresponds to the North American Industry Classification System (NAICS) code assigned to this contract. The small business size standard corresponding to this NAICS code can be found at http://www.sba.gov/content/table-small-business-size-standards.

(d) The small business size standard for a Contractor providing a product which it does not manufacture itself, for a contract other than a construction or service contract, is 500 employees.

(e) Except as provided in paragraph (g) of this clause, the Contractor shall make the representation required by paragraph (b) of this clause by validating or updating all its representations in the Representations and Certifications section of the System for Award Management (SAM) and its other data in SAM, as necessary, to ensure that they reflect the Contractor's current status. The
Contractor shall notify the contracting office in writing within the timeframes specified in paragraph (b) of this clause that the data have been validated or updated, and provide the date of the validation or update.

(f) If the Contractor represented that it was other than a small business concern prior to award of this contract, the Contractor may, but is not required to, take the actions required by paragraphs (e) or (g) of this clause.

(g) If the Contractor does not have representations and certifications in SAM, or does not have a representation in SAM for the NAICS code applicable to this contract, the Contractor is required to complete the following rerepresentation and submit it to the contracting office, along with the contract number and the date on which the rerepresentation was completed:

The Contractor represents that it ( ) is, (X) is not a small business concern under NAICS Code 541711- assigned to contract number HDTRA1-15-C-0041.

(Contractor to sign and date and insert authorized signer's name and title).

(End of clause)

52.222-2 PAYMENT FOR OVERTIME PREMIUMS (JUL 1990)

(a) The use of overtime is authorized under this contract if the overtime premium cost does not exceed $0.00 or the overtime premium is paid for work --

(1) Necessary to cope with emergencies such as those resulting from accidents, natural disasters, breakdowns of production equipment, or occasional production bottlenecks of a sporadic nature;

(2) By indirect-labor employees such as those performing duties in connection with administration, protection, transportation, maintenance, standby plant protection, operation of utilities, or accounting;

(3) To perform tests, industrial processes, laboratory procedures, loading or unloading of transportation conveyances, and operations in flight or afloat that are continuous in nature and cannot reasonably be interrupted or completed otherwise; or

(4) That will result in lower overall costs to the Government.

(b) Any request for estimated overtime premiums that exceeds the amount specified above shall include all estimated overtime for contract completion and shall--

(1) Identify the work unit; e.g., department or section in which the requested overtime will be used, together with present workload, staffing, and other data of the affected unit sufficient to permit the Contracting Officer to evaluate the necessity for the overtime;

(2) Demonstrate the effect that denial of the request will have on the contract delivery or performance schedule;

(3) Identify the extent to which approval of overtime would affect the performance or payments in connection with other Government contracts, together with identification of each affected contract; and

(4) Provide reasons why the required work cannot be performed by using multishift operations or by employing additional personnel.

* Insert either "zero" or the dollar amount agreed to during negotiations. The inserted figure does not apply to the exceptions in paragraph (a)(1) through (a)(4) of the clause.

(End of clause)

52.244-2 SUBCONTRACTS (OCT 2010)

(a) Definitions. As used in this clause--

Approved purchasing system means a Contractor's purchasing system that has been reviewed and approved in accordance with Part 44 of the Federal Acquisition Regulation (FAR).

Consent to subcontract means the Contracting Officer's written consent for the Contractor to enter into a particular subcontract.

Subcontract means any contract, as defined in FAR Subpart 2.1, entered into by a subcontractor to furnish supplies or services for performance of the prime contract or a subcontract. It includes, but is not limited to, purchase orders, and changes and modifications to purchase orders.

(b) When this clause is included in a fixed-price type contract, consent to subcontract is required only on unpriced contract actions (including unpriced modifications or unpriced delivery orders), and only if required in accordance with paragraph (c) or (d) of this clause.

(c) If the Contractor does not have an approved purchasing system, consent to subcontract is required for any subcontract that—

(1) Is of the cost-reimbursement, time-and-materials, or labor-hour type; or

(2) Is fixed-price and exceeds—

(i) For a contract awarded by the Department of Defense, the Coast Guard, or the National Aeronautics and Space Administration, the greater of the simplified acquisition threshold or 5 percent of the total estimated cost of the contract; or

(ii) For a contract awarded by a civilian agency other than the Coast Guard and the National Aeronautics and Space Administration, either the simplified acquisition threshold or 5 percent of the total estimated cost of the contract.

(d) If the Contractor has an approved purchasing system, the Contractor nevertheless shall obtain the Contracting Officer's written consent before placing the following subcontracts:

(e)(1) The Contractor shall notify the Contracting Officer reasonably in advance of placing any subcontract or modification thereof for which consent is required under paragraph (b), (c), or (d) of this clause, including the following information:

(i) A description of the supplies or services to be subcontracted.

(ii) Identification of the type of subcontract to be used.

(iii) Identification of the proposed subcontractor.

(iv) The proposed subcontract price.

(v) The subcontractor's current, complete, and accurate certified cost or pricing data and Certificate of Current Cost or Pricing Data, if required by other contract provisions.

(vi) The subcontractor's Disclosure Statement or Certificate relating to Cost Accounting Standards when such data are required by other provisions of this contract.

(vii) A negotiation memorandum reflecting—

(A) The principal elements of the subcontract price negotiations;

(B) The most significant considerations controlling establishment of initial or revised prices;

(C) The reason certified cost or pricing data were or were not required;

(D) The extent, if any, to which the Contractor did not rely on the subcontractor's certified cost or pricing data in determining
the price objective and in negotiating the final price;

(E) The extent to which it was recognized in the negotiation that the subcontractor's certified cost or pricing data were not accurate, complete, or current; the action taken by the Contractor and the subcontractor; and the effect of any such defective data on the total price negotiated;

(F) The reasons for any significant difference between the Contractor's price objective and the price negotiated; and

(G) A complete explanation of the incentive fee or profit plan when incentives are used. The explanation shall identify each critical performance element, management decisions used to quantify each incentive element, reasons for the incentives, and a summary of all trade-off possibilities considered.

(2) The Contractor is not required to notify the Contracting Officer in advance of entering into any subcontract for which consent is not required under paragraph (c), (d), or (e) of this clause.

(f) Unless the consent or approval specifically provides otherwise, neither consent by the Contracting Officer to any subcontract nor approval of the Contractor's purchasing system shall constitute a determination—

(1) Of the acceptability of any subcontract terms or conditions;

(2) Of the allowability of any cost under this contract; or

(3) To relieve the Contractor of any responsibility for performing this contract.

(g) No subcontract or modification thereof placed under this contract shall provide for payment on a cost-plus-a-percentage-of-cost basis, and any fee payable under cost-reimbursement type subcontracts shall not exceed the fee limitations in FAR 15.404-4(c)(4)(i).

(h) The Contractor shall give the Contracting Officer immediate written notice of any action or suit filed and prompt notice of any claim made against the Contractor by any subcontractor or vendor that, in the opinion of the Contractor, may result in litigation related in any way to this contract, with respect to which the Contractor may be entitled to reimbursement from the Government.

(i) The Government reserves the right to review the Contractor's purchasing system as set forth in FAR Subpart 44.3.

(j) Paragraphs (c) and (e) of this clause do not apply to the following subcontracts, which were evaluated during negotiations:

Kitware, Inc.
International Society for Infectious Diseases

(End of clause)

52.252-2 CLAUSES INCORPORATED BY REFERENCE (FEB 1998)

This contract incorporates one or more clauses by reference, with the same force and effect as if they were given in full text. Upon request, the Contracting Officer will make their full text available. Also, the full text of a clause may be accessed electronically at this/these address(es):

http://farsite.hill.af.mil

(End of clause)

52.252-6 AUTHORIZED DEVIATIONS IN CLAUSES (APR 1984)

(a) The use in this solicitation or contract of any Federal Acquisition Regulation (48 CFR Chapter 1) clause with an authorized deviation is indicated by the addition of "(DEVIATION)" after the date of the clause.

(b) The use in this solicitation or contract of any Defense Acquisition Regulations System, Department Of Defense (48 CFR Chapter 2) clause with an authorized deviation is indicated by the addition of "(DEVIATION)" after the name of the regulation.

(End of clause)

252.204-9004 IMPLEMENTATION OF DISCLOSURE OF INFORMATION (AUG 2014)

In accordance with DFARS 252.204-7000 Disclosure of Information, any information to be released shall be submitted at least 10 days before the proposed release date, for security and policy review. Submit one copy to each below:

(a) Office of Public Affairs, DTRA/J0XGP, 8725 John J. Kingman Dr, MS 6201, Ft Belvoir VA 22060-6201.

(b) Contracting Officer, Brian Nuckols, DTRA/J4CRC, 8725 John J. Kingman Dr, MS 6201, Ft Belvoir VA 22060-6201.

(c) Program Manager, Christopher Kiley, DTRA/J9CB, 8725 John J. Kingman Dr, MS 6201, Ft Belvoir VA 22060-6201.

(End of Clause)

252.235-7010 Acknowledgment of Support and Disclaimer. (MAY 1995)

(a) The Contractor shall include an acknowledgment of the Government's support in the publication of any material based on or developed under this contract, stated in the following terms: This material is based upon work supported by the Defense Threat Reduction Agency under Contract No. HDTRA1-15-C-0041.

(b) All material, except scientific articles or papers published in scientific journals, must, in addition to any notices or disclaimers by the Contractor, also contain the following disclaimer: Any opinions, findings and conclusions or recommendations expressed in this material are those of the author(s) and do not necessarily reflect the views of the Defense Threat Reduction Agency.

(End of clause)

252.245-9000 Government Property (MAY 2013)

(a) In accordance with FAR 52.245-1(b), Property Management, and FAR 52.245-1(f), Contractor Plans and Systems, the Contractor shall have a system to manage (control, use, preserve, protect, repair and maintain) Government property in its possession.

(b) The Contractor shall complete and return the applicable attachment(s) electronically:

(c) The Government Site Visits/Physical Inventory – The DTRA will annually verify the Property in the Possession of the Contractor. The Contactor's Point of Contact shall coordinate with the Program Manager/Contracting Officer Representative or DTRA Accountable Property Officer (APO) on prearranged site visits upon request.

(d) The physical inventory report shall be validated/confirmed via signature by both the Contractor's Property Administrator and the DTRA's Government Representative (i.e. COR, APO, etc.). Inventory discrepancies must be reported immediately to the Contracting Officer, COR/Program Manager and resolved by the DTRA APO.

(e) Inventory Disposal Schedule – When applicable, the Contractor shall submit the inventory disposal schedule to the DTRA Logistics Office (DTRA J4L) for approval 45 days prior to submission of an inventory disposal schedule to the Plant Clearance Officer.

(End of Clause)

252.203-7999
Prohibition on Contracting with Entities that Require Certain Internal Confidentiality Agreements. (DEVIATION 2015-O0010)(FEB 2015)

(a) The Contractor shall not require employees or subcontractors seeking to report fraud, waste, or abuse to sign or comply with internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or contactors from lawfully reporting such waste, fraud, or abuse to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information.

(b) The Contractor shall notify employees that the prohibitions and restrictions of any internal confidentiality agreements covered by this clause are no longer in effect.

(c) The prohibition in paragraph (a) of this clause does not contravene requirements applicable to Standard Form 312, Form 4414, or any other form issued by a Federal department or agency governing the nondisclosure of classified information.

(d)(1) In accordance with section 743 of Division E, Title VIII, of the Consolidated and Further Continuing Resolution Appropriations Act, 2015, (Pub. L. 113-235), use of funds appropriated (or otherwise made available) under that or any other Act may be prohibited, if the Government determines that the Contractor is not in compliance with the provisions of this clause.

(2) The Government may seek any available remedies in the event the Contractor fails to perform in accordance with the terms and conditions of the contract as a result of Government action under this clause.

16. REMARKS

The contractor will deliver software that can interface with the Biosurveillance Ecosystem (BSVE) and should include both source and executable codes. The software deliverables will be the following:

Within 12 months of contract award:

- Connect GRITS Girder database to the BSVE
- Prototype GRITS event recommendations and filtering
- Connect GRITS diagnostic and text-mining APIs to the BSVE
- Build BSVE interface to GRITS with the SDK
- Build mechanisms to crowdsource annotations
- Incorporate disease network graphs to assist diagnostics
- Support diagnostic algorithm development with dashboard
- Populated EDIR database
- Crowdsourced labels and annotations

Within 24 months of contract award:

- Expand diagnostic capability to arbitrary data feeds
- Connect GRITS to EIDR/Mantle
- Update diagnostic model in near-realtime
- Use text mining to extend network graphs/ontologies
- Connect EIDR collective intelligence editor to the BSVE
- Connect GRITS diagnostic data filtering to the BSVE
- Generate disease summary reports from diagnostics
- Forecast disease emergence
- Expanded EDIR database

Blk 4-5: Per DID referenced elements, contractor format is acceptable. Report shall detail all work performed under this effort, including the results of analysis, and appropriate conclusions and/or recommendations. Dataset compatible with Microsoft Excel or contractor recommended database application.

A final technical report is required by the end of the base period. Updates to this report will be required at the end of the Option Year, if exercised. The report should include the following elements:

1) A description of the research and development processes used to arrive at the results of the study
2) A detailed compilation of the results generated
3) A description of the performance characteristics of the developed software and an analysis of its likely utility for additional development and deployment
4) Recommendations for the next stages of development
5) Description of what data are required to feed the delivered alorithms and an approach for the Government to maintain access to those data feeds.

Additionally, the contractor will deliver:

- Feedback on diagnostic dashboard (Updates provided each 12 months)
- Documentation on near-realtime architecture (24 months after contract award)
- Documentation for GRITS APIs (Updates provided each 12 months)

Blk 14: Submission by electronic media is preferred; E-mail, or CD ROM in a current version of Microsoft or Adobe products readable by the COR.

Statement of Work

1.0 - Objective:
EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) for diagnosing infectious disease bioevents. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. We propose scaling this system to handle large data volumes in near-real-time, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor live data feeds for diseases or disease characteristics of interest. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data; all connected to our network of experts from digital surveillance, disease ecology, and open source communities.

2.0 - Scope:
The **technology areas** to be investigated are mathematical disease models, disease detection, web data mining, scientific application development, digital disease surveillance, animal and human biosurveillance data, spatial environmental health data, and information storage and retrieval.

The **primary objective** is to deliver an application that facilitates rapid and accurate diagnosis of outbreaks to identify disease threats more rapidly than current methods of digital disease surveillance and to help BSVE analysts constrain complex infectious disease outbreak scenarios.

Major milestones:
1. Build BSVE interface to GRITS with the SDK
2. Build mechanisms to crowd source annotations
3. Expand diagnostic capability to arbitrary data feeds
4. Connect GRITS to EIDR and Mantle
5. Crowd source improvements to the GRITS media diagnostic tool
6. Connect GRITS diagnostic data filtering to the BSVE
7. Enrich diagnostic dashboard with dynamic visualizations
8. Forecast disease emergence spatially

3.0 - Background:

This is an extension of a previously funded DTRA initiative. Relevant documents can be found in the references section of the technical proposal.

4.0 - Tasks/Technical Requirements:
Task 1: Connect GRITS Girder database to the BSVE (Base Period)
1. Solicit feedback on GRITS data API from BSVE team
2. Create API key generation and assignment infrastructure for GRITS
3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API

5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities (Base Period)

1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords
3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article
7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE (Base Period)

1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Build BSVE interface to GRITS with the SDK (Base Period)

1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy application

Task 5: Build mechanisms to crowd source annotations (Base Period)

1. Prepare annotation interface to allow correcting annotations
2. Write documentation of annotation interface
3. Test annotation interface and incorporate feedback
4. Develop infrastructure to identify and assign annotation tasks
5. Integrate annotation interface into Mechanical Turk or similar platform
6. Integrate and deploy citizen science platform
7. Evaluate obtained annotations and report on quality (e.g., inter-annotator agreement)

Task 6: Incorporate disease network graphs to assist diagnostics (Base Period)

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blind spots' in the information network

Task 7: Support diagnostic algorithm development with dashboard (Base Period)

1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 8: Expand diagnostic capability to arbitrary data feeds (Option Year 1)

1. Build a submission interface for users to submit arbitrary feed
2. Integrate article-processing pipeline with a translation service to process non-English articles in near real time.

Task 9: Connect GRITS to EIDR/Mantle (Option Year 1)

1. Evaluate existing EIDR/Mantle API against needs of recommendation system
2. Develop capacity of EIDR/Mantle API to deliver historic event matches
3. Recommend EIDR/Mantle events (e.g., current event is similar to past outbreak)
4. Use EIDR/Mantle media to improve diagnostics and recommendation quality
5. Match GRITS data to events in EIDR and Mantle (expanding from EIDs to all outbreaks)

Task 10: Update diagnostic model in near real time (Option Year 1)

1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 11: Use text mining to extend network graphs/ontologies (Option Year 1)

1. Infer set of subjects (e.g., EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g., novel diseases, viral strains that have mutated, bacteria that have developed antibiotic resistance).

Task 12: Connect EIDR collective intelligence editor to the BSVE (Option Year 1)

1. Evaluate and implement changes to EIDR API for of GRITS diagnostic needs
2. Generate keywords and rules from EIDR data to incorporate into GRITS text mining
3. Incorporate EIDR data into diagnostic model training
4. Design user interface for expert review and editing of EIDR events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with EIDR

Task 13: Connect GRITS diagnostic data filtering to the BSVE (Option Year 1)

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 14: Generate disease summary reports from diagnostics (Option Year 1)

1. Create algorithms for generating statistics (e.g., case counts) and visualizations (e.g., epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 15: Forecast disease emergence (Option Year 1)

1. Build a mathematical model of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

5.0 - CDRLs/Other Deliverables:

- Project Spend Plan (In accordance with Exhibt A Contract Data Requirements List)
- Meeting and Teleconference Minutes (In accordance with Exhibt A Contract Data Requirements List)
- Monthly Progress & Cost Status Reports (In accordance with Exhibt A Contract Data Requirements List)
- Software (In accordance with Exhibt A Contract Data Requirements List)
- Reports (In accordance with Exhibt A Contract Data Requirements List)

March 26, 2015

EcoHealth Alliance Subcontracting Plan for HDTRA114-AMD1-CBA-03-2-0022

Per FAR 19.704, we have detailed below our individual subcontracting plan to maximize small business potential in our contracting efforts for Base Year, Option Year 1.

Table 1. Estimated Proposed Subcontracting Amounts for Base Year of Contract

Socioeconomic Concern	Base Year Amount Subcontracted to Small Business	Option 1 Amount Subcontracted to Small Business	Base Year Percentage of overall value of total Base Year contract (Small business subcontracted amount /Total contract amount)	Option Year 1 Percentage of overall value of total Option 1 Year contract (Small business subcontracted amount /Total contract amount)
Small Business (including ANC and Indian Tribes)	$506,686.72	$521,887.33	21%	21%
Veteran-owned small business	$0	$0	0%	0%
Service-Disabled Veteran Owned Small Business -	$0	$0	0%	0%
Service-Disabled Veteran Owned Small Business	$0	$0	0%	0%
HUBZone Small Business -	$0	$0	0%	0%
Small Disadvantaged Business (including ANCs and Indian tribes)	$0	$0	0%	0%
Women-Owned Small Business Concerns	$0	$0	0%	0%

1) The breakdown of our percentage goals for subcontracted dollars for the **Base Year** is as follows

- Small Business (including ANCs and Indian Tribes)- 20%
- Veteran-owned small business - 0%
- Service-Disabled Veteran owned Small Businesses- 0%
- HUBzone Small Business - 0%
- Small Disadvantaged Business (including ANCs and Indian tribes) - 0%
- Women-owned Small Business Concerns - 0%

The breakdown of our percentage goals for subcontracted dollars for **Option Year 1** is as follows

- Small Business (including ANCs and Indian Tribes)- 20%
- Veteran-owned small business - 0%
- Service-Disabled Veteran owned Small Businesses- 0%
- HUBzone Small Business - 0%
- Small Disadvantaged Business (including ANCs and Indian tribes) - 0%
- Women-owned Small Business Concerns - 0%

2) The total amount of dollars to be subcontracted for this proposal in the **Base year** is $631,208.71. EcoHealth Alliance (EHA) plans to subcontract $506, 686.72 in the Base Year to Small Businesses (Kitware). This is approximately 80% of all subcontracted dollars. This small business is not an ANC or Indian Tribe. EHA plans to subcontract $0 to veteran-owned small business, service-disabled veteran-owned small business, HUBZone small business, small disadvantaged business (including ANCs and Indian tribes) and women-owned small business concerns.

The total amount of dollars to be subcontracted for this proposal in **Option Year 1** is $650,144.98. EHA plans to subcontract $521,887.33 in the Option Year 1 to Small Businesses (Kitware). This is approximately 80% of all subcontracted dollars. This small business is not an ANC or Indian Tribe. EHA plans to subcontract $0 to veteran-owned small business, service-disabled veteran-owned small business, HUBZone small business, small disadvantaged business (including ANCs and Indian tribes) and women-owned small business concerns.

(3) Supplies and services to be contracted to our small business subcontractor (Kitware) includes machine learning, text analysis, software development, data management, and data visualization. Kitware is a unique scientific organization, selected on the basis of the nature of the work, good faith efforts to identify capable small business firms, and the precedent of successful prior collaborations with EHA. Specifically, they were selected on the basis of professional accomplishments, niche expertise, proven track record, and the precedent of previously having developed custom biosurveillance products to interfaced with their products and expertise.

(4) The total and categorical percentage awards are lower than DoD's goals due to the specialized work to be completed the proposed work and the previous collaboration with subcontractors on previous and related research and development contracts with EHA (funded by DTRA). These methods are used to develop subcontracting goals:

The Principal Investigator (PI; Dr. Andrew G. Huff) will consult with the Chief Financial Officer (CFO; Mr. Harvey Kasdan), to clearly identify the goods and services that will be subcontracted and will search source lists to identify small, disadvantaged, women-owned, SBA HUBzone, veteran owned, and service disabled veteran owned firms that can provide these goods and services. EHA will investigate the identified firms' capabilities and the past performance of these firms to determine if they are qualified to provide the goods and services required. If there are qualified small, disadvantaged, women-owned, SBA HUBzone, veteran owned, or service disabled veteran owned firms that offer the needed goods or services, they will be used whenever possible. Reasonable goals are established before considering the value of the needed subcontracts and the after identifying the pool of qualified firms.

(5) The internal identification and selection process for subcontractors are as follows:

1. Senior scientists survey and interview institutions and individuals recommended by our science staff, colleagues, industry groups, funders and, for in-country partner recommendations, local, regional and national governments and institutions.
2. Site visits are made as necessary, particularly for partners with whom we have not worked previously, to determine their capacity, and their local relationships. Extensive review includes CV's of principal investigators and their staff, organizational and administrative capacity, annual report and audit report reviews, indirect cost rate review, and history of the institution.
3. We conduct a complete review of prospective subcontractors among senior staff, with a recommendation to the President for final decision.
4. Source lists used in making the determinations:
    - www.pro-net.sba.gov, the SBA online database of small businesses
    - www.sba.gov/hubzone, the SBA online database of locations that qualify as HUBZones
    - Local Office of the Small Business Administration

(6) Indirect costs were not included in our goals. Kitware and ISDS have their own approved overhead and indirect rates. Their sub-award contains overhead and indirect rates.

(7)

Name:	Dr. Andrew G. Huff
Title:	Senior Scientist
Address:	460 West 34th Street 17th Floor New York, NY 10001
Telephone Number:	1.212.380.4497 (direct)
Email:	huff@ecohealthalliance.org

Specific duties as they relate to EHA's subcontracting program are:

- Identifies potential subcontractors based on the methods described above
- Survey's SB, HUBZone SB, SDB, WOSB and veteran owned or service disabled veteran owned businesses for potential inclusion in all solicitations for products or services which they are capable of providing
- Works with finance and administration departments to identify future subcontracting goals
- Coordinates with subcontractors and assures subcontracting reports are submitted in accordance with EHA and U.S. government policies
- Prepares and submits periodic subcontracting reports as outlined in this plan

(8) EHA gives careful consideration to small businesses that could provide the services we require. On this basis, we identified one recognized small business entity in the field (Kitware) that had the ability, expertise and the capacity to accomplish these goals and that would be able to compliment the expertise of our organization to accomplish the tasks detailed in our statement of work (SOW). Per FAR 19.703 (2)(b), we rely on written documentation to confirm a subcontractor's status as a small business. Due to the scientifically specific nature of the work that is proposed, we were unable, to the best of our ability, to identify areas of the work that could be further subcontracted, or qualified firms that could help EHA achieve our broader small business goals (e.g., veteran, disadvantaged, HUB, women, disabled). Beyond the specific goals of this proposal, EHA makes every effort to provide opportunities for small businesses.

(9) EHA will include the clause at 52.219-8, Utilization of Small Business Concerns (see 19.708(a)), in all subcontracts that offer further subcontracting opportunities, and will require all subcontractors (except small business concerns) that receive subcontracts in excess of $650,000 ($1.5 million for construction) to adopt a plan that complies with the requirements of the clause at 52.219-9, Small Business Subcontracting Plan (see 19.708(b));

(10) EHA agrees to cooperate in any studies or surveys that may be required. EHA agrees to submit periodic reports (annually, or when requested by DTRA) so the government can determine the extent of compliance by EHA to the subcontracting plan.

- EHA will submit an Individual Subcontract Report (ISR) and a Summary Subcontract Report (SSR) using eSRS when required.
- EHA will submit a ISR semi-annually and within 30 days of contract completion. We will use the eSRS system and follow the instructions detailed on the eSRS system
- EHA will submit an SSR annuals for the twelve month period ending September 30th. We will use the eSRS system and follow the instructions detailed on the eSRS system.
- EHA does not currently have, or plan to have subcontractors with subcontracting plans. None of EHA's subcontractors have subcontractors of their own.

(11) EHA agrees that it will maintain at least the following types of records to document compliance with the subcontracting plan:

- Source list, guides, and other data identifying SB, HUBZone SB, SDB, WOSB and veteran owned or service disabled veteran owned concerns.
- Organizations contacted to locate SB, HUBZone SB, SDB, WOSB and veteran owned or service disabled veteran owned concerns.
- On a contract-by-contract basis, records on all subcontract solicitations over $100,000, indicating for each solicitation (1) whether SB concerns were solicited, and if not, why not; (2) whether HUBZone SB concerns were solicited, and if not, why not; (3) whether SDB concerns were solicited, and if not, why not; (4) whether WOSB concerns were solicited, and if not, why not, (5) whether veteran owned or service disabled veteran concerns were solicited and if not, why not; and (6) reasons for the failure of solicited SB, HUBZone SB, SDB, WOSB and veteran owned or service disabled veteran owned concerns to receive the subcontract award.

Based upon the above criteria, we have selected our small business contractor in accordance with our plan. We are committed to the small business goals as outlined in FAR 19.702 and will continue to administer our subcontracting program, inclusive of contractual agreements and monthly invoices and reports, in accordance with these regulations.

Cheers,

Andrew G. Huff, Ph.D., M.S.

DATA RIGHTS ASSERTION LIST

Identification and Assertion of Restrictions on the Government's Use, Release, or Disclosure of Technical Data or Computer Software

The Offeror asserts for itself, or the persons identified below, that the Government's rights to use, release, or disclose the following technical data or computer software should be restricted

Technical data or computer software to be furnished with restrictions*	Basis for assertion**	Asserted rights category***	Name of person asserting restrictions****
None	None	None	None

*For technical data (other than computer software documentation) pertaining to items, components, or processes developed at private expense, identify both the deliverable technical data and each such item, component, or process. For computer software or computer software documentation identify the software or documentation

**Generally, development at private expense, either exclusively or partially, is the only basis for asserting restrictions. For technical data, other than computer software documentation, development refers to development of the item, component, or process to which the data pertain. The Government's rights in computer software documentation generally may not be restricted. For computer software, development refers to the software. Indicate whether development was accomplished exclusively or partially at private expense. If development was not accomplished at private expense, or for computer software documentation, enter the specific basis for asserting restrictions

***Enter asserted rights category (e.g., government purpose license rights from a prior contract, rights in SBIR data generated under another contract, limited, restricted, or government purpose rights under this or a prior contract, or specially negotiated licenses)

****Corporation, individual, or other person, as appropriate

*****Enter "none" when all data or software will be submitted without restrictions.

EcoHealth Alliance, Inc.
ATTN: Harvey Kasdan
460 West 34th Street – 17th Floor
New York, NY 10001

Dear Mr. Kasdan:

This letter is in reference to Defense Threat Reduction Agency (DTRA) Contract Number HDTRA1-15-C-0041 which provides the "Global Rapid Identification Tool System (GRITS)".

You are advised, in accordance with Contract Clause 52.217-9, "Option to Extend the Term of the Contract," the Government intends to exercise Option Period I under Contract Line Item Numbers (CLINs) 1001 and 1002 for the period of April 9, 2016 through to April 8, 2017.

This notice of the Government's intent to exercise the aforementioned option shall not be construed as an authorization to begin new work in the option period, nor does it commit the Government to the exercise of the option. All terms and conditions of the contract remain in full force and effect.

If you require additional information, please contact (b)(6) Contract Specialist, at (b)(6) or the undersigned at (b)(6)

Sincerely,

(b)(6)

Contracting Officer

SECTION G - CONTRACT ADMINISTRATION DATA

Accounting and Appropriation

Summary for the Payment Office

As a result of this modification, the total funded amount for this document was increased by $1,696,980.75 from $2,217,037.00 to $3,914,017.75.

SUBCLIN 100101:

Funding on SUBCLIN 100101 is initiated as follows:

ACRN: AC

CIN: JBCBA19766000101

Acctng Data: 044315 097 0400 000 N 20162017 D 2620 0602384BP_CB_CBA_RC 1617_0400_2620_TM2DN DTRA 255

Increase: $1,696,980.75

Total: $1,696,980.75

The following have been modified:

252.232-9000 CONTRACT FUNDING PROFILE (OCT 1998)

CLIN 0001 Subject to FAR Clause 52.232-22, Limitation of Funds, the amount of $2,217,037.00 is obligated for work to be performed during the period beginning with contract award and continuing through April 8, 2016. CLIN 0001 is FULLY FUNDED.

CLIN 1001 Subject to FAR Clause 52.232-22, Limitation of Funds, the amount of $1,696,980.75 is obligated for work to be performed during the CLIN 1001 period of perforamce start date of April 9, 2016 and continuing through its end date. Incremental funding planned, but not obligated is: $565,660.25.

(End of clause)

252.232-9001 PRICES/COST

a. Subject to the provisions of the Clauses of this Contract entitled LIMITATION OF FUNDS, ALLOWABLE COST AND PAYMENT, and FIXED FEE, the total allowable cost under this Contract shall not exceed $_____ A_____, which is the total estimated cost of the Contractor's performance hereunder, exclusive of fixed fee. In addition, the Government shall pay the Contractor a fixed fee of $_____B_____ for the performance of this Contract. It is understood and agreed that the Government's obligation is limited to INCREMENTAL FUNDING in the amount of $_____C_____. Within this amount ($_____C_____), the fixed fee shall bear the same relationship to the total fixed fee, as the costs incurred bear to the total estimated cost.

b. Interim payment vouchers may be submitted for provisional payment pursuant to the Clauses of this Contract entitled ALLOWABLE COST AND PAYMENT and FIXED FEE.

CLIN 0001

A: $2,217,037.00
B: $0
C: $2,217,037.00

CLIN 1001

A: $2,262,641.00
B: $0
C: $1,696,980.75

13. THIS ITEM APPLIES ONLY TO MODIFICATIONS OF CONTRACTS/ORDERS. IT MODIFIES THE CONTRACT/ORDER NO. AS DESCRIBED IN ITEM 14.

☐ A. THIS CHANGE ORDER IS ISSUED PURSUANT TO: (Specify authority) THE CHANGES SET FORTH IN ITEM 14 ARE MADE IN THE CONTRACT ORDER NO. IN ITEM 10A.

☐ B. THE ABOVE NUMBERED CONTRACT/ORDER IS MODIFIED TO REFLECT THE ADMINISTRATIVE CHANGES (such as changes in paying office, appropriation date, etc.) SET FORTH IN ITEM 14, PURSUANT TO THE AUTHORITY OF FAR 43.103(B).

☐ C. THIS SUPPLEMENTAL AGREEMENT IS ENTERED INTO PURSUANT TO AUTHORITY OF:

X D. OTHER (Specify type of modification and authority)
Bilateral Mod IAW FAR 43.103(a)(3) Mutual Agreement

E. IMPORTANT: Contractor ☐ is not, ☒ is required to sign this document and return 1 copies to the issuing office.

14. DESCRIPTION OF AMENDMENT/MODIFICATION (Organized by UCF section headings, including solicitation/contract subject matter where feasible.)
Modification Control Number: duncank171066

J4CRJ9CBA172109

The purpose of this modification is to:

1. Extend Option Period 1, CLINs 1001 and 1002 through to September 30, 2017 at no additional cost to the Government. As consideration for this extension, the Contractor shall develop and provide to the Government, at the Contractor's expense, a diagnostic engine that will create a summary report of separate articles that are linked to a single disease event.
2. Update CLINs 0002 and 1002 to identify them as not separately priced with a quantity of 1, and add ship to addresses in order to comply with DoD Procurement Data Standard requirements.
3. Realign ACRN AB funding from SLIN 000101 to CLIN 0001 in order to correct an issue wherein funding was incorrectly assigned to both the CLIN and SubCLIN. This realignment does not affect the total funding amount allocated to, or available for vouchers against, CLIN 0001.
4. Remove FOB and inspection terms from funding SubCLINs.
5. Replace Section G DFAS payment instruction clause 252.204-9002 with 252.204-0002.

Except as provided herein, all terms and conditions of the document referenced in Item 9A or 10A, as heretofore changed, remains unchanged and in full force and effect.

Dear Mr. Kasdan,

Congratulations! The Defense Threat Reduction Agency (DTRA) is providing notification that your proposal titled " Global Rapid Identification Tool Set (GRITS)" submitted under Broad Agency Announcement HDTRA114-AMD1-CBA-03-2-0022 has been tentatively selected for contract award. Please see the attached Fact Finding Letter for a request for additional information. All responses to this request are due at your earliest convenience, but DTRA would prefer no later than COB August 25, 2014. Please submit your response to me at (b)(6)

Thank you in advance for your time and assistance with this matter. Please let me know if you have any questions.

Best,

(b)(6)

August 18, 2014

EcoHealth Alliance Inc.
Mr. Harvey Kasdan
460 West 34th Street, 17th Floor
New York, New York 10001-2320

Dear Mr. Kasdan:

Congratulations! The Defense Threat Reduction Agency (DTRA) is providing notification that your proposal titled "Global Rapid Identification Tool Set (GRITS)" submitted under Broad Agency Announcement (HDTRA114-AMD1-CBA-03-2-0022) has been tentatively selected for contract award.

In order to proceed, DTRA requests that you provide additional information to your proposal in the following areas:

- Contract type. The Government plans to award a cost contract for this research and development effort. Grants are not a consideration for this selection.

- Technical Comments
  - Please remove Tasks 7 and 8; they do not align with current DTRA BSVE objectives.
  - Please remove Task 22; this is a duplicate task currently funded under BSVE efforts.
  - Please provide an updated cost estimate spreadsheet reflecting the removal of Tasks 7, 8 and 22 using the cost breakdown spreadsheet provided, and active cells containing formulae.
  - Please provide an updated PI name and hourly rate information that reflects the new PI for this project, as well as any other new project personnel that replace former project personnel.
  - Please clarify and verify the duration and access terms of the GRID and EcoHD datasets once integrated with BSVE.

- Cost Proposal
  The responsibility for providing adequate supporting data and attachments lies solely with the Offeror. Further, the Offeror must also bear the burden of proof in establishing reasonableness of proposed costs; therefore, it is in the Offeror's best interest to submit a fully supportable and well-prepared cost proposal. The basis and rationale for all proposed costs should be provided as part of the proposal so that Government personnel can place reliance on the information as current, complete, and accurate.
  All proposals are subject to the requirements of the Truth in Negotiations Act (TINA). Any proposal exceeding the threshold listed in FAR 15.403-4(a)(1) must submit a certificate of current cost and pricing data in the format described in FAR 15.406-2. The certificate of current cost and pricing data is required with proposal submission, however, after negotiations Offerors may be asked to re-submit an updated certificate.

Note: ***Your proposal is currently over the TINA threshold of $700,000.***

A. **Cost Breakdown:** The Offeror shall prepare and submit the Cost Proposal (with the exception of the narrative information described below) using Microsoft Excel format, with active formulae.

Offeror format acceptable provided it includes a detailed cost breakdown of all costs by cost element in accordance with Tables 1 - 5: Sample Formats attached. The Offeror must also provide a narrative to support the requirements in each cost element. In addition, the Offeror must provide a separate cost proposal, in the same level of detail as the prime contractor for each subcontractor or consultant which were not selected on adequate price competition.

Cost elements should include the following:

a. LABOR: Individual labor categories or persons (principal investigator, graduate students, etc.), with associated labor hours and unburdened labor rates.
   i. Please provide payroll record documentation to support the proposed labor rates.

b. MATERIALS: Cost of materials, broken out to the level of detail shown in Table 2. Clearly delineate any computer or IT purchases.

c. EQUIPMENT: Cost of equipment, broken out to the level of detail shown in Table 3.

d. TRAVEL: Cost of each trip, broken out to the level of detail shown in Table 4.

e. OTHER DIRECT COSTS (ODC): Cost of ODCs, broken out to the level of detail shown in Table 5. Examples of ODCs include but are not limited to the following:
   i. Publication and report cost
   ii. Laboratory and Computer Usage Fees
   iii. Communication costs not included in overhead
   iv. Consultant Services.

f. SUBCONTRACTOR: Total cost for each subcontractor and/or consultant (**to include each proposed CRO**), broken out to the level of detail shown in Table 6. Any subcontractor not selected on the basis of adequate price competition must provide a separate cost break out that is in compliance with the requirements included in this Attachment.

Specific questions:

- Epidemico
  - Please provide a cost breakdown spreadsheet with active formulae in the cells per the template supplied by DTRA.
  - Please provide payroll record documentation to support the proposed labor rates.
  - Please provide a breakdown of fringe.
  - Please provide a breakdown of the ODCs—specify the consultant, purpose and rate.
  - Please provide the vendors and catalog item numbers for the proposed materials and supplies.
  - Please share a copy of the most recent DHHS rate agreement.

- Kitware
  - Please provide a cost breakdown spreadsheet with active formulae in the cells per the template supplied by DTRA.
  - Please provide payroll record documentation to support the proposed labor rates.
  - Please provide a breakdown of fringe.
  - Please provide a breakdown of the ODCs --specify the consultant, purpose and rate.
  - Please provide the vendors and catalog item numbers for the proposed materials and supplies.
  - Please share a copy of the most recent rate agreement or recommendation.

- ISID—ProMED Mail
  - Please provide a cost breakdown spreadsheet with active formulae in the cells per the template supplied by DTRA.
  - Please provide payroll record documentation to support the proposed labor rates.
  - Please provide a breakdown of fringe.
  - Please provide a breakdown of the ODCs—specify the consultant, purpose and rate.
  - Please provide the vendors and catalog item numbers for the proposed materials and supplies.
  - Please share a copy of the most recent DHHS rate agreement.

g. INDIRECT COSTS:
   i. Fringe Benefits
      - Please provide a copy of the most recent memorandum from DHHS outlining your rate agreement.
   ii. Overhead
   iii. Material Handling
   iv. General and Administrative

B. **Cost Narrative**: All Offerors are required to provide a narrative to support each cost element proposed.

a. LABOR: Offerors must provide a basis of estimate for the number of hours or months proposed as well as the labor categories chosen for the work to be performed. Provide any rate agreements justifying the labor rates proposed.

b. MATERIALS: Offerors must provide a basis of the materials proposed and why these materials are necessary for the work to be performed. Include quotations when available. Also provide the rationale that demonstrates how the Offeror determined the costs fair and reasonable.

Specific questions:

- You have supplied a copy of EcoHealth Alliances' purchasing policy for ensuring best value in the initial proposal package.
- Please provide the suppliers to be used for material purchases, as well as corresponding catalog/part numbers for materials.
- Please provide a breakdown of the materials/supplies to be purchased on the supplied Cost Template spreadsheet.

c. TRAVEL: Offerors must provide justification for each trip proposed. Include what will be accomplished and explain how each trip benefits DTRA. Trips proposed that benefit the Offeror and/or more than one Government agency under another contract may be subject to cost sharing.

NOTE: Travel cost estimates should be based on the following:

Except as provided in FAR 31.205-46(a)(3), costs incurred for lodging, meals, and incidental expenses shall be considered to be reasonable and allowable only to the extent that they do not exceed on a daily basis the maximum per diem rates in effect at the time of travel as set forth in the:

(i) Federal Travel Regulations, prescribed by the General Services Administration, for travel in the contiguous United States,

(ii) Joint Travel Regulation, Volume 2, DoD Civilian Personnel, Appendix A, prescribed by the Department of Defense, for travel in Alaska, Hawaii, and outlying areas of the United States, or the

(iii) Standardized Regulations (Government Civilians, Foreign Areas), Section 925, "Maximum Travel Per Diem Allowances for Foreign Areas," prescribed by the Department of State, for travel in areas not covered in (a)(2)(i) and (ii) of FAR 31.205-46.

NOTE: **DTRA policy does not allow fee to be applied to travel.**

d. OTHER DIRECT COSTS (ODC): Offerors must provide a basis of the ODCs proposed and why they are necessary for the work to be performed. Provide quotations or publically posted price lists to support the costs proposed. Also provide the rationale that demonstrates how the Offeror determined the costs fair and reasonable.

Please provide a copy of your most recent OMB Circular A-133 Audit Report.

e. INDIRECT COSTS: Offerors must submit a copy of any current Forward Pricing Rate Agreements or Forward Pricing Rate Recommendations with Government agencies, such as DCMA or Department of Health and Human Services. If no agreement has been made with a Government representative, Offerors must provide all rates, factors, and bases by year utilized in the development of the proposal and the basis of those rates and factors.

f. FEE: If fee is proposed, offerors must provide rationale supporting the fee proposed.

NOTE: Offerors are encouraged to review the factors for how the Government evaluates contractor proposed fee located in DFARS 215.404-71.

- Statement of Work (SOW). Please ensure the following:
  A. Use "the contractor shall" whenever the work statement expresses a provision that is binding. Use "should" or "may" whenever it is necessary to express a declaration of purpose. Use "will" in cases where no Offeror requirement is involved; e.g., power will be supplied by the Government. Use active voice in describing work to be performed.

  B. The work effort should be segregated by performance period for all tasks to be performed in that year (e.g. Base Period, Option Period 1, Option Period 2, etc.). Identify the major tasks in separately numbered sub-paragraphs. Each major task should delineate, by subtask, the work to be performed by period. Number each task using the following decimal system (e.g. 4.1, 4.1.1, 4.1.1.1, 4.2, etc.).

  C. Identify in section 4, which group is performing each task/subtask (i.e. Prime or Sub).

  D. Clearly identify in the text of section 4 which period (e.g. Base Period, Option Period 1, etc.) the task will be performed in.

  E. Provide the SOW as a Microsoft Word document so it can be formatted as an attachment to the contract. Please ensure that the title and date of the SOW appear on the document.

- Human Use.
  The proposal notes that the proposed effort ***does not*** include human subjects or materials research. Please confirm that this remains true. If human subjects or materials research is

to be included in the effort, the work must be reviewed and approved by the DTRA Human Research Oversight Board.

- Animal Use.
  The proposal notes that the proposed effort ***does not*** include research involving animals on this effort. Please confirm that this remains true. If animal subjects are to be included in the effort, you must obtain IACUC/ACURO approval before animal studies may begin.

- CDRLs/Other Deliverables.
  See attached CDRLs/Other Deliverables DD 1423, which identifies each deliverable required by DTRA for this contract. Should you take any exception to the requirements stated therein, please notify DTRA in your response to this fact finding letter.

- System for Award Management (SAM). ***Verify and Update your SAM record by certifying to the required DFARs clauses.***

  A. After reviewing the SAM information, please verify that the representations and certifications currently posted electronically have been entered or updated within the last 12 months, inclusive of the following:

     - FAR 52.209-7 Information Regarding Responsibility Matters:
     - FAR 52.225-20 Prohibition on Conducting Restricted Business Operations in Sudan--Certification;
     - DFARS Provisions 252.209-7001, Disclosure of Ownership or Control by the Government of a Terrorist Country;
     - DFARS 252.247-7022 Representation of Extent of Transportation by Sea; and
     - DFARS 252.225.7031 Secondary Area Boycott of Israel:
     - DFARS 252.203-7000 Requirements Relating to Compensation of Former DoD Officials.

  B. The following clauses are not currently in SAM. Please review the addendum attachment containing these clauses, certify and sign them, and return them:

     - DFARS 252.203-7005 Representation Relating to Compensation of Former DoD Officials.

     NOTE: If any of the above mentioned provisions are not contained in the SAM database, EcoHealth Alliance is required to acknowledge and submit in writing documentation that they have read and understand each provision.

- Intellectual Property:

A. Data Rights. Please provide a data rights assertions list.

Identify on a Data Rights Assertions List all technical data and computer software, to the extent known at this time, that the Offeror, its subcontractors or suppliers, and potential subcontractors or suppliers, will furnish to the Government with less than "unlimited rights" to use, release and disclosure in accordance with DFARS 252.227-7017, Identification and Assertion of Use, Release or Disclosure Restrictions, and DFARS 252.227-7028, Technical Data or Computer Software Previously Delivered to the Government. Every Offeror proposing to deliver technical data or computer software to the Government will provide a Data Rights Assertions List as an attachment to their offer. The Data Rights Assertion List will contain a table of data deliverables to be furnished to the Government with rights restrictions, as illustrated in DFARS 252.227-7017 (d). This attachment will additionally provide the statement given in DFARS 252.227-7017 (d), signed and dated by an official authorized to contractually obligate the Offeror. If the Offeror will deliver all technical data and computer software to the Government without restrictions, enter "NONE" in this table under the heading "Technical Data or Computer Software to be Furnished with Restrictions."

Generally, development at private expense, either exclusively or partially, is the only basis for asserting restrictions to Government's rights. For technical data, other than computer software documentation, development refers to development of the item, component, or process to which the data pertain. For computer software, development refers to the software. The Government's rights in computer software documentation generally may not be restricted. In addition, if development was not accomplished at private expense, or for computer software documentation, there are also several specific bases for asserting restrictions.

When listing technical data (other than computer software documentation) pertaining to items, components, or processes, identify both the data deliverable from the CDRL and each such item, component, or process as specifically as possible (e.g., by referencing the CDRL and the specific sections of the proposal, data item numbers or item numbers, or specific technology or components). When listing computer software or computer software documentation, identify the software or documentation by specific name or module or item number.

For each of the technical data or computer software identified in the Data Rights Assertion List, identify the following information:

(i) Identify the basis for the assertion. Generally "developed exclusively at private expense" or "developed partially at private expense" are the only basis to assert restrictions in Government rights. In general, the Government rights in computer software documentation cannot be restricted. If development was not accomplished at private expense, or for computer software documentation, describe the specific basis for asserting restrictions. For example, basis for restricting Government rights may be:

(A) Development at private expense, either exclusively or partially. Indicate whether development was accomplished exclusively or partially at private expense.

(B) Rights under a prior government contract, including SBIR data rights for which the protection period has not expired.

(C) Standard commercial license customarily provided to the public.

(D) Specifically negotiated license rights.

(ii) Identify the asserted rights category for the technical data or computer software from the applicable clauses:

(A) For non-commercial technical data (other than computer software documentation), use the clause found at DFARS 252.227-7013, (e.g., government purpose rights; limited rights; specifically negotiated license rights; or rights under prior Government contracts, including SBIR data rights for which the protection period has not expired);

(B) For non-commercial computer software and non-commercial computer software documentation, use the clause at DFARS 252.227-7014 (e.g. government purpose rights, restricted rights, and specifically negotiated license rights, and rights under prior Government contracts, including SBIR data rights for which the protection period has not expired);

(C) For commercial technical data (other than computer software documentation), use the clause found at DFARS 252.227-7015 (e.g. government use rights, or specifically negotiated license rights). (NOTE: This clause applies only if the item, component or process to which the technical data pertains meets the definition of "commercial item" in FAR 2.101)

(D) For commercial computer software and commercial computer software documentation, refer to DFARS 227 7202-3 (e.g. standard commercial license rights, or specifically negotiated license rights). See definition of "commercial computer software" under DFARS 252.227-7014.

(iii) Offeror shall attach to its offer for each listed item copies of all proposed specifically negotiated license(s), Offeror's standard commercial license(s), and any other asserted restrictions other than government purpose rights, limited rights, government use rights, rights under prior government contracts, including SBIR data rights for which the protection period has not expired.

Both noncommercial and commercial data/software restrictions should be identified in the Data Rights Assertions list. Should the Offeror propose a specifically negotiated license or a commercial license, then the Offeror must include ALL the terms and conditions of that license. If an Offeror makes no assertions in accordance with the DFARS 252.227-7017, the Government will assume that the Offeror will deliver all data with "unlimited rights."

If the Offeror is awarded a contract, the Data Rights Assertions list shall be listed in an attachment to that contract. Upon request by the Contracting Officer, the Offeror shall provide sufficient information to enable the Contracting Officer to evaluate any listed assertion.

- **In accordance with FAR clause 52.222-37(c), Employment Reports on Veterans, EcoHealth Alliance is required to complete the Form VETS-100A, entitled "Federal Contractor Veterans' Employment Report (VETS-100A Report)." Please provide confirmation of your registration.**

- **Please provide a copy of EcoHealth Alliance's Subcontracting Plan.**

- Request EcoHealth Alliance extend the proposal validity through 150 days from the date of this letter.

- **Please provide a copy of the most recent OMB Circular A-133 Audit Report.**

- In accordance with Office of the Secretary of Defense (OSD) Memo dated November 29, 2012, "Enterprise-wide Contractor Manpower Reporting Application" (p. 3), DTRA will include an H Clause: "The contractor shall report ALL contractor labor hours (including subcontractor labor hours) required for performance of services provided under this contract for the [NAMED COMPONENT] via a secure data collection site. The contractor is required to completely fill in all required data fields using the following web address: http://www.ecmra.mil/ Reporting inputs will be for the labor executed during the period of performance during each Government fiscal year (FY), which runs October 1 through September 30. While inputs may be reported any time during the FY, all data shall be reported no later than October 31 of each calendar year, beginning with 2013. Contractors may direct questions to the help desk at help desk at: http://www.ecmra.mil."

- This is a reminder that any and all press releases must be approved by the contracting officer. It is advised not to release any information concerning this effort until a contract is signed and awarded.

Based on your response to these items, and further technical and cost analysis, we may require more information or revisions at a later date. Please note this is not an opportunity to revise other portions of your proposal. Negotiations will begin after receipt and review of information provided in response to this letter.

It is DTRA's intent to negotiate and award the contract so that there is continuity between the new effort and the Period of Performance expiration of the current contract HDTRA1-13-C-0029. In order to expedite the negotiation and award process, we request you send all information listed above as soon as it is available. All responses to this request are due by COB August 25, 2014 and should be submitted to Marie Sepe at marie.sepe@dtra.mil. The subject line of the e-mail should include your organization's name.

Should you have any questions, don't hesitate to contact me.

Sincerely,

(b)(6)

Contract Specialist

Company B	$200,000	Base Period	
Company A	$50,000	Option I	

252.203-7005 Representation Relating to Compensation of Former DoD Officials.

REPRESENTATION RELATING TO COMPENSATION OF FORMER DOD OFFICIALS (NOV 2011)

(a) *Definition.* "Covered DoD official" is defined in the clause at 252.203-7000, Requirements Relating to Compensation of Former DoD Officials.

(b) By submission of this offer, the offeror represents, to the best of its knowledge and belief, that all covered DoD officials employed by or otherwise receiving compensation from the offeror, and who are expected to undertake activities on behalf of the offeror for any resulting contract, are presently in compliance with all post-employment restrictions covered by 18 U.S.C. 207, 41 U.S.C. 2101-2107, and 5 CFR parts 2637 and 2641, including Federal Acquisition Regulation 3.104-2.

(End of provision)

52.209-7 – Information Regarding Responsibility Matters.

As prescribed in 9.104-7(b), insert the following provision:

Information Regarding Responsibility Matters (Feb 2012)

(a) *Definitions.* As used in this provision—

"Administrative proceeding" means a non-judicial process that is adjudicatory in nature in order to make a determination of fault or liability (*e.g.*, Securities and Exchange Commission Administrative Proceedings, Civilian Board of Contract Appeals Proceedings, and Armed Services Board of Contract Appeals Proceedings). This includes administrative proceeding at the Federal and State level but only in connection with performance of a Federal contract or grant. It does not include agency actions such as contract audits, site visits, corrective plans, or inspection of deliverables.

"Federal contracts and grants with total value greater than $10,000,000" means

(1) The total value of all current, active contracts and grants, including all priced options; and

(2) The total value of all current, active orders including all priced options under indefinite-delivery, indefinite-quantity, 8(a), or requirements contracts (including task and delivery and multiple-award Schedules).

"Principal" means an officer, director, owner, partner, or a person having primary management or supervisory responsibilities within a business entity (*e.g.*, general manager; plant manager; head of a division or business segment; and similar positions).

(b) The offeror [_] has [_] does not have current active Federal contracts and grants with total value greater than $10,000,000.

(c) If the offeror checked "has" in paragraph (b) of this provision, the offeror represents, by submission of this offer, that the information it has entered in the Federal Awardee Performance and Integrity Information System (FAPIIS) is current, accurate, and complete as of the date of submission of this offer with regard to the following information:

(1) Whether the offeror, and/or any of its principals, has or has not, within the last five years, in connection with the award to or performance by the offeror of a Federal contract or grant, been the subject of a proceeding, at the Federal or State level that resulted in any of the following dispositions:

(i) In a criminal proceeding, a conviction.

(ii) In a civil proceeding, a finding of fault and liability that results in the payment of a monetary fine, penalty, reimbursement, restitution, or damages of $5,000 or more.

(iii) In an administrative proceeding, a finding of fault and liability that results in—

(A) The payment of a monetary fine or penalty of $5,000 or more; or

(B) The payment of a reimbursement, restitution, or damages in excess of $100,000.

(iv) In a criminal, civil, or administrative proceeding, a disposition of the matter by consent or compromise with an acknowledgment of fault by the Contractor if the proceeding could have led to any of the outcomes specified in paragraphs (c)(1)(i), (c)(1)(ii), or (c)(1)(iii) of this provision.

(2) If the offeror has been involved in the last five years in any of the occurrences listed in (c)(1) of this provision, whether the offeror has provided the requested information with regard to each occurrence.

(d) The offeror shall post the information in paragraphs (c)(1)(i) through (c)(1)(iv) of this provision in FAPIIS as required through maintaining an active registration in the Central Contractor Registration database via https://www.acquisition.gov (see 52.204-7).

(End of provision)

16. REMARKS

BLOCK 10: The final report takes the place of the annual report for the final Option Period.

BLOCK 12: End of Period of Performance (PoP), per the below schedule.

- The Contractor shall submit a Draft Final Report by the 60th calendar day prior to the end of the contract PoP.
- DTRA shall provide comments to the Contractor by the 30th calendar day following receipt of the Contractor's Draft Final Report.
- The Contractor shall submit the Final Report on the 30th Calendar day after receipt of DTRA's comments to the draft.

The final report will be delivered to DTIC as well as DTRA.

BLOCK 4: Paragraphs, subparagraphs, and line items described in DI-MGMT-80555A may be omitted or edited for appropriateness with prior approval from the Contracting Office. Please provide final recommended content and format to the contracting office with the response to the fact finding letter.

A Final Report shall be prepared at the end of the effort. A final report will be provided whether any or all of the contract options are exercised. This report takes the place of the last monthly report due. (A Financial report is still required.) The report shall be in contractor format and narrate a complete summary of the contract execution and associated results obtained. The narration will include outstanding problems and their potential solution, and problems solved during the course of the year, along with the solution to the solved problems. The report shall demonstrate how the Technology Readiness Level (TRL) has been advanced. The report shall be in a form compatible with DTIC requirements for publication.

Do not include performers and providers data in the publishable report.

16. REMARKS

BLOCK 10: Annually

BLOCK 11: Award of Contract/Task Order

BLOCK 12: 15 working days after the end of the first quarter of performance

BLOCK 13: Annually

During the performance of the Contract, the Contractor may purchase material or equipment using government funds (Contractor Acquired Property [CAP]) if approved by the Procurement Contracting Officer (PCO). The Contractor shall perform, record, and disclose physical inventory results of all CAP in the Contractor's possession via the attached Government Furnished Property forms. These forms will be supplied to the contractor electronically by the PCO, via the Contract Specialist, as described below:

1) Scheduled Government Furnished Property Form: The PCO will supply this form electronically to the Contractor prior to contract award. For any equipment the Contractor proposes to purchase, the Contractor shall fill out the CDRL A006 Link A (Scheduled Government Furnished Property Form) prior to contract award. The contractor shall return it to the PCO electronically. The form will become an attachment to the award.

2) Requisitioned Government Furnished Property Form: The PCO will supply this form electronically to the Contractor after contract award. As the equipment listed on the Scheduled Government Furnished Property Form is purchased, the Contractor shall fill out the CDRL A006 Link B (Requisitioned Government Furnished Property Form), and shall return it to the PCO electronically.

16. REMARKS

Unless otherwise specified, all deliverables listed are due at the end of the contract.

The contractor will deliver software that can interface with the Biosurveillance Ecosystem (BSVE). The software deliverables will be the following:

Within 12 months of contract award:
- Connect GRITS Girder database to the BSVE
- Develop recommendation and decision support capabilities
- Connect GRITS diagnostic and text-mining APIs to the BSVE
- Prototype near-realtime processing
- Build BSVE interface to GRITS with the SDK
- Connect GRITS expert network (GRITS.net) to the BSVE
- Test diagnostic dashboard with expert communities

Within 24 months of contract award:
- Enhance the expert annotation interface
- Build mechanisms to crowdsource annotations
- Incorporate disease network graphs to assist diagnostics
- Support diagnostic algorithm development with dashboard
- Expand diagnostic capability to arbitrary data feeds
- Connect GRITS to GRID
- Update diagnostic model in near-realtime
- Use text mining to extend network graphs/ontologies

Within 36 months of contract award:
- Crowdsource improvements to the GRITS media diagnostic tool
- Connect GRID's collective intelligence editor to the BSVE
- Connect GRITS diagnostic data filtering to the BSVE
- Enrich diagnostic dashboard with dynamic visualizations
- Generate disease summary reports from diagnostics
- Connect EcoHD to GRITS recommendations
- Create a webcrawler for expanding coverage of disease reports
- Forecast disease emergence

Blk 4-5: Per DID referenced elements, contractor format is acceptable. Report shall detail all work performed under this effort, including the results of analysis, and appropriate conclusions and/or recommendations. Dataset compatible with Microsoft Excel or contractor recommended database application.

A final technical report is required by the end of the base period. The report should include the following elements:

1) A description of the research and development processes used to arrive at the results of the study
2) A detailed compilation of the results generated
3) A description of the performance characteristics of the developed software and an analysis of its likely utility for additional development and deployment
4) Recommendations for the next stages of development
5) Description of what data are required to feed the delivered alorithms and an approach for the Government to maintain access to those data feeds.

Additionally, the contractor will deliver:

- Feedback on diagnostic dashboard (Updates provided each 12 months)
- Crowdsourced labels and annotations (36 months after contract award)
- EcoHD data for drivers of infectious disease (36 months after contract award)
- Documentation on near-realtime architecture (24 months after contract award)
- Documentation for GRITS APIs (Updates provided each 12 months)

Blk 14: Submission by electronic media is preferred; E-mail, or CD ROM in a current version of Microsoft or Adobe products readable by the COR.

OPENING NEGOTIATIONS

March 18, 2015

Dr. Andrew Huff,

A. On behalf of the DTRA Contracting Officer, I am writing to officially open negotiations with respect to EcoHealth Alliance's Proposal # HDTRA114-AMD1-CBA-03-2-0022. The following are the negotiation topics to be resolved:

1. Labor

	Proposed		Position		Difference	
	Hours	**Total**	**Hours**	**Total**	**Hours**	**Total**
Base Period	20,384	$ 856,600.00	18,304	$ 769,598.08	2,080	$ 87,001.92
Option I Period	20,384	$ 882,298.00	18,304	$ 787,298.84	2,080	$ 94,999.16

a. Labor Category: EcoHealth's original proposal did not include a Program Assistant (I), however began including this labor category in all future iterations of the proposal beginning November 3, 2014. The requirements of the SOW have not changed, therefore based on the technical evaluators recommendation, this additionally proposed labor is not required to fulfill the requirements in the statement of work.

DTRA's Position: Remove this labor category for each year of the contract, reducing the hours from 20,384 to 18,304 for each year of this effort.

b. Labor Rate: EcoHealth has proposed two Research Assistant (I)'s throughout all revisions of their proposal. From their revision dated January 6, 2015 onward, the labor rate for the two Research Assistant (I)'s has almost doubled from what was originally proposed – from $19.23 p/h to $36.06 p/h. Additional research indicates that these labor categories have been proposed for previous efforts with rates more comparable ($17.15 p/h) to the lesser of the two.

DTRA's Position: Accept the originally proposed rate of $19.23 p/h.

c. Labor Escalation: DTRA does not agree with EcoHealth's proposal of a 3% labor escalation rate for Option Period I of the period of performance. According to the Bureau of Labor Statistics for the private industry, labor escalation is expected to rise at a rate of 2.3%.

DTRA's Position: Apply labor escalation of 2.3% to Option Period I.

2. Travel

Year of Travel	Proposed	Position	Difference
Base	$15,328.00	$9,887.50	$5,440.50
Option I	$10,753.20	$6,744.17	$4,009.03

DTRA has taken exception to EcoHealth's proposed pricing with respect to airfare, per diem, lodging, transportation, trainfare, and annual escalation costs. DTRA's market research resulted in lower rates across the board when utilizing Government mandated regulations and third party travel websites.

DTRA's Positions:

a. Airfare: Roundtrip, coach flying rates were researched by utilizing two different time frames. The first was with 7 days advanced notice. The second method was using 6 months' notice. Comparable rates were obtained for both time frames.
b. Per Diem: For a two day trip, per diem is paid at 75% of the rate for the first day and 100% of the second day. Any other trip length is calculated at 75% of the rate on the first and last day, 100% on days in between.
c. Lodging: Calculated using GSA travel rates.
d. Transportation: DTRA understands that local travel in expensive areas can add up, however research indicates that multiple modes, multiple times should not exceed $60 per person in NY and $30 per person elsewhere, especially when utilizing public transportation.
e. Trainfare: Calculated from Penn Station (New York, NY) to Albany-Rensselaer (Near Clifton Park, NY).
f. Escalation: DTRA takes exception to the proposed 3% price increase for Option Period I. From 2014 to 2015, GSA per diem rates remained unchanged and lodging rates increased by 1.37%. To account for uncertainties in the travel industry, DTRA will round this percentage up to 1.5% and use this as the basis for their position.

DTRA's determined positions for Travel:

Trip 1			
From: New York, NY			
To: Boston, MA			
Days	2		
Travelers	2		
	Proposed	**Position**	**Difference**
Airfare	$800.00	$ 500.00	$300.00
Per Diem	$284.00	$ 248.50	$35.50
Lodging	$1,000.00	$ 516.00	$484.00
Transportation Boston	$120.00	$ 70.00	$50.00
Local Transport NY	$120.00	$ 120.00	$0.00
Total	**$2,324.00**	**$ 1,454.50**	**$ 869.50**

Trip 2			
From: New York, NY			
To: Carrboro, NC			
Days	2		
Travelers	2		
	Proposed	**Position**	**Difference**
Airfare	$1,000.00	$ 700.00	$300.00
Per Diem	$224.00	$ 196.00	$28.00

Local Transport NY	$200.00	$ 120.00	$80.00
Total	**$4,888.00**	**$ 3,243.00**	**$ 1,645.00**

3. Other Direct Costs (ODCs)

ODCs	Proposed	Position	Difference
Base Period	$ 30,305.72	$ 29,670.00	$ 635.72
Option Period I	$ 30,493.89	$ 29,462.49	$ 1,031.40

a. Data Purchasing: This $2,400 cost was challenged in a previous contract and additional data was provided to substantiate it. S473 of this charge that was previously justified was for Online Safari Subscriptions, which was proposed separately for this effort under "Books and Reference Material."

DTRA's Position: Reduce the proposed $2,400 by $473.

b. Books & Reference Materials: DTRA takes exception to the proposed cost of $711.72. Research indicates that a Safari Books Online Teams Account is cheaper to purchase annually (S399) than to pay $39 per month for a Pro Account, thus saving $162.72.

DTRA's Position: Purchase of Annual Teams Account.

c. Escalation: DTRA takes exception to the proposed 3% increase for Option Period I. Researching current PPI numbers, the average CPI increase from 2012 through 2014 was 1.7%, therefore this will be the factor that DTRA will apply to the Base Period positions to develop positions for Option Period I. The Positions noted above for Option I reflect a 1.7% increase over the base year positions.

DTRA's Position: Apply 1.7% as the annual escalation factor.

4. Subcontractor Costs

a. International Society for Infectious Diseases

Base Summary		Proposed	Position	Difference
Direct Labor		$ 31,972.38	$ 31,972.38	$ -
Travel		$ 2,696.00	$ 3,003.00	$ (307.00)
ODCs		$ 64,019.90	$ 64,019.90	
Fringe	30.00%	$ 9,591.71	$ 9,591.71	$ -
G&A	15.00%	$ 16,242.00	$ 16,288.05	$ (46.05)
Total		**$ 124,521.99**	**$ 124,875.04**	**$ (353.05)**
Option I Summary		**Proposed**	**Position**	**Difference**
Direct Labor		$ 32,931.55	$ 32,707.74	$ 223.81
Travel		$ 2,776.88	$ 3,048.05	$ (271.17)
ODCs		$ 65,940.50	$ 65,940.50	
Fringe	30.00%	$ 9,879.47	$ 9,812.32	$ 67.14
G&A	15.00%	$ 16,729.26	$ 16,726.29	$ 2.97
Total		**$ 128,257.65**	**$ 128,234.90**	**$ 22.75**

i. Labor Escalation: DTRA takes exception to ISID's proposal of a 3% labor escalation rate for Option Period I of the period of performance. According to the Bureau of Labor Statistics for the private industry, labor escalation is expected to rise at a rate of 2.3%.

DTRA's Position: Apply labor escalation of 2.3% to Option Period I.

ii. Travel Airfare: Proposed airfare was priced lower than what market research yielded in the open market. Pricing was determined in the same manner as mentioned above under paragraph 2, Travel.

DTRA's Position: Increase airfare by $100 per trip.

iii. Travel Loding: Lodging was not proposed in accordance with approved GSA travel rates.

DTRA's Position: Apply GSA rates.

iv. Travel Per Diem: Per diem was not proposed in accordance with approved GSA travel rates.

DTRA's Position: Apply GSA rates.

v. Travel Escalation: DTRA takes exception to the proposed 3% price increase for Option Period I. From 2014 to 2015, GSA per diem rates remained unchanged and lodging rates increased by 1.37%.

DTRA's Position: To account for uncertainties in the travel industry, DTRA will round this percentage up to 1.5%.

vi. Indirect Rates: No exceptions were taken with the proposed indirect rates, however the costs reflect differences due to the exceptions taken within other cost pools noted above.

b. Kitware

Base Summary				
		Proposed	Position	Difference
Direct Labor		$ 182,466.06	$ 182,466.06	$ -
Travel		$ 4,832.00	$ 5,538.00	$ (706.00)
Indirect	82.80%	$ 155,082.80	$ 155,667.36	$ (584.57)
G&A	38.40%	$ 131,474.25	$ 131,969.83	$ (495.58)
Sub-Total		$ 473,855.11	$ 475,641.25	$ (1,786.15)
Fee	7% | 5.5%	$ 32,831.62	$ 25,855.68	$ 6,975.94
Total		**$ 506,686.72**	**$ 501,496.93**	**$ 5,189.79**

Option I Summary				
		Proposed	Position	Difference
Direct Labor		$ 187,940.04	$ 186,662.78	$ 1,277.26
Travel		$ 4,976.96	$ 5,621.07	$ (644.11)
Indirect	82.80%	$ 159,735.28	$ 159,211.03	$ 524.25
G&A	38.40%	$ 135,418.48	$ 134,974.03	$ 444.44
Sub-Total		$ 488,070.76	$ 486,468.91	$ 1,601.85
Fee	7% | 5.5%	$ 33,816.57	$ 26,446.63	$ 7,369.93
Total		**$ 521,887.33**	**$ 512,915.55**	**$ 8,971.78**

i. Labor Escalation: DTRA takes exception to Kitware's proposal of a 3% labor escalation rate for Option Period 1 of the period of performance. According to the Bureau of Labor Statistics for the private industry, labor escalation is expected to rise at a rate of 2.3%.

DTRA's Position: Apply labor escalation of 2.3% to Option Period I.

ii. Travel – Airfare: Proposed airfare was priced lower than what market research yielded in the open market. Pricing was determined in the same manner as mentioned above under paragraph 2, Travel.

DTRA's Position: Increase airfare by $100 per trip for the first two trips; increase by $280 for the last two.

iii. Travel – Loding: Lodging was not proposed in accordance with approved GSA travel rates.

DTRA's Position: Apply GSA rates.

iv. Travel – Per Diem: Per diem was not proposed in accordance with approved GSA travel rates.

DTRA's Position: Apply GSA rates.

v. Travel – Trainfare: Rates proposed were low based on market research for trainfare from Penn Station (New York, NY) to Albany-Rensselaer (Near Clifton Park, NY).

DTRA's Position: Increase to $160 ($80 each way) for the trainfare.

vi. Travel Escalation: DTRA takes exception to the proposed 3% price increase for Option Period I. From 2014 to 2015, GSA per diem rates remained unchanged and lodging rates increased by 1.37%.

DTRA's Position: To account for uncertainties in the travel industry, DTRA will round this percentage up to 1.5%.

vii. Indirect Rates: No exceptions were taken with the proposed indirect rates, however the costs reflect differences due to the exceptions taken within other cost pools noted above.

viii. Fixed Fee: DTRA takes exception to the 7% proposed fee by Kitware for this effort. DTRA's analysis of fee in accordance with DFARS 215.404-71, also removing travel costs from the fee calculation, which is DTRA policy, resulted in a fee value of $52,302.31 or 5.5% of the total estimated cost less travel.

DTRA's Position: Apply 5.5% to determine the fixed fee amount of $52,302.31.

5. Indirect Cost Rates DTRA accepts all indirect cost rates as proposed. The amounts differ from what is proposed due to DTRA's exceptions to EcoHealth's proposed pricing outlined in the areas above.

6. VETS100 EcoHealth has submitted evidence that they have submitted their VETS 100 report, however a copy was not furnished to DTRA. A copy will be required prior to award. Please provide this at your earliest convenience.

7. Subcontracting Plan EcoHealth will be required to update their Subcontracting Plan to reflect negotiated prices and address requirements set forth by FAR 19.704(a) prior to contract award. Please provide this at your earliest convenience.

8. FAR & DFAR Provisions – EcoHealth will need to fill out and submit the following provisions prior to award:

    1. DFARS 252.203-7998
    2. DFARS 252.209-7992
    3. DFARS 252.222-7007
    4. DFARS 252.225-7050

    An attachment including each clause have been forwarded for convenience. Please sign and return.

B. Stemming from the topics cited above, DTRA's position with respect to the cost-plus-fixed-fee value for this effort is as follows:

Base Summary				
	Rate	Proposed	Position	Difference
Labor Hours		20,384.00	18,304.00	2,080.00
Direct Labor		$ 856,600.00	$ 769,598.08	$ 87,001.92
Travel		$ 15,328.00	$ 9,887.50	$ 5,440.50
ODCs		$ 30,305.72	$ 29,670.00	$ 635.72
Subcontractors		$ 631,208.72	$ 626,371.97	$ 4,836.74
Fringe	35.10%	$ 300,666.60	$ 270,128.93	$ 30,537.67
G&A	44.20%	$ 564,831.94	$ 510,193.75	$ 54,429.12
Total		**$ 2,398,940.98**	**$ 2,215,850.23**	**$ 183,090.75**

Option I Summary				
	Rate	Proposed	Position	Difference

Hi (b)(6)

We have corrected the errors that you identified. Also, a letter of explanation is provided from Epidemico related to data purchases. Thank you for your attention to detail! As we grow as an organization, I assure you we will continue to improve.

* What are the next steps in the process?

Cheers,

Andrew

Subject: Re: FW: Response Requested: EcoHealth Alliance - GRITS 2.0 - proposal, SOW, & award finalization

H (b)(6)

We have everything corrected. We are waiting on our sub (Epidemico) to provide us with a brief letter or document stating that the licensing fee is for data that is not publicly available via their website. Hopefully this document arrives today.

Best,

Andrew

Number	Contractor	Cost Category	Concern	Response
1	Eco	Labor	Last labor cost was not included in the cost. Please correct.	Our apologies. We corrected the error. This must have been an artifact since the program assistant's salary was
2	Eco	Subcontractors	Table is confusing as it lists Kitware two times in the base period, then a 3rd time listed under Option I. Please correctly identify which sub and cost goes into which year of the proposed contract.	Our apologies. We corrected the error.
3	Eped	ODCs	$10,000 license fee? The website appears free, can you submit something to support this charge?	The Healthmapper website is free and publicly available, but a direct link to the raw data (used and analyzed by the website) is not. We have obtaed abrief document from the subcontractor to explain that the data are not
4	ISID	Labor	Larry Madoff, Editor, $88-$90 p/h seems extremely excessive for an editor based on market research. What makes this position so unique?	Good question. Dr. Larry Madoff is the world's leading expert and authority on biosurveillence. He has over 30 years experience in biosurveillince and is the person that manages ProMED (the world's largest and most frequently used platform for biosurveillence). His expertise and professional network exceeds anyone else in thje field. He is able to provide expertise that no one else has in international biosurveillence. In fact his rate is
5	ISID	ODCs	Consultant - Copy Editor rate is incorrect on ISID's breakout. They state 160 hours at $28.84 = $4,760. That is incorrect, the correct charge should be $4,614.40. This impacts indirect costs and the figures on your prime proposal since this will change the dollar amounts throughout	Thank you for catching this. We have corrected the figures throughout. Also, we noticed that the incorrect equipment costs were listed and we corrected this.

OTHER DIRECT COSTS

Description	Total Price	Contract Period	Additional Information
			List detailed description and additional information stating the need for the requirement and the method with which the total cost was calculated. Example: Twenty hours of laboratory usage is required to complete Task 4 and was calculated at a rate of $200 per hour. Laboratory hours were estimated based on experience with previous efforts of a similar size
Cloud Processing Services	$17,094	Base Period	Commercial cloud processing for modeling, data analysis, software development, and web hosting. Estimate is
Domain Registrar	$ 160	Base Period	Annual cost for domain name and security certificates
Cloud Application Services	$ 840	Base period	Cost of Google Apps Services and data hosting ($10 per user per month for google apps with unlimited
Data Purchasing	$ 2,400	Base Period	Additional global datasets will be purchased based on priority diseases and regions identified in consultation
Code Hosting	$2,400	Base Period	Estimate is based on the monthly cost of a github.com platinum plan
Books and reference materials	$711.72	Base Period	Estimate is a subscription to Safari Books Online ($46.81/month), plus 5 additional book purchases at $30
Software Licenses	$1,000	Base Period	Additional licenses for software such as text editors and office tools (estimated $100 per person)
Publication Fees	$4,500.00	Base Period	Calculated based on average publication fee for PLoS (Public Library of Science) journals (2 publications x
Meeting Costs	$500.00	Base Period	This will support two all-day meetings with the partners at the EcoHealth Alliance office in NY. It covers
Recruiting	$700	Base Period	2 job listings at $350 per 30-day listing on StackOverflow careers
Cloud Processing Services	$17,094	Option Year 1	Commercial cloud processing for modeling, data analysis, software development, and web hosting. Estimate is
Domain Registrar	$ 160	Option Year 1	Annual cost for domain name and security certificates
Cloud Application Services	$ 840	Option Year 1	Cost of Google Apps Services and data hosting ($10 per user per month for google apps with unlimited
Data Purchasing	$ 2,400	Option Year 1	Additional global datasets will be purchased based on priority diseases and regions identified in consultation
Code Hosting	$2,400	Option Year 1	Estimate is based on the monthly cost of a github.com platinum plan
Books and reference materials	$711.72	Option Year 1	Estimate is a subscription to Safari Books Online ($46.81/month), plus 5 additional book purchases at $30
Software Licenses	$1,000	Option Year 1	Additional licenses for software such as text editors and office tools (estimated $100 per person)
Publication Fees	$4,500.00	Option Year 1	Calculated based on average publication fee for PLoS (Public Library of Science) journals (2 publications x
Meeting Costs	$500.00	Option Year 1	This will support two all-day meetings with the partners at the EcoHealth Alliance office in NY. It covers
	$59,911

Zach,

Epidemico has developed proprietary software and operates HealthMap databases, websites, algorithms, database architectures and news sites (the "HealthMap System") which collect, aggregate, analyze and disseminate information relating to world-wide infectious disease outbreaks and health-related incidents (the "Information"). The software is available for license where licensee has rights to use the platform and receive real time data feeds.

Should you need any further assistance, please do not hesitate to contact me, at kelly@epidemico.com or +1(617) 938-0252.

Sincerely,

Kelly Wahlberg
Chief Financial Officer
Epidemico, Inc.

Good morning (b)(6)

Below is a screenshot of the document that was sent to your predecessor. The missing value that you are referring to appears to be present in the last batch of documents that was requested and sent to (b)(6)

* Do you have the latest documents? - Please send me copies and I then I can verify that we are looking at the same docs.

This seemed to be a problem before you were assigned to this project (b)(6) looking at old documents). I will verify your version of the docs asap and then we can eliminate any potential confusing that may be occurring.

Thank you for being on top of this!

Best,

Andrew

(b)(6) wrote:

Dr. Huff, I'm looking over your Cost Summary and it appears that on the "Cost Summary" Tab, Total Direct Labor is missing the last labor category, Software Developer (II) in the total. This happens for both the Base and Option Year. I presume you'd like to add them into the cost summary? This will push the award value to $5,245,914, assuming the rest of the spreadsheet is correctly calculating indirects.

Please look over this and make any corrections that you feel should be made to correct this. Thank you in advance!

Dr. Huff,

Good Morning, my name is (b)(6) and I have been assigned your requirement. I will be familiarizing myself with this requirement as well as developing negotiation objectives for the pricing you have proposed. As soon as I have a better understanding of where this process was left upon (b)(6) departure, I will be back in touch with any questions or concerns I have. In the meantime, please don't hesitate to contact me with any questions or concerns of your own!

Respectfully,

Andrew,

That is correct - in light of (b)(6) departure, my team will be now filling in for the ultimate negotiation of your contract. I am in the process of getting a Contract Specialist from my team assigned to pick up where (b)(6) had left off, which I hope to have finalized by tomorrow, when our Branch Chief returns to the office.

Regarding the award date of the contract, my recommendation for the sake of expectations management would be to plan for the potential for a gap in funding. Whomever is assigned as the new Contract Specialist will need to get up to speed as to where (b)(6) had left off, and the holidays being immediately upon us won't help. Most importantly, however, please understand that this proposal and ultimate contract is completely independent of any other existing contract.

I'll have the new Contract Specialist contact you asap (again, tomorrow, most likely) to introduce himself/herself as he/she begins to get acquainted with the current status of the award process.

Thanks,

(b)(6)

Thank you Vic! Your assistance is greatly appreciated!

H (b)(6)

I have been having difficulty getting in touch with the contracting officer that we were working with at DTRA (b)(6) This past week at the International Society for Disease Surveillance Annual Conference, I had lunch with (b)(6) DTRA) and was informed that the contracting officer that was responsible for our GRITS 2 proposal/SOW/contract ((b)(6) has left DTRA.

This morning, (b)(6) informed me that I should follow-up Vic to ensure that everything is on track. In turn, Vic has referred me to you.

Here are a few key facts and things that we need to follow-up on:

* Our current contract for GRITS 1 expires in roughly 45 days;

* We sent the revised SOW to DTRA (b)(6) roughly 2 months ago; and,
* We have not received any feedback from him or DTRA since we sent the revised documents to him.

I want to ensure that there are no gaps in our funding and ensure that there are not any delays in the development and advancement of the technologies that we are developing for DTRA.

Please let me know how I can help you get the process get moving again.

Best,

Andrew

Subject: Fwd: [Non-DoD Source] EcoHealth Alliance DTRA invoicing

---

H(b)(6)

DCAA has let us know that they cannot process our invoices from now on, because they only process invoices for DoD contractors that they also perform audits of incurred cost. This was surprising, as we have been invoicing through DCAA for a few years now.

Annually, we send our audits to HHS who approves our rates. We contacted HHS who said we should contact DoD for assistance with this.

Do you know how we can resolve this, or could you please provide a contact of someone who can help us with this?

Thanks in advance!
Karissa

Joe,

As discussed a few weeks back, my management has directed me not to process any more public vouchers from EcoHealth Alliance. Typically, we process vouchers for those DoD contractors that we also perform audits of incurred cost. Therefore, since DCAA is not the cognizant audit agency, we should not continue processing vouchers.

Any questions, please contact me.

Good Morning Al,

We had spoken a few weeks ago about not submitting our invoices directly anymore and that HHS needed to provide us with a new location.

Could you please put this in an e-mail so I can provide this to the CFO and President.

Thanks

Joe

Hello,

EcoHealth Alliance, a non-profit company was originally assigned to DCMA for contract administration. Recently DCAA made a determination that they would no longer process EcoHealth invoices, since DCAA is not the auditing agency for EcoHealth.

Modification P00003 transferred the administration assignment from DCMA to ONR - Boston, in order to allow for ONR to work with EcoHealth's auditing agency, HHS.

For your convenience, I'm attaching the Award, Mods P00001, P00002 and P00003 for your files.

Please let me know if you have any questions or need anything further with regard to keeping EcoHealth's invoice payments moving forward.

If you need to contact EcoHealth directly, please check with Karissa Whiting and she will be able to point you in the right direction. Her phone is 212-380-4476, and her email address is whiting@ecohealthalliance.org.

Thank you,

Subject: Updated Cost Proposals
Date: Monday, February 9, 2015 5:23:28 PM
Attachments: EHA-COST SUMMARY-02092015-FINAL (2).xlsx
Kitware- COST BREAKOUT_02092015 (3).xlsx
Epidemico - COST BREAKOUT_02092016.xlsx

Hi (b)(6)

I have attached updated cost proposals for Kitware, Epidemico and EHA.

The Kitware cost proposal takes into account the extra trip that was missing on the previous version. Airfare and train costs are both correctly indicated to allow trips from North Carolina and Clifton Park (Kitware's two locations).

The Epidemico cost proposal has the updated indirect cost rates taken from their 2015 rate card previously sent. In regards to the HealthMap license fee ($10,000) I have no further updates on justifications other than what I sent you from Epidemico at the end of last week. If this is not sufficient, let me know if there is anything else EHA can provide you, or we can remove this all together.

The updated EHA cost proposal should reflect these updated subcontractor costs. Please let me know if you have any questions or need anything else from us. Thank you!

Best,
-Karissa

Volume I: Technical Proposal

I. Abstract

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. We aim to enhance our current GRITS platform, developed with DTRA support, by scaling this system to handle large data volumes in near-real-time, enhancing diagnostic capabilities through network and cluster analysis, and improving visualization through use of the latest reactive web technologies. GRITS will also utilize the benefits and explore the integration of crowdsourcing, collective intelligence, and expert review. This tool will rely on automation to ingest media, extract key disease characteristics, and recommend resources, increasing the specificity of the data feed to an analyst's workflow. We propose building an app with the BSVE SDK that allows BSVE users to submit resources to diagnose and to connect with experts from ProMED, HealthMap and EcoHealth, thereby increasing our network of experts from digital surveillance and open source communities. The diagnostic results generated by GRITS have immediate applications for risk mapping, outbreak prediction, and early warning of microbial threats, advancing our readiness to combat the broad class of chemical and biological threats posed by EIDs.

Keywords
disease ecology, digital diagnostics, natural language, machine learning, emergent media, network, real-time, data science

II. Scope

A. Objective

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) for diagnosing infectious disease bioevents. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to pinpoint and identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data, all connected to our network of experts from digital surveillance and open source communities.

B. Background

The discovery of HIV/AIDS in the 1980s marked the transition from declaring victory over infectious diseases, to global increases in disease emergence and re-emergence[1]. EcoHealth Alliance (EHA) is at the forefront of organizations working to 'get ahead of the epidemic curve' by identifying these threats before the next pandemic or extinction event. Our researchers pioneered the identification of the origins of pathogens, such as Nipah virus[2], SARS[3], and MERS[4]. We constantly seek innovative approaches to target our field surveillance efforts on emerging threats[5]. To this end, the global increase in the volume of data, from the growth of the web and instrumented systems, presents both a challenge to traditional surveillance approaches and a tremendous opportunity for novel discoveries.

Various biosurveillance technologies have been developed to monitor Internet data sources, for instance, syndromic surveillance initiatives target surrogate indicators of a disease outbreak[6]. As with other sectors, such as commerce, marketing, and finance, the challenge is to manage the

expanding volume of data while identifying signals of interest[7]. In the case of EIDs, access to emergent media, including participatory, personal, and interactive media, characterized by decentralized content generation (e.g. the blogosphere, internationalization, and social media), presents an opportunity to detect early mentions of disease characteristics and anomalies of interest.

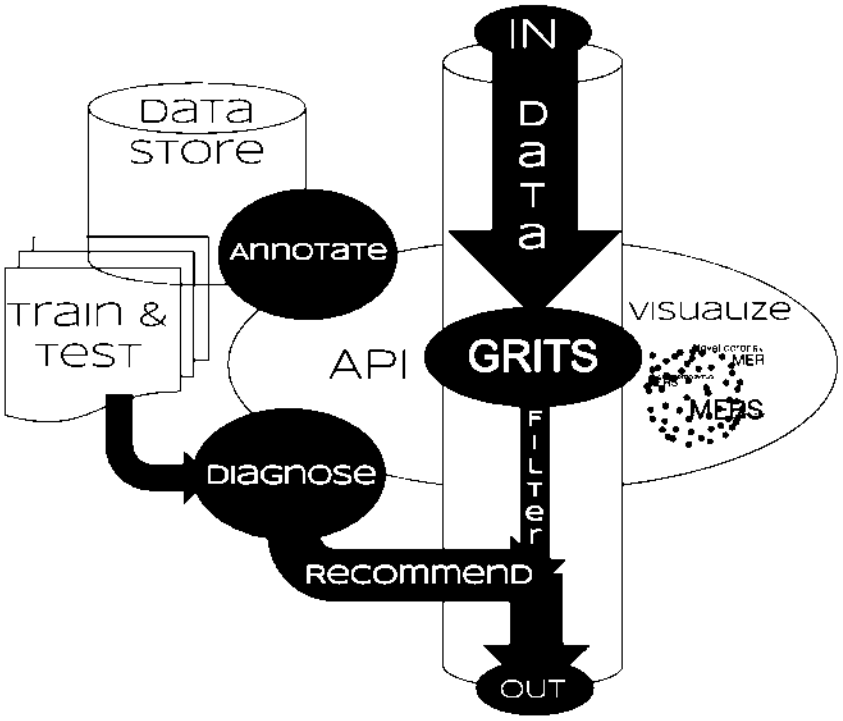
The GRITS partners are among the leading organizations in this domain. ProMED-mail (International Society of Infectious Diseases) manages a global email network of clinicians who are often among the first to identify and report disease threats[8]. Epidemico (HealthMap)[9] actively curates an expanding catalog of relevant news and social media assets. Both organizations are unique among their peers in leveraging broad networks of experts to curate and reduce the volume of media to a high-quality feed. Kitware Inc., our technical partner, has engineered sustainable communities around successful, high-impact open source scientific software.

EcoHealth assembled the GRITS team to advance the state-of-the-art in the detection and diagnosis of disease threats. GRITS combines new technologies with expert networks to apply the sciences of disease ecology and epidemiology to diagnosing big data for near-real-time disease situation awareness. We built GRITS upon pre-existing communities of expertise, rather than *de novo* technical solutions, recognizing that human experts must be integrated into the platform to ensure its intelligence and growth. In addition, we sought novel mechanisms for decision support by organizing, prioritizing, contextualizing, and linking information to relevant current and historic resources. Overall, we deploy science at the core of our systems to assemble near-real-time information in a manner that supports decision makers with diagnostic tools built by, and for, the digital disease ecology community. The diagnostic results generated by GRITS have immediate applications for risk mapping, outbreak prediction, and early warning of microbial threats.

Description of GRITS Capabilities

We take a diagnostic approach to identifying disease threats, setting research priorities, and strategically deploying our field teams. GRITS ingests and processes data feeds to provide decision support to analysts, with the following capabilities:

Diagnose - Identify the disease(s) described in a resource. Return a ranked list of disease with quantitative metrics of certainty (differential diagnoses).
Mine - Extract the key components of document via automated analysis, collective annotation, and expert curation. Return a set of relevant information.
Recommend - Expand the materials available to the analyst. Return a collection of recommended resources that provide historic and contemporary context.
Filter - Reduce the complexity of the data feed by selecting those documents that meet diagnostic criteria of interest to the analyst. Return a filtered subset of data.
Connect - Relate the material to underlying ontologies to provide a decision framework for the analyst. Return connections to other bioevents based on underlying network structures (e.g. geography, ecology, time, host, pathogen, and environmental drivers).



Sources of GRITS biointelligence

A. Machine	Data mining, machine learning, and natural language processing
B. Expert	Elicitation, consultation, and peer review
C. Collective	Crowdsourcing annotation and human intelligence tasks

A. Machine

GRITS leverages automation to ingest, process, and return an initial diagnosis of digital media, reducing the extraneous sources of information through which experts and reviewers must sort. The GRITS text mining system extracts key disease characteristics, such as locations, case counts, and dates, for our metadata and diagnostic models. These features, which may be combined into composite features by high level rules, are based on sentence patterns and keywords chosen from third-party sources such as WordNet, Geonames, Disease Ontology, Symptom Ontology, and Biocaster Ontology. The categories we extract, such as hosts, pathogens, diseases, signs and symptoms, drivers, and transmission types, are also informed by historic disease event data curated via our GRID project, and prioritized through consultation with our experts. The GRITS diagnostic models, that use machine learning algorithms based on extracted keywords to classify articles, are trained on test articles labeled with diseases by our partners. A key function of this machine intelligence is to provide the materials and platforms to crowdsource the training data.

B. Expert

GRITS is designed to be tightly integrated with a broad network of experts who contribute

relevant domain expertise ranging from disease ecology, wildlife health, epidemiology, biosurveillance, and medicine. We propose to enhance the accuracy of text mining service through expert consultation and close integration with public ontologies maintained by expert communities. We currently rely on experts to curate our content; however, we hope to close the loop by allowing BSVE users to contact these expert communities for input, including diagnostic advice, regional expertise, and language support (GRITS.net).

To fully integrate our users, we propose extending GRITS to provide more insight and flexibility in its operation. We wish to create mechanisms to edit and examine the effects of keywords on diagnosis, customize extracted features, and provide feedback on the 'best' diagnosis, thereby iteratively generating training data for the diagnostic algorithms. We also intend to test the article representations we use for classification through game-based mechanisms to identify areas for improvement in our representations. By combining a rule-based system with an algorithmic approach, the platform maintains both greater potential for expert input and easy interpretation for non-technical users.

C. Collective

The machine learning component of GRITS requires training data from portfolios of articles with disease labels and disease characteristic metadata, information collected from HealthMap and ProMed editors in order to highlight and categorize important features and relationships. These are then used to train classifiers to identify specific features of importance. To extend the range of articles we can classify, we propose using crowdsourcing methods via Amazon's Mechanical Turk and Zooniverse to generate labels and annotations for articles that do not require domain expertise.

To further enhance the accuracy of the GRITS classification algorithms, we propose crowdsourcing a diagnostic challenge, whereby we host and share our training data on an existing challenge platform (e.g. Kaggle), where programmers compete to build classifiers to improve accuracy.These approaches would compliment the models developed by our internal users and promote global citizenship in combating the scourge of emerging infectious disease. Finally, we propose integrating EHA's Global Repository for Infectious Diseases (GRID) to solicit collective intelligence and peer editing to develop a canonical collection of event data portfolios for BSVE users and the broader scientific community. The BSVE will have access to the GRID API throughout the contract period with an option to continue access through continued funding. EHA will also provide a copy of the GRID data to DTRA at the end of the contract period.

Our three-pronged approach (machine, expert, and collective) is a unique strength of the GRITS platform. Experts contribute keywords and rules to improve automated text mining tools, identify human intelligence tasks, and prioritize areas for algorithm development. Meanwhile, the automated tools enable experts to make the best use of their time by farming out less specialized tasks to the crowd, identifying errors in the data sources, and notifying editors or creating tasks to crowdsource solutions. In the case that there isn't enough data to deliver an accurate diagnosis, GRITS will identify the most useful information in distinguishing disease candidates and recommend an expert or field team to consult from our network (GRITS.net). Combined, this presents a unique conceptual model and workflow for supporting outbreak investigation.

Proposed Development

GRITS enhances traditional search with adaptive diagnostic models, trained on a broad spectrum of resources from GRITS partners and curated by our communities of experts. This diagnostic function reduces the complexity and increases the specificity of the data feed to an analyst's workflow. We propose scaling this system to handle large data volumes in near-real-time, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor live data feeds for diseases or disease characteristics of interest. To ensure rapid diagnosis when a disease first emerges, GRITS blends social media, news media, and scientific literature. This approach may be further leveraged to identify unusual events and diagnostic gaps that may herald an emerging infectious disease of unknown etiology.

BSVE integration and benefits

We propose building an app with the BSVE SDK that allows BSVE users to submit resources to diagnose. The app will display a basic visualization of a diagnosis, and provide links to diagnostic dashboards for decision support via additional visualizations and diagnostic tools.
The GRITS interface in BSVE will connect users to experts from ProMED, HealthMap and EcoHealth. The data processing stack will provide the capabilities identified above (diagnose, mine, recommend, filter, and connect) to data being ingested or monitored by the BSVE. Our diagnostic service is designed to continually evolve and improve via mechanisms for input from collective, expert, and machine intelligence sources. Our novel approach to diagnostics builds upon traditional search with the infusion of disease ecology into the methodology.

Technical Challenges

Due to incomplete reporting, errant diagnoses, delayed onset of symptoms, and delays in laboratory results, it is difficult diagnose diseases in the early phase of an outbreak[10]. Dialect varies among data sources and there is high variability in accessibility of news sources and scientific literature. Software has a language bias where non-latin characters are often the source of bugs, and foreign language articles require translation to fit into a single NLP pipeline. Additionally, media attention is biased toward OECD countries, with blind spots in some of the locations where diseases more frequently emerge, particularly those with limited clinical infrastructure and access to health professionals[11]. However, as a shared and accessible platform that can maximize the utility of both expert networks and machine intelligence, our tool is of particular value in resource-poor areas without laboratory diagnostic facilities or, with past events, where clinical samples are no longer available. To reduce the time-lag in detecting EIDs, we are interested in identifying prompt data sources and recruiting members of the GRITS network and BSVE community in disease prone environments to provide additional reports of emerging diseases.

When attempting to respond to user submitted corrections and feedback, some classifiers take considerable time to train (e.g. neural nets), and completely retaining any classifier on big data can be prohibitive. We will need to investigate methods of incrementally retraining our classifier in a timely manner as new data is submitted.

Technical merit

Overall, we propose to expand our automated data extraction to support reporting initiatives and event notification systems with near-real-time automated extraction of disease-relevant information from an arbitrary, unstructured data feed. Further development of the GRITS text mining system will allow us to introduce ecological and epidemiological concepts to extract more

complex information such as host-pathogen relationships and quantitative data (e.g. case counts) for modeling and analysis[12]. We want to improve the precision of the features we extract by developing more sophisticated natural language processing pipelines. Additionally, we plan to reduce error rates by taking advantage of the open source NLP software ecosystem to perform word sense disambiguation and coreference resolution. Identifying the features GRITS and BSVE users value and providing channels for them to provide us with feedback will also be important to improving GRITS. We propose dynamically retraining the classification algorithm GRITS uses to diagnose diseases based on user submitted corrections to its diagnosis. Finally, we plan on open sourcing reusable components of our system so that other groups can benefit from our work.

Our technology stack consists of modern web technologies such as Meteor that allow us to seamlessly update the content of the UI in near-real-time. These frameworks are compatible with the current technologies in the BSVE, such as AngularJS. We are actively investigating distributed processing technologies, such as Storm, that would allow us to process large volumes articles in parallel. Furthermore, we employ implementations of machine learning algorithms from scikit-learn, and are using natural language processing algorithms (e.g. tokenizing, part-of-speech-tagging, lemmatization) from nltk, and CLIPS pattern. We have started with a Python ML/NLP stack because of the rich software ecosystem available, and the ability to prototype rapidly with IPython notebooks.

Scientific merit

Automated categorization of EID reports by the GRITS diagnostic classifier will enable analysts and to search and filter them, increasing the ratio of relevant information they review. Furthermore, GRITS will provide decision support by suggesting potential diseases in reports of unknown diseases, and by recommending relevant data to review and organizations to contact. An established networks of experts from EcoHealth and One Health will provide input on our diagnostic engine enabling us to continually improve upon it. Infectious disease emergence is a global-scale challenge requiring an extended, engaged community to monitor, track and respond to new threats; it is also also intrinsically interdisciplinary given the complex life histories of many disease agents.

Ontologies are invaluable tools in artificial intelligence systems, decision support systems, data exploration and research where they can be used to make complex inferences and generate rich datasets. We seek to expand the scope of our ecological ontologies by considering taxonomic, distribution, ecological niche, and networks for pathogens and hosts. This will help us provide state of the art diagnostics for the BSVE by providing structured data from which we can make inferences with GRITS diagnostic algorithms. We plan to use the biointelligence extracted from news media and submitted by GRITS users to assemble a corpus of new information to form the basis of new relationships and entities within biological ontologies to help explain patterns of disease emergence. We are interested in incorporating these relationships and entities into public ontologies they derive from or relate to so that other projects benefit from our work. Our goal, with the work we propose, is to push our system so that more components operate in near-real-time, provide recommendations of to users for additional data-sources, work with citizen scientists to expand the data inputs to diagnostic tools, and integrate various GRITS components into the BSVE community.

C. Programmatics

This effort will support DoD CBDP, DTRA, and the Joint Science and Technology Office for Chemical and Biological Defense (JSTO-CBD), HDTRA1-14-CHEM-BIO-BAA, Chemical Biological Technologies Department and is submitted in response to Topic: CBA-03: Next Generation Analytic Capabilities for BSV. The work will support DTRA's mission to safeguard America and its allies from biological WMDs by providing diagnostic capabilities to reduce, eliminate, and counter microbial threats. Specifically this "Global Rapid Identification Tool System" is aimed at developing capacity for the detection of EID threats, to support protection efforts and mitigation of the threats posed by disease agents through the New Initiatives in Science and Technology program. This technology is intended for eventual transition through the DTRA R&D Enterprise.

Management plan

Our management plan blends strong scientific expertise in global EID surveillance, with agile software engineering as well as iterative and incremental rapid application development. The project will be managed by our team of data scientists and software developers at EcoHealth Alliance, in consultation with thought leaders in the field of biosurveillance (Epidemico & ProMED-mail), and infused with innovative technologies Kitware Inc., developers of leading edge, high quality software.

Key personnel (roles/responsibilities)

- EcoHealth Alliance (prime): management, delivery, software integration, computing, diagnostic analysis, data science, data mining, disease ecology
    - TBD (Principal Investigator - PI)
- Kitware Inc.: data management, visualization
    - Jeff Baumes, Ph.D. (Technical Sub-contractor)
- Epidemico: data curation, digital surveillance
    - John Brownstein, Ph.D. (Scientific Consultant)
- ProMED-mail: data curation, disease outbreak reporting
    - Larry Madoff, Ph.D. (Scientific Consultant)

Current data providers and collaborating centers:

- **ProMED-mail** - the Program for Monitoring Emerging Diseases - is an open source Internet-based reporting system dedicated to rapid global dissemination of information on outbreaks of infectious diseases and acute exposures to toxins that affect human health, including those in animals and in plants. Electronic communications enable ProMED-mail to provide up-to-date and reliable news seven days a week. Sources of information include media reports, official reports, online summaries, local observers, and others. A team of expert moderators screen, review, and investigate reports before posting to the network and distributing by email. ProMED-mail currently reaches over 40,000 subscribers in at least 185 countries.
- **Healthmap** - The freely available Web site 'healthmap.org' and mobile app 'Outbreaks Near Me' deliver real-time intelligence on a broad range of emerging infectious diseases. HealthMap brings together disparate data sources, including online news aggregators, eyewitness reports, expert-curated discussions and validated official reports, to achieve a unified and comprehensive view of the current global state of infectious diseases and their effect on human and animal health.

- **Global Repository of Infectious Disease (GRID) project** - an EHA project describing the initial emergence of global infectious disease bioevents since 1940. We collected direct language from the primary literature describing the agent, time, place, impact, transmission, host, driver, EID category, and economics of the event to discover patterns and trends among these variables across time and space. This is used to train the models with historic context to support both our Hotspot predictive modeling efforts and diagnostic capabilities.
- **GIDEON** - Global Infectious Disease and Epidemiology Network - is the world's premier global infectious diseases knowledge management database. It contains a diagnostic module that employs information on symptoms, country, incubation period, and laboratory tests to construct a ranked differential diagnosis. The Infectious Diseases module encompasses over 340 infectious diseases, 231 countries, over 500 anti-infective drugs and vaccines.
- **PubMed, Google Scholar, and Web of Science** - will be used to generate records of confirmed diagnoses and historical outbreaks. Additionally, we hope to explore archival resources such as CDC disease reports.

D. Relevance

Our goal with this project is to develop a tool system of high-relevance to DTRA's Goals and Objectives. With the support of DTRA, we could advance our GRITS to full development and extend timely operational capability to all sectors affected by the threat of EIDs. This state-of-the-art technology will help advance our readiness to combat the broad class of biological threats posed by EIDs, including the capability to identify agents with the potential to be used as WMDs. We have the expertise and capacity to ensure useable capability of the GRITS application within the timeline of tasks we propose. The tools will provide near-real-time decision support to end-users of GRITS and the BSVE. By using open source and transparent methods, we ensure that our results are reproducible and that the technology is portable, reliable, agile, and flexible in confronting emerging threats. The tools we propose are state-of-the-art, both scientifically and technically. GRITS leverage the latest reactive web technologies (e.g. Meteor), visualization environments (e.g. WebGL and Tangelo), and scientific databases (e.g. Girder). The machine learning and clustering algorithms are drawn from Scikit-learn, an open and accessible, community-supported Python library.

A key strategy in mitigating EID risk is to build situational awareness as far forward from our shores as possible, by using advanced digital biosurveillance to detect early signals that portend the emergence of high-risk, priority diseases and pathogens, including bioterrorism agents. This biosurveillance technology is adaptable to low resource settings, among them those most vulnerable to EIDs. Ultimately we hope to empower our warfighters and allies with the tools necessary to adapt and shape the dynamic Global Security Environment, as it pertains to the acute threat of infectious diseases.

Responses to DTRA's questions from the White Paper

How will the proposed system be sustained? Is a fee for service model envisioned? If so, details should be provided.

We propose providing to DTRA all of the data hosted in GRITS.db and all of the code developed for this proposed system under permissive open source licences (e.g. MIT and Apache2). Furthermore, EHA has established the Data Science and Research Technology (DART) lab with the express goal of supporting the services outlined in this proposal. We envision sustaining the

service under a 'fee for service' model to be negotiated with DTRA upon delivery of the work. We would do so in coordination from our technical subcontractor, Kitware Inc., who have extensive experience supporting open source development for federal agencies, including DOD. Our data subcontractors have agreed to make the full data available to DTRA spanning the duration of the contract (beginning Jan 18, 2013). Where copyright restrictions limit our ability to distribute the full text of the media, we will provide programmatic tools to retrieve the text in compliance with the terms and conditions of the source. Continued access to our experts via GRITS.net, could also be negotiated with all parties under a fee for service model. Additionally, we propose a 'freemium' mechanism to sustain data hosting and processing costs, whereby DTRA-approved users or organizations could access the service on a pay-as-you-go basis (e.g. paying for characters processed or volume stored).

What will actually be delivered to the Government/BSVE? Will this simply be an API to the EHA system, or will underlying tools and data be delivered? If yes, please clearly describe all deliverables.

We are prepared to deliver all materials developed through the contract under permissive open source licenses. Given the complexity of the system, and the maintenance burden, we recommend that that the DART lab continue to maintain the materials on a mutually agreed upon third party service (e.g. AWS) and provide the access to the data and diagnostic capabilities through our API. The source code will be made available through a private Github repository. We will provide full documentation, as we have done for the data service we are currently providing to the BSVE developed by Digital Infuzion. This applies to all deliverables, including GRITS.app, GRITS.db, and GRITS.md. The GRID platform has been developed with support from other agencies, foundations, and universities; however, we will provide unlimited access in perpetuity to DTRA via the API and web interface. The source code for Tangelo visualizations Girder are publicly available on Github and permissively licensed.

III. Credentials

A. Summary of Credentials

EcoHealth Alliance (EHA):

Building on over 40 years of groundbreaking science, EHA is a global nonprofit organization dedicated to protecting wildlife and safeguarding human health from the emergence of disease. The organization develops ways to combat the effects of damaged ecosystems on human and wildlife health. Using environmental and health data covering the past 60 years, EHA's scientists created the first ever global disease hotspots map that identified at-risk regions, to help predict and prevent the next pandemic crisis. That work is the foundation of EHA's rigorous, science-based approach, focused at the intersection of the environment, health and capacity building. Working in the U.S. and more than 20 countries worldwide, EHA's strength is founded on innovations in research, training, global partnerships, and policy initiatives.

EHA is a partner of the USAID Emerging Pandemic Threats PREDICT program, a $75 million effort focused on predicting and preventing pandemic diseases. PREDICT is building a global early warning system to detect and reduce the impacts of emerging diseases that move between wildlife and people (zoonotic diseases). PREDICT has developed a SMART surveillance method (Strategic, Measurable, Adaptive, Responsive, and Targeted) that accounts

for the fact that zoonotic pathogens, such as influenza and SARS, are responsible for the majority of emerging infectious diseases in people, and that more than three quarters of these emerging zoonoses are of wildlife origin. The SMART surveillance approach is designed to detect novel diseases with pandemic potential early, giving health professionals the best opportunity to prevent emergence and spread. It also targets sentinel animal species at active human interfaces in hotspot regions to improve surveillance efficiency.

The PREDICT team builds on a broad coalition of partners to develop the global capacity to monitor diseases at the animal-human interface and develop a risk-based approach to concentrate these efforts in surveillance, prevention, and response at the most critical points for disease emergence from wildlife.

PREDICT project objectives:

- Assess local surveillance capacity;
- Implement targeted and adaptive wildlife disease surveillance systems;
- Develop and deliver new technologies to improve efforts close to the source;
- Use cutting-edge information management and communication tools to bring the world closer to realizing an integrated, global approach to emerging zoonotic diseases.

Partners:

HealthMap/Epidemico

Healthmap is a team of researchers, epidemiologists and software developers based out of the Children's Hospital, Boston. Founded in 2006, Healthmap is an established global leader in utilizing online informal sources for disease outbreak monitoring and real-time surveillance of emerging public health threats. The freely available Web site 'healthmap.org' and mobile app 'Outbreaks Near Me' deliver real-time intelligence on a broad range of emerging infectious diseases for a diverse audience including libraries, local health departments, governments, and international travelers. HealthMap brings together disparate data sources, including online news aggregators, eyewitness reports, expert-curated discussions and validated official reports, to achieve a unified and comprehensive view of the current global state of infectious diseases and their effect on human and animal health. Through an automated process, updating 24/7/365, the system monitors, organizes, integrates, filters, visualizes and disseminates online information about emerging diseases in nine languages, facilitating early detection of global public health threats.

ProMED

ProMED-mail was established in 1994 with the support of the Federation of American Scientists and SatelLife. Since October 1999, ProMED-mail has operated as an official program of the International Society for Infectious Diseases, a nonprofit professional organization with 20,000 members worldwide.

Kitware, Inc.

Kitware, Inc. creates and supports leading edge, high quality software in the fields of computer vision, medical imaging, visualization, 3D data publishing, and technical software development. Kitware employs an open source development model to foster extended, collaborative communities, and an open source business model to provide flexible, low-cost technical solutions. The Company's services and products include technology integration, software

support, consulting, custom application development, and training and productivity tools that leverage our open-source software systems.

B. Summary of Qualifications for PI and Key Personnel

TBD (PI), will lead the Data Science and Research Technology group at EcoHealth Alliance. EcoHealth Alliance is currently in the process of filling this role. The PI will have a background in ecology and health, as well as expertise managing technical projects, and candidates will be reviewed by DTRA to ensure that they are qualified. The PI and the team will contribute expertise in geospatial data and analysis of the ecological origins of infectious disease emergence and digital disease surveillance.

Dr. John Brownstein is an Associate Professor at Harvard Medical School and directs the Computational Epidemiology Group at Children's Hospital Informatics Program in Boston. His group is supported by a multi-million dollar budget with support from NIH (NLM and NIAID), USAID, Centers for Disease Control and Prevention, and Google.org. He has pioneered efforts in participatory epidemiology, using statistical and informatics approaches aimed at improving public health surveillance and practice. He recently was awarded the Presidential Early Career Award for Scientists and Engineers, the highest honor bestowed by the United States government to outstanding scientists and engineers.

Dr. Lawrence Madoff is an infectious disease physician whose career has been devoted to disease surveillance. Dr. Madoff is the Editor of ProMED-mail, which uses Internet-based communication and social media to detect and report emerging infectious diseases globally. He is currently Director of the Division of Epidemiology and Immunization at the Massachusetts Department of Public Health, which oversees infectious disease surveillance and immunization activities in the state. He is a fellow of the American College of Physicians and a Fellow of the Infectious Disease Society of America.

Dr. Jeff Baumes is a technical lead at Kitware Inc. He has significant expertise in information analysis and presentation. His contributions include novel graph clustering algorithms that allow cluster overlap, and algorithms for discovering subsets of individuals persistently connected over time. Over the last six years, he has been a major technical contributor to the open source Titan scalable analysis and visualization toolkit, which is an extension of the Visualization Toolkit to include informatics and information visualization capabilities. He has worked on projects in several fields surrounding Titan such as text analysis, bioinformatics, and social network analysis including funding from NSF, DOD, DOE, and NIH.

C. Summary of Facilities to Perform the Proposed Work

Facilities at EcoHealth Alliance (EHA)

EcoHealth Alliance (EHA) is a 501(c)(3) nonprofit organization that specializes in scientific research on the causes, origins, and spread of zoonotic emerging diseases. EHA scientists have been working on spatial modeling for over 15 years, and on modeling of infectious disease emergence and spread for over a decade. EHA is based in New York City with 10,000 square feet of office space including a meeting room and basic laboratory. A core administrative staff of 11 employees support EHA's scientific team (15 core scientists, 100+ field staff) and are available for work on this project through foundation support. EHA is equipped with 25 networked PCs including ARRA funded International Live Meeting Video Conferencing facilities. EHA has

access to multiple servers, server support, and all necessary software on Mac, Linux, and Windows operating systems. Additional computing power is acquired from commercial cloud providers to meet project needs.

EHA has an active program of staff development and this is reviewed and adjusted annually as part of each employee's evaluation process. Specific provisions are made for internal training and external training resources, tuition support programs via a partnership with Columbia University, and active support of staff to spend time in collaborators organizations. All early stage investigators are mentored to provide guidance in research practices, grant management, administration and project management. Financial support from EHA core funds are available to support external tuition, travel to conferences and to conduct joint research in collaborator's institutions. There is no obligation for teaching time at EHA and all research staff are funded for 100% research time, however, there is a provision, through partnership with Columbia University, to enable staff to teach at the undergraduate and graduate level, with monetary support provided by Columbia University. Administration and other staff are supported in their efforts to enhance their careers by the provision of tuition fees for external courses, travel funds for conferences, and time off their core activities.

Facilities at Kitware Inc.
Kitware Inc. is headquartered just north of Albany, New York in a Clifton Park office complex. Kitware rents approximately 27,000 square feet of office space at this location. Kitware also has an office in Chapel Hill, North Carolina approximately 6,200 square feet in size. Both offices are linked via a common virtual private network and a shared phone system, and share financial and administrative personnel. They also have on-site office managers, lunchrooms, private meeting rooms, and advanced conference facilities including large screen projection systems and whole-room Polycom video conferencing systems. The proposed work will be performed at the Clifton Park site.

Kitware has a mixed environment of personal and shared computing platforms. Employees average three computers per person (desktop, laptop, and/or home system), with each computer typically equipped with multiple multi-core processors, a high-performance graphics card, dual monitors, and 8GB or more of main memory. These personal systems run a mix of Windows, Mac OS X, and Linux operating systems. Shared resources include compilation and testing farms as well as workstations running a variety of alternative operating systems for testing purposes, e.g., Windows XP or Vista. Kitware also maintains several servers to provide public access to the open source VTK, ITK, TubeTK, Titan, Slicer, CMake, and ParaView systems; to host web pages and web services for open source communities such as NA-MIC and Visomics; to operate open-access journals such as the Insight Journal and the Midas journal which has hosted workshop papers for nearly ten years; and to provide access to massive collections of public data for computer vision and medical imaging algorithm evaluation. Access to these systems is provided by a fiber connection to the internet yielding a total of 100 Mbit/second data rate.

Kitware hosts several special-purpose, high-end workstations, GPU systems, haptic systems, and magnetic and optical trackers. One such workstation is a multi-GPU computer featuring 6 NVidia GPU boards: 5 C2050 Tesla and 1 Quadro 5000 Fermi, as well as a 6-Core X5680

3.33GHz processor. A noteworthy haptic system is a MBP Freedom 7S haptic device, configurable for 6 or 7 degrees of freedom. To address large-scale distributed computing, the company maintains several clusters for development and testing. The clusters include: a twelve node testing cluster running mixed Linux and Windows operating systems; a four node Windows cluster with a gigabit Ethernet network; and a seven node Linux cluster with dual 64-bit Xenon processors, high-end graphics accelerators, and an Infiniband network driving a 3x2 PowerWall display. Kitware also has access to several external computer systems (e.g. HP, IBM, and Intel) through various vendor partnership programs.

IV. WORK TO BE PERFORMED.

A. General

Our goal over the 3-year time period is to expand our DTRA-funded GRITS platform to deliver near-real-time disease diagnostics, decision support, and data processing. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data, and connected to our network of experts from One Health, EcoHealth, and open source communities.

We are currently building a robust and scalable software infrastructure to provide a diagnostic decision support system for analysts with multiplier effects by connecting to a community of experts and data from EcoHealth Alliance, HealthMap, and ProMED-mail. The final deliverable will include our user interface (GRITS.app), application interface (GRITS.api), network of experts (GRITS.net), media diagnostics (GRITS.md), and database (GRITS.db). Overall, GRITS will be deployable and generalized application that will output probabilities and lists of pathogens likely responsible for an outbreak on the basis of user-provided data. Accordingly, the resource will be adaptable to a specific organization or agency's needs or emerging threats, and geographic areas of high concern. The source code for this algorithm will be made available to interested parties for further development and adaptation.

The original Rapid Identification Tool (RIT) prototype was developed by manually extracting symptoms from encephalitides reports in ProMED-mail to train a diagnostic model. Through rigorous testing, we identified modeling approaches that improved performance by combining natural language processing and machine learning algorithms. We recognized automated data collection and crowdsourced data curation would be needed to scale to disease coverage and diagnose additional diseases with greater precision. The GRITS diagnostic dashboard provides decision support to experts at our partner organizations by automatically extracting and visualizing information from media. We leverage crowdsourcing techniques by providing experts with tools for curating disease portfolios and annotating articles. We have developed an application programming interface (API) for access to our data and diagnostics by third party developers and users. Additionally, we integrated the project with an ongoing EHA initiative to collect historical disease outbreak data (Global Repository for Infectious Diseases - GRID). Finally, we integrated work from our colleagues at Kitware to support the storage and visualization of the large, complex datasets being generated.

During the proposed contract period, we will improve the accuracy and robustness of the GRITS media diagnostics. We will design new visualizations for the diagnostic dashboard to allow users to gain additional insights into our data and tools; develop a near-real-time processing stack to enable our visualizations and diagnostics to use the latest information; gain additional

advantages from our collective intelligence network by adding new mechanisms for experts to provide feedback and interact with our underlying data, rules, and algorithms; experiment with crowdsourcing as an additional source of training data and knowledge to further improve GRITS.md; and expand the capabilities of the system to provide decision support and recommendations to analysts.

By the end of the contract period GRITS will provide:

1. Robust architecture for near-real-time diagnostics and data processing
2. Interface from BSVE to GRITS with SDK
3. Healthmap, ProMED-mail, and EcoHealth data to the BSVE
4. Machine, expert, and community intelligence

Diagnostic modeling
We plan to use the biointelligence extracted from news media and submitted by GRITS users to form the basis of new relationships and entities within biological ontologies that link EID events, diseases, symptoms, hosts, and other entities and attributes related to infectious diseases together in a rich network structure. This ontology will be a critical data source for making domain specific inferences in diagnostic algorithms.

Data Storage and Management
Girder is a data management platform built to meet the needs of distributed, data-centric web applications. Girder is a modular framework that allows developers to build systems that use any or all of the components necessary to create a system tailored to their needs. All data sharing web applications need the same core functionality: upload, download, large data storage, supplemental metadata storage and indexing, authentication/authorization, a RESTful API, and an extensible plugin architecture. Girder provides these components and is currently being used for GRITS as well as several DOE projects.

Visualization
Tangelo is a system for rapid production of visual and interactive web applications. Using HTML5 standards such as SVG, WebGL, and 2D canvas, Tangelo integrates visualization modes spanning charts, hierarchical diagrams, and networks for time series, heterogeneous, or multivariate data. Tangelo provides interfaces to powerful visualization libraries such as GeoJS, ParaViewWeb, and D3.

B. Summary

Year 1 (2015)
1. Connect GRITS Girder database to the BSVE
2. Develop recommendation and decision support capabilities
3. Connect GRITS diagnostic and text-mining APIs to the BSVE
4. Prototype near-real-time processing
5. Build BSVE interface to GRITS with the SDK
6. Connect GRITS expert network (GRITS.net) to the BSVE

Year 2 (2016)
7. Build mechanisms to crowdsource annotations

8. Incorporate disease network graphs to assist diagnostics
9. Support diagnostic algorithm development with dashboard
10. Expand diagnostic capability to arbitrary data feeds
11. Connect GRITS to GRID
12. Update diagnostic model in near-real-time
13. Use text mining to extend network graphs/ontologies.

Year 3 (2017)

14. Crowdsource improvements to the GRITS media diagnostic tool
15. Connect GRID's collective intelligence editor to the BSVE
16. Connect GRITS diagnostic data filtering to the BSVE
17. Enrich diagnostic dashboard with dynamic visualizations
18. Generate disease summary reports from diagnostics
19. Forecast disease emergence

C. Detailed Tasks

Task 1: Connect GRITS Girder database to the BSVE

Description: Coordinate with BSVE developers to provide API access to GRITS database (HealthMap, ProMED and EcoHealth data with diagnostic metadata).
Resources: EcoHealth & Kitware (API, BSVE support), HealthMap & ProMED (data)
Metric(s) of success: BSVE access to GRITS data via API
Deliverable: API key and access for the BSVE team, communication between BSVE/GRITS
Subtasks:

1. Solicit feedback on GRITS data API from BSVE team
2. Create API key generation and assignment infrastructure for GRITS
3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API
5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities

Description: Use our GRITS.md to extract features of incoming articles to inform media recommendations for analysts based on areas or keywords of interest or a collection of documents being evaluated. Identify targets for data collection that would most enhance diagnostic capabilities for a particular event.
Resources: EcoHealth (algorithms and infrastructure), Kitware (storage & visualization), HealthMap & ProMED (testing)
Metrics of success: Recommendation system returns relevant articles, people and organizations. Adding recommended information improves diagnosis.
Deliverable: API and diagnostic dashboard interface to recommendations
Subtasks:

1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords
3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article

7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE
Description: Provide BSVE developers with API access to GRITS media diagnostics and text mining tools and support them as they integrate these features into the BSVE interface.
Resources: EcoHealth (API development, BSVE support)
Metrics of success: BSVE team satisfied with API structure. GRITS features and diagnoses accessible through BSVE.
Deliverable: API access for the BSVE team, communication between BSVE/GRITS.
Subtasks:
1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Prototype near-real-time processing
Description: Develop near-real-time architecture based on ideas from the lambda architecture, which allows high-performance integration of near-real-time streaming data with pre-processed data. Evaluate possible software tools for each component. Set up prototype of software stack.
Resources: EcoHealth & Kitware (architecture, software evaluation, prototyping)
Metrics of success: Working prototype
Deliverable: Documentation of software architecture and choices, working prototype
Subtasks:
1. Research lambda architecture
2. Develop near-real-time software architecture diagram and documentation
3. Evaluate options for near-real-time streaming data (e.g. Storm, Summingbird)
4. Evaluate options for pre-processing data (e.g. MapReduce, Spark)
5. Evaluate options for automated polling (e.g. Huginn, Luigi, Celery)
6. Investigate adaptive polling algorithms
7. Build prototype of near-real-time software architecture

Task 5: Build BSVE interface to GRITS with the SDK
Description: Build an app on the BSVE SDK that allows BSVE users to submit text to diagnose. The app will display a basic visualization of a diagnosis, and provide links to diagnostic dashboards where users can see additional visualizations and interact further with GRITS diagnostic tools.
Resources: EcoHealth (app development & testing)
Metrics of success: Users able to access GRITS through app deployed to BSVE
Deliverable: Deployed app, BSVE users able to access diagnostic dashboards
Subtasks:
1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy app

Task 6: Connect GRITS expert network (GRITS.net) to the BSVE

Description: GRITS is a bridge to experts from ProMED, HealthMap and EcoHealth. Two-way communication will benefit both BSVE and GRITS. We will develop mechanisms for BSVE users to submit requests for language, region, and diagnostic feedback, while allowing experts and organizations to opt-in and set availability to handle requests.
Resources: EcoHealth (experts and interface), ProMED and HealthMap (expertise)
Metrics of success: BSVE user can submit request to a GRITS expert. Language, region, and diagnostic expertise is available to DTRA and BSVE users.
Deliverable: BSVE interface through GRITS app to submit requests to experts
Subtasks:

1. Evaluate needs of BSVE users for expert feedback
2. Develop a messaging service to expert network
3. Design interface for posting requests and submitting materials
4. Tie messaging system into existing GRITS partner dashboards and routing

Task 7: Build mechanisms to crowdsource annotations
Description: Identify human intelligence annotation tasks for crowdsourcing by citizen scientists and Amazon's Mechanical Turk
Resources: EcoHealth (annotation interface), Mechanical Turk (pay for annotations), Citizen Scientists (volunteers)
Metrics of success: Annotations crowdsourced. Improves diagnostics from annotations.
Deliverable: Crowdsourced annotations incorporated into GRITS training data
Subtasks:

1. Develop infrastructure to identify and assign annotation tasks
2. Integrate annotation interface into Mechanical Turk or similar platform
3. Integrate and deploy citizen science platform
4. Evaluate obtained annotations and report on quality (e.g. inter-annotator agreement)

Task 8: Incorporate disease network graphs to assist diagnostics
Description: Model the geographic, ecological, and information structure of infectious disease networks and connect them to diagnostic API. Develop visualizations for diagnostic dashboard.
Resources: EcoHealth & Kitware (network modeling, visualization)
Metrics of success: Improved diagnostics from network reasoning
Deliverable: Visualizations of the network model in the diagnostic dashboard
Subtasks:

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blind spots' in the information network

Task 9: Support diagnostic algorithm development with dashboard
Description: Support multiple models for diagnosis, and continually reevaluate their effectiveness. Different algorithms may perform differently with time, origin, or diseases. Allow users to run and compare the results of different models via the diagnostic dashboard. Run automated jobs to compare the performance of models over time.
Resources: EcoHealth & Kitware (algorithm and interface development)
Metrics of success: Run and compare models from the dashboard
Deliverable: Capacity to compare model performance in the dashboard

Subtasks:

1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 10: Expand diagnostic capability to arbitrary data feeds
Description: Develop robust scraping algorithms and provide an interface for users to connect data sources to GRITS.
Resources: EcoHealth (algorithms), Language translation service
Metrics of success: Users can submit relevant feeds to the GRITS system
Deliverable: Interface for submitting data feeds
Subtasks:

1. Build a submission interface for users to submit arbitrary feed
2. Integrate article processing pipeline with a translation service to process non-English articles in near-real-time.

Task 11: Connect GRITS to GRID
Description: Incorporate GRID dataset into GRITS to give the platform a comprehensive historical perspective on EIDs and enhance analytic capabilities around drivers of disease behavior. Extend the recommendation system to include historic context from GRID (e.g. media and data). Use historic event data to expand to match targets for a disease or keyword.
Resources: EcoHealth (recommendation system, GRID)
Metrics of success: Diagnostic decision support enriched by **historic event data**
Deliverable: Improved recommendation system, match new reports with historic events
Subtasks:

1. Evaluate existing GRID API against needs of recommendation system
2. Develop capacity of GRID API to deliver historic event matches
3. Recommend GRID events (e.g. current event is similar to past outbreak)
4. Use GRID media to improve diagnostics and recommendation quality
5. Match GRITS data to events in GRID (expanding from EIDs to all outbreaks)

Task 12: Update diagnostic model in near-real-time
Description: Retrain the classifier with new reports from HealthMap/ProMED or users submissions. Classify labeled training data with GRITS, for example correcting misclassification. Investigate classifiers capable of distributed training or incremental retraining.
Resources: EcoHealth (algorithm and architecture development)
Metrics of success: Model updates improve performance. Near-real-time classifier updates.
Deliverable: Enhanced classification infrastructure, retraining interface
Subtasks:

1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 13: Use text mining to extend network graphs/ontologies
Description: Use features extracted from disease reports to add entities and relationships to a disease network ontology. For example, linking case counts to locations.
Resources: EcoHealth (feature extraction and ontologies)

Metrics of success: Accuracy of entities and relationships extracted from our data sources.
Deliverable: An extended ontology generated by text-mining algorithms
Subtasks:

1. Infer set of subjects (e.g. EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g. viral strains that have mutated or developed antibiotic resistance).

Task 14: Crowdsource improvements to the GRITS media diagnostic tool
Description: Sponsor public challenges (e.g. Kaggle) to solicit improvements to the GRITS media diagnostic by training better classifiers or by submitting additional training data.
Resources: EcoHealth & Kitware (challenge planning and execution)
Metrics of success: User submits an improvement with better performance (e.g. higher f-score)
Deliverable: Improved diagnostic tool from crowdsourced algorithms.
Subtasks:

1. Evaluate challenge platforms
2. Create a subset of data for crowdsourcing
3. Open source a base classifier example
4. Create challenge on selected platform
5. Publicize and run challenge

Task 15: Connect GRID collective intelligence editor to the BSVE
Description: Incorporate BSVE users as experts for the review and editing GRID events
Resources: EcoHealth (GRID)
Metrics of success: BSVE users contribute to GRID. Diagnostic models improve from GRID data. Additional features are extracted based on GRID data.
Deliverable: BSVE/GRITS access to GRID, improved diagnostics and feature extraction
Subtasks:

1. Evaluate and implement changes to GRID API for of GRITS diagnostic needs
2. Generate keywords and rules from GRID data to incorporate into GRITS text mining
3. Incorporate GRID data into diagnostic model training
4. Design user interface for expert review and editing of GRID events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with GRID

Task 16: Connect GRITS diagnostic data filtering to the BSVE
Description: Use diagnostics to reduce data volume to relevant reports. Users should be able to list diseases or regions of interest.
Resources: EcoHealth (GRITS integration), Kitware (data filtering)
Metrics of success: GRITS will return a subset of related assets
Subtasks:

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 17: Enrich diagnostic dashboard with dynamic visualizations

Description: Add dynamic Tangelo visualizations, including interactive dendrogram views of likely diseases, multidimensional visualization of report space, and flexible geovisualizations with interactive vector graphics for high-performance imagery and dense data.
Resources: EcoHealth (GRITS integration), Kitware (visualizations)
Metrics of success: Visualizations enrich expert decisions on diagnosis
Subtasks:

1. Develop dendrogram visualization
2. Develop multidimensional visualizations
3. Develop flexible geovisualizations

Task 18: Generate disease summary reports from diagnostics
Description: Aggregate the data collected by text-mining and diagnostic algorithms to give an meta overview of a collection of reports or disease outbreak.
Resources: EcoHealth (algorithms and reporting)
Metrics of success: Number of visits per unique user to the summary report website
Deliverable: API returns summary reports to diagnostic dashboard and BSVE
Subtasks:

1. Create algorithms for generating statistics (e.g. case counts) and visualizations (e.g. epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 19: Forecast disease emergence
Description: EHA are experts in disease hotspot mapping. Use GRITS.db and GRITS.md to iidentify diseases that pose the greatest threat. Use case-counts and data from historical epi curves to model probable epi curves for new diseases

Global Rapid Identification Tool System (GRITS)

Budget Justification

February 1, 2015 - January 31. 2018

Year 1

Direct Labor

Senior personnel

For this three-year budget period, the PI will lead the Data Science and Research Technology team and partners on this project. EcoHealth Alliance is currently in the process of filling this role. The PI will have a background in ecology and health, as well as expertise managing technical projects, and candidates will be reviewed by DTRA to ensure that they are qualified. The PI will directly supervise the team of researchers, data scientists, and developers, as well as coordinate code integration, software development, reporting, research, scientific data management, and modeling efforts.

Other Personnel

We request **$649,600** in direct labor costs to accommodate hours devoted to the project. The positions and labor rates in the cost proposal comprise the experience and skills needed to realize the work outlined in the statement of work (SOW), including data management, infectious disease expertise, mathematical modeling, software development, natural language processing, computational linguistics, machine learning, technical writing, coordination with partner organizations, and web development.

Fringe benefits

Fringe benefits are calculated for EcoHealth Alliance as 33.4% of 12-month base salary.

Our direct labor costs including fringe total **$866,566.**

Other Direct Costs

Travel

We request **$1,320** to fund 1 visit (2 people x 1 night) for the Principal Investigator and Senior Software Developer **to meet with the team members from HealthMap and ProMed Mail in Boston, MA**. Travel is calculated for 1 trip x (2 people x ((round trip airfare [$200]) + (2 travel days x [Meals and Incidentals ($71)]) + (1 night x [Hotel ($258)]))). The remaining $120 is budgeted for public transportation or cab service to and from the airport, and in Boston if necessary.

The Kitware teams are in two distinct locations. The database team is in Carrboro, NC while the visualization team is in Clifton Park, NY.

We request **$980** to fund 1 visit (2 people x 1 night) for the Principal Investigator and Senior Software Developer **to meet with the database team members at Kitware's office in Carrboro, NC**. Travel is calculated for 1 trip x (2 people x ((round trip airfare [$221]) + (2 travel days x [Meals and Incidentals ($56)]) + (1 night x [Hotel ($97)]))). The remaining $120 is budgeted for public transportation or cab service to and from the airport, and in Carrboro if necessary.

We request **$776** to fund 1 visit (2 people x 1 night) for the Principal Investigator and the Senior Software Developer **to meet with the visualization team members at Kitware's Clifton Park office outside of Albany, NY**. Travel is calculated for 1 trip x (2 people x ((round trip train [$100]) + (2 travel days x [Meals and Incidentals ($56)]) + (1 night x [Hotel ($116)]))). The remaining $120 is budgeted for public transportation or cab service to and from the airport, and in Albany if necessary.

We request **$2,516** to fund 2 visits (2 people x 1 night) for the Principal Investigator and the Senior Software Developer **to meet with the DTRA Contract Officers and BSVE team in the DC area**. Travel is calculated for 2 trips x (2 people x ((round trip airfare [$250]) + (2 travel days x [Meals and Incidentals ($71)]) + (1 night x [Hotel ($177)]))). The remaining $120 for each trip is budgeted for each person for two (2) trips to and from the airport in New York City, as well as public transportation or cab service in Washington D.C.

Additional funds of **$3,696** are requested for one trip (2 people x 4 nights) for the PI and the Senior Data Scientist **to attend the Digital Disease Detection Conference hosted by HealthMap**. This conference was hosted in San Francisco, CA in 2013, and we are using estimates from that trip to propose costs for the 2015 conference. This is the premier conference for the emerging field of digital disease detection. This meeting will provide the opportunity to showcase our work and interact with relevant peer networks. Travel is calculated for 1 trip x (2 people x ((round trip airfare [$500]) + (2 person x (5 days x [Meals and Incidentals ($56.8))) + (2 person x (4 nights x [Hotel ($251)])))). $120 is budgeted for transportation for two people to and from the airport as well as public transportation or cab service during the conference.

Travel costs for Year 1 total **$9288.**

All **Hotel and Meals & Incidentals** are calculated using FY2014 estimates in accordance with US Government Federal *per diem* regulations. The airfare or train fares are a calculated average of trips to the area during the specific time of year.

Materials and Equipment

We request **$7,256** for Materials and Equipment.
This includes two (2) new Apple 13" Macbook Air laptops. These are priced at $1,981 each (past purchase cost $1,757 each, not including warranty). This also includes (3) three

Thunderbolt Display Apple Monitors priced at $1,098 each including warranty. The additional hardware is necessary to ensure replacement equipment for EHA personnel and support efforts to complete the tasks outlined in the Statement of Work. Hardware purchases will be made in compliance with our purchasing policies, see Pricing Integrity (below).

Other Direct Costs
Other direct costs total **$30,006.**

We have budgeted **$17,094** for commercial cloud processing for modeling, data analysis, and software development through Amazon Web Services. This estimate is based on our current monthly cost ($1295 for July 2014 x 12 months), assuming our costs increase by 10% with additional usage of our services by the BSVE. These expenses reflect the computing time and resources needed by our developers to fulfill the tasks in the SOW, primarily the cost of processing high-volume, near-real-time data. AWS was selected as a sole source provider due to specific expertise. AWS is the world leader in cloud computing. AWS offers the full range of cloud computing tools, including virtual machines, storage, high performance computing, monitoring, virtual private networking, and databases. AWS has organization-wide Federal Information Security Management Act (FISMA) moderate level security certification, and has undergone multiple independent U.S. government security audit procedures.

Many costs previously grouped together under Data Hosting are delineated here:

$160 is requested to cover the annual cost for domain name and security certificates.

$840 is requested to cover the cost of Google Apps Services and data hosting ($10 per user per month for google apps with unlimited storage)

$2,400 is requested to purchase additional global datasets; all other data will be derived from the public domain to share with DTRA. Additional data purchases will be contingent on the priority diseases and regions identified in consultation with DTRA COR (SOW 3.1) and will be made in compliance with our purchasing policies (see Pricing Integrity below).

We request an additional **$2,400** ($200 per month) for code hosting with Github (Platinum) to maintain code hosting capabilities.

$711.72 is requested to cover the subscription to Safari Books Online ($46.81/month), plus 5 additional book purchases at $30 each.

$700 is requested to support additional licenses for software such as text editors and office tools (estimated $100 per person)

These code and data services facilitate rapid collaboration and ensure the resilience of the code through constant snapshots, secure hosting, version control, and routine backups. Dropbox and

Github are sole-source as specific tools that are best in class and competitively priced. Both services are irreplaceable components of our workflow at EHA. The tools are compatible with other ongoing projects for which there are no cheaper alternatives. The services are tied into our software process to ensure code integrity and to easily contribute resources from our code repositories and integrate updates from other projects. Our code is managed with Git version control for which Github is the leading commercial hosting service with instant collaboration in private and secure repositories. Dropbox is a secure cloud-based file sharing and backup service in use by over 2 million businesses. Additional information on the professional services selection process is provided in Pricing Integrity (below).

$4,500 is requested for two (2) publication fees. Our total is calculated from the average publication fee for PLOS (Public Library of Science) journals ($2,250 per publication).

$500 is requested to support two all-day meetings with the partners at the EcoHealth Alliance offices in NYC. Meetings will begin at the opening of business, requiring overnight accommodation for our subcontractors. These costs cover printing, copying, additional support for meeting materials, conference line and room usage, and other supplies to enhance partner collaboration.

$700 is requested for two 30-day listings on StackOverflow careers at $350 per listing.

Subcontracts

Funds are requested to support our subcontractors in their efforts to complete the tasks outlined in the Statement of Work. They are the same subcontractors with whom we have worked on the DTRA-funded GRITS platform.

Kitware Inc.

We request **$503,580.28** to Kitware Inc. for technical expertise in machine learning, text analysis, software development, data management, and data visualization. This covers approximately 835 labor hours for Jeff Baumes (Albany, NY) and Patrick Reynolds (Carrboro, NC), and 1182 hours of work each for two (2) R&D Engineers. They also request travel funds for two trips (2 people, 1 night) to NYC to meet with GRIT partners at the EcoHealth Alliance offices, and one trip (2 people, 1 night) to Washington, DC to accompany the PI in meeting with DTRA Contract Officers. These costs include 82.8% Overhead and 38.4% General and Administrative costs, the latter of which is taken from the total of direct costs and overhead costs. They request a seven percent fee, which is standard for Kitware's cost reimbursement contracts. Unlike other contracts that have fully burdened rates that incorporate individuals' actual costs, indirect costs, and profit, the profit fee is added separately in cost reimbursement contracts. The total costs are $186,120.06 (direct) and $284,754.76 (indirect and G&A), and $32,705.46 (fee).

Epidemico

We request **$356,071.82** to Epidemico for expertise in digital disease surveillance, disease

reporting expertise, disease modeling, as well as news and social media analysis. Epidemico is a spinoff from Boston Children's Hospital, Harvard Medical School, and MIT that specializes in health data collection and analytics. The subcontract will cover salary for Dr. Brownstein, Clark Freifeld, a software programmer, a software developer, a project manager, and a data curator. They also request travel funds for one trip (2 people, 1 night) to NYC to meet with GRIT partners at the EcoHealth Alliance offices, and one trip (2 people, 1 night) to Washington, DC to accompany the PI in meeting with DTRA Contract Officers. Also included is a $10,000 HealthMap data license fee. These costs are supplemented by a 10% indirect cost rate. The total costs are $323,370.17 (direct) and $32,3370.17 (indirect).

International Society for Infectious Diseases (ISID)

We request **$124,644.01** to ISID for disease reports, data collection, report moderating, and surveillance expertise. The subcontract will cover salary for Larry Madoff, Editor, and the IT Manager at ProMed-mail. Additional funds will support three (3) Editors who will devote time to the project and generate data. They also request travel funds for one trip (2 people, 1 night) to NYC to meet with GRIT partners at the EcoHealth Alliance offices, and one trip (2 people, 1 night) to Washington, DC to accompany the PI in meeting with DTRA Contract Officers. These costs are supplemented by an indirect rate of 15%. The total costs are $108,386.09 (direct) and $16,257.91 (indirect).

Indirect Costs

EcoHealth Alliance maintains efficient support logistics with a federally-approved overhead rate. We are requesting a low federally-agreed indirect rate of 44.1% on all direct costs. As per our Indirect Cost Rate agreement, we have applied our overhead rate only to the first $25,000 of each individual subcontract.

Total EcoHealth Alliance budgeted direct costs: $ 1,897,412
Total EcoHealth Alliance budgeted modified direct costs: $988,116
Total EcoHealth Alliance budgeted indirect costs: $435,759
Total EcoHealth Alliance budgeted costs: $ 2,333,171

Year 2 and Year 3

The justification for Year 1 applies to Year 2 and 3 with the following modifications.

Direct Labor

Senior personnel

Salary for the Senior Research Scientist (PI) is increased by 3% in Year 2 and 3, which is the federally agreed rate increase.

Other Personnel

All salaries are increased by 3% in Year 2 and 3, which is the federally agreed rate increase.

Fringe benefits
Fringe benefits are increased at a rate of .5% per year. For Year 2, EcoHealth Alliance has determined a rate of 33.9% of 12-month base salary. For Year 3, the determined rate is 34.4% of 12-month base salary.

Other Direct Costs

Travel
Travel estimates for trips to DC are increased by 3% in Year 2 and 3 in anticipation of higher travel costs.

Travel estimates for trips to Boston, Carrboro, and Albany to visit GRITS partners are increased by 3% in Year 2 and 3 in anticipation of higher travel costs.

All Hotel and Meals & Incidentals are calculated using the available FY2014 estimates in accordance with US Government Federal per diem regulations.

Materials and Equipment
No materials and equipment is budgeted in Year 2 and 3.

Other Expenses
There is a decrease from $700 in recruiting costs in Year 1 to $350 in recruiting costs for Year 2. There are no recruiting costs in Year 3. There are no other changes to other expenses.

Subcontracts
Salaries and travel costs increased by 3% or less.

Indirect Costs
We are requesting a low federally agreed indirect cost of 44.1% on all direct costs. EcoHealth Alliance maintains efficient support logistics with a federally approved overhead rate. As per our Indirect Cost Rate agreement, we have applied our overhead rate only to the first $25,000 of each individual subcontract.

Year 2

Total EcoHealth Alliance budgeted direct costs: $ 1,942,697
Total EcoHealth Alliance budgeted modified direct costs: $1,004,203
Total EcoHealth Alliance budgeted indirect costs: $442,854
Total EcoHealth Alliance budgeted costs: $ 1,942,697

Year 3

Total EcoHealth Alliance budgeted direct costs: $ 2,000,632
Total EcoHealth Alliance budgeted modified direct costs: $1,032,063
Total EcoHealth Alliance budgeted indirect costs: $455,140
Total EcoHealth Alliance budgeted costs: $ 2,455,772

Pricing integrity & Contractual services

Independent Contractors:

Professional services

Contracts may be entered into for professional services such as legal services, audit and accounting services, public relations services, technology services, and other services requiring specialized expertise. Contracts greater than $5,000 must be competitively bid, with a minimum of three (3) bids. In unusual situations where the expertise is extremely specific, a sole source may be chosen, and must be preapproved by the CFO.

Contracts may be drafted by EHA or the service provider, and must include name, address, complete contact information of provider, scope of work, identification of deliverables, timeframe for performance, payment terms, provision for termination and other information specified in the EHA standard contract form.

Costs are reviewed among competing bids, and by review of industry standards.

Professional Services contracts are approved by the CFO.

Consultants

Contracts may be entered into for consulting services to carry out specialized work on our behalf. Consultants are used either for specialized expertise not existing on staff, or to accelerate the completion of approved work. Contracts greater than $5,000 must be competitively bid, with a minimum of 3 bids. In unusual situations where the expertise is extremely specific, a sole source may be chose, and must be preapproved by the CFO.

Costs are reviewed among competing bids, and by review of industry standards.

Contracts may be drafted by EHA or the service provider, and must include name, address, complete contact information of provider, scope of work, identification of deliverables, timeframe for performance, payment terms, provision for termination and other information specified in the EHA standard contract form.

Consultant contracts are approved by the President of the organization.

Subcontractors and Subrecipients

Subcontracts may be entered into to support work funded under various federal prime awards, subcontracts from Prime Contractors having federal awards or with private entities. Subrecipients are subcontractors that are specifically named in a federal award. The selection process for subcontracts and subrecipients are as follows:

Senior scientists survey and interview institutions and individuals recommended by our science staff, colleagues, industry groups, funders and, for in-country partner recommendations, local, regional and national governments and institutions. Site visits are made as necessary, particularly for partners with whom we have not worked previously, to assess their capacity and their local relationships. Extensive review including CV's of principal investigators and their staff, administrative capacity, annual report and audit report reviews, indirect cost rate review, history of the institution

Costs are evaluated based on reasonableness, location of the work to be done, and the specific expertise needed for the funded work. Sub-Contracts are drafted by EHA, and must include name, address, complete contact information of provider, scope of work, identification of deliverables, timeframe for performance, payment terms, provision for termination and other information specified in the EHA standard contract form.

The prospective subcontractors reviewed among senior staff with a recommendation to the President for the decision.

Purchases

The Office manager is authorized to purchase supplies and equipment for the office and for computers for staff members. An office supply vendor is selected and reviewed annually. Selection is made based on competitive pricing for regularly purchased items, and quality of service. Purchases are made based on comparisons among online or physical catalogs.

Staff members may make purchases for items for their specific use, when the Office Manager cannot purchase them. Staff members must certify that the purchases are normal and reasonable costs.

epidemico

February 12, 2015

Andrew Huff, Ph.D., M.S.
Senior Research Scientist
EcoHealth Alliance

Dear Andrew,

Below and attached separately is information to support a revised license fee for our HealthMap data feed. Please let us know if you need any additional information. Thank you in advance for your support on this matter.

- Updated license fee: $240K annual fee
- Services included in license fee
  - 24/7, real-time data feed of all content and analyses from HealthMap (http://www.healthmap.org).
    - These data include event-based data scanned from over 50,000 publicly available websites including trade media, social media, and expert websites
    - Manual scanning of additional resources (e.g. blogs)
    - Data content includes all infectious disease outbreaks effecting both human and animal health
    - Data content is scanned, filtered, tagged and curated in 15+ languages, including English, Spanish, French, Russian, and Chinese, all translated into English
    - Data content is world-wide
    - Data content is updated hourly in real-time, 24/7
    - Data is curated by public health experts with capabilities in each of the supported languages
  - The feed is structured by specific disease entity, location, time stamp of the original publication, source data, category classification, outbreak rating by severity level, and any other relevant and significant details derived from the reporting source.
  - Feed can be delivered in an email or RSS or KML format.
  - Amazon cloud hosting fees included

- Separately attached: Contract agreement with DHS for same data license of HealthMap data feed. $240K annual fee

Best,

Robin Heffernan
President & COO
Epidemico, Inc.

Independent Auditor's Report on Financial Statements and Supplementary Information

Board of Directors
EcoHealth Alliance, Inc. and
Wildlife Preservation Trust International, Inc.

Report on the Financial Statements

We have audited the accompanying consolidated financial statements of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc., which comprise the consolidated balance sheet as of June 30, 2013, and the related consolidated statements of activities, functional expenses and cash flows for the year then ended, and the related notes to the consolidated financial statements.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audit. We conducted our audit in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

655 Third Avenue, 12th Floor, New York, NY 10017
(212) 867-4000 / Fax (212) 867-9810 / *www.loebandtroper.com*

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc. as of June 30, 2013, and changes in their net assets and their cash flows for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Supplementary Information

Our audit was conducted for the purpose of forming an opinion on the financial statements as a whole. The accompanying schedule of expenditures of federal awards, as required by Office of Management and Budget Circular A-133, *Audits of States, Local Governments, and Non-Profit Organizations*, is presented for purposes of additional analysis and is not a required part of the financial statements. The accompanying schedule of expenditures of federal awards is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the financial statements. Such information has been subjected to the auditing procedures applied in the audit of the financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the financial statements or to the financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the accompanying schedule of expenditures of federal awards is fairly stated, in all material respects, in relation to the financial statements as a whole.

Report on Summarized Comparative Information

We have previously audited EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s June 30, 2012 financial statements, and we expressed an unmodified audit opinion on those audited financial statements in our report dated January 31, 2013. In our opinion, the summarized comparative information presented herein as of and for the year ended June 30, 2012 is consistent, in all material respects, with the audited financial statements from which it has been derived.

Other Reporting Required by Government Auditing Standards

In accordance with *Government Auditing Standards*, we have also issued our report dated December 2, 2013 on our consideration of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control over financial reporting and on our tests of their compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of that report is to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control over financial reporting and compliance.

Loeb & Troper LLP

December 2, 2013, except for the schedule of expenditures of federal awards, as to which the date is February 14, 2014

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

JUNE 30, 2013

NOTE 1 - ORGANIZATION AND TAX STATUS

On June 22, 2010, Wildlife Trust, Inc. changed its name to EcoHealth Alliance, Inc.

EcoHealth Alliance, Inc. was incorporated on July 20, 2000 in the Commonwealth of Massachusetts. EcoHealth Alliance, Inc.'s mission is to integrate innovative science-based solutions and partnerships that increase capacity to achieve two interrelated goals: protecting global health by preventing the outbreak of emerging diseases and safeguarding ecosystems by promoting conservation.

EcoHealth Alliance, Inc. is funded primarily by contributions and government contracts and grants.

Wildlife Preservation Trust International, Inc. (WPTI) was incorporated on January 7, 1976 in the state of Pennsylvania. WPTI is a dormant corporation. In 2000, WPTI transferred the predominance of its assets to Wildlife Trust Inc., now known as EcoHealth Alliance, Inc.

EcoHealth Alliance, Inc. and WPTI are exempt from federal income tax under Section 501(c)(3) of the Internal Revenue Code and are related through common control.

EcoHealth Alliance, Inc. and WPTI are collectively referred to as "EHA."

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Basis of accounting - The financial statements are prepared on the accrual basis of accounting.

Principles of consolidation - All material intercompany transactions and balances have been eliminated in the consolidation.

Use of estimates - The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

-continued-

ECOHEALTH ALLIANCE, INC.
AND
WILDLIFE PRESERVATION TRUST
INTERNATIONAL, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

JUNE 30, 2013

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

Cash and cash equivalents - EHA considers highly liquid instruments purchased with original maturities of three months or less to be cash equivalents. EHA has periodically throughout the year maintained balances in various operating and money market accounts in excess of federally insured limits.

Investments - Investments are recorded at fair value. EHA invests in various investment securities. Investment securities are exposed to various risks such as interest rate, market and credit risks. Due to the level of risk associated with investment securities, it is at least reasonably possible that changes in the values of investment securities will occur in the near term, based upon the markets' fluctuations, and that such changes could materially affect EHA's financial statements.

Contributions receivable - Unconditional promises to give that are expected to be collected within one year are recorded at net realizable value. Unconditional promises to give that are expected to be collected in future years are recorded at the present value of their estimated future cash flows. The discounts on those amounts are computed using risk-adjusted interest rates applicable to the years in which the promises are received. Amortization of the discounts is included in contribution revenue. Conditional promises to give are not included as support until the conditions are subsequently met.

Government contracts receivable - Government contracts receivable are recorded when qualifying expenditures are incurred and EHA has a signed contract for services.

Allowance for doubtful accounts - EHA determines whether an allowance for uncollectibles should be provided for contributions and government contracts receivable. Such estimates are based on management's assessment of the aged basis of its contributions and other sources, current economic conditions and historical information. Contributions and government contracts receivable are written off against the allowance for doubtful accounts when all reasonable collection efforts have been exhausted.

Fixed assets - Fixed assets are recorded at cost and depreciated over their estimated useful lives using the straight-line method. Leasehold improvements are recorded at cost and are amortized over the shorter of the term of the lease or its estimated useful life using the straight-line method. Items with a cost in excess of $5,000 and an estimated useful life of greater than one year are capitalized.

ECOHEALTH ALLIANCE, INC.
AND
WILDLIFE PRESERVATION TRUST
INTERNATIONAL, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

JUNE 30, 2013

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

Net assets - Unrestricted net assets include funds having no restriction as to use or purpose imposed by donors. Temporarily restricted net assets are those whose use has been limited by donors to a specific time period or purpose. Permanently restricted net assets have been restricted by donors to be maintained in perpetuity.

Revenues from government agencies - Revenues from government agencies are recognized when earned. Expense-based grants are recognized as allowable expenses are incurred. Performance-based grants are recognized as milestones are achieved.

Contributed services - Contributed services are recognized as revenue if the services create or enhance nonfinancial assets or require specialized skills, are provided by individuals possessing those skills, and typically need to be purchased if not provided by donation.

Contributions - Unconditional contributions, including promises to give cash and other assets, are reported at fair value at the date the contribution is received. Contributions are reported as either temporarily or permanently restricted support if they are received with donor stipulations that limit the use of the donated assets. When a donor restriction expires, that is, when a stipulated time restriction ends or purpose restriction is accomplished, temporarily restricted net assets are reclassified as unrestricted net assets and reported in the statement of activities as net assets released from restrictions.

In-kind donations - In-kind donations are recorded at fair value.

Functional allocation of expenses - The costs of providing EHA's programs and other activities have been summarized on a functional basis. Accordingly, certain costs have been allocated among the programs and supporting services benefited.

Rent expense - EHA leases space at various locations. All leases are operating leases. Rent expense is recognized on the first day of each month for the current month's rent. All leases are reflected on the straight-line basis.

-continued-

ECOHEALTH ALLIANCE, INC.
AND
WILDLIFE PRESERVATION TRUST
INTERNATIONAL, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

JUNE 30, 2013

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

Grants to other organizations - EHA grants funds to charitable organizations for specific programs. Grants are recorded when approved by the EHA Board of Directors. Funds approved for payment are recorded as grants payable. As of June 30, 2013 and 2012, there were no outstanding grants payable.

Subcontracted services - Subcontracted services are recorded when services are incurred by the subcontractor. Advances to subcontractors are recorded as an asset. As of June 30, 2013 and 2012, there were no advances to subcontractors.

Measure of operations - EHA includes in its measure of operations all revenues and expenses that are an integral part of its program and supporting services and excludes investment income and disposition of restricted funds.

Prior-year summarized comparative information - The financial statements include certain prior-year summarized comparative information in total but not by net asset class. Such information does not include sufficient detail to constitute a presentation in conformity with accounting principles generally accepted in the United States of America. Accordingly, such information should be read in conjunction with the financial statements for the year ended June 30, 2012, from which the summarized information was derived.

Fair Value Measurements

Fair Value Measurements, ASC Topic 820, establishes a framework for measuring fair value. The framework provides a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). The three levels of the fair value hierarchy are described below. Level 1 inputs to the valuation methodology are unadjusted quoted prices for identical assets or liabilities in active markets that EHA has the ability to access. Level 2 inputs to the valuation methodology include:

- Quoted prices for similar assets or liabilities in active markets;
- Quoted prices for identical or similar assets or liabilities in inactive markets;
- Inputs other than quoted prices that are observable for the asset or liability;
- Inputs that are derived principally from or corroborated by observable market data by correlation or other means.

-continued-

ECOHEALTH ALLIANCE, INC.
AND
WILDLIFE PRESERVATION TRUST
INTERNATIONAL, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

JUNE 30, 2013

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

Fair Value Measurements (continued)

If the asset or liability has a specified (contractual) term, the Level 2 input must be observable for substantially the full term of the asset or liability. Level 3 inputs to the valuation methodology are unobservable and significant to the fair value measurement. The asset or liability's fair value measurement level within the fair value hierarchy is based on the lowest level of any input that is significant to the fair value measurement. Valuation techniques used need to maximize the use of observable inputs and minimize the use of unobservable inputs.

The following is a description of the valuation methodology used for assets measured at fair value. There has been no change in the methodology used at June 30, 2013 as compared to 2012.

Cash equivalents - Valued at the closing price reported on the active market on which the individual securities are traded.

Government and government agency bonds, common stock, corporate bonds, U.S. Treasury bonds and notes, and exchange-traded funds (ETFs) - Valued at the closing price reported on the active market on which the individual securities are traded.

The method described above may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, while EHA believes its valuation method is appropriate and consistent with other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different fair value measurement at the reporting date.

The assets at fair value as of June 30, 2013 and 2012 are set forth by level within the fair value hierarchy in Note 3.

Uncertainty in income taxes - EHA has determined that there are no material uncertain tax positions that require recognition or disclosure in the financial statements. Periods ending June 30, 2010 and subsequent remain subject to examination by applicable taxing authorities.

Subsequent events - Subsequent events have been evaluated through December 2, 2013, which is the date the financial statements were available to be issued.

NOTE 8 - OCCUPANCY

In 2005, EHA entered into a ten-year and five-month lease for office space in New York. On September 24, 2013 the lease was extended until December 31, 2023. Rental expense for the years ended June 30, 2013 and 2012 was $264,036 and $243,834, respectively.

Minimum lease payments are as follows:

Year Ending June 30,	
2014	$ 299,800
2015	369,600
2016	369,600
2017	397,100
2018	424,600
Thereafter	2,500,300
	$ 4,361,000

NOTE 9 - IN-KIND DONATIONS

EHA received the following in-kind donations:

Legal fees	$ 38,661
Public relations	690,600
Research	40,290
	$ 769,551

NOTE 10 - CONTINGENCIES

EHA is subject to audits by funding sources. Management believes that the results of such audits, if any, will not have an adverse effect on the financial statements.

NOTES TO SCHEDULE OF EXPENDITURES OF FEDERAL AWARDS

YEAR ENDED JUNE 30, 2013

NOTE 1 - BASIS OF PRESENTATION

The accompanying schedule of expenditures of federal awards (the "Schedule") includes the federal grant activity of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc. under programs of the federal government for the year ended June 30, 2013. The information in this schedule is presented in accordance with the requirements of Office of Management and Budget (OMB) Circular A-133, *Audits of States, Local Governments, and Non-Profit Organizations*. Because the Schedule presents only a selected portion of the operations of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc., it is not intended to and does not present the financial position, changes in net assets or cash flows of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Expenditures reported on the Schedule are reported on the accrual basis of accounting. Such expenditures are recognized following the cost principles contained in OMB Circular A-122, *Cost Principles for Non-Profit Organizations*, wherein certain types of expenditures are not allowable or are limited as to reimbursement. Negative amounts shown on the Schedule represent adjustments or credits made in the normal course of business to amounts reported as expenditures in prior years. Pass-through entity identifying numbers are presented where available.

NOTE 3 - SUBRECIPIENTS

Of the federal expenditures presented in the Schedule, EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc. provided federal awards to subrecipients as follows:

CFDA Number	Program Name	Amount Provided to Subrecipient
47.074	Biological Sciences	$ 97,109
93.855	Allergy, Immunology and Transplantation Research	616,816

LOEB & TROPER LLP

Independent Auditor's Report on
Internal Control Over Financial Reporting
and on Compliance and Other Matters
Based on an Audit of Financial Statements Performed
in Accordance with Government Auditing Standards

Board of Directors
EcoHealth Alliance, Inc. and
Wildlife Preservation Trust International, Inc.

We have audited, in accordance with the auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards* issued by the Comptroller General of the United States, the financial statements of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc., which comprise the balance sheet as of June 30, 2013, and the related statements of activities, functional expenses and cash flows for the year then ended, and the related notes to the financial statements, and have issued our report thereon dated December 2, 2013.

Internal Control over Financial Reporting

In planning and performing our audit of the financial statements, we considered EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control over financial reporting (internal control) to determine the audit procedures that are appropriate in the circumstances for the purpose of expressing our opinion on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control. Accordingly, we do not express an opinion on the effectiveness of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control.

A *deficiency in internal control* exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct, misstatements on a timely basis. A *material weakness* is a deficiency, or a combination of deficiencies, in internal control such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected, on a timely basis. A *significant deficiency* is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

655 Third Avenue, 12th Floor, New York, NY 10017
(212) 867-4000 / Fax (212) 867-9810 / *www.loebandtroper.com*

Our consideration of internal control was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control that might be material weaknesses or significant deficiencies. Given these limitations, during our audit we did not identify any deficiencies in internal control that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

Compliance and Other Matters

As part of obtaining reasonable assurance about whether EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s financial statements are free from material misstatement, we performed tests of their compliance with certain provisions of laws, regulations, contracts, and grant agreements, noncompliance with which could have a direct and material effect on the determination of financial statement amounts. However, providing an opinion on compliance with those provisions was not an objective of our audit and, accordingly, we do not express such an opinion. The results of our tests disclosed no instances of noncompliance or other matters that are required to be reported under *Government Auditing Standards*.

Purpose of This Report

The purpose of this report is solely to describe the scope of our testing of internal control and compliance and the results of that testing, and not to provide an opinion on the effectiveness of the entity's internal control or on compliance. This report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the entity's internal control and compliance. Accordingly, this communication is not suitable for any other purpose.

LOEB & TROPER LLP

Report on Compliance for Each Major Federal Program;
Report on Internal Control Over Compliance

Board of Directors
EcoHealth Alliance, Inc. and
Wildlife Preservation Trust International, Inc.

Report on Compliance for Each Major Federal Program

We have audited EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s compliance with the types of compliance requirements described in the OMB Circular A-133 Compliance Supplement that could have a direct and material effect on each of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s major federal programs for the year ended June 30, 2013. EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s major federal programs are identified in the summary of auditor's results section of the accompanying schedule of findings and questioned costs.

Management's Responsibility

Management is responsible for compliance with the requirements of laws, regulations, contracts, and grants applicable to their federal programs.

Auditor's Responsibility

Our responsibility is to express an opinion on compliance for each of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s major federal programs based on our audit of the types of compliance requirements referred to above. We conducted our audit of compliance in accordance with auditing standards generally accepted in the United States of America; the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States; and OMB Circular A-133, *Audits of States, Local Governments, and Non-Profit Organizations*. Those standards and OMB Circular A-133 require that we plan and perform the audit to obtain reasonable assurance about whether noncompliance with the types of compliance requirements referred to above that could have a direct and material effect on a major federal program occurred. An audit includes examining, on a test basis, evidence about EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s compliance with those requirements and performing such other procedures as we considered necessary in the circumstances.

655 Third Avenue, 12th Floor, New York, NY 10017
(212) 867-4000 / Fax (212) 867-9810 / *www.loebandtroper.com*

We believe that our audit provides a reasonable basis for our opinion on compliance for each major federal program. However, our audit does not provide a legal determination of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s compliance.

Opinion on Each Major Federal Program

In our opinion, EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc. complied, in all material respects, with the types of compliance requirements referred to above that could have a direct and material effect on each of their major federal programs for the year ended June 30, 2013.

Report on Internal Control Over Compliance

Management of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc. is responsible for establishing and maintaining effective internal control over compliance with the types of compliance requirements referred to above. In planning and performing our audit of compliance, we considered EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control over compliance with the types of requirements that could have a direct and material effect on each major federal program to determine the auditing procedures that are appropriate in the circumstances for the purpose of expressing an opinion on compliance for each major federal program and to test and report on internal control over compliance in accordance with OMB Circular A-133, but not for the purpose of expressing an opinion on the effectiveness of internal control over compliance. Accordingly, we do not express an opinion on the effectiveness of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control over compliance.

A deficiency in internal control over compliance exists when the design or operation of a control over compliance does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct, noncompliance with a type of compliance requirement of a federal program on a timely basis. A material weakness in internal control over compliance is a deficiency, or combination of deficiencies, in internal control over compliance, such that there is a reasonable possibility that material noncompliance with a type of compliance requirement of a federal program will not be prevented, or detected and corrected, on a timely basis. A significant deficiency in internal control over compliance is a deficiency, or a combination of deficiencies, in internal control over compliance with a type of compliance requirement of a federal program that is less severe than a material weakness in internal control over compliance, yet important enough to merit attention by those charged with governance.

Our consideration of internal control over compliance was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control over compliance that might be material weaknesses or significant deficiencies. We did not identify any deficiencies in internal control over compliance that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

The purpose of this report on internal control over compliance is solely to describe the scope of our testing of internal control over compliance and the results of that testing based on the requirements of OMB Circular A-133. Accordingly, this report is not suitable for any other purpose.

LOEB & TROPER LLP

Independent Auditor's Report on Financial Statements and Supplementary Information

Board of Directors
EcoHealth Alliance, Inc. and
Wildlife Preservation Trust International, Inc.

Report on the Financial Statements

We have audited the accompanying consolidated financial statements of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc., which comprise the consolidated balance sheet as of June 30, 2013, and the related consolidated statements of activities, functional expenses and cash flows for the year then ended, and the related notes to the consolidated financial statements.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audit. We conducted our audit in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

655 Third Avenue, 12th Floor, New York, NY 10017
(212) 867-4000 / Fax (212) 867-9810 / *www.loebandtroper.com*

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc. as of June 30, 2013, and changes in their net assets and their cash flows for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Supplementary Information

Our audit was conducted for the purpose of forming an opinion on the financial statements as a whole. The accompanying schedule of expenditures of federal awards, as required by Office of Management and Budget Circular A-133, *Audits of States, Local Governments, and Non-Profit Organizations*, is presented for purposes of additional analysis and is not a required part of the financial statements. The accompanying schedule of expenditures of federal awards is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the financial statements. Such information has been subjected to the auditing procedures applied in the audit of the financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the financial statements or to the financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the accompanying schedule of expenditures of federal awards is fairly stated, in all material respects, in relation to the financial statements as a whole.

Report on Summarized Comparative Information

We have previously audited EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s June 30, 2012 financial statements, and we expressed an unmodified audit opinion on those audited financial statements in our report dated January 31, 2013. In our opinion, the summarized comparative information presented herein as of and for the year ended June 30, 2012 is consistent, in all material respects, with the audited financial statements from which it has been derived.

Other Reporting Required by Government Auditing Standards

In accordance with *Government Auditing Standards*, we have also issued our report dated December 2, 2013 on our consideration of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control over financial reporting and on our tests of their compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of that report is to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control over financial reporting and compliance.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

JUNE 30, 2013

NOTE 1 - ORGANIZATION AND TAX STATUS

On June 22, 2010, Wildlife Trust, Inc. changed its name to EcoHealth Alliance, Inc.

EcoHealth Alliance, Inc. was incorporated on July 20, 2000 in the Commonwealth of Massachusetts. EcoHealth Alliance, Inc.'s mission is to integrate innovative science-based solutions and partnerships that increase capacity to achieve two interrelated goals: protecting global health by preventing the outbreak of emerging diseases and safeguarding ecosystems by promoting conservation.

EcoHealth Alliance, Inc. is funded primarily by contributions and government contracts and grants.

Wildlife Preservation Trust International, Inc. (WPTI) was incorporated on January 7, 1976 in the state of Pennsylvania. WPTI is a dormant corporation. In 2000, WPTI transferred the predominance of its assets to Wildlife Trust Inc., now known as EcoHealth Alliance, Inc.

EcoHealth Alliance, Inc. and WPTI are exempt from federal income tax under Section 501(c)(3) of the Internal Revenue Code and are related through common control.

EcoHealth Alliance, Inc. and WPTI are collectively referred to as "EHA."

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Basis of accounting - The financial statements are prepared on the accrual basis of accounting.

Principles of consolidation - All material intercompany transactions and balances have been eliminated in the consolidation.

Use of estimates - The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

ECOHEALTH ALLIANCE, INC.
AND
WILDLIFE PRESERVATION TRUST
INTERNATIONAL, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

JUNE 30, 2013

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

Cash and cash equivalents - EHA considers highly liquid instruments purchased with original maturities of three months or less to be cash equivalents. EHA has periodically throughout the year maintained balances in various operating and money market accounts in excess of federally insured limits.

Investments - Investments are recorded at fair value. EHA invests in various investment securities. Investment securities are exposed to various risks such as interest rate, market and credit risks. Due to the level of risk associated with investment securities, it is at least reasonably possible that changes in the values of investment securities will occur in the near term, based upon the markets' fluctuations, and that such changes could materially affect EHA's financial statements.

Contributions receivable - Unconditional promises to give that are expected to be collected within one year are recorded at net realizable value. Unconditional promises to give that are expected to be collected in future years are recorded at the present value of their estimated future cash flows. The discounts on those amounts are computed using risk-adjusted interest rates applicable to the years in which the promises are received. Amortization of the discounts is included in contribution revenue. Conditional promises to give are not included as support until the conditions are subsequently met.

Government contracts receivable - Government contracts receivable are recorded when qualifying expenditures are incurred and EHA has a signed contract for services.

Allowance for doubtful accounts - EHA determines whether an allowance for uncollectibles should be provided for contributions and government contracts receivable. Such estimates are based on management's assessment of the aged basis of its contributions and other sources, current economic conditions and historical information. Contributions and government contracts receivable are written off against the allowance for doubtful accounts when all reasonable collection efforts have been exhausted.

Fixed assets - Fixed assets are recorded at cost and depreciated over their estimated useful lives using the straight-line method. Leasehold improvements are recorded at cost and are amortized over the shorter of the term of the lease or its estimated useful life using the straight-line method. Items with a cost in excess of $5,000 and an estimated useful life of greater than one year are capitalized.

AND
WILDLIFE PRESERVATION TRUST
INTERNATIONAL, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

JUNE 30, 2013

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

Net assets - Unrestricted net assets include funds having no restriction as to use or purpose imposed by donors. Temporarily restricted net assets are those whose use has been limited by donors to a specific time period or purpose. Permanently restricted net assets have been restricted by donors to be maintained in perpetuity.

Revenues from government agencies - Revenues from government agencies are recognized when earned. Expense-based grants are recognized as allowable expenses are incurred. Performance-based grants are recognized as milestones are achieved.

Contributed services - Contributed services are recognized as revenue if the services create or enhance nonfinancial assets or require specialized skills, are provided by individuals possessing those skills, and typically need to be purchased if not provided by donation.

Contributions - Unconditional contributions, including promises to give cash and other assets, are reported at fair value at the date the contribution is received. Contributions are reported as either temporarily or permanently restricted support if they are received with donor stipulations that limit the use of the donated assets. When a donor restriction expires, that is, when a stipulated time restriction ends or purpose restriction is accomplished, temporarily restricted net assets are reclassified as unrestricted net assets and reported in the statement of activities as net assets released from restrictions.

In-kind donations - In-kind donations are recorded at fair value.

Functional allocation of expenses - The costs of providing EHA's programs and other activities have been summarized on a functional basis. Accordingly, certain costs have been allocated among the programs and supporting services benefited.

Rent expense - EHA leases space at various locations. All leases are operating leases. Rent expense is recognized on the first day of each month for the current month's rent. All leases are reflected on the straight-line basis.

ECOHEALTH ALLIANCE, INC.
AND
WILDLIFE PRESERVATION TRUST
INTERNATIONAL, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

JUNE 30, 2013

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

Grants to other organizations - EHA grants funds to charitable organizations for specific programs. Grants are recorded when approved by the EHA Board of Directors. Funds approved for payment are recorded as grants payable. As of June 30, 2013 and 2012, there were no outstanding grants payable.

Subcontracted services - Subcontracted services are recorded when services are incurred by the subcontractor. Advances to subcontractors are recorded as an asset. As of June 30, 2013 and 2012, there were no advances to subcontractors.

Measure of operations - EHA includes in its measure of operations all revenues and expenses that are an integral part of its program and supporting services and excludes investment income and disposition of restricted funds.

Prior-year summarized comparative information - The financial statements include certain prior-year summarized comparative information in total but not by net asset class. Such information does not include sufficient detail to constitute a presentation in conformity with accounting principles generally accepted in the United States of America. Accordingly, such information should be read in conjunction with the financial statements for the year ended June 30, 2012, from which the summarized information was derived.

Fair Value Measurements

Fair Value Measurements, ASC Topic 820, establishes a framework for measuring fair value. The framework provides a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). The three levels of the fair value hierarchy are described below. Level 1 inputs to the valuation methodology are unadjusted quoted prices for identical assets or liabilities in active markets that EHA has the ability to access. Level 2 inputs to the valuation methodology include:

- Quoted prices for similar assets or liabilities in active markets;
- Quoted prices for identical or similar assets or liabilities in inactive markets;
- Inputs other than quoted prices that are observable for the asset or liability;
- Inputs that are derived principally from or corroborated by observable market data by correlation or other means.

ECOHEALTH ALLIANCE, INC.
AND
WILDLIFE PRESERVATION TRUST
INTERNATIONAL, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

JUNE 30, 2013

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

Fair Value Measurements (continued)

If the asset or liability has a specified (contractual) term, the Level 2 input must be observable for substantially the full term of the asset or liability. Level 3 inputs to the valuation methodology are unobservable and significant to the fair value measurement. The asset or liability's fair value measurement level within the fair value hierarchy is based on the lowest level of any input that is significant to the fair value measurement. Valuation techniques used need to maximize the use of observable inputs and minimize the use of unobservable inputs.

The following is a description of the valuation methodology used for assets measured at fair value. There has been no change in the methodology used at June 30, 2013 as compared to 2012.

Cash equivalents - Valued at the closing price reported on the active market on which the individual securities are traded.

Government and government agency bonds, common stock, corporate bonds, U.S. Treasury bonds and notes, and exchange-traded funds (ETFs) - Valued at the closing price reported on the active market on which the individual securities are traded.

The method described above may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, while EHA believes its valuation method is appropriate and consistent with other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different fair value measurement at the reporting date.

The assets at fair value as of June 30, 2013 and 2012 are set forth by level within the fair value hierarchy in Note 3.

Uncertainty in income taxes - EHA has determined that there are no material uncertain tax positions that require recognition or disclosure in the financial statements. Periods ending June 30, 2010 and subsequent remain subject to examination by applicable taxing authorities.

Subsequent events - Subsequent events have been evaluated through December 2, 2013, which is the date the financial statements were available to be issued.

NOTES TO SCHEDULE OF EXPENDITURES OF FEDERAL AWARDS

YEAR ENDED JUNE 30, 2013

NOTE 1 - BASIS OF PRESENTATION

The accompanying schedule of expenditures of federal awards (the "Schedule") includes the federal grant activity of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc. under programs of the federal government for the year ended June 30, 2013. The information in this schedule is presented in accordance with the requirements of Office of Management and Budget (OMB) Circular A-133, *Audits of States, Local Governments, and Non-Profit Organizations*. Because the Schedule presents only a selected portion of the operations of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc., it is not intended to and does not present the financial position, changes in net assets or cash flows of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.

NOTE 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Expenditures reported on the Schedule are reported on the accrual basis of accounting. Such expenditures are recognized following the cost principles contained in OMB Circular A-122, *Cost Principles for Non-Profit Organizations*, wherein certain types of expenditures are not allowable or are limited as to reimbursement. Negative amounts shown on the Schedule represent adjustments or credits made in the normal course of business to amounts reported as expenditures in prior years. Pass-through entity identifying numbers are presented where available.

NOTE 3 - SUBRECIPIENTS

Of the federal expenditures presented in the Schedule, EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc. provided federal awards to subrecipients as follows:

CFDA Number	Program Name	Amount Provided to Subrecipient
47.074	Biological Sciences	$ 97,109
93.855	Allergy, Immunology and Transplantation Research	616,816

93. UNKNOWN	Bushment Services	4,000
	Total	$ 1,081,076

LOEB & TROPER LLP

Independent Auditor's Report on
Internal Control Over Financial Reporting
and on Compliance and Other Matters
Based on an Audit of Financial Statements Performed
in Accordance with Government Auditing Standards

Board of Directors
EcoHealth Alliance, Inc. and
Wildlife Preservation Trust International, Inc.

We have audited, in accordance with the auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards* issued by the Comptroller General of the United States, the financial statements of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc., which comprise the balance sheet as of June 30, 2013, and the related statements of activities, functional expenses and cash flows for the year then ended, and the related notes to the financial statements, and have issued our report thereon dated December 2, 2013.

Internal Control over Financial Reporting

In planning and performing our audit of the financial statements, we considered EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control over financial reporting (internal control) to determine the audit procedures that are appropriate in the circumstances for the purpose of expressing our opinion on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control. Accordingly, we do not express an opinion on the effectiveness of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control.

A *deficiency in internal control* exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct, misstatements on a timely basis. A *material weakness* is a deficiency, or a combination of deficiencies, in internal control such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected, on a timely basis. A *significant deficiency* is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

655 Third Avenue, 12th Floor, New York, NY 10017
(212) 867-4000 / Fax (212) 867-9810 / *www.loebandtroper.com*

Our consideration of internal control was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control that might be material weaknesses or significant deficiencies. Given these limitations, during our audit we did not identify any deficiencies in internal control that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

Compliance and Other Matters

As part of obtaining reasonable assurance about whether EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s financial statements are free from material misstatement, we performed tests of their compliance with certain provisions of laws, regulations, contracts, and grant agreements, noncompliance with which could have a direct and material effect on the determination of financial statement amounts. However, providing an opinion on compliance with those provisions was not an objective of our audit and, accordingly, we do not express such an opinion. The results of our tests disclosed no instances of noncompliance or other matters that are required to be reported under *Government Auditing Standards*.

Purpose of This Report

The purpose of this report is solely to describe the scope of our testing of internal control and compliance and the results of that testing, and not to provide an opinion on the effectiveness of the entity's internal control or on compliance. This report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the entity's internal control and compliance. Accordingly, this communication is not suitable for any other purpose.

Report on Compliance for Each Major Federal Program;
Report on Internal Control Over Compliance

Board of Directors
EcoHealth Alliance, Inc. and
Wildlife Preservation Trust International, Inc.

Report on Compliance for Each Major Federal Program

We have audited EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s compliance with the types of compliance requirements described in the OMB Circular A-133 Compliance Supplement that could have a direct and material effect on each of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s major federal programs for the year ended June 30, 2013. EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s major federal programs are identified in the summary of auditor's results section of the accompanying schedule of findings and questioned costs.

Management's Responsibility

Management is responsible for compliance with the requirements of laws, regulations, contracts, and grants applicable to their federal programs.

Auditor's Responsibility

Our responsibility is to express an opinion on compliance for each of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s major federal programs based on our audit of the types of compliance requirements referred to above. We conducted our audit of compliance in accordance with auditing standards generally accepted in the United States of America; the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States; and OMB Circular A-133, *Audits of States, Local Governments, and Non-Profit Organizations*. Those standards and OMB Circular A-133 require that we plan and perform the audit to obtain reasonable assurance about whether noncompliance with the types of compliance requirements referred to above that could have a direct and material effect on a major federal program occurred. An audit includes examining, on a test basis, evidence about EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s compliance with those requirements and performing such other procedures as we considered necessary in the circumstances.

655 Third Avenue, 12th Floor, New York, NY 10017
(212) 867-4000 / Fax (212) 867-9810 / *www.loebandtroper.com*

We believe that our audit provides a reasonable basis for our opinion on compliance for each major federal program. However, our audit does not provide a legal determination of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s compliance.

Opinion on Each Major Federal Program

In our opinion, EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc. complied, in all material respects, with the types of compliance requirements referred to above that could have a direct and material effect on each of their major federal programs for the year ended June 30, 2013.

Report on Internal Control Over Compliance

Management of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc. is responsible for establishing and maintaining effective internal control over compliance with the types of compliance requirements referred to above. In planning and performing our audit of compliance, we considered EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control over compliance with the types of requirements that could have a direct and material effect on each major federal program to determine the auditing procedures that are appropriate in the circumstances for the purpose of expressing an opinion on compliance for each major federal program and to test and report on internal control over compliance in accordance with OMB Circular A-133, but not for the purpose of expressing an opinion on the effectiveness of internal control over compliance. Accordingly, we do not express an opinion on the effectiveness of EcoHealth Alliance, Inc. and Wildlife Preservation Trust International, Inc.'s internal control over compliance.

A deficiency in internal control over compliance exists when the design or operation of a control over compliance does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct, noncompliance with a type of compliance requirement of a federal program on a timely basis. A material weakness in internal control over compliance is a deficiency, or combination of deficiencies, in internal control over compliance, such that there is a reasonable possibility that material noncompliance with a type of compliance requirement of a federal program will not be prevented, or detected and corrected, on a timely basis. A significant deficiency in internal control over compliance is a deficiency, or a combination of deficiencies, in internal control over compliance with a type of compliance requirement of a federal program that is less severe than a material weakness in internal control over compliance, yet important enough to merit attention by those charged with governance.

Our consideration of internal control over compliance was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control over compliance that might be material weaknesses or significant deficiencies. We did not identify any deficiencies in internal control over compliance that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

The purpose of this report on internal control over compliance is solely to describe the scope of our testing of internal control over compliance and the results of that testing based on the requirements of OMB Circular A-133. Accordingly, this report is not suitable for any other purpose.

Volume I: Technical Proposal

I. Abstract

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. We aim to enhance our current GRITS platform, developed with DTRA support, by scaling this system to handle large data volumes in near-real-time, enhancing diagnostic capabilities through network and cluster analysis, and improving visualization through use of the latest reactive web technologies. GRITS will also utilize the benefits and explore the integration of crowdsourcing, collective intelligence, and expert review. This tool will rely on automation to ingest media, extract key disease characteristics, and recommend resources, increasing the specificity of the data feed to an analyst's workflow. We propose building an app with the BSVE SDK that allows BSVE users to submit resources to diagnose and to connect with experts from ProMED, HealthMap and EcoHealth, thereby increasing our network of experts from digital surveillance and open source communities. The diagnostic results generated by GRITS have immediate applications for risk mapping, outbreak prediction, and early warning of microbial threats, advancing our readiness to combat the broad class of chemical and biological threats posed by EIDs.

Keywords
disease ecology, digital diagnostics, natural language, machine learning, emergent media, network, real-time, data science

II. Scope

A. Objective

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) for diagnosing infectious disease bioevents. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to pinpoint and identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data, all connected to our network of experts from digital surveillance and open source communities.

B. Background

The discovery of HIV/AIDS in the 1980s marked the transition from declaring victory over infectious diseases, to global increases in disease emergence and re-emergence[1]. EcoHealth Alliance (EHA) is at the forefront of organizations working to 'get ahead of the epidemic curve' by identifying these threats before the next pandemic or extinction event. Our researchers pioneered the identification of the origins of pathogens, such as Nipah virus[2], SARS[3], and MERS[4]. We constantly seek innovative approaches to target our field surveillance efforts on emerging threats[5]. To this end, the global increase in the volume of data, from the growth of the web and instrumented systems, presents both a challenge to traditional surveillance approaches and a tremendous opportunity for novel discoveries.

Various biosurveillance technologies have been developed to monitor Internet data sources, for instance, syndromic surveillance initiatives target surrogate indicators of a disease outbreak[6]. As with other sectors, such as commerce, marketing, and finance, the challenge is to manage the

expanding volume of data while identifying signals of interest[7]. In the case of EIDs, access to emergent media, including participatory, personal, and interactive media, characterized by decentralized content generation (e.g. the blogosphere, internationalization, and social media), presents an opportunity to detect early mentions of disease characteristics and anomalies of interest.

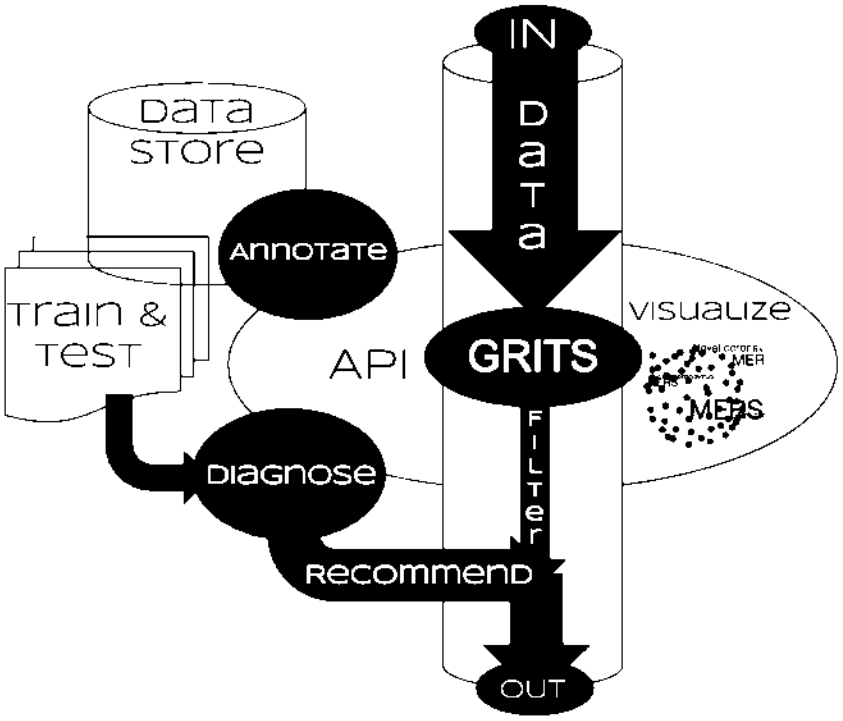
The GRITS partners are among the leading organizations in this domain. ProMED-mail (International Society of Infectious Diseases) manages a global email network of clinicians who are often among the first to identify and report disease threats[8]. Epidemico (HealthMap)[9] actively curates an expanding catalog of relevant news and social media assets. Both organizations are unique among their peers in leveraging broad networks of experts to curate and reduce the volume of media to a high-quality feed. Kitware Inc., our technical partner, has engineered sustainable communities around successful, high-impact open source scientific software.

EcoHealth assembled the GRITS team to advance the state-of-the-art in the detection and diagnosis of disease threats. GRITS combines new technologies with expert networks to apply the sciences of disease ecology and epidemiology to diagnosing big data for near-real-time disease situation awareness. We built GRITS upon pre-existing communities of expertise, rather than *de novo* technical solutions, recognizing that human experts must be integrated into the platform to ensure its intelligence and growth. In addition, we sought novel mechanisms for decision support by organizing, prioritizing, contextualizing, and linking information to relevant current and historic resources. Overall, we deploy science at the core of our systems to assemble near-real-time information in a manner that supports decision makers with diagnostic tools built by, and for, the digital disease ecology community. The diagnostic results generated by GRITS have immediate applications for risk mapping, outbreak prediction, and early warning of microbial threats.

Description of GRITS Capabilities

We take a diagnostic approach to identifying disease threats, setting research priorities, and strategically deploying our field teams. GRITS ingests and processes data feeds to provide decision support to analysts, with the following capabilities:

Diagnose - Identify the disease(s) described in a resource. Return a ranked list of disease with quantitative metrics of certainty (differential diagnoses).
Mine - Extract the key components of document via automated analysis, collective annotation, and expert curation. Return a set of relevant information.
Recommend - Expand the materials available to the analyst. Return a collection of recommended resources that provide historic and contemporary context.
Filter - Reduce the complexity of the data feed by selecting those documents that meet diagnostic criteria of interest to the analyst. Return a filtered subset of data.
Connect - Relate the material to underlying ontologies to provide a decision framework for the analyst. Return connections to other bioevents based on underlying network structures (e.g. geography, ecology, time, host, pathogen, and environmental drivers).



Sources of GRITS biointelligence

A. Machine	Data mining, machine learning, and natural language processing
B. Expert	Elicitation, consultation, and peer review
C. Collective	Crowdsourcing annotation and human intelligence tasks

A. Machine

GRITS leverages automation to ingest, process, and return an initial diagnosis of digital media, reducing the extraneous sources of information through which experts and reviewers must sort. The GRITS text mining system extracts key disease characteristics, such as locations, case counts, and dates, for our metadata and diagnostic models. These features, which may be combined into composite features by high level rules, are based on sentence patterns and keywords chosen from third-party sources such as WordNet, Geonames, Disease Ontology, Symptom Ontology, and Biocaster Ontology. The categories we extract, such as hosts, pathogens, diseases, signs and symptoms, drivers, and transmission types, are also informed by historic disease event data curated via our GRID project, and prioritized through consultation and testing with our experts. The GRITS diagnostic models, that use machine learning algorithms based on extracted keywords to classify articles, are trained on test articles labeled with diseases by our partners. A key function of this machine intelligence is to provide the materials and platforms to crowdsource the training data.

B. Expert

GRITS is designed to be tightly integrated with a broad network of experts who contribute

relevant domain expertise ranging from disease ecology, wildlife health, epidemiology, biosurveillance, and medicine. We propose to enhance the accuracy of text mining service through expert consultation and close integration with public ontologies maintained by expert communities. We currently rely on experts to curate our content; however, we hope to close the loop by allowing BSVE users to contact these expert communities for input, including diagnostic advice, regional expertise, and language support (GRITS.net).

To fully levy the expert community, we propose extending GRITS to provide more insight and flexibility in its operation. We wish to create mechanisms for experts to edit and examine the effects of keywords on diagnosis, customize extracted features, and provide feedback on the 'best' diagnosis, thereby iteratively generating training data for the diagnostic algorithms. We also intend to leverage our expert network to test the article representations we use for classification through game-based mechanisms to identify areas for improvement in our representations. By combining a rule-based system with an algorithmic approach, the platform maintains both greater potential for expert input and easy interpretation for non-technical users.

C. Collective

The machine learning component of GRITS requires training data from portfolios of articles with disease labels and disease characteristic metadata, information collected from HealthMap and ProMed editors in order to highlight and categorize important features and relationships. These are then used to train classifiers to identify specific features of importance. To extend the range of articles we can classify, we propose using crowdsourcing methods via Amazon's Mechanical Turk and Zooniverse to generate labels and annotations for articles that do not require domain expertise.

To further enhance the accuracy of the GRITS classification algorithms, we propose crowdsourcing a diagnostic challenge, whereby we host and share our training data on an existing challenge platform (e.g. Kaggle), where programmers compete to build classifiers to improve accuracy.These approaches would compliment the models developed by our internal users and promote global citizenship in combating the scourge of emerging infectious disease. Finally, we propose integrating EHA's Global Repository for Infectious Diseases (GRID) to solicit collective intelligence and peer editing to develop a canonical collection of event data portfolios for BSVE users and the broader scientific community.

Our three-pronged approach (machine, expert, and collective) is a unique strength of the GRITS platform. Experts contribute keywords and rules to improve automated text mining tools, identify human intelligence tasks, and prioritize areas for algorithm development. Meanwhile, the automated tools enable experts to make the best use of their time by farming out less specialized tasks to the crowd, identifying errors in the data sources, and notifying editors or creating tasks to crowdsource solutions. In the case that there isn't enough data to deliver an accurate diagnosis, GRITS will identify the most useful information in distinguishing disease candidates and recommend an expert or field team to consult from our network (GRITS.net). Combined, this presents a unique conceptual model and workflow for supporting outbreak investigation.

Proposed Development

GRITS enhances traditional search with adaptive diagnostic models, trained on a broad spectrum of resources from GRITS partners and curated by our communities of experts. This

diagnostic function reduces the complexity and increases the specificity of the data feed to an analyst's workflow. We propose scaling this system to handle large data volumes in near-real-time, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor live data feeds for diseases or disease characteristics of interest. To ensure rapid diagnosis when a disease first emerges, GRITS blends social media, news media, and scientific literature. This approach may be further leveraged to identify unusual events and diagnostic gaps that may herald an emerging infectious disease of unknown etiology.

BSVE integration and benefits

We propose building an app with the BSVE SDK that allows BSVE users to submit resources to diagnose. The app will display a basic visualization of a diagnosis, and provide links to diagnostic dashboards for decision support via additional visualizations and diagnostic tools.
The GRITS interface in BSVE will connect users to experts from ProMED, HealthMap and EcoHealth. The data processing stack will provide the capabilities identified above (diagnose, mine, recommend, filter, and connect) to data being ingested or monitored by the BSVE, including those proposed in the BSVE Data Challenge. Our diagnostic service is designed to continually evolve and improve via mechanisms for input from collective, expert, and machine intelligence sources. Our novel approach to diagnostics builds upon traditional search with the infusion of disease ecology into the methodology.

Technical Challenges

Due to incomplete reporting, errant diagnoses, delayed onset of symptoms, and delays in laboratory results, it is difficult diagnose diseases in the early phase of an outbreak[10]. Dialect varies among data sources and there is high variability in accessibility of news sources and scientific literature. Software has a language bias where non-latin characters are often the source of bugs, and foreign language articles require translation to fit into a single NLP pipeline. Additionally, media attention is biased toward OECD countries, with blind spots in some of the locations where diseases more frequently emerge, particularly those with limited clinical infrastructure and access to health professionals[11]. However, as a shared and accessible platform that can maximize the utility of both expert networks and machine intelligence, our tool is of particular value in resource-poor areas without laboratory diagnostic facilities or, with past events, where clinical samples are no longer available. To reduce the time-lag in detecting EIDs, we are interested in identifying prompt data sources and recruiting members of the GRITS network and BSVE community in disease prone environments to provide additional reports of emerging diseases.

When attempting to respond to user submitted corrections and feedback, some classifiers take considerable time to train (e.g. neural nets), and completely retaining any classifier on big data can be prohibitive. We will need to investigate methods of incrementally retraining our classifier in a timely manner as new data is submitted.

Technical merit

Overall, we propose to expand our automated data extraction to support reporting initiatives and event notification systems with near-real-time automated extraction of disease-relevant information from an arbitrary, unstructured data feed. Further development of the GRITS text mining system will allow us to introduce ecological and epidemiological concepts to extract more complex information such as host-pathogen relationships and quantitative data (e.g. case counts) for modeling and analysis[12]. We want to improve the precision of the features we extract

by developing more sophisticated natural language processing pipelines. Additionally, we plan to reduce error rates by taking advantage of the open source NLP software ecosystem to perform word sense disambiguation and coreference resolution. Identifying the features GRITS and BSVE users value and providing channels for them to provide us with feedback will also be important to improving GRITS. We propose dynamically retraining the classification algorithm GRITS uses to diagnose diseases based on user submitted corrections to its diagnosis. Finally, we plan on open sourcing reusable components of our system so that other groups can benefit from our work.

Our technology stack consists of modern web technologies such as Meteor that allow us to seamlessly update the content of the UI in near-real-time. These frameworks are compatible with the current technologies in the BSVE, such as AngularJS. We are actively investigating distributed processing technologies, such as Storm, that would allow us to process large volumes articles in parallel. Furthermore, we employ implementations of machine learning algorithms from scikit-learn, and are using natural language processing algorithms (e.g. tokenizing, part-of-speech-tagging, lemmatization) from nltk, and CLIPS pattern. We have started with a Python ML/NLP stack because of the rich software ecosystem available, and the ability to prototype rapidly with IPython notebooks.

Scientific merit

Automated categorization of EID reports by the GRITS diagnostic classifier will enable analysts and to search and filter them, increasing the ratio of relevant information they review. Furthermore, GRITS will provide decision support by suggesting potential diseases in reports of unknown diseases, and by recommending relevant data to review and organizations to contact. An established networks of experts from EcoHealth, and One Health will provide input on our diagnostic engine enabling us to continually improve upon it. Infectious disease emergence is a global-scale challenge requiring an extended, engaged community to monitor, track and respond to new threats; it is also also intrinsically interdisciplinary given the complex life histories of many disease agents.

Ontologies are invaluable tools in artificial intelligence systems, decision support systems, data exploration and research where they can be used to make complex inferences and generate rich datasets. We seek to expand the scope of our ecological ontologies by considering taxonomic, distribution, ecological niche, and networks for pathogens and hosts. This will help us provide state of the art diagnostics for the BSVE by providing structured data from which we can make inferences with GRITS diagnostic algorithms. We plan to use the biointelligence extracted from news media and submitted by GRITS users to assemble a corpus of new information to form the basis of new relationships and entities within biological ontologies to help explain patterns of disease emergence. We are interested in incorporating these relationships and entities into public ontologies they derive from or relate to so that other projects benefit from our work. Our goal, with the work we propose, is to push our system so that more components operate in near-real-time, provide recommendations of to users for additional data-sources, work with citizen scientists to expand the data inputs to diagnostic tools, and integrate various GRITS components into the BSVE community.

C. Programmatics

This effort will support DoD CBDP, DTRA, and the Joint Science and Technology Office for Chemical and Biological Defense (JSTO-CBD), HDTRA1-14-CHEM-BIO-BAA, Chemical

Biological Technologies Department and is submitted in response to Topic: CBA-03: Next Generation Analytic Capabilities for BSV. The work will support DTRA's mission to safeguard America and its allies from biological WMDs by providing diagnostic capabilities to reduce, eliminate, and counter microbial threats. Specifically this "Global Rapid Identification Tool System" is aimed at developing capacity for the detection of EID threats, to support protection efforts and mitigation of the threats posed by disease agents through the New Initiatives in Science and Technology program. This technology is intended for eventual transition through the DTRA R&D Enterprise.

Management plan
Our management plan blends strong scientific expertise in global EID surveillance, with agile software engineering as well as iterative and incremental rapid application development. The project will be managed by our team of data scientists and software developers at EcoHealth Alliance, in consultation with thought leaders in the field of biosurveillance (Epidemico & ProMED-mail), and infused with innovative technologies Kitware Inc., developers of leading edge, high quality software.

Key personnel (roles/responsibilities)

- EcoHealth Alliance (prime): management, delivery, software integration, computing, diagnostic analysis, data science, data mining, disease ecology
    - Nico Preston, Ph.D. (Principal Investigator - PI)
- Kitware Inc.: data management, visualization
    - Jeff Baumes, Ph.D. (Technical Sub-contractor)
- Epidemico: data curation, digital surveillance
    - John Brownstein, Ph.D. (Scientific Consultant)
- ProMED-mail: data curation, disease outbreak reporting
    - Larry Madoff, Ph.D. (Scientific Consultant)

Current data providers and collaborating centers:

- **ProMED-mail** - the Program for Monitoring Emerging Diseases - is an open source Internet-based reporting system dedicated to rapid global dissemination of information on outbreaks of infectious diseases and acute exposures to toxins that affect human health, including those in animals and in plants. Electronic communications enable ProMED-mail to provide up-to-date and reliable news seven days a week. Sources of information include media reports, official reports, online summaries, local observers, and others. A team of expert moderators screen, review, and investigate reports before posting to the network and distributing by email. ProMED-mail currently reaches over 40,000 subscribers in at least 185 countries.
- **Healthmap** - The freely available Web site 'healthmap.org' and mobile app 'Outbreaks Near Me' deliver real-time intelligence on a broad range of emerging infectious diseases. HealthMap brings together disparate data sources, including online news aggregators, eyewitness reports, expert-curated discussions and validated official reports, to achieve a unified and comprehensive view of the current global state of infectious diseases and their effect on human and animal health.
- **Global Repository of Infectious Disease (GRID) project** - an EHA project describing the initial emergence of global infectious disease bioevents since 1940. We collected direct language from the primary literature describing the agent, time, place, impact,

transmission, host, driver, EID category, and economics of the event to discover patterns and trends among these variables across time and space. This is used to train the models with historic context to support both our Hotspot predictive modeling efforts and diagnostic capabilities.

- **EcoHealth Data (EcoHD)** - a warehouse of global open source data, including climate, ecological, demographic datasets.
- **GIDEON** - Global Infectious Disease and Epidemiology Network - is the world's premier global infectious diseases knowledge management database. It contains a diagnostic module that employs information on symptoms, country, incubation period, and laboratory tests to construct a ranked differential diagnosis. The Infectious Diseases module encompasses over 340 infectious diseases, 231 countries, over 500 anti-infective drugs and vaccines.
- **PubMed, Google Scholar, and Web of Science** - will be used to generate records of confirmed diagnoses and historical outbreaks. Additionally, we hope to explore archival resources such as CDC disease reports.

D. Relevance

Our goal with this project is to develop a tool system of high-relevance to DTRA's Goals and Objectives. With the support of DTRA, we could advance our GRITS to full development and extend timely operational capability to all sectors affected by the threat of EIDs. This state-of-the-art technology will help advance our readiness to combat the broad class of biological threats posed by EIDs, including the capability to identify agents with the potential to be used as WMDs. We have the expertise and capacity to ensure useable capability of the GRITS application within the timeline of tasks we propose. The tools will provide near-real-time decision support to end-users of GRITS and the BSVE. By using open source and transparent methods, we ensure that our results are reproducible and that the technology is portable, reliable, agile, and flexible in confronting emerging threats. The tools we propose are state-of-the-art, both scientifically and technically. GRITS leverage the latest reactive web technologies (e.g. Meteor), visualization environments (e.g. WebGL and Tangelo), and scientific databases (e.g. Girder). The machine learning and clustering algorithms are drawn from Scikit-learn, an open and accessible, community-supported Python library.

A key strategy in mitigating EID risk is to build situational awareness as far forward from our shores as possible, by using advanced digital biosurveillance to detect early signals that portend the emergence of high-risk, priority diseases and pathogens, including bioterrorism agents. This biosurveillance technology is adaptable to low resource settings, among them those most vulnerable to EIDs. Ultimately we hope to empower our warfighters and allies with the tools necessary to adapt and shape the dynamic Global Security Environment, as it pertains to the acute threat of infectious diseases.

Responses to DTRA's questions from the White Paper

How will the proposed system be sustained? Is a fee for service model envisioned? If so, details should be provided.

We propose providing to DTRA all of the data hosted in GRITS.db and all of the code developed for this proposed system under permissive open source licences (e.g. MIT and Apache2). Furthermore, EHA has established the Data Science and Research Technology (DART) lab, under the direction of Dr. Preston (PI), with the express goal of supporting the services outlined in this proposal. We envision sustaining the service under a 'fee for service' model to be

negotiated with DTRA upon delivery of the work. We would do so in coordination from our technical subcontractor, Kitware Inc., who have extensive experience supporting open source development for federal agencies, including DOD. Our data subcontractors have agreed to make the full data available to DTRA spanning the duration of the contract (beginning Jan 18, 2013). Where copyright restrictions limit our ability to distribute the full text of the media, we will provide programmatic tools to retrieve the text in compliance with the terms and conditions of the source. Continued access to our experts via GRITS.net, could also be negotiated with all parties under a fee for service model. Additionally, we propose a 'freemium' mechanism to sustain data hosting and processing costs, whereby DTRA-approved users or organizations could access the service on a pay-as-you-go basis (e.g. paying for characters processed or volume stored).

What will actually be delivered to the Government/BSVE? Will this simply be an API to the EHA system, or will underlying tools and data be delivered? If yes, please clearly describe all deliverables.

We are prepared to deliver all materials developed through the contract under permissive open source licenses. Given the complexity of the system, and the maintenance burden, we recommend that that the DART lab continue to maintain the materials on a mutually agreed upon third party service (e.g. AWS) and provide the access to the data and diagnostic capabilities through our API. The source code will be made available through a private Github repository. We will provide full documentation, as we have done for the data service we are currently providing to the BSVE developed by Digital Infuzion. This applies to all deliverables, including GRITS.app, GRITS.db, and GRITS.md. The GRID and EcoHD platforms have been developed with support from other agencies, foundations, and universities; however, we will provide unlimited access in perpetuity to DTRA via their respective APIs and web interfaces. The source code for Tangelo visualizations Girder are publicly available on Github and permissively licensed.

III. Credentials

A. Summary of Credentials

EcoHealth Alliance (EHA):

Building on over 40 years of groundbreaking science, EHA is a global nonprofit organization dedicated to protecting wildlife and safeguarding human health from the emergence of disease. The organization develops ways to combat the effects of damaged ecosystems on human and wildlife health. Using environmental and health data covering the past 60 years, EHA's scientists created the first ever global disease hotspots map that identified at-risk regions, to help predict and prevent the next pandemic crisis. That work is the foundation of EHA's rigorous, science-based approach, focused at the intersection of the environment, health and capacity building. Working in the U.S. and more than 20 countries worldwide, EHA's strength is founded on innovations in research, training, global partnerships, and policy initiatives.

EHA is a partner of the USAID Emerging Pandemic Threats PREDICT program, a $75 million effort focused on predicting and preventing pandemic diseases. PREDICT is building a global early warning system to detect and reduce the impacts of emerging diseases that move between wildlife and people (zoonotic diseases). PREDICT has developed a SMART surveillance method (Strategic, Measurable, Adaptive, Responsive, and Targeted) that accounts for the fact that zoonotic pathogens, such as influenza and SARS, are responsible for the

majority of emerging infectious diseases in people, and that more than three quarters of these emerging zoonoses are of wildlife origin. The SMART surveillance approach is designed to detect novel diseases with pandemic potential early, giving health professionals the best opportunity to prevent emergence and spread. It also targets sentinel animal species at active human interfaces in hotspot regions to improve surveillance efficiency.

The PREDICT team builds on a broad coalition of partners to develop the global capacity to monitor diseases at the animal-human interface and develop a risk-based approach to concentrate these efforts in surveillance, prevention, and response at the most critical points for disease emergence from wildlife.

PREDICT project objectives:

- Assess local surveillance capacity;
- Implement targeted and adaptive wildlife disease surveillance systems;
- Develop and deliver new technologies to improve efforts close to the source;
- Use cutting-edge information management and communication tools to bring the world closer to realizing an integrated, global approach to emerging zoonotic diseases.

Partners:

HealthMap/Epidemico

Healthmap is a team of researchers, epidemiologists and software developers based out of the Children's Hospital, Boston. Founded in 2006, Healthmap is an established global leader in utilizing online informal sources for disease outbreak monitoring and real-time surveillance of emerging public health threats. The freely available Web site 'healthmap.org' and mobile app 'Outbreaks Near Me' deliver real-time intelligence on a broad range of emerging infectious diseases for a diverse audience including libraries, local health departments, governments, and international travelers. HealthMap brings together disparate data sources, including online news aggregators, eyewitness reports, expert-curated discussions and validated official reports, to achieve a unified and comprehensive view of the current global state of infectious diseases and their effect on human and animal health. Through an automated process, updating 24/7/365, the system monitors, organizes, integrates, filters, visualizes and disseminates online information about emerging diseases in nine languages, facilitating early detection of global public health threats.

ProMED

ProMED-mail was established in 1994 with the support of the Federation of American Scientists and SatelLife. Since October 1999, ProMED-mail has operated as an official program of the International Society for Infectious Diseases, a nonprofit professional organization with 20,000 members worldwide.

Kitware, Inc.

Kitware, Inc. creates and supports leading edge, high quality software in the fields of computer vision, medical imaging, visualization, 3D data publishing, and technical software development. Kitware employs an open source development model to foster extended, collaborative communities, and an open source business model to provide flexible, low-cost technical solutions. The Company's services and products include technology integration, software support, consulting, custom application development, and training and productivity tools that leverage our open-source software systems.

B. Summary of Qualifications for PI and Key Personnel

Dr. Nicholas Preston (PI), Ph.D., is the Director of Data Science and Research Technology at EcoHealth Alliance. He has data science experience in ecology, health, and computing and expertise managing technical projects with emerging web technologies. The tools and systems he develops are used by the EcoHealth community to identify new pandemic and extinction threats and to set priorities for biosurveillance and conservation. His work builds upon his postdoctoral research on virtual laboratories for collaborative research, recent examples include the Global Repository for Infectious Diseases (GRID); EcoHealth Data (EcoHD); global threats visualizations with WebGL (WiggleMaps), and the Global Rapid Identification Tool System (GRITS). Dr. Preston and his team will contribute expertise in geospatial data and analysis of the ecological origins of infectious disease emergence and digital disease surveillance.

Dr. John Brownstein is an Associate Professor at Harvard Medical School and directs the Computational Epidemiology Group at Children's Hospital Informatics Program in Boston. His group is supported by a multi-million dollar budget with support from NIH (NLM and NIAID), USAID, Centers for Disease Control and Prevention, and Google.org. He has pioneered efforts in participatory epidemiology, using statistical and informatics approaches aimed at improving public health surveillance and practice. He recently was awarded the Presidential Early Career Award for Scientists and Engineers, the highest honor bestowed by the United States government to outstanding scientists and engineers.

Dr. Lawrence Madoff is an infectious disease physician whose career has been devoted to disease surveillance. Dr. Madoff is the Editor of ProMED-mail, which uses Internet-based communication and social media to detect and report emerging infectious diseases globally. He is currently Director of the Division of Epidemiology and Immunization at the Massachusetts Department of Public Health, which oversees infectious disease surveillance and immunization activities in the state. He is a fellow of the American College of Physicians and a Fellow of the Infectious Disease Society of America.

Dr. Jeff Baumes is a technical lead at Kitware Inc. He has significant expertise in information analysis and presentation. His contributions include novel graph clustering algorithms that allow cluster overlap, and algorithms for discovering subsets of individuals persistently connected over time. Over the last six years, he has been a major technical contributor to the open source Titan scalable analysis and visualization toolkit, which is an extension of the Visualization Toolkit to include informatics and information visualization capabilities. He has worked on projects in several fields surrounding Titan such as text analysis, bioinformatics, and social network analysis including funding from NSF, DOD, DOE, and NIH.

C. Summary of Facilities to Perform the Proposed Work

Facilities at EcoHealth Alliance (EHA)

EcoHealth Alliance (EHA) is a 501(c)(3) nonprofit organization that specializes in scientific research on the causes, origins, and spread of zoonotic emerging diseases. EHA scientists have been working on spatial modeling for over 15 years, and on modeling of infectious disease emergence and spread for over a decade. EHA is based in New York City with 10,000 square feet of office space including a meeting room and basic laboratory. A core administrative staff of 11 employees support EHA's scientific team (15 core scientists, 100+ field staff) and are

available for work on this project through foundation support. EHA is equipped with 25 networked PCs including ARRA funded International Live Meeting Video Conferencing facilities. EHA has access to multiple servers, server support, and all necessary software on Mac, Linux, and Windows operating systems. Additional computing power is acquired from commercial cloud providers to meet project needs.

EHA has an active program of staff development and this is reviewed and adjusted annually as part of each employee's evaluation process. Specific provisions are made for internal training and external training resources, tuition support programs via a partnership with Columbia University, and active support of staff to spend time in collaborators organizations. All early stage investigators are mentored to provide guidance in research practices, grant management, administration and project management. Financial support from EHA core funds are available to support external tuition, travel to conferences and to conduct joint research in collaborator's institutions. There is no obligation for teaching time at EHA and all research staff are funded for 100% research time, however, there is a provision, through partnership with Columbia University, to enable staff to teach at the undergraduate and graduate level, with monetary support provided by Columbia University. Administration and other staff are supported in their efforts to enhance their careers by the provision of tuition fees for external courses, travel funds for conferences, and time off their core activities.

Facilities at Kitware Inc.
Kitware Inc. is headquartered just north of Albany, New York in a Clifton Park office complex. Kitware rents approximately 27,000 square feet of office space at this location. Kitware also has an office in Chapel Hill, North Carolina approximately 6,200 square feet in size. Both offices are linked via a common virtual private network and a shared phone system, and share financial and administrative personnel. They also have on-site office managers, lunchrooms, private meeting rooms, and advanced conference facilities including large screen projection systems and whole-room Polycom video conferencing systems. The proposed work will be performed at the Clifton Park site.

Kitware has a mixed environment of personal and shared computing platforms. Employees average three computers per person (desktop, laptop, and/or home system), with each computer typically equipped with multiple multi-core processors, a high-performance graphics card, dual monitors, and 8GB or more of main memory. These personal systems run a mix of Windows, Mac OS X, and Linux operating systems. Shared resources include compilation and testing farms as well as workstations running a variety of alternative operating systems for testing purposes, e.g., Windows XP or Vista. Kitware also maintains several servers to provide public access to the open source VTK, ITK, TubeTK, Titan, Slicer, CMake, and ParaView systems; to host web pages and web services for open source communities such as NA-MIC and Visomics; to operate open-access journals such as the Insight Journal and the Midas journal which has hosted workshop papers for nearly ten years; and to provide access to massive collections of public data for computer vision and medical imaging algorithm evaluation. Access to these systems is provided by a fiber connection to the internet yielding a total of 100 Mbit/second data rate.

Kitware hosts several special-purpose, high-end workstations, GPU systems, haptic systems, and magnetic and optical trackers. One such workstation is a multi-GPU computer featuring 6 NVidia GPU boards: 5 C2050 Tesla and 1 Quadro 5000 Fermi, as well as a 6-Core X5680 3.33GHz processor. A noteworthy haptic system is a MBP Freedom 7S haptic device, configurable for 6 or 7 degrees of freedom. To address large-scale distributed computing, the company maintains several clusters for development and testing. The clusters include: a twelve node testing cluster running mixed Linux and Windows operating systems; a four node Windows cluster with a gigabit Ethernet network; and a seven node Linux cluster with dual 64-bit Xenon processors, high-end graphics accelerators, and an Infiniband network driving a 3x2 PowerWall display. Kitware also has access to several external computer systems (e.g. HP, IBM, and Intel) through various vendor partnership programs.

IV. WORK TO BE PERFORMED.

A. General

Our goal over the 3-year time period is to expand our DTRA-funded GRITS platform to deliver near-real-time disease diagnostics, decision support, and data processing. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data, and connected to our network of experts from One Health, EcoHealth, and open source communities.

We are currently building a robust and scalable software infrastructure to provide a diagnostic decision support system for analysts with multiplier effects by connecting to a community of experts and data from EcoHealth Alliance, HealthMap, and ProMED-mail. The final deliverable will include our user interface (GRITS.app), application interface (GRITS.api), network of experts (GRITS.net), media diagnostics (GRITS.md), and database (GRITS.db). Overall, GRITS will be deployable and generalized application that will output probabilities and lists of pathogens likely responsible for an outbreak on the basis of user-provided data. Accordingly, the resource will be adaptable to a specific organization or agency's needs or emerging threats, and geographic areas of high concern. The source code for this algorithm will be made available to interested parties for further development and adaptation.

The original Rapid Identification Tool (RIT) prototype was developed by manually extracting symptoms from encephalitides reports in ProMED-mail to train a diagnostic model. Through rigorous testing, we identified modeling approaches that improved performance by combining natural language processing and machine learning algorithms. We recognized automated data collection and crowdsourced data curation would be needed to scale to disease coverage and diagnose additional diseases with greater precision. The GRITS diagnostic dashboard provides decision support to experts at our partner organizations by automatically extracting and visualizing information from media. We leverage crowdsourcing techniques by providing experts with tools for curating disease portfolios and annotating articles. We have developed an application programming interface (API) for access to our data and diagnostics by third party developers and users. Additionally, we integrated the project with ongoing EHA initiatives to collect historical disease outbreak data (Global Repository for Infectious Diseases - GRID) and background data for the drivers of disease emergence (EcoHealth Data - EcoHD). Finally, we integrated work from our colleagues at Kitware to support the storage and visualization of the large, complex datasets being generated.

During the proposed contract period, we will improve the accuracy and robustness of the GRITS media diagnostics. We will design new visualizations for the diagnostic dashboard to allow users to gain additional insights into our data and tools; develop a near-real-time processing stack to enable our visualizations and diagnostics to use the latest information; gain additional advantages from our collective intelligence network by adding new mechanisms for experts to provide feedback and interact with our underlying data, rules, and algorithms; experiment with crowdsourcing as an additional source of training data and knowledge to further improve GRITS.md; and expand the capabilities of the system to provide decision support and recommendations to analysts.

By the end of the contract period GRITS will provide:

1. Robust architecture for near-real-time diagnostics and data processing
2. Interface from BSVE to GRITS with SDK
3. Healthmap, ProMED-mail, and EcoHealth data to the BSVE
4. Machine, expert, and community intelligence

Diagnostic modeling
We plan to use the biointelligence extracted from news media and submitted by GRITS users to form the basis of new relationships and entities within biological ontologies that link EID events, diseases, symptoms, hosts, and other entities and attributes related to infectious diseases together in a rich network structure. This ontology will be a critical data source for making domain specific inferences in diagnostic algorithms.

Data Storage and Management
Girder is a data management platform built to meet the needs of distributed, data-centric web applications. Girder is a modular framework that allows developers to build systems that use any or all of the components necessary to create a system tailored to their needs. All data sharing web applications need the same core functionality: upload, download, large data storage, supplemental metadata storage and indexing, authentication/authorization, a RESTful API, and an extensible plugin architecture. Girder provides these components and is currently being used for GRITS as well as several DOE projects.

Visualization
Tangelo is a system for rapid production of visual and interactive web applications. Using HTML5 standards such as SVG, WebGL, and 2D canvas, Tangelo integrates visualization modes spanning charts, hierarchical diagrams, and networks for time series, heterogeneous, or multivariate data. Tangelo provides interfaces to powerful visualization libraries such as GeoJS, ParaViewWeb, and D3.

B. Summary

Year 1 (2015)
1. Connect GRITS Girder database to the BSVE
2. Develop recommendation and decision support capabilities
3. Connect GRITS diagnostic and text-mining APIs to the BSVE
4. Prototype near-real-time processing
5. Build BSVE interface to GRITS with the SDK

6. Connect GRITS expert network (GRITS.net) to the BSVE
7. Test diagnostic dashboard with expert communities.

Year 2 (2016)

8. Enhance the expert annotation interface
9. Build mechanisms to crowdsource annotations
10. Incorporate disease network graphs to assist diagnostics
11. Support diagnostic algorithm development with dashboard
12. Expand diagnostic capability to arbitrary data feeds
13. Connect GRITS to GRID
14. Update diagnostic model in near-real-time
15. Use text mining to extend network graphs/ontologies.

Year 3 (2017)

16. Crowdsource improvements to the GRITS media diagnostic tool
17. Connect GRID's collective intelligence editor to the BSVE
18. Connect GRITS diagnostic data filtering to the BSVE
19. Enrich diagnostic dashboard with dynamic visualizations
20. Generate disease summary reports from diagnostics
21. Connect EcoHD to GRITS recommendations
22. Create a web-crawler for expanding coverage of disease reports
23. Forecast disease emergence

C. Detailed Tasks

Task 1: Connect GRITS Girder database to the BSVE
Description: Coordinate with BSVE developers to provide API access to GRITS database (HealthMap, ProMED and EcoHealth data with diagnostic metadata).
Resources: EcoHealth & Kitware (API, BSVE support), HealthMap & ProMED (data)
Metric(s) of success: BSVE access to GRITS data via API
Deliverable: API key and access for the BSVE team, communication between BSVE/GRITS
Subtasks:

1. Solicit feedback on GRITS data API from BSVE team
2. Create API key generation and assignment infrastructure for GRITS
3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API
5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities
Description: Use our GRITS.md to extract features of incoming articles to inform media recommendations for analysts based on areas or keywords of interest or a collection of documents being evaluated. Identify targets for data collection that would most enhance diagnostic capabilities for a particular event.
Resources: EcoHealth (algorithms and infrastructure), Kitware (storage & visualization), HealthMap & ProMED (testing)
Metrics of success: Recommendation system returns relevant articles, people and organizations. Adding recommended information improves diagnosis.

Deliverable: API and diagnostic dashboard interface to recommendations
Subtasks:

1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords
3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article
7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE
Description: Provide BSVE developers with API access to GRITS media diagnostics and text mining tools and support them as they integrate these features into the BSVE interface.
Resources: EcoHealth (API development, BSVE support)
Metrics of success: BSVE team satisfied with API structure. GRITS features and diagnoses accessible through BSVE.
Deliverable: API access for the BSVE team, communication between BSVE/GRITS.
Subtasks:

1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Prototype near-real-time processing
Description: Develop near-real-time architecture based on ideas from the lambda architecture, which allows high-performance integration of near-real-time streaming data with pre-processed data. Evaluate possible software tools for each component. Set up prototype of software stack.
Resources: EcoHealth & Kitware (architecture, software evaluation, prototyping)
Metrics of success: Working prototype
Deliverable: Documentation of software architecture and choices, working prototype
Subtasks:

1. Research lambda architecture
2. Develop near-real-time software architecture diagram and documentation
3. Evaluate options for near-real-time streaming data (e.g. Storm, Summingbird)
4. Evaluate options for pre-processing data (e.g. MapReduce, Spark)
5. Evaluate options for automated polling (e.g. Huginn, Luigi, Celery)
6. Investigate adaptive polling algorithms
7. Build prototype of near-real-time software architecture

Task 5: Build BSVE interface to GRITS with the SDK
Description: Build an app on the BSVE SDK that allows BSVE users to submit text to diagnose. The app will display a basic visualization of a diagnosis, and provide links to diagnostic dashboards where users can see additional visualizations and interact further with GRITS diagnostic tools.
Resources: EcoHealth (app development & testing)
Metrics of success: Users able to access GRITS through app deployed to BSVE
Deliverable: Deployed app, BSVE users able to access diagnostic dashboards
Subtasks:

1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy app

Task 6: Connect GRITS expert network (GRITS.net) to the BSVE
Description: GRITS is a bridge to experts from ProMED, HealthMap and EcoHealth. Two-way communication will benefit both BSVE and GRITS. We will develop mechanisms for BSVE users to submit requests for language, region, and diagnostic feedback, while allowing experts and organizations to opt-in and set availability to handle requests.
Resources: EcoHealth (experts and interface), ProMED and HealthMap (expertise)
Metrics of success: BSVE user can submit request to a GRITS expert. Language, region, and diagnostic expertise is available to DTRA and BSVE users.
Deliverable: BSVE interface through GRITS app to submit requests to experts
Subtasks:

1. Evaluate needs of BSVE users for expert feedback
2. Develop a messaging service to expert network
3. Design interface for posting requests and submitting materials
4. Tie messaging system into existing GRITS partner dashboards and routing

Task 7: Test diagnostic dashboard with expert communities
Description: Give ProMED and HealthMap editors access to the diagnostic dashboard to test on relevant articles they encounter and incorporate their feedback.
Resources: EcoHealth (documentation, support), HealthMap & ProMED (testing)
Metrics of success: ease of use for editors, feedback obtained through the dashboard
Deliverable: write-up of feedback from editors
Subtasks:

1. Enhance and test dashboard UI for providing feedback
2. Write documentation of dashboard and provide to ProMED and HealthMap
3. Have editors test annotation dashboard and summarize their feedback
4. Incorporate changes or develop plan to make changes later

Task 8: Enhance the expert annotation interface
Description: Obtain feedback from experts on the annotation interface. Incorporate changes and add feedback mechanisms so that users can correct auto-generated annotations.
Resources: EcoHealth (annotation interface), HealthMap & ProMED (testing)
Metrics of success: ease of use for editors, feedback obtained
Deliverable: write-up of feedback from experts
Subtasks:

1. Write documentation of annotation interface and provide to experts
2. Have editors test annotation interface and summarize their feedback
3. Incorporate changes or develop plan to make changes later
4. Develop new forms of annotation that are less error prone and better inform text-mining and diagnostic algorithms.

Task 9: Build mechanisms to crowdsource annotations

Description: Identify human intelligence annotation tasks for crowdsourcing by citizen scientists and Amazon's Mechanical Turk
Resources: EcoHealth (annotation interface), Mechanical Turk (pay for annotations), Citizen Scientists (volunteers)
Metrics of success: Annotations crowdsourced. Improves diagnostics from annotations.
Deliverable: Crowdsourced annotations incorporated into GRITS training data
Subtasks:

1. Develop infrastructure to identify and assign annotation tasks
2. Integrate annotation interface into Mechanical Turk or similar platform
3. Integrate and deploy citizen science platform
4. Evaluate obtained annotations and report on quality (e.g. inter-annotator agreement)

Task 10: Incorporate disease network graphs to assist diagnostics
Description: Model the geographic, ecological, and information structure of infectious disease networks and connect them to diagnostic API. Develop visualizations for diagnostic dashboard.
Resources: EcoHealth & Kitware (network modeling, visualization)
Metrics of success: Improved diagnostics from network reasoning
Deliverable: Visualizations of the network model in the diagnostic dashboard
Subtasks:

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blind spots' in the information network

Task 11: Support diagnostic algorithm development with dashboard
Description: Support multiple models for diagnosis, and continually reevaluate their effectiveness. Different algorithms may perform differently with time, origin, or diseases. Allow users to run and compare the results of different models via the diagnostic dashboard. Run automated jobs to compare the performance of models over time.
Resources: EcoHealth & Kitware (algorithm and interface development)
Metrics of success: Run and compare models from the dashboard
Deliverable: Capacity to compare model performance in the dashboard
Subtasks:

1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 12: Expand diagnostic capability to arbitrary data feeds
Description: Develop robust scraping algorithms and provide an interface for users to connect data sources to GRITS.
Resources: EcoHealth (algorithms), Language translation service
Metrics of success: Users can submit relevant feeds to the GRITS system
Deliverable: Interface for submitting data feeds
Subtasks:

1. Build a submission interface for users to submit arbitrary feed

2. Integrate article processing pipeline with a translation service to process non-English articles in near-real-time.

Task 13: Connect GRITS to GRID
Description: Incorporate GRID dataset into GRITS to give the platform a comprehensive historical perspective on EIDs and enhance analytic capabilities around drivers of disease behavior. Extend the recommendation system to include historic context from GRID (e.g. media and data). Use historic event data to expand to match targets for a disease or keyword.
Resources: EcoHealth (recommendation system, GRID)
Metrics of success: Diagnostic decision support enriched by **historic event data**
Deliverable: Improved recommendation system, match new reports with historic events
Subtasks:
1. Evaluate existing GRID API against needs of recommendation system
2. Develop capacity of GRID API to deliver historic event matches
3. Recommend GRID events (e.g. current event is similar to past outbreak)
4. Use GRID media to improve diagnostics and recommendation quality
5. Match GRITS data to events in GRID (expanding from EIDs to all outbreaks)

Task 14: Update diagnostic model in near-real-time
Description: Retrain the classifier with new reports from HealthMap/ProMED or users submissions. Classify labeled training data with GRITS, for example correcting misclassification. Investigate classifiers capable of distributed training or incremental retraining.
Resources: EcoHealth (algorithm and architecture development)
Metrics of success: Model updates improve performance. Near-real-time classifier updates.
Deliverable: Enhanced classification infrastructure, retraining interface
Subtasks:
1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 15: Use text mining to extend network graphs/ontologies
Description: Use features extracted from disease reports to add entities and relationships to a disease network ontology. For example, linking case counts to locations.
Resources: EcoHealth (feature extraction and ontologies)
Metrics of success: Accuracy of entities and relationships extracted from our data sources.
Deliverable: An extended ontology generated by text-mining algorithms
Subtasks:
1. Infer set of subjects (e.g. EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g. viral strains that have mutated or developed antibiotic resistance).

Task 16: Crowdsource improvements to the GRITS media diagnostic tool
Description: Sponsor public challenges (e.g. Kaggle) to solicit improvements to the GRITS media diagnostic by training better classifiers or by submitting additional training data.
Resources: EcoHealth & Kitware (challenge planning and execution)

Metrics of success: User submits an improvement with better performance (e.g. higher f-score)
Deliverable: Improved diagnostic tool from crowdsourced algorithms.
Subtasks:

1. Evaluate challenge platforms
2. Create a subset of data for crowdsourcing
3. Open source a base classifier example
4. Create challenge on selected platform
5. Publicize and run challenge

Task 17: Connect GRID collective intelligence editor to the BSVE
Description: Incorporate BSVE users as experts for the review and editing GRID events
Resources: EcoHealth (GRID)
Metrics of success: BSVE users contribute to GRID. Diagnostic models improve from GRID data. Additional features are extracted based on GRID data.
Deliverable: BSVE/GRITS access to GRID, improved diagnostics and feature extraction
Subtasks:

1. Evaluate and implement changes to GRID API for of GRITS diagnostic needs
2. Generate keywords and rules from GRID data to incorporate into GRITS text mining
3. Incorporate GRID data into diagnostic model training
4. Design user interface for expert review and editing of GRID events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with GRID

Task 18: Connect GRITS diagnostic data filtering to the BSVE
Description: Use diagnostics to reduce data volume to relevant reports. Users should be able to list diseases or regions of interest.
Resources: EcoHealth (GRITS integration), Kitware (data filtering)
Metrics of success: GRITS will return a subset of related assets
Subtasks:

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 19: Enrich diagnostic dashboard with dynamic visualizations
Description: Add dynamic Tangelo visualizations, including interactive dendrogram views of likely diseases, multidimensional visualization of report space, and flexible geovisualizations with interactive vector graphics for high-performance imagery and dense data.
Resources: EcoHealth (GRITS integration), Kitware (visualizations)
Metrics of success: Visualizations enrich expert decisions on diagnosis
Subtasks:

1. Develop dendrogram visualization
2. Develop multidimensional visualizations
3. Develop flexible geovisualizations

Task 20: Generate disease summary reports from diagnostics
Description: Aggregate the data collected by text-mining and diagnostic algorithms to give an meta overview of a collection of reports or disease outbreak.

Resources: EcoHealth (algorithms and reporting)
Metrics of success: Number of visits per unique user to the summary report website
Deliverable: API returns summary reports to diagnostic dashboard and BSVE
Subtasks:

1. Create algorithms for generating statistics (e.g. case counts) and visualizations (e.g. epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 21: Connect EcoHD to GRITS recommendations
Description: Extend the recommendation system to include data sources from EcoHD.
Resources: EcoHealth (recommendation system, EcoHD)
Metrics of success: API returns data layers that are relevant for decision support
Deliverable: EcoHD data for drivers of infectious disease
Subtasks:

1. Evaluate existing EcoHD API against needs of recommendation system
2. Implement changes to EcoHD API
3. Use tags or metadata to identify relevance of EcoHD data sources

Task 22: Create a web-crawler for expanding coverage of disease reports
Description: GRITS data is biased to English language sources and OECD countries. Create a robust web-crawler to broaden sources data and provide an interface for users to submit links.
Resources: EcoHealth (web crawler), HealthMap & ProMED (media expertise)
Metrics of success: Webcrawler finds and retrieves relevant media
Deliverable: Webcrawler service that submits articles to GRITS.db
Subtasks:

1. Build a web crawler for DTRA priority infectious diseases
2. Build a submission interface for users to submic urls
3. Test and evaluate and web crawler and global coverage
4. Close the loop with data partners by sharing new resources through API

Task 23: Forecast disease emergence
Description: EHA are experts in disease hotspot mapping. Use GRITS.db and GRITS.md to iidentify diseases that pose the greatest threat. Use case-counts and data from historical epi curves to model probable epi curves for new diseases
Resources: EcoHealth (hotspots modeling)
Metrics of success: The cumulative difference between the actual epi curve and predicted curve. Identify hotspots for disease emergence based on diagnostics.
Deliverable: Return geocoded hotspots via API for visualization on BSVE
Subtasks:

1. Build a mathematical model of of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

Maintenance Plan

- Support the Global Rapid Identification Tool System (GRITS) on the cloud
- Develop a software process infrastructure for the GRITS developer community
- Build a robust server network to ensure uptime of the GRITS platform
- Develop a test suite to identify issues and ensure compatibility with the BSVE

- Develop user and developer documentation for the platform
- Maintain the software via a ticketing system.

V. Performance of Work

Year 1			
Q1	Q2	Q3	Q4

Connect GRITS Girder database to the BSVE

Develop recommendation and decision support capabilities

Connect GRITS diagnostic and text-mining APIs to the BSVE

Prototype near-real-time processing

Build BSVE interface to GRITS with the SDK

Connect GRITS expert network (GRITS.net) to the BSVE

Test diagnostic dashboard with expert communities.

Year 2			
Q1	Q2	Q3	Q4

Enhance the expert annotation interface

Build mechanisms to crowdsource annotations

Incorporate disease network graphs to assist diagnostics

Support diagnostic algorithm development with dashboard

Expand diagnostic capability to arbitrary data feeds

Connect GRITS to GRID

Update diagnostic model in near-real-time

Use text mining to extend network graphs/ontologies.

Year 3			
Q1	Q2	Q3	Q4

Crowdsource improvements to the GRITS media diagnostic tool

Connect GRID's collective intelligence editor to the BSVE

Connect GRITS diagnostic data filtering to the BSVE

Enrich diagnostic dashboard with dynamic visualizations

Generate disease summary reports from diagnostics

Connect EcoHD to GRITS recommendations

Create a web-crawler for expanding coverage of disease reports

Forecast disease emergence

Global Rapid Identification Tool System (GRITS)
Budget Justification

February 1, 2015 - January 31, 2018

Year 1

Direct Labor

Senior personnel
For this three-year budget period, the P.I., Dr. Nicholas Preston, will commit 75% time as the lead for all research by EcoHealth Alliance and partners on this project. Dr. Preston is the Director of Data Science and Research Technology (DART) at EcoHealth Alliance. His salary adjustment is being negotiated with our Board of Directors to reflect his experience and additional responsibilities at the organization. Dr. Preston will directly supervise the team of researchers, data scientists, and developers, as well as coordinate code integration, software development, reporting, research, scientific data management, and modeling efforts.

Other Personnel
We request **$525,220.80** in direct labor costs to accommodate hours devoted to the project. The positions and labor rates in the cost proposal comprise the experience and skills needed to realize the work outlined in the statement of work (SOW), including data management, infectious disease expertise, mathematical modeling, software development, natural language processing, computational linguistics, machine learning, technical writing, coordination with partner organizations, and web development.

Fringe benefits
Fringe benefits are calculated for EcoHealth Alliance as 32.3% of 12-month base salary.

Our direct labor costs including fringe total **$694,867.12**.

Other Direct Costs

Travel

We request **$1,193** to fund 2 visits (1 person x 1 night) for the Principal Investigator **to meet with the team members from HealthMap and ProMed Mail in Boston, MA**. Travel is calculated for 2 trips x (1 person x ((round trip airfare [$200]) + (2 travel days x [Meals and Incidentals ($53.25)]) + (1 night x [Hotel ($230)]))). The remaining $60 for each trip is budgeted for public transportation or cab service to and from the airport, and in Boston if necessary.

The Kitware teams are in two distinct locations. The database team is in Carrboro, NC while the visualization team is in Clifton Park, NY.

We request **$914** to fund 2 visits (1 person x 1 night) for the Principal Investigator **to meet with**

the database team members at Kitware's office in Carrboro, NC. Travel is calculated for 2 trips x (1 person x ((round trip airfare [$221]) + (2 travel days x [Meals and Incidentals ($42)]) + (1 night x [Hotel ($92)]))). The remaining $60 for each trip is budgeted for public transportation or cab service to and from the airport, and in Carrboro if necessary.

We request **$1,450** to fund 2 visits (2 people x 1 night) for the Principal Investigator and the Lead Developer **to meet with the visualization team members at Kitware's Clifton Park office outside of Albany, NY**. Travel is calculated for 2 trips x (2 people x ((round trip train [$100]) + (2 travel days x [Meals and Incidentals ($45.75)]) + (1 night x [Hotel ($111)]))). The remaining $60 is budgeted for each person for each trip for public transportation or cab service to and from the airport, and in Albany if necessary.

We request **$2,802** to fund 2 visits (2 people x 1 night) for the Principal Investigator and the Lead Developer **to meet with the DTRA Contract Officers and BSVE team in the DC area**. Travel is calculated for 2 trips x (2 people x ((round trip airfare [$250]) + (2 travel days x [Meals and Incidentals ($53.25)]) + (1 night x [Hotel ($224)]))). The remaining $120 for each trip is budgeted for each person for two (2) trips to and from the airport in New York City, as well as public transportation or cab service in Washington D.C.

Additional funds of **$3,707** are requested for one trip (2 people x 4 nights) for the PI and the Lead Developer **to attend the Digital Disease Detection Conference hosted by HealthMap**. This conference was hosted in San Francisco, CA in 2013, and we are using estimates from that trip to propose costs for the 2015 conference. This is the premier conference for the emerging field of digital disease detection. This meeting will provide the opportunity to showcase our work and interact with relevant peer networks. Travel is calculated for 1 trips x (2 people x ((round trip airfare [$500]) + (2 person x (3 days x [Meals and Incidentals ($71)])) + (2 person x (2 travel days x [Meals and Incidentals ($53.25)])) + (2 person x (4 nights x [Hotel ($226)])))). $260 is budgeted for transportation for two people, including two (2) trips to and from the airport for both, as well as public transportation or cab service during the conference.

Travel costs for Year 1 total $10,066.

All **Hotel and Meals & Incidentals** are calculated using FY2014 estimates in accordance with US Government Federal *per diem* regulations. The airfare or train fares are a calculated average of trips to the area during the specific time of year.

Materials and Equipment

We request **$18,360 (total)** for Materials and Equipment.

We have budgeted **$12,000** for commercial cloud processing for modeling, data analysis, and software development. Amazon Web Services (AWS) expenses listed in our budget are for three (3) accounts (approx. $333/mo for 12 months) for research, development, and testing.

These expenses reflect the computing time and resources needed by our developers to fulfill the tasks in the SOW, primarily the cost of processing high-volume, near-real-time data. AWS was selected as a sole source provider due to specific expertise. AWS is the world leader in cloud computing. AWS offers the full range of cloud computing tools, including virtual machines, storage, high performance computing, monitoring, virtual private networking, and databases. AWS has organization-wide Federal Information Security Management Act (FISMA) moderate level security certification, and has undergone multiple independent U.S. government security audit procedures.

We have budgeted an additional **$2,400** for purchasing additional global datasets; all other data will be derived from the public domain to share with DTRA. Additional data purchases will be contingent on the priority diseases and regions identified in consultation with DTRA COR (SOW 3.1) and will be made in compliance with our purchasing policies (see Pricing Integrity below).

$3,960 for computer supplies, which includes two (2) new Apple 13" Macbook Air laptops. These are priced at $1,981 each (past purchase cost $1,757 each, not including warranty). The additional hardware is necessary to ensure replacement equipment for EHA personnel and support efforts to complete the tasks outlined in the Statement of Work. Hardware purchases will be made in compliance with our purchasing policies, see Pricing Integrity (below).

Services

We request an additional **$2,400** ($200 per month) for code hosting with Github (Platinum) to maintain code hosting capabilities.

We also request **$1,881.48** ($156.79 per month) for data hosting services. This total includes $19.99 per month for Dropbox, and $5.99 per month for maintenance of off-site data backup and archival with CrashPlan (by Code 42), a competitively priced service with one of the world's most efficient cloud storage systems. The data hosting services also includes $70.00 per month for Google Cloud apps, which we use for all of our business software needs. This is a low-cost solution for real-time editing, document storage, video conferencing, presentations, and data entry. The Google Cloud protects our team from data loss and facilitates collaboration. These costs also include $46.81 per month for reference materials through the Safari bookshelf online electronic reference library. This service provides access to 34,000 technical titles on the latest technologies. The virtual nature of the service increases access and reduces cost. Finally, the monthly costs for data hosting include approximately $14 per month for a security certificate for a wildcard domain. This is priced at $160 per year, which breaks down to approximately $14 per month.

These code and data services facilitate rapid collaboration and ensure the resilience of the code through constant snapshots, secure hosting, version control, and routine backups. Dropbox and Github are sole-source as specific tools that are best in class and competitively priced. Both services are irreplaceable components of our workflow at EHA. The tools are compatible with

other ongoing projects for which there are no cheaper alternatives. The services are tied into our software process to ensure code integrity and to easily contribute resources from our code repositories and integrate updates from other projects. Our code is managed with Git version control for which Github is the leading commercial hosting service with instant collaboration in private and secure repositories. Dropbox is a secure cloud-based file sharing and backup service in use by over 2 million businesses. Additional information on the professional services selection process is provided in Pricing Integrity (below).

Other Expenses

We request **$5,000** in additional expenses. These costs are program specific and are not shared through the organization's indirect cost rate.

$500 is requested to support two all-day meetings with the partners at the EcoHealth Alliance offices in NYC. Meetings will begin at the opening of business, requiring overnight accommodation for our subcontractors. These costs cover printing, copying, additional support for meeting materials, conference line and room usage, and other supplies to enhance partner collaboration.

$4,500 is requested for two (2) publication fees. Our total is calculated from the average publication fee for PLOS (Public Library of Science) journals ($2,250 per publication).

Subcontracts

Funds are requested to support our subcontractors in their efforts to complete the tasks outlined in the Statement of Work. They are the same subcontractors with whom we have worked on the DTRA-funded GRITS platform.

Kitware Inc.

We request **$505,032.58** to Kitware Inc. for technical expertise in machine learning, text analysis, software development, data management, and data visualization. This covers approximately 835 labor hours for Jeff Baumes and Patrick Reynolds, and 1182 hours of work each for two (2) R&D Engineers. They also request travel funds for two trips (2 people, 1 night) to NYC to meet with GRIT partners at the EcoHealth Alliance offices, and two trips (2 people, 1 night) to Washington, DC to accompany the PI in meeting with DTRA Contract Officers. These costs include 82.8% Overhead and 38.4% General and Administrative costs, the latter of which is taken from the total of direct costs and overhead costs. They request a seven percent fee, which is standard for Kitware's cost reimbursement contracts. Unlike other contracts that have fully burdened rates that incorporate individuals' actual costs, indirect costs, and profit, the profit fee is added separately in cost reimbursement contracts. The total costs are $186,562.06 (direct) and $285,431.00 (indirect and G&A), and $33,039.51 (fee).

Epidemico

We request **$395,659.00** to Epidemico for expertise in digital disease surveillance, disease reporting expertise, disease modeling, as well as news and social media analysis. Epidemico is

a spinoff from Boston Children's Hospital, Harvard Medical School, and MIT that specializes in health data collection and analytics. The subcontract will cover salary for Dr. Brownstein, Clark Freifeld, a software programmer, a software developer, a project manager, and a data curator. They also request travel funds for two trips (2 people, 1 night) to NYC to meet with GRIT partners at the EcoHealth Alliance offices, and two trips (2 people, 1 night) to Washington, DC to accompany the PI in meeting with DTRA Contract Officers. Also included is a $10,000 HealthMap data license fee. These costs are supplemented by a 10% indirect cost rate. The total costs are $359,690.00 (direct) and $35,969.00 (indirect).

International Society for Infectious Diseases (ISID)
We request **$128,079.63** to ISID for disease reports, data collection, report moderating, and surveillance expertise. The subcontract will cover salary for Larry Madoff, Editor, and the IT Manager at ProMed-mail. Additional funds will support three (3) Editors who will devote time to the project and generate data. They also request travel funds for two trips (2 people, 1 night) to NYC to meet with GRIT partners at the EcoHealth Alliance offices, and two trips (2 people, 1 night) to Washington, DC to accompany the PI in meeting with DTRA Contract Officers. These costs are supplemented by an indirect rate of 15%. The total costs are $111,373.59 (direct) and $16,706.04 (indirect).

Indirect Costs
EcoHealth Alliance maintains efficient support logistics with a federally-approved overhead rate. We are requesting a low federally-agreed indirect rate of 44.1% on all direct costs. As per our Indirect Cost Rate agreement, we have applied our overhead rate only to the first $25,000 of each individual subcontract.

Total EcoHealth Alliance budgeted direct costs: $1,761,345.81
Total EcoHealth Alliance budgeted modified direct costs: $807,574.60
Total EcoHealth Alliance budgeted indirect costs: $356,140.40
Total EcoHealth Alliance budgeted costs: $2,117,486.21

Year 2 and Year 3

The justification for Year 1 applies to Year 2 and 3 with the following modifications.

Direct Labor

Senior personnel
Salary for Dr. Preston (PI) is increased by 3% in Year 2 and 3, which is the federally agreed rate increase.

Other Personnel
All salaries are increased by 3% in Year 2 and 3, which is the federally agreed rate increase.

Fringe benefits
Fringe benefits are increased at a rate of .5% per year. For Year 2, EcoHealth Alliance has determined a rate of 32.8% of 12-month base salary. For Year 3, the determined rate is 33.3% of 12-month base salary.

Other Direct Costs

Travel
Travel estimates for trips to DC are increased by 3% in Year 2 and 3 in anticipation of higher travel costs.

Travel estimates for trips to Boston, Carrboro, and Albany to visit GRITS partners are increased by 3% in Year 2 and 3 in anticipation of higher travel costs.

All Hotel and Meals & Incidentals are calculated using the available FY2014 estimates in accordance with US Government Federal per diem regulations.

Materials and Equipment
No increases in costs in Year 2 and 3

Services
No increase in costs in Year 2 and 3.

Other Expenses
No increase in previously-budgeted costs in Year 2 and 3.

An additional **$550** is requested in both Year 2 and Year 3 for future recruiting costs. For each year, these costs include a $350 job posting fee on Stack Overflow, $100 for business cards, and $100 to support a candidate presentation at the EHA offices to meet with fellow EHA staff (includes food, copying and printing materials, etc..). These costs are necessary to target and hire experienced candidates that can add to the robust data science, software development, and research team.

Subcontracts
Salaries and travel costs increased by 3% or less.

Indirect Costs
We are requesting a low federally agreed indirect cost of 44.1% on all direct costs. EcoHealth Alliance maintains efficient support logistics with a federally approved overhead rate. As per our Indirect Cost Rate agreement, we have applied our overhead rate only to the first $25,000 of each individual subcontract.

Year 2

Total EcoHealth Alliance budgeted direct costs: $1,812,463.61
Total EcoHealth Alliance budgeted modified direct costs: $828,159.27
Total EcoHealth Alliance budgeted indirect costs: $365,218.24
Total EcoHealth Alliance budgeted costs: $2,177,681.85

Year 3

Total EcoHealth Alliance budgeted direct costs: $1,868,447.81
Total EcoHealth Alliance budgeted modified direct costs: $852,694.34
Total EcoHealth Alliance budgeted indirect costs: $376,038.20
Total EcoHealth Alliance budgeted costs: $2,244,486.02

Pricing integrity & Contractual services

Independent Contractors:

Professional services

Contracts may be entered into for professional services such as legal services, audit and accounting services, public relations services, technology services, and other services requiring specialized expertise. Contracts greater than $5,000 must be competitively bid, with a minimum of three (3) bids. In unusual situations where the expertise is extremely specific, a sole source may be chosen, and must be preapproved by the CFO.

Contracts may be drafted by EHA or the service provider, and must include name, address, complete contact information of provider, scope of work, identification of deliverables, timeframe for performance, payment terms, provision for termination and other information specified in the EHA standard contract form.

Costs are reviewed among competing bids, and by review of industry standards.

Professional Services contracts are approved by the CFO.

Consultants

Contracts may be entered into for consulting services to carry out specialized work on our behalf. Consultants are used either for specialized expertise not existing on staff, or to accelerate the completion of approved work. Contracts greater than $5,000 must be competitively bid, with a minimum of 3 bids. In unusual situations where the expertise is extremely specific, a sole source may be chose, and must be preapproved by the CFO.

Costs are reviewed among competing bids, and by review of industry standards.

Contracts may be drafted by EHA or the service provider, and must include name, address, complete contact information of provider, scope of work, identification of deliverables, timeframe for performance, payment terms, provision for termination and other information specified in the EHA standard contract form.

Consultant contracts are approved by the President of the organization.

Subcontractors and Subrecipients

Subcontracts may be entered into to support work funded under various federal prime awards, subcontracts from Prime Contractors having federal awards or with private entities. Subrecipients are subcontractors that are specifically named in a federal award. The selection process for subcontracts and subrecipients are as follows:

Senior scientists survey and interview institutions and individuals recommended by our science staff, colleagues, industry groups, funders and, for in-country partner recommendations, local, regional and national governments and institutions. Site visits are made as necessary, particularly for partners with whom we have not worked previously, to assess their capacity and their local relationships. Extensive review including CV's of principal investigators and their staff, administrative capacity, annual report and audit report reviews, indirect cost rate review, history of the institution

Costs are evaluated based on reasonableness, location of the work to be done, and the specific expertise needed for the funded work. Sub-Contracts are drafted by EHA, and must include name, address, complete contact information of provider, scope of work, identification of deliverables, timeframe for performance, payment terms, provision for termination and other information specified in the EHA standard contract form.

The prospective subcontractors reviewed among senior staff with a recommendation to the President for the decision.

Purchases

The Office manager is authorized to purchase supplies and equipment for the office and for computers for staff members. An office supply vendor is selected and reviewed annually. Selection is made based on competitive pricing for regularly purchased items, and quality of service. Purchases are made based on comparisons among online or physical catalogs.

Staff members may make purchases for items for their specific use, when the Office Manager cannot purchase them. Staff members must certify that the purchases are normal and reasonable costs.

Certificate of Current Cost or Pricing Data

This is to certify that, to the best of my knowledge and belief, the cost or pricing data (as defined in section 2.101 of the (FAR) and required under FAR subsection 15.403-4) submitted, either actually or by specific identification in writing, to the Contracting Officer or to the Contracting Officer's representative in support of Proposal No. HDTRA114-AMD1-CBA-03-2-0022 are accurate, complete, and current as of May 7, 2014. This certification includes the cost or pricing data supporting any advance agreements and forward pricing rate agreements between the offeror and the Government that are part of the proposal.

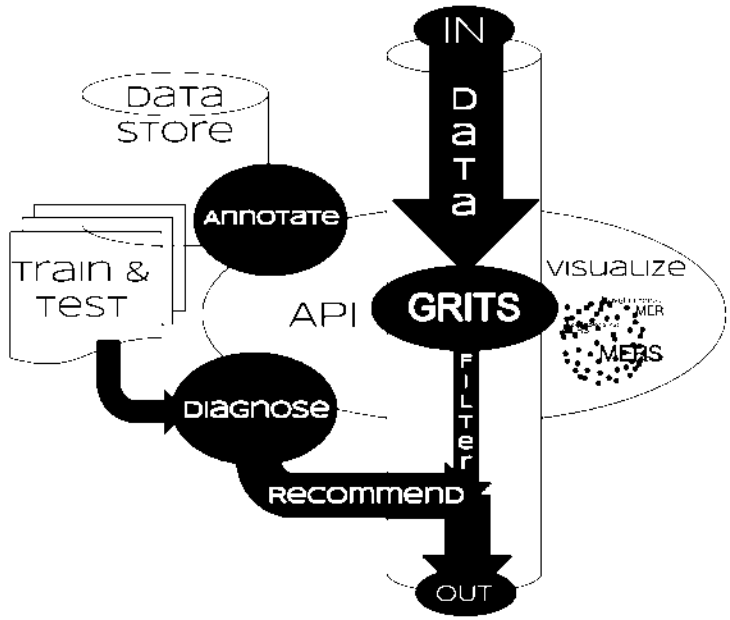
Global Rapid Identification Tool System (GRITS)
CBA-03, Dr. Nico Preston, EcoHealth Alliance

Objective Leverage the GRITS platform to deliver real-time disease diagnostics and data filtering to the BSVE, powered by GRITS analytics, visualizations, data, and experts from OneHealth, EcoHealth, and Open Source communities.

Description of effort We developed the GRITS diagnostic platform with support from DTRA and propose to connect the system with the BSVE, as follows:
- Develop app with SDK to connect BSVE and GRITS
- Scale GRITS to return near-real-time diagnostics
- Process, store, and deliver expert, collective, and machine annotated disease reports
- Integrate our network of EcoHealth and One Health scientists to collectively curate data for the BSVE
- Leverage diagnostics to filter and recommend data to BSVE
- Expand and integrate diagnostic visualizations in the BSVE



Benefits of proposed technology
-Early warning of microbial threats
-Filtering to increase data feed relevance for analysts -Near-real-time differential diagnosis
-Enhanced decision support and data processing for BSVE
-Improved visualization through reactive web technology
-Increased network of experts and collective intelligence
Challenges Limitations of early reporting for symptom based diagnosis, variations in natural language by data source, language translation and bias, and scale of big data.
Maturity of technology TRL 6
Research Area CBA-03 Next Generation Analytic Capabilities for BSV - TA 1 (Chemical/Biological)

Major goals
- BSVE interface to GRITS developed with SDK
- Near-real-time disease diagnostic capabilities
- Network of experts connected to BSVE via GRITS
- Big data search, filtering, and recommendation powered by GRITS diagnostic tools

Cost $2.1M per annum

Period of Performance 36 months

Contact Information Dr. Nico Preston; +1-212-380-4473

Global Rapid Identification Tool System (GRITS)
Statement of Work
May 7, 2014

1.0 - Objective:

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) for diagnosing infectious disease bioevents. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to pinpoint and identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. We propose scaling this system to handle large data volumes in near-real-time, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor live data feeds for diseases or disease characteristics of interest. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data, all connected to our network of experts from digital surveillance and open source communities.

2.0 - Scope:

The **technology areas** to be investigated are mathematical disease models, disease detection, web data mining, scientific application development, digital surveillance, and information storage and retrieval.

The **primary objective** is to deliver an application that facilitates rapid, high probability diagnosis of outbreaks to pinpoint disease threats more rapidly than current public health systems and diagnostics.

Major milestones:

1. Build BSVE interface to GRITS with the SDK
2. Build mechanisms to crowdsource annotations
3. Expand diagnostic capability to arbitrary data feeds
4. Connect GRITS to GRID
5. Crowdsource improvements to the GRITS media diagnostic tool
6. Connect GRITS diagnostic data filtering to the BSVE
7. Enrich diagnostic dashboard with dynamic visualizations
8. Create a web-crawler for expanding coverage of disease reports
9. Forecast disease emergence

3.0 - Background:

This is an extension of a previously funded DTRA initiative. Relevant documents can be found in the references section of the technical proposal.

4.0 - Tasks/Technical Requirements:

Task 1: Connect GRITS Girder database to the BSVE (Year 1)

1. Solicit feedback on GRITS data API from BSVE team

2. Create API key generation and assignment infrastructure for GRITS
3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API
5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities

1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords
3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article
7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE

1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Prototype near-real-time processing

1. Research lambda architecture
2. Develop near-real-time software architecture diagram and documentation
3. Evaluate options for near-real-time streaming data (e.g. Storm, Summingbird)
4. Evaluate options for pre-processing data (e.g. MapReduce, Spark)
5. Evaluate options for automated polling (e.g. Huginn, Luigi, Celery)
6. Investigate adaptive polling algorithms
7. Build prototype of near-real-time software architecture

Task 5: Build BSVE interface to GRITS with the SDK

1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy app

Task 6: Connect GRITS expert network (GRITS.net) to the BSVE

1. Evaluate needs of BSVE users for expert feedback
2. Develop a messaging service to expert network
3. Design interface for posting requests and submitting materials
4. Tie messaging system into existing GRITS partner dashboards and routing

Task 7: Test diagnostic dashboard with expert communities

1. Enhance and test dashboard UI for providing feedback
2. Write documentation of dashboard and provide to ProMED and HealthMap
3. Have editors test annotation dashboard and summarize their feedback
4. Incorporate changes or develop plan to make changes later

Task 8: Enhance the expert annotation interface (Year 2)

1. Write documentation of annotation interface and provide to experts
2. Have editors test annotation interface and summarize their feedback
3. Incorporate changes or develop plan to make changes later
4. Develop new forms of annotation that are less error prone and better inform text-mining and diagnostic algorithms.

Task 9: Build mechanisms to crowdsource annotations

1. Develop infrastructure to identify and assign annotation tasks
2. Integrate annotation interface into Mechanical Turk or similar platform
3. Integrate and deploy citizen science platform
4. Evaluate obtained annotations and report on quality (e.g. inter-annotator agreement)

Task 10: Incorporate disease network graphs to assist diagnostics

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blindspots' in the information network

Task 11: Support diagnostic algorithm development with dashboard

1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 12: Expand diagnostic capability to arbitrary data feeds

1. Build a submission interface for users to submit arbitrary feed
2. Integrate article processing pipeline with a translation service to process non-English articles in near-real-time.

Task 13: Connect GRITS to GRID

1. Evaluate existing GRID API against needs of recommendation system
2. Develop capacity of GRID API to deliver historic event matches
3. Recommend GRID events (e.g. current event is similar to past outbreak)
4. Use GRID media to improve diagnostics and recommendation quality
5. Match GRITS data to events in GRID (expanding from EIDs to all outbreaks)

Task 14: Update diagnostic model in near-real-time

1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 15: Use text mining to extend network graphs/ontologies

1. Infer set of subjects (e.g. EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g. viral strains that have mutated or developed antibiotic resistance).

Task 16: Crowdsource improvements to the GRITS media diagnostic tool (Year 3)

1. Evaluate challenge platforms
2. Create a subset of data for crowdsourcing
3. Open source a base classifier example
4. Create challenge on selected platform
5. Publicize and run challenge

Task 17: Connect GRID collective intelligence editor to the BSVE

1. Evaluate and implement changes to GRID API for of GRITS diagnostic needs
2. Generate keywords and rules from GRID data to incorporate into GRITS text mining
3. Incorporate GRID data into diagnostic model training
4. Design user interface for expert review and editing of GRID events
5. Implement expert review and editing interface

6. Set up mechanism for registering and authenticating BSVE users with GRID

Task 18: Connect GRITS diagnostic data filtering to the BSVE

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 19: Enrich diagnostic dashboard with dynamic visualizations

1. Develop dendrogram visualization
2. Develop multidimensional visualizations
3. Develop flexible geovisualizations

Task 20: Generate disease summary reports from diagnostics

1. Create algorithms for generating statistics (e.g. case counts) and visualizations (e.g. epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 21: Connect EcoHD to GRITS recommendations

1. Evaluate existing EcoHD API against needs of recommendation system
2. Implement changes to EcoHD API
3. Use tags or metadata to identify relevance of EcoHD data sources

Task 22: Create a web-crawler for expanding coverage of disease reports

1. Build a web crawler for DTRA priority infectious diseases
2. Build a submission interface for users to submic urls
3. Test and evaluate and web crawler and global coverage
4. Close the loop with data partners by sharing new resources through API

Task 23: Forecast disease emergence

1. Build a mathematical model of of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

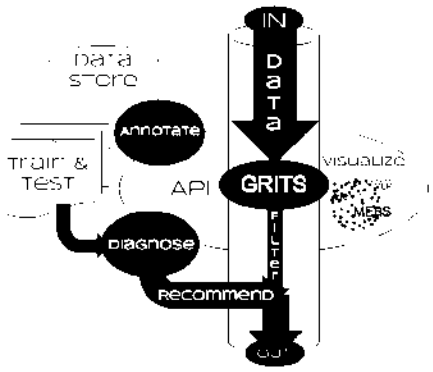
Volume III: Supplemental Information

Global Rapid Identification Tool System (GRITS)
CBA-03, Dr. Nico Preston, EcoHealth Alliance

Objective Leverage the GRITS platform to deliver real-time disease diagnostics and data filtering to the BSVE, powered by GRITS analytics, visualizations, data, and experts from OneHealth, EcoHealth, and Open Source communities.

Description of effort We developed the GRITS diagnostic platform with support from DTRA and propose to connect the system with the BSVE, as follows:
- Develop app with SDK to connect BSVE and GRITS
- Scale GRITS to return near-real-time diagnostics
- Process, store, and deliver expert, collective, and machine annotated disease reports
- Integrate our network of EcoHealth and One Health scientists to collectively curate data for the BSVE
- Leverage diagnostics to filter and recommend data to BSVE
- Expand and integrate diagnostic visualizations in the BSVE



Benefits of proposed technology
-Early warning of microbial threats
-Filtering to increase data feed relevance for analysts -Near-real-time differential diagnosis
-Enhanced decision support and data processing for BSVE
-Improved visualization through reactive web technology
-Increased network of experts and collective intelligence
Challenges Limitations of early reporting for symptom based diagnosis, variations in natural language by data source, language translation and bias, and scale of big data.
Maturity of technology TRL 6
Research Area CBA-03 Next Generation Analytic Capabilities for BSV - TA 1 (Chemical/Biological)

Major goals
- BSVE interface to GRITS developed with SDK
- Near-real-time disease diagnostic capabilities
- Network of experts connected to BSVE via GRITS
- Big data search, filtering, and recommendation powered by GRITS diagnostic tools

Cost $2.1M per annum

Period of Performance 36 months

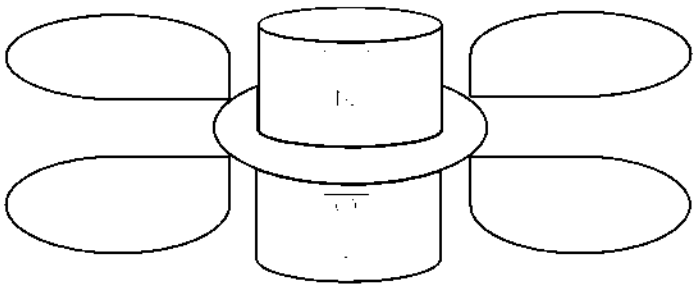
1) Updated White Paper

HDTRA1-14-CHEM-BIO-BAA
CBA-03 Next Generation Analytic Capabilities for BSV
"Global Rapid Identification Tool System (GRITS)" EcoHealth Alliance

Objective
EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) for diagnosing infectious disease bioevents. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to pinpoint and identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, previously developed with DTRA support, and expand it to deliver near-real-time disease diagnostics and data processing to the BSVE. These capabilities will be powered by GRITS analytics, visualizations, and data, and connected to a network of experts from One Health, EcoHealth, and Open Source communities.

Description of the Effort
The growth of data from both instrumentation and the web presents an emerging challenge to biosurveillance analysts. To tackle this, we are optimizing our surveillance efforts by taking a diagnostic approach to identifying disease threats, setting research priorities, and strategically deploying our field teams. GRITS is designed to ingest and process an unstructured data feed:



GRITS Data Processing:
- Mine (Extract)
- Diagnose (Identify)
- Recommend (Expand)
- Filter (Reduce)
- Connect (Relate)

Post-processing, GRITS returns a mined set of relevant data and words; a ranked differential diagnosis; a collection of recommended reports, historic events, and EcoHealth data; a filtered data subset informed by diagnostic targets; and connections to other bioevents and underlying network structures (e.g. geography, time, information, diseases, and environmental drivers).

We propose scaling this system to handle large data volumes in near-real-time, thereby allowing users of GRITS and the BSVE to monitor live data feeds for diseases, bioevents, or symptoms of interest. GRITS enhances traditional search with adaptive diagnostic models that are trained on data collections curated by our communities of experts and are capable of identifying documents of relevance to a disease of interest. These diagnostic filters reduce the complexity and increase the specificity of the data feed to an analyst's workflow. Additionally, this approach may be leveraged to identify unusual events and diagnostic gaps that may herald an emerging

infectious disease of unknown etiology.

GRITS diagnostic are trained on a broad spectrum of resources from partnerships with leading providers in the EcoHealth, One Health, and Open Source communities. Our network of experts includes ProMED-mail, HealthMap, Kitware Inc., and EcoHealth Alliance. To ensure diagnosis in the early stages of emergence, we blend social media, news media, and scientific literature, along with:

- **Collective intelligence:** crowdsourcing annotation and human intelligence tasks
- **Experts:** elicitation, consultation, and peer review
- **Automation**: data mining, machine learning, and natural language processing.

Through our Global Repository of Infectious Disease (GRID) project, EHA has curated media and data for historic bioevents. This is used to train the models with historic context to support both our Hotspot predictive modeling efforts and diagnostic capabilities. Lastly, our tools are integrated with our EcoHealth Data (EcoHD), a warehouse of global open source data, including climate, ecological, demographic datasets.

Benefits of the Proposed Technology

- Early warning of microbial threats
- Filtering to increase data feed relevance for analysts -Near-real-time differential diagnosis
- Enhanced decision support and data processing for BSVE
- Improved visualization through reactive web technology
- Increased network of experts and collective intelligence.

Technical Challenges

It is difficult to diagnose diseases in the early phase of an outbreak due to incomplete reporting. Natural language varies among news, scientific literature, and social media data sources. News aggregators have a strong western bias, resulting in media dark spots in hotspots of disease emergence. Open source media data has an English language bias, requiring non-latin character support and translation, and the volume of relevant data is continually increasing.

TRL of the technology: TRL 6

Major Goals/Milestones by fiscal year

Year 1 - Develop app (via SDK) to connect GRITS diagnostics and data to BSVE
Year 2 - Deploy near-real-time architecture to support live diagnostic dashboard in BSVE app
Year 3 - Integrate network of EcoHealth and One Health experts via BSVE app

2) Statement of Work

Global Rapid Identification Tool System (GRITS)
Statement of Work
May 7, 2014

1.0 - Objective:

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) for diagnosing infectious disease bioevents. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to pinpoint and identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. We propose scaling this system to handle large data volumes in near-real-time, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor live data feeds for diseases or disease characteristics of interest. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data, all connected to our network of experts from digital surveillance and open source communities.

2.0 - Scope:

The **technology areas** to be investigated are mathematical disease models, disease detection, web data mining, scientific application development, digital surveillance, and information storage and retrieval.

The **primary objective** is to deliver an application that facilitates rapid, high probability diagnosis of outbreaks to pinpoint disease threats more rapidly than current public health systems and diagnostics.

Major milestones:

1. Build BSVE interface to GRITS with the SDK
2. Build mechanisms to crowdsource annotations
3. Expand diagnostic capability to arbitrary data feeds
4. Connect GRITS to GRID
5. Crowdsource improvements to the GRITS media diagnostic tool
6. Connect GRITS diagnostic data filtering to the BSVE
7. Enrich diagnostic dashboard with dynamic visualizations
8. Create a web-crawler for expanding coverage of disease reports
9. Forecast disease emergence

3.0 - Background:

This is an extension of a previously funded DTRA initiative. Relevant documents can be found in the references section of the technical proposal.

4.0 - Tasks/Technical Requirements:

Task 1: Connect GRITS Girder database to the BSVE (Year 1)

1. Solicit feedback on GRITS data API from BSVE team
2. Create API key generation and assignment infrastructure for GRITS
3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API
5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities

1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords
3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article
7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE

1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Prototype near-real-time processing

1. Research lambda architecture
2. Develop near-real-time software architecture diagram and documentation
3. Evaluate options for near-real-time streaming data (e.g. Storm, Summingbird)
4. Evaluate options for pre-processing data (e.g. MapReduce, Spark)
5. Evaluate options for automated polling (e.g. Huginn, Luigi, Celery)
6. Investigate adaptive polling algorithms
7. Build prototype of near-real-time software architecture

Task 5: Build BSVE interface to GRITS with the SDK

1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy app

Task 6: Connect GRITS expert network (GRITS.net) to the BSVE

1. Evaluate needs of BSVE users for expert feedback
2. Develop a messaging service to expert network
3. Design interface for posting requests and submitting materials
4. Tie messaging system into existing GRITS partner dashboards and routing

Task 7: Test diagnostic dashboard with expert communities

1. Enhance and test dashboard UI for providing feedback
2. Write documentation of dashboard and provide to ProMED and HealthMap
3. Have editors test annotation dashboard and summarize their feedback
4. Incorporate changes or develop plan to make changes later

Task 8: Enhance the expert annotation interface (Year 2)

1. Write documentation of annotation interface and provide to experts

2. Have editors test annotation interface and summarize their feedback
3. Incorporate changes or develop plan to make changes later
4. Develop new forms of annotation that are less error prone and better inform text-mining and diagnostic algorithms.

Task 9: Build mechanisms to crowdsource annotations

1. Develop infrastructure to identify and assign annotation tasks
2. Integrate annotation interface into Mechanical Turk or similar platform
3. Integrate and deploy citizen science platform
4. Evaluate obtained annotations and report on quality (e.g. inter-annotator agreement)

Task 10: Incorporate disease network graphs to assist diagnostics

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blindspots' in the information network

Task 11: Support diagnostic algorithm development with dashboard

1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 12: Expand diagnostic capability to arbitrary data feeds

1. Build a submission interface for users to submit arbitrary feed
2. Integrate article processing pipeline with a translation service to process non-English articles in near-real-time.

Task 13: Connect GRITS to GRID

1. Evaluate existing GRID API against needs of recommendation system
2. Develop capacity of GRID API to deliver historic event matches
3. Recommend GRID events (e.g. current event is similar to past outbreak)
4. Use GRID media to improve diagnostics and recommendation quality
5. Match GRITS data to events in GRID (expanding from EIDs to all outbreaks)

Task 14: Update diagnostic model in near-real-time

1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 15: Use text mining to extend network graphs/ontologies

1. Infer set of subjects (e.g. EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g. viral strains that have mutated or developed antibiotic resistance).

Task 16: Crowdsource improvements to the GRITS media diagnostic tool (Year 3)

1. Evaluate challenge platforms
2. Create a subset of data for crowdsourcing
3. Open source a base classifier example
4. Create challenge on selected platform
5. Publicize and run challenge

Task 17: Connect GRID collective intelligence editor to the BSVE

1. Evaluate and implement changes to GRID API for of GRITS diagnostic needs

2. Generate keywords and rules from GRID data to incorporate into GRITS text mining
3. Incorporate GRID data into diagnostic model training
4. Design user interface for expert review and editing of GRID events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with GRID

Task 18: Connect GRITS diagnostic data filtering to the BSVE

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 19: Enrich diagnostic dashboard with dynamic visualizations

1. Develop dendrogram visualization
2. Develop multidimensional visualizations
3. Develop flexible geovisualizations

Task 20: Generate disease summary reports from diagnostics

1. Create algorithms for generating statistics (e.g. case counts) and visualizations (e.g. epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 21: Connect EcoHD to GRITS recommendations

1. Evaluate existing EcoHD API against needs of recommendation system
2. Implement changes to EcoHD API
3. Use tags or metadata to identify relevance of EcoHD data sources

Task 22: Create a web-crawler for expanding coverage of disease reports

1. Build a web crawler for DTRA priority infectious diseases
2. Build a submission interface for users to submic urls
3. Test and evaluate and web crawler and global coverage
4. Close the loop with data partners by sharing new resources through API

Task 23: Forecast disease emergence

1. Build a mathematical model of of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

5.0 - CDRLs/Other Deliverables:

Reports
- Monthly Status Reports (36)
- Monthly Cost Status Reports (36)
- Quarterly Status Reports (12)
- Final Report (1)
- Software Release Versions (V)
    - (V.4.7) - Robust Girder database backend (GRITS.db) and API access
    - (V.4.8) - Prototype GRITS event recommendations and filtering
    - (V.5.0) - Connect GRITS APIs to BSVE app
    - (V.5.1) - Connect GRITS.net to BSVE
    - (V.5.2) - Connect GRID event recommendations to API
    - (V.5.3) - Enhanced text mining and diagnostics

(V.5.4) - Crowdsourcing module for gathering additional training data
(V.5.5) - Web crawler that searches the web for EID reports
(V.5.6) - Disease forecast reports

- Miscellaneous data submissions:
  1. Feedback on diagnostic dashboard
  2. Crowdsourced labels and annotations
  3. EcoHD data for drivers of infectious disease
- Documentation:
  1. Documentation on near-real-time architecture
  2. Documentation for GRITS APIs

3) DUNS, TIN, & NAICS

DUNS: 077090066

TIN: 31-1726494

NAICS
541690: Other Scientific and Technical Consulting Services
541940: Veterinary Services
541990: All Other Professional, Scientific, and Technical Services
813312: Environment, Conservation and Wildlife Organizations

4) Letter of Intent from DoD or DoE Lab

This is not applicable to EcoHealth Alliance.

5) System for Award Management (SAM)

EcoHealth Alliance is registered in the SAM database and will keep its registration current for the life of the contract.

6) Certifications and Representations

The below provisions are not contained in the SAM database.

DFARS 252.203-7000 Requirements Relating to Compensation of Former DoD Officials.

DFARS 252.203-7005 Representation Relating to Compensation of Former DoD Officials.

DFARS 252.209-7997 Representation by Corporations Regarding an Unpaid Delinquent Tax Liability or a Felony Conviction Under Any Federal Law-DoD Appropriations (Deviation 2013-O0006)

EcoHealth Alliance acknowledges and understands each provision and will comply as necessary.

Regarding FAR 52.209-7, we are aware of this requirement and will comply as necessary.

Our SOW contains no proprietary data or restrictive markings, and if we are awarded a contract, we consent to the potential public release of our Statement of Work.

EcoHealth Alliance has no FFRDC sponsor.

EcoHealth Alliance is not a DoE FFRDC participant.

7) Human Subjects

No human subjects will be used so this is not applicable to our application.

8) Animal Use

No animal subjects will be used so this is not applicable to our application.

9) Biosurety, Select Agent and Chemical Agent Use: N/A

No select agents will be used so this is not applicable to our application.

10) Organizational Conflict of Interest Advisory

EcoHealth Alliance is currently under contract with the Defense Threat Reduction Agency/J4C, administered through the Office of Naval Research, (Contract No. HDTRA1-13-C-0029) until July 17, 2014.

11) Intellectual Property

There are no known patents, patent applications, or inventions which the Offeror may be required to license in order to perform the work described in the Offeror's proposal, or which the Government may be required to license to make or use the deliverables of the contract should the Offeror's proposal be selected for award.

12) List of Patents

There are no known patents, patent application, or inventions.

13) Data Rights Assertion List

The Offeror asserts for itself that the Government's rights to use, release, or disclose the following technical data or computer software is furnished without restrictions.

14) EVMS Information

This proposal does not have an estimated total dollar value greater than $20 million.

15) Subcontracting Plan

Per FAR 19.702, we have detailed below our individual subcontracting plan to maximize small business potential in our contracting efforts.

The total amount of dollars to be subcontracted for this proposal is **$3,178,829.03**. To reflect current DoD percentage goals, we set a goal of thirty percent (approximately **$954,000**) of subcontracted dollars specifically for small businesses.

The breakdown of our percentage goals for subcontracted dollars is as follows:

Small Business - 20% (DoD goal: 36.7%)
HUB Zone Small Business - 2% (DoD goal: 3%)
Small Disadvantaged Business - 3% (DoD goal: 5%)
Women-Owned Small Business Concerns - 3% (DoD goal: 5%)
Service-Disabled Veteran Owned Small Business - 2% (DoD goal: 3%)

We set the total and categorical percentage goals lower than DoD goals due to the specialized work to be contracted for this proposal and the historic collaborations and seed project off of which this proposal is developed.

The principal work contracted for this proposal is technical expertise in machine learning, text analysis, software development, data management, and data visualization, as well as expertise in digital disease surveillance, disease reporting expertise, global health data collection, disease report moderating, disease modeling, as well as news and social media analysis specific to disease threats.

With the above subcontracting opportunities in mind, EcoHealth Alliance gave careful consideration to small businesses that could provide the full array of services we require. On this basis, we identified two recognized small business entities in the field (Kitware and Epidemico) that had the ability and the capacity to accomplish the majority of these goals and that would be able to compliment the expertise of our organization to accomplish the tasks

detailed in our statement of work (SOW). Per FAR 19.703 (2)(b), we rely on written documentation to confirm a subcontractor's status as a small business.

Furthermore, due to the scientifically specific nature of the work we propose, we were unable, to the best of our knowledge, to identify areas of the work that we could further subcontracted or qualified firms that could help us achieve our broader small business goals (e.g. veteran, disadvantaged, HUB, women, disabled).

Supplies and services to be contracted to Kitware includes machine learning, text analysis, software development, data management, and data visualization. Epidemico has recognized expertise in disease surveillance, disease reporting expertise, disease modeling, as well as news and social media analysis for disease threats. Both entities are unique scientific organizations, selected on the basis of the nature of the work, good faith efforts to identify capable small business firms, and the precedent of successful prior collaborations with EcoHealth Alliance. Specifically, they were selected on the basis of professional accomplishments, niche expertise, proven track record, and the precedent of previously having developed custom biosurveillance products to interfaced with their products and expertise.

Beyond the specific goals of this proposal, EcoHealth Alliance will make every effort to provide opportunities for small business through our current mechanisms for entering into professional services.

The internal identification and selection process for subcontractors are as follows:

1. Senior scientists survey and interview institutions and individuals recommended by our science staff, colleagues, industry groups, funders and, for in-country partner recommendations, local, regional and national governments and institutions.
2. Site visits are made as necessary, particularly for partners with whom we have not worked previously, to determine their capacity, and their local relationships. Extensive review includes CV's of principal investigators and their staff, organizational and administrative capacity, annual report and audit report reviews, indirect cost rate review, and history of the institution.
3. We conduct a complete review of prospective subcontractors among senior staff, with a recommendation to the President for final decision.

The total for contract awards to Kitware and Epidemico is **$2,782,947.69** which equals approximately eighty eight percent (88%) of total subcontracted dollars, surpassing our original percentage goals for small businesses. Indirect costs were not included in our goals, and both Epidemico and Kitware have their own approved overhead rates.

Based upon the above criteria, we have selected our small business contractors in accordance with our plan. We are committed to the small business goals as outlined in FAR 19.702 and will continue to administer our subcontracting program, inclusive of contractual agreements and

monthly invoices and reports, in accordance with these regulations. The person who administers these requirements is the administrative point of contract for the project. Per DTRA's request, we will submit the ISR and SSR for evaluation compliance if necessary.

EcoHealth Alliance does assure that we will cooperate in any studies or surveys required, and we will include the relevant flow-down clauses in awards to subcontractors.

- **52.219-8 9 (Utilization of SB concerns)**
- **52.219-9 (Subcontracting Plan)**

16) Recommended Contract/Pricing Arrangements and Rationale

EcoHealth Alliance recommends the use of a "Cost Reimbursement Contract" as specified in section 16.301-3 of the Federal Acquisition Regulations. The maximum contract amount would consists of a budget for direct cost plus an overhead allocation based on the most recently federally approved indirect cost rate.

The rationale for this choice is that it is consistent with the payment methodology of other federal grants awarded to EcoHealth Alliance and the financial management systems of EcoHealth Alliance.

17) Authorized Negotiators

Principal Investigator: Nicholas Preston, Ph.D.
Director, Data Science and Research Technology
EcoHealth Alliance
460 West 34th Street - 17th floor
New York, NY 10001
preston@ecohealthalliance.org
1.212.380.4497 (direct)
1.212.380.4465 (fax)

BPOC: Aleksei Chmura
Program Coordinator
EcoHealth Alliance
460 West 34th Street - 17th floor
New York, NY 10001
chmura@ecohealthalliance.org
1.212.380.4473 (direct)
1.212.380.4465 (fax)

Contractual Obligator: Peter Daszak, Ph.D.

President, EcoHealth Alliance
EcoHealth Alliance
460 West 34th Street - 17th floor
New York, NY 10001
daszak@ecohealthalliance.org
1.212.380.4460 (direct)
1.212.380.4465 (fax)

18) Statement of Current and Pending Support

Dr. Nicholas Preston, PI

Pending Research Support

Next Generation Analytic Capabilities for BSV
HDTRA114-AMD1-CBA-03-2-0022
Role: PI
Funding Agency: DTRA

BSVE Data Challenge
HDTRA114-AMD1-CBA-05-2-0021
Role: PI
Funding Agency: DTRA

Current Research Support

Global Rapid Identification Tool System (GRITS) for Undiagnosed EID Events, PI: Preston
07-009-7096-52291
Role: PI
Dates: 1/2013-present
Funding Agency: DTRA
Dr. Preston is the PI for this collaborative initiative to develop a model-driven web application for biosurveillance analysts to diagnosis digital infectious disease reports. He conducts the technical project management and supervises both the data scientists developing the machine learning algorithms and software developers building the web application.

PREDICT, PI: Morse
Role: Project Director
Dates: 12/2011-present
Funding Agency: USAID

Dr. Preston develops the Sicki Project, a repository of historical EID information through investigative surveys of experts; data mining the web and scientific literature; and building web portals for collective intelligence and collaboration in EID research.

Completed Research Support

Canepi: A biosurveillance ecosystem in the cloud, PI: Karesh
N66001-13-C-2024
Role: Technical Lead
Dates:12/2012-7/2013
Funding Agency: DTRA

Canepi is a cloud-based biosurveillance ecosystem designed to support a rapid detect-identify-respond lifecycle of emerging diseases. Dr. Preston led the technical team developing the web platform and coordinating with the algorithm developers and data providers.

Skoll Global Threats Fund, PI: Preston
Role: PI
Dates: 4/2012-9/2012
Funding Agency: Skoll Foundation

Dr. Preston developed global data sets and visualizations of global threat in a web application. The team deployed the maps with our open source WiggleMaps (WebGL) visualization environment for dynamic and interactive maps. The gridded data sets included wildlife, human demographics, conflict, vector borne disease, migration, livestock, extractive industry, temperature and precipitation.

dotSkapes Virtual Laboratory (dVL), PI: Patz
Role: Project Director
Dates: 9/2009-9/2011
Funding Agency: Gottesman Fund

Dr. Preston designed and developed dotSkapes, a virtual laboratory that leveraged advances in web technology to reduce barriers to collaboration, thereby making it easier to find, analyze, organize, and share research. The platform was designed to quickly connect users with relevant resources (e.g., people, data, and analytical tools) via search engines trained on the scientific literature. The team used an interactive geographic interface to visualize complex datasets.

19. ATTACHMENT 11 – STANDARD FORM 1408

Preaward Survey of Prospective Contractor Accounting System Checklist

Instructions:
1. Mark "X" in the appropriate column.
2. Provide a narrative describing how the current accounting system supports your response to each item.

Contractor Name:	EcoHealth Alliance
Point of Contact:	Harvey Kasdan, CFO
CAGE Code:	3MMU3
DUNS Code:	077090066

	Yes	No	N/A	Note
1. Is the accounting system in accord with generally accepted accounting principles?	X			1
2. ACCOUNTING SYSTEM PROVIDES FOR:				
a. Proper segregation of direct costs from indirect costs.	X			2
b. Identification and accumulation of direct costs by contract.	X			3
c. A logical and consistent method for the allocation of indirect costs to intermediate and final cost objectives. (A contract is final cost objective.)		X		4
d. Accumulation of costs under general ledger control.	X			5
e. A timekeeping system that identifies employees' labor by intermediate or final cost objectives.		X		6
f. A labor distribution system that charges direct and indirect labo to the appropriate cost objectives.		X		7

g. Interim (at least monthly) determination of costs charged to a contract through routine posting of books of account.	X			8
h. Exclusion from costs charged to government contracts of amounts which are not allowable in terms of FAR 31, Contract Cost Principles and Procedures, or other contract provisions.	X			9
i. Identification of costs by contract line item and by units (as if each unit or line item were a separate contract) if required by the proposed contract.		X		10
j. Segregation of preproduction costs from production costs.		X		11
3. Accounting system provides financial information:				
a. Required by contract clauses concerning limitation of cost (FAR 52.232-20 and 21) or limitation on payments (FAR 52.216-16).		X		12
b. Required to support requests for progress payments.	X			13
4. Is the accounting system designed, and are the records maintained in such a manner that adequate, reliable data are developed for use in pricing follow-on acquisitions?	X			14
5. Is the accounting system currently in full operation? (If not, describe in Page 2 narrative which portions are (1) in operation, (2) set up, but not yet in operation, (3) anticipated, or (4) nonexistent.)	X			15

Instruction: Use this section to explain how the current accounting system supports your response to each item. If a response is N/A provide further explanation. Use as much space as needed. Provide references to current policies and procedures if applicable.

Note	Narrative
1	EcoHealth Alliance manages all costs in accord with GAAP as it relates to non-profit organizations.
2	All costs are properly coded to a specific Project, Funding Source, and General Ledger category. Purchased items must be reviewed and approved before the invoice is paid.
3	Each contract is assigned a unique project number when a grant is awarded. All direct costs (salaries, benefits and vendor payables) incurred in the performance of the contract is coded to that number
4	Indirect costs are calculated via Excel spreadsheet and entered into the general ledger through a journal entry. The indirect cost rate is based on the approved contrac budget.
5	All costs are treated the same regardless of funding source. They must be authorized by the contract manager of their approved subordinate and be consistent with the signed contract.
6	The timekeeping system is not part of the accounting system. Timesheets are in Excel format and are signed by the employee each month. Time allocations are applie to salaries and entered via journal entry for each project. The system considers each contract a separate cost objective.
7	Direct and indirect costs are charged to each contract via discrete coding of project and general ledger categories.
8	All projects costs are reviewed by the project manager each month to identify coding errors and to measure the progress of the contract against contract objectives.
9	All costs that are prohibited by the contract or other federal law are removed from the project ledger and charged to “unrestricted funds.”
10	There are separate general ledger lines for each contract item in the approved budget The system however, does not record units of items purchased. This information can be added via a transaction description.

11	Preproduction costs not authorized by the contract would be considered non-reimbursable. Production costs, delineated by the contract start date would be included in contract costs so long as they are authorized by the contract budget.
12	The accounting system does not contain information regarding the total value of the contract. That is monitored via Excel analysis.
13	All requests for payments are supported by the general ledger.
14	The general ledger is audited each year by an independent audit firm in accord with th requirement of OMB Circulars A-122 and A-133. EHA has not been cited for any material deficiencies over the last three years.
15	The accounting system is in full operation and is regularly updated when instructed by the software vendor.

20) Forward Pricing Rate Agreement

All rates and bases by year can be found in the cost proposal and cost narrative.

21) Confirmed Proposal Expiration date

EHA holds the proposal, to include proposed costs, firm for one year after receipt.

22) Exception Statement to FAR Clauses

EHA has reviewed these clauses in preparation of a resulting award.

Per FAR 19.702, we have detailed below our individual subcontracting plan to maximize small business potential in our contracting efforts.

The total amount of dollars to be subcontracted for this proposal is **$3,178,829.03**. To reflect current DoD percentage goals, we set a goal of thirty percent (approximately **$954,000**) of subcontracted dollars specifically for small businesses.

The breakdown of our percentage goals for subcontracted dollars is as follows:

Small Business - 20% (DoD goal: 36.7%)
HUB Zone Small Business - 2% (DoD goal: 3%)
Small Disadvantaged Business - 3% (DoD goal: 5%)
Women-Owned Small Business Concerns - 3% (DoD goal: 5%)
Service-Disabled Veteran Owned Small Business - 2% (DoD goal: 3%)

We set the total and categorical percentage goals lower than DoD goals due to the specialized work to be contracted for this proposal and the historic collaborations and seed project off of which this proposal is developed.

The principal work contracted for this proposal is technical expertise in machine learning, text analysis, software development, data management, and data visualization, as well as expertise in digital disease surveillance, disease reporting expertise, global health data collection, disease report moderating, disease modeling, as well as news and social media analysis specific to disease threats.

With the above subcontracting opportunities in mind, EcoHealth Alliance gave careful consideration to small businesses that could provide the full array of services we require. On this basis, we identified two recognized small business entities in the field (Kitware and Epidemico) that had the ability and the capacity to accomplish the majority of these goals and that would be able to compliment the expertise of our organization to accomplish the tasks detailed in our statement of work (SOW). Per FAR 19.703 (2)(b), we rely on written documentation to confirm a subcontractor's status as a small business.

Furthermore, due to the scientifically specific nature of the work we propose, we were unable, to the best of our knowledge, to identify areas of the work that we could further subcontracted or qualified firms that could help us achieve our broader small business goals (e.g. veteran, disadvantaged, HUB, women, disabled).

Supplies and services to be contracted to Kitware includes machine learning, text analysis, software development, data management, and data visualization. Epidemico has recognized expertise in disease surveillance, disease reporting expertise, disease modeling, as well as news and social media analysis for disease threats. Both entities are unique scientific organizations, selected on the basis of the nature of the work, good faith efforts to identify

capable small business firms, and the precedent of successful prior collaborations with EcoHealth Alliance. Specifically, they were selected on the basis of professional accomplishments, niche expertise, proven track record, and the precedent of previously having developed custom biosurveillance products to interfaced with their products and expertise.

Beyond the specific goals of this proposal, EcoHealth Alliance will make every effort to provide opportunities for small business through our current mechanisms for entering into professional services.

The internal identification and selection process for subcontractors are as follows:

1. Senior scientists survey and interview institutions and individuals recommended by our science staff, colleagues, industry groups, funders and, for in-country partner recommendations, local, regional and national governments and institutions.
2. Site visits are made as necessary, particularly for partners with whom we have not worked previously, to determine their capacity, and their local relationships. Extensive review includes CV's of principal investigators and their staff, organizational and administrative capacity, annual report and audit report reviews, indirect cost rate review, and history of the institution.
3. We conduct a complete review of prospective subcontractors among senior staff, with a recommendation to the President for final decision.

The total for contract awards to Kitware and Epidemico is **$2,782,947.69** which equals approximately eighty eight percent (88%) of total subcontracted dollars, surpassing our original percentage goals for small businesses. Indirect costs were not included in our goals, and both Epidemico and Kitware have their own approved overhead rates.

Based upon the above criteria, we have selected our small business contractors in accordance with our plan. We are committed to the small business goals as outlined in FAR 19.702 and will continue to administer our subcontracting program, inclusive of contractual agreements and monthly invoices and reports, in accordance with these regulations. The person who administers these requirements is the administrative point of contract for the project. Per DTRA's request, we will submit the ISR and SSR for evaluation compliance if necessary.

EcoHealth Alliance does assure that we will cooperate in any studies or surveys required, and we will include the relevant flow-down clauses in awards to subcontractors.

- **52.219-8 9 (Utilization of SB concerns)**
- **52.219-9 (Subcontracting Plan)**

This does not apply as we achieved our small business goals listed in our plan.

Global Rapid Identification Tool System (GRITS)
Statement of Work
May 7, 2014

1.0 - Objective:
EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) for diagnosing infectious disease bioevents. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to pinpoint and identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. We propose scaling this system to handle large data volumes in near-real-time, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor live data feeds for diseases or disease characteristics of interest. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data, all connected to our network of experts from digital surveillance and open source communities.

2.0 - Scope:
The **technology areas** to be investigated are mathematical disease models, disease detection, web data mining, scientific application development, digital surveillance, and information storage and retrieval.

The **primary objective** is to deliver an application that facilitates rapid, high probability diagnosis of outbreaks to pinpoint disease threats more rapidly than current public health systems and diagnostics.

Major milestones:
1. Build BSVE interface to GRITS with the SDK
2. Build mechanisms to crowdsource annotations
3. Expand diagnostic capability to arbitrary data feeds
4. Connect GRITS to GRID
5. Crowdsource improvements to the GRITS media diagnostic tool
6. Connect GRITS diagnostic data filtering to the BSVE
7. Enrich diagnostic dashboard with dynamic visualizations
8. Create a web-crawler for expanding coverage of disease reports
9. Forecast disease emergence

3.0 - Background:

This is an extension of a previously funded DTRA initiative. Relevant documents can be found in the references section of the technical proposal.

4.0 - Tasks/Technical Requirements:
Task 1: Connect GRITS Girder database to the BSVE (Year 1)
1. Solicit feedback on GRITS data API from BSVE team

2. Create API key generation and assignment infrastructure for GRITS
3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API
5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities

1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords
3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article
7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE

1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Prototype near-real-time processing

1. Research lambda architecture
2. Develop near-real-time software architecture diagram and documentation
3. Evaluate options for near-real-time streaming data (e.g. Storm, Summingbird)
4. Evaluate options for pre-processing data (e.g. MapReduce, Spark)
5. Evaluate options for automated polling (e.g. Huginn, Luigi, Celery)
6. Investigate adaptive polling algorithms
7. Build prototype of near-real-time software architecture

Task 5: Build BSVE interface to GRITS with the SDK

1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy app

Task 6: Connect GRITS expert network (GRITS.net) to the BSVE

1. Evaluate needs of BSVE users for expert feedback
2. Develop a messaging service to expert network
3. Design interface for posting requests and submitting materials
4. Tie messaging system into existing GRITS partner dashboards and routing

Task 7: Test diagnostic dashboard with expert communities

1. Enhance and test dashboard UI for providing feedback
2. Write documentation of dashboard and provide to ProMED and HealthMap
3. Have editors test annotation dashboard and summarize their feedback
4. Incorporate changes or develop plan to make changes later

Task 8: Enhance the expert annotation interface (Year 2)

1. Write documentation of annotation interface and provide to experts
2. Have editors test annotation interface and summarize their feedback
3. Incorporate changes or develop plan to make changes later
4. Develop new forms of annotation that are less error prone and better inform text-mining and diagnostic algorithms.

Task 9: Build mechanisms to crowdsource annotations

1. Develop infrastructure to identify and assign annotation tasks
2. Integrate annotation interface into Mechanical Turk or similar platform
3. Integrate and deploy citizen science platform
4. Evaluate obtained annotations and report on quality (e.g. inter-annotator agreement)

Task 10: Incorporate disease network graphs to assist diagnostics

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blindspots' in the information network

Task 11: Support diagnostic algorithm development with dashboard

1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 12: Expand diagnostic capability to arbitrary data feeds

1. Build a submission interface for users to submit arbitrary feed
2. Integrate article processing pipeline with a translation service to process non-English articles in near-real-time.

Task 13: Connect GRITS to GRID

1. Evaluate existing GRID API against needs of recommendation system
2. Develop capacity of GRID API to deliver historic event matches
3. Recommend GRID events (e.g. current event is similar to past outbreak)
4. Use GRID media to improve diagnostics and recommendation quality
5. Match GRITS data to events in GRID (expanding from EIDs to all outbreaks)

Task 14: Update diagnostic model in near-real-time

1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 15: Use text mining to extend network graphs/ontologies

1. Infer set of subjects (e.g. EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g. viral strains that have mutated or developed antibiotic resistance).

Task 16: Crowdsource improvements to the GRITS media diagnostic tool (Year 3)

1. Evaluate challenge platforms
2. Create a subset of data for crowdsourcing
3. Open source a base classifier example
4. Create challenge on selected platform
5. Publicize and run challenge

Task 17: Connect GRID collective intelligence editor to the BSVE

1. Evaluate and implement changes to GRID API for of GRITS diagnostic needs
2. Generate keywords and rules from GRID data to incorporate into GRITS text mining
3. Incorporate GRID data into diagnostic model training
4. Design user interface for expert review and editing of GRID events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with GRID

Task 18: Connect GRITS diagnostic data filtering to the BSVE

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 19: Enrich diagnostic dashboard with dynamic visualizations

1. Develop dendrogram visualization
2. Develop multidimensional visualizations
3. Develop flexible geovisualizations

Task 20: Generate disease summary reports from diagnostics

1. Create algorithms for generating statistics (e.g. case counts) and visualizations (e.g. epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 21: Connect EcoHD to GRITS recommendations

1. Evaluate existing EcoHD API against needs of recommendation system
2. Implement changes to EcoHD API
3. Use tags or metadata to identify relevance of EcoHD data sources

Task 22: Create a web-crawler for expanding coverage of disease reports

1. Build a web crawler for DTRA priority infectious diseases
2. Build a submission interface for users to submic urls
3. Test and evaluate and web crawler and global coverage
4. Close the loop with data partners by sharing new resources through API

Task 23: Forecast disease emergence

1. Build a mathematical model of of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

5.0 - CDRLs/Other Deliverables:

Reports
- Monthly Status Reports (36)
- Monthly Cost Status Reports (36)
- Quarterly Status Reports (12)
- Final Report (1)
- Software Release Versions (V)
    - (V.4.7) - Robust Girder database backend (GRITS.db) and API access
    - (V.4.8) - Prototype GRITS event recommendations and filtering
    - (V.5.0) - Connect GRITS APIs to BSVE app
    - (V.5.1) - Connect GRITS.net to BSVE
    - (V.5.2) - Connect GRID event recommendations to API
    - (V.5.3) - Enhanced text mining and diagnostics
    - (V.5.4) - Crowdsourcing module for gathering additional training data
    - (V.5.5) - Web crawler that searches the web for EID reports
    - (V.5.6) - Disease forecast reports
- Miscellaneous data submissions:
    1. Feedback on diagnostic dashboard
    2. Crowdsourced labels and annotations

3. EcoHD data for drivers of infectious disease

- Documentation:
    1. Documentation on near-real-time architecture
    2. Documentation for GRITS APIs

Data Rights Assertion List

Technical data or computer software to be furnished with restrictions*	Basis for assertion**	Asserted rights category***	Name of person asserting restrictions****
None			

*For technical data (other than computer software documentation) pertaining to items, components, or processes developed at private expense, identify both the deliverable technical data and each such item, component, or process. For computer software or computer software documentation identify the software or documentation.

**Generally, development at private expense, either exclusively or partially, is the only basis for asserting restrictions. For technical data, other than computer software documentation, development refers to development of the item, component, or process to which the data pertain. The Government's rights in computer software documentation generally may not be restricted. For computer software, development refers to the software. Indicate whether development was accomplished exclusively or partially at private expense. If development was not accomplished at private expense, or for computer software documentation, enter the specific basis for asserting restrictions.

***Enter asserted rights category (e.g., government purpose license rights from a prior contract, rights in SBIR data generated under another contract, limited, restricted, or government purpose rights under this or a prior contract, or specially negotiated licenses).

****Corporation, individual, or other person, as appropriate.

*****Enter "none" when all data or software will be submitted without restrictions.

Defense Threat Reduction Agency
(b)(6)
8725 John J. Kingman Road, MSC 6201
Ft. Belvoir, VA 22060-6201

Dear (b)(6)

Per your request, in the letter dated October 21st 2014, we are providing you with the additional information that you have requested.

Summary of Changes

- Technical Proposal
  - Tasks 4, 6,7,8,16,19, 21 and 22 were removed.
  - We provided additional information on how the network graphs will work within GRITS including their sources of information (labeled as Task 10 in your response letter).
  - Task 21 was removed, so we did not provide an inventory of EcoHD holdings as requested..
  - A 24-month timeline was created.

- Cost Proposal: Cost proposals for EHA and all subcontractors were updated to reflect the removal of tasks and did not result in considerable cost savings.

- Statement of Work (SOW): The SOW was updated to reflect the removed tasks.

- The proposal validity was extended 150 days from the date of this letter.

EcoHealth Alliance is very excited to begin next work under this agreement and is excited for the positive impact that this project will have on global public health. We are looking forward to working with you.

Thank you,

Dr. Andrew G. Huff

Senior Research Scientist
EcoHealth Alliance
460 West 34th Street 17th Floor
New York, NY 10001

Statement of Work

1.0 - Objective:

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) for diagnosing infectious disease bioevents. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to pinpoint and identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. We propose scaling this system to handle large data volumes in near-real-time, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor live data feeds for diseases or disease characteristics of interest. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data, all connected to our network of experts from digital surveillance and open source communities.

2.0 - Scope:

The **technology areas** to be investigated are mathematical disease models, disease detection, web data mining, scientific application development, digital surveillance, and information storage and retrieval.

The **primary objective** is to deliver an application that facilitates rapid, high probability diagnosis of outbreaks to pinpoint disease threats more rapidly than current public health systems and diagnostics.

Major milestones:

1. Build BSVE interface to GRITS with the SDK
2. Build mechanisms to crowdsource annotations
3. Expand diagnostic capability to arbitrary data feeds
4. Connect GRITS to GRID
5. Crowdsource improvements to the GRITS media diagnostic tool
6. Connect GRITS diagnostic data filtering to the BSVE
7. Enrich diagnostic dashboard with dynamic visualizations
8. Forecast disease emergence

3.0 - Background:

This is an extension of a previously funded DTRA initiative. Relevant documents can be found in the references section of the technical proposal.

4.0 - Tasks/Technical Requirements:

Task 1: Connect GRITS Girder database to the BSVE (Year 1)

1. Solicit feedback on GRITS data API from BSVE team
2. Create API key generation and assignment infrastructure for GRITS
3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API

5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities

1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords
3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article
7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE

1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Prototype near-real-time processing

1. Research lambda architecture
2. Develop near-real-time software architecture diagram and documentation
3. Evaluate options for near-real-time streaming data (e.g. Storm, Summingbird)
4. Evaluate options for pre-processing data (e.g. MapReduce, Spark)
5. Evaluate options for automated polling (e.g. Huginn, Luigi, Celery)
6. Investigate adaptive polling algorithms
7. Build prototype of near-real-time software architecture

Task 5: Build BSVE interface to GRITS with the SDK

1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy app

Task 6: Connect GRITS expert network (GRITS.net) to the BSVE

1. Evaluate needs of BSVE users for expert feedback
2. Develop a messaging service to expert network
3. Design interface for posting requests and submitting materials
4. Tie messaging system into existing GRITS partner dashboards and routing

Task 7: Build mechanisms to crowdsource annotations

1. Develop infrastructure to identify and assign annotation tasks
2. Integrate annotation interface into Mechanical Turk or similar platform
3. Integrate and deploy citizen science platform
4. Evaluate obtained annotations and report on quality (e.g. inter-annotator agreement)

Task 8: Incorporate disease network graphs to assist diagnostics

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blindspots' in the information network

Task 9: Support diagnostic algorithm development with dashboard

1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results

3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 10: Expand diagnostic capability to arbitrary data feeds

1. Build a submission interface for users to submit arbitrary feed
2. Integrate article processing pipeline with a translation service to process non-English articles in near-real-time.

Task 11: Connect GRITS to GRID

1. Evaluate existing GRID API against needs of recommendation system
2. Develop capacity of GRID API to deliver historic event matches
3. Recommend GRID events (e.g. current event is similar to past outbreak)
4. Use GRID media to improve diagnostics and recommendation quality
5. Match GRITS data to events in GRID (expanding from EIDs to all outbreaks)

Task 12: Update diagnostic model in near-real-time

1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 13: Use text mining to extend network graphs/ontologies

1. Infer set of subjects (e.g. EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g. viral strains that have mutated or developed antibiotic resistance).

Task 14: Crowdsource improvements to the GRITS media diagnostic tool (Year 3)

1. Evaluate challenge platforms
2. Create a subset of data for crowdsourcing
3. Open source a base classifier example
4. Create challenge on selected platform
5. Publicize and run challenge

Task 15: Connect GRID collective intelligence editor to the BSVE

1. Evaluate and implement changes to GRID API for of GRITS diagnostic needs
2. Generate keywords and rules from GRID data to incorporate into GRITS text mining
3. Incorporate GRID data into diagnostic model training
4. Design user interface for expert review and editing of GRID events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with GRID

Task 16: Connect GRITS diagnostic data filtering to the BSVE

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 17: Enrich diagnostic dashboard with dynamic visualizations

1. Develop dendrogram visualization
2. Develop multidimensional visualizations
3. Develop flexible geovisualizations

Task 18: Generate disease summary reports from diagnostics

1. Create algorithms for generating statistics (e.g. case counts) and visualizations (e.g. epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 19: Forecast disease emergence

1. Build a mathematical model of of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

Statement of Work

1.0 - Objective:
EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) for diagnosing infectious disease bioevents. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to pinpoint and identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. We propose scaling this system to handle large data volumes in near-real-time, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor live data feeds for diseases or disease characteristics of interest. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data; all connected to our network of experts from digital surveillance and open source communities.

2.0 - Scope:
The **technology areas** to be investigated are mathematical disease models, disease detection, web data mining, scientific application development, digital surveillance, and information storage and retrieval.

The **primary objective** is to deliver an application that facilitates rapid, high probability diagnosis of outbreaks to pinpoint disease threats more rapidly than current public health systems and diagnostics.

Major milestones:
1. Build BSVE interface to GRITS with the SDK
2. Build mechanisms to crowd source annotations
3. Expand diagnostic capability to arbitrary data feeds
4. Connect GRITS to GRID
5. Connect GRITS diagnostic data filtering to the BSVE
6. Forecast disease emergence

3.0 - Background:

This is an extension of a previously funded DTRA initiative. Relevant documents can be found in the references section of the technical proposal.

4.0 - Tasks/Technical Requirements:
Task 1: Connect GRITS Girder database to the BSVE (Base Period)
1. Solicit feedback on GRITS data API from BSVE team
2. Create API key generation and assignment infrastructure for GRITS
3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API
5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities (Base Period)
1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords

3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article
7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE (Base Period)

1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Build BSVE interface to GRITS with the SDK (Base Period)

1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy application

Task 5: Build mechanisms to crowd source annotations (Base Period)

1. Prepare annotation interface to allow correcting annotations
2. Write documentation of annotation interface
3. Test annotation interface and incorporate feedback
4. Develop infrastructure to identify and assign annotation tasks
5. Integrate annotation interface into Mechanical Turk or similar platform
6. Integrate and deploy citizen science platform
7. Evaluate obtained annotations and report on quality (e.g., inter-annotator agreement)

Task 6: Incorporate disease network graphs to assist diagnostics (Base Period)

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blind spots' in the information network

Task 7: Support diagnostic algorithm development with dashboard (Base Period)

1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 8: Expand diagnostic capability to arbitrary data feeds (Option Year 1)

1. Build a submission interface for users to submit arbitrary feed
2. Integrate article-processing pipeline with a translation service to process non-English articles in near real time.

Task 9: Connect GRITS to GRID (Option Year 1)

1. Evaluate existing GRID API against needs of recommendation system
2. Develop capacity of GRID API to deliver historic event matches
3. Recommend GRID events (e.g. current event is similar to past outbreak)
4. Use GRID media to improve diagnostics and recommendation quality
5. Match GRITS data to events in GRID (expanding from EIDs to all outbreaks)

Task 10: Update diagnostic model in near real time (Option Year 1)

1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 11: Use text mining to extend network graphs/ontologies (Option Year 1)

1. Infer set of subjects (e.g. EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g. viral strains that have mutated or developed antibiotic resistance).

Task 12: Connect GRID collective intelligence editor to the BSVE (Option Year 1)

1. Evaluate and implement changes to GRID API for of GRITS diagnostic needs
2. Generate keywords and rules from GRID data to incorporate into GRITS text mining
3. Incorporate GRID data into diagnostic model training
4. Design user interface for expert review and editing of GRID events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with GRID

Task 13: Connect GRITS diagnostic data filtering to the BSVE (Option Year 1)

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 14: Generate disease summary reports from diagnostics (Option Year 1)

1. Create algorithms for generating statistics (e.g. case counts) and visualizations (e.g. epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 15: Forecast disease emergence (Option Year 1)

1. Build a mathematical model of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

Task 4: Prototype near-real-time processing (Base Period)

1. Research lambda architecture
2. Develop near-real-time software architecture diagram and documentation
3. Evaluate options for near-real-time streaming data (e.g. Storm, Summingbird)
4. Evaluate options for pre-processing data (e.g. MapReduce, Spark)
5. Evaluate options for automated polling (e.g. Huginn, Luigi, Celery)
6. Investigate adaptive polling algorithms
7. Build prototype of near-real-time software architecture

Task 5: Build BSVE interface to GRITS with the SDK (Base Period)

1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy app

Task 6: Connect GRITS expert network (GRITS.net) to the BSVE (Base Period)

1. Evaluate needs of BSVE users for expert feedback
2. Develop a messaging service to expert network
3. Design interface for posting requests and submitting materials
4. Tie messaging system into existing GRITS partner dashboards and routing

Task 7: Build mechanisms to crowdsource annotations (Option Year 1)

1. Develop infrastructure to identify and assign annotation tasks
2. Integrate annotation interface into Mechanical Turk or similar platform
3. Integrate and deploy citizen science platform
4. Evaluate obtained annotations and report on quality (e.g. inter-annotator agreement)

2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 10: Expand diagnostic capability to arbitrary data feeds (Option Year 1)

1. Build a submission interface for users to submit arbitrary feed

2. Integrate article processing pipeline with a translation service to process non-English articles in near-real-time.

Task 11: Connect GRITS to GRID (Option Year 1)

1. Evaluate existing GRID API against needs of recommendation system
2. Develop capacity of GRID API to deliver historic event matches
3. Recommend GRID events (e.g. current event is similar to past outbreak)
4. Use GRID media to improve diagnostics and recommendation quality
5. Match GRITS data to events in GRID (expanding from EIDs to all outbreaks)

Task 12: Update diagnostic model in near-real-time (Option Year 1)

1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 13: Use text mining to extend network graphs/ontologies (Option Year 1)

1. Infer set of subjects (e.g. EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g. viral strains that have mutated or developed antibiotic resistance).

Task 14:Crowdsource improvements to the GRITS media diagnostic tool(Option Year 2)

1. Evaluate challenge platforms
2. Create a subset of data for crowdsourcing
3. Open source a base classifier example
4. Create challenge on selected platform
5. Publicize and run challenge

Task 15: Connect GRID collective intelligence editor to the BSVE (Option Year 2)

1. Evaluate and implement changes to GRID API for of GRITS diagnostic needs
2. Generate keywords and rules from GRID data to incorporate into GRITS text mining
3. Incorporate GRID data into diagnostic model training
4. Design user interface for expert review and editing of GRID events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with GRID

Task 16: Connect GRITS diagnostic data filtering to the BSVE (Option Year 2)

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 17: Enrich diagnostic dashboard with dynamic visualizations (Option Year 2)

1. Develop dendrogram visualization
2. Develop multidimensional visualizations
3. Develop flexible geovisualizations

Task 18: Generate disease summary reports from diagnostics (Option Year 2)

1. Create algorithms for generating statistics (e.g. case counts) and visualizations (e.g. epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 19: Forecast disease emergence (Option Year 2)

1. Build a mathematical model of of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

Volume I: Technical Proposal

I. Abstract

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) to deliver disease diagnostics, decision support, and data processing to the BSVE. We aim to enhance our current GRITS platform, developed with DTRA support, by scaling this system to handle large data volumes enhancing diagnostic capabilities through network and cluster analysis. GRITS will also utilize the benefits and explore the integration of crowdsourcing, collective intelligence, and expert review. This tool will rely on automation to ingest media, extract key disease characteristics, and recommend resources, increasing the specificity of the data feed to an analyst's workflow. We propose building an app with the BSVE SDK that allows BSVE users to submit resources to diagnose and to connect with experts from ProMED, HealthMap and EcoHealth, thereby increasing our network of experts from digital surveillance and open source communities. The diagnostic results generated by GRITS have immediate applications for risk mapping, outbreak prediction, and early warning of microbial threats, advancing our readiness to combat the broad class of chemical and biological threats posed by EIDs.

Keywords
disease ecology, digital diagnostics, natural language, machine learning, emergent media, network, data science

II. Scope

A. Objective

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) for diagnosing infectious disease events. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to pinpoint and identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver disease diagnostics, decision support, and data processing to the BSVE. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data; all connected to our network of experts from digital surveillance and open source communities.

B. Background

The discovery of HIV/AIDS in the 1980s marked the transition from declaring victory over infectious diseases, to global increases in disease emergence and re-emergence[1]. EcoHealth Alliance (EHA) is at the forefront of organizations working to 'get ahead of the epidemic curve' by identifying these threats before the next pandemic or extinction event. Our researchers pioneered the identification of the origins of pathogens, such as Nipah virus[2], SARS[3], and MERS[4]. We constantly seek innovative approaches to target our field surveillance efforts on emerging threats[5]. To this end, the global increase in the volume of data, from the growth of the web and instrumented systems, presents both a challenge to traditional surveillance approaches and a tremendous opportunity for novel discoveries.

Various biosurveillance technologies have been developed to monitor Internet data sources, for instance, syndromic surveillance initiatives target surrogate indicators of a disease outbreak[6]. As with other sectors, such as commerce, marketing, and finance, the challenge is to manage the expanding volume of data while identifying signals of interest[7]. In the case of EIDs, access to emergent media, including participatory, personal, and interactive media, characterized by

decentralized content generation (e.g., the blogosphere, internationalization, and social media), presents an opportunity to detect early instances of disease characteristics and anomalies of interest.

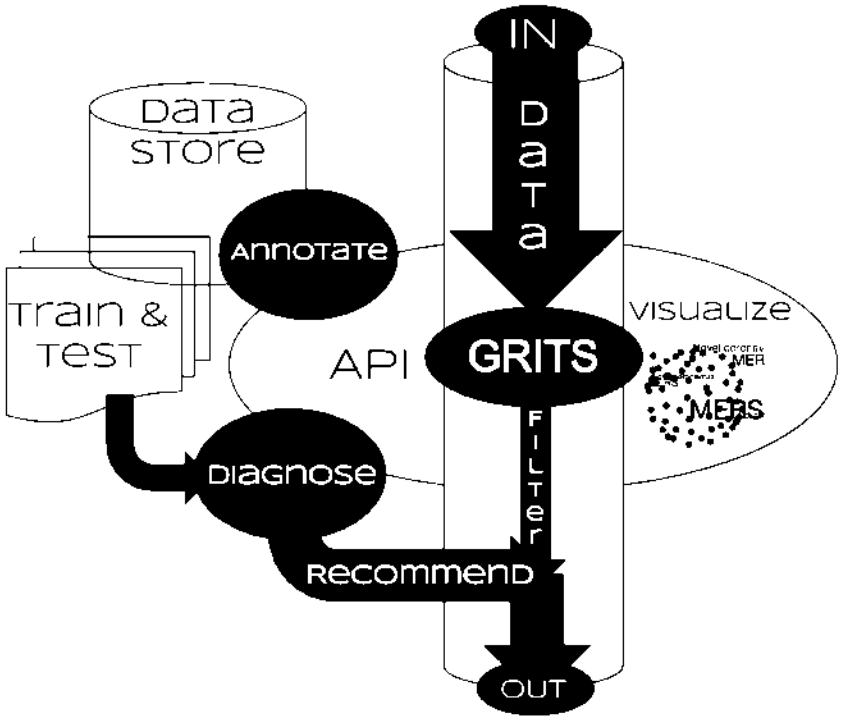
The GRITS partners are among the leading organizations in this domain. ProMED-mail (International Society of Infectious Diseases) manages a global email network of clinicians who are often among the first to identify and report disease threats[8]. Epidemico (HealthMap)[9] actively curates an expanding catalog of relevant news and social media assets. Both organizations are unique among their peers in leveraging broad networks of experts to curate and reduce the volume of media to a high-quality feed. Kitware Inc., our technical partner, has engineered sustainable communities around successful, high-impact open source scientific software.

EcoHealth assembled the GRITS team to advance the state-of-the-art in the detection and diagnosis of disease threats. GRITS combines new technologies with expert networks to apply the sciences of disease ecology and epidemiology to diagnosing big data for near-real-time disease situation awareness. We built GRITS upon pre-existing communities of expertise, rather than *de novo* technical solutions, recognizing that human experts must be integrated into the platform to ensure its intelligence and growth. In addition, we sought novel mechanisms for decision support by organizing, prioritizing, contextualizing, and linking information to relevant current and historic resources. Overall, we deploy science at the core of our systems to assemble near-real-time information in a manner that supports decision makers with diagnostic tools built by, and for, the digital disease ecology community. The diagnostic results generated by GRITS have immediate applications for risk mapping, outbreak prediction, and early warning of microbial threats.

Description of GRITS Capabilities

We take a diagnostic approach to identifying disease threats, setting research priorities, and strategically deploying our field teams. GRITS ingests and processes data feeds to provide decision support to analysts, with the following capabilities:

Diagnose - Identify the disease(s) described in a resource. Return a ranked list of diseases with quantitative metrics of certainty (differential diagnoses).
Mine - Extract the key components of document via automated analysis, collective annotation, and expert curation. Return a set of relevant information.
Recommend - Expand the materials available to the analyst. Return a collection of recommended resources that provide historic and contemporary context.
Filter - Reduce the complexity of the data feed by selecting those documents that meet diagnostic criteria of interest to the analyst. Return a filtered subset of data.
Connect - Relate the material to underlying ontologies to provide a decision framework for the analyst. Return connections to other bioevents based on underlying network structures (e.g., geography, ecology, time, host, pathogen, and environmental drivers).



Sources of GRITS Biointelligence

A. Machine Data mining, machine learning, and natural language processing

C. Collective Crowdsourcing annotation and human intelligence tasks

A. Machine

GRITS leverages automation to ingest, process, and return an initial diagnosis of digital media, reducing the extraneous sources of information through which experts and reviewers must sort. The GRITS text mining system extracts key disease characteristics, such as locations, case counts, and dates, for our metadata and diagnostic models. These features, which may be combined into composite features by high-level rules, are based on sentence patterns and keywords chosen from third-party sources such as WordNet, Geonames, Disease Ontology, Symptom Ontology, and Biocaster Ontology. The categories we extract, such as hosts, pathogens, diseases, signs and symptoms, drivers, and transmission types, are also informed by historic disease event data curated via our GRID project, and prioritized through consultation with our experts. The GRITS diagnostic models, that use machine-learning algorithms based on extracted keywords to classify articles, are trained on test articles labeled with diseases by our partners. A key function of this machine intelligence is to provide the materials and platforms to crowd source the training data.

C. Collective

The machine-learning component of GRITS requires training data from portfolios of articles with disease labels and disease characteristic metadata, information collected from HealthMap and ProMED editors to highlight and categorize important features and relationships. These are then used to train classifiers to identify specific features of importance. To extend the range of articles we can classify, we propose using crowdsourcing methods via Amazon's Mechanical Turk and Zooniverse to generate labels and annotations for articles that do not require domain expertise.

To further enhance the accuracy of the GRITS classification algorithms, we propose crowdsourcing a diagnostic challenge, whereby we host and share our training data on an existing challenge platform (e.g., Kaggle), where programmers compete to build classifiers to improve accuracy. These approaches would compliment the models developed by our internal users and promote global citizenship in combating the scourge of emerging infectious disease. Finally, we propose integrating EHA's Global Repository for Infectious Diseases (GRID) to solicit collective intelligence and peer editing to develop a canonical collection of event data portfolios for BSVE users and the broader scientific community. The BSVE will have access to the GRID API throughout the contract period with an option to continue access through continued funding. EHA will also provide a copy of the GRID data to DTRA at the end of the contract period.

Our two-pronged approach (machine and collective) is a unique strength of the GRITS platform. The automated tools enable experts to make the best use of their time by farming out less specialized tasks to the crowd, identifying errors in the data sources, and notifying editors or creating tasks to crowd source solutions. In the case that there isn't enough data to deliver an accurate diagnosis, GRITS will identify the most useful information in distinguishing disease candidates. Combined, this presents a unique conceptual model and workflow for supporting outbreak investigation.

Proposed Development

GRITS enhances traditional search with adaptive diagnostic models, trained on a broad spectrum of resources from GRITS partners and curated by our communities of experts. This diagnostic function reduces the complexity and increases the specificity of the data feed to an analyst's workflow. We propose scaling this system to handle large data volumes, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor data feeds for diseases or disease characteristics of interest. To ensure rapid diagnosis when a disease first emerges, GRITS blends social media, news media, and scientific literature. This approach may be further leveraged to identify unusual events and diagnostic gaps that may herald an emerging infectious disease of unknown etiology.

BSVE Integration and Benefits

We propose building an application with the BSVE SDK that allows BSVE users to submit resources to diagnose. The app will display a basic visualization of a diagnosis, and provide links to diagnostic dashboards for decision support via additional visualizations and diagnostic tools. The data processing stack will provide the capabilities identified above (diagnose, mine, recommend, filter, and connect) to data being ingested or monitored by the BSVE. Our diagnostic service is designed to continually evolve and improve via mechanisms for input from collective and machine intelligence sources. Our novel approach to diagnostics builds upon traditional search with the infusion of disease ecology into the method.

Technical Challenges
Due to incomplete reporting, errant diagnoses, delayed onset of symptoms, and delays in laboratory results, it is difficult diagnose diseases in the early phase of an outbreak[10]. Dialect varies among data sources and there is high variability in accessibility of news sources and scientific literature. Software has a language bias where non-Latin characters are often the source of bugs, and foreign language articles require translation to fit into a single NLP pipeline. Additionally, media attention is biased toward OECD countries, with blind spots in some of the locations where diseases more frequently emerge, particularly those with limited clinical infrastructure and access to health professionals[11]. However, as a shared and accessible platform that can maximize the utility of both expert networks and machine intelligence, our tool is of particular value in resource-poor areas without laboratory diagnostic facilities or, with past events, where clinical samples are no longer available. To reduce the time lag in detecting EIDs, we are interested in identifying prompt data sources and recruiting members of the GRITS network and BSVE community in disease prone environments to provide additional reports of emerging diseases.

When attempting to respond to user submitted corrections and feedback, some classifiers take considerable time to train (e.g., neural nets), and completely retaining any classifier on big data can be prohibitive. We will need to investigate methods of incrementally retraining our classifier in a timely manner as new data is submitted.

Technical merit
Overall, we propose to expand our automated data extraction to support reporting initiatives and event notification systems with near-real-time automated extraction of disease-relevant information from an arbitrary, unstructured data feed. Further development of the GRITS text mining system will allow us to introduce ecological and epidemiological concepts to extract more complex information such as host-pathogen relationships and quantitative data (e.g., case counts) for modeling and analysis[12]. We want to improve the precision of the features we extract by developing more sophisticated natural language processing pipelines. Additionally, we plan to reduce error rates by taking advantage of the open source NLP software ecosystem to perform word sense disambiguation and coreference resolution. Identifying the features GRITS and BSVE users value and providing channels for them to provide us with feedback will also be important to improving GRITS. We propose dynamically retraining the classification algorithm GRITS uses to diagnose diseases based on user submitted corrections to its diagnosis. Finally, we plan on open sourcing reusable components of our system so that other groups can benefit from our work.

Our technology stack consists of modern web technologies like Meteor that allow us to seamlessly update the content of the UI. These frameworks are compatible with the current technologies in the BSVE, such as AngularJS. Furthermore, we employ implementations of machine learning algorithms from scikit-learn, and are using natural language processing algorithms (e.g., tokenizing, part-of-speech-tagging, lemmatization) from nltk, and CLIPS pattern. We have started with a Python ML/NLP stack because of the rich software ecosystem available, and the ability to prototype rapidly with IPython notebooks.

Scientific merit
Automated categorization of EID reports by the GRITS diagnostic classifier will enable analysts and to search and filter them, increasing the ratio of relevant information they review. Furthermore, GRITS will provide decision support by suggesting potential diseases in reports of

unknown diseases, and by recommending relevant data to review. Established networks of experts from EcoHealth and One Health will provide input on our diagnostic engine enabling us to continually improve upon it. Infectious disease emergence is a global-scale challenge requiring an extended, engaged community to monitor, track and respond to new threats; it is also intrinsically interdisciplinary given the complex life histories of many disease agents.

Ontologies are invaluable tools in artificial intelligence systems, decision support systems, data exploration and research where they can be used to make complex inferences and generate rich datasets. We seek to expand the scope of our ecological ontologies by considering taxonomic, distribution, ecological niche, and networks for pathogens and hosts. This will help us provide state of the art diagnostics for the BSVE by providing structured data from which we can make inferences with GRITS diagnostic algorithms. We plan to use the biointelligence extracted from news media and submitted by GRITS users to assemble a corpus of new information to form the basis of new relationships and entities within biological ontologies to help explain patterns of disease emergence. We are interested in incorporating these relationships and entities into public ontologies they derive from or relate to so that other projects benefit from our work. Our goal, with the work we propose, is to push our system to provide recommendations of to users for additional data-sources, work with citizen scientists to expand the data inputs to diagnostic tools, and integrate various GRITS components into the BSVE community.

C. Programmatics

This effort will support DoD CBDP, DTRA, and the Joint Science and Technology Office for Chemical and Biological Defense (JSTO-CBD), HDTRA1-14-CHEM-BIO-BAA, Chemical Biological Technologies Department and is submitted in response to Topic: CBA-03: Next Generation Analytic Capabilities for BSV. The work will support DTRA's mission to safeguard America and its allies from biological WMDs by providing diagnostic capabilities to reduce, eliminate, and counter microbial threats. Specifically this "Global Rapid Identification Tool System" is aimed at developing capacity for the detection of EID threats, to support protection efforts and mitigation of the threats posed by disease agents through the New Initiatives in Science and Technology program. This technology is intended for eventual transition through the DTRA R&D Enterprise.

Management plan

Our management plan blends strong scientific expertise in global EID surveillance, with agile software engineering as well as iterative and incremental rapid application development. The project will be managed by our team of data scientists and software developers at EcoHealth Alliance, in consultation with thought leaders in the field of biosurveillance (Epidemico & ProMED-mail), and infused with innovative technologies Kitware Inc., developers of leading edge, high quality software.

Key personnel (roles/responsibilities)

- EcoHealth Alliance (prime): management, delivery, software integration, computing, diagnostic analysis, data science, data mining, disease ecology
    - Andrew Huff, Ph.D., M.S. (Principal Investigator - PI)
- Kitware Inc.: data management, visualization
    - Jeff Baumes, Ph.D. (Technical Sub-contractor)
- Epidemico: data curation, digital surveillance
    - John Brownstein, Ph.D. (Scientific Consultant)

- ProMED-mail: data curation, disease outbreak reporting
    - Larry Madoff, Ph.D. (Scientific Consultant)

Current data providers and collaborating centers:

- **ProMED-mail** - the Program for Monitoring Emerging Diseases - is an open source Internet-based reporting system dedicated to rapid global dissemination of information on outbreaks of infectious diseases and acute exposures to toxins that affect human health, including those in animals and in plants. Electronic communications enable ProMED-mail to provide up-to-date and reliable news seven days a week. Sources of information include media reports, official reports, online summaries, local observers, and others. A team of expert moderators screen, review, and investigate reports before posting to the network and distributing by email. ProMED-mail currently reaches over 40,000 subscribers in at least 185 countries.
- **HealthMap** - The freely available Web site 'healthmap.org' and mobile app 'Outbreaks Near Me' deliver real-time intelligence on a broad range of emerging infectious diseases. HealthMap brings together disparate data sources, including online news aggregators, eyewitness reports, expert-curated discussions and validated official reports, to achieve a unified and comprehensive view of the current global state of infectious diseases and their effect on human and animal health.
- **Global Repository of Infectious Disease (GRID) project** - an EHA project describing the initial emergence of global infectious disease bioevents since 1940. We collected direct language from the primary literature describing the agent, time, place, impact, transmission, host, driver, EID category, and economics of the event to discover patterns and trends among these variables across time and space. This is used to train the models with historic context to support both our Hotspot predictive modeling efforts and diagnostic capabilities.
- **GIDEON** - Global Infectious Disease and Epidemiology Network - is the world's premier global infectious diseases knowledge management database. It contains a diagnostic module that employs information on symptoms, country, incubation period, and laboratory tests to construct a ranked differential diagnosis. The Infectious Diseases module encompasses over 340 infectious diseases, 231 countries, over 500 anti-infective drugs and vaccines.
- **PubMed, Google Scholar, and Web of Science** - will be used to generate records of confirmed diagnoses and historical outbreaks. Additionally, we hope to explore archival resources such as CDC disease reports.

D. Relevance

Our goal with this project is to develop a tool system of high-relevance to DTRA's Goals and Objectives. With the support of DTRA, we could advance our GRITS to full development and extend timely operational capability to all sectors affected by the threat of EIDs. This state-of-the-art technology will help advance our readiness to combat the broad class of biological threats posed by EIDs, including the capability to identify agents with the potential to be used as WMDs. We have the expertise and capacity to ensure useable capability of the GRITS application within the timeline of tasks we propose. The tools will provide near-real-time decision support to end-users of GRITS and the BSVE. By using open source and transparent methods, we ensure that our results are reproducible and that the technology is portable, reliable, agile, and flexible in confronting emerging threats. The tools we propose are state-of-the-art, both scientifically and technically. GRITS leverage the latest reactive web technologies (e.g., Meteor), visualization environments (e.g., WebGL and Tangelo), and scientific databases (e.g.,

Girder). The machine learning and clustering algorithms are drawn from Scikit-learn, an open and accessible, community-supported Python library.

A key strategy in mitigating EID risk is to build situational awareness as far forward from our shores as possible, by using advanced digital biosurveillance to detect early signals that portend the emergence of high-risk, priority diseases and pathogens, including bioterrorism agents. This biosurveillance technology is adaptable to low resource settings, among them those most vulnerable to EIDs. Ultimately we hope to empower our warfighters and allies with the tools necessary to adapt and shape the dynamic Global Security Environment, as it pertains to the acute threat of infectious diseases.

Responses to DTRA's questions from the White Paper
How will the proposed system be sustained? Is a fee for service model envisioned? If so, details should be provided.
We propose providing to DTRA all of the data hosted in GRITS.db and all of the code developed for this proposed system under permissive open source licenses (e.g., MIT and Apache2). Furthermore, EHA has established the Data Science and Research Technology (DART) lab with the express goal of supporting the services outlined in this proposal. We envision sustaining the service under a 'fee for service' model to be negotiated with DTRA upon delivery of the work. We would do so in coordination from our technical subcontractor, Kitware Inc., who has extensive experience supporting open source development for federal agencies, including DoD. Our data subcontractors have agreed to make the full data available to DTRA spanning the duration of the contract (beginning Jan 18, 2013). Where copyright restrictions limit our ability to distribute the full text of the media, we will provide programmatic tools to retrieve the text in compliance with the terms and conditions of the source. Additionally, we propose a 'freemium' mechanism to sustain data hosting and processing costs, whereby DTRA-approved users or organizations could access the service on a pay-as-you-go basis (e.g., paying for characters processed or volume stored).

What will actually be delivered to the Government/BSVE? Will this simply be an API to the EHA system, or will underlying tools and data be delivered? If yes, please clearly describe all deliverables.
We are prepared to deliver all materials developed through the contract under permissive open source licenses. Given the complexity of the system, and the maintenance burden, we recommend that that EHA continue to maintain the materials on a mutually agreed upon third party service (e.g., AWS) and provide the access to the data and diagnostic capabilities through our API. The source code will be made available through a private repository. We will provide full documentation, as we have done for the data service we are currently providing to the BSVE developed by Digital Infuzion. This applies to all deliverables, including GRITS.app, GRITS.db, and GRITS.md. The GRID platform has been developed with support from other agencies, foundations, and universities; however, we will provide unlimited access in perpetuity to DTRA via the API and web interface. The source code for Tangelo visualizations Girder are publicly available on Github and permissively licensed.

III. Credentials

A. Summary of Credentials

EcoHealth Alliance (EHA):

Building on over 40 years of groundbreaking science, EHA is a global nonprofit organization dedicated to protecting wildlife and safeguarding human health from the emergence of disease. The organization develops ways to combat the effects of damaged ecosystems on human and wildlife health. Using environmental and health data covering the past 60 years, EHA's scientists created the first ever global disease hotspots map that identified at-risk regions, to help predict and prevent the next pandemic crisis. That work is the foundation of EHA's rigorous, science-based approach, focused at the intersection of the environment, health and capacity building. Working in the U.S. and more than 20 countries worldwide, EHA's strength is founded on innovations in research, training, global partnerships, and policy initiatives.

EHA is a partner of the USAID Emerging Pandemic Threats PREDICT program, a $75 million effort focused on predicting and preventing pandemic diseases. PREDICT is building a global early warning system to detect and reduce the impacts of emerging diseases that move between wildlife and people (zoonotic diseases). PREDICT has developed a SMART surveillance method (Strategic, Measurable, Adaptive, Responsive, and Targeted) that accounts for the fact that zoonotic pathogens, like influenza and SARS, are responsible for the majority of emerging infectious diseases in people, and that more than three quarters of these emerging zoonoses are of wildlife origin. The SMART surveillance approach is designed to detect novel diseases with pandemic potential early, giving health professionals the best opportunity to prevent emergence and spread. It also targets sentinel animal species at active human interfaces in hotspot regions to improve surveillance efficiency.

The PREDICT team builds on a broad coalition of partners to develop the global capacity to monitor diseases at the animal-human interface and develop a risk-based approach to concentrate these efforts in surveillance, prevention, and response at the most critical points for disease emergence from wildlife.

PREDICT project objectives:

- Assess local surveillance capacity;
- Implement targeted and adaptive wildlife disease surveillance systems;
- Develop and deliver new technologies to improve efforts close to the source;
- Use cutting-edge information management and communication tools to bring the world closer to realizing an integrated, global approach to emerging zoonotic diseases.

Partners:
HealthMap/Epidemico
HealthMap is a team of researchers, epidemiologists and software developers based out of the Children's Hospital, Boston. Founded in 2006, HealthMap is an established global leader in utilizing online informal sources for disease outbreak monitoring and real-time surveillance of emerging public health threats. The freely available Web site 'healthmap.org' and mobile app 'Outbreaks Near Me' deliver real-time intelligence on a broad range of emerging infectious diseases for a diverse audience including libraries, local health departments, governments, and international travelers. HealthMap brings together disparate data sources, including online news aggregators, eyewitness reports, expert-curated discussions and validated official reports, to

achieve a unified and comprehensive view of the current global state of infectious diseases and their effect on human and animal health. Through an automated process, updating 24/7/365, the system monitors, organizes, integrates, filters, visualizes and disseminates online information about emerging diseases in nine languages, facilitating early detection of global public health threats.

ProMED
ProMED-mail was established in 1994 with the support of the Federation of American Scientists and SatelLife. Since October 1999, ProMED-mail has operated as an official program of the International Society for Infectious Diseases, a nonprofit professional organization with 20,000 members worldwide.

Kitware, Inc.
Kitware, Inc. creates and supports leading edge, high quality software in the fields of computer vision, medical imaging, visualization, 3D data publishing, and technical software development. Kitware employs an open source development model to foster extended, collaborative communities, and an open source business model to provide flexible, low-cost technical solutions. The Company's services and products include technology integration, software support, consulting, custom application development, and training and productivity tools that leverage our open-source software systems.

B. Summary of Qualifications for PI and Key Personnel
Dr. Andrew Huff (PI), is a senior research scientist at EcoHealth Alliance. Over the past 4 years, he patented a novel technology at the University of Minnesota, to collect and combine disparate spatial data sources to rapidly identify biologically or chemically contaminated sources of food. To accomplish this difficult task, he has engineered spatial algorithms and has created novel primary functional keys for data fusion. While at Sandia National Laboratories, he developed multiple computational models for infectious disease consequence prediction and developed unique analytical methods for infectious disease epidemiology and emergence. He has worked on projects funded by DOE, DHS, DoS, DTRA, DVA FDA, HHS, and USDA.

Dr. John Brownstein is an Associate Professor at Harvard Medical School and directs the Computational Epidemiology Group at Children's Hospital Informatics Program in Boston. His group is supported by a multi-million dollar budget with support from NIH (NLM and NIAID), USAID, Centers for Disease Control and Prevention, and Google.org. He has pioneered efforts in participatory epidemiology, using statistical and informatics approaches aimed at improving public health surveillance and practice. He recently was awarded the Presidential Early Career Award for Scientists and Engineers, the highest honor bestowed by the United States government to outstanding scientists and engineers.

Dr. Lawrence Madoff is an infectious disease physician whose career has been devoted to disease surveillance. Dr. Madoff is the Editor of ProMED-mail, which uses Internet-based communication and social media to detect and report emerging infectious diseases globally. He is currently Director of the Division of Epidemiology and Immunization at the Massachusetts Department of Public Health, which oversees infectious disease surveillance and immunization activities in the state. He is a fellow of the American College of Physicians and a Fellow of the Infectious Disease Society of America.

Dr. Jeff Baumes is a technical lead at Kitware Inc. He has significant expertise in information analysis and presentation. His contributions include novel graph clustering algorithms that allow cluster overlap, and algorithms for discovering subsets of individuals persistently connected over time. Over the last six years, he has been a major technical contributor to the open source Titan scalable analysis and visualization toolkit, which is an extension of the Visualization Toolkit to include informatics and information visualization capabilities. He has worked on projects in several fields surrounding Titan such as text analysis, bioinformatics, and social network analysis including funding from NSF, DoD, DOE, and NIH.

C. Summary of Facilities to Perform the Proposed Work

Facilities at EcoHealth Alliance (EHA)
EcoHealth Alliance (EHA) is a 501(c)(3) nonprofit organization that specializes in scientific research on the causes, origins, and spread of zoonotic emerging diseases. EHA scientists have been working on spatial modeling for over 15 years, and on modeling of infectious disease emergence and spread for over a decade. EHA is based in New York City with 10,000 square feet of office space including a meeting room and basic laboratory. A core administrative staff of 11 employees support EHA's scientific team (15 core scientists, 100+ field staff) and are available for work on this project through foundation support. EHA is equipped with 25 networked PCs including ARRA funded International Live Meeting Video Conferencing facilities. EHA has access to multiple servers, server support, and all necessary software on Mac, Linux, and Windows operating systems. Additional computing power is acquired from commercial cloud providers to meet project needs.

EHA has an active program of staff development and this is reviewed and adjusted annually as part of each employee's evaluation process. Specific provisions are made for internal training and external training resources, tuition support programs via a partnership with Columbia University, and active support of staff to spend time in collaborators organizations. All early stage investigators are mentored to provide guidance in research practices, grant management, administration and project management. Financial support from EHA core funds is available to support external tuition, travel to conferences and to conduct joint research in collaborator's institutions. There is no obligation for teaching time at EHA and all research staff are funded for 100% research time; however, there is a provision, through partnership with Columbia University, to enable staff to teach at the undergraduate and graduate level, with monetary support provided by Columbia University. Administration and other staff are supported in their efforts to enhance their careers by the provision of tuition fees for external courses, travel funds for conferences, and time off their core activities.

Facilities at Kitware Inc.
Kitware Inc. is headquartered just north of Albany, New York in a Clifton Park office complex. Kitware rents approximately 27,000 square feet of office space at this location. Kitware also has an office in Chapel Hill, North Carolina approximately 6,200 square feet in size. Both offices are linked via a common virtual private network and a shared phone system, and share financial and administrative personnel. They also have on-site office managers, lunchrooms, private meeting rooms, and advanced conference facilities including large screen projection systems and whole-room Polycom video conferencing systems. The proposed work will be performed at the Clifton Park site.

Kitware has a mixed environment of personal and shared computing platforms. Employees average three computers per person (desktop, laptop, and/or home system), with each computer typically equipped with multiple multi-core processors, a high-performance graphics card, dual monitors, and 8GB or more of main memory. These personal systems run a mix of Windows, Mac OS X, and Linux operating systems. Shared resources include compilation and testing farms as well as workstations running a variety of alternative operating systems for testing purposes, e.g., Windows XP or Vista. Kitware also maintains several servers to provide public access to the open source VTK, ITK, TubeTK, Titan, Slicer, CMake, and ParaView systems; to host web pages and web services for open source communities such as NA-MIC and Visomics; to operate open-access journals such as the Insight Journal and the Midas journal which has hosted workshop papers for nearly ten years; and to provide access to massive collections of public data for computer vision and medical imaging algorithm evaluation. Access to these systems is provided by a fiber connection to the Internet yielding a total of 100 Mbit/second data rate.

Kitware hosts several special-purpose, high-end workstations, GPU systems, haptic systems, and magnetic and optical trackers. One such workstation is a multi-GPU computer featuring 6 NVidia GPU boards: 5 C2050 Tesla and 1 Quadro 5000 Fermi, as well as a 6-Core X5680 3.33GHz processor. A noteworthy haptic system is a MBP Freedom 7S haptic device, configurable for 6 or 7 degrees of freedom. To address large-scale distributed computing, the company maintains several clusters for development and testing. The clusters include: a twelve node testing cluster running mixed Linux and Windows operating systems; a four node Windows cluster with a gigabit Ethernet network; and a seven node Linux cluster with dual 64-bit Xenon processors, high-end graphics accelerators, and an Infiniband network driving a 3x2 PowerWall display. Kitware also has access to several external computer systems (e.g., HP, IBM, and Intel) through various vendor partnership programs.

IV. WORK TO BE PERFORMED.

A. General

Our goal over the 3-year time period is to expand our DTRA-funded GRITS platform to deliver disease diagnostics, decision support, and data processing. These enhanced capabilities will be powered by GRITS analytics, and data.

We are currently building a robust and scalable software infrastructure to provide a diagnostic decision support system for analysts. The final deliverable will include our user interface (GRITS.app), application interface (GRITS.api), media diagnostics (GRITS.md), and database (GRITS.db). Overall, GRITS will be deployable and generalized application that will output probabilities and lists of pathogens likely responsible for an outbreak on the basis of user-provided data. Accordingly, the resource will be adaptable to a specific organization or agency's needs or emerging threats, and geographic areas of high concern. The source code for this algorithm will be made available to interested parties for further development and adaptation.

The original Rapid Identification Tool (RIT) prototype was developed by manually extracting symptoms from encephalitides reports in ProMED-mail to train a diagnostic model. Through rigorous testing, we identified modeling approaches that improved performance by combining natural language processing and machine learning algorithms. We recognized automated data collection and crowd sourced data curation would be needed to scale to disease coverage and

diagnose additional diseases with greater precision. The GRITS diagnostic dashboard provides decision support to experts at our partner organizations by automatically extracting and visualizing information from media. We leverage crowdsourcing techniques by providing experts with tools for curating disease portfolios and annotating articles. We have developed an application programming interface (API) for access to our data and diagnostics by third party developers and users. Additionally, we integrated the project with an ongoing EHA initiative to collect historical disease outbreak data (Global Repository for Infectious Diseases - GRID). Finally, we integrated work from our colleagues at Kitware to support the storage and visualization of the large, complex datasets being generated.

During the proposed contract period, we will improve the accuracy and robustness of the GRITS media diagnostics. We will experiment with crowdsourcing as an additional source of training data and knowledge to further improve GRITS.md and expand the capabilities of the system to provide decision support and recommendations to analysts.

By the end of the contract period GRITS will provide:

1. Robust architecture for diagnostics and data processing;
2. Interface from BSVE to GRITS with SDK;
3. Healthmap, ProMED-mail, and EcoHealth data to the BSVE; and,
4. Machine and community intelligence.

Diagnostic modeling
We plan to use the biointelligence extracted from news media and submitted by GRITS users to form the basis of new relationships and entities within biological ontologies that link EID events, diseases, symptoms, hosts, and other entities and attributes related to infectious diseases together in a rich network structure. This ontology will be a critical data source for making domain specific inferences in diagnostic algorithms.

Data Storage and Management
Girder is a data management platform built to meet the needs of distributed, data-centric web applications. Girder is a modular framework that allows developers to build systems that use any or all of the components necessary to create a system tailored to their needs. All data sharing web applications need the same core functionality: upload, download, large data storage, supplemental metadata storage and indexing, authentication/authorization, a RESTful API, and extensible plugin architecture. Girder provides these components and is currently being used for GRITS as well as several DOE projects.

B. Summary

Base Year (2015)

1. Connect GRITS Girder database to the BSVE
2. Develop recommendation and decision support capabilities
3. Connect GRITS diagnostic and text-mining APIs to the BSVE
4. Build BSVE interface to GRITS with the SDK
5. Build mechanisms to crowd source annotations
6. Incorporate disease network graphs to assist diagnostics
7. Support diagnostic algorithm development with dashboard

Option Year 1 (2016)

8. Expand diagnostic capability to arbitrary data feeds
9. Connect GRITS to GRID
10. Update diagnostic model in near-real-time
11. Use text mining to extend network graphs/ontologies.
12. Connect GRID's collective intelligence editor to the BSVE
13. Connect GRITS diagnostic data filtering to the BSVE
14. Generate disease summary reports from diagnostics
15. Forecast disease emergence

C. Detailed Tasks

Task 1: Connect GRITS Girder database to the BSVE
Description: Coordinate with BSVE developers to provide API access to GRITS database (HealthMap, ProMED and EcoHealth data with diagnostic metadata).
Resources: EcoHealth & Kitware (API, BSVE support), HealthMap & ProMED (data).
Metric(s) of success: BSVE access to GRITS data via API.
Deliverable: API key and access for the BSVE team, communication between BSVE/GRITS.
Subtasks:

1. Solicit feedback on GRITS data API from BSVE team
2. Create API key generation and assignment infrastructure for GRITS
3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API
5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities
Description: Use our GRITS.md to extract features of incoming articles to inform media recommendations for analysts based on areas or keywords of interest or a collection of documents being evaluated. Identify targets for data collection that would most enhance diagnostic capabilities for a particular event.
Resources: EcoHealth (algorithms and infrastructure), Kitware (storage & visualization), HealthMap & ProMED (testing).
Metrics of success: Recommendation system returns relevant articles, people and organizations. Adding recommended information improves diagnosis.
Deliverable: API and diagnostic dashboard interface to recommendations.
Subtasks:

1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords
3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article
7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE
Description: Provide BSVE developers with API access to GRITS media diagnostics and text mining tools and support them as they integrate these features into the BSVE interface.
Resources: EcoHealth (API development, BSVE support).

Metrics of success: BSVE team satisfied with API structure. GRITS features and diagnoses accessible through BSVE.
Deliverable: API access for the BSVE team, communication between BSVE/GRITS.
Subtasks:

1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Build BSVE interface to GRITS with the SDK
Description: Build an app on the BSVE SDK that allows BSVE users to submit text to diagnose. The app will display a basic visualization of a diagnosis, and provide links to diagnostic dashboards where users can see additional visualizations and interact further with GRITS diagnostic tools.
Resources: EcoHealth (app development & testing).
Metrics of success: Users able to access GRITS through app deployed to BSVE.
Deliverable: Deployed app, BSVE users able to access diagnostic dashboards.
Subtasks:

1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy application

Task 5: Build mechanisms to crowd source annotations
Description: Identify human intelligence annotation tasks for crowdsourcing by citizen scientists and Amazon's Mechanical Turk. Extend the annotation interface so that users can correct auto-generated annotations.
Resources: EcoHealth (annotation interface), Mechanical Turk (pay for annotations), Citizen Scientists (volunteers).
Metrics of success: Annotations crowd sourced. Improves diagnostics from annotations.
Deliverable: Crowd sourced annotations incorporated into GRITS training data.
Subtasks:

1. Prepare annotation interface to allow correcting annotations
2. Write documentation of annotation interface
3. Test annotation interface and incorporate feedback
4. Develop infrastructure to identify and assign annotation tasks
5. Integrate annotation interface into Mechanical Turk or similar platform
6. Integrate and deploy citizen science platform
7. Evaluate obtained annotations and report on quality (e.g., inter-annotator agreement)

Task 6: Incorporate disease network graphs to assist diagnostics
Description: Model the geographic, ecological, and information structures of infectious disease networks and connect them to diagnostic API. Develop visualizations for diagnostic dashboard.
Resources: EcoHealth & Kitware (network modeling, visualization). Data sources: OpenStreetMaps, Customs and Border Patrol commercial trade data, Ecologicaldata.org, Geonames.org, Bpedia.org, Public Health Agency Canada, CDC's Morbidity and Mortality

Weekly Report (MMWR), EHA's GRID/SICKI, PubMED, OBO ontologies, Crisis.net, and Moz.com. Open source Python code for spatial network analysis (e.g., Sage, lumify.io, OWL).
Metrics of success: Improved diagnostics from network reasoning.
Deliverable: Visualizations of the network model in the diagnostic dashboard.
Subtasks:

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blind spots' in the information network

Task 7: Support diagnostic algorithm development with dashboard
Description: Support multiple models for diagnosis, and continually reevaluate their effectiveness. Different algorithms may perform differently with time, origin, or diseases. Allow users to run and compare the results of different models via the diagnostic dashboard. Run automated jobs to compare the performance of models over time.
Resources: EcoHealth & Kitware (algorithm and interface development).
Metrics of success: Run and compare models from the dashboard.
Deliverable: Capacity to compare model performance in the dashboard.
Subtasks:

1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 8: Expand diagnostic capability to arbitrary data feeds
Description: Develop robust scraping algorithms and provide an interface for users to connect data sources to GRITS.
Resources: EcoHealth (algorithms), Language translation service.
Metrics of success: Users can submit relevant feeds to the GRITS system.
Deliverable: Interface for submitting data feeds.
Subtasks:

1. Build a submission interface for users to submit arbitrary feed
2. Integrate article-processing pipeline with a translation service to process non-English articles in near real time.

Task 9: Connect GRITS to GRID
Description: Incorporate GRID dataset into GRITS to give the platform a comprehensive historical perspective on EIDs and enhance analytic capabilities around drivers of disease behavior. Extend the recommendation system to include historic context from GRID (e.g., media and data). Use historic event data to expand to match targets for a disease or keyword.
Resources: EcoHealth (recommendation system, GRID).
Metrics of success: Diagnostic decision support enriched by historic event data.
Deliverable: Improved recommendation system, match new reports with historic events.
Subtasks:

1. Evaluate existing GRID API against needs of recommendation system
2. Develop capacity of GRID API to deliver historic event matches
3. Recommend GRID events (e.g., current event is similar to past outbreak)
4. Use GRID media to improve diagnostics and recommendation quality

5. Match GRITS data to events in GRID (expanding from EIDs to all outbreaks)

Task 10: Update diagnostic model in near real time
Description: Retrain the classifier with new reports from HealthMap/ProMED or users submissions. Classify labeled training data with GRITS, for example correcting misclassification. Investigate classifiers capable of distributed training or incremental retraining.
Resources: EcoHealth (algorithm and architecture development).
Metrics of success: Model updates improve performance. Classifier updates.
Deliverable: Enhanced classification infrastructure, retraining interface.
Subtasks:
1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 11: Use text mining to extend network graphs/ontologies
Description: Use features extracted from disease reports to add entities and relationships to disease network ontology. For example, linking case counts to locations.
Resources: EcoHealth (feature extraction and ontologies).
Metrics of success: Accuracy of entities and relationships extracted from our data sources.
Deliverable: An extended ontology generated by text-mining algorithms.
Subtasks:
1. Infer set of subjects (e.g., EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g., viral strains that have mutated or developed antibiotic resistance).

Task 12: Connect GRID collective intelligence editor to the BSVE
Description: Incorporate BSVE users as experts for the review and editing GRID events.
Resources: EcoHealth (GRID).
Metrics of success: BSVE users contribute to GRID. Diagnostic models improve from GRID data. Additional features are extracted based on GRID data.
Deliverable: BSVE/GRITS access to GRID, improved diagnostics and feature extraction.
Subtasks:
1. Evaluate and implement changes to GRID API for of GRITS diagnostic needs
2. Generate keywords and rules from GRID data to incorporate into GRITS text mining
3. Incorporate GRID data into diagnostic model training
4. Design user interface for expert review and editing of GRID events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with GRID

Task 13: Connect GRITS diagnostic data filtering to the BSVE
Description: Use diagnostics to reduce data volume to relevant reports. Users should be able to list diseases or regions of interest.
Resources: EcoHealth & Kitware (GRITS integration and data filtering).
Metrics of success: GRITS will return a subset of related assets.
Subtasks:

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 14: Generate disease summary reports from diagnostics
Description: Aggregate the data collected by text-mining and diagnostic algorithms to give an meta overview of a collection of reports or disease outbreak.
Resources: EcoHealth (algorithms and reporting).
Metrics of success: Number of visits per unique user to the summary report website
Deliverable: API returns summary reports to diagnostic dashboard and BSVE.
Subtasks:
1. Create algorithms for generating statistics (e.g., case counts) and visualizations (e.g., epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 15: Forecast disease emergence
Description: EHA are experts in disease hotspot mapping. Use GRITS.db and GRITS.md to identify diseases that pose the greatest threat. Use case-counts and data from historical epidemic curves to model probable epidemic curves for new diseases.
Resources: EcoHealth (hotspots modeling).
Metrics of success: The cumulative difference between the actual epidemic curve and predicted curve. Identify hotspots for disease emergence based on diagnostics.
Deliverable: Return geocoded hotspots via API for visualization on BSVE.
Subtasks:
1. Build a mathematical model of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

Maintenance Plan
- Support the Global Rapid Identification Tool System (GRITS) on the cloud
- Develop a software process infrastructure for the GRITS developer community
- Build a robust server network to ensure uptime of the GRITS platform
- Develop a test suite to identify issues and ensure compatibility with the BSVE
- Develop user and developer documentation for the platform
- Maintain the software via a ticketing system.

V. Performance of Work

Description of Services: We shall provide all management, tools, supplies, equipment, and labor necessary to build GRITS. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to pinpoint and identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. We propose scaling this system to handle large data volumes in near-real-time, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor live data feeds for diseases or disease characteristics of interest. These enhanced capabilities will be

powered by GRITS analytics, visualizations, and data; all connected to our network of experts from digital surveillance and open source communities.

Period of Performance: Performance period for this contract will be no more than 150 days from the date of award, and will run continuously for 12 months with the provision for one time extension of this contract for an additional 12-month period.

Task 1: Connect GRITS Girder database to the BSVE (Base Period)

1. Solicit feedback on GRITS data API from BSVE team
2. Create API key generation and assignment infrastructure for GRITS
3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API
5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities (Base Period)

1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords
3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article
7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE (Base Period)

1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Build BSVE interface to GRITS with the SDK (Base Period)

1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy application

Task 5: Build mechanisms to crowd source annotations (Base Period)

1. Prepare annotation interface to allow correcting annotations
2. Write documentation of annotation interface
3. Test annotation interface and incorporate feedback
4. Develop infrastructure to identify and assign annotation tasks
5. Integrate annotation interface into Mechanical Turk or similar platform
6. Integrate and deploy citizen science platform
7. Evaluate obtained annotations and report on quality (e.g., inter-annotator agreement)

Task 6: Incorporate disease network graphs to assist diagnostics (Base Period)

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blind spots' in the information network

Task 7: Support diagnostic algorithm development with dashboard (Base Period)

1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 8: Expand diagnostic capability to arbitrary data feeds (Option Year 1)

1. Build a submission interface for users to submit arbitrary feed
2. Integrate article-processing pipeline with a translation service to process non-English articles in near real time.

Task 9: Connect GRITS to GRID (Option Year 1)

1. Evaluate existing GRID API against needs of recommendation system
2. Develop capacity of GRID API to deliver historic event matches
3. Recommend GRID events (e.g. current event is similar to past outbreak)
4. Use GRID media to improve diagnostics and recommendation quality
5. Match GRITS data to events in GRID (expanding from EIDs to all outbreaks)

Task 10: Update diagnostic model in near real time (Option Year 1)

1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 11: Use text mining to extend network graphs/ontologies (Option Year 1)

1. Infer set of subjects (e.g. EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g. viral strains that have mutated or developed antibiotic resistance).

Task 12: Connect GRID collective intelligence editor to the BSVE (Option Year 1)

1. Evaluate and implement changes to GRID API for of GRITS diagnostic needs
2. Generate keywords and rules from GRID data to incorporate into GRITS text mining
3. Incorporate GRID data into diagnostic model training
4. Design user interface for expert review and editing of GRID events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with GRID

Task 13: Connect GRITS diagnostic data filtering to the BSVE (Option Year 1)

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 14: Generate disease summary reports from diagnostics (Option Year 1)

1. Create algorithms for generating statistics (e.g. case counts) and visualizations (e.g. epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 15: Forecast disease emergence (Option Year 1)

1. Build a mathematical model of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

Records: EHA shall be responsible for creating, maintaining, and disposing of only those government required records that are specifically cited in this PWS or required by the provisions of a mandatory directive listed in If requested by the Government, EHA shall provide the original record or a reproducible copy of any such record within 14 working days of receipt of the request.

Year 1			
Q1	Q2	Q3	Q4

Connect GRITS Girder database to the BSVE

Develop recommendation and decision support capabilities

Connect GRITS diagnostic and text-mining APIs to the BSVE

Prototype near-real-time processing

Build BSVE interface to GRITS with the SDK

Connect GRITS expert network (GRITS.net) to the BSVE

Test diagnostic dashboard with expert communities.

Year 2			
Q1	Q2	Q3	Q4

Enhance the expert annotation interface

Build mechanisms to crowdsource annotations

Incorporate disease network graphs to assist diagnostics

Support diagnostic algorithm development with dashboard

Expand diagnostic capability to arbitrary data feeds

Connect GRITS to GRID

Update diagnostic model in near-real-time

Use text mining to extend network graphs/ontologies.

Year 3			
Q1	Q2	Q3	Q4

Crowdsource improvements to the GRITS media diagnostic tool

Connect GRID's collective intelligence editor to the BSVE

Connect GRITS diagnostic data filtering to the BSVE

Enrich diagnostic dashboard with dynamic visualizations

Generate disease summary reports from diagnostics

Connect EcoHD to GRITS recommendations

Create a web-crawler for expanding coverage of disease reports

Forecast disease emergence

Volume I: Technical Proposal

I. Abstract

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) to deliver disease diagnostics, decision support, and data processing to the BSVE. We aim to enhance our current GRITS platform, developed with DTRA support, by scaling this system to handle large data volumes enhancing diagnostic capabilities through network and cluster analysis. GRITS will also utilize the benefits and explore the integration of crowdsourcing, collective intelligence, and expert review. This tool will rely on automation to ingest media, extract key disease characteristics, and recommend resources, increasing the specificity of the data feed to an analyst's workflow. We propose building an app with the BSVE SDK that allows BSVE users to submit resources to diagnose and to connect with experts from ProMED and EcoHealth, thereby increasing our network of experts from digital surveillance and open source communities. The diagnostic results generated by GRITS have immediate applications for risk mapping, outbreak prediction, and early warning of microbial threats, advancing our readiness to combat the broad class of chemical and biological threats posed by EIDs.

Keywords
disease ecology, digital diagnostics, natural language, machine learning, emergent media, network, data science, disease emergence

II. Scope

A. Objective

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) for diagnosing infectious disease events. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to pinpoint and identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver disease diagnostics, decision support, and data processing to the BSVE. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data; all connected to our network of experts from digital surveillance, open source, and infectious disease ecology communities.

B. Background

The discovery of HIV/AIDS in the 1980s marked the transition from declaring victory over infectious diseases, to global increases in disease emergence and re-emergence[1]. EcoHealth Alliance (EHA) is at the forefront of organizations working to 'get ahead of the epidemic curve' by identifying these threats before the next pandemic or extinction event. Our researchers pioneered the identification of the origins of pathogens, such as Nipah virus[2], SARS[3], and MERS[4]. We constantly seek innovative approaches to target our field surveillance efforts on emerging threats[5]. To this end, the global increase in the volume of data, from the growth of the web and instrumented systems, presents both a challenge to traditional surveillance approaches and a tremendous opportunity for novel discoveries.

Various biosurveillance technologies have been developed to monitor Internet data sources, for instance, syndromic surveillance initiatives target surrogate indicators of a disease outbreak[6]. As with other sectors, such as commerce, marketing, and finance, the challenge is to manage the expanding volume of data while identifying signals of interest[7]. In the case of EIDs, access to emergent media, including participatory, personal, and interactive media, characterized by decentralized content generation (e.g., the blogosphere, internationalization, and social media),

presents an opportunity to detect early instances of disease characteristics and anomalies of interest.

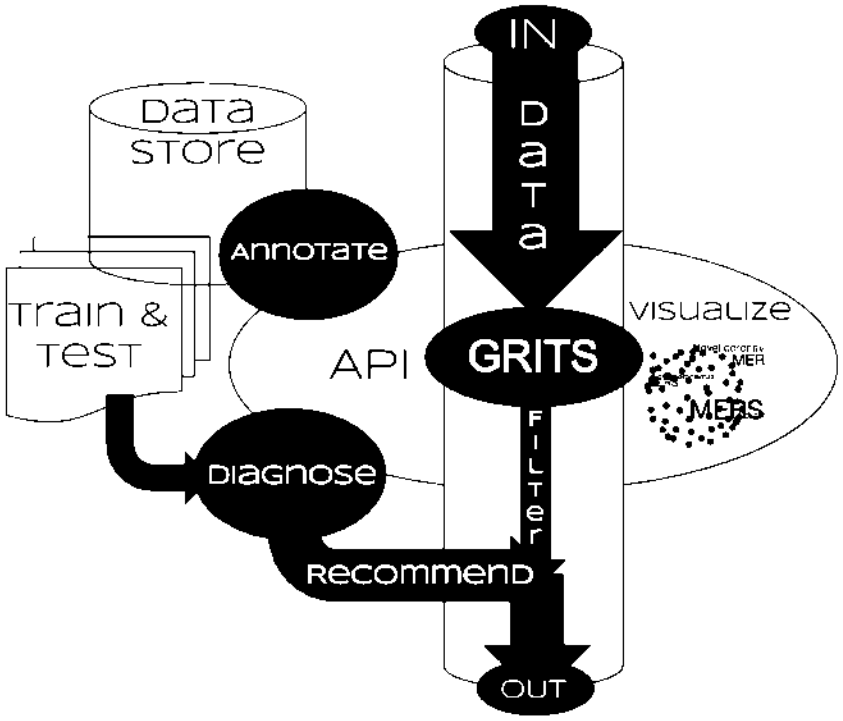
The GRITS collaborators are among the leading organizations in this domain. ProMED-mail (International Society of Infectious Diseases) manages a global email network of clinicians who are often among the first to identify and report disease threats[8]. EHA and its international partners actively conduct biosurveillance on emerging infectious diseases globally[9]. Both organizations are unique among their peers in leveraging broad networks of experts to curate and reduce the volume of media to a high-quality feed. Kitware Inc., our technical partner, has engineered sustainable communities around successful, high-impact open source scientific software.

EcoHealth assembled the GRITS team to advance the state-of-the-art in the detection and diagnosis of disease threats. GRITS combines new technologies with expert networks to apply the sciences of disease ecology and epidemiology to diagnosing big data for near-real-time disease situation awareness. We built GRITS upon pre-existing communities of expertise, rather than *de novo* technical solutions, recognizing that human experts must be integrated into the platform to ensure its intelligence and growth. In addition, we sought novel mechanisms for decision support by organizing, prioritizing, contextualizing, and linking information to relevant current and historic resources. Overall, we deploy science at the core of our systems to assemble near-real-time information in a manner that supports decision makers with diagnostic tools built by, and for, the digital disease ecology community. The diagnostic results generated by GRITS have immediate applications for risk mapping, outbreak prediction, and early warning of microbial threats.

Description of GRITS Capabilities

We take a diagnostic approach to identifying disease threats, setting research priorities, and strategically deploying our field teams. GRITS ingests and processes data feeds to provide decision support to analysts, with the following capabilities:

Diagnose - Identify the disease(s) described in a resource. Return a ranked list of diseases with quantitative metrics of certainty (differential diagnoses).
Mine - Extract the key components of document via automated analysis, collective annotation, and expert curation. Return a set of relevant information.
Recommend - Expand the materials available to the analyst. Return a collection of recommended resources that provide historic and contemporary context.
Filter - Reduce the complexity of the data feed by selecting those documents that meet diagnostic criteria of interest to the analyst. Return a filtered subset of data.
Connect - Relate the material to underlying ontologies to provide a decision framework for the analyst. Return connections to other bioevents based on underlying network structures (e.g., geography, ecology, time, host, pathogen, and environmental drivers).



Sources of GRITS Biointelligence

A. Machine Data mining, machine learning, and natural language processing

C. Collective Crowdsourcing annotation and human intelligence tasks

A. Machine

GRITS leverages automation to ingest, process, and return an initial diagnosis of digital media, reducing the extraneous sources of information through which experts and reviewers must sort. The GRITS text mining system extracts key disease characteristics, such as locations, case counts, and dates, for our metadata and diagnostic models. These features, which may be combined into composite features by high-level rules, are based on sentence patterns and keywords chosen from third-party sources such as WordNet, Geonames, Disease Ontology, Symptom Ontology, and Biocaster Ontology. The categories we extract, such as hosts, pathogens, diseases, signs and symptoms, drivers, and transmission types, are also informed by historic disease event data curated via our EIDR project, and prioritized through consultation with our experts. The GRITS diagnostic models, that use machine-learning algorithms based on extracted keywords to classify articles, are trained on test articles labeled with diseases by our partners. A key function of this machine intelligence is to provide the materials and platforms to crowd source the training data.

C. Collective
The machine-learning component of GRITS requires training data from portfolios of articles with disease labels and disease characteristic metadata, information collected from open source health informatics websites (e.g., ProMED) to highlight and categorize important features and relationships. These are then used to train classifiers to identify specific features of importance. To extend the range of articles we can classify, we propose using crowdsourcing methods via Amazon's Mechanical Turk and Zooniverse to generate labels and annotations for articles that do not require domain expertise.

To further enhance the accuracy of the GRITS classification algorithms, we propose crowdsourcing a diagnostic challenge, whereby we host and share our training data on an existing challenge platform (e.g., Kaggle), where programmers compete to build classifiers to improve accuracy. These approaches would compliment the models developed by our internal users and promote global citizenship in combating the scourge of emerging infectious disease. Finally, we propose integrating EHA's Global Repository for Infectious Diseases (EIDR) to solicit collective intelligence and peer editing to develop a canonical collection of event data portfolios for BSVE users and the broader scientific community. The BSVE will have access to the EIDR API throughout the contract period with an option to continue access through continued funding. EHA will also provide a copy of the EIDR data to DTRA at the end of the contract period.

Our two-pronged approach (machine and collective) is a unique strength of the GRITS platform. The automated tools enable experts to make the best use of their time by farming out less specialized tasks to the crowd, identifying errors in the data sources, and notifying editors or creating tasks to crowd source solutions. In the case that there isn't enough data to deliver an accurate diagnosis, GRITS will identify the most useful information in distinguishing disease candidates. Combined, this presents a unique conceptual model and workflow for supporting outbreak investigation.

Proposed Development
GRITS enhances traditional search with adaptive diagnostic models, trained on a broad spectrum of resources from GRITS partners and curated by our communities of experts. This diagnostic function reduces the complexity and increases the specificity of the data feed to an analyst's workflow. We propose scaling this system to handle large data volumes, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor data feeds for diseases or disease characteristics of interest. To ensure rapid diagnosis when a disease first emerges, GRITS blends social media, news media, and scientific literature. This approach may be further leveraged to identify unusual events and diagnostic gaps that may herald an emerging infectious disease of unknown etiology.

BSVE Integration and Benefits
We propose building an application with the BSVE SDK that allows BSVE users to submit resources to diagnose. The app will display a basic visualization of a diagnosis, and provide links to diagnostic dashboards for decision support via additional visualizations and diagnostic tools. The data processing stack will provide the capabilities identified above (diagnose, mine, recommend, filter, and connect) to data being ingested or monitored by the BSVE. Our diagnostic service is designed to continually evolve and improve via mechanisms for input from collective and machine intelligence sources. Our novel approach to diagnostics builds upon traditional search with the infusion of disease ecology into the method.

Technical Challenges
Due to incomplete reporting, errant diagnoses, delayed onset of symptoms, and delays in laboratory results, it is difficult diagnose diseases in the early phase of an outbreak[10]. Dialect varies among data sources and there is high variability in accessibility of news sources and scientific literature. Software has a language bias where non-Latin characters are often the source of bugs, and foreign language articles require translation to fit into a single NLP pipeline. Additionally, media attention is biased toward OECD countries, with blind spots in some of the locations where diseases more frequently emerge, particularly those with limited clinical infrastructure and access to health professionals[11]. However, as a shared and accessible platform that can maximize the utility of both expert networks and machine intelligence, our tool is of particular value in resource-poor areas without laboratory diagnostic facilities or, with past events, where clinical samples are no longer available. To reduce the time lag in detecting EIDs, we are interested in identifying prompt data sources and recruiting members of the GRITS network and BSVE community in disease prone environments to provide additional reports of emerging diseases.

When attempting to respond to user submitted corrections and feedback, some classifiers take considerable time to train (e.g., neural nets), and completely retaining any classifier on big data can be prohibitive. We will need to investigate methods of incrementally retraining our classifier in a timely manner as new data is submitted.

Technical merit
Overall, we propose to expand our automated data extraction to support reporting initiatives and event notification systems with near-real-time automated extraction of disease-relevant information from an arbitrary, unstructured data feed. Further development of the GRITS text mining system will allow us to introduce ecological and epidemiological concepts to extract more complex information such as host-pathogen relationships and quantitative data (e.g., case counts) for modeling and analysis[12]. We want to improve the precision of the features we extract by developing more sophisticated natural language processing pipelines. Additionally, we plan to reduce error rates by taking advantage of the open source NLP software ecosystem to perform word sense disambiguation and coreference resolution. Identifying the features GRITS and BSVE users value and providing channels for them to provide us with feedback will also be important to improving GRITS. We propose dynamically retraining the classification algorithm GRITS uses to diagnose diseases based on user submitted corrections to its diagnosis. Finally, we plan on open sourcing reusable components of our system so that other groups can benefit from our work.

Our technology stack consists of modern web technologies like Meteor that allow us to seamlessly update the content of the UI. These frameworks are compatible with the current technologies in the BSVE, such as AngularJS. Furthermore, we employ implementations of machine learning algorithms from scikit-learn, and are using natural language processing algorithms (e.g., tokenizing, part-of-speech-tagging, lemmatization) from nltk, and CLIPS pattern. We have started with a Python ML/NLP stack because of the rich software ecosystem available, and the ability to prototype rapidly with IPython notebooks.

Scientific merit
Automated categorization of EID reports by the GRITS diagnostic classifier will enable analysts and to search and filter them, increasing the ratio of relevant information they review. Furthermore, GRITS will provide decision support by suggesting potential diseases in reports of

unknown diseases, and by recommending relevant data to review. Established networks of experts from EcoHealth and One Health will provide input on our diagnostic engine enabling us to continually improve upon it. Infectious disease emergence is a global-scale challenge requiring an extended, engaged community to monitor, track and respond to new threats; it is also intrinsically interdisciplinary given the complex life histories of many disease agents.

Ontologies are invaluable tools in artificial intelligence systems, decision support systems, data exploration and research where they can be used to make complex inferences and generate rich datasets. We seek to expand the scope of our ecological ontologies by considering taxonomic, distribution, ecological niche, and networks for pathogens and hosts. This will help us provide state of the art diagnostics for the BSVE by providing structured data from which we can make inferences with GRITS diagnostic algorithms. We plan to use the biointelligence extracted from news media and submitted by GRITS users to assemble a corpus of new information to form the basis of new relationships and entities within biological ontologies to help explain patterns of disease emergence. We are interested in incorporating these relationships and entities into public ontologies they derive from or relate to so that other projects benefit from our work. Our goal, with the work we propose, is to push our system to provide recommendations of to users for additional data-sources, work with citizen scientists to expand the data inputs to diagnostic tools, and integrate various GRITS components into the BSVE community.

C. Programmatics

This effort will support DoD CBDP, DTRA, and the Joint Science and Technology Office for Chemical and Biological Defense (JSTO-CBD), HDTRA1-14-CHEM-BIO-BAA, Chemical Biological Technologies Department and is submitted in response to Topic: CBA-03: Next Generation Analytic Capabilities for BSV. The work will support DTRA's mission to safeguard America and its allies from biological WMDs by providing diagnostic capabilities to reduce, eliminate, and counter microbial threats. Specifically this "Global Rapid Identification Tool System" is aimed at developing capacity for the detection of EID threats, to support protection efforts and mitigation of the threats posed by disease agents through the New Initiatives in Science and Technology program. This technology is intended for eventual transition through the DTRA R&D Enterprise.

Management plan

Our management plan blends strong scientific expertise in global EID surveillance, with agile software engineering as well as iterative and incremental rapid application development. The project will be managed by our team of data scientists and software developers at EcoHealth Alliance, in consultation with thought leaders in the field of biosurveillance (ISID), and infused with innovative technologies Kitware Inc., developers of leading edge, high quality software.

Key personnel (roles/responsibilities)

- EcoHealth Alliance (prime): management, delivery, software integration, computing, diagnostic analysis, data science, data mining, disease ecology
    - Andrew Huff, Ph.D., M.S. (Principal Investigator - PI)
- Kitware Inc.: data management, visualization
    - Jeff Baumes, Ph.D. (Technical Sub-contractor)
- ProMED-mail: data curation, disease outbreak reporting
    - Larry Madoff, Ph.D. (Scientific Consultant)

Sources of open source data:

- **ProMED-mail** - the Program for Monitoring Emerging Diseases - is an open source Internet-based reporting system dedicated to rapid global dissemination of information on outbreaks of infectious diseases and acute exposures to toxins that affect human health, including those in animals and in plants. Electronic communications enable ProMED-mail to provide up-to-date and reliable news seven days a week. Sources of information include media reports, official reports, online summaries, local observers, and others. A team of expert moderators screen, review, and investigate reports before posting to the network and distributing by email. ProMED-mail currently reaches over 40,000 subscribers in at least 185 countries.
- **Mantle & EIDR** – are emerging infectious disease tools and databases created by EHA. EIDR describes the initial emergence of global infectious disease bioevents since 1940. We collected direct language from the primary literature describing the agent, time, place, impact, transmission, host, driver, EID category, and economics of the event to discover patterns and trends among these variables across time and space. This is used to train the models with historic context to support both our Hotspot predictive modeling efforts and diagnostic capabilities. We are going to use the information collected, stored, and shared with Mantle to help GRITS more accurately detect disease emergence events, to increase diagnostic accuracy of diseases, and to improve the predictive capabilities of GRITS.
- **GIDEON** - Global Infectious Disease and Epidemiology Network - is the world's premier global infectious diseases knowledge management database. It contains a diagnostic module that employs information on symptoms, country, incubation period, and laboratory tests to construct a ranked differential diagnosis. The Infectious Diseases module encompasses over 340 infectious diseases, 231 countries, over 500 anti-infective drugs and vaccines.
- **PubMed, Google Scholar, and Web of Science** - will be used to generate records of confirmed diagnoses and historical outbreaks. Additionally, we hope to explore archival resources such as CDC disease reports.

D. Relevance

Our goal with this project is to develop a tool system of high-relevance to DTRA's Goals and Objectives. With the support of DTRA, we could advance our GRITS to full development and extend timely operational capability to all sectors affected by the threat of EIDs. This state-of-the-art technology will help advance our readiness to combat the broad class of biological threats posed by EIDs, including the capability to identify agents with the potential to be used as WMDs. We have the expertise and capacity to ensure useable capability of the GRITS application within the timeline of tasks we propose. The tools will provide near-real-time decision support to end-users of GRITS and the BSVE. By using open source and transparent methods, we ensure that our results are reproducible and that the technology is portable, reliable, agile, and flexible in confronting emerging threats. The tools we propose are state-of-the-art, both scientifically and technically. GRITS leverage the latest reactive web technologies (e.g., Meteor), visualization environments (e.g., WebGL and Tangelo), and scientific databases (e.g., Girder). The machine learning and clustering algorithms are drawn from Scikit-learn, an open and accessible, community-supported Python library.

A key strategy in mitigating EID risk is to build situational awareness as far forward from our shores as possible, by using advanced digital biosurveillance to detect early signals that portend the emergence of high-risk, priority diseases and pathogens, including bioterrorism agents. This

biosurveillance technology is adaptable to low resource settings, among them those most vulnerable to EIDs. Ultimately we hope to empower our warfighters and allies with the tools necessary to adapt and shape the dynamic Global Security Environment, as it pertains to the acute threat of infectious diseases.

Responses to DTRA's questions from the White Paper
How will the proposed system be sustained? Is a fee for service model envisioned? If so, details should be provided.
We propose providing to DTRA all of the data hosted in GRITS.db and all of the code developed for this proposed system under permissive open source licenses (e.g., MIT and Apache2). Furthermore, EHA has established the Data Science and Research Technology (DART) lab with the express goal of supporting the services outlined in this proposal. We envision sustaining the service under a 'fee for service' model to be negotiated with DTRA upon delivery of the work. We would do so in coordination from our technical subcontractor, Kitware Inc., who has extensive experience supporting open source development for federal agencies, including DoD. Our data subcontractors have agreed to make the full data available to DTRA spanning the duration of the contract (beginning Jan 18, 2013). Where copyright restrictions limit our ability to distribute the full text of the media, we will provide programmatic tools to retrieve the text in compliance with the terms and conditions of the source. Additionally, we propose a 'freemium' mechanism to sustain data hosting and processing costs, whereby DTRA-approved users or organizations could access the service on a pay-as-you-go basis (e.g., paying for characters processed or volume stored).

What will actually be delivered to the Government/BSVE? Will this simply be an API to the EHA system, or will underlying tools and data be delivered? If yes, please clearly describe all deliverables.
We are prepared to deliver all materials developed through the contract under permissive open source licenses. Given the complexity of the system, and the maintenance burden, we recommend that that EHA continue to maintain the materials on a mutually agreed upon third party service (e.g., AWS) and provide the access to the data and diagnostic capabilities through our API. The source code will be made available through a private repository. We will provide full documentation, as we have done for the data service we are currently providing to the BSVE developed by Digital Infuzion. This applies to all deliverables, including GRITS.app, GRITS.db, and GRITS.md. The EIDR platform has been developed with support from other agencies, foundations, and universities; however, we will provide unlimited access in perpetuity to DTRA via the API and web interface. The source code for Tangelo visualizations Girder are publicly available on Github and permissively licensed.

III. Credentials

A. Summary of Credentials

EcoHealth Alliance (EHA):

Building on over 40 years of groundbreaking science, EHA is a global nonprofit organization dedicated to protecting wildlife and safeguarding human health from the emergence of disease. The organization develops ways to combat the effects of damaged ecosystems on human and wildlife health. Using environmental and health data covering the past 60 years, EHA's scientists created the first ever global disease hotspots map that identified at-risk regions, to help predict and prevent the next pandemic crisis. That work is the foundation of EHA's rigorous, science-based approach, focused at the intersection of the environment, health and capacity building. Working in the U.S. and more than 20 countries worldwide, EHA's strength is founded on innovations in research, training, global partnerships, and policy initiatives.

EHA is a partner of the USAID Emerging Pandemic Threats PREDICT program, a $75 million effort focused on predicting and preventing pandemic diseases. PREDICT is building a global early warning system to detect and reduce the impacts of emerging diseases that move between wildlife and people (zoonotic diseases). PREDICT has developed a SMART surveillance method (Strategic, Measurable, Adaptive, Responsive, and Targeted) that accounts for the fact that zoonotic pathogens, like influenza and SARS, are responsible for the majority of emerging infectious diseases in people, and that more than three quarters of these emerging zoonoses are of wildlife origin. The SMART surveillance approach is designed to detect novel diseases with pandemic potential early, giving health professionals the best opportunity to prevent emergence and spread. It also targets sentinel animal species at active human interfaces in hotspot regions to improve surveillance efficiency.

The PREDICT team builds on a broad coalition of partners to develop the global capacity to monitor diseases at the animal-human interface and develop a risk-based approach to concentrate these efforts in surveillance, prevention, and response at the most critical points for disease emergence from wildlife.

PREDICT project objectives:

- Assess local surveillance capacity;
- Implement targeted and adaptive wildlife disease surveillance systems;
- Develop and deliver new technologies to improve efforts close to the source;
- Use cutting-edge information management and communication tools to bring the world closer to realizing an integrated, global approach to emerging zoonotic diseases.

Partners:
ProMED
ProMED-mail was established in 1994 with the support of the Federation of American Scientists and SatelLife. Since October 1999, ProMED-mail has operated as an official program of the International Society for Infectious Diseases, a nonprofit professional organization with 20,000 members worldwide.

Kitware, Inc.
Kitware, Inc. creates and supports leading edge, high quality software in the fields of computer vision, medical imaging, visualization, 3D data publishing, and technical software development.

Kitware employs an open source development model to foster extended, collaborative communities, and an open source business model to provide flexible, low-cost technical solutions. The Company's services and products include technology integration, software support, consulting, custom application development, and training and productivity tools that leverage our open-source software systems.

B. Summary of Qualifications for PI and Key Personnel

Dr. Andrew Huff (PI), is a senior research scientist at EcoHealth Alliance. Over the past 4 years, he patented a novel technology at the University of Minnesota, to collect and combine disparate spatial data sources to rapidly identify biologically or chemically contaminated sources of food. To accomplish this difficult task, he has engineered spatial algorithms and has created novel primary functional keys for data fusion. While at Sandia National Laboratories, he developed multiple computational models for infectious disease consequence prediction and developed unique analytical methods for infectious disease epidemiology and emergence. He has worked on projects funded by DOE, DHS, DoS, DTRA, DVA FDA, HHS, and USDA.

Dr. Lawrence Madoff is an infectious disease physician whose career has been devoted to disease surveillance. Dr. Madoff is the Editor of ProMED-mail, which uses Internet-based communication and social media to detect and report emerging infectious diseases globally. He is currently Director of the Division of Epidemiology and Immunization at the Massachusetts Department of Public Health, which oversees infectious disease surveillance and immunization activities in the state. He is a fellow of the American College of Physicians and a Fellow of the Infectious Disease Society of America.

Dr. Jeff Baumes is a technical lead at Kitware Inc. He has significant expertise in information analysis and presentation. His contributions include novel graph clustering algorithms that allow cluster overlap, and algorithms for discovering subsets of individuals persistently connected over time. Over the last six years, he has been a major technical contributor to the open source Titan scalable analysis and visualization toolkit, which is an extension of the Visualization Toolkit to include informatics and information visualization capabilities. He has worked on projects in several fields surrounding Titan such as text analysis, bioinformatics, and social network analysis including funding from NSF, DoD, DOE, and NIH.

C. Summary of Facilities to Perform the Proposed Work

Facilities at EcoHealth Alliance (EHA)

EcoHealth Alliance (EHA) is a 501(c)(3) nonprofit organization that specializes in scientific research on the causes, origins, and spread of zoonotic emerging diseases. EHA scientists have been working on spatial modeling for over 15 years, and on modeling of infectious disease emergence and spread for over a decade. EHA is based in New York City with 10,000 square feet of office space including a meeting room and basic laboratory. A core administrative staff of 11 employees support EHA's scientific team (15 core scientists, 100+ field staff) and are available for work on this project through foundation support. EHA is equipped with 25 networked PCs including ARRA funded International Live Meeting Video Conferencing facilities. EHA has access to multiple servers, server support, and all necessary software on Mac, Linux, and Windows operating systems. Additional computing power is acquired from commercial cloud providers to meet project needs.

EHA has an active program of staff development and this is reviewed and adjusted annually as part of each employee's evaluation process. Specific provisions are made for internal training and external training resources, tuition support programs via a partnership with Columbia University, and active support of staff to spend time in collaborators organizations. All early stage investigators are mentored to provide guidance in research practices, grant management, administration and project management. Financial support from EHA core funds is available to support external tuition, travel to conferences and to conduct joint research in collaborator's institutions. There is no obligation for teaching time at EHA and all research staff are funded for 100% research time; however, there is a provision, through partnership with Columbia University, to enable staff to teach at the undergraduate and graduate level, with monetary support provided by Columbia University. Administration and other staff are supported in their efforts to enhance their careers by the provision of tuition fees for external courses, travel funds for conferences, and time off their core activities.

Facilities at Kitware Inc.
Kitware Inc. is headquartered just north of Albany, New York in a Clifton Park office complex. Kitware rents approximately 27,000 square feet of office space at this location. Kitware also has an office in Chapel Hill, North Carolina approximately 6,200 square feet in size. Both offices are linked via a common virtual private network and a shared phone system, and share financial and administrative personnel. They also have on-site office managers, lunchrooms, private meeting rooms, and advanced conference facilities including large screen projection systems and whole-room Polycom video conferencing systems. The proposed work will be performed at the Clifton Park site.

Kitware has a mixed environment of personal and shared computing platforms. Employees average three computers per person (desktop, laptop, and/or home system), with each computer typically equipped with multiple multi-core processors, a high-performance graphics card, dual monitors, and 8GB or more of main memory. These personal systems run a mix of Windows, Mac OS X, and Linux operating systems. Shared resources include compilation and testing farms as well as workstations running a variety of alternative operating systems for testing purposes, e.g., Windows XP or Vista. Kitware also maintains several servers to provide public access to the open source VTK, ITK, TubeTK, Titan, Slicer, CMake, and ParaView systems; to host web pages and web services for open source communities such as NA-MIC and Visomics; to operate open-access journals such as the Insight Journal and the Midas journal which has hosted workshop papers for nearly ten years; and to provide access to massive collections of public data for computer vision and medical imaging algorithm evaluation. Access to these systems is provided by a fiber connection to the Internet yielding a total of 100 Mbit/second data rate.

Kitware hosts several special-purpose, high-end workstations, GPU systems, haptic systems, and magnetic and optical trackers. One such workstation is a multi-GPU computer featuring 6 NVidia GPU boards: 5 C2050 Tesla and 1 Quadro 5000 Fermi, as well as a 6-Core X5680 3.33GHz processor. A noteworthy haptic system is a MBP Freedom 7S haptic device, configurable for 6 or 7 degrees of freedom. To address large-scale distributed computing, the company maintains several clusters for development and testing. The clusters include: a twelve node testing cluster running mixed Linux and Windows operating systems; a four node Windows cluster with a gigabit Ethernet network; and a seven node Linux cluster with dual 64-bit Xenon processors, high-end graphics accelerators, and an Infiniband network driving a 3x2 PowerWall

display. Kitware also has access to several external computer systems (e.g., HP, IBM, and Intel) through various vendor partnership programs.

IV. WORK TO BE PERFORMED.

A. General

Our goal over the 3-year time period is to expand our DTRA-funded GRITS platform to deliver disease diagnostics, decision support, and data processing. These enhanced capabilities will be powered by GRITS analytics, and data.

We are currently building a robust and scalable software infrastructure to provide a diagnostic decision support system for analysts. The final deliverable will include our user interface (GRITS.app), application interface (GRITS.api), media diagnostics (GRITS.md), and database (GRITS.db). Overall, GRITS will be deployable and generalized application that will output probabilities and lists of pathogens likely responsible for an outbreak on the basis of user-provided data. Accordingly, the resource will be adaptable to a specific organization or agency's needs or emerging threats, and geographic areas of high concern. The source code for this algorithm will be made available to interested parties for further development and adaptation.

The original Rapid Identification Tool (RIT) prototype was developed by manually extracting symptoms from encephalitides reports in ProMED-mail to train a diagnostic model. Through rigorous testing, we identified modeling approaches that improved performance by combining natural language processing and machine learning algorithms. We recognized automated data collection and crowd sourced data curation would be needed to scale to disease coverage and diagnose additional diseases with greater precision. The GRITS diagnostic dashboard provides decision support to experts at our partner organizations by automatically extracting and visualizing information from media. We leverage crowdsourcing techniques by providing experts with tools for curating disease portfolios and annotating articles. We have developed an application programming interface (API) for access to our data and diagnostics by third party developers and users. Additionally, we integrated the project with an ongoing EHA initiative to collect historical disease outbreak data (Global Repository for Infectious Diseases - EIDR). Finally, we integrated work from our colleagues at Kitware to support the storage and visualization of the large, complex datasets being generated.

During the proposed contract period, we will improve the accuracy and robustness of the GRITS media diagnostics. We will experiment with crowdsourcing as an additional source of training data and knowledge to further improve GRITS.md and expand the capabilities of the system to provide decision support and recommendations to analysts.

By the end of the contract period GRITS will provide:

1. Robust architecture for diagnostics and data processing;
2. Interface from BSVE to GRITS with SDK;
3. Analysis and synthesis of multiple open source data *to* the BSVE; and,
4. Machine and community intelligence.

Diagnostic modeling
We plan to use the biointelligence extracted from news media and submitted by GRITS users to form the basis of new relationships and entities within biological ontologies that link EID events, diseases, symptoms, hosts, and other entities and attributes related to infectious diseases together in a rich network structure. This ontology will be a critical data source for making domain specific inferences in diagnostic algorithms.

Data Storage and Management
Girder is a data management platform built to meet the needs of distributed, data-centric web applications. Girder is a modular framework that allows developers to build systems that use any or all of the components necessary to create a system tailored to their needs. All data sharing web applications need the same core functionality: upload, download, large data storage, supplemental metadata storage and indexing, authentication/authorization, a RESTful API, and extensible plugin architecture. Girder provides these components and is currently being used for GRITS as well as several DOE projects.

B. Summary

Base Year (2015)

1. Connect GRITS Girder database to the BSVE
2. Develop recommendation and decision support capabilities
3. Connect GRITS diagnostic and text-mining APIs to the BSVE
4. Build BSVE interface to GRITS with the SDK
5. Build mechanisms to crowd source annotations
6. Incorporate disease network graphs to assist diagnostics
7. Support diagnostic algorithm development with dashboard

Option Year 1 (2016)

8. Expand diagnostic capability to arbitrary data feeds
9. Connect GRITS to EIDR
10. Update diagnostic model in near-real-time
11. Use text mining to extend network graphs/ontologies.
12. Connect EIDR's collective intelligence editor to the BSVE
13. Connect GRITS diagnostic data filtering to the BSVE
14. Generate disease summary reports from diagnostics
15. Forecast disease emergence

C. Detailed Tasks

Task 1: Connect GRITS Girder database to the BSVE
Description: Coordinate with BSVE developers to provide API access to GRITS database (ProMED and EcoHealth data with diagnostic metadata).
Resources: EcoHealth & Kitware (API, BSVE support), EHA & ProMED (data).
Metric(s) of success: BSVE access to GRITS data via API.
Deliverable: API key and access for the BSVE team, communication between BSVE/GRITS.
Subtasks:

1. Solicit feedback on GRITS data API from BSVE team
2. Create API key generation and assignment infrastructure for GRITS

3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API
5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities
Description: Use our GRITS.md to extract features of incoming articles to inform media recommendations for analysts based on areas or keywords of interest or a collection of documents being evaluated. Identify targets for data collection that would most enhance diagnostic capabilities for a particular event.
Resources: EcoHealth (algorithms and infrastructure), Kitware (storage & visualization), EHA & ProMED (testing).
Metrics of success: Recommendation system returns relevant articles, people and organizations. Adding recommended information improves diagnosis.
Deliverable: API and diagnostic dashboard interface to recommendations.
Subtasks:

1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords
3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article
7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE
Description: Provide BSVE developers with API access to GRITS media diagnostics and text mining tools and support them as they integrate these features into the BSVE interface.
Resources: EcoHealth (API development, BSVE support).
Metrics of success: BSVE team satisfied with API structure. GRITS features and diagnoses accessible through BSVE.
Deliverable: API access for the BSVE team, communication between BSVE/GRITS.
Subtasks:

1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Build BSVE interface to GRITS with the SDK
Description: Build an app on the BSVE SDK that allows BSVE users to submit text to diagnose. The app will display a basic visualization of a diagnosis, and provide links to diagnostic dashboards where users can see additional visualizations and interact further with GRITS diagnostic tools.
Resources: EcoHealth (app development & testing).
Metrics of success: Users able to access GRITS through app deployed to BSVE.
Deliverable: Deployed app, BSVE users able to access diagnostic dashboards.
Subtasks:

1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission

5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy application

Task 5: Build mechanisms to crowd source annotations
Description: Identify human intelligence annotation tasks for crowdsourcing by citizen scientists and Amazon's Mechanical Turk. Extend the annotation interface so that users can correct auto-generated annotations.
Resources: EcoHealth (annotation interface), Mechanical Turk (pay for annotations), Citizen Scientists (volunteers).
Metrics of success: Annotations crowd sourced. Improves diagnostics from annotations.
Deliverable: Crowd sourced annotations incorporated into GRITS training data.
Subtasks:

1. Prepare annotation interface to allow correcting annotations
2. Write documentation of annotation interface
3. Test annotation interface and incorporate feedback
4. Develop infrastructure to identify and assign annotation tasks
5. Integrate annotation interface into Mechanical Turk or similar platform
6. Integrate and deploy citizen science platform
7. Evaluate obtained annotations and report on quality (e.g., inter-annotator agreement)

Task 6: Incorporate disease network graphs to assist diagnostics
Description: Model the geographic, ecological, and information structures of infectious disease networks and connect them to diagnostic API. Develop visualizations for diagnostic dashboard.
Resources: EcoHealth & Kitware (network modeling, visualization). Data sources: OpenStreetMaps, Customs and Border Patrol commercial trade data, Ecologicaldata.org, Geonames.org, Bpedia.org, Public Health Agency Canada, CDC's Morbidity and Mortality Weekly Report (MMWR), EHA's EIDR and Mantle, PubMED, OBO ontologies, Crisis.net, and Moz.com. Open source Python code for spatial network analysis (e.g., Sage, lumify.io, OWL).
Metrics of success: Improved diagnostics from network reasoning.
Deliverable: Visualizations of the network model in the diagnostic dashboard.
Subtasks:

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blind spots' in the information network

Task 7: Support diagnostic algorithm development with dashboard
Description: Support multiple models for diagnosis, and continually reevaluate their effectiveness. Different algorithms may perform differently with time, origin, or diseases. Allow users to run and compare the results of different models via the diagnostic dashboard. Run automated jobs to compare the performance of models over time.
Resources: EcoHealth & Kitware (algorithm and interface development).
Metrics of success: Run and compare models from the dashboard.
Deliverable: Capacity to compare model performance in the dashboard.
Subtasks:

1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters

4. Automate algorithms and record performance

Task 8: Expand diagnostic capability to arbitrary data feeds
Description: Develop robust scraping algorithms and provide an interface for users to connect data sources to GRITS.
Resources: EcoHealth (algorithms), Language translation service.
Metrics of success: Users can submit relevant feeds to the GRITS system.
Deliverable: Interface for submitting data feeds.
Subtasks:
1. Build a submission interface for users to submit arbitrary feed
2. Integrate article-processing pipeline with a translation service to process non-English articles in near real time.

Task 9: Connect GRITS to EIDR
Description: Incorporate EIDR dataset into GRITS to give the platform a comprehensive historical perspective on EIDs and enhance analytic capabilities around drivers of disease behavior. Extend the recommendation system to include historic context from EIDR (e.g., media and data). Use historic event data to expand to match targets for a disease or keyword.
Resources: EcoHealth (recommendation system, EIDR).
Metrics of success: Diagnostic decision support enriched by historic event data.
Deliverable: Improved recommendation system, match new reports with historic events.
Subtasks:
1. Evaluate existing EIDR API against needs of recommendation system
2. Develop capacity of EIDR API to deliver historic event matches
3. Recommend EIDR events (e.g., current event is similar to past outbreak)
4. Use EIDR media to improve diagnostics and recommendation quality
5. Match GRITS data to events in EIDR (expanding from EIDs to all outbreaks)

Task 10: Update diagnostic model in near real time
Description: Retrain the classifier with new reports from EHA/ProMED or users submissions. Classify labeled training data with GRITS, for example correcting misclassification. Investigate classifiers capable of distributed training or incremental retraining.
Resources: EcoHealth (algorithm and architecture development).
Metrics of success: Model updates improve performance. Classifier updates.
Deliverable: Enhanced classification infrastructure, retraining interface.
Subtasks:
1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 11: Use text mining to extend network graphs/ontologies
Description: Use features extracted from disease reports to add entities and relationships to disease network ontology. For example, linking case counts to locations.
Resources: EcoHealth (feature extraction and ontologies).
Metrics of success: Accuracy of entities and relationships extracted from our data sources.
Deliverable: An extended ontology generated by text-mining algorithms.
Subtasks:

1. Infer set of subjects (e.g., EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g., viral strains that have mutated or developed antibiotic resistance).

Task 12: Connect EIDR collective intelligence editor to the BSVE
Description: Incorporate BSVE users as experts for the review and editing EIDR events.
Resources: EcoHealth (EIDR).
Metrics of success: BSVE users contribute to EIDR. Diagnostic models improve from EIDR data. Additional features are extracted based on EIDR data.
Deliverable: BSVE/GRITS access to EIDR, improved diagnostics and feature extraction.
Subtasks:

1. Evaluate and implement changes to EIDR API for of GRITS diagnostic needs
2. Generate keywords and rules from EIDR data to incorporate into GRITS text mining
3. Incorporate EIDR data into diagnostic model training
4. Design user interface for expert review and editing of EIDR events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with EIDR

Task 13: Connect GRITS diagnostic data filtering to the BSVE
Description: Use diagnostics to reduce data volume to relevant reports. Users should be able to list diseases or regions of interest.
Resources: EcoHealth & Kitware (GRITS integration and data filtering).
Metrics of success: GRITS will return a subset of related assets.
Subtasks:

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 14: Generate disease summary reports from diagnostics
Description: Aggregate the data collected by text-mining and diagnostic algorithms to give an meta overview of a collection of reports or disease outbreak.
Resources: EcoHealth (algorithms and reporting).
Metrics of success: Number of visits per unique user to the summary report website
Deliverable: API returns summary reports to diagnostic dashboard and BSVE.
Subtasks:

1. Create algorithms for generating statistics (e.g., case counts) and visualizations (e.g., epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 15: Forecast disease emergence
Description: EHA are experts in disease hotspot mapping. Use GRITS.db and GRITS.md to identify diseases that pose the greatest threat. Use case-counts and data from historical epidemic curves to model probable epidemic curves for new diseases.
Resources: EcoHealth (hotspots modeling).
Metrics of success: The cumulative difference between the actual epidemic curve and predicted curve. Identify hotspots for disease emergence based on diagnostics.

Deliverable: Return geocoded hotspots via API for visualization on BSVE.
Subtasks:

1. Build a mathematical model of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

Maintenance Plan

- Support the Global Rapid Identification Tool System (GRITS) on the cloud
- Develop a software process infrastructure for the GRITS developer community
- Build a robust server network to ensure uptime of the GRITS platform
- Develop a test suite to identify issues and ensure compatibility with the BSVE
- Develop user and developer documentation for the platform
- Maintain the software via a ticketing system.

V. Performance of Work

Description of Services: We shall provide all management, tools, supplies, equipment, and labor necessary to build GRITS. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to pinpoint and identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. We propose scaling this system to handle large data volumes in near-real-time, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor live data feeds for diseases or disease characteristics of interest. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data; all connected to our network of experts from digital surveillance and open source communities.

Period of Performance: Performance period for this contract will be no more than 150 days from the date of award, and will run continuously for 12 months with the provision for one time extension of this contract for an additional 12-month period.

Task 1: Connect GRITS Girder database to the BSVE (Base Period)

1. Solicit feedback on GRITS data API from BSVE team
2. Create API key generation and assignment infrastructure for GRITS
3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API
5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities (Base Period)

1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords
3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article
7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE (Base Period)

1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Build BSVE interface to GRITS with the SDK (Base Period)

1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy application

Task 5: Build mechanisms to crowd source annotations (Base Period)

1. Prepare annotation interface to allow correcting annotations
2. Write documentation of annotation interface
3. Test annotation interface and incorporate feedback
4. Develop infrastructure to identify and assign annotation tasks
5. Integrate annotation interface into Mechanical Turk or similar platform
6. Integrate and deploy citizen science platform
7. Evaluate obtained annotations and report on quality (e.g., inter-annotator agreement)

Task 6: Incorporate disease network graphs to assist diagnostics (Base Period)

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blind spots' in the information network

Task 7: Support diagnostic algorithm development with dashboard (Base Period)

1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 8: Expand diagnostic capability to arbitrary data feeds (Option Year 1)

1. Build a submission interface for users to submit arbitrary feed
2. Integrate article-processing pipeline with a translation service to process non-English articles in near real time.

Task 9: Connect GRITS to EIDR (Option Year 1)

1. Evaluate existing EIDR API against needs of recommendation system
2. Develop capacity of EIDR API to deliver historic event matches
3. Recommend EIDR events (e.g., current event is similar to past outbreak)
4. Use EIDR media to improve diagnostics and recommendation quality
5. Match GRITS data to events in EIDR (expanding from EIDs to all outbreaks)

Task 10: Update diagnostic model in near real time (Option Year 1)

1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 11: Use text mining to extend network graphs/ontologies (Option Year 1)

1. Infer set of subjects (e.g., EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups

3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g., viral strains that have mutated or developed antibiotic resistance).

Task 12: Connect EIDR collective intelligence editor to the BSVE (Option Year 1)

1. Evaluate and implement changes to EIDR API for of GRITS diagnostic needs
2. Generate keywords and rules from EIDR data to incorporate into GRITS text mining
3. Incorporate EIDR data into diagnostic model training
4. Design user interface for expert review and editing of EIDR events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with EIDR

Task 13: Connect GRITS diagnostic data filtering to the BSVE (Option Year 1)

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 14: Generate disease summary reports from diagnostics (Option Year 1)

1. Create algorithms for generating statistics (e.g., case counts) and visualizations (e.g., epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 15: Forecast disease emergence (Option Year 1)

1. Build a mathematical model of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

Records: EHA shall be responsible for creating, maintaining, and disposing of only those government required records that are specifically cited in this PWS or required by the provisions of a mandatory directive listed in If requested by the Government, EHA shall provide the original record or a reproducible copy of any such record within 14 working days of receipt of the request.

Year 1			
Q1	Q2	Q3	Q4

Connect GRITS Girder database to the BSVE

Develop recommendation and decision support capabilities

Connect GRITS diagnostic and text-mining APIs to the BSVE

Prototype near-real-time processing

Build BSVE interface to GRITS with the SDK

Connect GRITS expert network (GRITS.net) to the BSVE

Test diagnostic dashboard with expert communities.

Year 2			
Q1	Q2	Q3	Q4

Enhance the expert annotation interface

Build mechanisms to crowdsource annotations

Incorporate disease network graphs to assist diagnostics

Support diagnostic algorithm development with dashboard

Expand diagnostic capability to arbitrary data feeds

Connect GRITS to GRID

Update diagnostic model in near-real-time

Use text mining to extend network graphs/ontologies.

Year 3			
Q1	Q2	Q3	Q4

Crowdsource improvements to the GRITS media diagnostic tool

Connect GRID's collective intelligence editor to the BSVE

Connect GRITS diagnostic data filtering to the BSVE

Enrich diagnostic dashboard with dynamic visualizations

Generate disease summary reports from diagnostics

Connect EcoHD to GRITS recommendations

Create a web-crawler for expanding coverage of disease reports

Forecast disease emergence

Volume I: Technical Proposal

I. Abstract

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. We aim to enhance our current GRITS platform, developed with DTRA support, by scaling this system to handle large data volumes in near-real-time, enhancing diagnostic capabilities through network and cluster analysis, and improving visualization through use of the latest reactive web technologies. GRITS will also utilize the benefits and explore the integration of crowdsourcing, collective intelligence, and expert review. This tool will rely on automation to ingest media, extract key disease characteristics, and recommend resources, increasing the specificity of the data feed to an analyst's workflow. We propose building an app with the BSVE SDK that allows BSVE users to submit resources to diagnose and to connect with experts from ProMED, HealthMap and EcoHealth, thereby increasing our network of experts from digital surveillance and open source communities. The diagnostic results generated by GRITS have immediate applications for risk mapping, outbreak prediction, and early warning of microbial threats, advancing our readiness to combat the broad class of chemical and biological threats posed by EIDs.

Keywords
disease ecology, digital diagnostics, natural language, machine learning, emergent media, network, real-time, data science

II. Scope

A. Objective

EcoHealth Alliance (EHA) proposes a Global Rapid Identification Tool System (GRITS) for diagnosing infectious disease bioevents. Our current GRITS media diagnostic tool (GRITS.md) delivers ranked differential diagnoses to pinpoint and identify disease threats more rapidly than current public health systems. Our specific objective with this proposal is to leverage the GRITS platform, developed with DTRA support since January 2013, and expand it to deliver near-real-time disease diagnostics, decision support, and data processing to the BSVE. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data, all connected to our network of experts from digital surveillance and open source communities.

B. Background

The discovery of HIV/AIDS in the 1980s marked the transition from declaring victory over infectious diseases, to global increases in disease emergence and re-emergence[1]. EcoHealth Alliance (EHA) is at the forefront of organizations working to 'get ahead of the epidemic curve' by identifying these threats before the next pandemic or extinction event. Our researchers pioneered the identification of the origins of pathogens, such as Nipah virus[2], SARS[3], and MERS[4]. We constantly seek innovative approaches to target our field surveillance efforts on emerging threats[5]. To this end, the global increase in the volume of data, from the growth of the web and instrumented systems, presents both a challenge to traditional surveillance approaches and a tremendous opportunity for novel discoveries.

Various biosurveillance technologies have been developed to monitor Internet data sources, for instance, syndromic surveillance initiatives target surrogate indicators of a disease outbreak[6]. As with other sectors, such as commerce, marketing, and finance, the challenge is to manage

the expanding volume of data while identifying signals of interest[7]. In the case of EIDs, access to emergent media, including participatory, personal, and interactive media, characterized by decentralized content generation (e.g. the blogosphere, internationalization, and social media), presents an opportunity to detect early mentions of disease characteristics and anomalies of interest.

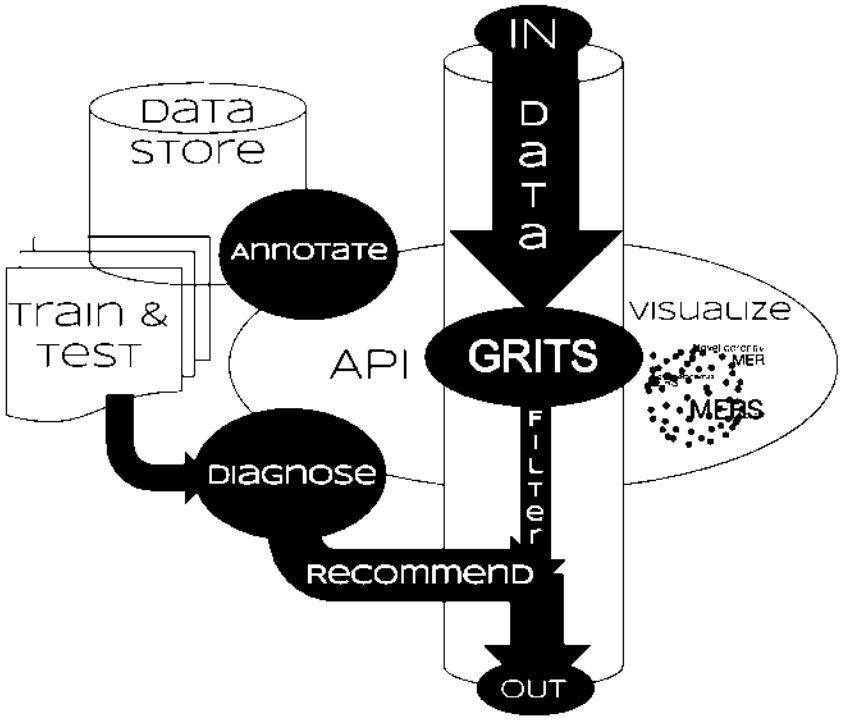
The GRITS partners are among the leading organizations in this domain. ProMED-mail (International Society of Infectious Diseases) manages a global email network of clinicians who are often among the first to identify and report disease threats[8]. Epidemico (HealthMap)[9] actively curates an expanding catalog of relevant news and social media assets. Both organizations are unique among their peers in leveraging broad networks of experts to curate and reduce the volume of media to a high-quality feed. Kitware Inc., our technical partner, has engineered sustainable communities around successful, high-impact open source scientific software.

EcoHealth assembled the GRITS team to advance the state-of-the-art in the detection and diagnosis of disease threats. GRITS combines new technologies with expert networks to apply the sciences of disease ecology and epidemiology to diagnosing big data for near-real-time disease situation awareness. We built GRITS upon pre-existing communities of expertise, rather than *de novo* technical solutions, recognizing that human experts must be integrated into the platform to ensure its intelligence and growth. In addition, we sought novel mechanisms for decision support by organizing, prioritizing, contextualizing, and linking information to relevant current and historic resources. Overall, we deploy science at the core of our systems to assemble near-real-time information in a manner that supports decision makers with diagnostic tools built by, and for, the digital disease ecology community. The diagnostic results generated by GRITS have immediate applications for risk mapping, outbreak prediction, and early warning of microbial threats.

Description of GRITS Capabilities

We take a diagnostic approach to identifying disease threats, setting research priorities, and strategically deploying our field teams. GRITS ingests and processes data feeds to provide decision support to analysts, with the following capabilities:

Diagnose - Identify the disease(s) described in a resource. Return a ranked list of diseases with quantitative metrics of certainty (differential diagnoses).
Mine - Extract the key components of document via automated analysis, collective annotation, and expert curation. Return a set of relevant information.
Recommend - Expand the materials available to the analyst. Return a collection of recommended resources that provide historic and contemporary context.
Filter - Reduce the complexity of the data feed by selecting those documents that meet diagnostic criteria of interest to the analyst. Return a filtered subset of data.
Connect - Relate the material to underlying ontologies to provide a decision framework for the analyst. Return connections to other bioevents based on underlying network structures (e.g. geography, ecology, time, host, pathogen, and environmental drivers).



Sources of GRITS biointelligence

A. Machine	Data mining, machine learning, and natural language processing
B. Expert	Elicitation, consultation, and peer review
C. Collective	Crowdsourcing annotation and human intelligence tasks

A. Machine

GRITS leverages automation to ingest, process, and return an initial diagnosis of digital media, reducing the extraneous sources of information through which experts and reviewers must sort. The GRITS text mining system extracts key disease characteristics, such as locations, case counts, and dates, for our metadata and diagnostic models. These features, which may be combined into composite features by high level rules, are based on sentence patterns and keywords chosen from third-party sources such as WordNet, Geonames, Disease Ontology, Symptom Ontology, and Biocaster Ontology. The categories we extract, such as hosts, pathogens, diseases, signs and symptoms, drivers, and transmission types, are also informed by historic disease event data curated via our GRID project, and prioritized through consultation with our experts. The GRITS diagnostic models, that use machine learning algorithms based on extracted keywords to classify articles, are trained on test articles labeled with diseases by our partners. A key function of this machine intelligence is to provide the materials and platforms to crowdsource the training data.

B. Expert

GRITS is designed to be tightly integrated with a broad network of experts who contribute relevant domain expertise ranging from disease ecology, wildlife health, epidemiology, biosurveillance, and medicine. We propose to enhance the accuracy of text mining service through expert consultation and close integration with public ontologies maintained by expert communities. We currently rely on experts to curate our content; however, we hope to close the loop by allowing BSVE users to contact these expert communities for input, including diagnostic advice, regional expertise, and language support (GRITS.net).

To fully integrate our users, we propose extending GRITS to provide more insight and flexibility in its operation. We wish to create mechanisms to edit and examine the effects of keywords on diagnosis, customize extracted features, and provide feedback on the 'best' diagnosis, thereby iteratively generating training data for the diagnostic algorithms. We also intend to test the article representations we use for classification through game-based mechanisms to identify areas for improvement in our representations. By combining a rule-based system with an algorithmic approach, the platform maintains both greater potential for expert input and easy interpretation for non-technical users.

C. Collective

The machine learning component of GRITS requires training data from portfolios of articles with disease labels and disease characteristic metadata, information collected from HealthMap and ProMed editors in order to highlight and categorize important features and relationships. These are then used to train classifiers to identify specific features of importance. To extend the range of articles we can classify, we propose using crowdsourcing methods via Amazon's Mechanical Turk and Zooniverse to generate labels and annotations for articles that do not require domain expertise.

To further enhance the accuracy of the GRITS classification algorithms, we propose crowdsourcing a diagnostic challenge, whereby we host and share our training data on an existing challenge platform (e.g. Kaggle), where programmers compete to build classifiers to improve accuracy.These approaches would compliment the models developed by our internal users and promote global citizenship in combating the scourge of emerging infectious disease. Finally, we propose integrating EHA's Global Repository for Infectious Diseases (GRID) to solicit collective intelligence and peer editing to develop a canonical collection of event data portfolios for BSVE users and the broader scientific community. The BSVE will have access to the GRID API throughout the contract period with an option to continue access through continued funding. EHA will also provide a copy of the GRID data to DTRA at the end of the contract period.

Our three-pronged approach (machine, expert, and collective) is a unique strength of the GRITS platform. Experts contribute keywords and rules to improve automated text mining tools, identify human intelligence tasks, and prioritize areas for algorithm development. Meanwhile, the automated tools enable experts to make the best use of their time by farming out less specialized tasks to the crowd, identifying errors in the data sources, and notifying editors or creating tasks to crowdsource solutions. In the case that there isn't enough data to deliver an accurate diagnosis, GRITS will identify the most useful information in distinguishing disease candidates and recommend an expert or field team to consult from our network (GRITS.net). Combined, this presents a unique conceptual model and workflow for supporting outbreak

investigation.

Proposed Development
GRITS enhances traditional search with adaptive diagnostic models, trained on a broad spectrum of resources from GRITS partners and curated by our communities of experts. This diagnostic function reduces the complexity and increases the specificity of the data feed to an analyst's workflow. We propose scaling this system to handle large data volumes in near-real-time, along with enhancing diagnostic capabilities, thereby allowing users of GRITS and the BSVE to monitor live data feeds for diseases or disease characteristics of interest. To ensure rapid diagnosis when a disease first emerges, GRITS blends social media, news media, and scientific literature. This approach may be further leveraged to identify unusual events and diagnostic gaps that may herald an emerging infectious disease of unknown etiology.

BSVE integration and benefits
We propose building an app with the BSVE SDK that allows BSVE users to submit resources to diagnose. The app will display a basic visualization of a diagnosis, and provide links to diagnostic dashboards for decision support via additional visualizations and diagnostic tools. The GRITS interface in BSVE will connect users to experts from ProMED, HealthMap and EcoHealth. The data processing stack will provide the capabilities identified above (diagnose, mine, recommend, filter, and connect) to data being ingested or monitored by the BSVE. Our diagnostic service is designed to continually evolve and improve via mechanisms for input from collective, expert, and machine intelligence sources. Our novel approach to diagnostics builds upon traditional search with the infusion of disease ecology into the methodology.

Technical Challenges
Due to incomplete reporting, errant diagnoses, delayed onset of symptoms, and delays in laboratory results, it is difficult diagnose diseases in the early phase of an outbreak[10]. Dialect varies among data sources and there is high variability in accessibility of news sources and scientific literature. Software has a language bias where non-latin characters are often the source of bugs, and foreign language articles require translation to fit into a single NLP pipeline. Additionally, media attention is biased toward OECD countries, with blind spots in some of the locations where diseases more frequently emerge, particularly those with limited clinical infrastructure and access to health professionals[11]. However, as a shared and accessible platform that can maximize the utility of both expert networks and machine intelligence, our tool is of particular value in resource-poor areas without laboratory diagnostic facilities or, with past events, where clinical samples are no longer available. To reduce the time-lag in detecting EIDs, we are interested in identifying prompt data sources and recruiting members of the GRITS network and BSVE community in disease prone environments to provide additional reports of emerging diseases.

When attempting to respond to user submitted corrections and feedback, some classifiers take considerable time to train (e.g. neural nets), and completely retaining any classifier on big data can be prohibitive. We will need to investigate methods of incrementally retraining our classifier in a timely manner as new data is submitted.

Technical merit
Overall, we propose to expand our automated data extraction to support reporting initiatives and event notification systems with near-real-time automated extraction of disease-relevant information from an arbitrary, unstructured data feed. Further development of the GRITS text

mining system will allow us to introduce ecological and epidemiological concepts to extract more complex information such as host-pathogen relationships and quantitative data (e.g. case counts) for modeling and analysis[12]. We want to improve the precision of the features we extract by developing more sophisticated natural language processing pipelines. Additionally, we plan to reduce error rates by taking advantage of the open source NLP software ecosystem to perform word sense disambiguation and coreference resolution. Identifying the features GRITS and BSVE users value and providing channels for them to provide us with feedback will also be important to improving GRITS. We propose dynamically retraining the classification algorithm GRITS uses to diagnose diseases based on user submitted corrections to its diagnosis. Finally, we plan on open sourcing reusable components of our system so that other groups can benefit from our work.

Our technology stack consists of modern web technologies such as Meteor that allow us to seamlessly update the content of the UI in near-real-time. These frameworks are compatible with the current technologies in the BSVE, such as AngularJS. We are actively investigating distributed processing technologies, such as Storm, that would allow us to process large volumes articles in parallel. Furthermore, we employ implementations of machine learning algorithms from scikit-learn, and are using natural language processing algorithms (e.g. tokenizing, part-of-speech-tagging, lemmatization) from nltk, and CLIPS pattern. We have started with a Python ML/NLP stack because of the rich software ecosystem available, and the ability to prototype rapidly with IPython notebooks.

Scientific merit

Automated categorization of EID reports by the GRITS diagnostic classifier will enable analysts and to search and filter them, increasing the ratio of relevant information they review. Furthermore, GRITS will provide decision support by suggesting potential diseases in reports of unknown diseases, and by recommending relevant data to review and organizations to contact. An established networks of experts from EcoHealth and One Health will provide input on our diagnostic engine enabling us to continually improve upon it. Infectious disease emergence is a global-scale challenge requiring an extended, engaged community to monitor, track and respond to new threats; it is also also intrinsically interdisciplinary given the complex life histories of many disease agents.

Ontologies are invaluable tools in artificial intelligence systems, decision support systems, data exploration and research where they can be used to make complex inferences and generate rich datasets. We seek to expand the scope of our ecological ontologies by considering taxonomic, distribution, ecological niche, and networks for pathogens and hosts. This will help us provide state of the art diagnostics for the BSVE by providing structured data from which we can make inferences with GRITS diagnostic algorithms. We plan to use the biointelligence extracted from news media and submitted by GRITS users to assemble a corpus of new information to form the basis of new relationships and entities within biological ontologies to help explain patterns of disease emergence. We are interested in incorporating these relationships and entities into public ontologies they derive from or relate to so that other projects benefit from our work. Our goal, with the work we propose, is to push our system so that more components operate in near-real-time, provide recommendations of to users for additional data-sources, work with citizen scientists to expand the data inputs to diagnostic tools, and integrate various GRITS components into the BSVE community.

C. Programmatics

This effort will support DoD CBDP, DTRA, and the Joint Science and Technology Office for Chemical and Biological Defense (JSTO-CBD), HDTRA1-14-CHEM-BIO-BAA, Chemical Biological Technologies Department and is submitted in response to Topic: CBA-03: Next Generation Analytic Capabilities for BSV. The work will support DTRA's mission to safeguard America and its allies from biological WMDs by providing diagnostic capabilities to reduce, eliminate, and counter microbial threats. Specifically this "Global Rapid Identification Tool System" is aimed at developing capacity for the detection of EID threats, to support protection efforts and mitigation of the threats posed by disease agents through the New Initiatives in Science and Technology program. This technology is intended for eventual transition through the DTRA R&D Enterprise.

Management plan

Our management plan blends strong scientific expertise in global EID surveillance, with agile software engineering as well as iterative and incremental rapid application development. The project will be managed by our team of data scientists and software developers at EcoHealth Alliance, in consultation with thought leaders in the field of biosurveillance (Epidemico & ProMED-mail), and infused with innovative technologies Kitware Inc., developers of leading edge, high quality software.

Key personnel (roles/responsibilities)

- EcoHealth Alliance (prime): management, delivery, software integration, computing, diagnostic analysis, data science, data mining, disease ecology
    - TBD (Principal Investigator - PI)
- Kitware Inc.: data management, visualization
    - Jeff Baumes, Ph.D. (Technical Sub-contractor)
- Epidemico: data curation, digital surveillance
    - John Brownstein, Ph.D. (Scientific Consultant)
- ProMED-mail: data curation, disease outbreak reporting
    - Larry Madoff, Ph.D. (Scientific Consultant)

Current data providers and collaborating centers:

- **ProMED-mail** - the Program for Monitoring Emerging Diseases - is an open source Internet-based reporting system dedicated to rapid global dissemination of information on outbreaks of infectious diseases and acute exposures to toxins that affect human health, including those in animals and in plants. Electronic communications enable ProMED-mail to provide up-to-date and reliable news seven days a week. Sources of information include media reports, official reports, online summaries, local observers, and others. A team of expert moderators screen, review, and investigate reports before posting to the network and distributing by email. ProMED-mail currently reaches over 40,000 subscribers in at least 185 countries.
- **Healthmap** - The freely available Web site 'healthmap.org' and mobile app 'Outbreaks Near Me' deliver real-time intelligence on a broad range of emerging infectious diseases. HealthMap brings together disparate data sources, including online news aggregators, eyewitness reports, expert-curated discussions and validated official reports, to achieve a unified and comprehensive view of the current global state of infectious diseases and their effect on human and animal health.

- **Global Repository of Infectious Disease (GRID) project** - an EHA project describing the initial emergence of global infectious disease bioevents since 1940. We collected direct language from the primary literature describing the agent, time, place, impact, transmission, host, driver, EID category, and economics of the event to discover patterns and trends among these variables across time and space. This is used to train the models with historic context to support both our Hotspot predictive modeling efforts and diagnostic capabilities.
- **GIDEON** - Global Infectious Disease and Epidemiology Network - is the world's premier global infectious diseases knowledge management database. It contains a diagnostic module that employs information on symptoms, country, incubation period, and laboratory tests to construct a ranked differential diagnosis. The Infectious Diseases module encompasses over 340 infectious diseases, 231 countries, over 500 anti-infective drugs and vaccines.
- **PubMed, Google Scholar, and Web of Science** - will be used to generate records of confirmed diagnoses and historical outbreaks. Additionally, we hope to explore archival resources such as CDC disease reports.

D. Relevance

Our goal with this project is to develop a tool system of high-relevance to DTRA's Goals and Objectives. With the support of DTRA, we could advance our GRITS to full development and extend timely operational capability to all sectors affected by the threat of EIDs. This state-of-the-art technology will help advance our readiness to combat the broad class of biological threats posed by EIDs, including the capability to identify agents with the potential to be used as WMDs. We have the expertise and capacity to ensure useable capability of the GRITS application within the timeline of tasks we propose. The tools will provide near-real-time decision support to end-users of GRITS and the BSVE. By using open source and transparent methods, we ensure that our results are reproducible and that the technology is portable, reliable, agile, and flexible in confronting emerging threats. The tools we propose are state-of-the-art, both scientifically and technically. GRITS leverage the latest reactive web technologies (e.g. Meteor), visualization environments (e.g. WebGL and Tangelo), and scientific databases (e.g. Girder). The machine learning and clustering algorithms are drawn from Scikit-learn, an open and accessible, community-supported Python library.

A key strategy in mitigating EID risk is to build situational awareness as far forward from our shores as possible, by using advanced digital biosurveillance to detect early signals that portend the emergence of high-risk, priority diseases and pathogens, including bioterrorism agents. This biosurveillance technology is adaptable to low resource settings, among them those most vulnerable to EIDs. Ultimately we hope to empower our warfighters and allies with the tools necessary to adapt and shape the dynamic Global Security Environment, as it pertains to the acute threat of infectious diseases.

Responses to DTRA's questions from the White Paper

How will the proposed system be sustained? Is a fee for service model envisioned? If so, details should be provided.

We propose providing to DTRA all of the data hosted in GRITS.db and all of the code developed for this proposed system under permissive open source licences (e.g. MIT and Apache2). Furthermore, EHA has established the Data Science and Research Technology (DART) lab with the express goal of supporting the services outlined in this proposal. We envision sustaining the

service under a 'fee for service' model to be negotiated with DTRA upon delivery of the work. We would do so in coordination from our technical subcontractor, Kitware Inc., who have extensive experience supporting open source development for federal agencies, including DOD. Our data subcontractors have agreed to make the full data available to DTRA spanning the duration of the contract (beginning Jan 18, 2013). Where copyright restrictions limit our ability to distribute the full text of the media, we will provide programmatic tools to retrieve the text in compliance with the terms and conditions of the source. Continued access to our experts via GRITS.net, could also be negotiated with all parties under a fee for service model. Additionally, we propose a 'freemium' mechanism to sustain data hosting and processing costs, whereby DTRA-approved users or organizations could access the service on a pay-as-you-go basis (e.g. paying for characters processed or volume stored).

What will actually be delivered to the Government/BSVE? Will this simply be an API to the EHA system, or will underlying tools and data be delivered? If yes, please clearly describe all deliverables.
We are prepared to deliver all materials developed through the contract under permissive open source licenses. Given the complexity of the system, and the maintenance burden, we recommend that that the DART lab continue to maintain the materials on a mutually agreed upon third party service (e.g. AWS) and provide the access to the data and diagnostic capabilities through our API. The source code will be made available through a private Github repository. We will provide full documentation, as we have done for the data service we are currently providing to the BSVE developed by Digital Infuzion. This applies to all deliverables, including GRITS.app, GRITS.db, and GRITS.md. The GRID platform has been developed with support from other agencies, foundations, and universities; however, we will provide unlimited access in perpetuity to DTRA via the API and web interface. The source code for Tangelo visualizations Girder are publicly available on Github and permissively licensed.

III. Credentials

A. Summary of Credentials

EcoHealth Alliance (EHA):

Building on over 40 years of groundbreaking science, EHA is a global nonprofit organization dedicated to protecting wildlife and safeguarding human health from the emergence of disease. The organization develops ways to combat the effects of damaged ecosystems on human and wildlife health. Using environmental and health data covering the past 60 years, EHA's scientists created the first ever global disease hotspots map that identified at-risk regions, to help predict and prevent the next pandemic crisis. That work is the foundation of EHA's rigorous, science-based approach, focused at the intersection of the environment, health and capacity building. Working in the U.S. and more than 20 countries worldwide, EHA's strength is founded on innovations in research, training, global partnerships, and policy initiatives.

EHA is a partner of the USAID Emerging Pandemic Threats PREDICT program, a $75 million effort focused on predicting and preventing pandemic diseases. PREDICT is building a global early warning system to detect and reduce the impacts of emerging diseases that move between wildlife and people (zoonotic diseases). PREDICT has developed a SMART surveillance method (Strategic, Measurable, Adaptive, Responsive, and Targeted) that accounts

for the fact that zoonotic pathogens, such as influenza and SARS, are responsible for the majority of emerging infectious diseases in people, and that more than three quarters of these emerging zoonoses are of wildlife origin. The SMART surveillance approach is designed to detect novel diseases with pandemic potential early, giving health professionals the best opportunity to prevent emergence and spread. It also targets sentinel animal species at active human interfaces in hotspot regions to improve surveillance efficiency.

The PREDICT team builds on a broad coalition of partners to develop the global capacity to monitor diseases at the animal-human interface and develop a risk-based approach to concentrate these efforts in surveillance, prevention, and response at the most critical points for disease emergence from wildlife.

PREDICT project objectives:

- Assess local surveillance capacity;
- Implement targeted and adaptive wildlife disease surveillance systems;
- Develop and deliver new technologies to improve efforts close to the source;
- Use cutting-edge information management and communication tools to bring the world closer to realizing an integrated, global approach to emerging zoonotic diseases.

Partners:

HealthMap/Epidemico

Healthmap is a team of researchers, epidemiologists and software developers based out of the Children's Hospital, Boston. Founded in 2006, Healthmap is an established global leader in utilizing online informal sources for disease outbreak monitoring and real-time surveillance of emerging public health threats. The freely available Web site 'healthmap.org' and mobile app 'Outbreaks Near Me' deliver real-time intelligence on a broad range of emerging infectious diseases for a diverse audience including libraries, local health departments, governments, and international travelers. HealthMap brings together disparate data sources, including online news aggregators, eyewitness reports, expert-curated discussions and validated official reports, to achieve a unified and comprehensive view of the current global state of infectious diseases and their effect on human and animal health. Through an automated process, updating 24/7/365, the system monitors, organizes, integrates, filters, visualizes and disseminates online information about emerging diseases in nine languages, facilitating early detection of global public health threats.

ProMED

ProMED-mail was established in 1994 with the support of the Federation of American Scientists and SatelLife. Since October 1999, ProMED-mail has operated as an official program of the International Society for Infectious Diseases, a nonprofit professional organization with 20,000 members worldwide.

Kitware, Inc.

Kitware, Inc. creates and supports leading edge, high quality software in the fields of computer vision, medical imaging, visualization, 3D data publishing, and technical software development. Kitware employs an open source development model to foster extended, collaborative communities, and an open source business model to provide flexible, low-cost technical solutions. The Company's services and products include technology integration, software

support, consulting, custom application development, and training and productivity tools that leverage our open-source software systems.

B. Summary of Qualifications for PI and Key Personnel

TBD (PI), will lead the Data Science and Research Technology group at EcoHealth Alliance. EcoHealth Alliance is currently in the process of filling this role, and we will provide an update as soon as possible. The PI will have a background in ecology and health, as well as expertise managing technical projects, and candidates will be reviewed by DTRA to ensure that they are qualified. The PI and the team will contribute expertise in geospatial data and analysis of the ecological origins of infectious disease emergence and digital disease surveillance.

Dr. John Brownstein is an Associate Professor at Harvard Medical School and directs the Computational Epidemiology Group at Children's Hospital Informatics Program in Boston. His group is supported by a multi-million dollar budget with support from NIH (NLM and NIAID), USAID, Centers for Disease Control and Prevention, and Google.org. He has pioneered efforts in participatory epidemiology, using statistical and informatics approaches aimed at improving public health surveillance and practice. He recently was awarded the Presidential Early Career Award for Scientists and Engineers, the highest honor bestowed by the United States government to outstanding scientists and engineers.

Dr. Lawrence Madoff is an infectious disease physician whose career has been devoted to disease surveillance. Dr. Madoff is the Editor of ProMED-mail, which uses Internet-based communication and social media to detect and report emerging infectious diseases globally. He is currently Director of the Division of Epidemiology and Immunization at the Massachusetts Department of Public Health, which oversees infectious disease surveillance and immunization activities in the state. He is a fellow of the American College of Physicians and a Fellow of the Infectious Disease Society of America.

Dr. Jeff Baumes is a technical lead at Kitware Inc. He has significant expertise in information analysis and presentation. His contributions include novel graph clustering algorithms that allow cluster overlap, and algorithms for discovering subsets of individuals persistently connected over time. Over the last six years, he has been a major technical contributor to the open source Titan scalable analysis and visualization toolkit, which is an extension of the Visualization Toolkit to include informatics and information visualization capabilities. He has worked on projects in several fields surrounding Titan such as text analysis, bioinformatics, and social network analysis including funding from NSF, DOD, DOE, and NIH.

C. Summary of Facilities to Perform the Proposed Work

Facilities at EcoHealth Alliance (EHA)

EcoHealth Alliance (EHA) is a 501(c)(3) nonprofit organization that specializes in scientific research on the causes, origins, and spread of zoonotic emerging diseases. EHA scientists have been working on spatial modeling for over 15 years, and on modeling of infectious disease emergence and spread for over a decade. EHA is based in New York City with 10,000 square feet of office space including a meeting room and basic laboratory. A core administrative staff of 11 employees support EHA's scientific team (15 core scientists, 100+ field staff) and are available for work on this project through foundation support. EHA is equipped with 25 networked PCs including ARRA funded International Live Meeting Video Conferencing facilities.

EHA has access to multiple servers, server support, and all necessary software on Mac, Linux, and Windows operating systems. Additional computing power is acquired from commercial cloud providers to meet project needs.

EHA has an active program of staff development and this is reviewed and adjusted annually as part of each employee's evaluation process. Specific provisions are made for internal training and external training resources, tuition support programs via a partnership with Columbia University, and active support of staff to spend time in collaborators organizations. All early stage investigators are mentored to provide guidance in research practices, grant management, administration and project management. Financial support from EHA core funds are available to support external tuition, travel to conferences and to conduct joint research in collaborator's institutions. There is no obligation for teaching time at EHA and all research staff are funded for 100% research time, however, there is a provision, through partnership with Columbia University, to enable staff to teach at the undergraduate and graduate level, with monetary support provided by Columbia University. Administration and other staff are supported in their efforts to enhance their careers by the provision of tuition fees for external courses, travel funds for conferences, and time off their core activities.

Facilities at Kitware Inc.
Kitware Inc. is headquartered just north of Albany, New York in a Clifton Park office complex. Kitware rents approximately 27,000 square feet of office space at this location. Kitware also has an office in Chapel Hill, North Carolina approximately 6,200 square feet in size. Both offices are linked via a common virtual private network and a shared phone system, and share financial and administrative personnel. They also have on-site office managers, lunchrooms, private meeting rooms, and advanced conference facilities including large screen projection systems and whole-room Polycom video conferencing systems. The proposed work will be performed at the Clifton Park site.

Kitware has a mixed environment of personal and shared computing platforms. Employees average three computers per person (desktop, laptop, and/or home system), with each computer typically equipped with multiple multi-core processors, a high-performance graphics card, dual monitors, and 8GB or more of main memory. These personal systems run a mix of Windows, Mac OS X, and Linux operating systems. Shared resources include compilation and testing farms as well as workstations running a variety of alternative operating systems for testing purposes, e.g., Windows XP or Vista. Kitware also maintains several servers to provide public access to the open source VTK, ITK, TubeTK, Titan, Slicer, CMake, and ParaView systems; to host web pages and web services for open source communities such as NA-MIC and Visomics; to operate open-access journals such as the Insight Journal and the Midas journal which has hosted workshop papers for nearly ten years; and to provide access to massive collections of public data for computer vision and medical imaging algorithm evaluation. Access to these systems is provided by a fiber connection to the internet yielding a total of 100 Mbit/second data rate.

Kitware hosts several special-purpose, high-end workstations, GPU systems, haptic systems, and magnetic and optical trackers. One such workstation is a multi-GPU computer featuring 6 NVidia GPU boards: 5 C2050 Tesla and 1 Quadro 5000 Fermi, as well as a 6-Core X5680

3.33GHz processor. A noteworthy haptic system is a MBP Freedom 7S haptic device, configurable for 6 or 7 degrees of freedom. To address large-scale distributed computing, the company maintains several clusters for development and testing. The clusters include: a twelve node testing cluster running mixed Linux and Windows operating systems; a four node Windows cluster with a gigabit Ethernet network; and a seven node Linux cluster with dual 64-bit Xenon processors, high-end graphics accelerators, and an Infiniband network driving a 3x2 PowerWall display. Kitware also has access to several external computer systems (e.g. HP, IBM, and Intel) through various vendor partnership programs.

IV. WORK TO BE PERFORMED.

A. General

Our goal over the 3-year time period is to expand our DTRA-funded GRITS platform to deliver near-real-time disease diagnostics, decision support, and data processing. These enhanced capabilities will be powered by GRITS analytics, visualizations, and data, and connected to our network of experts from One Health, EcoHealth, and open source communities.

We are currently building a robust and scalable software infrastructure to provide a diagnostic decision support system for analysts with multiplier effects by connecting to a community of experts and data from EcoHealth Alliance, HealthMap, and ProMED-mail. The final deliverable will include our user interface (GRITS.app), application interface (GRITS.api), network of experts (GRITS.net), media diagnostics (GRITS.md), and database (GRITS.db). Overall, GRITS will be deployable and generalized application that will output probabilities and lists of pathogens likely responsible for an outbreak on the basis of user-provided data. Accordingly, the resource will be adaptable to a specific organization or agency's needs or emerging threats, and geographic areas of high concern. The source code for this algorithm will be made available to interested parties for further development and adaptation.

The original Rapid Identification Tool (RIT) prototype was developed by manually extracting symptoms from encephalitides reports in ProMED-mail to train a diagnostic model. Through rigorous testing, we identified modeling approaches that improved performance by combining natural language processing and machine learning algorithms. We recognized automated data collection and crowdsourced data curation would be needed to scale to disease coverage and diagnose additional diseases with greater precision. The GRITS diagnostic dashboard provides decision support to experts at our partner organizations by automatically extracting and visualizing information from media. We leverage crowdsourcing techniques by providing experts with tools for curating disease portfolios and annotating articles. We have developed an application programming interface (API) for access to our data and diagnostics by third party developers and users. Additionally, we integrated the project with an ongoing EHA initiative to collect historical disease outbreak data (Global Repository for Infectious Diseases - GRID). Finally, we integrated work from our colleagues at Kitware to support the storage and visualization of the large, complex datasets being generated.

During the proposed contract period, we will improve the accuracy and robustness of the GRITS media diagnostics. We will design new visualizations for the diagnostic dashboard to allow users to gain additional insights into our data and tools; develop a near-real-time processing stack to enable our visualizations and diagnostics to use the latest information; gain additional

advantages from our collective intelligence network by adding new mechanisms for experts to provide feedback and interact with our underlying data, rules, and algorithms; experiment with crowdsourcing as an additional source of training data and knowledge to further improve GRITS.md; and expand the capabilities of the system to provide decision support and recommendations to analysts.

By the end of the contract period GRITS will provide:

1. Robust architecture for near-real-time diagnostics and data processing
2. Interface from BSVE to GRITS with SDK
3. Healthmap, ProMED-mail, and EcoHealth data to the BSVE
4. Machine, expert, and community intelligence

Diagnostic modeling
We plan to use the biointelligence extracted from news media and submitted by GRITS users to form the basis of new relationships and entities within biological ontologies that link EID events, diseases, symptoms, hosts, and other entities and attributes related to infectious diseases together in a rich network structure. This ontology will be a critical data source for making domain specific inferences in diagnostic algorithms.

Data Storage and Management
Girder is a data management platform built to meet the needs of distributed, data-centric web applications. Girder is a modular framework that allows developers to build systems that use any or all of the components necessary to create a system tailored to their needs. All data sharing web applications need the same core functionality: upload, download, large data storage, supplemental metadata storage and indexing, authentication/authorization, a RESTful API, and an extensible plugin architecture. Girder provides these components and is currently being used for GRITS as well as several DOE projects.

Visualization
Tangelo is a system for rapid production of visual and interactive web applications. Using HTML5 standards such as SVG, WebGL, and 2D canvas, Tangelo integrates visualization modes spanning charts, hierarchical diagrams, and networks for time series, heterogeneous, or multivariate data. Tangelo provides interfaces to powerful visualization libraries such as GeoJS, ParaViewWeb, and D3.

B. Summary

Year 1 (2015)

1. Connect GRITS Girder database to the BSVE
2. Develop recommendation and decision support capabilities
3. Connect GRITS diagnostic and text-mining APIs to the BSVE
4. Prototype near-real-time processing
5. Build BSVE interface to GRITS with the SDK
6. Connect GRITS expert network (GRITS.net) to the BSVE

Year 2 (2016)

7. Build mechanisms to crowdsource annotations

8. Incorporate disease network graphs to assist diagnostics
9. Support diagnostic algorithm development with dashboard
10. Expand diagnostic capability to arbitrary data feeds
11. Connect GRITS to GRID
12. Update diagnostic model in near-real-time
13. Use text mining to extend network graphs/ontologies.

Year 3 (2017)

14. Crowdsource improvements to the GRITS media diagnostic tool
15. Connect GRID's collective intelligence editor to the BSVE
16. Connect GRITS diagnostic data filtering to the BSVE
17. Enrich diagnostic dashboard with dynamic visualizations
18. Generate disease summary reports from diagnostics
19. Forecast disease emergence

C. Detailed Tasks

Task 1: Connect GRITS Girder database to the BSVE
Description: Coordinate with BSVE developers to provide API access to GRITS database (HealthMap, ProMED and EcoHealth data with diagnostic metadata).
Resources: EcoHealth & Kitware (API, BSVE support), HealthMap & ProMED (data)
Metric(s) of success: BSVE access to GRITS data via API
Deliverable: API key and access for the BSVE team, communication between BSVE/GRITS
Subtasks:

1. Solicit feedback on GRITS data API from BSVE team
2. Create API key generation and assignment infrastructure for GRITS
3. Connect Girder data storage to API key infrastructure
4. Incorporate feedback from the BSVE team into GRITS API
5. Generate documentation for API access

Task 2: Develop recommendation and decision support capabilities
Description: Use our GRITS.md to extract features of incoming articles to inform media recommendations for analysts based on areas or keywords of interest or a collection of documents being evaluated. Identify targets for data collection that would most enhance diagnostic capabilities for a particular event.
Resources: EcoHealth (algorithms and infrastructure), Kitware (storage & visualization), HealthMap & ProMED (testing)
Metrics of success: Recommendation system returns relevant articles, people and organizations. Adding recommended information improves diagnosis.
Deliverable: API and diagnostic dashboard interface to recommendations
Subtasks:

1. Set up job to extract and store features of incoming articles
2. Provide recommendations based on keywords
3. Recommend similar articles based on an article or portfolio
4. Create mechanism for people and organizations to opt in to be recommended
5. Recommend people or organizations based on keywords, articles, or portfolios
6. Identify missing features that differentiate between top diagnoses for an article

7. Connect recommendation system to API

Task 3: Connect GRITS diagnostic and text-mining APIs to the BSVE
Description: Provide BSVE developers with API access to GRITS media diagnostics and text mining tools and support them as they integrate these features into the BSVE interface.
Resources: EcoHealth (API development, BSVE support)
Metrics of success: BSVE team satisfied with API structure. GRITS features and diagnoses accessible through BSVE.
Deliverable: API access for the BSVE team, communication between BSVE/GRITS.
Subtasks:
1. Connect diagnosis and text-mining to API infrastructure
2. Write documentation on diagnosis and text mining APIs for BSVE team
3. Incorporate feedback from the BSVE team into GRITS API
4. Support BSVE team as they integrate GRITS extracted features and diagnostics

Task 4: Prototype near-real-time processing
Description: Develop near-real-time architecture based on ideas from the lambda architecture, which allows high-performance integration of near-real-time streaming data with pre-processed data. Evaluate possible software tools for each component. Set up prototype of software stack.
Resources: EcoHealth & Kitware (architecture, software evaluation, prototyping)
Metrics of success: Working prototype
Deliverable: Documentation of software architecture and choices, working prototype
Subtasks:
1. Research lambda architecture
2. Develop near-real-time software architecture diagram and documentation
3. Evaluate options for near-real-time streaming data (e.g. Storm, Summingbird)
4. Evaluate options for pre-processing data (e.g. MapReduce, Spark)
5. Evaluate options for automated polling (e.g. Huginn, Luigi, Celery)
6. Investigate adaptive polling algorithms
7. Build prototype of near-real-time software architecture

Task 5: Build BSVE interface to GRITS with the SDK
Description: Build an app on the BSVE SDK that allows BSVE users to submit text to diagnose. The app will display a basic visualization of a diagnosis, and provide links to diagnostic dashboards where users can see additional visualizations and interact further with GRITS diagnostic tools.
Resources: EcoHealth (app development & testing)
Metrics of success: Users able to access GRITS through app deployed to BSVE
Deliverable: Deployed app, BSVE users able to access diagnostic dashboards
Subtasks:
1. Obtain and review SDK documentation from BSVE
2. Develop backend component to access GRITS API
3. Set up mechanism for BSVE users to authenticate and/or register with GRITS
4. Develop frontend component to allow submission
5. Develop frontend component to provide diagnosis and dashboard links
6. Coordinate with BSVE to deploy app

Task 6: Connect GRITS expert network (GRITS.net) to the BSVE

Description: GRITS is a bridge to experts from ProMED, HealthMap and EcoHealth. Two-way communication will benefit both BSVE and GRITS. We will develop mechanisms for BSVE users to submit requests for language, region, and diagnostic feedback, while allowing experts and organizations to opt-in and set availability to handle requests.
Resources: EcoHealth (experts and interface), ProMED and HealthMap (expertise)
Metrics of success: BSVE user can submit request to a GRITS expert. Language, region, and diagnostic expertise is available to DTRA and BSVE users.
Deliverable: BSVE interface through GRITS app to submit requests to experts
Subtasks:

1. Evaluate needs of BSVE users for expert feedback
2. Develop a messaging service to expert network
3. Design interface for posting requests and submitting materials
4. Tie messaging system into existing GRITS partner dashboards and routing

Task 7: Build mechanisms to crowdsource annotations
Description: Identify human intelligence annotation tasks for crowdsourcing by citizen scientists and Amazon's Mechanical Turk
Resources: EcoHealth (annotation interface), Mechanical Turk (pay for annotations), Citizen Scientists (volunteers)
Metrics of success: Annotations crowdsourced. Improves diagnostics from annotations.
Deliverable: Crowdsourced annotations incorporated into GRITS training data
Subtasks:

1. Develop infrastructure to identify and assign annotation tasks
2. Integrate annotation interface into Mechanical Turk or similar platform
3. Integrate and deploy citizen science platform
4. Evaluate obtained annotations and report on quality (e.g. inter-annotator agreement)

Task 8: Incorporate disease network graphs to assist diagnostics
Description: Model the geographic, ecological, and information structure of infectious disease networks and connect them to diagnostic API. Develop visualizations for diagnostic dashboard.
Resources: EcoHealth & Kitware (network modeling, visualization)
Metrics of success: Improved diagnostics from network reasoning
Deliverable: Visualizations of the network model in the diagnostic dashboard
Subtasks:

1. Develop features to extract from texts and map to ontologies
2. Develop geographic, ecological, and transportation network graphs
3. Develop information network graph
4. Build graph visualizations with Tangelo
5. Develop tool to identifies 'blind spots' in the information network

Task 9: Support diagnostic algorithm development with dashboard
Description: Support multiple models for diagnosis, and continually reevaluate their effectiveness. Different algorithms may perform differently with time, origin, or diseases. Allow users to run and compare the results of different models via the diagnostic dashboard. Run automated jobs to compare the performance of models over time.
Resources: EcoHealth & Kitware (algorithm and interface development)
Metrics of success: Run and compare models from the dashboard
Deliverable: Capacity to compare model performance in the dashboard

Subtasks:
1. Develop infrastructure for training multiple machine learning algorithms
2. Create interface to select algorithms and compare results
3. Create interface for selecting algorithm parameters
4. Automate algorithms and record performance

Task 10: Expand diagnostic capability to arbitrary data feeds
Description: Develop robust scraping algorithms and provide an interface for users to connect data sources to GRITS.
Resources: EcoHealth (algorithms), Language translation service
Metrics of success: Users can submit relevant feeds to the GRITS system
Deliverable: Interface for submitting data feeds
Subtasks:
1. Build a submission interface for users to submit arbitrary feed
2. Integrate article processing pipeline with a translation service to process non-English articles in near-real-time.

Task 11: Connect GRITS to GRID
Description: Incorporate GRID dataset into GRITS to give the platform a comprehensive historical perspective on EIDs and enhance analytic capabilities around drivers of disease behavior. Extend the recommendation system to include historic context from GRID (e.g. media and data). Use historic event data to expand to match targets for a disease or keyword.
Resources: EcoHealth (recommendation system, GRID)
Metrics of success: Diagnostic decision support enriched by **historic event data**
Deliverable: Improved recommendation system, match new reports with historic events
Subtasks:
1. Evaluate existing GRID API against needs of recommendation system
2. Develop capacity of GRID API to deliver historic event matches
3. Recommend GRID events (e.g. current event is similar to past outbreak)
4. Use GRID media to improve diagnostics and recommendation quality
5. Match GRITS data to events in GRID (expanding from EIDs to all outbreaks)

Task 12: Update diagnostic model in near-real-time
Description: Retrain the classifier with new reports from HealthMap/ProMED or users submissions. Classify labeled training data with GRITS, for example correcting misclassification. Investigate classifiers capable of distributed training or incremental retraining.
Resources: EcoHealth (algorithm and architecture development)
Metrics of success: Model updates improve performance. Near-real-time classifier updates.
Deliverable: Enhanced classification infrastructure, retraining interface
Subtasks:
1. Create a service for retraining the classifier with new labeled data
2. Research distributed training and incremental retraining algorithms
3. Add features to the UI that allow users to confirm or correct classifications

Task 13: Use text mining to extend network graphs/ontologies
Description: Use features extracted from disease reports to add entities and relationships to a disease network ontology. For example, linking case counts to locations.
Resources: EcoHealth (feature extraction and ontologies)

Metrics of success: Accuracy of entities and relationships extracted from our data sources.
Deliverable: An extended ontology generated by text-mining algorithms
Subtasks:

1. Infer set of subjects (e.g. EID events) and predicates (hasCase, reportedBy)
2. Create feature extractors for interesting subject-predicate-object groups
3. Use named entity classification or related technologies to identify diseases and disease attributes that are unknown to our system in advance (e.g. viral strains that have mutated or developed antibiotic resistance).

Task 14: Crowdsource improvements to the GRITS media diagnostic tool
Description: Sponsor public challenges (e.g. Kaggle) to solicit improvements to the GRITS media diagnostic by training better classifiers or by submitting additional training data.
Resources: EcoHealth (challenge planning and execution)
Metrics of success: User submits an improvement with better performance (e.g. higher f-score)
Deliverable: Improved diagnostic tool from crowdsourced algorithms.
Subtasks:

1. Evaluate challenge platforms
2. Create a subset of data for crowdsourcing
3. Open source a base classifier example
4. Create challenge on selected platform
5. Publicize and run challenge

Task 15: Connect GRID collective intelligence editor to the BSVE
Description: Incorporate BSVE users as experts for the review and editing GRID events
Resources: EcoHealth (GRID)
Metrics of success: BSVE users contribute to GRID. Diagnostic models improve from GRID data. Additional features are extracted based on GRID data.
Deliverable: BSVE/GRITS access to GRID, improved diagnostics and feature extraction
Subtasks:

1. Evaluate and implement changes to GRID API for of GRITS diagnostic needs
2. Generate keywords and rules from GRID data to incorporate into GRITS text mining
3. Incorporate GRID data into diagnostic model training
4. Design user interface for expert review and editing of GRID events
5. Implement expert review and editing interface
6. Set up mechanism for registering and authenticating BSVE users with GRID

Task 16: Connect GRITS diagnostic data filtering to the BSVE
Description: Use diagnostics to reduce data volume to relevant reports. Users should be able to list diseases or regions of interest.
Resources: EcoHealth & Kitware (GRITS integration and data filtering)
Metrics of success: GRITS will return a subset of related assets
Subtasks:

1. Generate diagnostic rules to match regions and diseases of interest
2. Test filtered results with experts to determine accuracy of filtering
3. Add near-real-time diagnostic filtering to GRITS API

Task 17: Enrich diagnostic dashboard with dynamic visualizations

Description: Add dynamic Tangelo visualizations, including interactive dendrogram views of likely diseases, multidimensional visualization of report space, and flexible geovisualizations with interactive vector graphics for high-performance imagery and dense data.
Resources: EcoHealth (GRITS integration), Kitware (visualizations)
Metrics of success: Visualizations enrich expert decisions on diagnosis
Subtasks:
1. Develop dendrogram visualization
2. Develop multidimensional visualizations
3. Develop flexible geovisualizations

Task 18: Generate disease summary reports from diagnostics
Description: Aggregate the data collected by text-mining and diagnostic algorithms to give an meta overview of a collection of reports or disease outbreak.
Resources: EcoHealth (algorithms and reporting)
Metrics of success: Number of visits per unique user to the summary report website
Deliverable: API returns summary reports to diagnostic dashboard and BSVE
Subtasks:
1. Create algorithms for generating statistics (e.g. case counts) and visualizations (e.g. epidemic curves) to include in the summary report.
2. Integrate diagnostic filtering to identify data sources for the summary report

Task 19: Forecast disease emergence
Description: EHA are experts in disease hotspot mapping. Use GRITS.db and GRITS.md to identify diseases that pose the greatest threat. Use case-counts and data from historical epi curves to model probable epi curves for new diseases
Resources: EcoHealth (hotspots modeling)
Metrics of success: The cumulative difference between the actual epi curve and predicted curve. Identify hotspots for disease emergence based on diagnostics.
Deliverable: Return geocoded hotspots via API for visualization on BSVE
Subtasks:
1. Build a mathematical model of of disease emergence that incorporates GRITS networks
2. Create a geo visualization for GRITS dashboard
3. Add geocoded hotspot data to the API

Maintenance Plan
- Support the Global Rapid Identification Tool System (GRITS) on the cloud
- Develop a software process infrastructure for the GRITS developer community
- Build a robust server network to ensure uptime of the GRITS platform
- Develop a test suite to identify issues and ensure compatibility with the BSVE
- Develop user and developer documentation for the platform
- Maintain the software via a ticketing system.

V. Performance of Work

Year 1			
Q1	Q2	Q3	Q4

Connect GRITS Girder database to the BSVE

Develop recommendation and decision support capabilities

Connect GRITS diagnostic and text-mining APIs to the BSVE

Prototype near-real-time processing

Build BSVE interface to GRITS with the SDK

Connect GRITS expert network (GRITS.net) to the BSVE

Test diagnostic dashboard with expert communities.

Year 2			
Q1	Q2	Q3	Q4

Enhance the expert annotation interface

Build mechanisms to crowdsource annotations

Incorporate disease network graphs to assist diagnostics

Support diagnostic algorithm development with dashboard

Expand diagnostic capability to arbitrary data feeds

Connect GRITS to GRID

Update diagnostic model in near-real-time

Use text mining to extend network graphs/ontologies.

Year 3			
Q1	Q2	Q3	Q4

Crowdsource improvements to the GRITS media diagnostic tool

Connect GRID's collective intelligence editor to the BSVE

Connect GRITS diagnostic data filtering to the BSVE

Enrich diagnostic dashboard with dynamic visualizations

Generate disease summary reports from diagnostics

Connect EcoHD to GRITS recommendations

Create a web-crawler for expanding coverage of disease reports

Forecast disease emergence

Section C - Descriptions and Specifications

STATEMENT OF WORK

Project Title: Understanding Rift Valley Fever in Republic of South Africa

Document Date: July 1, 2013

Objective: The objective of this grant is to build a collaborative partnership with South African scientists and managers to study important aspects of Rift Valley fever virus (RVFV) epidemiology and ecology that have been neglected by previous research on the continent. The project is designed to strengthen South Africa's leadership role within the African continent for the study and control of RVFV and other vector-borne diseases. This work is vital to understanding how to manage animal populations, protect people, when and how to use vaccination protocols, and ways to reduce the risk of the virus spreading outside of Africa. It also provides the baseline data needed to better predict the spread of the virus should it ever be introduced into the United States and strengthens scientific partnerships in the region, thereby fulfilling DTRA's mandate of reducing the threat of the introduction and maintenance of a select agent into the United States.

Scope: The grantee proposes the first comprehensive study of the implications of vertebrate immunity at multiple scales, including the effect of vaccination, vector transmission dynamics and climate-ecology on RVFV ecology between and during epizootics. Grantee shall investigate RVFV life cycle, transmission by mosquitos, and immunity in domestic and wild ruminants, and humans, paired with vegetation and climate data, to increase our understanding of these integrated aspects through a One Health approach. The grantee team shall focus on the following major goals and milestones:

1. Improve the capacity for South Africa to be a regional leader in vector-borne diseases and Rift Valley fever virus epidemiology.
    - Establish collaborations of stakeholders, training of local technical personnel, training of graduate students and post-doctoral fellows, and improve official disease reporting to local and international authorities, publishing and sharing of project findings.
2. Determine how immunity against RVFV may change over time in domestic and wild ruminants (vaccinated and non-vaccinated) and be altered by animal management approaches.
    - Establish study protocols, implement and maintain field studies at individual and population scales, including the use of vaccines to simulate exposure and conduct laboratory analyses.
3. Determine the herd immunity status of free-ranging wildlife, wildlife from game farms and domestic animals in a 200Km^2 study region.
    - Establish implement and maintain field studies and conduct laboratory analyses.
4. Determine how mosquito abundance relates to weather in South Africa, the percentage of mosquitoes carrying RVFV and which ruminant species these vectors are biting.
    - Establish study protocols, implement and maintain mosquito field studies, collate weather/climate data, extend vector studies in OY4 and OY5 to examine variability between years.
5. Determine the current seroprevalence of RVFV antibodies in people working on the study farms and detect inter-epidemic transmission to people if it is occurring.
    - Improve the understanding of the widespread effect of previous RVFV outbreaks in people from the study area.

This integrated approach represents the most comprehensive project to date to understand the epidemiology and ecology of RVFV. It is likely that herd immunity within the entire ruminant community (wild and domestic) plays a role in whether an outbreak occurs given the

appropriate climatic conditions. The proposed immunity studies combined with transmission and succession data collected from mosquitoes during this project will demonstrate their relationship with the occurrence of an outbreak. This work in conjunction with a better understanding of current exposure levels and possible inter-epidemic transmission in people will improve the ability of scientists, local stakeholders and policy makers to prevent potential RVFV outbreaks. This research will have a **direct impact** on methods of managing ruminants, mosquitoes and mitigating risks to reduce or prevent future outbreaks and will likely be transferable to other nations in southern or all of Africa. It will also better inform policy makers in the U.S. to develop contingency plans should a RVF outbreak occur on American soil.

Our research will be centered in the Republic of South Africa (RSA), in areas with heightened risk of RVFV outbreaks (based on prior and future potential for occurrence). Collaborators from five RSA governmental and academic institutions (RSA National Institute for Communicable Diseases (NICD), RSA National and State Veterinary Services, RSA National Parks (SANParks), RSA Department of Defense, and University of Pretoria), as well as RSA private and livestock game ranchers, will play active and key roles in all components of the project, including study design, training, sampling, testing, and data analysis and information dissemination. The extensive involvement of South African partners will enable opportunities to advance RSA as a leader in vector-borne disease research. The proposed project duration is three years, with two optional years to allow for further advancement of research.

Background:

Rift Valley fever (RVF) is an emerging infectious disease that presents a formidable challenge for global public health and livestock producers. Its causative agent, RVF virus (RVFV) is listed as a pathogen of significant concern with the potential for international spread by several national and international defense, health and agricultural agencies, including the US DoD and CDC, WHO, and FAO. In addition to the potential risk of spread to the U.S. (intentionally or unintentionally), the virus causes large, devastating epizootics in Africa, inducing high rates of abortions in pregnant domestic ruminants, and over 90% mortality in juveniles. In addition to the economic and nutritional impacts on humans from livestock loss, transmission to humans occurs either through contact with bodily fluids and tissues of infected livestock, or via the bite of an infected mosquito. Though human infection with RVFV may be mild, it can cause hemorrhagic, neurological or hepatic disease. In recent years, RVFV has been demonstrated to cross the Red Sea, resulting in outbreaks in Yemen and Saudi Arabia.

On the basis of our project partners' work, climate has been used as a predictor of RVF outbreak occurrence and control. However, climate prediction models have not been paired with basic research necessary for understanding of the vector life cycle and its role in RVF maintenance, and the transmission pathways and immunological dynamics of RVFV. As a result, prevention and control strategies are insufficient to adequately prepare for current and potential RVF risks. Thus, there is great need to better elucidate the underlying mechanisms of RVF, especially given the potential for transmission between vectors, humans, and animals.

Key references include (Further references can be found in the Project Narrative):

Anyamba A, *et al.* Prediction, Assessment of the Rift Valley Fever Activity in East and Southern Africa 2006-2008 and Possible Vector Control Strategies. Am J Trop Med Hyg. 2010;83(2):43-51.

Kasari TR, *et al*. Evaluation of pathways for release of Rift Valley fever virus into domestic ruminant livestock, ruminant wildlife, and human populations in the continental United States. JAVMA. 2008; 232(4):514-529.

Archer BN, *et al*. Outbreak of Rift Valley fever affecting veterinarians and farmers in South Africa, 2008. S Afr Med J. 2011;101(4):263-6.

The RSA represents an ideal location for this research given the weaknesses in current understanding of RFV epidemiology there, the willingness, interest and capacity of local partners to engage in the project, the impact of RVF outbreaks to agricultural production and risks to people and trade, the abundance of wildlife and presence of game farming to facilitate the research activities needed, and the recertification of the NICD BSL-4 laboratory facilities. The study area has seen multiple RVF outbreaks in the past and hosts a variety of ruminant species – including domestic cattle, goats and sheep as well as wildlife. It hosts 23% of the game farming in RSA. Preliminary data has been obtained for this project through field studies and testing with project partners EcoHealth Alliance, SANParks, DETEA and NICD (Technical Proposal Table 1). The preliminary data has informed the study design by allowing us to target wild ruminant species with highest seroprevalence for RVFV. Furthermore, the success of collaboration with project partners to date ensures the ability to collect adequate samples for analytical statistical significance and the ability to conduct testing of samples in RSA.

Tasks/Scientific Goals: **(Format: Year #(s).Task #.Sub-task#)**

Task Y1.1-OY5.1: Improve the capacity for South Africa to be a leader in vector-borne diseases and Rift Valley fever virus epidemiology (Years 1-OY5).

Our team believes that South Africa can be a leader and model to other African nations regarding public health. Three medical entomology and mosquito identification workshops for regional professionals will be given. This will focus on techniques for trapping adult mosquitoes and larvae and their identification. A post-doctoral fellow from South Africa or southern Africa will split her/his time between EHA (conducting epidemiological and ecological analyses) and working in South Africa (working with the field and laboratory teams). We will also select two Masters' students in epidemiology and one or two (if option years are approved) Masters' students in entomology from the University of Pretoria.

Y1.1.1, Y3.1.1, OY4.1.1 Conduct an entomology workshop for participants from southern Africa.

Y1.1.2-OY5.1.2 Mentor a South African post-doctoral fellow on RVFV epidemiology.

Y1.1.3 -Y2.1.3 Train two Masters' students in epidemiology.

Y1.1.4-OY4.1.4 Train PhD student.

Y2.1.5-OY4.1.5 Train Masters' student(s) in medical entomology.

Task Y1.2-OY5.2: Field mosquito studies and corresponding satellite data (Years 1-OY5).

The grantees shall **1)** monitor rainfall conditions on a daily basis. Additionally, the vegetation conditions using normalized difference vegetation index (NDVI) shall be monitored via satellite every 10 days in our 20,000Km^2 study area; **2)** Identify the mechanistic link between mosquito abundance and succession in RSA with NDVI satellite data technology by conducting a line transect with 40km intervals, with weekly vegetation transects and daily larvae sampling of flooded *dambos* in Y1; **3)** Use a variety of traps to collect mosquitoes at selected sites for one week per site per quarter and after identification, screen pools with RT-PCR and isolate RVFV viral strains, and isolate blood-meals to analyze using PCR of the vertebrate cytochrome b gene of mitochondrial DNA (RNA extraction will occur in a BSL-3 or more secure facility; PCR and RT-PCR will be conducted in a BSL-2 facility). **4)** Grantee shall conduct mosquito abundance and diversity sampling at the 50 ranches randomly chosen from the metapopulation investigation (see Task 6) during Y3 and OY5.

Y1.2.1 Finalize proposed protocols with collaborators and stakeholders in RSA.

Y1.2.2 Implement concurrent vegetation and dambo transects for mosquito larvae.

Y1.2.3-OY5.2.3 Collect and process mosquitoes at ruminant sampling sites.

Y1.2.4-OY5.2.3 Collect satellite derived rainfall, temperature and NDVI data.

Y3.2.5, OY5.2.5 Conduct cross-sectional mosquito study across the 20,000km^2 study site.

Task Y1.3-OY5.3: Ruminant immunological study (Years 1-OY5).

Our target ruminant community for sampling includes domestic livestock, game-ranched wildlife and free-ranging wildlife. The importance of each group and each scale will be analyzed based on the data from Task 3 and Task 5 (below). **1) Sheep flocks – Individual immunity:** We will create experimental flocks of 70 modified-live vaccinated, 70 inactivated vaccinated and 70 non-vaccinated seronegative sheep. Sheep will be maintained in the same manner as domestic stock on farms in Free State. The flocks will be sampled quarterly and tested for anti-RVFV IgG, IgM and interferon gamma (BSL-2). Each treatment group should give us different information regarding the longevity of anti-RVFV antibodies and innate immunity. Aliquots will remain in cryogenic storage at the state veterinary laboratories. **2) Game-Farm springbok – Population immunity:** We will work with commercial game ranches that raised springbok for hunting or meat. We will simulate RVFV exposure by using a modified-live vaccinated group to compare to a control group. In Y1 the 800 springbok will be captured, vaccinated (if needed), sampled, tagged, quarantined and released. Annually, 100 vaccinated and 100 unvaccinated springbok will be culled as part of the ranches' protocol. All sera will be tested by virus neutralization test (BSL-3). Unused serum aliquots will be stored in a secure serum bank at SANParks.

Y1.3.1 Vaccinate sheep for individual and population level immunoepidemiolgical studies.

Y1.3.2-OY5.3.2 Collect quarterly/annual serology in study flocks and/or herds.

Y1.3.3 Vaccinate springbok for individual and population level immunoepidemiolgical studies.

Task Y1.4, Y2.4, Y4.4: Disseminate reports to relevant stakeholders (Years 1, 2, 4).

Synthesize all data collected through the projects described above as well as capacity building activities in South Africa. A database for the extensive amount of data shall be developed and used for epidemiological analyses. Biobank sample repositories will be maintained and corresponding metadata will be available. Scientific and general reports will be generated. A stakeholder meeting will be held annually (Tasks 4 and 7- see Task 7 for Y3 and OY5, for more complete summaries to close the project) to describe the project and the current results.

Y1.4.1, Y2.4.1, OY4.4.1 Submit reports, including sample repository data, to DTRA.

Y1.4.1, Y2.4.1, OY4.4.1 Complete annual report to local stakeholders.

Y1.4.3 Disseminate preliminary serological data in a peer-reviewed publication..

Y1.4.1, Y2.4.1, OY4.4.1 Conduct presentations/meetings at times and places specified in the grant schedule, including DTRA Annual Technical Review.

Y1.4.1, Y2.4.1, OY4.4.1 Submit and maintain samples in biobanks.

Y1.4.1, Y2.4.1, OY4.4.1 Conduct annual stakeholder meetings.

Y2.4.7, OY4.4.7 Prepare to submit publications on data collected in Years 1-4.

Task Y.2.5-OY5.5: Conduct human surveys and serological cross-sectional study (Years 2-OY5).

Grantee shall develop and publish public health information on the prevention of RVFV and vector-borne diseases for the ranchers and employees in the Free State. The information will be

published in English, Afrikaans and Sestho. Grantee shall conduct annual serosurveys and written surveys of the employees (on a voluntary basis) at the ranches where the study sheep and springbok flocks/herds are located to detect possible inter-epidemic human transmission of RVFV. During the meta-population analyses a large cross-sectional study across the ranches and farms throughout our 20,000km^2 study site shall be conducted. Human serum samples shall be screened by ELISA (IgG and IgM; BSL-2) and confirmed with virus neutralization (BSL-3).

Y2.5.1 Develop written information booklet on RVFV and other vector-borne diseases.

Y2.5.2 Develop written questionnaire for risk analyses of RVFV infection.

Y2.5.3-OY5.5.3 Collect serology samples from people at the ranches in domestic and game-farm study.

Y2.5.4-OY5.5.4 Conduct written questionnaire in conjunction with blood collection.

Y2.5.5-OY5.5.5 Conduct serological analyses for human anti-RVFV IgG and IgM.

Y3.5.6, OY5.5.6 Conduct serology and written surveys for people at farms used for metapopulation study.

Task Y3.6, OY5.6: Ruminant metapopulation study (Years 3 and O5).

Grantee shall conduct a large-scale serosurvey of free-ranging and farmed wildlife and livestock herds. We propose two replicate sampling events following each rainy season in Years 3 and OY5. For six species (sheep, goats, cattle, springbok, kudu and blesbok) grantee shall sample a minimum of 400 individuals (the wild species will include samples from game ranches and Mokala National Park). A minimum of 50 individuals from three additional species (buffalo, waterbuck and kudu) and 100 nyala will be sampled. Laboratory tests include ELISA IgG and IgM (BSL-3) and VNT for wildlife (BSL-3). Data on animal movement, including birth and cull rates for ranched animals as well as trade shall be obtained by the ranch owner via a survey.

Y3.6.1, OY5.6.1 Conduct metapopulation level herd immunity survey of domestic and wild ruminants.

Y3.6.2, OY5.6.2 Store wildlife serum in SANParks biobank for future studies.

Task Y3.7, OY5.7: Epidemiological analyses and comprehensive report of project to date (Years 3 and OY5).

Grantee shall prepare the database and complete analyses on mosquito, satellite and ruminant data collected from the project to date, including metapopulation data. Grantee shall synthesize this data and prepare manuscripts for publication. A stakeholder meeting will be held annually to describe the project and the current results.

Y3.7.1, OY5.7.1 Analyze and disseminate mosquito data.

Y3.7.2, OY5.7.2 Analyze and disseminate ruminant data.

Y3.7.3, OY5.7.3 Analyze and disseminate human data.

Y3.7.4, OY5.7.4 Synthesize and report project's scientific and capacity building success to DTRA.

Y3.7.5, OY5.7.5 Prepare and submit manuscripts for publication in peer-reviewed journals.

Y3.7.6, OY5.7.6 Conduct presentations/meetings at times and places specified in the grant schedule, including DTRA Annual Technical Review.

E-mail: Karesh@ecohealthalliance.org.

252.601-9001 GRANTS OFFICER'S REPRESENTATIVE (GOR) (MAY 2009)

d. Grants Officer's Representative (GOR) for this Grant is:
Name: (b)(6)
Defense Threat Reduction Agency/J3CTBS
8725 John J. Kingman Road, MS 6201
Fort Belvoir, VA 22060-6201
telephone (b)(6)
email address: (b)(6)

b. SCOPE AND LIMITATIONS OF AUTHORITY FOR DTRA GRANTS OFFICER'S REPRESENTATIVE

1. The Grants Officer's Representative (GOR) is responsible for monitoring the technical and programmatic performance of the grant or cooperative agreement (hereinafter referred to as agreement) including compliance with the agreement's reporting requirements. Perceived deviations from the agreement's terms and conditions shall be brought to the attention of appropriate recipient personnel and if not corrected, to the attention of the Grants Officer. Deviations or other occurrences indicative of the recipient's inability or unwillingness to conform to the agreement's requirements shall be brought to the immediate attention of the Grants Officer.

2. The GOR has no authority to modify the stated terms of the agreement or specifications in any manner, or to approve any action that would result in additional charges to the Government. The DTRA Grants Officer must make all such changes in writing.

3. The GOR is authorized to correspond directly with the recipient on matters within the scope and limitations of his or her authority. All such correspondence shall be signed personally by the GOR and a copy will be furnished the Grants Officer for placement in the official agreement file.

4. The GOR will provide technical advice to the recipient to the extent such advice will not alter any of the agreement's terms and conditions or result in an increase in the estimated cost of the agreement's performance as specified in the agreement. The GOR is encouraged to discuss with the recipient new ideas related to the original scope of the agreement that may be of special interest to DTRA. The GOR should also be alert for indications that any part of the research is becoming unfruitful. If, as a result of such discussions, questions arise as to the possible need for a modification, the matter shall be brought to the immediate attention of the Grants Officer. The GOR shall not direct the recipient to undertake any action that the recipient believes to be contrary to the agreement's scope, terms or conditions without the written approval of the Grants Officer.

5. Any visits to the recipient's facilities on matters pertaining to the agreement will be documented in a brief memorandum. A copy will be provided the Grants Officer for placement in the official agreement file.

6. The GOR will maintain such work files as he or she deems necessary to properly document performance of the duties and responsibilities as a GOR. Upon completion of the agreement and delivery of all required reports, such work files will be forwarded to the Grants Officer for placement in the official agreement file.

7. In performance of the GOR's duties, the GOR shall constantly stress protection of the Government's interests. Similarly, the GOR shall avoid any act which may tend to compromise the position of DTRA, any individual member of DTRA or which will impact confidence in the integrity of DTRA with the business community.

(End of Clause)

252.601-9001 GRANTS OFFICER'S REPRESENTATIVE (GOR) (MAY 2009)

d. Grants Officer's Representative (GOR) for this Grant is:
Name: (b)(6)
Defense Threat Reduction Agency/J3CTBS
8725 John J. Kingman Road, MS 6201
Fort Belvoir, VA 22060-6201
telephone (b)(6)
email address (b)(6)

b. SCOPE AND LIMITATIONS OF AUTHORITY FOR DTRA GRANTS OFFICER'S REPRESENTATIVE

1. The Grants Officer's Representative (GOR) is responsible for monitoring the technical and programmatic performance of the grant or cooperative agreement (hereinafter referred to as agreement) including compliance with the agreement's reporting requirements. Perceived deviations from the agreement's terms and conditions shall be brought to the attention of appropriate recipient personnel and if not corrected, to the attention of the Grants Officer. Deviations or other occurrences indicative of the recipient's inability or unwillingness to conform to the agreement's requirements shall be brought to the immediate attention of the Grants Officer.

2. The GOR has no authority to modify the stated terms of the agreement or specifications in any manner, or to approve any action that would result in additional charges to the Government. The DTRA Grants Officer must make all such changes in writing.

3. The GOR is authorized to correspond directly with the recipient on matters within the scope and limitations of his or her authority. All such correspondence shall be signed personally by the GOR and a copy will be furnished the Grants Officer for placement in the official agreement file.

4. The GOR will provide technical advice to the recipient to the extent such advice will not alter any of the agreement's terms and conditions or result in an increase in the estimated cost of the agreement's performance as specified in the agreement. The GOR is encouraged to discuss with the recipient new ideas related to the original scope of the agreement that may be of special interest to DTRA. The GOR should also be alert for indications that any part of the research is becoming unfruitful. If, as a result of such discussions, questions arise as to the possible need for a modification, the matter shall be brought to the immediate attention of the Grants Officer. The GOR shall not direct the recipient to undertake any action that the recipient believes to be contrary to the agreement's scope, terms or conditions without the written approval of the Grants Officer.

5. Any visits to the recipient's facilities on matters pertaining to the agreement will be documented in a brief memorandum. A copy will be provided the Grants Officer for placement in the official agreement file.

6. The GOR will maintain such work files as he or she deems necessary to properly document performance of the duties and responsibilities as a GOR. Upon completion of the agreement and delivery of all required reports, such work files will be forwarded to the Grants Officer for placement in the official agreement file.

7. In performance of the GOR's duties, the GOR shall constantly stress protection of the Government's interests. Similarly, the GOR shall avoid any act which may tend to compromise the position of DTRA, any individual member of DTRA or which will impact confidence in the integrity of DTRA with the business community.

SECTION B - SUPPLIES OR SERVICES AND PRICES

CLIN 0005
The option status has changed from Option to Option Exercised.

SUBCLIN 000501 is added as follows:

ITEM NO	SUPPLIES/SERVICES	QUANTITY	UNIT	UNIT PRICE	AMOUNT
000501					$0.00
	Funding in support of OY 4, CLIN 0005 FFP				
				NET AMT	$0.00
	ACRN AE CIN: HDTRA151699004000501				$998,193.00

SECTION E - INSPECTION AND ACCEPTANCE

The Acceptance/Inspection Schedule for CLIN 0005 has been changed from:

INSPECT AT	INSPECT BY	ACCEPT AT	ACCEPT BY
N/A	N/A	N/A	Government

To:

INSPECT AT	INSPECT BY	ACCEPT AT	ACCEPT BY
Destination	Government	Destination	Government

The following Acceptance/Inspection Schedule was added for SUBCLIN 000501:

INSPECT AT	INSPECT BY	ACCEPT AT	ACCEPT BY
N/A	N/A	N/A	N/A

SECTION G - CONTRACT ADMINISTRATION DATA

Accounting and Appropriation

Summary for the Payment Office

As a result of this modification, the total funded amount for this document was increased by $998,193.00 from $3,938,166.00 to $4,936,359.00.

SUBCLIN 000501:
Funding on SUBCLIN 000501 is initiated as follows:

ACRN: AE

CIN: HDTRA151699004000501

Acctng Data: 044315 097 0134 000 N 20182020 D 34HQ 0901515BR KD BP OT 18 1820 0134 34HQ SCNCT DTRA 410

Increase: $998,193.00

Total: $998,193.00

The following have been modified:

252.601-9000 GRANT POINTS OF CONTACT (MAY 2009)

a. Grant Specialist:
Name: (b)(6)
Defense Threat Reduction Agency/AL-ACO
8725 John J. Kingman Road, MS 6201
Fort Belvoir, VA 22060-6201
telephone (b)(6)
email address (b)(6)

b. Grantee Business Office:
Name: Ms. Virgina Porter
Title: Administrative Assistant to the Executive Vice President for Health &Policy.
Phone: 212.380.4470 _
E-mail: Porter@EcoHealthAlliance.org .

c. Grantee Principal Investigator (PI):
Name: Dr. William B Karesh.
Title: Principal Investigator.
Phone: 212-380-4463.
E-mail: Karesh@ecohealthalliance.org.

252.601-9001 GRANTS OFFICER'S REPRESENTATIVE (GOR) (MAY 2009)

d. Grants Officer's Representative (GOR) for this Grant is:
Name: (b)(6)
Defense Threat Reduction Agency/J3CTBS_
8725 John J. Kingman Road, MS 6201
Fort Belvoir, VA 22060-6201
telephone (b)(6)
email address: (b)(6)

b. SCOPE AND LIMITATIONS OF AUTHORITY FOR DTRA GRANTS OFFICER'S REPRESENTATIVE

1. The Grants Officer's Representative (GOR) is responsible for monitoring the technical and programmatic performance of the grant or cooperative agreement (hereinafter referred to as agreement) including compliance with the agreement's reporting requirements. Perceived deviations from the agreement's terms and conditions shall be brought to the attention of appropriate recipient personnel and if not corrected, to the attention of the Grants Officer. Deviations or other occurrences indicative of the recipient's inability or unwillingness to conform to the agreement's requirements shall be brought to the immediate attention of the Grants Officer.

2. The GOR has no authority to modify the stated terms of the agreement or specifications in any manner, or to approve any action that would result in additional charges to the Government. The DTRA Grants Officer must make all such changes in writing.

3. The GOR is authorized to correspond directly with the recipient on matters within the scope and limitations of his or her authority. All such correspondence shall be signed personally by the GOR and a copy will be furnished the Grants Officer for placement in the official agreement file.

4. The GOR will provide technical advice to the recipient to the extent such advice will not alter any of the agreement's terms and conditions or result in an increase in the estimated cost of the agreement's performance as specified in the agreement. The GOR is encouraged to discuss with the recipient new ideas related to the original scope of the agreement that may be of special interest to DTRA. The GOR should also be alert for indications that any part of the research is becoming unfruitful. If, as a result of such discussions, questions arise as to the possible need for a modification, the matter shall be brought to the immediate attention of the Grants Officer. The GOR shall not direct the recipient to undertake any action that the recipient believes to be contrary to the agreement's scope, terms or conditions without the written approval of the Grants Officer.

5. Any visits to the recipient's facilities on matters pertaining to the agreement will be documented in a brief memorandum. A copy will be provided the Grants Officer for placement in the official agreement file.

6. The GOR will maintain such work files as he or she deems necessary to properly document performance of the duties and responsibilities as a GOR. Upon completion of the agreement and delivery of all required reports, such work files will be forwarded to the Grants Officer for placement in the official agreement file.

7. In performance of the GOR's duties, the GOR shall constantly stress protection of the Government's interests. Similarly, the GOR shall avoid any act which may tend to compromise the position of DTRA, any individual member of DTRA or which will impact confidence in the integrity of DTRA with the business community.

(End of Clause)

252.632-9000 GRANT FUNDING PROFILE (MAR 2012)

FUNDING PROFILE:
The amount of $4,936,359.00 is obligated for work to be performed during the period beginning with grant award and continuing through May 27, 2019. Additional incremental funding planned, but not obligated, is:

The Government's liability is limited to the amount obligated

EcoHealth Alliance (EHA): Y1

PI Salary. PI Karesh will commit .5 month p.a. (Y1-OY5). In Year 1 we will request .2 month's salary ($30,338) and will match the rest of the salary with non-governmental funding. PI Karesh will meet with PIs and Key Personnel in South Africa to initiate the project (he will meet them either in Johannesburg or in Kimberly). He will work with Co-PI Rostal to coordinate the wide array of partners involved in this collaboration. He will oversee the start of the ruminant and mosquito field work with Co-PI Rostal. He will mentor the post-doctoral fellow during his/her time in NYC. PI Karesh will attend the DTRA Annual Technical Review. Co-PI Rostal will commit 8-mo p.a. (Y1-OY5) to the project. In Y1 we will request .5 month's salary ($47,000). She will work with PI Karesh to coordinate the many partners involved in this collaboration. She will work with our South African colleagues to ensure all the proper permits IACUC/IRB equivalents are submitted and accepted. She will also develop the U.S.-based IACUC and IRB. She will make two trips to South Africa, one with PI Karesh to meet with the collaborators and local stakeholders and assist with initial sampling and one to assist with sampling later in the year. She will work closely with the local project veterinarian and Key Personnel on the various parts of the project. She will mentor the post-doctoral fellow in epidemiology during his/her time in NYC. She will also lead the team in authoring the peer-reviewed publication describing the preliminary data.

Other Personnel. Key Personnel (KP) Hosseini will commit 1.1-3 month p.a. (Y1-OY5) to this project. In Year 1 we will request 1.1 month's salary ($7,230). KP Hosseini will meet with collaborators in South Africa to finalize the field protocols. KP Hosseini will develop the database to store all field, laboratory and repository data. KP Hosseini will mentor the post-doctoral fellow in the ecology of diseases during his/her time in NYC. Key Personnel Daszak will commit 2 months p.a. (Y1-OY5) to the project. We will request $12,296 in Y1 (.5 months), and his remaining (1.5 months) time will be funded through non-governmental sources. He will oversee the overall sampling protocol finalization and mentor the post-doctoral fellow in the study of infectious diseases. We will have a program administrator committed to 2 months p.a. (Y1-OY5), which is $8,036 in Y1. The program administrator will assist with communication among the collaborators, the hiring of the RSA project veterinarian, technicians and capture team and the logistics of travel for the PIs, KPs and the fellow. We will support a full-time post-doctoral fellow in epidemiology and infectious diseases, and as he/she will be spending varying amounts of time in the U.S. we will be offering a competitive salary (starting at $40,000) for 12 months p.a. (Y1-OY5). The post-doctoral fellow will be selected from one of the following candidate pools, listed by priority, South Africa, southern Africa, and Africa, depending on interest in the position. The selected fellow will be responsible, on an annual basis, for collecting the mosquitoes from the locations of our sheep flocks and springbok herds and in Mokala National Park (MNP). He/she will also help the veterinarian with ruminant sampling and testing. He/she will attend the entomology workshop and make one or two visits to EHA p.a. to work with the NYC collaborators and train in the epidemiology and ecology of infectious diseases. In Y1 he/she will also spend one month with KP Anyamba, learning about the use of normalized difference vegetation indices (NDVI) and satellite data analyses. We will hire a local veterinarian as the project veterinarian for 12 months (starting at $30,000) p.a. (Y1-O5). The project veterinarian will work closely with KP Nel, PI Rostal, KP Kemp and the post-doctoral fellow to coordinate all ruminant sampling and testing. The project veterinarian will join the stakeholder

meeting and will work with KP Nel to establish the experimental sheep flocks. He/she will be responsible for quarterly sampling of the sheep and testing the whole blood for innate immune response (γINF), in coordination with NICD. A technician will be hired for 12 months ($18,000) p.a. (Y1-OY5). The technician will assist the veterinarian with all ruminant sampling, innate immune response analysis and delivering the serum samples to NICD for, RVFV serology analysis. The technician will also assist with the mosquito sampling at ruminant locations when the post-doctoral candidate is in the U.S. A botanist technician will be hired for 6 months in Y1 ($9,000). The technician will be responsible for conducting the vegetation and dambo transects in Y1 to validate the NDVI analyses. The technician will submit all data to EHA to be stored in the database and ensure proper care of the larvae until they are submitted to KP Kemp at NICD. We will hire 1 to 3 student technicians full time during Y1-OY1. These technicians will assist in sample collection as well as laboratory analysis, in addition to this they will conduct a small research project as described in the technical report and the statement of work. We have budgeted $3,000 p.a. for each student. In Y1 we will hire two students, for a total of $6,000. Initial capture, sampling, tagging and vaccinating of springbok (or injecting them with saline as placebo) will require the assistance of a 10 man capture team for one month in Y1 ($2,696 per man per month = $26,960).

Deleted: in one of the state veterinary laboratories

Deleted: ruminant testing

Fringe Benefits. Fringe benefits are calculated as 32.3% of base salary for PIs, KPs, the program administrator and the post-doctoral fellow (they increase by 0.5% annually).

Deleted: 1

Equipment. We will purchase a vehicle in Y1 ($30,000) that will be used for ruminant, human and mosquito sampling (Y1-OY5). A vehicle will be required as, renting a 4x4 wheel drive vehicle is approximately $150 per day. This cost would quickly overpass the requested amount for the vehicle. At times when more than one team is in the field (ruminant team, mosquito team or human team) we will need a second vehicle. As part of cost-sharing the DOD-RSA have agreed to provide a vehicle when needed as per the memorandum of understanding that will be completed during Y1. These vehicles are necessary given the geographic variation of our sites especially in Y1, Y3 and OY5 (our study site is 200Km^2) of the project as well as the variety of sampling types that will occur. We will purchase an ELISA reader ($6,000) for sheep γINF ELISAs.

Deleted: 93,909

Deleted: hiring a car and driver during the 3-5 years of the study would be more costly and our study site covers 200Km^2 over which we will visit various farms and ranches for the different components of the project.

Deleted: t

Travel.

International All flights to/from South Africa from/to New York City were calculated at $2000 RT airfare to/from Johannesburg, $2200 round-trip airfare to/from Kimberley and $400 for flights from Johannesburg to Kimberley. Room and board for Johannesburg is $175 a day and $40 in Kimberley.

PI Karesh will visit the lab and the field site once in Y1-3 and OY5 ($2000 airfare + 350 ($175*2 days) + 400 airfare to Kimberley + ($40*6 days) + 67 misc. travel costs = $3,057). Co-PI Rostal will make two trips per year to the field site to oversee sampling (Trip 1: $2000 airfare + 350 ($175*2 days) + 400 airfare to Kimberley + ($40*40 days) + 67 misc. travel costs $4,417; Trip 2: $2200 airfare + ($40*14 days) = 100 misc. travel costs = $2,860). KP Hosseini will visit the field site in Y1. He will travel with PI Karesh, visiting Johannesburg for 2 days and Kimberley for 6 days ($2000 airfare + 350 ($175*2 days) + 400 airfare to Kimberley + ($40*6 days) + 67 misc. travel costs = $3,057). The post-doctoral fellow will make two trips to the U.S.

for a total of 5-6 months. The salary provides compensation for living expenses in the U.S., thus only funding for the flights will be requested ($2,200*2 trips = $4,400).
U.S. Domestic: We are also budgeting $550 p.a. for KP Hosseini to meet with KP Anyamba at USRA ($550 – 150 train fare + $300 hotel + $100 for local transit). In Y1 the post-doctoral fellow will spend 1 month in Baltimore, and as stated above, transportation will be funded ($150 train fare). In Y1 we are budgeting $1,260 for PI Karesh to attend the DTRA Annual Technical Review ($500 airfare · $120 hotel * 3 nights + $100 food * 3days + $100 for transit).
RSA Domestic: While the veterinarian, technician and post-doctoral candidate will be using the purchased vehicle, the transportation for the botanist technician (est. @ $14,560: for a car and driver $112/day * 130 days) will be provided as part of cost-sharing from DoD RSA as per the memorandum of understanding. We will pay for fuel for our vehicle at $0.101/km * 150km per day * 262 days = $4,000 p.a.

Other Direct Costs.
Materials and Supplies Funds for ruminant sampling in Y1 we have budgeted $18,531 in flock start-up costs. Flock costs will vary by vaccine status (one sheep is $64.30, control flock is $64.3*70 = $4,501; inactivated costs $8.25 more per individual, $72.55*70 ≈ $5,078 and modified-live vaccinated is $29.30 more per individual, $93.60*70 – $6,552). Farmers will be paid $800 per flock p.a. to maintain the flocks. For sampling, the market rate is SAR25/kg of meat. 18kg per animal costing $9,000 for each of two 400 animal herd. 8 ranches will participate (– with vaccinated animals and – without) and 2 ranches will be culled per year. We budgeted $2000 p.a. to divide among the farms, as the farms in Y3-5 would normally have already culled their animals and need greater incentive the longer they keep the animals. Gamma-interferon kits are $425 each and test 46 animals in duplicate p.a. We will use 20 kits ($425*20 – $8,500) p.a. A cell incubator for the γINF is $1000, in the lab where the innate immunity testing will occur. We expect to spend $5,000 p.a. to purchase sampling materials, such as nitrile gloves, vaccutainer® tubes and needles, dry ice, netting for bomas, respirators for separating serum in the field, two portable centrifuges, and ear tags etc. Additionally, the team will require a GPS unit ($400).

Mosquito trapping supplies are estimated to cost a total of $6,972 in Y1, including *Aedes* specific mosquito traps (e.g. 8 BioSentinel Mosquito traps, 8 oviposition traps and 6 CDC light traps - $200 ea. – $1,800), 5 Shannon CO_2 traps ($194ea. – $970) and two Modified CDC Backpack Aspirator with Regular/fine Mesh Stainless Steel Collection Cups ($601 ea. = $1,202).

We have budgeted $6,000 for additional supplies for the Masters' student's project ($3,000 per student), as he/she may incorporate other factors or pathogens into his/her research.

We are budgeting $1,500 p.a. to host a stakeholders' meeting in the Free State. This will include local ranchers, farmers, veterinarians, and policy makers. We will introduce the project to them and find potential participant farms/ranches for our experimental flocks/herds.

We budgeted $3000 to purchase a computer for the post-doctoral fellow in Y2 for the development of his own project, the analysis of initial data and the preparation of presentations.

We budgeted $1,750 p. a. for computer software licenses and services, including ArcGIS, Mathematica, etc.

Indirect Costs We are requesting the federally agreed indirect cost of 44.1% on all direct costs, except tuition. We have applied this IC rate to the first $25,000 of the subcontracts valued over $25,000 p.a. Total EcoHealth Alliance budgeted indirect costs for Y1: $[illegible].

EcoHealth Alliance (EHA): Y2

PI Salary. All salaries are increased by 5% p.a. due to the exceptionally high cost of living increases in New York City. In Year 2 we will request [illegible] month's salary ($[illegible]) for PI Karesh, PI Karesh will coordinate with all PIs and Key Personnel the many partners and facets involved in this project. He will monitor the lab and field work. He will mentor the post-doctoral fellow during his/her time in NYC. PI Karesh will present and discuss initial results and potential modifications with advisors at WHO and OIE as well as at a domestic presentation. Co-PI Rostal will commit 8-mo p.a. (Y1-OY5) to the project ($[illegible]). She will work with PI Karesh to coordinate the many partners involved in this collaboration, oversee fieldwork, and coordinate research. She will make two trips to South Africa, one with PI Karesh and KP Daszak to meet with the collaborators and local stake holders assist with sampling and initiating the springbok and human studies and one to assist with sampling later in the year. She will work closely with the local project veterinarian and Key Personnel to on the various parts of the project. She will mentor the post-doctoral fellow in epidemiology during his/her time in NYC. She will work with KPs Msimang and Kemp to produce written literature for the public regarding RVFV and vector-borne diseases and design the questionnaire for the human sampling project. Co-PI Rostal will attend the DTRA Annual Technical Review.

Other Personnel. Key Personnel (KP) Hosseini will commit 2 month in Year 2 ($[illegible]). KP Hosseini will maintain the project database and will conduct initial data analyses and summaries. KP Hosseini will mentor the post-doctoral fellow in the ecology of diseases during his/her time in NYC. Key Personnel Daszak will commit [illegible] month ($[illegible]) to the project in Y2. He will work with KP Hosseini to conduct the initial data analyses, visit our collaborators in South Africa and mentor the post-doctoral fellow in the study of infectious diseases. We will have a program administrator committed to 2 month ($[illegible]). The program administrator will assist with communication among the collaborators, the hiring of the capture team and the logistics of travel for the PIs, KPs and the fellow. We will support a full-time post-doctoral fellow in epidemiology and infectious diseases, ($42,000). The fellow will collect mosquitoes from the locations of our sheep flocks, springbok herds and in Mokala National Park (MNP). He/she will also help the veterinarian with ruminant sampling and testing. He/she will make two visits to EHA to work with the NYC collaborators and train in the epidemiology and ecology of infectious diseases. He/she will begin developing his/her own project within the framework of our research plan. In Y2 he/she will also spend two months with KP Kemp learning mosquito speciation and analysis as well as assisting with the laboratory transmission experiments. The project veterinarian, 12 months ($31,500), will work closely with KP Nel, PI Rostal, KP Kemp and the post-doctoral fellow to coordinate all ruminant sampling and testing. The project veterinarian will join the stakeholder meeting and will work with KP Nel and a professional capture team to capture, sample and tag the springbok. He/she will be continue for quarterly sampling of the sheep and testing the whole blood for innate immune response (γINF). A technician will be hired for 12 months ($18,900). The technician will assist the veterinarian with all ruminant sampling, innate immune response analysis and delivering the serum samples to in one of the state veterinary laboratories.

NICD for ruminant testing. The technician will also assist with the mosquito sampling at ruminant locations when the post-doctoral candidate is in the U.S. Sampling the culled springbok will require the assistance of two members of a capture team for 0.5months ($1,350 per man per month = $2,700). In Y2 we will hire three students (the new student technician will be hired at the rate of $13,000, while the other two will receive a 5% increase for the cost of living), for a total of $40,300.

Fringe Benefits. Fringe benefits are calculated as 33.8% of base salary for PIs, KPs, program administrator and the post-doctoral fellow (they increase by 0.5% annually).

Travel.
International All flights to/from South Africa from/to New York City were calculated at $2000 RT airfare to/from Johannesburg, $2,200 round-trip airfare to/from Kimberley and $400 for flights from Johannesburg to Kimberley. Room and board for Johannesburg is $175 a day and $40 in Kimberley.
PI Karesh and KP Daszak will visit the lab and the field site once ($2000 airfare + 350 ($175*2 days) + 400 airfare to Kimberley + ($40*6 days) + 67 misc. travel costs = $3,057*2 = $6,114). Co-PI Rostal will make two trips field site to oversee sampling (Trip 1: $2000 airfare + 350 ($175*2 days) + 400 airfare to Kimberley + ($40*20 days) + 67 misc. travel costs = $5,217; Trip 2: $2200 airfare + ($40*14 days) + 100 misc. travel costs = $2,860). The post-doctoral fellow will make two trips to the U.S. for a total of 4-5 months. The salary is compensation for living expenses in the U.S., thus only funding for the flights will be requested ($2,200*2 trips = $4,400). Funding will be provided for PI Karesh to present our initial work at an international conference, e.g. IMED, at $4,600 (airfare $1,000, hotel ($400/night) * 6, $125/day * 6, and $350 registration).
U.S. Domestic: We are also budgeting $550 for KP Hosseini to meet with KP Anyamba at USRA ($550 = 150 train fare + $300 hotel + $100 for local transit). In Y2 we are budgeting $1,260 each for PI Rostal and the post-doctoral fellow to attend the DTRA Annual Technical Review (($500 airfare + $120/night hotel x 3d + $100/day food x 3d + $100 for transit)*2 = $2,520), and a domestic conference, e.g. ASTMH or CDC's EID conference for KP Daszak to present preliminary data.
RSA Domestic: If another vehicle is needed for the human sampling of workers at our participating farms/ranches it will be covered by JDoD RSA. We will pay for fuel for our vehicle at $0.101/km x 150km per day x 262 days = $4,000 p.a. We will pay for 2nd year Masters' students to attend and present their work at a local conference (($150 transportation + $100 registration + ($40/day*5 days) + 50 misc. transit)*2 = $1,000).

Other Direct Costs.
Materials and Supplies Funds for ruminant sampling in Y2 include $800 per flock of sheep for maintenance ($2,400). Gamma-interferon kits are $425 each and test 46 animals in duplicate p.a. We will use 20 kits ($425*20 = $8,500) p.a. For springbok sampling we budgeted $2000 p.a. to divide among the farms, as the farms in Y3-5 would normally have already culled their animals and need greater incentive the longer they keep the animals. We expect to spend $10,600 (increase of 3% p.a.) to purchase sampling materials, such as nitrile gloves, vaccutainer® tubes and needles, dry ice, netting for bomas, respirators for separating serum in the field, two portable centrifuges, and ear tags etc. We will purchase the sampling equipment for ruminants for both

Y2 and Y3 at this time so that the meta-population sampling in Y3 can begin at the start of the year.

Mosquito trapping supplies are estimated to cost a total of $600 p.a. ($200*3).We expect to purchase 3 replacement traps in Y2.

We budgeted $5000 to purchase a computer for the PI Rostal and KP Hosseini Y3 to conduct epidemiological and ecological analyses. Masters' student's project ($3,000 per student = $6,000), as he/she may incorporate other factors or pathogens into his/her research: described in the technical report and SOW.

We are budgeting $1,575 (accounting for 3% increase p.a.) to host a stakeholders' meeting in the Free State. This will include local ranchers, farmers, veterinarians, and policy makers. We will update them on the project, introduce the human and springbok sampling projects to them and find potential participant farms/ranches for our experimental flocks/herds.

We are also budgeting $1,750 p.a. for computer software licenses and services, including ArcGIS, Mathematica, etc.

Publications: We budgeted $3,800 for publications in Y2 ($1,500 per open access journal, $2 $3,000) plus $800 for another journal.

Indirect Costs We are requesting the federally agreed indirect cost of 44.1% on all direct costs, except tuition. We have applied this IC rate to the first $25,000 of the subcontracts valued over $25,000 p.a. Total EcoHealth Alliance budgeted indirect costs for Y2: $228,534.

EcoHealth Alliance (EHA) Y3

PI Salary. All salaries are increased by 5% p.a. due to the exceptionally high cost of living increases in New York City. In Year 3 we will request 2 month's salary ($11,172) for PI Karesh and the remaining 1 month will be matched with non-governmental funding. PI Karesh will coordinate with all PIs and Key Personnel the many partners and facets involved in this project. He will monitor the lab and field work. He will mentor the post-doctoral fellow during his/her time in NYC. PI Karesh will present and discuss initial results and potential modifications with advisors at WHO and OIE. Co-PI Rostal will commit 8-mo p.a. (Y1-OY5) to the project ($22,369). She will work with PI Karesh to coordinate the many partners involved in this collaboration, oversee fieldwork, and coordinate research. She will make two trips to South Africa, one with PI Karesh to meet with the collaborators and local stake holders assist with sampling and initiating the metapopulation cross-sectional studies and one to assist with sampling later in the year. She will work closely with the local project veterinarian and Key Personnel to on the various parts of the project. She will mentor the post-doctoral fellow in epidemiology during his/her time in NYC.

Other Personnel. Key Personnel (KP) Hosseini will commit 3 month in Year 3 ($15,735). KP Hosseini will maintain the project database and will conduct initial data analyses and summaries. KP Hosseini will mentor the post-doctoral fellow in the ecology of diseases during his/her time in NYC. Key Personnel Daszak will commit 1 month ($25,178) to the project in Y3 and the remaining 1 month will be matched with non-governmental funding. He will work with KP Hosseini to conduct the initial data analyses and mentor the post-doctoral fellow in the study of infectious diseases. KP Daszak will attend the DTRA Annual Technical Review. We will have a program administrator committed to 2 month ($4,341). The program administrator will assist with communication among the collaborators, and the logistics of travel for the PIs, KPs and the fellow. We will support a full-time post-doctoral fellow in epidemiology and infectious diseases, ($46,305). The fellow will collect mosquitoes from the locations of our sheep flocks, springbok herds and in Mokala National Park (MNP). He/she will also help the veterinarian with ruminant sampling and testing and human sampling as needed. He/she will make two visits to EHA to work with the NYC collaborators and train in the epidemiology and ecology of infectious diseases. He/she will begin the analysis for his/her own project within the framework of our research plan. The project veterinarian, 12 months ($34,729), will work closely with KP Nel, PI Rostal and the post-doctoral fellow to coordinate all ruminant sampling and testing. The project veterinarian will join the stakeholder meeting. He/she will be continue for quarterly sampling of the sheep and testing the whole blood for innate immune response (γINF), Two hundred springbok will be culled and the veterinarian will oversee the sampling of our cohort and ensure the proper disposal of the vaccinated animals. Sampling the culled springbok will require the assistance of two members of a capture team for 1 month ($1,350 per man per month = $5,400). A technician will be hired for 12 months ($20,837). The technician will also assist with the mosquito sampling at ruminant locations when the post-doctoral candidate is in the U.S., In OY5 we will hire one student for a total of $13,650.

Fringe Benefits. Fringe benefits are calculated as 33.8% of base salary for PIs, KPs, program administrator and the post-doctoral fellow (they increase by 5% annually).

Travel.

International All flights to/from South Africa from/to New York City were calculated at $2000 RT airfare to/from Johannesburg, $2200 round-trip airfare to/from Kimberley and $400 for flights from Johannesburg to Kimberley. Room and board for Johannesburg is $175 a day and $40 in Kimberley.

Co-PI Rostal will make two trips field site to oversee sampling (Trip 1: $2000 airfare + 350 ($175*2 days) + 400 airfare to Kimberley + ($40*20 days) + 67 misc. travel costs = $3,617; Trip 2: $2200 airfare + ($40*14 days) + 100 misc. travel costs = $2,860). The post-doctoral fellow will make two trips to the U.S. for 6-7 months, to focus on analyses. The salary is compensation for living expenses in the U.S., thus only funding for the flights will be requested ($2,200*2 = $4,400). Funding will be provided for PI Rostal and KP Daszak to present our work at an international conference, e.g. IMED, at $9,200 (airfare $1,000, hotel ($400/night) * 6, $125/day * 6, and $350 registration*2).

U.S. Domestic: We are also budgeting $550 for KP Hosseini to meet with KP Anyamba at USRA ($550= 150 train fare + $300 hotel + $100 for local transit). In OY4 we are budgeting $1,260 for KP Hosseini to attend the DTRA Annual Technical Review ($500 airfare + $120 hotel * 3 nights = $100 food * 3 days + $100 for transit = 1,260), and a domestic conference, e.g. ASTMH or CDC's EID conference for PI Rostal to present preliminary data ($500 airfare + $340 registration = $120 hotel * 3 nights + $100 food * 3 days+ $100 for transit = $1,600).

Deleted: Sampling the culled springbok will require the assistance of two members of a capture team for 1 month ($1,350 per man per month = $5,400).
Deleted: 5.3
Deleted: 1

RSA Domestic: If another vehicle is needed for the human sampling of workers at our participating farms/ranches it will be covered by DoD-RSA as costs during. We will pay for fuel for our vehicle at $0.101/km x 150km per day x 262 days = $4,000 p.a. We will pay for the 2nd year Masters' student to attend and present their work at a local conference (($150 transportation + $100 registration + ($40/day*5 days) + 50 misc. transit) = $500).

Other Direct Costs.

Materials and Supplies Funds for ruminant sampling in OY4 include $800 per flock of sheep for maintenance ($2,400). Gamma-interferon kits are $425 each and test 46 animals in duplicate p.a. We will use 20 kits ($425*20 $8,500) p.a. , we funded springbok will be culled per, we budgeted $2000 p.a. to divide among the farms, as the farms in OY4-5 would normally have already culled their animals and need greater incentive the longer they keep the animals. We expect to spend $11,111 (increase of 3% p.a.) to purchase sampling materials for OY4 and prepare for the metapopulation sampling in OY5 in order to initiate the survey early in the year and have time to conduct analyses. These materials include, such as nitrile gloves, vaccutainer® tubes and needles, dry ice, netting for bomas, respirators for separating serum in the field, two portable centrifuges, and ear tags etc.

Mosquito trapping supplies are estimated to cost a total of $600 p.a. ($200*3).We expect to purchase 3 replacement traps in OY4.

The Masters' student will receive $3,000 for his/her project, as he/she may incorporate other factors or pathogens into his/her research.

We are budgeting $2,639 (accounting for 3% increase p.a.) to host a stakeholders' meeting in the Free State. This will include local ranchers, farmers, veterinarians, and policy makers. We will update them on the project, introduce the human and springbok sampling projects to them.

We are also budgeting $1,750 p. a. for computer software licenses and services, including ArcGIS, Mathematica, etc.

Publications: We budgeted $3,500 for publications in OY4 ($1,500 for two open-access journal),

Indirect Costs We are requesting the federally agreed indirect cost of 44.1% on all direct costs. We have applied this IC rate to the first $25,000 of the subcontracts valued over $25,000 p.a. Total EcoHealth Alliance budgeted indirect costs for OY4: $228,805.

EcoHealth Alliance (EHA) OY5

PI Salary. All salaries are increased by 5% p.a. due to the exceptionally high cost of living increases in New York City. In Option Year 5 (OY5) we will request 2 month's salary ($19,030) for PI Karesh and the remainder will be matched with non-governmental funding. PI Karesh will coordinate with all PIs and Key Personnel the many partners and facets involved in this project. He will monitor the lab and field work. He will mentor the post-doctoral fellow during his/her time in NYC. PI Karesh will present and discuss initial results and potential modifications with advisors at WHO and OIE. PI Karesh will attend the DTRA Annual Technical Review. Co-PI Rostal will commit 8-mo p.a. (Y1-OY5) to the project ($57,858). She will work with PI Karesh to coordinate the many partners involved in this collaboration, oversee fieldwork, and coordinate research. She will make two trips to South Africa, one with PI Karesh to meet with the collaborators and local stake holders assist with sampling and implementing the metapopulation

cross-sectional studies and one to assist with sampling later in the year. She will work closely with the local project veterinarian and Key Personnel to on the various parts of the project. She will mentor the post-doctoral fellow in epidemiology during his/her time in NYC.

Other Personnel. Key Personnel (KP) Hosseini will commit 3 month in OY5 ($18,087). KP Hosseini will maintain the project database and will conduct final data analyses and summaries with other collaborators. KP Hosseini will mentor the post-doctoral fellow in the ecology of diseases during his/her time in NYC. Key Personnel Daszak will commit .75 month ($17,941) to the project in OY5. He will work with KP Hosseini to conduct the data analyses and mentor the post-doctoral fellow in the study of infectious diseases. We will have a program administrator committed to 5 months ($15,122). The program administrator will assist with communication among the collaborators, and the logistics of travel for the PIs, KPs and the fellow. We have requested an extra month of support for the program administrator in order to assist with a smooth transition at the end of the project. We will support a full-time post-doctoral fellow in epidemiology and infectious diseases, ($48,620). The fellow will collect mosquitoes from the locations of our sheep flocks, springbok herds and in Mokala National Park (MNP). He/she will also help the veterinarian with ruminant sampling and testing, and with the metapopulation survey with ruminants, people and mosquitoes as needed. He/she will make two visits to EHA of approximately two-three months to work with the NYC collaborators and conduct epidemiological and ecological analyses. He/she will write and submit his/her own project for peer-reviewed publication. The project veterinarian, 12 months ($36,465), will work closely with KP Nel, PI Rostal, KP Kemp and the post-doctoral fellow to coordinate all ruminant sampling and testing and the metapopulation ruminant surveys of domestic and game-ranched animals of six species, including assisting with SANParks veterinarians in MNP as needed. The project veterinarian will join the stakeholder meeting. He/she will be continue for quarterly sampling of the sheep and testing the whole blood for innate immune response (γINF) in one of the state veterinary laboratories. At the end of OY5 200 springbok will be culled and the veterinarian will oversee the sampling of our cohort and ensure the proper disposal of the vaccinated animals. Sampling the culled springbok will require the assistance of two members of a capture team for 0.5months ($1,350 per man per half month = $2,700). A technician will be hired for 12 months ($21,879). The technician will assist the veterinarian with all ruminant sampling, innate immune response analysis and delivering the serum samples to NICD for ruminant testing. The technician will also assist with the mosquito sampling as needed/available during the metapopulation surveys.

Fringe Benefits. Fringe benefits are calculated as 34.3% of base salary for PIs, KPs, program administrator and the post-doctoral fellow (they increase by .5% annually).

Travel.

International All flights to/from South Africa from/to New York City were calculated at $2000 RT airfare to/from Johannesburg, $2200 round-trip airfare to/from Kimberley and $400 for flights from Johannesburg to Kimberley. Room and board for Johannesburg is $175 a day and $40 in Kimberley.

PI Karesh will visit the field site once ($2200 airfare + ($40*6 days) + 67 misc. travel costs $2,507). Co-PI Rostal will make two trips field site to oversee sampling (Trip 1: $2000 airfare + 350 ($175*2 days) + 400 airfare to Kimberley + ($40*60 days) + 67 misc. travel costs = $5,217;

Trip 2: $2200 airfare + (S40*14 days) − 100 misc. travel costs S2,860). The post-doctoral fellow will make one trip to the U.S. for 2-3 months. The salary is compensation for living expenses in the U.S., thus only funding for the flights will be requested ($2,200).

U.S. Domestic: We are also budgeting S550 for KP Hosseini to meet with KP Anyamba at USRA (S550= 150 train fare + $300 hotel + $100 for local transit). In OY5 we are budgeting $1,260 for PI Karesh to attend the DTRA Annual Technical Review ($500 airfare + $120 hotel * 3 nights + $100 food * 3 days + S100 for transit). PI Rostal and KP Hosseini will be funded to present our results at a domestic conference, e.g. ASTMH or CDC's EID ($500 airfare + $340 registration − $120 hotel * 3 nights + $100 food * 3 days + $100 for transit $1,600*2 $3,200).

RSA Domestic: If another vehicle is needed for the human sampling of workers at our participating farms/ranches it will be covered by DoD-RSA as cost sharing. We will pay for fuel for our vehicle at $0.101/km x 150km per day x 262 days $4,000 p.a.,

Other Direct Costs.

Materials and Supplies Funds for ruminant sampling in OY5 include $800 per flock of sheep for maintenance ($2,400). Gamma-interferon kits are $425 each and test 46 animals in duplicate p.a. We will use 20 kits ($425*20 = $8,500) p.a. We budgeted S2000 to divide among the final farms, as the farms would normally have already culled their animals and need greater incentive the longer they keep the animals. For the metapopulation survey we budgeted S30 per farm (sampling 8− animals) for 50 farms per species. with a 3% increase in cost p.a., (cow, sheep, goat and springbok; total of S6,000) and $50 per farm. with a 3% increase in cost p.a., (sampling 8− animals) for 50 farms per species (blesbok and kudu; $5,000) for a total of $11,000.

We are budgeting $1,088 (accounting for 3% increase p.a.) to host the final stakeholders' meeting in the Free State. We will update stakeholders on the results of the project.

We are also budgeting S1,750 p. a. for computer software licenses and services, including ArcGIS, Mathematica, etc.

Publications: We budgeted $1,900 for publications in OY5 (S1,500 for one open-access journal, and S400 for another journal = $1,900).

Indirect Costs We are requesting the federally agreed indirect cost of 44.1% on all direct costs. We have applied this IC rate to the first S25,000 of the subcontracts valued over S25,000 p.a. or for the total amount for subcontracts under S25,000. Total EcoHealth Alliance budgeted indirect costs for OY5: $212,936,

Statement of Work

Project Title: Understanding Rift Valley Fever in Republic of South Africa

Document Date: July 1, 2013

Objective: The objective of this grant is to build a collaborative partnership with South African scientists and managers to study important aspects of Rift Valley fever virus (RVFV) epidemiology and ecology that have been neglected by previous research on the continent. The project is designed to strengthen South Africa's leadership role within the African continent for the study and control of RVFV and other vector-borne diseases. This work is vital to understanding how to manage animal populations, protect people, when and how to use vaccination protocols, and ways to reduce the risk of the virus spreading outside of Africa. It also provides the baseline data needed to better predict the spread of the virus should it ever be introduced into the United States and strengthens scientific partnerships in the region, thereby fulfilling DTRA's mandate of reducing the threat of the introduction and maintenance of a select agent into the United States.

Scope: The grantee proposes the first comprehensive study of the implications of vertebrate immunity at multiple scales, including the effect of vaccination, vector transmission dynamics and climate-ecology on RVFV ecology between and during epizootics. Grantee shall investigate RVFV life cycle, transmission by mosquitos, and immunity in domestic and wild ruminants, and humans, paired with vegetation and climate data, to increase our understanding of these integrated aspects through a One Health approach. The grantee team shall focus on the following major goals and milestones:

1. Improve the capacity for South Africa to be a regional leader in vector-borne diseases and Rift Valley fever virus epidemiology.
    - Establish collaborations of stakeholders, training of local technical personnel, training of graduate students and post-doctoral fellows, and improve official disease reporting to local and international authorities, publishing and sharing of project findings.
2. Determine how immunity against RVFV may change over time in domestic and wild ruminants (vaccinated and non-vaccinated) and be altered by animal management approaches.
    - Establish study protocols, implement and maintain field studies at individual and population scales, including the use of vaccines to simulate exposure and conduct laboratory analyses.
3. Determine the herd immunity status of free-ranging wildlife, wildlife from game farms and domestic animals in a 200Km^2 study region.
    - Establish implement and maintain field studies and conduct laboratory analyses.
4. Determine how mosquito abundance relates to weather in South Africa, the percentage of mosquitoes carrying RVFV and which ruminant species these vectors are biting.
    - Establish study protocols, implement and maintain mosquito field studies, collate weather/climate data, extend vector studies in OY4 and OY5 to examine variability between years.
5. Determine the current seroprevalence of RVFV antibodies in people working on the study farms and detect inter-epidemic transmission to people if it is occurring.
    - Improve the understanding of the widespread effect of previous RVFV outbreaks in

people from the study area.

This integrated approach represents the most comprehensive project to date to understand the epidemiology and ecology of RVFV. It is likely that herd immunity within the entire ruminant community (wild and domestic) plays a role in whether an outbreak occurs given the appropriate climatic conditions. The proposed immunity studies combined with transmission and succession data collected from mosquitoes during this project will demonstrate their relationship with the occurrence of an outbreak. This work in conjunction with a better understanding of current exposure levels and possible inter-epidemic transmission in people will improve the ability of scientists, local stakeholders and policy makers to prevent potential RVFV outbreaks. This research will have a **direct impact** on methods of managing ruminants, mosquitoes and mitigating risks to reduce or prevent future outbreaks and will likely be transferable to other nations in southern or all of Africa. It will also better inform policy makers in the U.S. to develop contingency plans should a RVF outbreak occur on American soil.

Our research will be centered in the Republic of South Africa (RSA), in areas with heightened risk of RVFV outbreaks (based on prior and future potential for occurrence). Collaborators from five RSA governmental and academic institutions (RSA National Institute for Communicable Diseases (NICD), RSA National and State Veterinary Services, RSA National Parks (SANParks), RSA Department of Defense, and University of Pretoria), as well as RSA private and livestock game ranchers, will play active and key roles in all components of the project, including study design, training, sampling, testing, and data analysis and information dissemination. The extensive involvement of South African partners will enable opportunities to advance RSA as a leader in vector-borne disease research. The proposed project duration is three years, with two optional years to allow for further advancement of research.

Background:

Rift Valley fever (RVF) is an emerging infectious disease that presents a formidable challenge for global public health and livestock producers. Its causative agent, RVF virus (RVFV) is listed as a pathogen of significant concern with the potential for international spread by several national and international defense, health and agricultural agencies, including the US DoD and CDC, WHO, and FAO. In addition to the potential risk of spread to the U.S. (intentionally or unintentionally), the virus causes large, devastating epizootics in Africa, inducing high rates of abortions in pregnant domestic ruminants, and over 90% mortality in juveniles. In addition to the economic and nutritional impacts on humans from livestock loss, transmission to humans occurs either through contact with bodily fluids and tissues of infected livestock, or via the bite of an infected mosquito. Though human infection with RVFV may be mild, it can cause hemorrhagic, neurological or hepatic disease. In recent years, RVFV has been demonstrated to cross the Red Sea, resulting in outbreaks in Yemen and Saudi Arabia.

On the basis of our project partners' work, climate has been used as a predictor of RVF outbreak occurrence and control. However, climate prediction models have not been paired with basic research necessary for understanding of the vector life cycle and its role in RVF maintenance, and the transmission pathways and immunological dynamics of RVFV. As a result, prevention and control strategies are insufficient to adequately prepare for current and potential RVF risks. Thus, there is great need to better elucidate the underlying mechanisms of RVF, especially given the potential for transmission between vectors, humans, and animals.

Key references include (Further references can be found in the Project Narrative):

Anyamba A, *et al.* Prediction, Assessment of the Rift Valley Fever Activity in East and Southern Africa 2006-2008 and Possible Vector Control Strategies. Am J Trop Med Hyg. 2010;83(2):43-51.

Kasari TR, *et al.* Evaluation of pathways for release of Rift Valley fever virus into domestic ruminant livestock, ruminant wildlife, and human populations in the continental United States. JAVMA. 2008; 232(4):514-529.

Archer BN, *et al.* Outbreak of Rift Valley fever affecting veterinarians and farmers in South Africa, 2008. S Afr Med J. 2011;101(4):263-6.

The RSA represents an ideal location for this research given the weaknesses in current understanding of RFV epidemiology there, the willingness, interest and capacity of local partners to engage in the project, the impact of RVF outbreaks to agricultural production and risks to people and trade, the abundance of wildlife and presence of game farming to facilitate the research activities needed, and the recertification of the NICD BSL-4 laboratory facilities. The study area has seen multiple RVF outbreaks in the past and hosts a variety of ruminant species – including domestic cattle, goats and sheep as well as wildlife. It hosts 23% of the game farming in RSA. Preliminary data has been obtained for this project through field studies and testing with project partners EcoHealth Alliance, SANParks, DETEA and NICD (Technical Proposal Table 1). The preliminary data has informed the study design by allowing us to target wild ruminant species with highest seroprevalence for RVFV. Furthermore, the success of collaboration with project partners to date ensures the ability to collect adequate samples for analytical statistical significance and the ability to conduct testing of samples in RSA.

Tasks/Scientific Goals: **(Format: Year #(s).Task #.Sub-task#)**

Task Y1.1-OY5.1: Improve the capacity for South Africa to be a leader in vector-borne diseases and Rift Valley fever virus epidemiology (Years 1-OY5).

Our team believes that South Africa can be a leader and model to other African nations regarding public health. Three medical entomology and mosquito identification workshops for regional professionals will be given. This will focus on techniques for trapping adult mosquitoes and larvae and their identification. A post-doctoral fellow from South Africa or southern Africa will split her/his time between EHA (conducting epidemiological and ecological analyses) and working in South Africa (working with the field and laboratory teams). We will also select two Masters' students in epidemiology and one or two (if option years are approved) Masters' students in entomology from the University of Pretoria.

Y1.1.1, Y3.1.1, OY4.1.1 Conduct an entomology workshop for participants from southern Africa.

Y1.1.2-OY5.1.2 Mentor a South African post-doctoral fellow on RVFV epidemiology.

Y1.1.3 -Y2.1.3 Train two Masters' students in epidemiology.

Y1.1.4-OY4.1.4 Train PhD student.

Y2.1.5-OY4.1.5 Train Masters' student(s) in medical entomology.

Task Y1.2-OY5.2: Field mosquito studies and corresponding satellite data (Years 1-OY5).

The grantees shall **1)** monitor rainfall conditions on a daily basis. Additionally, the vegetation conditions using normalized difference vegetation index (NDVI) shall be monitored via satellite every 10 days in our 20,000Km^2 study area; **2)** Identify the mechanistic link between mosquito abundance and succession in RSA with NDVI satellite data technology by conducting a line transect with 40km intervals, with weekly vegetation transects and daily larvae sampling of flooded *dambos* in Y1; **3)** Use a variety of traps to collect mosquitoes at selected sites for one week per site per quarter and after identification, screen pools with RT-PCR and isolate RVFV viral strains, and isolate blood-meals to analyze using PCR of the vertebrate cytochrome b gene

of mitochondrial DNA (RNA extraction will occur in a BSL-3 or more secure facility; PCR and RT-PCR will be conducted in a BSL-2 facility). **4)** Grantee shall conduct mosquito abundance and diversity sampling at the 50 ranches randomly chosen from the metapopulation investigation (see Task 6) during Y3 and OY5.

Y1.2.1 Finalize proposed protocols with collaborators and stakeholders in RSA.

Y1.2.2 Implement concurrent vegetation and dambo transects for mosquito larvae.

Y1.2.3-OY5.2.3 Collect and process mosquitoes at ruminant sampling sites.

Y1.2.4-OY5.2.3 Collect satellite derived rainfall, temperature and NDVI data.

Y3.2.5, OY5.2.5 Conduct cross-sectional mosquito study across the 20,000km^2 study site.

Task Y1.3-OY5.3: Ruminant immunological study (Years 1-OY5).

Our target ruminant community for sampling includes domestic livestock, game-ranched wildlife and free-ranging wildlife. The importance of each group and each scale will be analyzed based on the data from Task 3 and Task 5 (below). **1) Sheep flocks – Individual immunity:** We will create experimental flocks of 70 modified-live vaccinated, 70 inactivated vaccinated and 70 non-vaccinated seronegative sheep. Sheep will be maintained in the same manner as domestic stock on farms in Free State. The flocks will be sampled quarterly and tested for anti-RVFV IgG, IgM and interferon gamma (BSL-2). Each treatment group should give us different information regarding the longevity of anti-RVFV antibodies and innate immunity. Aliquots will remain in cryogenic storage at the state veterinary laboratories. **2) Game-Farm springbok – Population immunity:** We will work with commercial game ranches that raised springbok for hunting or meat. We will simulate RVFV exposure by using a modified-live vaccinated group to compare to a control group. In Y1 the 800 springbok will be captured, vaccinated (if needed), sampled, tagged, quarantined and released. Annually, 100 vaccinated and 100 unvaccinated springbok will be culled as part of the ranches' protocol. All sera will be tested by virus neutralization test (BSL-3). Unused serum aliquots will be stored in a secure serum bank at SANParks.

Y1.3.1 Vaccinate sheep for individual and population level immunoepidemiolgical studies.

Y1.3.2-OY5.3.2 Collect quarterly/annual serology in study flocks and/or herds.

Y1.3.3 Vaccinate springbok for individual and population level immunoepidemiolgical studies.

Task Y1.4, Y2.4, Y4.4: Disseminate reports to relevant stakeholders (Years 1, 2, 4).

Synthesize all data collected through the projects described above as well as capacity building activities in South Africa. A database for the extensive amount of data shall be developed and used for epidemiological analyses. Biobank sample repositories will be maintained and corresponding metadata will be available. Scientific and general reports will be generated. A stakeholder meeting will be held annually (Tasks 4 and 7- see Task 7 for Y3 and OY5, for more complete summaries to close the project) to describe the project and the current results.

Y1.4.1, Y2.4.1, OY4.4.1 Submit reports, including sample repository data, to DTRA.

Y1.4.1, Y2.4.1, OY4.4.1 Complete annual report to local stakeholders.

Y1.4.3 Disseminate preliminary serological data in a peer-reviewed publication..

Y1.4.1, Y2.4.1, OY4.4.1 Conduct presentations/meetings at times and places specified in the grant schedule, including DTRA Annual Technical Review.

Y1.4.1, Y2.4.1, OY4.4.1 Submit and maintain samples in biobanks.

Y1.4.1, Y2.4.1, OY4.4.1 Conduct annual stakeholder meetings.

Y2.4.7, OY4.4.7 Prepare to submit publications on data collected in Years 1-4.

Task Y.2.5-OY5.5: Conduct human surveys and serological cross-sectional study (Years 2-OY5).

Grantee shall develop and publish public health information on the prevention of RVFV and vector-borne diseases for the ranchers and employees in the Free State. The information will be published in English, Afrikaans and Sestho. Grantee shall conduct annual serosurveys and written surveys of the employees (on a voluntary basis) at the ranches where the study sheep and springbok flocks/herds are located to detect possible inter-epidemic human transmission of RVFV. During the meta-population analyses a large cross-sectional study across the ranches and farms throughout our 20,000km^2 study site shall be conducted. Human serum samples shall be screened by ELISA (IgG and IgM; BSL-2) and confirmed with virus neutralization (BSL-3).

Y2.5.1 Develop written information booklet on RVFV and other vector-borne diseases.

Y2.5.2 Develop written questionnaire for risk analyses of RVFV infection.

Y2.5.3-OY5.5.3 Collect serology samples from people at the ranches in domestic and game-farm study.

Y2.5.4-OY5.5.4 Conduct written questionnaire in conjunction with blood collection.

Y2.5.5-OY5.5.5 Conduct serological analyses for human anti-RVFV IgG and IgM.

Y3.5.6, OY5.5.6 Conduct serology and written surveys for people at farms used for metapopulation study.

Task Y3.6, OY5.6: Ruminant metapopulation study (Years 3 and O5).

Grantee shall conduct a large-scale serosurvey of free-ranging and farmed wildlife and livestock herds. We propose two replicate sampling events following each rainy season in Years 3 and OY5. For six species (sheep, goats, cattle, springbok, kudu and blesbok) grantee shall sample a minimum of 400 individuals (the wild species will include samples from game ranches and Mokala National Park). A minimum of 50 individuals from three additional species (buffalo, waterbuck and kudu) and 100 nyala will be sampled. Laboratory tests include ELISA IgG and IgM (BSL-3) and VNT for wildlife (BSL-3). Data on animal movement, including birth and cull rates for ranched animals as well as trade shall be obtained by the ranch owner via a survey.

Y3.6.1, OY5.6.1 Conduct metapopulation level herd immunity survey of domestic and wild ruminants.

Y3.6.2, OY5.6.2 Store wildlife serum in SANParks biobank for future studies.

Task Y3.7, OY5.7: Epidemiological analyses and comprehensive report of project to date (Years 3 and OY5).

Grantee shall prepare the database and complete analyses on mosquito, satellite and ruminant data collected from the project to date, including metapopulation data. Grantee shall synthesize this data and prepare manuscripts for publication. A stakeholder meeting will be held annually to describe the project and the current results.

Y3.7.1, OY5.7.1 Analyze and disseminate mosquito data.

Y3.7.2, OY5.7.2 Analyze and disseminate ruminant data.

Y3.7.3, OY5.7.3 Analyze and disseminate human data.

Y3.7.4, OY5.7.4 Synthesize and report project's scientific and capacity building success to DTRA.

Y3.7.5, OY5.7.5 Prepare and submit manuscripts for publication in peer-reviewed journals.

Y3.7.6, OY5.7.6 Conduct presentations/meetings at times and places specified in the grant schedule, including DTRA Annual Technical Review.

Dear Terrie,

We have consulted our implementing partners, and to the best of our knowledge, we do not anticipate incurring the stated level of tax in any upcoming transactions.

Please let me know if you need additional information. Also, please note that the primary administrative contact for this project is Ms. Emma Lane. Future emails should copy her, Dr. Aleksei Chmura and Ms. Evelyn Luciano - all copied here.

Cheers,
Jon

Technical Abstract (Limit your abstract to 200 words with no classified or proprietary information)

Serological Biosurveillance for Spillover of Henipaviruses and Filoviruses at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia / Epstein CBEP-Thrust Area 6, CC WMD Summary The henipaviruses and filoviruses include Nipah virus (NiV) and several species of Ebola (EBOV) and Marburg virus (MARV), respectively, which are highly pathogenic viruses and select agents capable of causing public health emergencies of international concern. Bats are recognized as reservoirs for both henipa- and filoviruses, and zoonotic transmission of these viruses from bats to humans has occurred in Southeast Asia. This project will enhance early detection and surveillance capacity in Malaysia by: 1) transferring Luminex-based technology with validated reagents to detect IgG antibodies against any henipa- and filoviruses to Government of Malaysia partner labs in wildlife, livestock and human health sectors; 2) training laboratory personnel to develop and utilize Luminex-based assays to identify exposure to and spillover of henipa- and filoviruses; 3) conducting biological surveillance in wildlife (esp. bats), livestock and people around indigenous communities that hunt wildlife and on farms in Peninsular Malaysia, where there are high levels of contact among people and animals. Activities will be coordinated with and complimentary to the USAID Emerging Pandemic Threats: PREDICT program and surveillance data will be shared with the Govt. of Malaysia (GoM). The proposed project is closely aligned with the aims of the Cooperative Biological Engagement Program Thrust Area 6 in that it will support biosurveillance and capability building, engages partner-country scientists, and promotes a One-Health approach to biological threat reduction.

CBEP = Thrust Area 6 – Cooperative Counter WMD Research with Global Partners
Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia

Phase II Technical Proposal

I. **ABSTRACT.** The henipaviruses and filoviruses include Hendra virus (HeV) and Nipah virus (NiV), and several species of Ebola (EBOV) and Marburg virus (MARV), respectively, which are highly pathogenic viruses and select agents capable of causing public health emergencies of international concern. Bats are recognized as reservoirs for both henipa- and filoviruses, and zoonotic transmission of these viruses from bats to humans via domestic or wild animals has occurred in Southeast Asia. The full diversity of henipa- and filoviruses in bats and their potential to infect livestock and people is unknown. This project will reduce the threat from these viral agents in Malaysia by enhancing early detection and surveillance capacity in government labs by: 1) transferring Luminex-based technology with validated reagents to detect IgG antibodies against *any* henipa- and filoviruses to Government of Malaysia labs in wildlife, livestock and human health sectors; 2) training lab personnel to develop and utilize Luminex-based assays to identify exposure to henipa- and filoviruses; 3) conduct biological surveillance in wildlife (esp. bats), livestock and people in indigenous communities that hunt wildlife and on farms in Peninsular Malaysia, where there are high levels of contact among people and animals. Based on building local capacity for hypothesis driven research and improved use of technology, this project will help characterize the distribution and spillover potential from bats of henipa- and filoviruses in Peninsular Malaysia. Activities will be coordinated with, and complimentary to, the USAID Emerging Pandemic Threats: PREDICT program and serological data will be shared with the Govt. of Malaysia (GoM). The proposed project is closely aligned with the aims of the Cooperative Biological Engagement Program in that it will support biosurveillance and capability building, decrease the threat from select agents (Ebola and Nipah virus); engage partner-country scientists, and promote a One-Health approach to threat reduction.

II. SCOPE.

A. OBJECTIVE. Our overarching goal is to characterize the distribution and detect spillover of henipa- and filoviruses within indigenous populations and on farms in Peninsular Malaysia. As part of this process, we will enhance capacity at key government labs in human and animal health sectors for serological surveillance in animals and human populations for these high consequence pathogens.

B. BACKGROUND. The majority of emerging infectious diseases are zoonotic, and most originate in wildlife populations (1). Spillover from animal populations into humans is primarily driven by human activities that bring people and animals into closer contact, such as land use change, hunting, live animal trade, and agricultural intensification (2). Several emerging zoonoses have become pandemics with significant global health and economic impacts, including HIV/AIDS, SARS coronavirus, and most recently, Ebola virus disease in West Africa. Despite a growing awareness by governments that most high consequence emerging viruses come from wildlife, there is still relatively little surveillance of wildlife populations for zoonotic pathogens. Resources for disease surveillance are focused on human and domestic animal populations, which limits the possibility of early detection and prevention of outbreaks (3).

Understanding the diversity and prevalence of zoonotic agents in key wildlife species in areas where people, domestic animals, and wildlife have high degrees of contact (e.g. farms or live animal markets) can provide opportunity for early detection and response to spillover events and limit human and livestock mortality (3). Among groups of emerging zoonotic viruses, henipaviruses (Family *Paramyxoviridae*) and ebolaviruses and marburgvirus (Family *Filoviridae*) have caused outbreaks in people with high mortality rates (4, 5). Included in these viral genera are NiV and EBOV, both of which are listed as a select agents and identified by HHS and USDA as pathogens of significant threat to both human and animal health (6).

The proposed interdisciplinary research effort has three *objectives*: 1) enhance the GoM's ability to detect and respond to high priority zoonoses by transferring a Luminex-based serological assay with validated reagents to detect IgG antibodies against known and unknown henipa- and filoviruses to key government partner labs in human and animal health sectors; 2) train laboratory personnel to use this panel to screen serum samples from animals and people; 3) screen serum samples collected under the PREDICT project *and* conduct additional targeted serological surveillance in wildlife, livestock and people in indigenous communities and on farms, where there is likely to be high levels of human-animal contact. **Our overarching goals are to establish henipa- and filovirus sero-surveillance in Peninsular Malaysia, identify potential points of zoonotic transmission, and reduce the risk of outbreaks.**

We propose to test the following two hypotheses: 1) there are multiple henipa- and filoviruses in bats in Malaysia, some of which have zoonotic potential; and 2) spillover of these viruses from wildlife reservoirs (e.g. bats) has occurred, undetected, on farms and in rural indigenous communities who hunt wildlife. Both environments contain high risk interfaces where wildlife, domestic animals and people have a greater frequency of contact. Incorporating serological tests for high consequence pathogens will enhance existing One Health surveillance programs and help the government more rapidly detect and respond to spillover events at human-animal interfaces.

Henipaviruses. Nipah virus (NiV) is an emerging zoonotic paramyxovirus (genus *Henipavirus*), carried by frugivorous bats, that has pandemic potential (7). Its bat reservoir hosts are widely distributed throughout Asia and Africa, it can be transmitted directly from bats to humans, livestock to humans, and person to person, spillover has occurred repeatedly in populous and internationally connected regions, and it is associated with high mortality rates (4). NiV first emerged as a respiratory and encephalitic disease in pigs on a large-scale farm in Malaysia. Infected pigs transmitted NiV to humans, resulting in 265 infections and 105 deaths (40% mortality) (8). Fruit trees planted next to pig enclosures on the index farm created an interface where bats could drop chewed fruit, contaminated with bat saliva (and virus) into pig enclosures (9). An ecological study by our group found that NiV circulates widely in both native pteropid bat species in Malaysia (10). Industrialization and intensification of pig farming over time, coupled with having orchards next to animal enclosures, created conditions that allowed for repeated spillover from bats, persistent circulation within pigs, and ultimately a human outbreak (11). In 2014, an outbreak of NiV occurred in the Philippines in people who consumed meat from infected horses (12). In Bangladesh, outbreaks of NiV encephalitis have been recognized in people on a near-annual basis since 2001, with a mean case fatality rate of 70% and in some cases reaching 100% (13). Outbreaks in Bangladesh are seasonal, clustered within the western

part of the country, and have been linked to date palm sap consumption (13). *Pteropus giganteus*, the putative reservoir for NiV on the Indian subcontinent, feeds on date palm sap as it flows into collection pots overnight and contaminates the sap with excreta (14-16). At least 48 primary human cases, presumed to be infected directly by bats, have been identified, and human-to human transmission has occurred in many of the outbreaks (7, 13).

Filoviruses. Filoviruses circulate both in Africa and Southeast Asia, and have also been linked to bat reservoirs (17). In Africa, EBOV, formerly Zaire ebolavirus, and Sudan virus (SUDV) have caused multiple human outbreaks with mean mortality rates between 50% and 90% (5). The current EBOV outbreak in West Africa, by far the largest Ebola epidemic in history, has had more than 28,600 cases, primarily in Sierra Leone, Guinea, and Liberia, with a mortality rate of 40% (18-20). EBOV and Marburg virus (MARV) have been detected in several fruit bat species in central Africa (Congo) and Uganda respectively (21, 22), and antibodies to EBOV were detected in *Eidolon helvum* (related to *Pteropus spp.*) in Ghana (23).

Reston virus (RESTV), originally discovered in long-tailed macaques (*Macaca fascicularis*) that were imported to the US from the Philippines, is the only species of ebolavirus that has been identified in Asia (24). In the Philippines, antibodies against RESTV were incidentally detected in pigs and farmers by the US CDC while investigating a disease outbreak on pig farms (25). While it was not the primary cause of disease on these farms, RESTV spillover had occurred and was not detected by existing local surveillance platforms. In a related investigation of possible RESTV reservoirs, our group identified RESTV RNA in *Mineopterus schreibersii,* a common insectivorous bat (26). We also detected RESTV antibodies in two fruit bat species: *Cynopterus brachyotis* and *Pteropus vampyrus:* the latter is an NiV reservoir. We also found antibodies against EBOV and RESTV in 3.5% of *Rousettus leschnaultii* (n=141) in Bangladesh (27) *M. schreibersii*, *R. leschenaulti*, and two *Pteropus* species, including *P. vampyrus* are each present in Malaysia, which suggests that there may be ebolaviruses circulating there as well. While RESTV has not been associated with disease in people, it is not known whether related ebolaviruses are circulating in bats in Malaysia that have the potential to cause significant morbidity and mortality in human or animal hosts.

The sheer diversity of bat species in Asia, coupled with the likely diversity of henipa- and filoviruses, suggests that there may be significant opportunities for spillover from bats to occur. A major challenge to detecting these viruses in bats is that they 1) tend to occur at low prevalence, 2) have seasonal, yet poorly understood infection patterns, and 3) cause acute, asymptomatic infections in bats. Without large sample sizes and long-term repeated sampling, virus (RNA) detection is difficult. However, antibodies are more easily detected because they persist in individual bats and occur at higher prevalence, requiring smaller sample sizes to detect exposed individuals. This makes serology a valuable tool for identifying bat reservoirs, characterizing temporal infection patterns, and providing evidence for human or livestock exposure to bat-borne viruses(28). Enhancing human and animal surveillance for henipaviruses, including NiV, in regions where they are enzootic is critical to reducing the risk of a significant global pandemic.

Serology Luminex and its use in disease surveillance. Members of our group (Epstein, Broder, Wang, Crameri, Hughes) have been collaborating on serological based biosurveillance activities

in Australia, South and Southeast Asia and Africa using multiplex biosphere (Luminex) based assays for 10 years (29-36). The Luminex bead-based assay procedure is similar to the traditional ELISA assay both in process and reagents. The final reporter is what differs from ELISA, which uses a horseradish peroxidase and a colorimetric change read by spectrophotometer, whereas Luminex uses a fluorescent phycoerythrin reporter and microfluidics and lasers. The other fundamental difference between the two is the use of multiple beads of different colors rather than the traditional 96-wells of an ELISA. Luminex is an ideal surveillance tool due to its ability to screen for multiple targets in a single well. In less than the time it takes to run a single ELISA assay to identify one agent the Luminex multiplex assay we have developed will identify up to 25 different antibodies against multiple viral agents. The platform also has other advantages over ELISA, the dynamic range of Luminex is greater than 3.5logs, significantly more than the ELISA, helping to make analysis and development of thresholds in a surveillance setting clearer. Luminex is particularly advantageous when studying small (<20g) mammals like bats from which very little serum can be safely collected, as a relatively small volume of sera (5µl) is required to run an entire panel.

The Luminex-based multiplex serological assay for the detection of IgG antibodies specific for NiV and HeV, was first developed at the CSIRO Australian Animal Health Laboratory (AAHL) (36) and has since been expanded to include novel nucleoprotein (N) antigens (29). It is used in Australia as a surveillance tool for HeV and other related bat-borne viruses. The Broder lab significantly expanded the panel to include viral envelope glycoproteins from all known henipa- and filoviruses. **Table 1** shows the number of viral species and antigens that will be employed in the present proposal that are in-hand or in-development. This assay has been used to screen human, livestock, and bat sera in a number of international henipa- and filovirus research projects, including a 6-year longitudinal study of bats and livestock in Bangladesh (see **Preliminary Data)** and has been transferred to collaborative laboratories in the UK, Germany and China.

Table 1. Viral proteins prepared or in development and Bioplex bead currently in use.

Pan-immunoreactivity and other assay considerations. The use of the henipa- and filovirus nucleocapsid (N) proteins will be included to allow a detection of novel yet related viruses to the henipa- and filoviruses (27, 29). Dr. Linfa Wang at Duke NUS Graduate Medical School-Singapore will provide these proteins. Similarly, we will use the membrane glycoprotein (Gp) of every known filovirus from Oceania/Asia/Africa and Europe, to detect unknown or related filoviruses by antigenic cross-reactivity. By including N

and envelope glycoproteins of all known henipa- and filoviruses in a test panel, the possibility of detecting a novel or unknown henipaviruses will be significantly enhanced. Positive controls for the Luminex-based and confirmatory screening assays will be monoclonal antibodies (mAbs) and polyclonal antisera generated using the recombinant viral protein antigens. *Confirmatory assays.* The first line confirmatory tests for our Luminex-based assay will be a combination of Western blot and ELISA, using our panel of recombinant purified viral antigens or alternatively, a viral pseudovirus neutralization assay. We use **reporter pseudoviruses** as means to safely conduct neutralization assays for pathogenic viral agents (37-40) and these virus neutralization confirmation assays will be initially carried out at the Broder lab at USU, then transferred to partner labs in Malaysia. The entire filovirus panel (**Table 1**) will be constructed using a vesicular stomatitis virus (VSV)-based reporter viruses using the Indiana VSV strain (a non-pathogenic and non-select agent virus). The rescue of replication-competent rVSV reporter viruses from DNA clones is carried out in human 293T cells, as described (38, 39). *New reagent development.* **Antibodies.** The Broder lab will develop additional specific immunological reagents for the program. We have considerable experience in developing murine mAbs to numerous antigens and have already developed the largest panels of anti-G and anti-F henipavirus glycoprotein murine mAbs covering HeV, NiV and Cedar virus. In addition, we have henipavirus positive human sera available as controls for any human sera analysis (as does the GoM), and a select number of ebolavirus Gp murine mAbs. Additional murine mAb development to new viral glycoproteins is in progress at the Broder lab using recombinant human mAbs to these viral glycoproteins via phage-display technology (41-43). We will rapidly develop all required immunological control reagents covering the entire viral antigen panel shown in **Table 1** for our biosurveillance program.

Preliminary data: Serological studies of NiV and EBOV using the Luminex-based platform. Studies conducted by our group have shown that NiV viral prevalence in pteropid bats is low (~1%-3%) and there is temporal variation to shedding (10, 44, 45). Mean seroprevalence in *P. vampyrus,* which is found across Peninsular Malaysia was 32% (n=253; range 16.7% - 42.4%). In Bangladesh, we conducted a 6-year longitudinal study of *P. giganteus* using the Luminex-based platform to screen bats for IgG antibodies against both NiV and EBOV. Between 20% and 80% of adult *P. giganteus* were NiV seropositive (**Figure 1A**), while between 20% and 50%

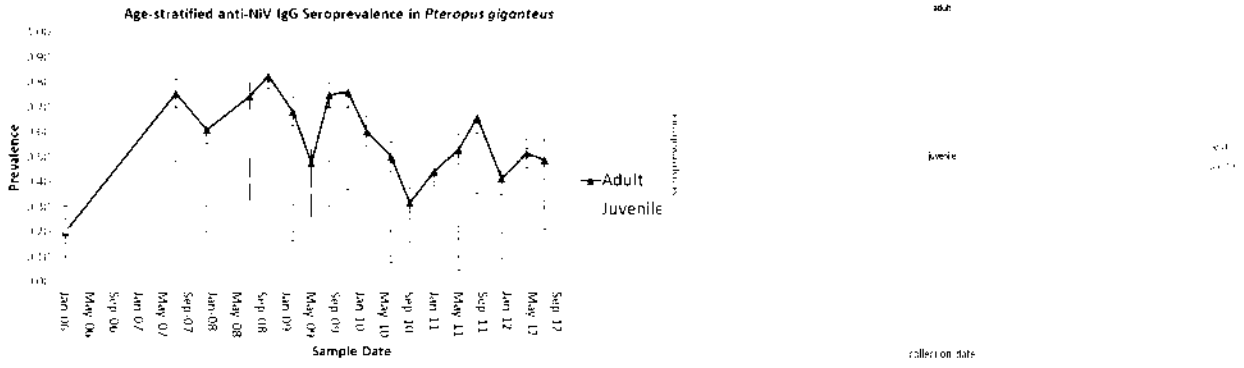

Figure 1 A (left) and B (right). Adult and Juvenile seroprevalence for NiV (A) and EBOV (B) in *Pteropus giganteus* 2006-2012, Bangladesh, shows seasonal patterns of juvenile infection. (Epstein et al., *unpub*).

were EBOV seropositive (**Figure 1B**). NiV infections appear to peak in June/July while EBOV

appears to peak in December (Epstein et al., *in prep*). We found a diversity of genetic strains of NiV in *P. giganteus* (Epstein et al., *in prep*), and viruses which are NiV-like but distinct henipaviruses (46). Non-neutralizing antibodies against NiV-like viruses found in goats, cattle, and pigs in Bangladesh suggests that spillover from bats to domestic animals occurs and that there is a broad spectrum of henipaviruses circulating in bats (31). The possibility that multiple henipa- or filoviruses capable of infecting people or livestock could be circulating in bats in Malaysia makes enhanced surveillance and early detection of these high consequence viruses critically important for reducing their threat to public health.

The Emerging Pandemic Threats: PREDICT project and the Global Health Security Agenda. The USAID Emerging Pandemic Threats: PREDICT program is a multi-year, global-scale program designed to enhance surveillance for novel zoonotic viruses in countries most vulnerable to disease emergence (47). EcoHealth Alliance (EHA) is a core implementing partner in the PREDICT consortium and the lead partner for Malaysia. EHA has also conducted research on NiV and other emerging zoonoses in collaboration with the GoM since 2001. EHA and Tom Hughes (CM), have been collaboratively implementing PREDICT activities since 2009, when the program began. EHA is formally partnered with the GoM under a memorandum of agreement that includes the Ministry of Health (MOH), The Department of Veterinary Services (DVS), and the Department of Wildlife and National Parks (DWNP). Our collaboration includes field and laboratory activities focused on detection of novel zoonotic viruses in animal and human populations in close contact (e.g. PREDICT). We have identified indigenous (Orang Asli) communities that hunt as a high risk population and have strategically sampled wildlife, domestic animals and people, at points of possible spillover from animal reservoirs. From 2009-2014, PREDICT tested wildlife samples using viral family-level PCR assays for more than 20 families, and discovered more than 800 novel viruses in bats, rodents and nonhuman primates across 30 countries. **However, serology has not been part of PREDICT's diagnostic approach.** In 2015-2017 we will characterize behavioral risk and collect biological specimens from Orang Asli in Perak state who report hunting wildlife. We will concurrently sample bats, rodents, and peridomestic animals (e.g. dogs) that live in these forested communities. We have received IRB approval and begun a 1-year pilot study in three Orang Asli communities, where we are sampling 50 individuals from each village along with wildlife and hunting dogs. Samples collected include blood, oral, and fecal specimens, and testing will be done at the National Public Health Lab (human specimens) and DWNP (animal specimens). Our surveillance approach ultimately intends to integrate serology, **however, PREDICT is in the stage of evaluating serological platforms, including Luminex and is in need of additional input for selection. This proposed project will be highly complementary to PREDICT by 1) significantly improving capacity within the GoM to efficiently screen human and animal serum samples for antibodies to henipa- and filoviruses, 2) providing critical performance data for the Luminex-based platform; and 3) supporting a One-Health approach by engaging all three sectors of wildlife, livestock, and human health through a coordinated surveillance strategy.** We will leverage substantial existing resources by screening archived sera (> 1200 animals including 945 macaques and 176 bats) and human samples (300 archived Orang Asli sera stored at NPHL). **The Global Health Security Agenda (GHSA)** is a multi-lateral initiative to enhance nations' ability to detect and respond to zoonotic disease threats. Malaysia is among the signatories to the GHSA and this project is in line with supporting the overall goals and activities set by the GHSA.

University Malaya – NMRC-A study of Orang Asli. We will also have access to Orang Asli samples collected from acutely febrile patients at Gombak Hospital that serve the Orang Asli communities, and samples from Orang Asli communities in Selangor under a separate ongoing disease study led by the Univ. of Malaya (Prof. Abu Bakar) with NMRC-A (Co-PI Pike). Under this proposal our partners at UM will screen these samples from indigenous populations which may help us identify additional risk factors (beyond direct animal contact) for exposure to henipa- and filoviruses.

This proposal is distinct from PREDICT in that it focuses solely on serological diagnostic testing of human, livestock, and at wildlife for henipaviruses and filoviruses, whereas PREDICT uses PCR assays to screen for a much broader array of viral families. While this project uses some samples collected under PREDICT and an ongoing UM-NMRC-A Orang Asli study, the proposed farm study and expanded Orang Asli forest study are new and will be completely supported by this project budget.

II. PROGRAMMATICS.

Partner Institutions and Roles: EcoHealth Alliance, NY USA. (EHA; prime) will finalize and implement the study design, coordinate overall project, co-supervise PhD and post-doctoral students, obtain relevant ethical approvals; coordinate field and lab studies; and with PREDICT project; and with relevant government agencies; co-analyze and publish data. EHA will be responsible for all contractual obligations with DTRA. Jonathan Epstein, DVM, MPH (Principal Investigator, PI); Gary Crameri, BSc (Consultant, Senior Research Scientist), Field/Research Scientist DVM/PhD (to be hired). **Conservation Medicine, Ltd., Malaysia (CM).** In-country implementation lead (also PREDICT lead). Study design; coordinate field and lab studies; *will collect wildlife, livestock, and human samples with DWNP, UPM/DVS, and MOH partners;* communicate with Govt. Malaysia partners; obtain local permits and permissions; co-analyze data, coordinate training activities & workshops. Tom Hughes BSc (Co-PI; Research Scientist); Mei Ho Lee, MS, BSc (Microbiologist/ Res. Sci.), Jimmy Lee, MSc, BSc (Field/Research Scientist), lab technician (to be hired). **Uniformed Services University, Maryland, USA. (USU)** will develop and transfer reagents to partner labs; train labs; co-supervise graduate students; analyze analysis; reporting and publication. Christopher Broder, PhD (Co-PI); Eric Laing, PhD (Post-doctoral fellow), Sophia DeSilva (PhD student). **The Naval Medical Research Center-Asia (NMRC-A)**, Singapore. Study design; coordinate UM Orang Asli study; data co-analysis & publication. Brian Pike, PhD, MPH (Co-PI; Research Scientist). **Duke-NUS, Singapore**. Provide nucleocapsid (N) protein reagents (no cost); Contribute to Science advisory Group; Data co-analysis & publication. Lin-Fa Wang, PhD (Consultant/virologist). **Department of Wildlife and National Parks (DWNP), Peninsular Malaysia.** *Collect wildlife samples and perform testing*; facilitate lab training; facilitate relevant permits and permissions for wildlife work, as appropriate; data co-analysis & publication. Frankie Thomas Sitam, MSc (Molecular Biologist/Research Officer). **National Public Health Laboratory (NPHL), Ministry of Health, Peninsular Malaysia.** *Collect Orang Asli and farm worker samples*; laboratory testing; facilitate lab training; community outreach; facilitate ethical (IRB) review; data co-analysis & publication. Khebir bin Verhasib, MD (Clinical Epidemiologist), Yukie Chen, MSc (Research Scientist). **University Putra Malaysia, Dept. of Veterinary Services, Peninsular Malaysia.** *Collect livestock samples*, coordinate with DVS field officers, acquire permits for farm study; Luminex testing; PhD student training; data co-analysis & publication. **University of Malaya (UM).** *Test*

samples from existing Orang Asli study (with NMRC) using Luminex-based platform; train/supervise PhD student under this project; results analysis & publication. Sazaly Abu Bakar, PhD (Epidemiologist / Research Scientist). **USAID Regional Development Mission for Asia (RDMA),** Bangkok. Member, Science Advisory Group (SAG). Daniel Schar VMD. Observe activities and advise.

III. RELEVANCE.

Scientific & Threat Reduction Impact: The proposed project is closely aligned with the goals of the Cooperative Biological Engagement Program. It will support biosurveillance and capability building; it will use and promote a One-Health approach to surveillance, training, and research activities, as well as engagement with government agencies. Building scientific expertise and appropriate capacity to safely and accurately detect, respond and report viral zoonotic agents will enhance Malaysia's ability to detect viral threats such as EBOV, NiV, and related viruses, **and reduce the threat caused by deliberate release or natural emergence of select agents**. This project will also support and complement USAID's Emerging Pandemic Threats PREDICT program and the GHSA by enhancing local capacity to detect spillover of known and novel zoonotic agents and providing evidence of possible spillover at high risk interfaces (47). To ensure synergy and complementarity with ongoing GoM and PREDICT programs, we will convene a Scientific Advisory Group (SAG) that includes USAID RDMA (Dan Schar), Linfa Wang, and members of the Zoonotic Technical Working Committee, a One-Health platform in Malaysia. This group will discuss results; provide input on surveillance activities, interventions and future activities.

CREDENTIALS. PI: Dr. Jonathan Epstein is a veterinary epidemiologist and the Associate Vice President at EHA. He is a technical lead for surveillance and outbreak response under the USAID Emerging Pandemic Threats: PREDICT program, a $100 million effort focused on predicting and preventing pandemic diseases. Dr. Epstein is recognized internationally for his expertise on the ecology of emerging zoonotic viruses and currently directs research and surveillance programs in West Africa, South and Southeast Asia, and China. He has led investigations of NiV, EBOV, SARS CoV and MERS CoV in Asia, the Middle East, and Africa. He has also served as a consultant for WHO, FAO, OIE, and the Institute of Medicine.
Prime Organization: **EcoHealth Alliance (EHA)** is a scientific organization, working with local partners in over 30 countries at the nexus of health, biodiversity conservation and international development. EHA has a staff of 35 in New York, including scientists (e.g. social scientists, veterinarians, ecologists, analysts, IT experts, economists), administration, and communications staff. EHA has an extensive record of publishing high quality, peer-reviewed papers, journals, briefing documents and reports, including seminal work on emerging infectious diseases and bat-borne viral zoonoses. EHA's ability to produce highly utilized and understandable science-based outputs will contribute significantly to achieving project goals and provide objective methods for tracking project utilization of project findings. In 2014, EHA became the first foreign NGO to sign a Memorandum of Agreement (MOA) with the GoM. The MOA is to study zoonotic disease in populations exposed to wildlife and includes three sectors of government: Ministry of Health, The Department of Wildlife and National Parks, and The Department of Veterinary Services.
Partners: **Co-PI Mr. Gary Crameri** (Consultant, **EcoHealth Alliance**). Mr. Crameri has served as a senior laboratory scientist at the CSIRO Australian Animal Health Laboratory for over 30 years. He has been instrumental in developing diagnostic assays for henipa- and filoviruses,

including the Luminex-based platform described in this proposal. Drs. Epstein, Broder, Wang and Crameri have collaborated on NiV related research for more than 10 years.

Conservation Medicine, Ltd. (CM) is based in Kuala Lumpur and dedicated to emerging infectious disease research and capacity building in Malaysia. **Co-PI Mr. Tom Hughes** has worked with EcoHealth Alliance since 2005 and is the country coordinator for EHA Malaysia projects under PREDICT. CM works with EHA to implement field and lab work, and maintains communications with the GoM's MoH, NPHL, DWNP, UPM and DVS. Expertise includes wildlife capture and sampling, microbiology/lab diagnostics, biosafety, and qualitative risk assessment methods. CM has animal capture and sampling equipment, and field transportation.

Uniformed Services University, Maryland. Co-PI Prof. Christopher Broder and his lab have considerable expertise in the design, construction, expression and purification of viral envelope glycoprotein antigens. His current research focuses on virus-host cell interactions, vaccines and antibody therapeutics development for HIV and emerging zoonotic viruses including NiV, HeV and animal model development; EBOV and MARV. Major research contributions include the development of the first oligomeric, HIV-1 soluble gp140 glycoprotein and Hendra/Nipah soluble G glycoprotein subunit vaccine (1st commercial vaccine against a BSL-4 agent (Zoetis, Inc.) and development of antiviral human monoclonal antibodies against NiV and HeV. **Naval Medical Research Center, Asia (NMRC-A). Co-PI Dr. Brian Pike**. A U.S. Navy research scientist, Dr. Pike has more than 20 years of experience in molecular biology and he presently serves as the Navy's Southeast Asia lead in emerging infectious disease research. With a principal interest in zoonosis, Dr. Pike's accomplishments have ranged from describing the emergence of falciparum malaria to the detection of novel retroviruses in subsistence hunters in Cameroon and he has ongoing studies in MERS-CoV, dengue, as well as cohorts established for the detection of novel emergent pathogens.

Department of Wildlife and National Parks (DWNP). The national wildlife authority for Malaysia. Frankie Sitam is an experienced molecular biologist and wildlife officer and has trained in field and laboratory techniques under PREDICT, including use of PPE and molecular viral diagnostic techniques. DWNP will complete (2016) a new BSL2 genetics and disease diagnostic lab. The lab will include PCR suites, a serology suite where the Luminex platform will be installed, and ultra-cold storage. PERHILITAN has equipment for wildlife capture and sampling and field transportation, and officers are trained in bat and macaque capture and sampling techniques.

National Public Health Laboratory (NPHL), Ministry of Health. The national diagnostic laboratory for the Ministry of Health. NPHL has multiple BSL2 and BSL3 diagnostic suites and is equipped with molecular diagnostic tools (including the PREDICT viral family level PCR assays and controls) as well as basic serology (e.g. ELISA). MoH and NPHL will lead the human sampling activities in Orang Asli communities and on farms and field staff are fully trained for human clinical work.

University Putra Malaysia (UPM), Department of Veterinary Services: Dr. Latiffah Hassan. Dr. Hassan is a veterinarian and professor of epidemiology and head of the virology lab at UPM. She has worked on research related to livestock pathogens and zoonotic diseases, including Nipah virus (with EcoHealth Alliance), since 2000.

University of Malaya (UM). Professor Sazaly Abubakar. Dr. Sazaly has been involved in infectious disease research for over 20 years. Among his notable contributions include leading the team that provided the first molecular evidence of NiV transmission from pigs to humans, and the identification of the presence of more than one NiV strains during the outbreak in

Malaysia. Dr. Sazaly is the Editor and Chairperson of the subcommittee in establishing Malaysia's first Biosafety and Biosecurity Policy and Guideline under the Ministry of Health, and the Chairman of UM Institutional Biosafety and Biosecurity Committee. Currently, Dr. Sazaly is the Director of Tropical Infectious Diseases Research and Education Centre (TIDREC), a Centre of Excellence in UM that was established in 2008 as a dedicated one-stop research centre for the advancement of knowledge in tropical infectious diseases, especially neglected tropical infectious diseases that have potential impact on the global community.
Duke-NUS Graduate Medical School, Singapore. Professor Linfa Wang. An international leader in viral discovery and bat-borne viral diagnostics, Professor Linfa Wang has led seminal research in HeV, NiV and SARS diagnostics, viral discovery, and bat immunology.

IV. WORK TO BE PERFORMED.

A. GENERAL. This project aims to develop capacity to detect antibodies against all known and potentially novel henipa- and filoviruses – two groups of select agents, in wildlife, livestock, and people at risk of exposure to animal reservoirs. Serological surveillance can identify points of zoonotic transmission and prevalence of exposure that may have been previously undetected in human or livestock populations. Early detection of human or livestock infection (natural or deliberate) can allow the GoM to more quickly establish interventions that reduce the risk of henipa- or filoviruses emergence in human populations. This project will provide the first longitudinal study of exposure to NiV, EBOV, and other related viruses in human populations known to have high degree of contact with wildlife or livestock, specifically Orang Asli and farm workers. This study uses a One-Health approach and will strengthen existing partnerships among departments of the GoM responsible for human, livestock, and wildlife health. The data generated by this study will strongly support the aims of DTRA CBEP and the USAID Emerging Pandemic Threats PREDICT program by establishing proof of concept for the use of a Luminex-based multiplexed serological platform which can easily be scaled to other important geographies where henipa- and filovirus bat reservoirs occur (e.g. Thailand or Bangladesh). Through the development of lab capacity, joint multi-sectoral field surveillance activities, and graduate student training, Malaysia's capacity to detect and respond to emerging zoonoses will be significantly strengthened, and we will provide important data regarding the circulation of henipa- and filoviruses in natural reservoirs. All serum samples will be collected in duplicate and preserved in biobanks in Malaysia in partner labs with all relevant metadata collected at the time of sampling.

SUMMARY.

Year 1. Task 1. Enhance capacity within Malaysia to conduct serological surveillance for henipa- and filoviruses. **Task 2**. Develop and validate Luminex-based reagents to detect henipa- and filovirus antibodies. **Task 3**. Screen archived serum samples from wildlife and Orang Asli for henipa- and filovirus antibodies using a Luminex-based platform. **Task 4**: Serological survey of humans, wildlife, and peri-domestic animals in Orang Asli community. **Task 5**. Develop serological study of farm workers, livestock, and wildlife around farms. **Task 6**. Disseminate reports to relevant stakeholders
Year 2. Task 1. Continued: Enhance capacity within Malaysia to conduct serological surveillance for henipa- and filoviruses. **Task 2**. Continued: Develop and validate Luminex-based reagents to detect henipa- and filovirus antibodies. **Task 3**: Continued: Screen archived serum samples from wildlife and Orang Asli for henipa- and filovirus antibodies using a

Luminex-based platform. **Task 4**. Continued: Serological survey of humans, wildlife, and peri-domestic animals in Orang Asli community. **Task 5**. Begin serological survey of farm workers, livestock, and wildlife. **Task 6:** Communicate progress to stakeholders.
Year 3. Task 1. Continued: Enhance capacity within Malaysia to conduct serological surveillance for henipa- and filoviruses. **Task 2**. Continued: Develop and validate Luminex-based reagents to detect henipa- and filovirus antibodies. **Task 4**. Continued: Serological survey of humans, wildlife, and peri-domestic animals in Orang Asli community. **Task 5**. Continued: serological survey of farm workers, livestock, and wildlife. Epidemiological analysis of serological data. **Task 6**: Comprehensive report of project completed. Disseminate reports to relevant stakeholders
Year 4 (optional). Task 1. Continued: Enhance capacity within Malaysia to conduct serological surveillance for henipa- and filoviruses. **Task 2**. Continued: Develop and validate Luminex-based reagents to detect henipa- and filovirus antibodies. **Task 4**. Continued: Follow-up serological survey of Orang Asli who hunt wildlife, wildlife, and peri-domestic animals. **Task 5**. Conduct follow-up serological survey of farm workers, livestock, and wildlife. **Task 6**. Epidemiological analysis of serological data.
Year 5 (optional). Task 1. Continued: Enhance capacity within Malaysia to conduct serological surveillance for henipa- and filoviruses. **Task 2**. Continued: Develop and validate Luminex-based reagents to detect henipa- and filovirus antibodies. **Task 4**. Continued: Follow-up serological survey of Orang Asli who hunt wildlife, wildlife, and peri-domestic animals. **Task 5**. Continued: Conduct follow-up serological survey of farm workers, livestock, and wildlife. **Task 6**. Epidemiological analysis of serological data. Final reports provided and manuscripts prepared.

DETAILED TASKS.

Year 1. Task 1: Enhance capacity within Malaysia to conduct serological surveillance for henipa- and filoviruses. (Year 1-OY5). *Description and execution*: The GoM has been engaged in using a One-Health approach to zoonotic disease surveillance since the NiV outbreak in 1998 and most recently via collaborations with EHA under PREDICT. Adding a serological component to surveillance will greatly enhance the government's ability to detect both known and unknown henipa- and filoviruses in wildlife reservoirs, domestic animals and human populations at risk for spillover. To establish this capacity, EHA will provide a BioRad Bio-Plex 200 machine with computer console to NPHL and DWNP. Professor Broder (USU) will provide reagents for all henipa- and filovirus assays. Prof. Linfa Wang (**at no cost**) will provide N proteins for the nonspecific henipa- and filovirus assays. Following installation, Co-PI Broder, his post doc, and Mr. Crameri will hold a 10-day training course for lab technicians at DWNP, NPHL, including staff from UM; UM has a Luminex machine and will receive assay reagents through this project. UPM will receive Luminex + training in Y2. Co-PI Hughes and team will identify archived sera from wildlife and Orang Asli collected by the PREDICT project to use for training purposes and to be screened under **Task 3**. Technicians from partner labs will screen archived sera to reinforce training. PI Epstein and Co-PI Broder will co-supervise a PhD student at USU who will develop additional assay reagents in Y1-OY5. Prof. Abu Bakar (UM) and Co-PI Pike (NMRC-A) will identify 1 PhD or 2 Masters' students at UM to train under the project with co-supervision from Mr. Hughes and Dr. Epstein (Y1-Y3 and OY4-OY5); Prof. Hassan will identify 1 PhD student at UPM, co-supervised by Dr. Epstein, to work under farm study. Each

GoM partner lab may identify a staff scientist to receive advanced training in viral pseudo-type assay development at USU. Trainees may bring sero-positive samples to USU to confirm. Co-investigators and in country partners will work closely to analyze serological results and plan Y2 activities. A project database will be developed. Co-investigators and the Science Advisory Group (SAG) will meet in Y1 (aligned with training) to discuss plans and coordinate activities. *Resources:* EHA: 2 research scientists, 1 administrative assistant, (to coordinate project activities, support field activities and facilitate communications among partners), 1 consultant (Crameri) to facilitate Luminex transfer/troubleshooting and conduct lab training and 4 subcontractors: (CM) 3 scientists to coordinate training activities and with PREDICT; (USU) 1 post doc, 1 PhD student, 1 research assistant to coordinate reagent development, transfer, and training; (NMRC-A) & (UM) 2 scientists to coordinate UM collection from Orang Asli and serological testing using Luminex, 1 PhD student or 2 Masters students. (UPM): 1 research scientist, 1 PhD student. *Metrics of success*: Luminex-based assays transferred to government lab partners; lab personnel trained; archived samples tested; UM and UPM graduate students identified; database developed. *Deliverables*: Government surveillance capacity enhanced, scientists and students trained. *Subtasks*: (*Format Year#.Task#.Subtask#*) *1.1.1.* Grantee shall transfer BioRad Bio-Plex 200 to NPHL and DWNP labs; *1.1.2-2.1.2.* Grantee shall transfer Luminex-based filovirus and henipavirus reagents to DWNP, NPHL, and UM labs; *1.1.3.* Conduct lab training; *1.1.4* identify 1 UM PhD or 2 Masters' students & 1 UPM PhD student; 1.1.5 convene the SAG (at times and places specified in the schedule); 1.1.6 develop database for serology results and sample metadata; establish sample repository at partner labs. 1.1.7. pseudovirus development training at USU.

Task 2. Develop and validate Luminex-based reagents to detect henipa- and filovirus antibodies. *Description and execution.* We will engineer soluble and secreted versions of henipa- and filovirus glycoproteins, expressed in mammalian cell culture systems to accurately reflect proper synthesis including their assembly and processing into properly glycosylated higher order complexes (51). Constructs are designed and tested in pilot experiments for expression and analysis, and then used to establish stably expressing cell lines. Preparative amounts of the various soluble viral glycoproteins will be made using serum-free culture conditions in suspension culture, and proteins are purified using the appropriate tag protocol (either S-tag or double strep tag (TST)) by affinity chromatography, followed by concentration and size exclusion chromatography. These antigens have been shown to be ideal serological assay reagents in both Luminex and ELISA and have been used extensively on the Luminex-based platform. In Y1-2 we will produce Mojaing virus (MojV) and African GH-M74a G glycoproteins; Bundibugyo virus (BDBV), Tai Forest virus (TAFV), Lloviu virus (LLOV), MARV Ravn, SUDV, SUDV GpΔmucin, RESTV (monkey), and RESTV (porcine) Gp glycoproteins. We will test the utility of each individual glycoprotein by Luminex, ELISA and Western blotting then provide all necessary reagents to partner labs to accomplish the testing under this project. *Resources.* EHA: 1 scientist and 1 administrative assistant to co-supervise PhD student at USU producing reagents and coordinate transfer of reagents to Malaysia; 1 subcontractor (USU): 1 scientist (Co-PI Broder), 1 post-doc (Laing); 1 PhD student; and 1 research assistant. Duke-NUS, Singapore (Linfa Wang) shall provide N proteins for henipa- and filovirus nonspecific assays at no cost. *Deliverables.* Development of reagents; transfer to Malaysian partner labs; *Subtasks:* 1.2.1-2.2.1 develop remaining specific reagents; 1.2.2-3.2.2 use the completed viral glycoprotein preparations and produce polyclonal rabbit serum to each

individual glycoprotein; test the utility of each individual glycoprotein by Luminex-based, ELISA and Western blotting assays; 1.2.3 provide N protein reagents to detect novel henipa- and filoviruses to partner labs. 1.2.4-OY5.2.4: If novel henipa- or filoviruses are detected using molecular assays (under PREDICT), grantee may develop new reagents for antibodies against these viruses and negative sera will be re-screened.

Task 3. Screen archived serum samples from wildlife and Orang Asli for henipa- and filovirus antibodies using a Luminex-based platform (Y1). *Description and execution.* We will screen up to 900 macaque and 175 bat archived serum samples collected under PREDICT and stored at DWNP, up to 300 archived Orang Asli samples stored at NPHL, and up to 200 Orang Asli samples at UM. The number of samples will depend on serum volume and quality. Results will be used to inform the farm and Orang Asli studies described in **Tasks 4 and 5**. Positive sera may be sent for confirmatory testing at USU using pseudovirus serum neutralization assays, ELISA, or Western blot. Results will be entered into a database and shared with government partners. *Resources*. (EHA) 1 scientist, 1 administrative assistant to coordinate communication and reporting; 3 subcontracts: (CM) 1 scientist and 1 lab technician will identify archived samples and assist with testing at DWNP and NPHL; (USU) 1 PhD student and 1 research assistant will perform confirmatory testing (pending permits to export samples); (UM) 1 lab scientist may identify archived Orang Asli samples and screen for henipa- and filovirus antibodies. *Metrics of success*: archived samples identified and screened; *Deliverables*: archived Orang Asli samples and bat & macaque serum samples screened at NPHL, UM, and DWNP labs; results entered into database and communicated to relevant stakeholders. *Subtasks*: 1.3.1 identify suitable archived animal and human sera; 1.3.2 screen sera for henipa- and filovirus Abs; 1.3.3 confirm positive results with western blot or pseudovirus assay; 1.3.4 enter results into database and analyze.

Task 4. Serological survey of Orang Asli, including those who hunt; associated wildlife, and peri-domestic animals. (Y1-OY5). *Description and execution.* Indigenous communities living in forested areas and that practice subsistence wildlife hunting are at higher risk of exposure to zoonotic viruses due to handling and butchering wildlife and therefore contact with bodily fluids. In **Y1** of this project, we will apply for IRB ethical approval to continue and expand from a pilot study currently underway (expected completion: Oct 2016). Pending IRB and IACUC approval, CM, MoH, and DWNP will work together in **Y1-Y2** to sample 100 individuals from each of 3 Orang Asli communities in Perak State (incl. Kuala Lipis and Gua Musang), **totaling 300 human blood samples**. 100 people sampled per community will allow us to detect a seropositive individual with 95% confidence at a prevalence of 3%, assuming a population of 500 individuals. We will also aim to sample blood from 50 bats per each of 3 species around each study village (e.g. *Miniopterus*, *Pteropus*, and *Rousettus* spp); 30 nonhuman primates; and 30 dogs, if present, in order to be able to detect henipa- or filovirus antibodies in an individual with 95% confidence given a 5% seroprevalence (in bats) and 10% in dogs and nonhuman primates. MOH officers and CM will collect blood from Orang Asli and associated animals, and serum will be separated either in the field or at partner labs and stored at -86C at prior to testing. A sample size of 50 bats would allow us to detect differences between study locations (or time points, should we conduct follow-up studies) of 56% with 95% confidence and 80% precision. **Under this DTRA project,** CM and NPHL will test up to 300 Orang Asli; CM and DWNP will test up to 450 bat and 90 nonhuman primate samples; and CM and UPM will test 90 dog samples for henipa- and filovirus antibodies using the Luminex-based platform. Note: PREDICT will

support the concurrent collection of swab samples (e.g. throat, nasal, rectal, urogenital) by this team from animals and people and testing them for henipavirus and filovirus RNA. Results will be shared between the two projects to enhance outputs and knowledge of these viral groups. UM and NMRC-A will screen 500 Orang Asli sera per project year collected from acute febrile patients at Gombak Hospital and non-symptomatic volunteers from communities in Selangor state under a concurrent, separately funded (State Dept. study of tick-borne illness) study led by Prof. Abu Bakar (UM) and Co-PI Pike (NMRC-A). Subjects enrolled in this study are well characterized and will include those with and without a history of animal contact. Under our project, those serum samples will be tested by UM using the Luminex-based platform. A lab scientist from NPHL and DWNP may travel to USU with positive samples from this study as part of a 2-week training to learn pseudovirus assay development for serum neutralization assay performance. We aim to conduct a follow-up study of Orang Asli forested communities in Y3. *Resources:* (EHA) 2 research scientists and 1 admin asst. to coordinate sampling and testing activities, reporting and data analysis and to co-supervise student at USU and UM [samples collected +tested by CM, DWNP, and MoH]; 4 subcontractors: (CM) 2 research scientists to oversee sample testing and data management & coordinate lab activities with GoM partners, 1 lab technician to assist with testing; (USU) 1 post doc, 1 PhD student 1 research assistant to coordinate training and confirmatory testing; (NMRC-A) & (UM) 2 scientists, 1 PhD student to coordinate UM sample collection from Orang Asli and serological testing; GoM (staff and logistics may be provided by DWNP and MOH). *Metrics of success*: IRB and IACUC approval for expanded Orang Asli study; Orang Asli and animal samples collected in **Y1-Y2**, screened by NPHL, UPM, UM, and DWNP for henipa- and filovirus Abs; positive results confirmed; results entered into database; samples archived and documented; results analyzed and follow-up studies planned for **Y3-OY4**. *Deliverables*: Human and animal sera collected and tested for henipa- and filovirus antibodies; data entered into database; relevant stakeholders informed of results. *Subtasks: 1.4.1.* apply for IRB/IACUC; 1.4.2-OY4.4.2. Orang Asli, wildlife, and peridomestic animal samples collected & tested; 1.4.3. Results entered into database; 1.4.4 2.4.4 Positive samples confirmed; 1.4.5. Follow-up studies planned with GoM; 1.4.6. Analyze data.

Task 5. Develop serological study of farm workers, livestock, and wildlife around farms. (Y1-OY5) *Description and execution.* NiV originally emerged on a large-scale pig farm in Ipoh, Perak. In the Philippines, RESTV has also emerged on pig farms and in both cases farm workers were infected. We aim to conduct serological surveillance of farm workers and livestock on 2 large-scale farms (>5000 ruminants and/or pigs) and 2 small-scale farms (500-1000 ruminants and/or pigs) and wildlife living proximal to the farms to detect exposure to (and potentially spillover of) henipa- or filoviruses. **Note: we now have full support from the Department of Veterinary Services for this study** (see letters). In Y1 we will work with UPM, DVS, MOH, DWNP and the SAG to discuss study design and feasibility for identifying and accessing appropriately sized farms. We will visit potential study sites and locate bat caves or roosts proximal (~25km radius) to each farm, meet farm owners, and characterize the livestock. We will use this planning year to obtain all necessary IRB and IACUC approvals. We will conduct sampling in Y2-Y3, pending approvals, and conduct a follow-up study in OY4 and OY5 (if funded). *Resources.* (EHA). 2 research scientists and 1 admin asst. to coordinate communication and attend meetings; convene SAG; prepare ethical approval applications; 1 subcontract: (CM): 2 scientists and 1 admin assistant to coordinate and attend meetings with GoM partners; conduct scoping visits to farms; prepare ethical approval applications; (UPM) 1 Research scientist, 1 PhD

student; DWNP, MoH, DVS will attend meetings and visit farms as part of scoping activities. *Metrics of success*: Meeting with all GoM partners and SAG to design study; scoping visits to farms; submission of research permit and ethical approval applications in US and Malaysia. *Deliverables*: planning meetings with relevant GoM departments; visit/select farms; apply for permits/ethical approval. *Subtasks:* 1.5.1 Apply for IRB and IACUC approvals. 1.5.2. Conduct scoping visits to farms, characterize livestock and local wildlife species.

Task 6. Disseminate reports to relevant stakeholders (Y1-OY5). Grantee shall synthesize all data collected through the projects described above as well as capacity building activities in Malaysia. Scientific and general reports will be generated and provided to GoM partners and an annual report to DTRA. *Resources*: EHA: 2 research scientists, 1 admin assistant, to conduct analysis; compile results and report; supervise PHD students; facilitate communication between partners, develop project database and ensure data management for reporting, develop annual report for DTRA and a summary report for stakeholders; 4 subcontractors: CM 3 research scientists, 1 admin assistant to oversee database & data entry, compile results, facilitate communication among stakeholders; USU 1 research scientist, 1 post-doc, 1 PhD student, 1 research assistant to collate all results and products developed under the above projects; UPM 1 research scientist and 1 PhD student to prep for farm study; NMRC-A & UM; 2 scientists, 1 PhD student to assist with data analysis. *Metrics of success*. Completion of annual report with sample metadata to DTRA Thrust Area 6; completion of scientific report with preliminary analyses to local stakeholders. *Deliverable*s: Communication via reports; reports provided to local stakeholders; PhD students report progress to supervisors, database created. *Subtasks*: 1.6.1-OY5.6.1 submit reports to DTRA. 1.6.2-OY5.6.2 Complete annual report to local stakeholders. 1.6.3-OY5.6.3 Conduct presentations/meetings at times and places specified in the grant schedule, including DTRA Annual Technical Review. 1.6.4-OY5.6.4 Conduct annual stakeholder meetings. 3.6.7-OY5.6.7 Prepare and submit publications.

Year 2. Task 1: Continued: **Enhance capacity within Malaysia to conduct serological surveillance for henipa- and filoviruses. (Year 1-OY5).** *Description, execution, and resources*: Continued use of Luminex platform at GoM labs; PhD student at UM and UPM enrolled and projects identified. *Deliverables*: Capacity built for serosurveillance in Malaysia and graduate students trained. *Subtasks*: 2.1.1. Transfer any new henipa- and filovirus reagents to partner labs; *2.1.2* UM 1 PhD or 2 Masters' student and UPM 1 PhD student project identified; 2.1.3. GoM lab personnel trained at USU.

Task 2. Continued: Develop and validate new reagents to improve the Luminex-based panel for henipa- and filovirus antibody detection. *Description, execution and resources:* as in Y1. *Metrics of success:* new reagents developed and validated that expand sero-platform; *Deliverable:* new reagents; *Subtasks:* 2.1.1 complete production of MoJ and African GH-M74a F glycoproteins. 2.1.2 Generate mAbs to the African GH-M74a and MoJ G glycoproteins, the BDBV, TAFV, LLOV, RESTV Gp glycoproteins & test by Luminex, ELISA and Western blotting. 2.1.3 If novel henipa- or filoviruses identified by PREDICT, develop specific Luminex-based reagents for antibodies against these viruses and re-screen negative sera.

Task 3. Screen archived serum samples from wildlife and Orang Asli for henipa- and filovirus antibodies using Luminex-based Platform. *Description, execution, and resources*. As in Y1. *Metrics of success*. Results from Luminex-based assay analyzed and positive samples sent to USU for confirmatory testing (with lab staff as necessary); results entered into database

Deliverables. Final test results for archived samples. *Subtasks* 2.3.1. positive samples tested using confirmatory assay; 2.3.2. final results entered into database and analyzed.

Task 4: Continued: Serological survey of Orang Asli who hunt, wildlife, and peri-domestic animals. *Description, execution and resources.* We will analyze results from initial study (Task 4, Y1) and plan follow-up with MoH in Y3. Apply for IRB approval. *Metrics of success* data analyzed (in concordance with UM study and PREDICT molecular data); discussions with MoH and UM regarding a repeated sampling in Y3; application for ethical review submitted; *Deliverables*: plan for longitudinal surveillance in the same Orang Asli communities developed. *Subtasks*: 2.4.1 analyze serology data 2.4.2 evaluate serology along with molecular data from PREDICT, 2.4.3. enter results into database; 2.4.4 share results with partner labs.

Task 5. Continued: Serological study of farm workers, livestock, and wildlife around farms. (Y2-Y3, OY4.5.2-OY5) *Description and Execution.* We will select 2 large-scale farms (> 5000 mammals (e.g. pigs, goats, cows) and smaller-scale farms (<1000 animals). We will target 4 bats species, 50 bats per species (e.g. *P. vampyrus, C. brachyotis, M. schreibersii,* and *R. leschenaultii* as potential reservoirs for henipa- and filoviruses) and sample populations near study farms. This sample size will allow us to detect a single exposed individual with 95% confidence, given an estimated seroprevalence of 5% in the population. Other bat species may be included depending on results from **Y1 Task 3 and 4**. We may also sample 30 macaques, and 30 dogs captured proximal to each farm, which will allow detection of an exposed individual with 95% confidence given a prevalence of 10%. In a study of dogs in an Ebola endemic area of Gabon, 26-30% were seropositive(52). We will target 50 of each mammalian livestock species per farm, which will allow us to detect differences in seroprevalence of 46% between species and farms with 95% confidence and 80% power. *Animal sampling techniques*: All sampling is non-destructive, with each animal released at the point of capture after samples are collected. All team members (Epstein, Hughes, J. Lee, MH. Lee, and DWNP&DVS field officers) are vaccinated against rabies and fully trained in the use of personal protective equipment appropriate for the capture, handling and sampling of wildlife or livestock (available at http://bit.ly/1U7f2hB). PREDICT sampling protocols (also used here) are IACUC approved (UC Davis). Bat capture, sampling and PPE are described in detail by PI Epstein in (28). Briefly, bats are captured using mist nets or harp traps. Each bat is immediately removed after capture and placed into a cotton bag until sampled (within 6 hours of capture). Pteropid bats are anesthetized using either isoflurane gas or medetomidine/ketamine injection. Smaller bats are manually restrained. Blood is collected via the brachial, cephalic, or saphenous vein. For small insectivorous bats, blood is collected using either a hematocrit tube or a pipette gun followed by placement in buffered saline. Blood from larger animals (>100g) will be collected and placed into a serum separator tube and placed on ice. Serum may be separated in the field or in the lab, depending on timing of return to the lab. Serum samples will be placed in liquid nitrogen and transferred to -80C freezers in the DWNP or NPHL lab. Macaques will be captured and sampled by experienced DWNP officers using appropriate PPE, according to PREDICT protocols ((available at http://bit.ly/1U7f2hB). Blood samples will be collected from animals and people and serum separated either in the field or in the lab. All samples will be divided into 2 aliquots and stored at respective partner labs. [The PREDICT project will support additional sample collection: oropharyngeal swabs, fecal samples, and urine, or molecular analysis]. We will aim to enroll farm workers who have contact with animals to be screened for exposure as well. A questionnaire will be developed to collect data from farm workers about their history of contact

with animals. We will complete one round of sampling on all four farms in Y2, and conduct a second round of sampling on the same farms in OY4 and 4 additional farms in OY5, if approved. *Resources:* EHA 2 research scientists to help develop study design and implement sampling; 2 subcontractors: (CM) 3 research scientists to help develop and implement study; lab technician to support diagnostic testing at partner labs; relevant GoM partners (DVS, DWNP, MoH) may provide field and laboratory staff and transportation to support sampling on and around farms and screening samples at respective labs; (USU) 1 research scientist and 1 postdoctoral fellow to provide test reagents and contribute to data analysis. *Metrics of success*: selection of farms; study implementation with partners; human and animal sampling; sample screening using Luminex-based platform; data entry and analysis. *Deliverables*: wildlife, livestock and humans sampled on farms; questionnaires of farm workers conducted; samples tested. *Subtasks:* 2.5.1 collect livestock and wildlife (bat and nonhuman primate) samples 2.5.2 interview farm workers 2.5.3. collect blood samples from farm workers; 2.5.4. test serum samples 2.5.5 enter and analyze data.

Task 6. Disseminate reports to relevant stakeholders (Years 1, 3, OY5). *Description, execution, and resources*: same as Y1. *Metrics of success*. Same as Y1. *Deliverables*: same as Y1; *Subtasks*: 2.6.1-OY5.6.1 submit annual reports to DTRA. 2.6.2-OY5.6.2 submit annual report to local stakeholders. 2.6.3-OY5.6.3 presentations/meetings at times and places specified in the grant schedule, including DTRA Annual Technical Review. 2.6.4-OY5.6.4 Conduct annual investigator meetings.

Year 3. Task 1: Continued: **Enhance Capacity within Malaysia to conduct serological surveillance for novel and known henipa- and filoviruses.** *Description, execution, and resources*: As in Y1. *Metrics of success*: See Y1 and Y2. *Deliverables*: Capacity built for serosurveillance in Malaysia and graduate student trained. *Subtasks*: 3.1.1. Grantee shall transfer any new henipa- and filovirus reagents to partner labs; 3.1.2. UM PhD or 2 Masters' students trained; 3.1.3. GoM lab personnel may train at USU

Task 2. Continued: Develop and validate new reagents to improve the Luminex-based panel for novel and known henipa- and filovirus antibody detection. *Description, execution, and resources:* as in Y1. *Metrics of success:* new reagents developed and validated that expand sero-platform; *Deliverable:* new reagents; *Subtasks:* 3.1.1 If novel henipa- or filoviruses are detected using molecular assays (testing done under PREDICT), grantee shall develop specific Luminex-based reagents for antibodies against these viruses and negative sera will be re-screened.

Task 4: Continued: Serological surveys of human, peridomestic animals and wildlife in indigenous communities that hunt. *Description, execution.* Follow-up study conducted with MoH as in Y1. *Resources*: as in Y1. *Metrics of success:* data analyzed (in concordance with UM study and PREDICT molecular data); *Deliverables*: repeat sampling in the same Orang Asli communities. *Subtasks*: 3.4.1 analyze serology data 3.4.2 evaluate serology along with molecular data from PREDICT, 3.4.3. Enter results into database; 3.4.4 share results with stakeholders.

Task 5. Continued: Serological study of farm workers, livestock, and wildlife around farms. *Description, execution.* Final analysis of farm study data; develop follow-up study (OY4) *resources:* Same as Y2. *Metrics of success*: results analyzed; manuscript drafted; report prepared for GoM partners *Deliverables*: final analysis; manuscript prepared for submission. *Subtasks:* 3.5.1 analyze qualitative and serological data from farm study 3.5.2 plan for follow-up study (if funded) 3.5.3 prepare report to GoM partners and stakeholders (farm owners).

Task 6. Disseminate reports to relevant stakeholders (Years 1, 3, OY5). *Description, execution, and resources*: same as Y1. *Metrics of success*. Same as Y1. *Deliverables*: same as Y1; *Subtasks*: 3.6.1-OY5.6.1 submit reports to DTRA. 3.6.2-OY5.6.2 Complete annual report to local stakeholders. 3.6.3, OY5.6.3 prepare manuscript for submission to a peer-reviewed publication. 3.6.4-OY5.6.4 Conduct presentations/meetings at times and places specified in the grant schedule, including DTRA Annual Technical Review. 3.6.5-OY5.6.5 Conduct annual stakeholder meetings.

Year 4 (Optional) Task 1: Continued: **Enhance capacity within Malaysia to conduct serological surveillance for henipa- and filoviruses.** *Description, execution, and resources:* Select an additional Masters' student from UM to train (OY4-OY5). *Metrics of success*: See Y1 and Y2. *Deliverables*: Capacity built for serosurveillance in Malaysia and graduate students trained. *Subtasks*: 4.*1.2*. UM PhD student trained; additional Masters' student selected.

Task 2. Continued: Develop and validate new reagents to improve the Luminex-based panel for henipa- and filovirus antibody detection. *Description, execution, and resources:* as in Y1. *Metrics of success:* new regents developed and validated that expand sero-platform; *Deliverable:* new reagents; *Subtasks:* 4.1.1 If novel henipa- or filoviruses detected by PREDICT, develop specific Luminex-based reagents for these viruses and negative sera will be re-screened.

Task 4: Continued: Serological survey of Orang Asli who hunt, wildlife, and peri-domestic animals. *Description, execution.* Complete test confirmation and data analysis with PREDICT PCR results. Re-screen sera, if necessary, using assays developed from newly discovered viruses. *Resources*: as in Y1. *Metrics of success* data analyzed along with results from UM study and PREDICT molecular data); *Deliverable*s: Comprehensive analysis of serological and molecular results. *Subtasks*: 4.4.1 complete confirmatory testing and analyze serology data; 4.4.2 evaluate serology along with molecular data from PREDICT, 4.4.3. Enter results into database; 2.4.4 Masters' student training; 4.4.5 share results with stakeholders.

Task 5. Continued: Serological study of farm workers, livestock, and wildlife around farms. (OY4-OY5) *Description and execution.* Follow-up study of same farms from Y2-3 to generate temporal data & detect change in seroprevalence. *Resources:* Same as Y2. *Metrics of success*: sampling with government partners; human and animal sampling; sample screening using Luminex-based platform; data entry and analysis. *Deliverables*: wildlife, livestock and humans sampled from same farms; questionnaires of farm workers repeated; samples tested & confirmed. *Subtasks:* 4.5.1 collect livestock samples4.5.2 collect wildlife samples 4.5.3 interview farm workers 4.5.4. sample farm workers; 4.5.5. test samples 4.5.6 enter and analyze data.

Year 5 (optional): Task 1: Continued: **Enhance capacity within Malaysia to conduct serological surveillance for henipa- and filoviruses.** *Description, execution, and resources:* additional UM Masters' student trained. *Metrics of success*: See Y1 and Y2. *Deliverables*: Capacity built for serosurveillance in Malaysia enhanced and graduate students trained. Subtasks: 5.*1.1*. PhD student and Masters' student trained.

Task 2. Continued: Develop and validate new reagents to improve the Luminex-based panel for henipa- and filovirus antibody detection. *Description, execution, and resources:* as in Y1. *Metrics of success:* new regents developed and validated that expand sero-platform; *Deliverable:* new reagents; *Subtasks:* 5.1.1 If novel henipa- or filoviruses are detected using molecular assays (testing done under PREDICT), grantee shall develop specific Luminex-based reagents for antibodies against these viruses and negative sera will be re-screened.

Task 4: Continued: Serological survey of Orang Asli who hunt, wildlife, and peri-domestic animals. (Y1, Y3). *Description, execution.* Data analysis from all years. *Resources*: as in Y1. *Metrics of success* data analyzed (in concordance with UM study and PREDICT molecular data); *Deliverables*: all serological data from Orang Asli study analyzed. *Subtasks*: 5.4.1 complete sample testing 5.4.2 analyze serology along with molecular data from PREDICT 5.4.3. Enter results into database; 5.4.5 share results with stakeholders.

Task 5. Continued: Follow-up study of farm workers, livestock, and wildlife around farms. (OY5) *Description and execution*: Continued sampling at farms. *Resources:* Same as OY4. *Metrics of success*: sampling with government partners; human and animal sampling; sample screening using Luminex-based platform; data entry and analysis. *Deliverables*: wildlife, livestock and humans sampled from same farms; questionnaires of farm workers; samples tested; longitudinal dataset analyzed. *Subtasks:* 5.5.1 collect livestock samples 5.5.2 collect wildlife (bat and macaque) samples 5.5.3 interview farm workers 5.5.4. Collect samples from farm workers; 5.5.5. Test serum samples 5.5.6 enter and analyze all farm data from Y2-OY5.

Task 6. Disseminate reports to relevant stakeholders (Years 1, 3, OY5). *Description, execution, and resources:* same as Y1. *Metrics of success*. Same as Y1. *Deliverables*: same as Y1; *Subtasks*: 5.6.1 submit final report to DTRA. 5.6.2 Final report to local stakeholders. 5.6.3 Prepare serological data analysis for publication a peer-reviewed journal. 5.6.4 Conduct presentations/meetings at times and places specified in the grant schedule, including DTRA Annual Technical Review.

PERFORMANCE SCHEDULE. (also in Statement of Work)

Task	Y1	Y2	Y3	OY4	OY5
1. Enhance capacity in Malaysia for serological surveillance for all henipaviruses and filoviruses					
1.1. Transfer BioRad Bio-Plex 200 in NPHL, DWNP, and UPM labs					
1.2 Transfer serological reagents to NPHL, DWNP, UPM, and UM labs					
1.3 Training staff at partner labs					
1.4 Identify graduate students at UM and UPM					
1.5 Convene Science Advisory Group					
1.6 Develop database for serology results and sample metadata					
1.7 Training in pseudovirus development at USU					
2. Develop & validate henipavirus and filovirus reagents.					
2.1 Produce specific henipavirus and filovirus proteins					
2.2 Produce and test monoclonal antibodies against new proteins					
2.3 Transfer henipa and filo N protein assays to partner labs					
2.4. develop/validate proteins and mAbs for novel henipa- & filoviruses					
3.Screen archived wildlife and Orang Asli sera					
3.1 Identify archived wildlife and human sera at NPHL and DWNP					
3.2 Screen sera using Luminex-based platform					
3.3 Confirm positive sera with additional testing					
3.4 Enter results in database / analyze					

Task	Y1	Y2	Y3	OY4	OY5
4. Sero-survey of Orang Asli and animals					
4.1 apply for IRB/IACUC approval					
4.2 Collect & test serum samples from Orang Asli – animals					
4.3 Enter results into database					
4.4 Confirm positive sera with additional testing					
4.5 Conduct follow-up study of Orang Asli and animals					
4.6 Analyze data					
5. Serological study of farm workers, livestock, and wildlife on farms	■	■	■	■	■
5.1 Apply for necessary permits and ethical approval	■	■			
5.2 scoping visits to potential study farms; select farms	■				
5.3 sample farm workers, livestock, and wildlife on farms		■	■		
5.4 follow-up study of farm workers, wildlife and livestock (4 farms)				■	■
5.5 Enter results into database / analyse results		■	■	■	■
6. Disseminate reports to relevant stakeholders					
6.1 annual report toDTRA					
6.2 annual report to government of Malaysia partners					
6.3 attend DTRA annual technical review					
6.4 partner meeting in Malaysia					
6.5 present results at scientific conference (e.g. ASTMH, IMED, ASM)					
6.6 prepare manuscripts for publication in peer-reviewed journal

EcoHealth Alliance (EHA): Y1

PI Salary. PI Epstein will commit 2 months p.a. (Y1-OY5). In Year 1, we will request $22,700 salary for 2.0 months p.a. PI Epstein will meet with Co-PIs and key personnel in Malaysia to initiate the project and coordinate the wide array of partners involved in this collaboration. He will oversee the start of the training workshop at Government of Malaysia (GoM) labs. He will attend the DTRA Annual Technical Review.

Other Personnel. The Program Administrator, Emma Lane, will commit 8.0 months p.a. (Y1-OY5) to this project. In Year 1, we will request $33,750 for 8.0 months p.a. Lane will assist with communication among collaborators, reporting to DTRA and local GoM partners, the hiring of the project field scientist and additional team members, and the logistics of travel for the PIs, KPs, and all team members. We will hire a project field scientist for 6.0 months p.a. (Y1-OY5) starting at $30,000. The field scientist will work with the in-country team in Malaysia to assist with fieldwork, sample collection, and will be located in KL and field sites throughout Malaysia as needed.

Fringe Benefits. Fringe benefits are calculated at 31.3% of base salary for PI Epstein, Program Administrator Lane and Field Scientist. Base salaries increase at a yearly percentage rate of 5.0%.

Equipment. We will purchase three Luminex 200 machines at $66,500 each (Y1-OY5). In Year 1, we will purchase two Luminex 200 machines (for NPHL and DNWP) for a total of $133,000.00. The third may be purchased in Y2 for VRI. We will purchase 3 Luminex pro wash stations at $10,600 per lab (DWNP, NPHL, and VRI) (Y1-OY5). In Year 1, we will purchase two Luminex pro wash stations for a total of $21,200.00. The Luminex machines and pro wash stations are necessary for conducting the core serological assays for henipaviruses and filoviruses and represent our major deliverable for enhancing Malaysia's surveillance capabilities.

Travel.
Domestic. We have budgeted PI domestic travel for Y1-OY5 for $3,000 per year. Travel will include transportation costs to and from 1 scientific conference (e.g. ASTMH, ASM Biodefense) in the US and the annual DTRA meeting to present preliminary results. Each trip is budgeted for $1,500 ($320 train RT + $1,180 ($295*4 days)).

International. We have budgeted international travel for Y1 at $26,000. PI travel to Malaysia for Y1-OY5 to meet with co-investigators and government collaborators, participate in lab training, meet with graduate students, is estimated at $6,000 per year; ($2,500 airfare NY-KL RT, + $2,630 ($263*10 days) accommodation, dining and incidentals + $870 (transportation to regions for site visits, meetings, and misc. travel costs). The field scientist will travel to Malaysia twice per year for one month's time for Y1-OY5 for $15,000 per year. We estimate each trip to be $7,500 ($2,500 airfare + $2,000 ($80*25 field days) + $789 ($263*3 days in Kuala Lumpur for meetings) + $2,000 rental vehicle to transport at field sites + $211 misc. travel costs. We have budgeted travel for consultant Gary Crameri to travel to Malaysia to trouble shoot Luminex assays and conduct training workshops in Y1 and Y2. In Year 1, Crameri will travel to the National Public Health Lab and Department of Wildlife and National Parks in Kuala Lumpur

from Australia. We request S5,000 in Y1 ($1,300 airfare + $3,682 (S263*14 days in KL) + $20 misc. travel costs.

Other Direct Costs.
Materials and Supplies. We will purchase three microplate shakers at S1,000 per lab and three laptops for Luminex reads at S3,000 each (Y1-OY5). In Year 1, we will purchase two microplate shakers for a total of $2,000.00 and two laptops for Luminex reads for a total of $6,000.00. We estimate costs for supplies, consumables, and shipping costs at S5,000 per year for Y1-OY5 and phone/conference call charges at $5,000 per year for Y1-OY5.

Consultant Services. We will hire Gary Crameri as a consultant on the project (Y1-OY5) for a total of $25,000.00 to co-conduct lab trainings, troubleshoot Luminex assays, and to contribute to study design and data analysis and publication. In Year 1, Crameri's consultancy agreement will be $5,000.

Subawards/Consortium/Contractual Costs. We will have three subaward agreements on this project (Y1-OY5). In Year 1, Conservation Medicine Ltd. Subaward will total S81,660.83, The Henry M. Jackson Foundation at Uniformed Services University of the Health Sciences subaward will total $242,901.95, the United States Navy subaward will total S50,000.00, and the Universiti Putra Malaysia subaward will total $28,556.00. Further details on budget elements are outlined under the subaward budget documentation.

Indirect Costs. We are requesting the federally agreed indirect cost of 35.4% on all direct costs. We have applied this IC rate to the first S25,000 of the subcontracts valued over S25,000 p.a. Total EcoHealth Alliance budgeted indirect costs for Y1: S93,990.13.

EcoHealth Alliance (EHA) Y2:

PI Salary. All salaries are increased by 1.05% p.a. due to the exceptionally high cost of living increases in New York City. In Year 2, we will request $23,835 salary for 2.0 months p.a. PI Epstein will meet with Co-PIs, key personnel, government partners, and graduate students in Malaysia, and coordinate the wide array of partners involved in this collaboration. He will work on study development, ethical review applications, and coordinate project activities. He will attend the DTRA Annual Technical Review.

Other Personnel. The Program Administrator, Emma Lane, will commit 8.0 months p.a. (Y1-OY5) to this project. In Year 2, we will request $35.437.50 for 8.0 months p.a. Lane will assist with communication among collaborators, reporting to DTRA and local GoM partners, the hiring of the project field scientist and additional team members, and the logistics of travel for the PIs, KPs, and all team members. In Year 2, we request S31,500 for 6.0 months p.a. for the project field scientist. The field scientist will work with CM and GoM partners for 2 months in Malaysia and 4 months in NY p.a. to help develop and implement field studies, obtain ethical approvals, coordinate supplies and logistics, perform data analysis. He/she will be located in NY and Malaysia.

Fringe Benefits. Fringe benefits are calculated at 31.3% of base salary for PI Epstein, Program Administrator Lane, and Field Scientist. Base salaries increase at a yearly percentage rate of 5.0%.

Equipment. In Year 2, we will purchase one Luminex 200 machine for a total of $66,500.00 and one Luminex pro wash station for a total of $10,600.00 for the Veterinary Research Institute (VRI), our third GoM partner. The Luminex machines and pro wash stations are necessary for conducting the core serological assays for henipaviruses and filoviruses and represent our major deliverable for enhancing Malaysia's surveillance capabilities.

Domestic. We have budgeted PI domestic travel for Y1-OY5 for $3,000 per year. Travel will include transportation costs to and from 1 scientific conference (e.g. ASTMH, ASM Biodefense) in the US and the annual DTRA meeting to present preliminary results. Each trip is budgeted for $1,500 ($320 train RT + $1,180 ($295*4 days)).

International. We have budgeted international travel for Y2 at $26,000. PI travel to Malaysia to meet with co-investigators and government collaborators, participate in lab training, meet with graduate students, is estimated at $6,000 per year; ($2,500 airfare NY-KL RT, + $2,630 ($263*10 days) accommodation, dining and incidentals + $870 (transportation to regions for site visits, meetings, and misc. travel costs). The field scientist will travel to Malaysia twice per year for one month's time for Y1-OY5 for $15,000 per year. *We estimate each trip to be $7,500 ($2,500 airfare + $2,000 ($80*25 field days) + $789 ($263*3 days in Kuala Lumpur for meetings) + $2,000 rental vehicle to transport at field sites + $211 misc. travel costs.* In Y2, we have budgeted for consultant Gary Crameri to travel to Malaysia from Australia to conduct a 10-day training workshop at the Veterinary Research Institute in Ipoh and attend the annual co-investigators' meeting in KL. We request $5,000 in Y2 ($1,500 airfare + $2756 ($263*4 days in KL and $142*12 days in Ipoh) + $744 misc. travel costs incl. car rental.

Other Direct Costs.
Materials and Supplies. We will purchase three microplate shakers at $1,000 per lab and three laptops for Luminex reads at $3,000 each (Y1-OY5). In Year 2, we will purchase one microplate shaker for a total of $1,000.00 and one laptop for Luminex reads for a total of $3,000.00. We estimate shipping costs for supplies and consumables at $5,000 per year for Y1-OY5 and phone/conference call charges at $5,000 per year for Y1-OY5.

Consultant Services. In Year 2, Crameri's consultancy agreement will be $5,000 to co-conduct lab trainings, troubleshoot Luminex assays, and to contribute to study design and data analysis and publication.

Subawards/Consortium/Contractual Costs. We will have three subaward agreements on this project (Y1-OY5). In Year 2, Conservation Medicine Ltd. Subaward will total $106,965.29, Henry M. Jackson Foundation at Uniformed Services University of the Health Sciences subaward will total $287,820.41, the United States Navy subaward will total $50,000.00, and the Universiti Putra Malaysia subaward will total $36,542.00. Further details on budget elements are outlined under the subaward budget documentation.

Indirect Costs. We are requesting the federally agreed indirect cost of 35.4% on all direct costs. We have applied this IC rate to the first $25,000 of the subcontracts valued over $25,000 p.a. Total EcoHealth Alliance budgeted indirect costs for Y2: $94,583.24.

EcoHealth Alliance (EHA) Y3:
PI Salary. All salaries are increased by 1.05% p.a. due to the exceptionally high cost of living increases in New York City. In Year 3, we will request $25,026.75 salary for 2.0 months p.a. PI Epstein will meet with Co-PIs, key personnel, government partners, and graduate students in Malaysia, and coordinate the wide array of partners involved in this collaboration. He will work on comprehensive data analysis for Y1-3, the final summary report to DTRA and local stakeholders and will coordinate project activities for OY 4 and OY5 (if funded). He will attend the DTRA Annual Technical Review.

Other Personnel. The Program Administrator, Emma Lane, will commit 8.0 months p.a. (Y1-OY5) to this project. In Year 3, we will request $37,209.38 for 8.0 months p.a. Lane will assist with communication among collaborators, reporting to DTRA and local GoM partners, and logistics of travel for the PIs, KPs, and all team members. In Year 3, we request $33,075.00 for 6.0 months p.a. for the project field scientist. The field scientist will work with CM and GoM partners for 2 months in Malaysia and 4 months in NY p.a. to help develop and implement field studies, obtain ethical approvals, coordinate supplies and logistics, contribute to data analysis and reporting. He/she will be located in NY and Malaysia.

Fringe Benefits. Fringe benefits are calculated at 31.3% of base salary for PI Epstein, Program Administrator Lane, and Field Scientist. Base salaries increase at a yearly percentage rate of 5.0%.

Equipment. N/A

Travel.
Domestic. We have budgeted PI domestic travel for Y1-OY5 for $3,000 per year. Travel will include transportation costs to and from 1 scientific conference (e.g. ASTMH, ASM Biodefense) in the US and the annual DTRA meeting to present preliminary results. Costs per trip may vary, as per diem rates will be used for the meeting location.

International. We have budgeted international travel for Y3 at $26,000. PI travel to Malaysia to meet with co-investigators and government collaborators, participate in lab training, meet with graduate students, is estimated at $6,000 per year; ($2,500 airfare NY-KL RT, + $2,630 ($263*10 days) accommodation, dining and incidentals + $870 (transportation to regions for site visits, meetings, and misc. travel costs). The field scientist will travel to Malaysia twice per year for one month's time for Y1-OY5 for $15,000 per year. We estimate each trip to be $7,500 ($2,500 airfare + $2,000 ($80*25 field days) + $789 ($263*3 days in Kuala Lumpur for meetings) + $2,000 rental vehicle to transport at field sites + $211 misc. travel costs. Consultant Crameri will travel from Australia to KL for the annual Co-PIs meeting: $2,500 ($1300 RT airfare + $1,052 ($263*4) days in Kuala Lumpur) + $148 misc. travel expenses.

Other Direct Costs.
Materials and Supplies. We estimate shipping costs for supplies and consumables at $5,000 per year for Y1-OY5 and phone/conference call charges at $5,000 per year for Y1-OY5.

Publications. We request $10,000 for publication costs for Y3 and OY5. In Year 3, we request $5,000.

Consultant Services. In Year 3, Crameri's consultancy agreement will be $2,500 to contribute to study design and data analysis, reporting and publication.

Subawards/Consortium/Contractual Costs. We will have three subaward agreements on this project (Y1-OY5). In Year 3, Conservation Medicine Ltd. Subaward will total $105,536.40, Henry M. Jackson Foundation at Uniformed Services University of the Health Sciences subaward will total $262,029.95, the United States Navy subaward will total $50,000.00, and the Universiti Putra Malaysia subaward will total $36,542.00. Further details on budget elements are outlined under the subaward budget documentation.

Indirect Costs. We are requesting the federally agreed indirect cost of 35.4% on all direct costs. We have applied this IC rate to the first $25,000 of the subcontracts valued over $25,000 p.a. Total EcoHealth Alliance budgeted indirect costs for Y3: $95,276.80.

EcoHealth Alliance (EHA) Option Year 4 (OY4):

PI Salary. All salaries are increased by 1.05% p.a. due to the exceptionally high cost of living increases in New York City. In OY4, we will request $26,278.09 salary for 2.0 months p.a. PI Epstein will meet with Co-PIs, key personnel, government partners, and graduate students in Malaysia, and coordinate the wide array of partners involved in this collaboration. He will work on study development, ethical review applications, and coordinate project activities. He will attend the DTRA Annual Technical Review.

Other Personnel. The Program Administrator, Emma Lane, will commit 8.0 months p.a. (Y1-OY5) to this project. In OY4, we will request $38,069.84 for 8.0 months p.a. Lane will assist with communication among collaborators, reporting to DTRA and local GoM partners, the hiring of the project field scientist and additional team members, and the logistics of travel for the PIs, KPs, and all team members. In OY4, we request $34,728.75 for 6.0 months p.a. for the project field scientist. The field scientist will work with CM and GoM partners for 2 months in Malaysia and 4 months in NY p.a. to help develop and implement field studies, obtain ethical approvals, coordinate supplies and logistics, contribute to data analysis and reporting. He/she will be located in NY and Malaysia.

Fringe Benefits. Fringe benefits are calculated at 31.3% of base salary for PI Epstein, Program Administrator Lane, and Field Scientist. Base salaries increase at a yearly percentage rate of 5.0%.

Equipment. N/A

Travel.
Domestic. We have budgeted PI domestic travel for Y1-OY5 for $3,000 per year. Travel will include transportation costs to and from 1 scientific conference (e.g. ASTMH, ASM Biodefense) in the US and the annual DTRA meeting to present preliminary results. Costs per trip may vary, as per diem rates will be used for the meeting location.

International. We have budgeted international travel for OY4 at $26,000. PI travel to Malaysia to meet with co-investigators and government collaborators, participate in lab training, meet with graduate students, is estimated at $6,000 per year; ($2,500 airfare NY-KL RT, + $2,630 ($263*10 days) accommodation, dining and incidentals + $870 (transportation to regions for site visits, meetings, and misc. travel costs). The field scientist will travel to Malaysia twice per year for one month's time for Y1-OY5 for $15,000 per year. We estimate each trip to be $7,500 ($2,500 airfare + $2,000 ($80*25 field days) + $789 ($263*3 days in Kuala Lumpur for meetings) + $2,000 rental vehicle to transport at field sites + $211 misc. travel costs. Consultant Crameri will travel from Australia to KL for the annual Co-PIs meeting: $2,500 ($1300 RT airfare + $1,052 ($263*4) days in Kuala Lumpur) + $148 misc. travel expenses.

Other Direct Costs.
Materials and Supplies. We estimate costs for supplies and consumables at $5,000 per year for Y1-OY5 and phone/conference call charges at $5,000 per year for Y1-OY5.

Consultant Services. In OY4, Crameri's consultancy agreement will be $2,500 to contribute to study design and data analysis and publication.

Subawards/Consortium/Contractual Costs. We will have three subaward agreements on this project (Y1-OY5). In OY4, Conservation Medicine Ltd. Subaward will total $105,846.24, Henry M. Jackson Foundation at Uniformed Services University of the Health Sciences subaward will total $271,029.98, the United States Navy subaward will total $50,000.00, and the Universiti Putra Malaysia subaward will total $36,542.00. Further details on budget elements are outlined under the subaward budget documentation.

Indirect Costs. We are requesting the federally agreed indirect cost of 35.4% on all direct costs. We have applied this IC rate to the first $25,000 of the subcontracts valued over $25,000 p.a. Total EcoHealth Alliance budgeted indirect costs for OY4: $95,721.84.

EcoHealth Alliance (EHA) OY5:

PI Salary. All salaries are increased by 1.05% p.a. due to the exceptionally high cost of living increases in New York City. In OY5, we will request $27,591.99 salary for 2.0 months p.a. PI Epstein will meet with Co-PIs, key personnel, government partners, and graduate students in Malaysia, and coordinate the wide array of partners involved in this collaboration. He will work on final data analysis, final report to DTRA and local stakeholders and coordinate project activities. He will attend the DTRA Annual Technical Review.

Other Personnel. The Program Administrator, Emma Lane, will commit 8.0 months p.a. (Y1-OY5) to this project. In OY5, we will request S41,023.34 for 8.0 months p.a. Lane will assist with communication among collaborators, reporting to DTRA and local GoM partners, the hiring of the project field scientist and additional team members, and the logistics of travel for the PIs, KPs, and all team members. In OY5, we request $36,465.19 for 6.0 months p.a. for the project field scientist. The field scientist will work with CM and GoM partners for 2 months in Malaysia and 4 months in NY p.a. to help develop and implement field studies, obtain ethical approvals, coordinate supplies and logistics, contribute to data analysis and reporting. He/she will be located in NY and Malaysia.

Fringe Benefits. Fringe benefits are calculated at 31.3% of base salary for PI Epstein, Program Administrator Lane, and Field Scientist. Base salaries increase at a yearly percentage rate of 5.0%.

Equipment. N/A

Travel.
Domestic. We have budgeted PI domestic travel for Y1-OY5 for $3,000 per year. Travel will include transportation costs to and from 1 scientific conference (e.g. ASTMH, ASM Biodefense) in the US and the annual DTRA meeting to present preliminary results. Costs per trip may vary, as per diem rates will be used for the meeting location.

International. We have budgeted international travel for Y3 at $26,000. PI travel to Malaysia to meet with co-investigators and government collaborators, participate in lab training, meet with graduate students, is estimated at $6,000 per year; (S2,500 airfare NY-KL RT, + S2,630 (S263*10 days) accommodation, dining and incidentals + $870 (transportation to regions for site visits, meetings, and misc. travel costs). The field scientist will travel to Malaysia twice per year for one month's time for Y1-OY5 for $15,000 per year. We estimate each trip to be S7,500 (S2,500 airfare + $2,000 (S80*25 field days) + S789 ($263*3 days in Kuala Lumpur for meetings) + $2,000 rental vehicle to transport at field sites + $200 misc. travel costs. Consultant Crameri will travel from Australia to KL for the annual Co-PIs meeting: $2,500 (S1300 RT airfare + $1,052 ($263*4) days in Kuala Lumpur) + $148 misc. travel expenses.

Other Direct Costs.
Materials and Supplies. We estimate shopping costs for supplies and consumables at S5,000 per year for Y1-OY5 and phone/conference call charges at $5,000 per year for Y1-OY5.

Publications. In OY5, we request S5,000 for publication of scientific manuscripts.

Consultant Services. In OY5, Crameri's consultancy agreement will be S2,500 to contribute to final data analysis and publication.

Subawards/Consortium/Contractual Costs. We will have three subaward agreements on this project (Y1-OY5). In OY4, Conservation Medicine Ltd. Subaward will total $96,217.11, Henry M. Jackson Foundation at Uniformed Services University of the Health Sciences subaward will total S216,939,96, the United States Navy subaward will total S50,000.00, and the Universiti

Putra Malaysia subaward will total $36542. Further details on budget elements are outlined under the subaward budget documentation.

Indirect Costs. We are requesting the federally agreed indirect cost of 35.4% on all direct costs. We have applied this IC rate to the first $25,000 of the subcontracts valued over $25,000 p.a. Total EcoHealth Alliance budgeted indirect costs for OY5: $99,817.63.

Conservation Medicine, Ltd. (CM): Y1

Co-PI Salary. Co-PI Hughes will commit 3.6 months p.a. (Y1-OY5). In Year 1, we request $15,120 salary for 3.6 months p.a. Co-PI Hughes will work with PI, Co-PIs and key personnel in Malaysia to coordinate all in-country lab and field activities including acquisition of local ethical approvals and permits; communicate with Government of Malaysia partners; ensure training and technology transfer occur smoothly, co-mentor graduate students from UM, coordinate with PREDICT activities, and contribute to data collection, analysis, reporting, and publication. We request a salary increase for Co-PI Hughes of 5% each year from Y2- OY5.

Other Personnel. The Malaysia team will include Microbiologist/Research Scientist, Mei Ho Lee, who will commit 3.6 months p.a. (Y1-OY5) to this project. In Year 1, we request $7,800 for 3.6 months p.a. Lee will assist with Luminex training, coordinating archived sample selection and screening using the Luminex-based platform at each partner lab. She will also contribute to study development, data analysis, reporting to partners and publication; Research Scientist, Jimmy Lee for 3.6 months p.a. (Y1-OY5) at $7,090 p.a. The Research Scientist will assist with sample repository curation, sample collection, field logistics and coordination, animal capture and sampling (with EHA Field Scientist). We request a salary increase of 5% p.a. for both the Senior Research Officer and the Research Assistant, respectively. We will hire an Administrative Assistant for 3.6 months p.a to help coordinate the logistics of the project, communicate with the PI, co-investigators, and GoM partners. We request S4,800 for 3.6 months p.a. (Y1-OY5) for the Administrative Assistant. We will also hire a Lab Technician for 6.0 months to work at DWNP, NPHL and UPM, as needed, to assist with training, sample curation, testing, and data entry into database. We request $6,000 p.a. in Y1 for Lab Technician. The entire Malaysia team will be located in KL, Malaysia.

Use of vehicle for in-country travel to field sites (Kuala Lipis, Gua Musang, Gombok Hospital, Ipoh, and others TBD) will cost approximately $5,000 p.a. for fuel, tolls, and vehicle maintenance.

Field and lab supplies. Table 1 shows the breakdown of samples that will be collected over the 3 + 2 optional years of this study. We request S12,120 in Y1 to cover costs for supplies for an Orang Asli and animal study in forested communities where 150 people will be sampled at a cost of S20/ per person; and 285 animals will be sampled at S32 per animal. Also in Y1, 2 training workshops that will include 4 technicians from each partner lab (PERHLITAN, NPHL, and UM). Training will be conducted for 10 days at each partner lab in Kuala Lumpur and will teach use of the Luminex-based serological assays, data interpretation and analysis, and reagent development. Costs will include local transportation costs, meals, lab reagents for training, and administrative costs. We have budgeted $5,000 p.a. to support transportation and accommodation costs for 2 field officers from DWNP, DVS, or MoH (max. 6 officers) to accompany CM team to conduct animal capture and sampling and human sampling at Orang Asli Field sites and for farm scoping visits at locations TBD in Peninsular Malaysia. Note: DWNP,

MoH or DVS officers' salaries are not included in this estimate, only costs while in the field, which may include per diems associated with additional travel, accommodation, and food costs.

Indirect costs. We are requesting S6,900 (10% of direct costs) for administrative and personnel costs.

Conservation Medicine (CM): Y2

Co-PI Salary. Co-PI Hughes will commit 3.6 months p.a. (Y1-OY5). In Year 2, we request $15,876.00 salary for 3.6 months p.a. Co-PI Hughes will work with PI, Co-PIs and key personnel in Malaysia to coordinate all in-country lab and field activities – including acquisition of local ethical approvals and permits; communicate with Government of Malaysia partners; ensure training and technology transfer occur smoothly, co-mentor graduate students from UM, coordinate with PREDICT activities, and contribute to data collection, analysis, reporting, and publication. We request a salary increase for Co-PI Hughes of 5% each year from Y2- OY5.

Other Personnel. In Year 2, we request $8,190.00 for 3.6 months p.a. for Mei Ho Lee, who will assist with Luminex training, coordinating archived sample selection and screening using the Luminex-based platform at each partner lab. She will also contribute to study development, data analysis, reporting to partners and publication; Research Scientist, Jimmy Lee for 3.6 months p.a. (Y1-OY5) at S7,302.00 p.a. The Research Scientist will assist with sample repository curation, sample collection, field logistics and coordination, animal capture and sampling (with EHA Field Scientist). We request a salary increase of 5% p.a. for both the Senior Research Officer and the Research Scientist, respectively. We will hire an Administrative Assistant for 3.6 months p.a to help coordinate the logistics of the project, communicate with the PI, co-investigators, and GoM partners. We request S4,800 for 3.6 months p.a. (Y1-OY5) for the Administrative Assistant. The Lab Technician will spend 6.0 months to work at DWNP, NPHL and VRI, as needed, to assist with training, sample curation, testing, and data entry into database. We request $6,000 p.a. in Y2 for Lab Technician. The entire Malaysia team will be located in KL, Malaysia.

Travel.
Domestic
Use of vehicle for in-country travel to field sites (Kuala Lipis, Gua Musang, Gombok Hospital, Ipoh, and others TBD) will cost approximately $5,000 p.a. for fuel, tolls, and vehicle maintenance.

Field and lab supplies. In Y2 the farm study begins. We have budgeted $36,500 in Y2 for consumables for both the second year of the Orang Asli hunting community study and the first year of the farm study. We estimate sampling approximately 900 animals (wildlife and domestic) calculated at S32/animal for supplies and logistics; Consumables will include traps, bags, disposables (e.g. needles, syringes, blood tubes, liquid nitrogen, etc…). We budgeted for sampling 165 people at $20/person. Costs include questionnaire materials, blood tubes, needles, syringes, liquid nitrogen, etc…) at 4 farm locations (TBD). We also request S3,000 for a 10-day training workshop for 4-6 technicians at the Universiti Putra Malaysia (UPM), in Kuala Lumpur. Training will include use of the Luminex based platform, data analysis, and reagent

development. We have budgeted $5,000 p.a. to support transportation and accommodation costs for 2 field officers from DWNP, DVS, or MoH (max. 6 officers) to accompany CM team to assist with animal capture and sampling and human interviews and sampling at farm locations in Peninsular Malaysia.

Indirect costs. We are requesting S9,725 (10% Direct costs) for administrative and personnel costs.

Conservation Medicine (CM): Y3

Co-PI Salary. Co-PI Hughes will commit 3.6 months p.a. In Year 3, we request $16,669.80 salary for 3.6 months p.a. Co-PI Hughes will work with PI, Co-PIs and key personnel in Malaysia to coordinate all in-country lab and field activities including acquisition of local ethical approvals and permits; communicate with Government of Malaysia partners; ensure training and technology transfer occur smoothly, co-mentor graduate students from UM, coordinate with PREDICT activities, and contribute to data collection, analysis, reporting, and publication. We request a salary increase for Co-PI Hughes of 5% each year from Y2- OY5.

Other Personnel. In Year 3, we request $8,599.50 for 3.6 months p.a. for Mei Ho Lee, who will assist with human and animal sample testing using the Luminex-based platform at each partner lab. She will also contribute to study development, data analysis, reporting to partners and publication; Research Scientist, Jimmy Lee will spend 3.6 months at S7,521.78 p.a. The Research Scientist will assist with sample repository curation, sample collection, field logistics and coordination, animal capture and sampling (with EHΛ Field Scientist), and data entry and analysis. We request a salary increase of 5% p.a. for both the Senior Research Officer and the Research Assistant, respectively. We request S4,800 for 6.0 months p.a. for the Administrative Assistant to help coordinate the logistics of the project, communicate with the PI, co-investigators, and GoM partners. We request $6,000 p.a. for the Lab Technician to work with DWNP, NPHL and VRI, as needed, to assist with training, sample curation, testing, and data entry into database. The entire Malaysia team will be located in Kuala Lumpur.

Travel.
Domestic
Use of vehicle for in-country travel to field sites (Kuala Lipis, Gua Musang, Gombok Hospital, Ipoh, and others TBD) will cost approximately $5,000 p.a. for fuel, tolls, and vehicle maintenance.

Field and lab supplies. We have budgeted S36,500 in Y3 for consumables for the third year of the Orang Asli hunting community study and the second year of the farm study. We estimate sampling approximately 900 animals (wildlife and domestic) calculated at S32/animal for supplies and logistics; Consumables will include traps, bags, disposables (e.g. needles, syringes, blood tubes, liquid nitrogen, etc…). We budgeted for sampling 165 people at $20/person. Costs include questionnaire materials, blood tubes, needles, syringes, liquid nitrogen, etc…) at 4 farm locations (TBD). We have budgeted $5,000 p.a. to support transportation and accommodation costs for 6 field officers from DWNP, and MoH to accompany CM team to assist with animal

capture and sampling and human interviews and sampling at Orang Asli villages in Peninsular Malaysia.

Indirect costs. We are requesting S9,595 (10% indirect costs) for administrative and personnel costs.

Conservation Medicine (CM): OY4

Co-PI Salary. Co-PI Hughes will commit 3.6 months p.a. (Y1-OY5). In Year 4, we request $17,503.29 salary for 3.6 months p.a. Co-PI Hughes will work with PI, Co-PIs and key personnel in Malaysia to coordinate all in-country lab and field activities including acquisition of local ethical approvals and permits; communicate with Government of Malaysia partners; ensure training and technology transfer occur smoothly, co-mentor graduate students from UM, coordinate with PREDICT activities, and contribute to data collection, analysis, reporting, and publication. We request a salary increase for Co-PI Hughes of 5% each year from Y2- OY5.

Other Personnel. In Option Year 4, we request S9,029.48 for 3.6 months p.a. for Mei Ho Lee who will assist with study development, permit acquisition, human and animal sample testing using the Luminex-based platform at each partner lab, data analysis, reporting to partners and publication. Jimmy Lee will spend 3.6 months at S7,747.43 p.a. and will assist with sample repository curation, sample collection, field logistics and coordination, animal capture and sampling (with EHA Field Scientist), and data entry and analysis. We request a salary increase of 5% p.a. for both the Senior Research Officer and the Research Assistant, respectively. We request S4,800 for 6.0 months for an Administrative Assistant to help coordinate the logistics of the project, communicate with the PI, co-investigators, and GoM partners. We request $6,000 in OY4 for the Lab Technician for 6.0 months to work with DWNP, NPHL and VRI, as needed, to assist with training, sample curation, testing, and data entry into database. The entire Malaysia team will be located in Kuala Lumpur, Malaysia.

Travel.

Domestic

Use of vehicle for in-country travel to field sites (Kuala Lipis, Gua Musang, Gombok Hospital, Ipoh, and others TBD) will cost approximately $5,000 p.a. for fuel, tolls, and vehicle maintenance.

Field and lab supplies. We have budgeted S36,500 in OY4 for consumables for both the final year of the Orang Asli hunting community study and the third year of the farm study. We estimate sampling approximately 900 animals (wildlife and domestic) calculated at S32/animal for supplies and logistics; Consumables will include traps, bags, disposables (e.g. needles, syringes, blood tubes, liquid nitrogen, etc…). We budgeted for sampling 165 people at $20/person. Costs include questionnaire materials, blood tubes, needles, syringes, liquid nitrogen, etc…) at 4 farm locations (TBD). (as in Y2). We have budgeted S3,500 p.a. to support transportation and accommodation costs for 4 field officers from DWNP, VRI, and MoH to accompany CM team to assist with animal capture and sampling and human interviews and sampling at farm locations in Peninsular Malaysia.

Indirect costs. We are requesting $9,622 (10% Direct costs). for administrative and personnel costs.

Conservation Medicine (CM): OY5

Co-PI Salary. Co-PI Hughes will commit 3.6 months p.a. (Y1-OY5). In Year 5, we request $18,378.45 salary for 3.6 months p.a. Co-PI Hughes will work with PI, Co-PIs and key personnel in Malaysia to coordinate all in-country lab and field activities – including acquisition of local ethical approvals and permits; communicate with Government of Malaysia partners; ensure training and technology transfer occur smoothly, co-mentor graduate students from UM, coordinate with PREDICT activities, and contribute to data collection, analysis, reporting, and publication. We request a salary increase for Co-PI Hughes of 5% each year from Y2- OY5. He will attend the DTRA Annual Technical Review

Other Personnel. In Option Year 5 (OY5), we request $9,480.95 for 3.6 months p.a. for Mei Ho Lee to assist with study development, permit acquisition, human and animal sample testing using the Luminex-based platform at each partner lab, data analysis, reporting to partners and publication. We request $7,979.86 for Research Assistant, Jimmy Lee for 3.6 months p.a. to assist with sample repository curation, sample collection, field logistics and coordination, animal capture and sampling (with EHA Field Scientist), and data entry and analysis. We request a salary increase of 5% p.a. for both the Senior Research Officer and the Research Assistant, respectively. We request $4,800 for the Administrative Assistant for 6 months p.a to help coordinate the logistics of the project, communicate with the PI, co-investigators, and GoM partners. We request $6,000 p.a. for the Lab Technician to work with DWNP, NPHL and VRI, as needed, to assist with training, sample curation, testing, and data entry into database. The entire Malaysia team will be located in Kuala Lumpur, Malaysia.

Travel.
Domestic
Use of vehicle for in-country travel to field sites (Kuala Lipis, Gua Musang, Gombok Hospital, Ipoh, and others TBD) will cost approximately $5,000 p.a. for fuel, tolls, and vehicle maintenance.

Field and lab supplies. We have budgeted We have budgeted $24,380 in OY5 for consumables for the final year of the farm study. We estimate sampling approximately 760 animals (wildlife and domestic) calculated at $32/animal for supplies and logistics; Consumables will include traps, bags, disposables (e.g. needles, syringes, blood tubes, liquid nitrogen, etc…). We budgeted for sampling 15 people at $20/person. Costs include questionnaire materials, blood tubes, needles, syringes, liquid nitrogen, etc…) at 4 farm locations (TBD). We have budgeted $3,500 p.a. to support transportation and accommodation costs for 4 field officers from DWNP, VRI, and MoH to accompany CM team to assist with animal capture and sampling and human interviews and sampling at farm locations in Peninsular Malaysia.

Indirect costs. We are requesting $8,747 (10% direct costs) for administrative and personnel costs.

Table 1. Sample totals.

Task	Samples Y1-Y2	Samples Y3-OY5	Total Samples Y1-OY5	Samples collected by:	Tested by
3	950 macaque		950 macaque	PREDICT (Archived)	DWNP
3	175 bat		175 bat	PREDICT (Archived)	DWNP
3	300 Orang Asli		300 Orang Asli	PREDICT (Archived)	NPHL

Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia / Epstein
CBEP-Thrust Area 6, CC WMD

Naval Medical Research Center – Asia (NMRC-A): Y1
Co-PI Salary: Co-PI Pike will commit 2 month percent effort (Y1-OY5). However, the conduct of the study is considered part of his official duties as a government employee. Therefore, we are not requesting any salary for Dr. Pike. Dr. Pike will serve as the lead DoD liaison, providing local collaborative project management, on-site technical expertise, assist with quality control/assurance, and provide additional support to project collaborators as needed.

Travel: Co-Pike will conduct one 5-day trip twice per year (Y1-OY5) from NMRC-A in Singapore to KL for project oversight and management. We estimate each trip to cost $1,580, ($265 RT airfare + $1,315 ($263*5 days). Total travel for Year 1 will be $3,160.

Contracts: NMRC-A will subcontract with the University of Malaya (UM) for all field and laboratory work conducted within the scope of this proposal. Estimated contract costs are $45K/year (Y1-OY5). See accompanying UM budget below.

Tropical Infectious Diseases Research and Education Centre (TIDREC): Y1
PI Salary. PI AbuBakar will commit 1 month p.a. (Y1-OY5). We will request 0.4 month's salary ($4000) and will match the rest of the salary with institutional funding. PI AbuBakar will meet with Project Leader and other PIs involved in this project collaboration. He will work with Co-PI Chang and Key Personnel to meet with the relevant ministries and agencies in Malaysia to initiate the project. Co-PI Chang will commit 2 months p.a. (Y1-OY5) to the project. We will request 0.8 month's salary ($4000) and will match the rest of the salary with institutional funding. She will work with PI AbuBakar to coordinate with the partners involved in this project collaboration. She will work with Key Personnel to ensure that all relevant permits such as IRB/IBBC are submitted and approved. She will work closely with Key Personnel on various parts of the project. She will also work closely with Key Personnel Khor in authoring peer-reviewed publication describing the findings from the project.

Other Personnel. Key Personnel (KP) Khor will commit 6 months p.a. (Y1-OY5) and we will request 2.4 month's salary ($6000). KP Khor will meet with the partners, specifically from the relevant local ministries and agencies to finalize field protocols. He will develop the protocols for the sampling and transportation of samples, laboratory tests procedures and sample/data storage. He will oversee the laboratory testing. He will also be involved in authoring peer-reviewed publication describing the findings from the project. We will support a PhD candidate in molecular virology and epidemiology. He/she will spend at least 2 weeks in the U.S. to be trained in the laboratory testing for henipaviruses and filoviruses. He/she will be responsible for the laboratory testing for henipaviruses and filoviruses. We will hire a project administrator committed to 0.8 month p.a. (Y1-OY5) ($1400). He/she will assist with communication with the local partners and relevant authorities, and other administrative work relevant to the project. A technician will be hired for 4 months p.a. (Y1-OY5) ($6000). He/she will assist in conducting the laboratory testing.

Travel.
International: PhD candidate will visit the U.S. once for meetings/training in the Washington DC area for $4,992, ($2000 airfare + $2,950 ($295*10 days) + $42 misc. travel costs.

Malaysia Domestic: KP Khor and PhD candidate will visit the collection sites (21 sites) twice a year in Y1 ($0.16/km*150km*42 = $1008).

Other Direct Costs

Materials and Supplies. We are estimating at least $4000 p.a. to purchase materials for sampling, such as nitrile gloves, needles, vacutainer, alcohol swabs, plasters, etc. We will need maintenance and calibration for luminex related equipment. On-site assistants will assist in recruitment of individuals for the project, administration of questionnaire, collection of samples and arrangement of delivering the serum samples to TIDREC for laboratory testing. The on-site assistants will be paid $5 per sample collected, and we estimate a total of 1000 samples to be collected a year (Y1-OY5) ($5000). We are budgeting $2500 p.a. for services to transport the collected samples from the collection sites to TIDREC. We are budgeting $500 p.a. for computer software licenses such as Avira, Bitdefender or AVG.

Indirect Costs. We are requesting indirect cost of 10% on all direct costs as applied by our institution.

Tuition. We are budgeting $4000 p.a. per student to partially cover the tuition for the PhD program at University of Malaya and living expenses for Y1.

Indirect Costs: The indirect rate at NMRC-A is $10.66/hour of percent effort. For Co-PI Pike, the indirect cost rate is $1840.34 ($10.66 (seat rate)*0.083(percent effort)*2080 (hours/year)=$1840.34)

Naval Medical Research Center – Asia (NMRC-A): Y2

Co-PI Salary: Co-PI Pike will commit 2 month percent effort (Y1-OY5). However, the conduct of the study is considered part of his official duties as a government employee. She will work with Key Personnel to ensure that all relevant permits such as IRB/IBBC are submitted and approved. She will work closely with Key Personnel on various parts of the project. She will also work closely with Key Personnel Khor in authoring peer-reviewed publication describing the findings from the project.

Other Personnel. Key Personnel (KP) Khor will commit 6 months p.a. (Y1-OY5) and we will request 2.4 month's salary ($6000). KP Khor will meet with the partners, specifically from the relevant local ministries and agencies to finalize field protocols. He will develop the protocols for the sampling and transportation of samples, laboratory tests procedures and sample/data storage. He will oversee the laboratory testing. He will also be involved in authoring peer-reviewed publication describing the findings from the project. We will support a PhD candidate in molecular virology and epidemiology. He/she will spend at least 2 weeks in the U.S. to be trained in the laboratory testing for henipaviruses and filoviruses. He/she will be responsible for the laboratory testing for henipaviruses and filoviruses. We will hire a project administrator committed to 0.8 month p.a. (Y1-OY5) ($1400). He/she will assist with communication with the local partners and relevant authorities, and other administrative work relevant to the project. A technician will be hired for 4 months p.a. (Y1-OY5) ($6000). He/she will assist in conducting the laboratory testing.

Travel.
KP Khor and PhD candidate will visit the collection sites (21 sites) twice a year in OY4 ($0.16/km*150km*42 = $1008).

Other Direct Costs

Materials and Supplies. We are estimating at least $5000 p.a. to purchase materials for sampling, such as nitrile gloves, needles, vacutainer, alcohol swabs, plasters, etc. We will need maintenance and calibration for luminex related equipment p.a. ($8000). On-site assistants will assist in recruitment of individuals for the project, administration of questionnaire, collection of samples and arrangement of delivering the serum samples to TIDREC for laboratory testing. The on-site assistants will be paid $5 per sample collected, and we estimate a total of 1000 samples to be collected a year (Y1-OY5) ($5000). We are budgeting $2500 p.a. for services to transport the collected samples from the collection sites to TIDREC. We are budgeting $500 p.a. for computer software licenses such as Avira, Bitdefender or AVG.

Indirect Costs. We are requesting indirect cost of 10% on all direct costs as applied by our institution.

Tuition. We are budgeting $4000 p.a. per student to partially cover the tuition for the PhD program at University of Malaya and living expenses for OY4.

Indirect Costs: The indirect rate at NMRC-A is $10.66/hour of percent effort. For Co-PI Pike, the indirect cost rate is $1840.34 ($10.66 (seat rate)*0.083(percent effort)*2080 (hours/year)=$1840.34)

Naval Medical Research Center – Asia (NMRC-A): OY5

Co-PI Salary: Co-PI Pike will commit 2 month percent effort (Y1-OY5). However, the conduct of the study is considered part of his official duties as a government employee. Therefore, we are not requesting any salary for Dr. Pike. Dr. Pike will serve as the lead DoD liaison, providing local collaborative project management, on-site technical expertise, assist with quality control/assurance, and provide additional support to project collaborators as needed.

Travel: Co-Pike will conduct one 5-day trip twice per year (Y1-OY5) from NMRC-A in Singapore to KL for project oversight and management. We estimate each trip to cost $1,580, ($265 RT airfare + $1,315 ($263*5 days). Total travel for OY5 will be $3,160.

Contracts: NMRC-A will subcontract with the University of Malaya (UM) for all field and laboratory work conducted within the scope of this proposal. Estimated contract costs are $45K/year (Y1-OY5). See accompanying UM budget below.

Tropical Infectious Diseases Research and Education Centre (TIDREC): OY5

PI Salary. PI AbuBakar will commit 1 month p.a. (Y1-OY5). We will request 0.4 month's salary ($4000) and will match the rest of the salary with institutional funding. PI AbuBakar will meet with Project Leader and other PIs involved in this project collaboration. He will work with Co-PI Chang and Key Personnel to meet with the relevant ministries and agencies in Malaysia to initiate the project. Co-PI Chang will commit 2 months p.a. (Y1-OY5) to the project. We will request 0.8 month's salary ($4000) and will match the rest of the salary with institutional funding. She will work with PI AbuBakar to coordinate with the partners involved in this project collaboration. She will work with Key Personnel to ensure that all relevant permits such as IRB/IBBC are submitted and approved. She will work closely with Key Personnel on various parts of the project. She will also work closely with Key Personnel Khor in authoring peer-reviewed publication describing the findings from the project.

Other Personnel. Key Personnel (KP) Khor will commit 6 months p.a. (Y1-OY5) and we will request 2.4 month's salary ($6000). KP Khor will meet with the partners, specifically from the relevant local ministries and agencies to finalize field protocols. Indirect Costs. We are requesting indirect cost of 10% on all direct costs as applied by our institution.

Tuition. We are budgeting $4000 p.a. per student to partially cover the tuition for the PhD program at University of Malaya and living expenses for OY5.

Indirect Costs: The indirect rate at NMRC-A is $10.66/hour of percent effort. For Co-PI Pike, the indirect cost rate is $1840.34 ($10.66 (seat rate)*0.083(percent effort)*2080 (hours/year)–$1840.34)

The Henry M. Jackson Foundation at Uniformed Services University of the Health Sciences (USU): Y1

PI Salary. Co-PI Christopher C Broder will commit 1.0 months p.a. (Y1-OY5), though no salary is requested for Broder, as he is funded by other funding organizations. Co-PI Broder will coordinate and oversee the efforts of a research assistant, postdoctoral fellow and a graduate student. The work on this project will be performed by Broder and the personnel listed below.

Other Personnel. The postdoctoral fellow, Eric Laing, will commit 12 months p.a. (Y1-OY5) to this project. In Year 1, we request $48,000. Laing will be the USU key personnel training and conducting the on-site Luminex training modules in the Malaysian laboratories along with consultant, Gary Crameri. Laing will also help oversee the training of Malaysian graduate students or staff who will visit the USU lab for training on the concepts and practice of viral glycoprotein antigen preparation for use in Luminex and other serological assays such as ELISA. Laing's salary will increase each year by 3.0%. The research technician, Lianying Yan, will commit 6 months p.a. (Y1-OY5) to this project. In Year 1, we request $25,243. Yan will help oversee the training of Malaysian graduate students and staff who will visit the USU lab for training in the concepts and practice of viral glycoprotein antigen preparation for use in Luminex and other serological assays such as ELISA. The graduate student, Sofia DeSilva, will commit 6 months p.a. (Y1-OY4) to this project. In Year 1, we request $17,800. DeSilva will help oversee the training of Malaysian graduate students or staff who will visit the USU lab for training in the concepts and practice of viral glycoprotein antigen preparation for use in Luminex and other serological assays such as ELISA, and also VSV-based reporter virus neutralization assays.

Fringe Benefits. The fringe rate used is 32.32% for Henry M. Jackson Foundation (HJF).

Equipment. N/A

Travel:
Domestic. N/A

International. We request $10,000 for international travel for Co-PI Broder and postdoctorate student Laing for Y1-OY5. Broder and Laing will travel once per year to Malaysia for training purposes. Individually, yearly trip will total $5,000 ($2,000 airfare + $2,630 ($263*10 days) + 370 misc. travel costs.

Other Direct Costs.
Materials and Supplies. In Year 1, we request $22,000 for luminex reagent production and consumables, molecular biology reagents for $2,000 and cell culture materials and supplies for $3,000.

Indirect Costs. The USU On-site overhead rate of 34.74%, less subawards; additional 14.30%, Company-wide G&A rate is applied on the total direct cost less subaward plus the USU on-site overhead rate. For proposals including subawards, additional 1.0% is applied on total subaward cost. The above indirect cost and fringe benefit rates for FY 2016 were proposed to the USAMRAA on September 11, 2015.

The Henry M. Jackson Foundation at Uniformed Services University of the Health Sciences (USU): Y2

PI Salary. Co-PI Christopher C Broder will commit 1.0 months p.a. (Y1-OY5), though no salary is requested for Broder, as he is funded by other funding organizations. Co-PI Broder will coordinate and

oversee the efforts of a research assistant, postdoctoral fellow and a graduate student. The work on this project will be performed by Broder and the personnel listed below.

Other Personnel. The postdoctoral fellow, Eric Laing, will commit 12 months p.a. (Y1-OY5) to this project. In Year 2, we request $49,440. Laing will be the USU key personnel training and conducting the on-site Luminex training modules in the Malaysian laboratories along with consultant, Gary Crameri. Laing will also help oversee the training of Malaysian graduate students or staff who will visit the USU lab for training on the concepts and practice of viral glycoprotein antigen preparation for use in Luminex and other serological assays such as ELISA. Laing's salary will increase each year by 3.0%. The research technician, Lianying Yan, will commit 6 months p.a. (Y1-OY5) to this project. In Year 2, we request $26,000.29. Yan will help oversee the training of Malaysian graduate students and staff who will visit the USU lab for training in the concepts and practice of viral glycoprotein antigen preparation for use in Luminex and other serological assays such as ELISA. The graduate student, Sofia DeSilva, will commit 6 months p.a. (Y1-OY4) to this project. In Year 2, we request $17,801. DeSilva will help oversee the training of Malaysian graduate students or staff who will visit the USU lab for training in the concepts and practice of viral glycoprotein antigen preparation for use in Luminex and other serological assays such as ELISA, and also VSV-based reporter virus neutralization assays.

Fringe Benefits. The fringe rate used is 32.32% for Henry M. Jackson Foundation (HJF).

Equipment. N/A

Travel:
Domestic. N/A

International. We request $10,000 for international travel for Co-PI Broder and postdoctoral student Laing for Y1-OY5. Broder and Laing will travel once per year to Malaysia for training purposes. Individually, yearly trip will total $5,000 ($2,000 airfare + $2,630 ($263*10 days) + 370 misc. travel costs. In Year 2, two Malaysian lab staff members will travel to the USU lab for training for a total of $10,000. We request $5,000 per person, ($2,000 + $2,916 ($243*12 days) + $84 misc. travel costs.

Other Direct Costs.
Materials and Supplies. In Year 2, we have budgeted $22,000 for Luminex reagent development and consumables, a new generic protein (from newly discovered viruses) development and production is budgeted for $16,250 (partially outlines below). We will purchase molecular biology reagents for $2,000 and cell culture materials and supplies for $3,000.

Table 1: Time and material expense for producing-5mg soluble viral glycoprotein of a henipavirus or filovirus (a new unknown virus)

Items	Time	Description	Unit price$	Quant. required	Total in $
Gene synthesis		Companies(GenScript)	750/gene	1	750
Gene amplification	2 wks	E. coli competent cell	380/kit	0.1	38

Universiti Putra Malaysia (UPM): Y1

Other Personnel. Key personnel, Dr. Latiffah Hassan, will commit 2.0 months p.a. (Y1-OY5). In Year 1, we request $5,000 salary for 2.0 months p.a. Dr. Hassan will work with Co-PI Mr. Tom Hughes (Conservation Medicine, Ltd.) to coordinate in-country lab and field activities and will be the main contact for personnel at UPM. We will hire a lab technician for Y1-OY5. In Y1, we will only hire the technician for 1 month, at $600 per month, in order to prepare the lab for receiving a Luminex machine and a training workshop in Y2 and to help develop the Farm study. Beginning in Y2, we will request full 12 months of salary through OY5. A PhD student will work full time on this project, beginning in Y1, who will be co-supervised by PI Epstein. For Y1, the PhD student will receive $12,000 for project costs, which include supplies and field costs.

Travel.
Domestic.
In Y1, we request $6,000 for travel. Travel will include transportation costs for Dr. Hassan and the PhD student to and from field sites in Malaysia.

Indirect costs. We are requesting $4,956 (21% of direct costs) for administrative and personnel costs.

Universiti Putra Malaysia (UPM): Y2

Other Personnel. Key personnel, Dr. Latiffah Hassan, will commit 2.0 months p.a.. In Year 2, we request $5,000 salary for 2.0 months p.a. Dr. Hassan will work with Co-PI Mr. Tom Hughes (Conservation Medicine, Ltd.) to coordinate in-country lab and field activities and will be the main contact for personnel at UPM. In Year 2, we request $7,200 for 12 months salary for the lab technician to facilitate the farm study, test livestock samples, and oversee Luminex installation and maintenance at UPM. A PhD student will work on this project from UPM, who will be co-supervised by Dr. Hassan and Dr. Epstein. For Y2, the PhD student will receive $12,000 for project costs, which include supplies and field costs.

Travel.
Domestic.
In Y2, we request $6,000 for travel. Travel will include transportation costs for Dr. Hassan and the PhD student to and from field sites in Malaysia.

Indirect costs. We are requesting $6,342 (21% of direct costs) for administrative and personnel costs.

Universiti Putra Malaysia (UPM): Y3

Other Personnel. Key personnel, Dr. Latiffah Hassan, will commit 2.0 months p.a.. In Year 3, we request $5,000 salary for 2.0 months p.a. Dr. Hassan will work with Co-PI Mr. Tom Hughes (Conservation Medicine, Ltd.) to coordinate in-country lab and field activities and will be the

main contact for personnel at UPM. In Year 2, we request S7,200 for 12 months salary for the lab technician to facilitate the farm study, test livestock samples, and oversee Luminex installation and maintenance at UPM. A PhD student will work on this project from UPM, who will be co-supervised by Dr. Hassan and Dr. Epstein. For Y3, the PhD student will receive $12,000 for project costs, which include supplies and field costs.

Travel.
Domestic.
In Y1-OY5, we request $6,000 for travel. Travel will include transportation costs for Dr. Hassan and the PhD student to and from field sites in Malaysia.

Indirect costs. We are requesting S6,342 (21% of direct costs) for administrative and personnel costs.

Universiti Putra Malaysia (UPM): OY4

Other Personnel. Key personnel, Dr. Latiffah Hassan, will commit 2.0 months p.a. (Y1-OY5). In OY4, we request $5,000 salary for 2.0 months p.a. Dr. Hassan will work with Co-PI Mr. Tom Hughes (Conservation Medicine, Ltd.) to coordinate in-country lab and field activities and will be the main contact for personnel at UPM. In Year 2, we request $7,200 for 12 months salary for the lab technician to facilitate the farm study, test livestock samples, and oversee Luminex installation and maintenance at UPM. Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia PI: J.H. Epstein, EcoHealth Alliance, CBEP-TA.6 CC WMD GRANT # 11985842

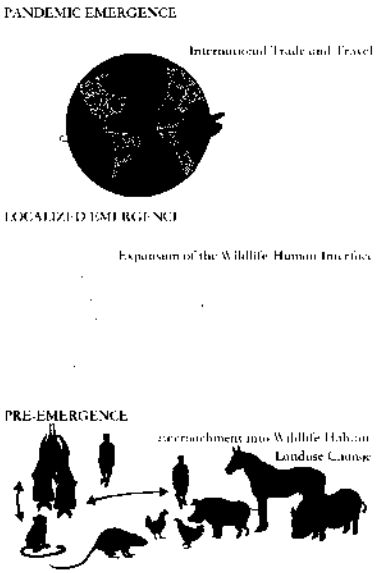
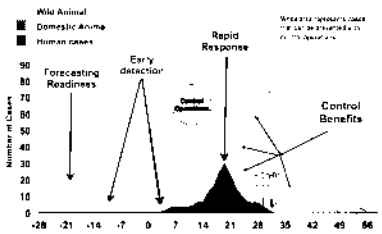
Objective: To enhance capacity within the Government of Malaysia human and animal health sectors to detect antibodies to all known and novel filoviruses and henipaviruses in wildlife, livestock and people, via active surveillance. This will accelerate detection and response to spillover and emergence events.

Method: Wildlife reservoirs in Malaysia may carry Nipah virus, Ebola virus and potentially unknown related viruses that could threaten livestock and public health. This project brings together partners in wildlife, human health, and agricultural government sectors (One Health) and establishes state-of-the art diagnostics to detect all filoviruses and henipaviruses in wildlife, livestock and people with high animal exposure (e.g. hunting communities & farmers).





surveillance in animals and people at high risk to detect & respond to spillover earlier

Status of effort: Memorandum of Agreement established with three Govt. of Malaysia departments; ongoing active collaboration under USAID PREDICT; biological samples collected from > 900 bat and primate species and 100 people; 22 reagents for filo and henipavirus antibody detection produced and validated.

Personnel Supported: 12 Researchers, 2 University Faculty, 4 Graduate Students, 1 Post-Doctoral Fellow, 5 Scientific Advisors; 3 lab research assistants/techs

Publications & Meetings: >35 peer-reviewed papers 2015 >10 presentations at National and International Science, Medicine, or Policy forums and conferences.

Major Goals and Milestones:

- Enhance local capacity for science & zoonotic disease surveillance Years 1-3 & Option Years 4-5
- Establish multiplexed pan-filovirus & pan-henipavirus serological assays in Govt. of Malaysia labs in wildlife, livestock, and human health sectors Years 1-3.
- Conduct serological surveillance to detect zoonotic pathogens & transmission in humans and animals at high risk interfaces – Years 1-3 & Option Years 4-5

Funding Profile: $816,818 Y1 (10/16-9/17) $820,195 Y2, $718,529 Y3, $729,541 OY4, $681,487 OY5

Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia / Epstein
CBEP-Thrust Area 6, CC WMD

Statement of Work

Project Title: Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia

Document Date: May 2016

Objective: The objective of this project is to enhance capacity within the Malaysia government to characterize the distribution of and detect spillover of novel and known henipaviruses and filoviruses, (both groups include high consequence zoonotic pathogens) in indigenous populations and farms in Peninsular Malaysia. Current surveillance strategies for novel zoonotic viruses rely exclusively on molecular detection tools, but Nipah and Ebola viruses are present at low prevalence in bat species which makes infected individuals difficult to detect. By establishing a multiplexed serological assay developed to detect antibodies against any henipa- and filoviruses, the Government of Malaysia (GoM) will more effectively be able to determine the distribution of these high-impact viruses in wildlife reservoirs and detect evidence of spillover in at-risk human or livestock populations. This enhancement of human and animal surveillance in all three sectors (wildlife, livestock and human health) and training of Malaysian scientists utilizes a One Health approach and will help reduce risk of zoonotic disease emergence and spread by accelerating detection and response. These activities fulfill DTRA CBEP's mandate and are also complementary to and supportive of the aims of the USAID EPT program and the Global Health Security Agenda.

Scope: This research includes transferring state-of-the art serological reagents and Luminex-based microsphere beaded technology that will allow the Government of Malaysia to use a One Health approach to conduct serological surveillance for all known *and unknown* henipaviruses and filoviruses in wildlife, domestic animals, and humans. The study will test archived human and wildlife serum samples which are linked to PCR-tested oral, rectal, or urogenital swab samples (collected and tested under the ongoing USAID Emerging Pandemic Threats: PREDICT program and a University of Malaya study of Orang Asli healthy populations and acutely febrile hospital cases). It will also conduct a new study looking at henipa- and filovirus antibodies in livestock and farm workers and wildlife near the farms, as well as an expanded Orang Asli study focused on hunting communities living in the forest. The grantee will investigate spillover of these pathogens by screening wildlife reservoirs (e.g. bats and nonhuman primates), people, and livestock for IgG antibodies to henipaviruses and filoviruses, while also continuing to develop and transfer additional tests that will detect antibodies against novel viruses in these groups.

Our team will focus on the following major goals and milestones:

1. Improve the Government of Malaysia's capacity to conduct serological surveillance for henipaviruses and filoviruses in human and animal populations, using a One Health approach.
    - Transfer Luminex-based technology into government and university diagnostic labs in three key sectors (wildlife, livestock, and human health); conduct trainings for staff to be able to screen samples, interpret results, and perform confirmatory assays; train local graduate students; and publish and share findings among GoM partners.
2. Determine the host distribution and seroprevalence of henipaviruses and filoviruses in wildlife (e.g. bat) populations in Peninsular Malaysia associated with Orang Asli communities and livestock farms.

- Conduct cross-sectional serological studies of humans and animals for henipa- and filoviruses by testing sera from new samples collected under this project and archived samples from PREDICT. Wildlife sampling will be conducted jointly with the Dept. of Wildlife and National Parks (DWNP); livestock sampling with DVS and UPM; and human sampling with MoH. These activities provide opportunity for One Health-based disease surveillance; threat reduction; and capacity building within the Government of Malaysia.

3. Conduct surveillance for IgG antibodies against filoviruses and henipaviruses in people and domestic animals which may indicate spillover from wildlife reservoirs. Sampling activities will focus on Orang Asli communities and farms in Peninsular Malaysia and will be conducted jointly with the Ministry of Health's National Public Health Laboratory (NPHL), DWNP, and the University Putra Malaysia under the Department of Veterinary Services (DVS). Serological surveillance will allow the GoM to focus limited resources and develop interventions to reduce threat from viral outbreaks in at-risk animal and human populations.

- Qualitative studies (e.g. questionnaires) detailing human-animal contact where sampling occurs will characterize high-risk behaviors and interfaces;
- Sampling human, wildlife, and domestic animal populations in Orang Asli forest communities that practice hunting.
- Sampling domestic animals and farm workers on large and small-scale farms and associated wildlife to identify evidence of spillover.

Our research will be focused on building capacity within the Government of Malaysia to conduct serological surveillance in human and animal populations in Peninsular Malaysia where people and animals are believed to have high levels of contact. Collaborators from the Government of Malaysia (GoM)'s Department of Wildlife and National Parks (DWNP), the Ministry of Health's National Public Health Laboratory (NPHL), the Department of Veterinary Service's University Putra Malaysia (UPM), University of Malaysia (UM), The Uniformed Services University, Maryland (USU), Conservation Medicine, Ltd. (CM), The US Navy Medical Research Center, Asia (NMRC-A), and Duke-NUS Graduate Medical School, Singapore (Linfa Wang lab) will play active roles in this research. EHA's history of successful collaboration with DWNP, MoH, and DVS under prior research projects and most recently through PREDICT, as well as having a Memorandum of Agreement with the aforementioned institutions, gives us confidence that we will be able to achieve the aims of this proposal (also see letters of collaboration).

The duration of the proposed project is three years, with optional 4th and 5th years containing follow-up Orang Asli studies and farm studies so that we have longitudinal data. These option years will significantly strengthen the overall study by enhancing our ability to detect temporal patterns of infection in bat and other animal populations as well as additional opportunity to detect spillover in humans or livestock. **Through these proposed activities we would create enhanced One Health surveillance for known *and novel* henipaviruses and filoviruses in human and animal populations in Peninsular Malaysia, an emerging disease hotspot**. The proposed activities would significantly support Malaysia's surveillance priorities, DTRA CBEP Thrust Area 6 objectives, the Global Health Security Agenda (GHSA), and the USAID Emerging Pandemic Threats program by allowing the Government of Malaysia to more rapidly detect infections of high impact zoonotic agents and develop effective interventions to prevent viral

outbreaks and reduce human and animal mortality, thereby reducing the threat from these high consequence viral agents.

Background:

Nipah virus (NiV), Ebola virus (EBOV) and Marburg Virus (MARV) are emerging zoonotic viruses belonging to the genera *Henipavirus* (Family *Paramyxoviridae*), *Ebolavirus* and *Marburgvirus* (both Family *Filoviridae*) and they have each caused outbreaks in people with high mortality rate. These viruses are listed as a select agents by HHS and USDA as pathogens of significant threat to both human and animal health. Nipah virus (NiV) is a zoonotic paramyxovirus (genus *Henipavirus*) with pandemic potential that first emerged on a pig farm in Malaysia in 1997 and led to a human outbreak with more than 260 cases and 40% mortality. Old world frugivorous bats, particularly Genus *Pteropus* (Family *Pteropodidae*), are natural reservoirs for a range of henipaviruses, including Nipah virus. Filoviruses circulate both in Africa and Southeast Asia, and have also been linked to bat reservoirs. In Africa, EBOV and Sudan virus (SUDV) have caused multiple human outbreaks with mean mortality rates between 50% and 90%. The current EBOV outbreak in West Africa, by far the largest Ebola epidemic in history, has had more than 28,600 cases, primarily in Sierra Leone, Guinea, and Liberia, with a mortality rate of 40%. The outbreak in West Africa has prompted the Government of Malaysia to determine whether filoviruses are circulating in bat species resident in Peninsular Malaysia. Malaysia's experience with Nipah virus, existing technical expertise, and its current commitment to using a One Health approach to disease surveillance (e.g. surveillance for novel zoonoses under PREDICT in all three sectors: wildlife, livestock, and human health) make it an ideal place to establish an advanced serological platform for detection of henipavirus and filovirus antibodies in wildlife and at-risk livestock and human populations.

Preliminary data: Serological studies of Nipah virus and Ebola virus using the Luminex-based platform. Studies conducted by our group have shown that NiV viral prevalence in pteropid bats is low (~1%-3%) and there is temporal variation to shedding. Mean seroprevalence in *P. vampyrus,* which is found across Peninsular Malaysia was 32% (n=253; range 16.7% - 42.4%). In Bangladesh, we conducted a 6-year longitudinal study of *Pteropus giganteus* using the Luminex-based platform to screen bats for IgG antibodies against both Nipah virus and Ebola virus Zaire. Between 20% and 80% of adult *Pteropus giganteus* were NiV seropositive, while between 20% and 50% were EBOV seropositive (Epstein et al, *in prep*). Nipah virus infections appear to peak in June/July while EBOV appears to peak in December (see also Project Narrative). We found a diversity of genetic strains of Nipah virus in *P. giganteus* (Epstein et al., *in prep*), and viruses which are NiV-like but distinct henipaviruses. Non-neutralizing antibodies against NiV-like viruses found in goats, cattle, and pigs in Bangladesh suggests that spillover from bats to domestic animals occurs and that there is a broad spectrum of henipaviruses circulating in bats. RESTV RNA was recently identified by our group in *Mineopterus schreibersii,* a common insectivorous bat. We also detected RESTV antibodies in two fruit bat species: *Cynopterus brachyotis* and *Pteropus vampyrus:* the latter is a NiV reservoir. In Bangladesh, we found antibodies against EBOV and RESTV in 3.5% of *Rousettus leschenaultii* (n=141). *M. schreibersii*, *R. leschenaultii*, and two *Pteropus* species, including *P. vampyrus* all occur in Malaysia, yet there is no data available regarding filoviruses in wildlife in Malaysia. The possibility that multiple henipaviruses or filoviruses capable of infecting people or livestock

to be circulating in bats in Malaysia makes enhanced surveillance and early detection of these high consequence viruses critically important for reducing their threat to public health.

PREDICT
Between 2009 and 2015, EHA, CM, and the Department of Wildlife and National Parks (DWNP) have collected and archived samples, including serum, from more than 1,400, animals including bats, rodents, and macaques all from areas where people and wildlife come into contact. While oropharyngeal, urogenital, and rectal swab samples have been or will be screened using PCR assays for viral families (including paramyxoviruses and filoviruses), corresponding sera remain archived (and untested) and will be made available for this project to test them using the Luminex-based assay.

University Malaya study of acutely ill Orang Asli patients.
We will also have access to archived and newly collected Orang Asli samples collected from acutely febrile patients at Gombak Hospital that serves the Orang Asli communities, under a separate ongoing disease study at the University of Malaya (Prof. Abu Bakar) and NMRC-A (Co-PI Pike). This study just received renewed funding to continue sampling febrile patients and expand to sample asymptomatic Orang Asli from communities across a land-use gradient, which will include individuals without animal exposure. Under this proposal we will screen sera collected from well characterized Orang Asli patients and community members using the Luminex-based platform.

***Tasks/Scientific Goals:* (Format: Year #(s). Task #. Sub-task#)**

Task 1: (Year 1-OY5). Enhance capacity within Malaysia to conduct serological surveillance for henipa- and filoviruses. The GoM has been engaged in using a One-Health approach to zoonotic disease surveillance since the NiV outbreak in 1998 and most recently via collaborations with EHA under PREDICT. However, current GoM and PREDICT surveillance activities in humans, wildlife and domestic animals are based on broad molecular assays designed to identify novel viruses (including henipaviruses and filoviruses). One of the challenges with this approach is that Nipah, Ebola, and related viruses tend to be acute and asymptomatic infections in bats, making detection of viral RNA challenging. IgG antibodies,

however, persist in bats (as well as people and livestock), reducing the sampling effort necessary to identify exposed or infected individuals in a population and also allowing for detection of asymptomatic carriers. Adding a serological component to existing surveillance will greatly enhance the government's ability to detect both known and unknown henipa- and filoviruses in wildlife, domestic animals and human populations at risk for spillover. To establish this capacity, we will provide a BioRad Bio-Plex 200 machine with computer console to NPHL and DWNP. We will provide all reagents for henipa- and filovirus assays. Following Bio-Plex installation, we will conduct a 10-day training course for lab technicians at DWNP and another at NPHL. UM has a Luminex machine and will receive assay reagents and lab staff will participate in one of the training workshops. 1 PhD student at USU will develop additional assay reagents in Y1-OY5. We will identify *either* 1 PhD or 2 Masters' students at UM and 1 PhD student at UPM to train under this project. We will provide additional training to technical staff from GoM partner labs in viral pseudo-type assay development at USU. The grantee shall:

1.1.1. Transfer BioRad Bio-Plex 200 to NPHL and DWNP labs;

1.1.2-2.1.2. Transfer Luminex-based filovirus and henipavirus reagents to DWNP, NPHL, and UM labs; the grantee will provide a BioRad Bio-Plex 200 to UPM and conduct a 10-day training workshop in Y2.

1.1.3.-2.1.3 Train lab staff to use Luminex-based assays

1.1.4- OY5.1.4 Supervise 1 UM PhD or 2 Masters' students (Y1-3), and 1 UPM PhD student

1.1.5-OY5.1.5 Convene the Science Advisory Group (annually in KL);

1.1.6-2.1.6 Develop a database for serology results and sample metadata; establish sample repository at partner labs.

Task 2. (Y1-OY5) Develop and validate Luminex-based reagents to detect henipa- and filovirus antibodies. At USU, we will engineer soluble and secreted versions of henipa- and filovirus glycoproteins, expressed in mammalian cell culture systems to accurately reflect proper synthesis including their assembly and processing into properly glycosylated higher order complexes. Constructs will be designed and tested in pilot experiments for expression and analysis, and then used to establish stably expressing cell lines. Preparative amounts of the various soluble viral glycoproteins will be made using serum-free culture conditions in suspension culture, and proteins are purified using the appropriate tag protocol (either S-tag or double strep tag (TST)) by affinity chromatography, followed by concentration and size exclusion chromatography. We will test the utility of each individual glycoprotein by Luminex, ELISA and Western blotting then provide all necessary reagents to partner labs to accomplish the testing under this project. The grantee shall:

1.2.1-2.2.1 produce Mojaing virus (MojV) and African GH-M74a G glycoproteins; Bundibugyo virus (BDBV), Tai Forest virus (TAFV), Lloviu virus (LLOV), MARV Ravn, SUDV, SUDV GpΔmucin, RESTV (monkey), and RESTV (porcine) Gp glycoproteins.

1.2.2-3.2.2 use the completed viral glycoprotein preparations and produce polyclonal rabbit serum to each individual glycoprotein; test the utility of each individual glycoprotein by Luminex-based, ELISA and Western blotting assays;

1.2.3 Provide N protein reagents to detect novel henipa- and filoviruses to partner labs.

1.2.4-OY5.2.4: If novel henipa- or filoviruses are detected using molecular assays (under

PREDICT), grantee may develop new reagents for antibodies against these viruses and negative sera will be re-screened.

Task 3. Screen archived serum samples from wildlife and Orang Asli for henipa- and filovirus antibodies using a Luminex-based platform (Y1-Y2). Grantee shall test up to 945 macaque and 175 bat archived serum samples collected under PREDICT and stored at DWNP, and up to 300 archived Orang Asli samples stored at NPHL, and up to 200 Orang Asli samples at UM. The number of samples will depend on available serum volume and quality. Results will be used to inform the Orang Asli and farm studies described in **Tasks 4 and 5**. Positive sera may be sent for confirmatory testing at USU using pseudovirus serum neutralization assays, ELISA, or Western blot. Results shall be entered into a database and shared with GoM partners.

1.3.1 Identify suitable archived animal and human sera;
1.3.2 Screen sera for henipa- and filovirus IgG antibodies at GoM and UM partner labs;
1.3.3 Confirm positive results using western blot or pseudovirus assay;
1.3.4 Enter results into database and analyze;
1.3.5-2.3.5 share results with partners.

Task 4. Serological survey of Orang Asli who hunt, wildlife, and peri-domestic animals. (Y1-OY5). Indigenous communities living in forested areas and that practice subsistence wildlife hunting are at higher risk of exposure to zoonotic viruses due to handling and butchering wildlife and therefore contact with bodily fluids. In **Y1** of this project, we will apply for IRB ethical approval to continue and expand from a pilot study currently underway (expected completion: Oct 2016). Pending IRB and IACUC approval, CM, MoH, and DWNP will work together in **Y1-Y2** to sample 100 individuals from each of 3 Orang Asli communities in Perak State (incl. Kuala Lipis and Gua Musang), **totaling 600 human blood samples over five years**. 100 people sampled per community will allow us to detect a seropositive individual with 95% confidence at a prevalence of 3%, assuming a population of 500 individuals. We will also aim to sample blood from 50 bats per each of 3 species around each study village (e.g. *Miniopterus*, *Pteropus*, and *Rousettus* spp); 30 nonhuman primates; and 30 dogs, if present, in order to be able to detect henipa- or filovirus antibodies in an individual with 95% confidence given a 5% seroprevalence (in bats) and 10% in dogs and nonhuman primates. MOH officers and CM will collect blood from Orang Asli and associated animals, and serum will be separated either in the field or at partner labs and stored at -86C at prior to testing. A sample size of 50 bats would allow us to detect differences between study locations (or time points, should we conduct follow-up studies) of 56% with 95% confidence and 80% precision. The grantee shall conduct repeated sampling of Orang Asli and peri-domestic livestock and wildlife in the same communities in Y3-OY4. If novel henipa or filoviruses identified by PREDICT, new assays will be developed in OY4 and negative samples re-tested. Molecular and serological data from Orang Asli will be co-analyzed in OY4-OY5. In addition, we will test sera collected through an ongoing UM study of Orang Asli. Up to 500 samples per year will be collected Y1-OY5, and these will be tested using the Luminex-based platform at UM. Positive samples will be confirmed at UM or USU.
The grantee shall:

1.4.1.-OY5.4.1 Test Orang Asli, wildlife, and peri-domestic animal samples collected under PREDICT and UM studies
1.4.2-2.4.2, Y3.4.2, OY4.4.2-OY5.4.2. Enter results into database and analyze data;
1.4.3 – 2.4.3, Y3.4.3, OY4.4.3 Confirm sero-positive samples;

1.4.4. Develop follow-up study with GoM partners to be implemented in Y3.
2.4.5 Apply for IRB and permits for follow-up study
3.4.6 Implement repeated sampling in Orang Asli villages
3.4.7 Analyze longitudinal data
OY4.4.1. If new viruses found by PREDICT, develop new sero assay and re-test samples
OY4.4.2.-OY5.4.2 Confirm additional test results and co-analyze molecular and sero data

Task 5. Develop serological study of farm workers, livestock, and wildlife around farms. (Y1-OY5) Grantee shall conduct a serological survey of farm workers and animals living on or around 2 large-scale farms (>5000 ruminants and/or pigs) and 2 small-scale farms (500-1000 ruminants and/or pigs) in Peninsular Malaysia to detect exposure to henipa- or filoviruses. Grantee shall work with DWNP to sample bats, macaques and dogs proximal to farms; and with MoH to conduct qualitative research and collect blood samples from farm workers to screen for henipa- and filovirus antibodies. Grantee will work with UPM to sample and test livestock. In Y1 grantee will select appropriately sized farms. Grantee shall also locate bat caves or roosts proximal to each farm, meet farm owners, and characterize the livestock. Grantee shall apply for all necessary IRB and IACUC approvals. Grantee may commence sampling in Y2, pending approvals, and conduct a follow-up study in OY4 and OY5 (if funded). The grantee shall:

1.5.1 Meet with GoM partners to develop study;
1.5.2 Apply for ethical approvals and permits.
1.5.3. Conduct scoping visits to farms, characterize livestock and local wildlife species.
2.5.1-3.5.1 Collect wildlife, livestock, and human samples
2.5.2-3.5.2 Conduct questionnaires with farm workers
2.5.3-3.5.3 Screen samples using Luminex-based assay; confirm results
2.5.4-3.5.4 Enter data into database and analyze results
OY4.5.1-5.5.1 Repeat human, wildlife and livestock sampling at each farm
OY4.5.2-OY5.5.2 Test samples, enter results into database; analyze complete dataset
OY5.5.3 prepare manuscript based on (Y1-OY5) study

Task 6. Disseminate reports to relevant stakeholders (Y1-OY5). Grantee shall synthesize all data collected through the projects described above as well as capacity building activities in Malaysia. Scientific and general reports will be generated and provided to GoM partners and an annual report to DTRA. PhD or Masters' students will complete thesis and present at annual stakeholders meeting in KL or at scientific meeting in Malaysia. Grantee shall meet with GoM partners and SAG in Kuala Lumpur annually, according to schedule. Grantee shall present findings at scientific meetings (e.g. ASTM, ASM Biodefense, IMED, EcoHealth) to present findings according to the schedule.

1.6.1-OY5.6.1 submit progress reports to DTRA.
1.6.2-OY5.6.2 Complete annual report to local stakeholders.
1.6.3-OY5.6.3 Conduct presentations/meetings at times and places specified in the grant schedule, including DTRA Annual Technical Review.
1.6.4-OY5.6.4 Conduct annual stakeholder meetings.
3.6.5. Prepare comprehensive project report for GoM
3.6.7, OY5.6.7 UM Graduate students present thesis to committee and prepare publication in peer reviewed journal
3.6.6-OY5.6.6 Prepare and submit publications to disseminate study findings.

Project Timeline

Task	Y1	Y2	Y3	OY4	OY5
1. Enhance capacity in Malaysia for serological surveillance for all henipaviruses and filoviruses					
1.1. Transfer BioRad Bio-Plex 200 in NPHL, DWNP, and UPM labs					
1.2 Transfer serological reagents to NPHL, DWNP, UPM, and UM labs					
1.3 Training staff at partner labs					
1.4 Identify graduate students at UM and UPM					
1.5 Convene Science Advisory Group					
1.6 Develop database for serology results and sample metadata					
1.7 Training in pseudovirus development at USU					
2. Develop & validate henipavirus and filovirus reagents.					
2.1 Produce specific henipavirus and filovirus proteins					
2.2 Produce and test monoclonal antibodies against new proteins					
2.3 Transfer henipa and filo N protein assays to partner labs					
2.4. develop/validate proteins and mAbs for novel henipa- & filoviruses					
3.Screen archived wildlife and Orang Asli sera					
3.1 Identify archived wildlife and human sera at NPHL and DWNP					
3.2 Screen sera using Luminex-based platform					
3.3 Confirm positive sera with additional testing					
3.4 Enter results in database / analyze					
4. Sero-survey of Orang Asli and animals					
4.1 apply for IRB/IACUC approval					
4.2 Collect & test serum samples from Orang Asli ~ animals					
4.3 Enter results into database					
4.4 Confirm positive sera with additional testing					
4.5 Conduct follow-up study of Orang Asli and animals					
4.6 Analyze data					
5. Serological study of farm workers, livestock, and wildlife on farms	■	■	■	■	■
5.1 Apply for necessary permits and ethical approval	■	■			
5.2 scoping visits to potential study farms; select farms	■				
5.3 sample farm workers, livestock, and wildlife on farms		■	■		
5.4 follow-up study of farm workers, wildlife and livestock (4 farms)				■	■
5.5 Enter results into database / analyse results		■	■	■	■
6. Disseminate reports to relevant stakeholders					
6.1 annual report toDTRA					
6.2 annual report to government of Malaysia partners					
6.3 attend DTRA annual technical review					
6.4 partner meeting in Malaysia					
6.5 present results at scientific conference (e.g. ASTMH, IMED, ASM)					
6.6 prepare manuscripts for publication in peer-reviewed journal

16. IS APPLICATION SUBJECT TO REVIEW BY STATE EXECUTIVE ORDER 12372 PROCESS?

a. YES ☐ THIS PREAPPLICATION/APPLICATION WAS MADE AVAILABLE TO THE STATE EXECUTIVE ORDER 12372 PROCESS FOR REVIEW ON:

DATE:

b. NO ☒ PROGRAM IS NOT COVERED BY E.O. 12372; OR

☐ PROGRAM HAS NOT BEEN SELECTED BY STATE FOR REVIEW

17. By signing this application, I certify (1) to the statements contained in the list of certifications* and (2) that the statements herein are true, complete and accurate to the best of my knowledge. I also provide the required assurances * and agree to comply with any resulting terms if I accept an award. I am aware that any false, fictitious. or fraudulent statements or claims may subject me to criminal, civil, or administrative penalties. (U.S. Code, Title 18, Section 1001)

☒ **I agree**

**The list of certifications and assurances, or an Internet site where you may obtain this list, is contained in the announcement or agency specific instructions.*

Expiration Date: 6/30/2016

1. Are Human Subjects Involved? ☒ Yes ☐ No

1.a. If YES to Human Subjects

Is the Project Exempt from Federal regulations? ☐ Yes ☒ No

If yes, check appropriate exemption number. ☐ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5 ☐ 6

If no, is the IRB review Pending? ☒ Yes ☐ No

IRB Approval Date:

Human Subject Assurance Number:

2. Are Vertebrate Animals Used? ☒ Yes ☐ No

2.a. If YES to Vertebrate Animals

Is the IACUC review Pending? ☒ Yes ☐ No

IACUC Approval Date:

Animal Welfare Assurance Number:

3. Is proprietary/privileged information included in the application? ☐ Yes ☒ No

4.a. Does this Project Have an Actual or Potential Impact - positive or negative - on the environment? ☐ Yes ☒ No

4.b. If yes, please explain:

4.c. If this project has an actual or potential impact on the environment, has an exemption been authorized or an environmental assessment (EA) or environmental impact statement (EIS) been performed? ☐ Yes ☐ No

4.d. If yes, please explain:

5. Is the research performance site designated, or eligible to be designated, as a historic place? ☐ Yes ☒ No

5.a. If yes, please explain:

6. Does this project involve activities outside of the United States or partnerships with international collaborators? ☒ Yes ☐ No

6.a. If yes, identify countries: Malaysia, Singapore

HDTRA1-14-24-FRCWMD-BAA
Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia

Dear Sir or Madame,

We are pleased to submit a revised Phase II proposal for HDTRA1-14-24-FRCWMD-BAA **Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia.** We have gone through each of the reviewers' comments and responded to them in a separate document which we have included in attachment 3 in the supporting documents. Where appropriate, we have revised content within the full scientific proposal to respond to comments, and we have indicated where changes were made in our response in attachment 3.

The comments were helpful, and we hope that we have sufficiently clarified any questions that the reviewers had. Please do not hesitate to contact me should you require any further clarification.

Sincerely,

Dr. Jonathan Epstein

Principle Investigator
Associate Vice President,
EcoHealth Alliance.

HDTRA1-14-24-FRCWMD-BAA

Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia

Response to reviewers' comments and indication where proposal has been revised in response.

Technical

1) *It is requested that the authors clarify the benefit of the proposed approach to threat detection*

There is growing evidence that zoonotic viruses such as Ebola and Nipah virus, which are select agents and classed as potential bioweapons, are widely circulating in bat hosts throughout Asia and Africa, where infectious disease surveillance capacity is generally poor. As evidenced by the Ebola outbreak in West Africa, virus spilled over from an animal reservoir into people in a remote village in Guinea, resulting in viral spread across borders into three countries before the virus was detected and international agencies could intervene. This project will establish surveillance for select agents in a country that has already experienced an outbreak of Nipah virus which lead to the deaths of more than 100 people in two countries. The outbreak was detected because it occurred on a large pig farm, but it is likely that other spillover events have occurred on smaller farms and gone undetected. Routine serological surveillance for henipaviruses or filoviruses is not currently conducted on farms or in human populations with high levels of contact with bat reservoirs, which means zoonotic transmission may be missed and the possibility for viral amplification and spread within human or animal populations still exists. Further, Ebola surveillance has not yet been established in Malaysia, despite evidence from the Philippines that Reston Ebola virus is present in bat species which also occur in Malaysia. The ability to determine whether people or livestock have been exposed to henipaviruses or filoviruses will help the government of Malaysia develop policy to reduce the risk of transmission events and also provides a means to diagnose exposure from deliberate release of these or related select agents. In addition, little is known about the genetic spectrum of henipaviruses and ebolaviruses in bats, and the Luminex system augments the molecular surveillance tools currently in place via the PREDICT project. Thus, this serological surveillance system benefits risk reduction by enhancing Malaysia's capacity to detect exposure to select agents in livestock and human populations that may have been deliberately released and identify high risk locations and behaviors related to exposure via contact with wildlife reservoirs.

Note: we have made revisions to emphasize/clarify threat reduction in: the Abstract and throughout the proposal, including section III. Relevance.

2) *Although proposed to use samples from an ongoing study of acute febrile illness and patients with a history of animal contact, including cases without the suspected exposure may enable the authors to better quantify risk as well as identify novel risk factors.*

The reviewers are correct, and we have expanded the scope of Orang Asli samples collected under the UM/ NMRC-A study. In addition to the Orang Asli hospital-based study of acute febrile cases at Gombok, funding was just granted to Co-PI Pike and UM Prof. AbuBakar to also conduct community-based serosurveillance of healthy individuals in up to 15 Orang Asli communities that reflect a spectrum of animal exposure from urban communities unlikely to have animal exposure to

more rural communities that may have more contact. This, coupled with our proposed study in forest communities should provide a broad spectrum of exposures and give us the potential to identify novel routes of exposure. A questionnaire will be developed for the new UM study that collects information about a range of behaviors, including consuming dropped fruit, palm sap, and bushmeat. We expect that our analysis from the proposed studies within this proposal will provide valuable insight into the types of behaviors that may be associated with henipavirus and filovirus exposure and allow us to develop more targeted epidemiological studies in the future.

3) *Foodborne transmission of henipavirus has been reported, suggesting that infection may not require direct animal contact. With the current approach, the authors may fail to identify some risk factors.*

The reviewer is correct that in Bangladesh and the Philippines, henipavirus transmission has been food borne (date palm sap and consumption of infected horse, respectively). In Malaysia, there were no documented cases of food borne transmission during the 1998 outbreak. In fact, all cases of NiV encephalitis has exposure to sick pigs. In the Philippines, consumption of infected horse meat led to human infections. It is, of course possible that in Malaysia there are additional behaviors that constitute risk. Date palm sap is not consumed the same way in Malaysia as in Bangladesh. However, we will include questions in our community and hospital based Orang Asli studies about palm sap, sick animal consumption, bushmeat consumption, dropped fruit consumption, and contact with sick livestock to address the possibility food borne and other routes on infection.

Programmatic:

1) *It is requested that the authors provide more information on the relationship between USAID's PREDICT project and the proposal. The critique of the white paper requested that these relationships be explained in greater detail, yet the full proposal has not adequately done so. A diagram(s) of the relationship within the context of the collection and processing of the sera would be helpful.*

   We have further clarified this relationship within the body of the proposal in section II, page 7. In addition, as requested, we have provided the reviewers with a figure showing sampling activities and workflow, as well as specific sample numbers and which partners are collecting and testing them (see below). In simplest terms, this DTRA project will exclusively use serology to investigate henipavirus and filovirus antibodies in biological samples. Because the core team that is responsible for implementing PREDICT activities in Malaysia is EHA and Conservation Medicine Ltd. and we work with the same govt. of Malaysia entities: the Department of Wildlife and National Parks, the Ministry of Health (National Public Health Lab) and the Department of Veterinary services and its vet school, UPM, we are able to screen human and animal serum samples previously collected by PREDICT that will not otherwise be tested.

   The farm study and an expanded Orang Asli study are proposed here, and are unique to this proposal. They will now be fully supported through this project budget (see budget justification). PREDICT will support the additional concurrent collection of swab samples from bats, livestock and people sampled under this study, and the testing of those samples for henipavirus and filovirus *RNA* using PCR. We will co-analyze the molecular and serological data, providing the Government of Malaysia (and USG

stakeholders) with a more robust picture of filoviruses and henipaviruses present in bats, livestock and people.

2) *It is requested that the authors provide a detailed description of each organization's role. It is not clear from the proposal, or the budget, which group will conduct the serological survey sampling.*

We have clarified these details in the proposal under specific tasks and section II Programmatics Partner Institutions and roles. CM will work with MoH personnel to sample Orang Asli and farm workers; with the Department of Wildlife and National Parks to sample wildlife in Orang Asli villages and around farms; with UPM, and State DVS officers to sample livestock on farms. The University of Malaya (UM) will conduct the Orang Asli serological sampling at specific at Gombok Hospital and communities in Selangor under an ongoing and separately funded study with NMRC-A. Our proposed project will support the collection of an additional blood sample by UM, who will also test those samples using Luminex. USU and EHA will provide reagents and Luminex training to each partner lab (NPHL, UPM, DWNP, and UM).

3) *It is requested that the authors provide a work flow diagram and/or a chart, on sample collection strategies (i.e. study sites, sample size, species, agency conducting sampling).*

We have provided these here due to space limitations:

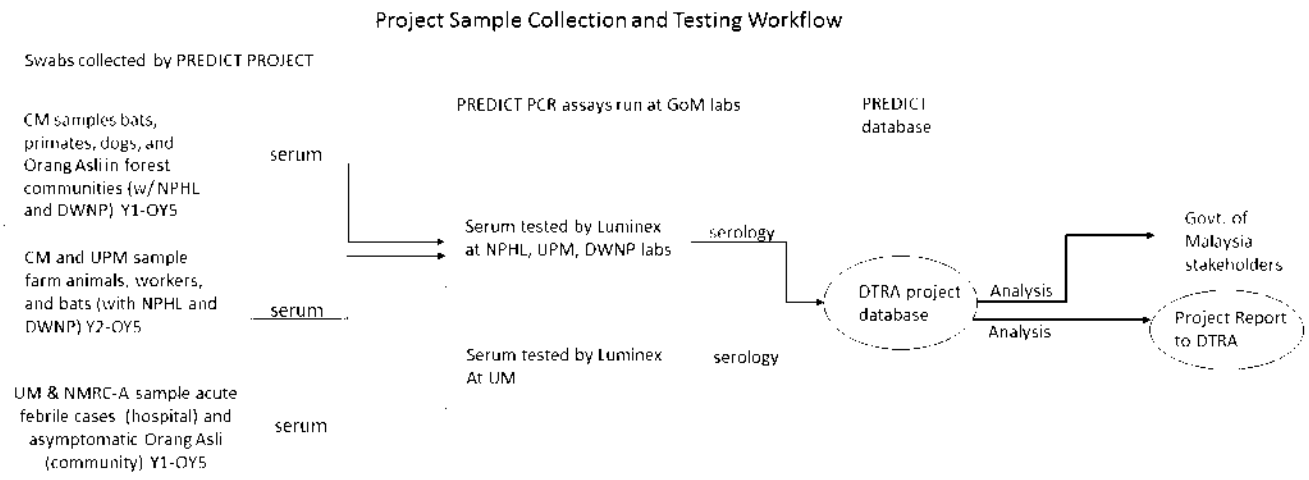

Table 1. Samples collected and tested by task, partner, and diagnostic lab.

Task	Samples Y1-Y2	Samples Y3-OY5	Total Samples Y1-OY5	Samples collected by:	Tested by
3	950 macaque		950 macaque	PREDICT (Archived)	DWNP
3	175 bat		175 bat	PREDICT (Archived)	DWNP
3	300 Orang Asli		300 Orang Asli	PREDICT (Archived)	NPHL
3	200 Orang Asli		200 Orang Asli	UM / NMRC-A (Archived)	UM
4	300 Orang Asli	300 Orang Asli	600 Orang Asli	CM, MoH	NPHL
4	450 bats, 30 NHP	450 bats, 30 NHP	900 bat, 60 NHP	CM, DWNP	DWNP
4	90 dogs	90 dogs	180 dogs	CM	UPM
4	up to 1000 OA	up to 1500 OA	up to 2500 Orang Asli	NMRC-A/UM active project	UM
5	800 bats, 120 NHP	800 bats, 120 NHP	1600 bats, 240 NHP	CM, DWNP	DWNP
5	600 livestock	600 livestock	1200 livestock	UPM, DVS, CM	UPM
5	60 farm workers	60 farm workers	120 farm workers	MoH, CM	NPHL

4) *Recommend assessment of the risk associated with activities (i.e. Year 1-Task 4, Year 1-Task 5, and the technology transfer in Year 2-Task 1) that are described as being in pre-coordination or that may not occur, and provide risk mitigation strategies, such as alternative approaches, or remove activities if risk is assessed to be very high.*

We have resolved all pre-coordination issues with DVS and now have their full support for this proposal and commitment from UPM, the national vet college under DVS, to collaborate under this study (see letters from DVS and UPM). Therefore, we no longer consider any of the proposed activities to be high risk.

Administrative:

5) *It is requested that the authors clarify the number of graduate students that will be supported in the study, particularly from Malaysia. Four students are mentioned in the quad chart, but this number was not reflected in the proposal.*

We have clarified this in the Full Proposal Detailed Task List and Statement of Work. There will be up to 2 Malaysian graduate students from UM (either 2 masters level or 1 PhD student) and 1 PhD student from UPM. A fourth graduate student involved is from USU.

Budget:

Note that we have provided clarification based on the reviewers questions regarding budget in the Budget Justification, as well as in this document.

6) *It is requested that the authors have the number of animal sampling within the proposal (1,250 noted), match what is proposed in the budget.*

HDTRA1-14-24-FRCWMD-BAA

Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia

We have revised the budget and justification so that the sample numbers and budget accurately reflect the proposed study.

7) *It is requested that the authors clarify the large discrepancy in materials costs for serological sampling between Conservation Medicine and NMRC-TIDREC ($4,000 vs $40,000).*

The sampling cost rates for supplies and materials provided by CM (now only $31,000 per year for Orang Asli and Farm study human and animal sampling) reflect the fact that wildlife and animal capture materials and sampling and Orang Asli Community sampling are much more resource intensive, particularly in a forest environment, compared to the UM study which will largely be working with hospital-based patients or people from relatively accessible communities. This is factored into CM's cost per sample rate. Also, the sampling materials and logistics for the UM study will largely be paid for by their existing dept. of State award, with the exception of an extra 3cc tube and cyrovials which will be provided to collect an additional aliquot of blood and serum sample for our project, which makes the UM costs lower.

8) *It is requested that the authors clarify the cost for new generic protein, and that the cost is consistent within the text and chart.*

We have updated the details in the budget justification narrative (see Table 1) to clarify this cost calculation.

9) *It is requested that the authors provide clarity on why costs for Luminex materials vary greatly from year to year*

10) *It is requested that the authors remove plans to come to Virginia for the DTRA Annual Technical Review. This is not a requirement for this study.*

We have removed this activity from the plan and budget. We thank the reviewers for the clarification on this point.

Administrative:

11) *It is requested that the authors clarify the number of graduate students that will be supported in the study, particularly from Malaysia. Four students are mentioned in the quad chart, but this number was not reflected in the proposal.*

We have clarified this in the detailed task list within the full proposal.

12) *Additional materials and documents are required at this stage to allow initiation of the US Government Interagency reviews. These items include full legal names, additional*

names/spellings/aliases, birth dates, and curriculum vitae and/or resumes for all foreign project participants, including any personnel that have been identified since the proposal submission. The same information is also required for any additional partner nation participants.

We have provided these.

PROJECT START DATE Oct 1 2016

The reviewers of the Protocol Risk Assessment Tool (PRAT) requested the following comments be addressed:

Section 1f:
1) Please clarify why Facility 1 USU does not have an autoclave.

Facility 1 USU: Has a centralized autoclave facility on the same floor as all listed laboratory spaces.

2) *Will TIDREC be manipulating samples? If so this facility needs to be listed in this section with the appropriate laboratory information.* **This section has been updated.**

3) *NWFL (Facility 3) lists an "Animal sampling and treatment room" in this section. Is this an ABSL? If so please update this section* **This is not a biosafety level room**

4) *In the comments section please clarify which facility has the additional rooms.* **This has been updated**

5) *Section 1g: Recommend this section be revised to reflect 1)the roles of each facility, 2)what samples will be received at each facility and what will be done with these samples, 3)the field collection portion of the project was not addressed in the workflow section, 4) culturing was not addressed in the workflow but it is outlined later in the PRAT as an activity,*

6) *Discrepancy between mice being used as hosts, but not outlined in the workflow section, and what facility mice will be used in:* ***Mice will not be used in this study other than in reagent development by USU. This has been updated in the PRAT.***

Section 2a:
1) *Please include culturing in the workflow, since it is listed as an activity. Also, please indicate what facility will be culturing.* **We have updated to clarify that culturing will not be an activity.**
- *Identify what facilities will conduct culturing.* **Culturing will not take place in this study.**

2) *Identify what animals will be used. Please update workflow sections and other relevant sections*
We have updated the animal use table and description.

3) *Identify what facility will conduct the recombinant DNA work and what facility will be receiving it. Request this section be updated* **Facility 1 (USU) will do recombinant DNA work. Section is updated.**

4) *Please complete 2a OTCC section.* **This will not take place. Section has been updated.**

Section 2b:

1) *Please verify if Facility 2 (NPHL) will conduct pathology, parasitology, and toxicology activities* **NPHL will not conduct pathology, parasitology, or toxicology activities.**

2) *Please verify whether vaccine and vector research will be conducted* **Vaccine and vector research will not be conducted. Section has been updated.**

Section 2c:
1) *Please explain the use of the aerosol chambers and homogenizers for Facilities 2 & 3 in relation to the study* **Aerosol chambers and homogenizers will not be used. Section has been updated.**

2) *Section 2d: Please confirm that all BSCs utilized in this study will be recertified and remain certified for the duration of the project. Currently all BSCs listed need to be recertified this year.* **All BSCs will be recertified throughout the project.**

Section 2f:

1) *The PRAT does not mention non-human primates, as mentioned in the full proposal. Recommend updating with the PRAT or proposal.* **Macaques are included in this study but none will be housed in any of the facilities. Only free-ranging macaques will be sampled.**

2) *Please clarify how lab-raised mice are to be used as a host model*
This following has been include in the animal section on the PRAT form: Mice will be used for immunological reagent development by facility 1 (USU). They will be immunized with purified recombinant viral glycoproteins and subsequently processed for monoclonal antibody development. IACUC approval of USU protocol (MIC-13-262) was 09/30/2013 and expires 09/29/2016, but will be submitted for renewal 08/01/2016

Section 2g: Please clarify if there will be an IRB. If not, please explain why? **Yes, there will be an IRB for human work. The exact approval date is unknown.**

Section 3c: A 'Project Specific SOP' was listed for Facility 4 but not explained/defined in the comment section. Please clarify if there will be one? **Luminex SOPs, developed at the Australian Animal Health Laboratory will be utilized in this project – Section has been updated**

Section 4b:
Facility 1 (USU) is a United States facility but does not comply with US standards (BMBL 5th ed.) in relation to its laboratories (i.e. sealed laboratory surfaces, laboratory air is not recirculated). Please verify

the information, and provide an update section. **There were multiple errors on the form. This section has been updated. Facility 1 (USU) does comply.**

2) *Please confirm that Facilities 2 – 4 have BSL-3/BSL-2 enhanced laboratories* **Confirmed**

Section 5a: Facility 1 (USU) is a United States facility but does not comply with US standards (BMBL 5th ed.) in that is does not have safety goggles/glasses for its BSL-2. Please confirm the information provided is correct and update section if necessary **Safety goggles/glasses are in place. This section has been updated.**

Section 6b:
Please confirm that Facility 1 (USU) does not have internal laboratory doors that lock. **All laboratory doors lock and have a self-closing mechanism.**

2) *Please confirm whether the guard walks the grounds (exterior monitoring) and the building(s) (interior monitoring) and update the section as necessary.* **Facility 1 has a 24/7 guard force. Physical monitoring occurs both outside and within all areas of the facility, including all monitored laboratory spaces with incubators, refrigerators and freezers. Facilities 2-5 all have security.**

Section 6c: Please clarify how hard copy data is stored at Facility 1 (USU) and why such data it is not secured in a DoD facility. **Hard copy data is stored in locked laboratory and office spaces.**

Section 6e: Please verify for Facility 1 (USU) who their carrier/shippers are and update the section. **Federal Express is used for Facility 1.**

Section 6f: Please clarify and verify why there are no personnel management measures in place for a US DoD Facility (Facility 1 (USU)). Please update this section accordingly. **This section is now updated. There are fully compliant management measures in place.**

Section 7e: Please provide a scanned copy of the PIs actual signature

ATTACHMENT 3 SUPPORTING DOCUMENTATION

1) FOREIGN PRINCIPLE INVESTIGATORS AND OTHER MEMBERS OF FOREIGN RESEARCH TEAM

Complete details and complete CV's provided in the Research and Related Senior/Key Person Profile Form

Foreign PIs:

Mr. Tom Hughes
President
Conservation Medicine Ltd., D203, Block D, Paradesa Tropika, Persiaran Meranti, Bandar Sri (b)(6)

Gary Crameri, BSc
Senior Laboratory Scientist, Consultant, EcoHealth Alliance (based in Geelong, Australia, formerly CSIRO AAHL).

Brian L. Pike, PhD, MPH
Research Scientist
U.S. Naval Medical Research Center (b)(6)
(b)(6)

Other members (alphabetical order):

Professor Sazaly Abu Bakar
Professor, Tropical Infectious Diseases Research & Education Centre (b)(6)
Faculty of Medicine, University of Malaya (b)(6)

Dr. Liyen Chang
Technical Expert, Tropical Infectious Diseases Research & Education Centre (b)(6)
& O, Faculty of Medicine, University of Malaya, (b)(6)

Ms. Yukie Chen
Scientific Officer, National Public Health Laboratory, (b)(6)
(b)(6)

Mr. Jimmy Lee
Research Scientist, Conservation Medicine, Ltd., (b)(6)
(b)(6)

Ms. Mei Ho Lee
Microbiologist, Senior Research Officer, Conservation Medicine, Ltd. (b)(6)
(b)(6)

Dr. Daniel Schar
Senior Regional Emerging Infectious Diseases Advisor
U.S. Agency for International Development
Regional Development Mission for Asia, Bangkok, Thailand.

Mr. Frankie Thomas Sitam MSc
Wildlife Research Officer, Department of Wildlife and National Parks (DWNP) KM10 Jalan Cheras, 56100 Kuala Lumpur, Malaysia

Dr. Khebir bin Verhasib
Director, National Public Health Laboratory, Ministry of Health, Lot 1853, Kampung Melayu Sungai Buloh, 47000 Sungai Buloh, Malaysia

Professor Linfa Wang
Director, Programme in Emerging Infectious Disease, Duke-NUS Medical School, 8 College Road, Singapore 169857

Dr. Latiffah binti Hassan
Head of Department, Veterinary Laboratory Diagnostics, Faculty of Veterinary Medicine, Universiti Putra Malaysia, Serdang 43400 Selangor DE, Malaysia

Dr. Noorliza Binti Mohamad Noordin
Head, Disease Division, National Public Health Laboratory, Ministry of Health Malaysia, Lot 1853, Kampung Melayu Sungai Buloh 47000 Sunagi Buloh, Selangor Darul Ehsan

2) DESCRIPTION OF RELATIONSHIP BETWEEN PROJECT AND CURRENT RESEARCH EFFORTS OF FOREIGN RESEARCH TEAM

EcoHealth Alliance has worked with the Government of Malaysia on zoonotic disease research since 2001, (and Epstein since 2003) beginning with a large international collaboration studying the emergence of Nipah virus. PI, Epstein (EHA) and Co-PI Hughes have worked together on zoonotic disease surveillance projects since 2005, beginning with a large-scale NIH-funded study of Nipah virus in bats, which was done in close partnership with the Veterinary Research Institute (VRI) and the Department of Wildlife and National Parks (DWNP). Since 2007, the scope of collaborative research undertaken by EHA in Malaysia has expanded to include the study of human populations highly exposed to wildlife (e.g. Orang Asli) and then in 2009, EHA began implementing activities under the USAID EPT PREDICT program. This One Health initiative has been an active partnership between EHA, CM, the DWNP, NPHL, and VRI, with technical input from USAID RDMA (Schar) in Bangkok. The objectives of PREDICT, now in its 7th year in Malaysia, are fully consistent with the objectives of this research proposal. Indeed, PREDICT established capacity in all three GoM lab partners to screen human and animal samples for RNA from novel viruses using broad, viral family-level assays and a synthetic universal positive control. Additionally, EHA, CM, and DWNP have developed a wildlife disease surveillance program under which more than a dozen wildlife officers have trained in safe capture and sample collection from key wildlife reservoirs including bats, rodents, and nonhuman primates. This proposed research project will expand the capabilities of the

Government of Malaysia and PREDICT to include broad serological surveillance for henipa- and filoviruses, and the Luminex-based platform will be applied to human and wildlife samples already collected by DWNP, NPHL, EHA and CM and to be collected by the PREDICT project which will run in parallel with the activities proposed under this study. The results from this project will inform PREDICT as it seeks to identify a serological platform to integrate into its surveillance protocols.

EcoHealth Alliance (PI, Epstein), CM (Hughes), the Broder Lab at USU (Broder), Gary Crameri and Professor Linfa Wang (both formerly from CSIRO Australian Animal Health Laboratory) have worked together for more than 10 years on research related to zoonotic disease ecology in bats, livestock and people in Australia and throughout Asia. In 2003, Dr. Epstein worked with Professor Wang and Mr. Crameri on collaborative research in China that identified bats as the natural reservoir for SARS coronavirus. While at the CSIRO Australian Animal Health Laboratory in Geelong, Wang, Crameri, Epstein and Broder have used the Luminex-based assays for henipaviruses and filoviruses, described in this proposal, to screen bat and other animal samples. Currently, The Broder lab also has active and proposed collaborative activities with Drs. Linfa Wang and Dr. Ian H Mendenhall, Program in Emerging Infectious Diseases, Duke-NUS Graduate Medical School, Singapore. These ongoing collaborations have been spearheaded by postdoc Dr. Eric Laing, who will be engaged in the present proposal's efforts. These collaborations involve using the Broder lab virus glycoprotein coated beads together with Duke-NUS banks of sera from bats, other potential wildlife reservoirs, and livestock so that they can be screened in a cost-effective and high throughput fashion. Eric Laing, with the support of a NSF Fellowship, transferred our multiplex technology to Duke-NUS in 2015 in order to carry out some pilot serosurveillance studies. The collaborative research performed at the Duke-NUS Graduate Medical School will further demonstrate the efficacy of the multiplex assay to screen wildlife and livestock sera from study sites in Malaysia. Additionally, it can demonstrate whether multiplex bead assays should be applied in biosurveillance of zoonotic pathogens for other One Health projects. These related research areas are highly relevant and strongly supportive of the significantly expanded goals of the present proposal.

The U.S. Navy has conducted biomedical research in the Asia Pacific region since 1945. The U.S. Naval Medical Research Center-Asia (NMRC-A), a cooperative research initiative established in Singapore, is part of this proud Navy tradition. NMRC-A's mission is to identify infectious disease threats of military and public health importance and develop and evaluate interventions and products to mitigate those threats. NMRC-A supports U.S. interests in the Pacific Theater and advances diplomacy in the region by conducting infectious disease research and improving disease surveillance and outbreak response assistance for infectious diseases of critical public health importance to the United States and our regional partners. NMRC-A will serve as the lead DoD liaison, providing collaborative project management, on-site technical expertise, assist with quality control/assurance, and provide additional support to project collaborators as needed. The proposed project leverages NMRC-A's existing partnerships and resources in the region, specifically those linked to an established Biosecurity Engagement Program cohort funded by the U.S. Department of State. Further, the focus of this proposal is in direct support of USPACOM's Theater Security Cooperation agenda which promotes stability and security throughout the region by strengthening local capacity to detect and respond to

emergent biological threats and developing working relationships between host countries and their U.S. counterparts.

UPM Faculty of Veterinary Medicine and EcoHealth Alliance have had a working relationship since 2004 when they worked together on the NIH funded Nipah virus research in Malaysia. Dr Latiffah and Dr Epstein co – supervised a Malaysian PHD candidate enrolled at UPM Faculty of Veterinary Medicine under this grant. The Faculty of Veterinary Medicine and EcoHealth Alliance have maintained a working relationship over the last 12 years most recently through the USAID funded Emerging Pandemic Threat Program. EcoHealth Alliance coordinate PREDICT activities in Malaysia and the national coordinating office for MYHOUN (One Health Workforce) is located at the Faculty of Veterinary Medicine. The chairman and coordinator of MYHOUN are both staff at the Faculty of Veterinary Medicine.

UPM Faculty of Veterinary Medicine will assist with sample collection at farms on Peninsular Malaysia and the screening and analysis of all livestock samples will be conducted at the Virology lab at the Faculty of Veterinary Medicine. The Faculty will facilitate this process by providing a technician to assist with the screening, a Post Graduate student will be identified to pursue a PHD through this project at the Faculty.

3) FACILITIES, EQUIPMENT, AND OTHER RESOURCES

EcoHealth Alliance, New York, USA
EcoHealth Alliance (EHA) is an NGO that specializes in scientific research on the causes, origins and spread of zoonotic emerging diseases. EHA scientists have been working on spatial modeling of zoonoses for over 15 years, and on modeling of infectious disease emergence and spread for over a decade. EHA is based in New York City with 10,000 square feet of office space including a meeting room and basic laboratory – freezer storage and light microscopy. The scientific staff (25 core scientists, 100+ field staff) is supported by a core admin staff of 11, which is available for work on this project and is funded through foundation and federal support. EHA does not support diagnostic facilities at its core headquarters, and works in partnership with a network of leading diagnostic labs in the USA and around the world.

EHA is equipped with 25 networked PCs including ARRA-funded International LifeSize Video Conferencing facilities. High-speed video conferencing facilities are installed with key international collaborators. EHA has access to a 24-7 server, server support, and all required software including Geographic Information Systems (ArcGIS, GRASS), statistical programs(R, MatLab, SPSS), word and spreadsheet processing (Microsoft Office and LibreOffice), graphic editors (Inkscape, Adobe CS3) running on both Apple and Windows Operating Systems. Additionally we have a twenty-processor hyper-threading, public IP addressed Linux server which can be used for intensive computational modeling. All our databases are maintained in either PostgreSQL or MongoDB and stored in our server. To ensure data redundancy and to streamline our workflow we make use of cloud storage services (Dropbox, Google Drive and Crash Plan).

EHA is the headquarters of a global network of over 70 partners that provides exceptional leverage for the core scientists. This network includes staff from: intergovernmental agencies

(WHO, OIE, FAO, DIVERSITAS, IUCN); locally based wildlife conservation organizations in Asia, Africa and Latin America; infectious disease surveillance laboratories including BSL-3 and -4 laboratories; and scientific institutions. EHA is the headquarters of the One Health Alliance of South Asia (OHASA); the Consortium for Conservation Medicine (CCM); the journal *EcoHealth*; the IUCN Wildlife Health Specialist Group; and the OIE Wildlife Health Network. EHA is a member of the IUCN and Columbia University's Center for Environmental Research and Conservation (CERC) and the Center for Infection and Immunity, so that all scientific staff hold adjunct appointments at Columbia University's E3B Department, or in the Department of Epidemiology at the Mailman School of Public Health.

Uniformed Services University (USU), Maryland, USA
USU is the medical school at which approximately half of the physicians in the Armed Services receive their graduate training. Research at USU is supported primarily by extramural grants, as in other medical schools. The PI is a tenured Professor in the Department of Microbiology and Immunology, which includes 12 full-time Faculty members. The overall focus of the Department is mechanisms of infectious diseases and the host response/immunology. A major focus of the PI's Department is virology and viral Immunology. Faculty interests and active research programs at USU are diverse, with many nationally- and internationally-known investigators, including the PI's chair, Dr. Alison O'Brien, who was the 2008-9 President of the American Society for Microbiology (ASM). USU is also physically located directly across from the main NIH campus in Bethesda, and within a short distance from Frederick, MD, and the PI maintains a very active collaboration with NCI, NIH, investigators which has been in place for over 25 years since the PIs postdoctoral work began at NIH in 1989. The PI has a 110 sqft office across from laboratories. Two full time secretaries and two program managers are available to provide support within the department. A Learning Resource Center is a medical and scientific library with additional microcomputers and support. A wide variety of scientific journals are available in print and via remote computer access. The Henry M. Jackson Foundation (HJF) with USU will manage this award. A central autoclave/glassware washroom serves the Department of Microbiology and Immunology and is maintained through extramural grant support.

There are seven computer work stations located in the PI's laboratories and a computer in the PI's office. The computers are connected to each other by a server, and hardwired to the USU network, with Google Unlimited storage, and WiFi is also available. A variety of software programs are available, including statistical analysis programs, Reference Manager, Power Point, MS Word, Quattro Pro, Excel, Clone Manager Suite v7.0, Align Plus v4.0, Prizm, Flowjo 10.2 (flow cytometry analysis software), Primer Express, ABI 7500 analysis software. In addition, Cluster and Statistical Analysis for Microarrays program is available from other laboratories. The PI's laboratories are divided into 3 rooms totaling 1,440 sf and each set up to maintain its own cell culture BSL2 operations. The laboratories are equipped with eight CO2 incubators for tissue culture, 4 inverted and 1 bright field microscopes, high speed and ultracentrifuges, four biological safety cabinets, 2 -20°C, 3 -80°C freezers, 4 liquid nitrogen freezers 6 refrigerator/freezers, 4 PCR machines, 2 ELISA plate reader, and various small equipment items (gel electrophoresis, circulating adjustable water baths, heat blocks, western blotting apparatuses, etc..). Two GE-ATKA low pressure chromatography systems, with integrated UV detectors, fraction collectors, and pump systems, and gradient fractionator.

The USU Biomedical Instrumentation Center (BIC) Flow Cytometry Core includes two Becton-Dickinson (10- and 13-parameter) LSRII FACS analyzers and one 15-parameter FACSAria FACS sorter, as well as off-line analysis workstations. The BIC Imaging Core houses two confocal microscopes, including a Zeiss LSM Pascal system with 405/458/488/514/543 laser excitation and Zess 710NLO system with 405/458/488/514/561/633 conventional lasers and a Coherent Ultra2 Ti-Sapphire laser for multiphoton excitation, continuously tunable over the range of 690 to 1080 nm. A Becker-Hickl two-detector FLIM system (for FRET analyses) is on order, and will be connected to the Zeiss 710NLO. The facility has several wide-field fluorescence microscopes, and three data analysis stations with software packages including: Zeiss Zen software and full Physiology package; Media Cybernetics' 3D Constructor, Image Pro Analyzer, Autodeblur, and Autovisualize; Metamorph Basic. An Imaging Core also has a Philips CM100 transmission EM and an ultramicrotome (Leica EM UC6 with EM FC6 cryo attachment). There is also an on-site oligonucleotide and peptide synthesis facility. Mass spectrometry (MALDI-TOF) instrumentation is available, as is an integrated FLA-5000/LAS-3000 imaging system (Fuji) for many applications that involve fluorescence and chemiluminescence imaging of gels and blots.

Conservation Medicine, Ltd. (CM), Malaysia
Conservation Medicine Ltd., was incorporated in 2014 in Kuala Lumpur, Malaysia, and is directed by Mr. Tom Hughes who has worked with EcoHealth Alliance since 2007. CM employs two other scientists, all who have worked together with EcoHealth Alliance since 2009 to implement field and lab projects including activities under the USAID Emerging Pandemic Threats: PREDICT program. CM is equipped with office space, laptop computers, internet, mobile phones, GPS units, and a 4WD vehicle fully equipped for field transportation to remote field sites. CM maintains wildlife capture equipment and supplies for biological sample collection and liquid nitrogen dry shippers for ensuring cold chain during transport of biological samples from field to lab. CM has supplies of personal protective equipment for all field and lab staff, including PAPRs and N95 respirators, gloves and disposable coveralls. CM maintains communication with NPHL, DWNP and VRI on behalf of EHA, and CM scientists work closely with government partners to implement PREDICT field and lab activities.

The Department of Wildlife and National Parks (DWNP), Malaysia
The Department of Wildlife and National Parks, or PERHILITAN, is the federal wildlife authority for Peninsular Malaysia. They are responsible for conservation of all wildlife species in the country, and have research staff that are trained in wildlife medicine, conservation, and laboratory sciences (e.g. genetics). Since 2002, the DWNP has been involved in wildlife disease research as a partner with EcoHealth Alliance, focusing on Nipah virus in bats. It has become increasingly more active in actively participating in wildlife disease and epidemiological studies and is a fully-engaged partner under the Emerging Pandemic Threats: PREDICT program with EcoHealth Alliance and Conservation Medicine, Ltd. As a result of a growing investment from the Government of Malaysia, the DWNP was allocated resourced in 2013 to construct a new forensics and disease diagnostic laboratory, which is scheduled to come online in 2016. This lab will be equipped with a pathology room, BSL-2 PCR suites, ultra-cold storage; and a serology suite, which will be where the Luminex-based assay described in this proposal will be placed. DWNP's engagement in this proposed project is indicative of their desire to understand which

zoonotic pathogens are present in wildlife reservoirs in Malaysia, and in playing a critical role in the GoM's One Health approach to disease surveillance and public health.

National Public Health Laboratory (NPHL), Malaysia

The National Public Health (NPHL) is a division under the Disease Control Division, Department of Public Health, Ministry of Health, which has been built to provide support services to the outbreak investigation and surveillance activities. There are five public health laboratories, the National Public Health Laboratory, Sungai Buloh, which is the national laboratories and four regional laboratories: the Public Health Laboratory Johor Bharu, Johor; Public Health Laboratory Ipoh, Perak; Public Health Laboratory Kota Kinabalu, Sabah and most recently built Public Health Laboratory Perol, Kelantan. Implementation of the new laboratory building project was started in July, 1997 and was built on an area of 27.6 acres with a building area of 6,865 square meters.

The vision of NPHL is to become a center of excellence in providing analytical and diagnostic services to support disease surveillance, outbreak investigations and food security in Malaysia. NPHL also funtions to provide laboratory services to assist in the investigation and control during an outbreak of diseases; provide laboratory services for surveillance and monitoring of all Public Health-related diseases; provide laboratory services for the food surveillance activities and enforcement of the food safety act; provide training and human resource development in the field of epidemiology, food quality control and disease control on health care as well as assist in research activities under the Public Health Program by providing laboratory diagnosis.

The laboratories in NPHL provide services commensurate with outbreaks investigation, disease surveillances and food safety. The list of laboratory investigation provided by NPHL include: Microbiology (bacteriology, mycobacterium, tuberculosis, Mycobacterium leprae, parasite, malaria, viruses, clinical chemistry, tar and nicotine, insectorium) and Food (food and water biology, pesticides residues, drug residues, additive and nutritional labeling, mycotoxin and natural toxin, GMO & food speciation, natural and environmental pollutants) testing. NPHL is activity involved in the outbreak investigation and provided various analytical tests that included: viral culture, PCR, serology, culture and sensitivity, antigen detection (only sputum), microscopic techniques and serotyping. NPHL is also able to analyze sources of the outbreak for the common pathogens or diseases such as (poliomyelitis syndrome, enteroviral meningitis (E71), other viral meningitis, Japanese encephalitis, influenza, respiratory syncycial virus, adenovirus, pertussis, diphtheria, streptococcal pharyngitis, scarlet fever, bacteria pneumonia, measles, rubella virus, chikungunya virus, herpes simplex virus, varicella zoster virus, hand, food and mouth disease, dengue, malaria, hepatitis A, hepatitis B, leptospirosis, entero pathogenic bacteria, viral gastroenteritis, adeno virus or enteroviral, bacteria conjunctivitis, Meliodosis, legionellosis and other diseases as well as food and environmental poisoning.

Tropical Infectious Diseases Research and Education Centre (TIDREC), University of Malaya, Kuala Lumpur, Malaysia

TIDREC is a research center dedicated to the advancement of knowledge in tropical infectious diseases in Malaysia, focusing especially on neglected tropical infectious diseases that have the potential impact on the global community.

TIDREC was set up in 2008 in the Department of Medical Microbiology in the Faculty of Medicine, University of Malaya. University of Malaya is the oldest university and the leading research university in Malaysia. Additionally, it is one of the largest teaching and referral hospital in the capital city of Kuala Lumpur. TIDREC houses the WHO Collaborating Centre for Arbovirus Reference and Research (Dengue and Dengue Haemorrhagic Fever). More recently, TIDREC has established linkages with the Orang Asli Affairs Department to conduct biosurveillance for emerging and re-emerging pathogens at selected aboriginal villages. TIDREC has also recently established collaboration with the Ministry of Health to determine and identify etiologies of febrile disease in patients presenting at the hospitals and health clinics in the semi-urban and rural areas in and around Kuala Lumpur.

TIDREC has 14 scientific staff members, including virologists, bacteriologists, parasitologists, immunologists and technicians. TIDREC leverages on existing experience and expertise of the scientific staff members who have a strong tradition in research on epidemiology, surveillance and diagnostics, with particular strengths in dengue virus, Nipah virus, respiratory viruses and rickettsiae. The members have active collaboration with many local and international partners, as well as various sources of project funding, local and international.

TIDREC owns necessary facilities to perform biosurveillance activities and pathogen screening through next generation sequencing, microarray and Luminex assay. TIDREC has a fully certified modular Biosafety Level 3 laboratory and also a mobile Biosafety Level 3 laboratory for fieldwork. Freezers and ultra-low temperature freezers for storage of human serum are in highly secured locations with controlled access and appropriate inventory system. TIDREC is currently applying MS ISO/IEC 17025:2005 accreditation for the Biosafety Level 2 diagnostic laboratory. TIDREC's scientific staff is well trained in biosafety and biosecurity. They are capable to work in high-containment facility and are fully competent to handle work involving infectious agents. TIDREC also has members who are GCP trained as well as certified phlebotomists.

Universiti Putra Malaysia (UPM), Selangor, Malaysia
Formal teaching is conducted mainly in the Academic Block, while clinical practice and core clinical training take place at Universit Veterinary Hospital (UVH), (that is equipped with seminar rooms, ward spaces, tables and chairs for revision, and WIFI access. Students on call are provided with overnight rooms furnished with beds), the Necropsy Block and the University Agricultural Park/*Taman Pertanian Universiti* (TPU). Core clinical teaching is in the form of formal lectures, practical classes, student-centred and problem-based learning, rounds, clinical conference, and handling of hospital cases. Clinical teaching in companion animal medicine and surgery, farm and exotic animal medicine and surgery, veterinary diagnostic imaging, and clinical skills is conducted in UVH. Industrial training is conducted in government and commercial animal farms and veterinary laboratories in the country and abroad, zoos, wildlife conservation centres, and animal shelters.

The teaching methods in the clinics are progressive and innovative, utilizing clinical facilities that meet the standards of the Malaysian Veterinary Council (MVC). The Faculty is the first educational institution in Malaysia accredited with MS ISO 9001:2008 for comprehensive quality management system for teaching, services and research. The diagnostic laboratories of

Veterinary Labs Services Unit (VLSU) including the Virology lab to be used for this project) are accredited with MS ISO/IEC 17025:2005. The University Agricultural Park obtained Malaysian Good Agricultural Practice certification (MyGAP) from the Department of Veterinary Services (DVS) Malaysia in 2014 and maintains a quality management system (QMS) under ISO 9001:2008 and Environmental Management System (EMS). Clinical teaching methods are current, with hands-on training and provide opportunities to obtain first-hand information from clients, conduct physical and clinical examinations, formulate problem lists, differentials and plans, and treatment of patients, all under the supervision of clinicians. The standard and effectiveness of clinical teaching are assessed by feedbacks on the performance of Faculty graduates employed by veterinary clinics, the DVS Malaysia, and other veterinary and related organisations.

Students have access to a broad range of diagnostic and therapeutic facilities, training in diagnostic imaging (X-rays, ultrasound, CT, fluoroscopy), anaesthesia (gas machines, ventilators, multiparameter monitors), intensive and critical care (blood pressure monitors, desk top blood and chemistry analysers), internal medicine (endoscopes, blood pressure monitors) surgery, use of controlled drugs and vaccines, case management, and ambulatory services in UVH. Post-mortem and diagnostic histopathology training are performed in the Necropsy Block. Exposure to laboratory diagnoses is by rotation to the VLSU, the commercial diagnostic arm of the Faculty. The Faculty also has access to the Livestock Division, University Agriculture Park (TPU), and foster farms for student training. The University Veterinary Hospital has separate isolation facilities for cats and dogs that are fully ventilated and well-maintained with standard operation procedures (SOPs) to prevent disease spread. Isolation of large animals is handled at the farms and under the supervision of the DVS Malaysia.

The majority of lectures and supervised laboratory practical classes for pre- and para-clinical courses are conducted in the Academic Block. Clinical grand rounds for small animals, large animals, radiology, and post-mortem are held in the auditorium. Faculty students are rotated to VLSU for laboratory diagnosis training. Students have access to the computer laboratory, library, anatomy museum, student centre and a student-managed business laboratory (PutraBiz). The Necropsy Block facilitates the demonstration and training in necropsy procedures, sample collection, tissue preparation for histopathology, and carcass storage.

At UVH companion animal practice and clinical classes are conducted in the fully air-conditioned units with separate entrances, reception and waiting areas, examination rooms, medicine and surgical wards, and quarantine wards for cats and dogs. Routine blood tests are done in VLSU while a mini-laboratory in UVH is used for immediate analyses. The Diagnostic Imaging, Pharmacy, Veterinary Anaesthesia and Critical Care Units are available for student training. Students on their own time can practice clinical skills in the Clinical Skills Laboratory using the Objective Structured Clinical Examination (OSCE) technique. Farm animal practice and clinical classes are conducted in UVH and TPU.

The Faculty follows a set of SOPs, including online reporting of incidents according to the Occupational Safety and Health Policy 2013. The University Emergency Action Team responds to any emergency in the Faculty. The Faculty under the supervision of the University Fire Department runs regular fire drills. Fires escape routes are clearly posted with assigned assembly

points. Fire extinguishers are checked and maintained once a year. Students are instructed on biosafety and on hygienic practices at the beginning of each semester. Emergency showers and eye wash stations are in place at several strategic locations in the Veterinary Complex. Most diagnostic laboratories and UVH facilities are accessible to authorised personnel only. The University Health Centre is less than 3 km and a Government General Hospital (Serdang Hospital) is approximately 500 m from the Veterinary Complex.

The clinical pathology and diagnostic pathology laboratories are under the purview of the Department of Veterinary Laboratory Diagnostics and include haematology and clinical biochemistry, bacteriology, virology, serology, parasitology, animal resource unit, histopathology and post-mortem. These laboratories are well-equipped diagnoses for domestic animals and other non-traditional species such as aquatic animals, marine mammals, and zoo/exotic animal species in accurate and timely manner.

A company assigned and contracted to dispose waste materials provides colour-coded bins and bags for placement of waste materials to be collected on a schedule. Animal carcasses are disposed by burying in a university-designated piece of land. Animal waste from the large animal wards flows into a treatment tank before discharge.

Subj: LETTER OF SUPPORT FOR THE PROPOSAL ENTITLED "SEROLOGICAL BIOSURVEILLANCE FOR SPILLOVER OF HENIPAVIRUSES AND FILOVIRUSES AT AGRICULTURAL AND HUNTING HUMAN-ANIMAL INTERFACES IN PENINSULAR MALAYSIA"

1. This letter confirms that the Naval Medical Research Center – Asia (NMRC-A) is aware of, and a willing collaborator in, the proposed project entitled "Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia" on which Dr. Jonathan Epstein serves as the Principal Investigator.

2. The proposed work is very much in line with our current infectious disease research priorities. Additionally, through increased capacity and enhanced surveillance, the proposed project will further the aims of USPACOM's Theater Security Cooperation initiative which seeks to promote stability and security throughout Southeast Asia.

3. We are eager to partner with the collaborators of this project. Questions pertaining to this proposal and our involvement should be directed to our command's lead on this project, LT Brian Pike, at brian.pike@fe.navy.mil or by phone at +65-6751-2228.

Re: Letter of Intent to Collaborate

Dear Ms. Lane:

This letter affirms The Henry M. Jackson Foundation for the Advancement of Military Medicine, Inc.'s intent to collaborate in the project entitled "Serological Biosurveillance for Spillover of Henipaviruses and Filoviruses at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia", under the direction of Dr. Jonathan Epstein, to be submitted to the Defense Threat Reduction Agency (DTRA), in response to Funding Opportunity Number: HDTRA1-14-24-FRCWMD-BAA.

Dr. Christopher Broder, Professor, Department of Microbiology, Uniformed Services University of the Health Sciences (USUHS), is the Principal Investigator for The Henry M. Jackson Foundation for the Advancement of Military Medicine, Inc. (HJF).

The proposed budget period is April 1, 2016 through March 31, 2021. The total budget for HJF is $1,203,179 which includes $421,934 in Facilities and Administrative costs.

Our organization is subject to and compliant with the requirements of OMB Circulars A-122 and A-133. Our organization is also compliant with the updated PHS Financial Conflict of Interest (FCOI) regulation and has enrolled in the FDP Clearinghouse of Institutions compliant with these regulations. The appropriate programmatic and administrative personnel of HJF involved in this grant application are aware of the consortium agreement policy and are prepared to establish the necessary inter-organizational agreement(s) consistent with that policy.

Sincerely,

Lisa Straker,
Senior Proposal Manager-Team Lead

cc: Dr. Christopher Broder, Principal Investigator

UNIVERSITY OF MALAYA

14 December 2015

To: DTRA C-WMD Thrust Area 6 Program,

By signing below, I acknowledge that I am listed as a collaborator on this proposal, entitled "Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia," with Dr. Jonathan Epstein as the Principal Investigator. I agree to undertake the tasks assigned to me or my organization, as described in the project narrative of this proposal, specifically (i) serological analysis of collected blood samples for henipavirus and filovirus infections using appropriate assays including the Luminex binding assay; and (ii) participating in training opportunities at partner organizations to acquire relevant expertise and skills to accomplish the assigned tasks. I commit to ensure completion of the assigned tasks within the available means and resources at my disposal, and to share the findings from the project with the community at scientific meetings and through joint-scientific publications; however I or my organization is not obligated to give away any samples obtained from this project and shall not hold any liability arises from this collaboration.

I recognize the proposed project would provide valuable opportunities in advancing knowledge to better understand pathogens of concern in this country and region, particularly henipaviruses and filoviruses. The project would also provide support for training in technical epidemiological and laboratory skills, allowing us to increase long-term professional capacity within the country.

We look forward to a successful and productive partnership with the collaborators of this project.

Sincerely yours,

Professor Dr. Sazaly AbuBakar

From: Dr. Khebir bin Verasahib

By signing below, I acknowledge that I am listed as a collaborator on this proposal, entitled "Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia," with Dr. Jonathan Epstein as the Principal Investigator. I agree to undertake the mutually agreed tasks assigned to me or my organization for successful implementation of this proposed project.

We hope that the proposed project would provide support for valuable opportunities to formally train our staff in laboratory skills, allowing us to increase long-term professional capacity within the country. In doing so, we will able to support better understanding of the risk of Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia.

We are eager to partner with the collaborators of this project.

From: Mr. Fakhrul Hatta bin Musa

By signing below, I acknowledge that I (on behalf of my institution) listed as a collaborator on this proposal, entitled "Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia," with Dr. Jonathan Epstein as the Principal Investigator. I agree to undertake the tasks assigned to my organization, as described in the project narrative of this proposal, which are subjected to be discussed in future meetings and mutually agreed by all collaborating parties prior to the commence of the said project.

We hope that from this project we will be able to enhance our capacity and expertise in wildlife zoonotic disease surveillance, as well as better understands the risk of spillover of *Henipaviruses* and *Filoviruses* in Peninsular Malaysia which will greatly benefit the country. We are looking forward for valuable opportunities to formally train our staff in technical laboratory skills and transfer of latest technologies into our laboratory facilities.

We are eager to partner with the collaborators of this project.

From: Daniel Schar, V.M.D.

By signing below, I acknowledge that I am listed as a collaborator on this proposal, entitled "Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia," with Dr. Jonathan Epstein as the Principal Investigator. I agree to undertake the tasks assigned to me, as described in the project narrative of this proposal, and I commit to provide or make available the resources specified therein.

I take the opportunity to highlight this proposal's complementarity with—and contributions to—the Global Health Security Agenda, and the United States' commitments to partner internationally to mitigate emerging infectious disease threats. Additionally, the work envisioned adds a critically important dimension to USAID's Emerging Pandemic Threats, PREDICT 2 work in Malaysia and across Asia, enabling enhanced serological surveillance that will further refine the understanding of risk profiles associated with these viral families.

I acknowledge my full endorsement of this proposal, and am pleased to partner with the collaborators of this project.

Sincerely,

By signing below, I acknowledge that I am listed as a collaborator on this proposal, entitled "Serological Biosurveillance for Spillover of Henipaviruses and Filoviruses at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia," with Dr. Jonathan Epstein as the Principal Investigator. I agree to undertake the tasks assigned to me or my organization, as described in the project narrative of this proposal, and I commit to provide or make available the resources specified therein.

The proposed project would provide opportunities to test some of our recently developed platforms in molecular and serological detection of bat-borne viruses. Participation in this project will also enhance our existing collaborations as well as opening up new collaboration network in the region, which will be crucial for our long-term aim to improve our preparedness in response to potential outbreaks of zoonotic agents.

We are eager to partner with the collaborators of this project.

From: Tom Hughes

By signing below, I acknowledge that I am listed as a collaborator on this proposal, entitled "Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia," with Dr. Jonathan Epstein as the Principal Investigator. I agree to undertake the tasks assigned to me or my organization, as described in the project narrative of this proposal.

The proposed project would provide support for valuable opportunities to build capacity within government partner labs in Malaysia and to conduct vitally important serological surveillance for henipaviruses and filoviruses at high risk interfaces. This program is complementary to the activities we are conducting with EHA and the Government of Malaysia under the Emerging Pandemic Threats: PREDICT program. The knowledge gained from this work will provide important information about Ebola virus in bat reservoirs, and help inform future One Health strategies for zoonotic disease research and surveillance in Malaysia.

We are eager to partner with the collaborators of this project.

Sincerely,

Tom Hughes

Date 16 May 2016

To: DTRA C – WMD Thrust Area 6 Program

From: Dato' Dr. Kamarudin bin Md. Isa

I acknowledge that The Department of Veterinary Services a collaborator on this proposal, entitled "Serological Biosurveillance for Spillover of Henipaviruses and Filoviruses at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia, " with Dr. Jonathan Epstein as the Principal Investigator. DVS subject to the terms to be mutually agreed upon by the parties, agrees to co-operate in the proposed project.

We hope that the proposed project would provide support for valuable opportunities to augment serological diagnostic capabilities at the national veterinary college (UPM) and training for DVS staff involved in livestock health and disease surveillance at livestock facilities. The proposed activities are consistent with our zoonotic disease surveillance.

We welcome the opportunity to collaborate with EcoHealth Alliance on this project.

Sincerely,

Name : Dato' Dr. Kamarudin bin Md. Isa

Title : Director General

Institution : Department of Veterinary Services

252.601-9001 GRANTS OFFICER'S REPRESENTATIVE (GOR) (MAY 2009)

d. Grants Officer's Representative (GOR) for this Grant is:
Name: (b)(6)
Defense Threat Reduction Agency/J3CTB
8725 John J. Kingman Road, MS 6201
Fort Belvoir, VA 22060-6201
telephone (b)(6)

email address (b)(6)

b. SCOPE AND LIMITATIONS OF AUTHORITY FOR DTRA GRANTS OFFICER'S REPRESENTATIVE

1. The Grants Officer's Representative (GOR) is responsible for monitoring the technical and programmatic performance of the grant or cooperative agreement (hereinafter referred to as agreement) including compliance with the agreement's reporting requirements. Perceived deviations from the agreement's terms and conditions shall be brought to the attention of appropriate recipient personnel and if not corrected, to the attention of the Grants Officer. Deviations or other occurrences indicative of the recipient's inability or unwillingness to conform to the agreement's requirements shall be brought to the immediate attention of the Grants Officer.

2. The GOR has no authority to modify the stated terms of the agreement or specifications in any manner, or to approve any action that would result in additional charges to the Government. The DTRA Grants Officer must make all such changes in writing.

3. The GOR is authorized to correspond directly with the recipient on matters within the scope and limitations of his or her authority. All such correspondence shall be signed personally by the GOR and a copy will be furnished the Grants Officer for placement in the official agreement file.

4. The GOR will provide technical advice to the recipient to the extent such advice will not alter any of the agreement's terms and conditions or result in an increase in the estimated cost of the agreement's performance as specified in the agreement. The GOR is encouraged to discuss with the recipient new ideas related to the original scope of the agreement that may be of special interest to DTRA. The GOR should also be alert for indications that any part of the research is becoming unfruitful. If, as a result of such discussions, questions arise as to the possible need for a modification, the matter shall be brought to the immediate attention of the Grants Officer. The GOR shall not direct the recipient to undertake any action that the recipient believes to be contrary to the agreement's scope, terms or conditions without the written approval of the Grants Officer.

5. Any visits to the recipient's facilities on matters pertaining to the agreement will be documented in a brief memorandum. A copy will be provided the Grants Officer for placement in the official agreement file.

6. The GOR will maintain such work files as he or she deems necessary to properly document performance of the duties and responsibilities as a GOR. Upon completion of the agreement and delivery of all required reports, such work files will be forwarded to the Grants Officer for placement in the official agreement file.

7. In performance of the GOR's duties, the GOR shall constantly stress protection of the Government's interests. Similarly, the GOR shall avoid any act which may tend to compromise the position of DTRA, any individual member of DTRA or which will impact confidence in the integrity of DTRA with the business community.

(End of Clause)

FUNDING PROFILE:

The amount of $766,817.00 is obligated for work to be performed during the period beginning with grant award and continuing through April 30th, 2018. Additional incremental funding planned, but not obligated, is:

FY18 $121,958.02
FY19 $804,315.14
FY20 $715,283.29

The Government's liability is limited to the amount obligated

INVOICE SCHEDULE:

Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia / Epstein
CBEP-Thrust Area 6, CC WMD

Statement of Work

Project Title: Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia

Document Date: May 2016

Objective: The objective of this project is to enhance capacity within the Malaysia government to characterize the distribution of and detect spillover of novel and known henipaviruses and filoviruses, (both groups include high consequence zoonotic pathogens) in indigenous populations and farms in Peninsular Malaysia. Current surveillance strategies for novel zoonotic viruses rely exclusively on molecular detection tools, but Nipah and Ebola viruses are present at low prevalence in bat species which makes infected individuals difficult to detect. By establishing a multiplexed serological assay developed to detect antibodies against any henipa- and filoviruses, the Government of Malaysia (GoM) will more effectively be able to determine the distribution of these high-impact viruses in wildlife reservoirs and detect evidence of spillover in at-risk human or livestock populations. This enhancement of human and animal surveillance in all three sectors (wildlife, livestock and human health) and training of Malaysian scientists utilizes a One Health approach and will help reduce risk of zoonotic disease emergence and spread by accelerating detection and response. These activities fulfill DTRA CBEP's mandate and are also complementary to and supportive of the aims of the USAID EPT program and the Global Health Security Agenda.

Scope: This research includes transferring state-of-the art serological reagents and Luminex-based microsphere beaded technology that will allow the Government of Malaysia to use a One Health approach to conduct serological surveillance for all known *and unknown* henipaviruses and filoviruses in wildlife, domestic animals, and humans. The study will test archived human and wildlife serum samples which are linked to PCR-tested oral, rectal, or urogenital swab samples (collected and tested under the ongoing USAID Emerging Pandemic Threats: PREDICT program and a University of Malaya study of Orang Asli healthy populations and acutely febrile hospital cases). It will also conduct a new study looking at henipa- and filovirus antibodies in livestock and farm workers and wildlife near the farms, as well as an expanded Orang Asli study focused on hunting communities living in the forest. The grantee will investigate spillover of these pathogens by screening wildlife reservoirs (e.g. bats and nonhuman primates), people, and livestock for IgG antibodies to henipaviruses and filoviruses, while also continuing to develop and transfer additional tests that will detect antibodies against novel viruses in these groups.

Our team will focus on the following major goals and milestones:

1. Improve the Government of Malaysia's capacity to conduct serological surveillance for henipaviruses and filoviruses in human and animal populations, using a One Health approach.
    - Transfer Luminex-based technology into government and university diagnostic labs in three key sectors (wildlife, livestock, and human health); conduct trainings for staff to be able to screen samples, interpret results, and perform confirmatory assays; train local graduate students; and publish and share findings among GoM partners.
2. Determine the host distribution and seroprevalence of henipaviruses and filoviruses in wildlife (e.g. bat) populations in Peninsular Malaysia associated with Orang Asli communities and livestock farms.

- Conduct cross-sectional serological studies of humans and animals for henipa- and filoviruses by testing sera from new samples collected under this project and archived samples from PREDICT. Wildlife sampling will be conducted jointly with the Dept. of Wildlife and National Parks (DWNP); livestock sampling with DVS and UPM; and human sampling with MoH. These activities provide opportunity for One Health-based disease surveillance; threat reduction; and capacity building within the Government of Malaysia.

3. Conduct surveillance for IgG antibodies against filoviruses and henipaviruses in people and domestic animals which may indicate spillover from wildlife reservoirs. Sampling activities will focus on Orang Asli communities and farms in Peninsular Malaysia and will be conducted jointly with the Ministry of Health's National Public Health Laboratory (NPHL), DWNP, and the University Putra Malaysia under the Department of Veterinary Services (DVS). Serological surveillance will allow the GoM to focus limited resources and develop interventions to reduce threat from viral outbreaks in at-risk animal and human populations.

- Qualitative studies (e.g. questionnaires) detailing human-animal contact where sampling occurs will characterize high-risk behaviors and interfaces;
- Sampling human, wildlife, and domestic animal populations in Orang Asli forest communities that practice hunting.
- Sampling domestic animals and farm workers on large and small-scale farms and associated wildlife to identify evidence of spillover.

Our research will be focused on building capacity within the Government of Malaysia to conduct serological surveillance in human and animal populations in Peninsular Malaysia where people and animals are believed to have high levels of contact. Collaborators from the Government of Malaysia (GoM)'s Department of Wildlife and National Parks (DWNP), the Ministry of Health's National Public Health Laboratory (NPHL), the Department of Veterinary Service's University Putra Malaysia (UPM), University of Malaysia (UM), The Uniformed Services University, Maryland (USU), Conservation Medicine, Ltd. (CM), The US Navy Medical Research Center, Asia (NMRC-A), and Duke-NUS Graduate Medical School, Singapore (Linfa Wang lab) will play active roles in this research. EHA's history of successful collaboration with DWNP, MoH, and DVS under prior research projects and most recently through PREDICT, as well as having a Memorandum of Agreement with the aforementioned institutions, gives us confidence that we will be able to achieve the aims of this proposal (also see letters of collaboration).

The duration of the proposed project is three years, with optional 4th and 5th years containing follow-up Orang Asli studies and farm studies so that we have longitudinal data. These option years will significantly strengthen the overall study by enhancing our ability to detect temporal patterns of infection in bat and other animal populations as well as additional opportunity to detect spillover in humans or livestock. **Through these proposed activities we would create enhanced One Health surveillance for known *and novel* henipaviruses and filoviruses in human and animal populations in Peninsular Malaysia, an emerging disease hotspot**. The proposed activities would significantly support Malaysia's surveillance priorities, DTRA CBEP Thrust Area 6 objectives, the Global Health Security Agenda (GHSA), and the USAID Emerging Pandemic Threats program by allowing the Government of Malaysia to more rapidly detect infections of high impact zoonotic agents and develop effective interventions to prevent viral

outbreaks and reduce human and animal mortality, thereby reducing the threat from these high consequence viral agents.

Background:

Nipah virus (NiV), Ebola virus (EBOV) and Marburg Virus (MARV) are emerging zoonotic viruses belonging to the genera *Henipavirus* (Family *Paramyxoviridae*), *Ebolavirus* and *Marburgvirus* (both Family *Filoviridae*) and they have each caused outbreaks in people with high mortality rate. These viruses are listed as a select agents by HHS and USDA as pathogens of significant threat to both human and animal health. Nipah virus (NiV) is a zoonotic paramyxovirus (genus *Henipavirus*) with pandemic potential that first emerged on a pig farm in Malaysia in 1997 and led to a human outbreak with more than 260 cases and 40% mortality. Old world frugivorous bats, particularly Genus *Pteropus* (Family *Pteropodidae*), are natural reservoirs for a range of henipaviruses, including Nipah virus. Filoviruses circulate both in Africa and Southeast Asia, and have also been linked to bat reservoirs. In Africa, EBOV and Sudan virus (SUDV) have caused multiple human outbreaks with mean mortality rates between 50% and 90%. The current EBOV outbreak in West Africa, by far the largest Ebola epidemic in history, has had more than 28,600 cases, primarily in Sierra Leone, Guinea, and Liberia, with a mortality rate of 40%. The outbreak in West Africa has prompted the Government of Malaysia to determine whether filoviruses are circulating in bat species resident in Peninsular Malaysia. Malaysia's experience with Nipah virus, existing technical expertise, and its current commitment to using a One Health approach to disease surveillance (e.g. surveillance for novel zoonoses under PREDICT in all three sectors: wildlife, livestock, and human health) make it an ideal place to establish an advanced serological platform for detection of henipavirus and filovirus antibodies in wildlife and at-risk livestock and human populations.

Preliminary data: Serological studies of Nipah virus and Ebola virus using the Luminex-based platform. Studies conducted by our group have shown that NiV viral prevalence in pteropid bats is low (~1%-3%) and there is temporal variation to shedding. Mean seroprevalence in *P. vampyrus,* which is found across Peninsular Malaysia was 32% (n=253; range 16.7% - 42.4%). In Bangladesh, we conducted a 6-year longitudinal study of *Pteropus giganteus* using the Luminex-based platform to screen bats for IgG antibodies against both Nipah virus and Ebola virus Zaire. Between 20% and 80% of adult *Pteropus giganteus* were NiV seropositive, while between 20% and 50% were EBOV seropositive (Epstein et al, *in prep*). Nipah virus infections appear to peak in June/July while EBOV appears to peak in December (see also Project Narrative). We found a diversity of genetic strains of Nipah virus in *P. giganteus* (Epstein et al., *in prep*), and viruses which are NiV-like but distinct henipaviruses. Non-neutralizing antibodies against NiV-like viruses found in goats, cattle, and pigs in Bangladesh suggests that spillover from bats to domestic animals occurs and that there is a broad spectrum of henipaviruses circulating in bats. RESTV RNA was recently identified by our group in *Mineopterus schreibersii,* a common insectivorous bat. We also detected RESTV antibodies in two fruit bat species: *Cynopterus brachyotis* and *Pteropus vampyrus:* the latter is a NiV reservoir. In Bangladesh, we found antibodies against EBOV and RESTV in 3.5% of *Rousettus leschenaultii* (n=141). *M. schreibersii*, *R. leschenaultii*, and two *Pteropus* species, including *P. vampyrus* all occur in Malaysia, yet there is no data available regarding filoviruses in wildlife in Malaysia. The possibility that multiple henipaviruses or filoviruses capable of infecting people or livestock

to be circulating in bats in Malaysia makes enhanced surveillance and early detection of these high consequence viruses critically important for reducing their threat to public health.

PREDICT
Between 2009 and 2015, EHA, CM, and the Department of Wildlife and National Parks (DWNP) have collected and archived samples, including serum, from more than 1,400, animals including bats, rodents, and macaques all from areas where people and wildlife come into contact. While oropharyngeal, urogenital, and rectal swab samples have been or will be screened using PCR assays for viral families (including paramyxoviruses and filoviruses), corresponding sera remain archived (and untested) and will be made available for this project to test them using the Luminex-based assay.

University Malaya study of acutely ill Orang Asli patients.
We will also have access to archived and newly collected Orang Asli samples collected from acutely febrile patients at Gombak Hospital that serves the Orang Asli communities, under a separate ongoing disease study at the University of Malaya (Prof. Abu Bakar) and NMRC-A (Co-PI Pike). This study just received renewed funding to continue sampling febrile patients and expand to sample asymptomatic Orang Asli from communities across a land-use gradient, which will include individuals without animal exposure. Under this proposal we will screen sera collected from well characterized Orang Asli patients and community members using the Luminex-based platform.

***Tasks/Scientific Goals:* (Format: Year #(s). Task #. Sub-task#)**

Task 1: (Year 1-OY5). Enhance capacity within Malaysia to conduct serological surveillance for henipa- and filoviruses. The GoM has been engaged in using a One-Health approach to zoonotic disease surveillance since the NiV outbreak in 1998 and most recently via collaborations with EHA under PREDICT. However, current GoM and PREDICT surveillance activities in humans, wildlife and domestic animals are based on broad molecular assays designed to identify novel viruses (including henipaviruses and filoviruses). One of the challenges with this approach is that Nipah, Ebola, and related viruses tend to be acute and asymptomatic infections in bats, making detection of viral RNA challenging. IgG antibodies,

however, persist in bats (as well as people and livestock), reducing the sampling effort necessary to identify exposed or infected individuals in a population and also allowing for detection of asymptomatic carriers. Adding a serological component to existing surveillance will greatly enhance the government's ability to detect both known and unknown henipa- and filoviruses in wildlife, domestic animals and human populations at risk for spillover. To establish this capacity, we will provide a BioRad Bio-Plex 200 machine with computer console to NPHL and DWNP. We will provide all reagents for henipa- and filovirus assays. Following Bio-Plex installation, we will conduct a 10-day training course for lab technicians at DWNP and another at NPHL. UM has a Luminex machine and will receive assay reagents and lab staff will participate in one of the training workshops. 1 PhD student at USU will develop additional assay reagents in Y1-OY5. We will identify *either* 1 PhD or 2 Masters' students at UM and 1 PhD student at UPM to train under this project. We will provide additional training to technical staff from GoM partner labs in viral pseudo-type assay development at USU. The grantee shall:

1.1.1. Transfer BioRad Bio-Plex 200 to NPHL and DWNP labs;

1.1.2-2.1.2. Transfer Luminex-based filovirus and henipavirus reagents to DWNP, NPHL, and UM labs; the grantee will provide a BioRad Bio-Plex 200 to UPM and conduct a 10-day training workshop in Y2.

1.1.3.-2.1.3 Train lab staff to use Luminex-based assays

1.1.4- OY5.1.4 Supervise 1 UM PhD or 2 Masters' students (Y1-3), and 1 UPM PhD student

1.1.5-OY5.1.5 Convene the Science Advisory Group (annually in KL);

1.1.6-2.1.6 Develop a database for serology results and sample metadata; establish sample repository at partner labs.

Task 2. (Y1-OY5) Develop and validate Luminex-based reagents to detect henipa- and filovirus antibodies. At USU, we will engineer soluble and secreted versions of henipa- and filovirus glycoproteins, expressed in mammalian cell culture systems to accurately reflect proper synthesis including their assembly and processing into properly glycosylated higher order complexes. Constructs will be designed and tested in pilot experiments for expression and analysis, and then used to establish stably expressing cell lines. Preparative amounts of the various soluble viral glycoproteins will be made using serum-free culture conditions in suspension culture, and proteins are purified using the appropriate tag protocol (either S-tag or double strep tag (TST)) by affinity chromatography, followed by concentration and size exclusion chromatography. We will test the utility of each individual glycoprotein by Luminex, ELISA and Western blotting then provide all necessary reagents to partner labs to accomplish the testing under this project. The grantee shall:

1.2.1-2.2.1 produce Mojaing virus (MojV) and African GH-M74a G glycoproteins; Bundibugyo virus (BDBV), Tai Forest virus (TAFV), Lloviu virus (LLOV), MARV Ravn, SUDV, SUDV GpΔmucin, RESTV (monkey), and RESTV (porcine) Gp glycoproteins.

1.2.2-3.2.2 use the completed viral glycoprotein preparations and produce polyclonal rabbit serum to each individual glycoprotein; test the utility of each individual glycoprotein by Luminex-based, ELISA and Western blotting assays;

1.2.3 Provide N protein reagents to detect novel henipa- and filoviruses to partner labs.

1.2.4-OY5.2.4: If novel henipa- or filoviruses are detected using molecular assays (under

PREDICT), grantee may develop new reagents for antibodies against these viruses and negative sera will be re-screened.

Task 3. Screen archived serum samples from wildlife and Orang Asli for henipa- and filovirus antibodies using a Luminex-based platform (Y1-Y2). Grantee shall test up to 945 macaque and 175 bat archived serum samples collected under PREDICT and stored at DWNP, and up to 300 archived Orang Asli samples stored at NPHL, and up to 200 Orang Asli samples at UM. The number of samples will depend on available serum volume and quality. Results will be used to inform the Orang Asli and farm studies described in **Tasks 4 and 5**. Positive sera may be sent for confirmatory testing at USU using pseudovirus serum neutralization assays, ELISA, or Western blot. Results shall be entered into a database and shared with GoM partners.

1.3.1 Identify suitable archived animal and human sera;
1.3.2 Screen sera for henipa- and filovirus IgG antibodies at GoM and UM partner labs;
1.3.3 Confirm positive results using western blot or pseudovirus assay;
1.3.4 Enter results into database and analyze;
1.3.5-2.3.5 share results with partners.

Task 4. Serological survey of Orang Asli who hunt, wildlife, and peri-domestic animals. (Y1-OY5). Indigenous communities living in forested areas and that practice subsistence wildlife hunting are at higher risk of exposure to zoonotic viruses due to handling and butchering wildlife and therefore contact with bodily fluids. In **Y1** of this project, we will apply for IRB ethical approval to continue and expand from a pilot study currently underway (expected completion: Oct 2016). Pending IRB and IACUC approval, CM, MoH, and DWNP will work together in **Y1-Y2** to sample 100 individuals from each of 3 Orang Asli communities in Perak State (incl. Kuala Lipis and Gua Musang), **totaling 600 human blood samples over five years**. 100 people sampled per community will allow us to detect a seropositive individual with 95% confidence at a prevalence of 3%, assuming a population of 500 individuals. We will also aim to sample blood from 50 bats per each of 3 species around each study village (e.g. *Miniopterus*, *Pteropus*, and *Rousettus* spp); 30 nonhuman primates; and 30 dogs, if present, in order to be able to detect henipa- or filovirus antibodies in an individual with 95% confidence given a 5% seroprevalence (in bats) and 10% in dogs and nonhuman primates. MOH officers and CM will collect blood from Orang Asli and associated animals, and serum will be separated either in the field or at partner labs and stored at -86C at prior to testing. A sample size of 50 bats would allow us to detect differences between study locations (or time points, should we conduct follow-up studies) of 56% with 95% confidence and 80% precision. The grantee shall conduct repeated sampling of Orang Asli and peri-domestic livestock and wildlife in the same communities in Y3-OY4. If novel henipa or filoviruses identified by PREDICT, new assays will be developed in OY4 and negative samples re-tested. Molecular and serological data from Orang Asli will be co-analyzed in OY4-OY5. In addition, we will test sera collected through an ongoing UM study of Orang Asli. Up to 500 samples per year will be collected Y1-OY5, and these will be tested using the Luminex-based platform at UM. Positive samples will be confirmed at UM or USU.
The grantee shall:

1.4.1.-OY5.4.1 Test Orang Asli, wildlife, and peri-domestic animal samples collected under PREDICT and UM studies
1.4.2-2.4.2, Y3.4.2, OY4.4.2-OY5.4.2. Enter results into database and analyze data;
1.4.3 – 2.4.3, Y3.4.3, OY4.4.3 Confirm sero-positive samples;

1.4.4. Develop follow-up study with GoM partners to be implemented in Y3.
2.4.5 Apply for IRB and permits for follow-up study
3.4.6 Implement repeated sampling in Orang Asli villages
3.4.7 Analyze longitudinal data
OY4.4.1. If new viruses found by PREDICT, develop new sero assay and re-test samples
OY4.4.2.-OY5.4.2 Confirm additional test results and co-analyze molecular and sero data

Task 5. Develop serological study of farm workers, livestock, and wildlife around farms. (Y1-OY5) Grantee shall conduct a serological survey of farm workers and animals living on or around 2 large-scale farms (>5000 ruminants and/or pigs) and 2 small-scale farms (500-1000 ruminants and/or pigs) in Peninsular Malaysia to detect exposure to henipa- or filoviruses. Grantee shall work with DWNP to sample bats, macaques and dogs proximal to farms; and with MoH to conduct qualitative research and collect blood samples from farm workers to screen for henipa- and filovirus antibodies. Grantee will work with UPM to sample and test livestock. In Y1 grantee will select appropriately sized farms. Grantee shall also locate bat caves or roosts proximal to each farm, meet farm owners, and characterize the livestock. Grantee shall apply for all necessary IRB and IACUC approvals. Grantee may commence sampling in Y2, pending approvals, and conduct a follow-up study in OY4 and OY5 (if funded). The grantee shall:

1.5.1 Meet with GoM partners to develop study;
1.5.2 Apply for ethical approvals and permits.
1.5.3. Conduct scoping visits to farms, characterize livestock and local wildlife species.
2.5.1-3.5.1 Collect wildlife, livestock, and human samples
2.5.2-3.5.2 Conduct questionnaires with farm workers
2.5.3-3.5.3 Screen samples using Luminex-based assay; confirm results
2.5.4-3.5.4 Enter data into database and analyze results
OY4.5.1-5.5.1 Repeat human, wildlife and livestock sampling at each farm
OY4.5.2-OY5.5.2 Test samples, enter results into database; analyze complete dataset
OY5.5.3 prepare manuscript based on (Y1-OY5) study

Task 6. Disseminate reports to relevant stakeholders (Y1-OY5). Grantee shall synthesize all data collected through the projects described above as well as capacity building activities in Malaysia. Scientific and general reports will be generated and provided to GoM partners and an annual report to DTRA. PhD or Masters' students will complete thesis and present at annual stakeholders meeting in KL or at scientific meeting in Malaysia. Grantee shall meet with GoM partners and SAG in Kuala Lumpur annually, according to schedule. Grantee shall present findings at scientific meetings (e.g. ASTM, ASM Biodefense, IMED, EcoHealth) to present findings according to the schedule.

1.6.1-OY5.6.1 submit progress reports to DTRA.
1.6.2-OY5.6.2 Complete annual report to local stakeholders.
1.6.3-OY5.6.3 Conduct presentations/meetings at times and places specified in the grant schedule, including DTRA Annual Technical Review.
1.6.4-OY5.6.4 Conduct annual stakeholder meetings.
3.6.5. Prepare comprehensive project report for GoM
3.6.7, OY5.6.7 UM Graduate students present thesis to committee and prepare publication in peer reviewed journal
3.6.6-OY5.6.6 Prepare and submit publications to disseminate study findings.

Project Timeline

Task	Y1	Y2	Y3	OY4	OY5
1. Enhance capacity in Malaysia for serological surveillance for all henipaviruses and filoviruses					
1.1. Transfer BioRad Bio-Plex 200 in NPHL, DWNP, and UPM labs					
1.2 Transfer serological reagents to NPHL, DWNP, UPM, and UM labs					
1.3 Training staff at partner labs					
1.4 Identify graduate students at UM and UPM					
1.5 Convene Science Advisory Group					
1.6 Develop database for serology results and sample metadata					
1.7 Training in pseudovirus development at USU					
2. Develop & validate henipavirus and filovirus reagents.					
2.1 Produce specific henipavirus and filovirus proteins					
2.2 Produce and test monoclonal antibodies against new proteins					
2.3 Transfer henipa and filo N protein assays to partner labs					
2.4. develop/validate proteins and mAbs for novel henipa- & filoviruses					
3.Screen archived wildlife and Orang Asli sera					
3.1 Identify archived wildlife and human sera at NPHL and DWNP					
3.2 Screen sera using Luminex-based platform					
3.3 Confirm positive sera with additional testing					
3.4 Enter results in database / analyze					
4. Sero-survey of Orang Asli and animals					
4.1 apply for IRB/IACUC approval					
4.2 Collect & test serum samples from Orang Asli ~ animals					
4.3 Enter results into database					
4.4 Confirm positive sera with additional testing					
4.5 Conduct follow-up study of Orang Asli and animals					
4.6 Analyze data					
5. Serological study of farm workers, livestock, and wildlife on farms	■	■	■	■	■
5.1 Apply for necessary permits and ethical approval	■	■			
5.2 scoping visits to potential study farms; select farms	■				
5.3 sample farm workers, livestock, and wildlife on farms		■	■		
5.4 follow-up study of farm workers, wildlife and livestock (4 farms)				■	■
5.5 Enter results into database / analyse results		■	■	■	■
6. Disseminate reports to relevant stakeholders					
6.1 annual report toDTRA					
6.2 annual report to government of Malaysia partners					
6.3 attend DTRA annual technical review					
6.4 partner meeting in Malaysia					
6.5 present results at scientific conference (e.g. ASTMH, IMED, ASM)					
6.6 prepare manuscripts for publication in peer-reviewed journal					

DEFENSE THREAT REDUCTION AGENCY (DTRA)
GENERAL TERMS AND CONDITIONS FOR GRANT AWARDS

Table of Contents

1. **Terms and Conditions Incorporated by Reference.**

   The DoD Research and Development General Terms and Conditions, dated July 2016, are hereby incorporated by reference and are available for download at website http://www.onr.navy.mil/Contracts-Grants/submit-proposal/grants-proposal/grants-terms-conditions.aspx.

2. **Acceptance of Grant.**

   The recipient is not required to countersign the Grant document; however, the recipient agrees to the conditions specified in the Research Grant and the Articles contained herein unless notice of disagreement is furnished to the Grants Officer within fifteen (15) calendar days after the date of the Grants Officer's signature. In case of disagreement, the recipient shall not assess the Grant any costs of the research unless and until such disagreement(s) is resolved.

3. **Recipient Responsibilities.**

   The recipient will bear primary responsibility for the conduct of the research and will exercise judgment towards attaining the stated research objectives within the limits of the Grant's Terms and Conditions.

   The Principal Investigator(s) (PI) specified in the Grant award will be continuously responsible for the conduct of the research project and will be closely involved with the research effort. The PI, operating within the policies of the recipient, is in the best position to determine the means by which the research may be conducted most effectively.

4. **Standards for Financial Management Systems.**

   Where the Federal Government guarantees or insures the repayment of money borrowed by the recipient, DTRA, at its discretion, may require adequate bonding and insurance if the bonding and insurance requirements of the recipient are not deemed adequate to protect the interest of the Federal Government.

   DTRA may require adequate fidelity bond coverage where the recipient lacks sufficient coverage to protect the Federal Government's interest.

   Where bonds are required in the situations described above, the bonds shall be obtained from companies holding certificates of authority as acceptable sureties, as prescribed in 31 CFR Part 223, "Surety Companies Doing Business with the United States."

5. **Modification of the Grant.**

   The only method by which this Grant may be modified is by a formal, written modification signed by the Grants Officer. No other communications, whether oral or in writing, are valid.

   Prior Approvals are required as follows:

   1) Expenditures on equipment costing $5,000 or more not specifically identified in the budget at time of award. (Approval via written notification from the Grants Officer.)
   2) Expenditures for foreign travel not specifically identified in the budget at time of award. (Approval via written notification from the Grants Officer.)

3) Prior approval is not required to transfer amounts budgeted for indirect costs to absorb increases in direct costs, or vice versa.
4) Prior approval is not required to carry forward an unobligated balance to a subsequent period of performance under this award.

6. Payments.

The 2 CFR 200 governs responsibilities concerning payments, with the following clarifications:

Recipients shall submit requests for payment using Invoicing, Receipt, Acceptance, and Property Transfer (iRAPT) at https://wawf.eb.mil/. Any request for advance payments must be approved by the Administrative Grants Office shown in Block 6 of the award. The request shall be submitted to the Administrative Office identified in Block 6 of the Research Grant by entering the following routing codes:

1) *Pay Office DoDAAC*: See Block 12 (Code) on the first page of the Grant.
2) *Invoice Type*: Grant and Cooperative Agreement Voucher.
3) *Issue By DoDAAC*: See Block 5 (Code) on the first page of the Grant.
4) *Admin DoDAAC*: See Block 6 (Code) on the first page of the Grant.
5) *Grant Approver*: Same as Admin DoDAAC (Leave Ext. blank).

Payments will be made by the Defense Finance and Accounting Service (DFAS) office specified in the Research Grant (Block 12).

A foreign awardee must have a U.S. bank account and be signed up for electronic payments (electronic funds transfers (EFT)).

7. Funding Increments and/or Options.

The recipient is advised that the Grantor's obligation to provide funding for increments and/or options included in the Grant is contingent upon satisfactory performance in the judgment of the DTRA Scientific Officer/Technical Monitor and the availability of funds. Other factors will be considered before options will be exercised (for example, expenditure rate and current programmatic objectives). Accordingly, no legal liability on the part of the Grantor exists unless or until funds are made available to the Grantor and notice of such availability is confirmed in writing to the recipient. Refer to the Funding Profile in Section G of the Grant for additional incremental funding planned, but not currently obligated for the Grant.

Funding Increments – In no event is the Government obligated to reimburse the recipient for expenditures in excess of the total funds allotted by the Government to this agreement. Recipients should note that low expenditure rates reported on payment requests may be cause for deferral of future increments. The Government anticipates unilateral modifications for funding increments.

Options – If the agreement contains Option(s), the Government reserves the right to exercise the Option(s) unilaterally.

8. Patent Rights.

Patent Rights are governed by 37 CFR 401.14 with the following clarifications: All DTRA-related disclosures, confirmatory licenses to the government, patent applications, and other communications should be submitted as detailed herein.

The 37 CFR Part 401 invention reporting requirements are summarized in the table below. Unless otherwise indicated in the "Submission to DTRA" column, the grantee is required to upload the following types of invention information using iEdison (https://s-edison.info.nih.gov/iEdison/), a single web interface for government grantees to report details of inventions and patents. If the grantee organization is not already an iEdison registrant, then iEdison registration is required prior to submission of the below invention reports. The grant shall not be closed out until all invention reporting requirements are met.

Action	When	Discussion	37 CFR Reference	Submission to DTRA
Invention Report: The grantee must submit a report of any "subject" invention. The report must identify inventor(s), federal agency(ies), grant number(s), and date of any public disclosure. Date of submission establishes time frames for all future actions. Must be complete in technical detail. The report should be directed to the lead agency.	Within 2 months of inventor's initial report to the grantee' contractor organization.	There is no single format for disclosing the invention to the government. The communication should include the title of the invention, date of any public disclosure, names of all inventors, source(s) of federal funding (i.e. grant number), a written description of the invention in technical detail. The invention disclosure should be signed by the inventor(s); at the very least signed by a grantee institutional official.	401.14(a)(2) 401.14(c)(1)	Submit electronically by uploading either a PDF, TIFF, or text file through iEdison.
Rights to Inventions on Subcontracts: Subcontractors retain rights to their subject inventions.	Same reporting responsibilities, obligations and time frames as prime grantee organization.	Prime grantee organization cannot require ownership of subcontractor's subject invention(s)	401.14(g)(1) 401.14(g)(2)	Invention disclosure, confirmatory license, and proof of gov't support clause shall be submitted electronically through iEdison.
Election of Title to Invention: Grantee organization must notify the federal agency sponsor that it will retain ownership of invention and take steps to commercialize the invention.	Within 2 years of reporting the invention to the lead federal agency sponsor. (If disclosed publicly, this period is decreased.)		401.14(b) 401.14(f)(1) 401.14(c)(2)	Submit electronically through iEdison.
Confirmatory license The grantee organization must provide a nonexclusive, nontransferable, irrevocable, paid-up license for the government to practice or have the invention practiced on its behalf throughout the world.	Commensurate with report of any initial patent filing, unless the invention is being licensed as an unpatented biological material or research tool.		401.14(f)(1)	Submit electronically by uploading either a PDF or TIFF file through iEdison.
Nonelection of Title to Invention: Grantee organization must notify the federal sponsor that it will not retain ownership of an invention.	Within 2 years of reporting to federal agency sponsor. (If disclosed publicly, this period is decreased.)	Effectively a waiver to the government. After further review the federal agency sponsor may elect title on behalf of the government. Title does not actually vest with the government until government elects to retain title.	401.14(c)(2) 401.14(d)	Submit electronically through iEdison.
Assignment of Invention Rights to the Inventor: The inventor may request assignment of invention rights. Agencies support requests of this type variously. In all cases, documentation is required when a grantee organization waives rights to the invention and the inventor(s) wishes to retain the invention rights.	At the time the grantee organization elects not to pursue title and the inventor requests rights in the invention.	First, the grantee organization must elect not to retain rights in the invention. Second, the inventor must request the assignment of rights, agree to all terms associated with invention reporting as detailed in 37 CFR 401, and must pursue commercialization of the invention through patent filing or licensing as a research tool. Specific procedures for any agency should be determined prior to initiating the request.	401.14(k)(1); non-profits	This status shall be indicated using iEdison. Submission of all other issues (such as outstanding required documents) should be resolved prior to proceeding further. Submission of the required documents will be done electronically by uploading either a PDF, TIFF, or text file through iEdison.

Action	When	Discussion	37 CFR Reference	Submission to DTRA
Initial Patent Application: The grantee must inform the government of the initial patent application that related to any subject invention. The patent application must include a government support clause.	Within 1 year after election of title, unless there is an extension.	Time frame may vary if invention becomes public. The term initial patent application means a nonprovisional U.S. national application for patent as defined in 37 CFR 1.9(a)(3). The notification must include the patent application number and filing date assigned by the USPTO. A copy of the full application is not required.	401.14(c)(3) 401.2(n)	All filing data shall be submitted via iEdison. Evidence of inclusion of government support clause shall be submitted electronically as either a PDF or TIFF file through iEdison.
Assignment to Third Party: Documentation necessary when a grantee contractor wishes to assign invention rights to third party. If the grantee-contractor is a non-profit, the government must approve the assignment. For profit or small business grantee contractors do not need to seek approval. If the rights are assigned, new rights holder assumes the same reporting responsibilities as the grantee contractor organization.		If assignment approved, third party must pursue commercialization of the invention through patent filing or licensing of the invention as a research tool. Specific procedures to request third party assignment may vary between agencies. Consult DTRA prior to initiating request.	401.14(k) for non-profits. Note the distinction between small businesses and non-profit organizations.	Documentation shall be submitted electronically as either a PDF or TIFF file through iEdison.
Issued Patent: Grantee must provide federal agency sponsor with patent issue date, number, title of patent, and evidence of government support clause.	At the time of issue.	Patent must include government support clause.	401.5(f)(2) 401.14(f)(4)	All issued patent information shall be provided using iEdison. Evidence of inclusion of government support clause will be provided electronically as a PDF or TIFF file through iEdison
Request for Extension of Time: An extension of up to two years may be requested for election of title, or one year for filing a patent application.	Prior to any statutory bar.	Extension of 2 years for title election and one year for patent application are preapproved for funded inventions. Additional extensions need written approval from the federal agency sponsor.	401.14(c)(4)	Request electronically using iEdison.
Discontinuance of Patent Application, Payment of Maintenance Fees, or Defense in a Reexamination or Opposition proceeding on a Patent: Grantee must notify federal agency sponsor of changes in patent status.	At any time in the process, but prior to established deadlines	Relevant information and documents (e.g., patent application or patent) must be provided such that a determination to protect government interests can be made. The federal agency sponsor has the option to pursue the patent application or the patent if not being properly pursued or maintained. Any change in status must be reported at least 30 days prior to pending PTO office actions.	401.14(f)(3) 401.6	Indication shall be made via iEdison.

Action	When	Discussion	37 CFR Reference	Submission to DTRA
Annual Utilization Report: DTRA requires utilization reporting for all subject inventions that have had title elected or are licensed without a patent. Report includes stage of development, date of first commercial sale or use, number and type of licenses, gross income, licensing to small business, status of U.S. manufacturing and identification of any FDA-approved product names.	Annually	DTRA requires invention utilization reports on a 12 month reporting cycle beginning in the month of grantee choosing and continuing throughout duration of patent. Information requirements defined in iEdison. Note: this reporting requirement, if applicable, extends beyond the grant period.	401 14(h)	Submit electronically using iEdison.
Annual Summary Report of Inventions: Summarize all previously reported subject inventions under this grant.	Annually	Invention reports shall be filed annually due no later than 1 July of each year. Grants effective after 31 January will not require a report until 1 July of the following year. The recipient shall use DD Form 882, Report of Inventions and Subcontracts, to file invention reports. If no inventions occurred during the annual reporting period a negative report must be submitted. --Email Form DD882 to dtrabasicresearch@mail.mil (file size must be less than 10MB). File should be named by the Grant number and 'Invention Report' (e.g. HDTRA1-12-1-9999 Invention Report) --The Grant shall not be closed out until all invention reporting requirements are met.	401 5(f)(3)	No iEdison submission allowed. Submit DD Form 882, Report of Inventions and Subcontracts to: --DTRA Grants Officer, 8725 John J. Kingman Rd., MSC 6201 (#2730B), Ft. Belvoir VA 22060-6201 --Administrative Office identified in the Grant --As directed by DTRA, email or portal.
Final Invention Statement and Certification: Report all subject inventions derived or reduced to practice during the performance of the grant.	Due with the Final Technical Report within 90 days after the project ends.	Invention reports shall be filed at the end of the Grant's PoP. If no inventions occurred during the lifetime of the award, a negative report must be submitted. --Email Form DD882 to dtrabasicresearch@mail.mil (file size must be less than 10MB). File should be named by the Grant number and 'Invention Report' (e.g. HDTRA1-12-1-9999 Invention Report). --The Grant shall not be closed out until all invention reporting requirements are met.	401 5(f)(1)	No iEdison submission allowed. Submit DD Form 882, Report of Inventions and Subcontracts to: --DTRA Grants Officer, 8725 John J. Kingman Rd., MSC 6201 (#2730B), Ft. Belvoir VA 22060-6201 --Administrative Office identified in the Grant --As directed by DTRA, email or portal

9. Technical Reporting Requirements.

Research Performance Progress Report (RPPR). Except under rare cases, RPPRs are required annually. The RPPR is due no later than 1 July of each year. Grants effective after 31 January will not require a RPPR until 1 July of the following year.

The RPPR is *not* a cumulative report. The first RPPR shall only include actions that occurred from the Period of Performance start date up to submission of the first RPPR. Each subsequent report shall only include actions that occurred during the 12-month period following the previous year's RPPR.

A RPPR is not required in the final year of the award if the period of performance ends within 60 days of the RPPR due date. In this instance the Final Report will satisfy the requirement. Broadly the RPPR shall address the following items:

- Accomplishments
- Products
- Participants and Other Collaborating Organizations
- Impact
- Changes/Problems

Templates and specific instructions will be provided each year in advance of the submission deadline. All files must be submitted via email to dtrabasicresearch@mail.mil (individual file size must be less than 10MB). A copy of the RPPR should also be provided to the Administrative Office identified in the Grant. The file names should be as follows:

- RPPR: Year Annual Report Grant Number, e.g. 2017 Annual Report HDTRA1-12-1-9999.
- Metrics: Year Metrics Grant Number, e.g. 2017 Metrics HDTRA1-12-1-9999.

Quad Chart. An updated quad chart must be submitted annually. A template will be provided each year in advance of the submission deadline. All files must be submitted via email to dtrabasicresearch@mail.mil (individual file size must be less than 10MB). The file name should be as follows:

- Quad Chart: Year Quad Chart Grant Number, e.g. 2017 Quad Chart HDTRA1-12-1-9999.

Annual Technical Review. At least one representative (preferably the PI) for each award is expected to attend and present at an annual technical program review meeting, unless otherwise exempted by DTRA in writing. For planning purposes reviews will typically be for two days in Northern Virginia during the spring or summer months.

Final Technical Report. A comprehensive final technical report is required: the draft document is required forty-five (45) days prior to the end of the Period of Performance and the final document is required ninety (90) days after the expiration or termination of the award.

The purpose of the final report is to document and to transition the results of the effort into the DTRA and DoD applied research community. The final report will always be sent to the Defense Technical Information Center (DTIC) and unclassified reports may be made available to the public through the National Technical Information Service (NTIS).

The final report is more than an extension of previous annual reports. The final report shall be a **comprehensive** technical summary of the significant work accomplished. The final report, where it is not readily accessible in published form should, where applicable:

- Clearly describe and illustrate the experimental equipment, setup, and procedures;
- Characterize and tabulate collected/computed data in an appendix;

- Sufficiently describe computational codes so they can be reproduced. Include a listing of the code in an appendix if possible and appropriate; and
- When the research effort culminates in the production of one or more student theses or dissertations, in these cases, the most significant advancements and conclusions (equations, figures, relationships, etc.) should be included in an executive summary. The theses or dissertations should be attached as appendices only if they are not readily available. If they are, clearly reference them and how they can be obtained. Also include in the executive summary, cumulative lists of people involved in, and publications stemming from, the research effort. Do not include copies of already submitted or published articles in the final report.

Standard Form (SF) 298, Report Documentation Page, must be used. Item 13 of the SF-298 should contain a 100 to 200 word abstract summarizing technical progress during the reporting period. The SF-298 may be found on the Internet at: http://www.gsa.gov/portal/forms/download/116146

All of the report pages should be prepared for acquisition and distribution by DTIC. All of the report pages should be of good quality for copying purposes. No pages should be missing.

The format and standard required by your institution for the preparation of theses and dissertations shall be used for the final report. In the absence of any institutional standards, you may wish to refer to the American National Standards Institute (ANSI) document Z39.18-1987, "Scientific and Technical Reports: Organization, Preparation, and Production," for guidance. The report may be obtained from:

American National Standards Institute, Inc.
1430 Broadway
New York, NY 10018

It is anticipated that all final technical reports will be unclassified and that distribution will not be limited. However, for final technical reports that require a limited distribution as deemed necessary by DTRA, a Distribution List will be provided with the comments on the draft final technical report. The Distribution List should be formatted to match the rest of the report, placed at the end of the report, and added to the Table of Contents. The number of pages in the Distribution List should be added to the total page count and included in the total number of pages cited in Block 15 of the SF-298.

The draft of the final technical report will be due not later than forty-five (45) days prior to the end of the period of performance. The draft of the final technical report (including a draft SF-298) must be submitted electronically as follows:

- Email the draft of the final technical report to dtrabasicresearch@mail.mil (file size must be less than 10MB). The file name should be 'Draft Final Report' and the Grant number, e.g. Draft Final Report HDTRA1-12-1-9999.
- Provide a copy of the report to the Administrative Office identified in the Grant.

Within thirty (30) days, this draft will be reviewed by DTRA and comments will be provided to the Grantee to ensure the report complies with DTRA final report requirements. Such review and comment does not restrict the conduct or reporting of the project research

findings/outcomes and, in accordance with Article 35, does not restrict Grantee's ability to publish. Grantee shall incorporate such requested changes so that the report incorporates and complies with agreement final reporting requirements terms. Final Technical Reports are due ninety (90) days after the expiration or termination of the award. The final submission should be made in accordance with the draft final report submission instructions.

Final Metrics. A final metrics table (in MS Excel format) is required. A template and specific instructions will be provided in advance of the submission deadline. The final metrics file should be submitted along with the Final Technical Report. The fields contained in the final metrics file are analogous to those of the annual submissions. The final metrics file shall contain only data from the last annual reporting period until the end of the award's funded Period of Performance.

- Email the final Metrics File to dtrabasicresearch@mail.mil (file size must be less than 10MB). The file name should be 'Final Metrics' and the Grant number, e.g. Final Metrics HDTRA1-12-1-9999.

10. Financial Reporting Requirements.

Federal Financial Reports (SF-425) are due no later than 1 July of each year with data "as of" 30 May of that year. Grants effective after 31 January will not require a Federal Financial Report until 1 July of the following year. All financial reports shall be submitted to the Administration Office identified in Block 6 of the Research Grant. In addition, the Federal Financial Report must be submitted electronically as follows:

- Email the Federal Financial Report to dtrabasicresearch@mail.mil (file size must be less than 10MB). The file name should be the Year, 'Federal Financial Report' and the Grant number, e.g. 2015 Federal Financial Report HDTRA1-12-1-9999.

11. Delegation of Administration Duties.

Certain grant administration duties have been delegated to the Administration Office identified in Block 6 of the Research Grant. These duties are as follows:

1) Provisionally approve all Grant and Cooperative Agreement Vouchers.
2) Perform all property administration services except the approval of recipient's requests to purchase equipment with grant funds. Such approvals must be granted by the DTRA Grants Officer.
3) Perform all plant clearance functions.
4) Approve requests for Registration for Scientific and Technical Information Services (DD Form 1540).
5) Obtain all financial report(s) (see Article 10 of this document).
6) Execute administrative closeout procedures, which include the following:
   a. Obtain the final Report of Inventions and Subcontracts (DD Form 882).
   b. Obtain final payment request, if any.
   c. Obtain final property report and dispose of purchased property and government furnished equipment (GFE) in accordance with the DoDGARs Part 22, Subpart G.
   d. Perform a review of final incurred costs and assist the Grants Officer in resolving exceptions, if any, resulting from questioned costs.
   e. Assure that all refunds due the Government are received by the Grantor.

NOTE: This term and condition is **not applicable** to instrumentation and equipment grant awards.

12. Security.

As a general rule, PI's will not need access to classified security information in the conduct of research supported under this Grant. Should it appear that access to such information is desirable the recipient shall advise the Grantor and request clearance for the investigator. Should information be developed during the course of work under this Grant that, in the judgment of the PI or the recipient, should be classified, the Grants Officer shall be notified immediately.

13. Representations and Assurances.

By accepting funds under this Grant, the recipient assures that it will comply with applicable provisions of the national policies and statutory/regulatory/executive-based requirements detailed below.

LIVE ORGANISMS. By signing this agreement or accepting funds under this agreement, the recipient assures that it will comply with applicable provisions of the following national policies concerning live organisms:

1) For human subjects:

   a) Adhere to the requirements for protection of human subjects per the DoD level terms and conditions as well as the following DTRA requirements:
   b) The recipient shall adhere to DTRA local clause 252.223-9002 – Protection of Human Subjects (Aug 2010). The full text of this clause is as follows:

      All research under this grant involving human subjects must be conducted in accordance with 32 CFR 219, 10 U.S.C 980, and DoDD 3216.02, as well as other applicable federal and state regulations. Grantees must be cognizant of and abide by the additional restrictions and limitations imposed on the DoD regarding research involving human subjects, specifically as regards vulnerable populations (32 CFR 219 modifications to subparts B-D of 45 CFR 46), recruitment of military research subjects (32 CFR 219), and surrogate consent (10 U.S.C. 980).

      DTRA Directive 3216.01 of June 9, 2010 establishes the DTRA Human Subjects Protection Program, sets forth the policies, defines the applicable terms, and delineates the procedures necessary to ensure DTRA compliance with federal and DoD regulations and legislation governing human subject research. The regulations mandate that all DoD activities, components, and agencies protect the rights and welfare of human subjects of study in DoD-supported research, development, test and evaluation, and related activities hereafter referred to as "research". The requirement to comply with the regulations applies to new starts and to continuing research.

      The DTRA directive requires that research using human subjects may not begin or continue until the Defense Threat Reduction Agency's Research Oversight Board (ROB) has reviewed and approved the proposed protocol. Grantees and subcontractors are required to submit a valid federal assurance for their organization

(institution, laboratory, facility) that has been issued by either DoD or the Department of Health and Human Services, and documentation of review of proposed protocols by the local Institutional Review Board (IRB) to include consent forms for any planned research using human subjects to the DTRA ROB for its review through the Grants Officer's representative (if assigned) or the Grants Officer. The ROB review is separate from, and in addition to, local IRB review.

A study is considered to involve human research subjects if: 1) there is interaction with the subject (simply talking to the subject qualifies; no needles are required); and 2) if the study involves collection and/or analysis of personal/private information about an individual, or if material used in the study contains links to such information.

Written approval to begin research or subcontract for the use of human subjects under the proposed protocol will be provided in writing from the DTRA ROB, through the Grants Officer. A copy of this approval shall be maintained by both the Grantee and the government. Any proposed modifications or amendments to the approved protocol or consent forms must be submitted to the local IRB and the DTRA ROB for review and approval. Examples of modifications/ amendments to the protocol include but are not limited to:

- a change of the PI;
- changes in duration or intensity of exposure to some stimulus or agent;
- changes in the information requested of volunteers, or changes to the use of specimens or data collected; or
- changes in perceived or measured risks or benefits to volunteers that require changes to the study.

Research pursuant to such modifications or amendments shall not be initiated without IRB and ROB approval except when necessary to eliminate apparent and immediate hazards to the subject(s).

Research projects lasting more than one year require IRB review at least annually, or more frequently as required by the responsible IRB. ROB review and approval is required annually. The Grantee or subcontractor must provide documentation of continued IRB review of protocols for ROB review and approval in accordance with these Terms and Conditions. Research must not continue without renewed ROB approval unless necessary to eliminate apparent and immediate hazards to the subject(s).

Non-compliance with any provision of this clause may result in withholding of payments under the grant pursuant to the grant's payments clause(s) and/or grant termination pursuant to the grant's termination clause(s). The government shall not be responsible for any costs incurred for research involving human subjects prior to protocol approval by the ROB.

2) For animals:

   a. Adhere to the requirements for protection of animal subjects per the DoD level terms and conditions as well as the following DTRA requirements:

b. DTRA local clause 252.235-9001 – Prohibition of Use of Laboratory Animals (Jul 2010). The full text of this clause is as follows:

The grant recipient shall obtain approval from the US Army Medical Research and Material Command (MRMC), Animal Care and Use Review Office (ACURO) prior to conducting research on live nonhuman vertebrates. Studies involving non-human primates, dogs, cats, or marine mammals will require a site visit by an ACURO laboratory animal veterinarian as a condition of approval. DoD may also conduct site visits involving research on other animals when deemed appropriate. The animal research facility is responsible for notifying the DoD sponsor if Association for the Assessment and Accreditation of Laboratory Animal Care accreditation is lost or the facility is under USDA inspection. DoD also has the right to a site inspection under these circumstances.

The grant recipient (including subcontractors) is expressly forbidden to use laboratory animals in any manner whatsoever without the express written approval of MRMC ACURO.

The grant recipient shall complete the ACURO Animal Use Appendix for Research Involving Animals found at the following web site: http://mrmc.amedd.army.mil/index.cfm?pageid=research_protections.acuro_animalappendix. Submit the completed ACURO appendix, contact information, the DTRA grant number and a copy of the grant for processing to the email address listed at the ACURO website. Once ACURO approves the effort, the grant recipient will receive written approval to begin animal use from the US Army MRMC ACURO by separate email. The grant recipient shall promptly provide a copy of the approval to the Grants Officer and Grants Officer representative. After approval, changes or protocol amendments must be submitted to and approved by ACURO before implementation.

The grant recipient, or subcontractors as appropriate, shall submit the most recent U.S. Department of Agriculture Animal Care Inspection Report annually in accordance with instructions provided.

Non-compliance with any provision of this clause may result in termination of the grant.

DoD Instruction 3216.01, dated September 13, 2010, provides policy and requirements for the use of animals in DoD-funded research based on Army Regulation 40-33. The DoD definition of animal is any live nonhuman vertebrate. All proposals that involve the use of animals must be in compliance with DoD Instruction 3216.01 and AR 40-33. DTRA requires that research using animals not begin or continue until the ACURO has reviewed and approved the proposed animal use. For animals, the provisions include rules on animal acquisition, transport, care, handling, and use in: (i) 9 CFR parts 1-4, Department of Agriculture rules that implement the Laboratory Animal Welfare Action of 1966 (U.S.C. 2131-2156); and (ii) the "Guide for the Care and Use of Laboratory Animals," National Institutes of Health Publication No. 86-23

RESEARCH INVOLVING RECOMBINANT DNA MOLECULES. Any recipient performing research involving recombinant DNA molecules and/or organisms and viruses

containing recombinant DNA molecules agrees by acceptance of this award to comply with the National Institutes of Health "Guidelines for Research Involving Recombinant DNA Molecules," July 5, 1994 (59 FR34496) amended August 5, 1994 (59 FR40170) amended April 27, 1995 (60 FR 20726), or such later revision of those guidelines as may be published in the Federal Register.

COMBATING TRAFFICKING IN PERSONS. The recipient agrees to comply with the trafficking in persons requirement in Section 106(g) of the Trafficking Victims Protection Act of 2000 (TVPA), as amended (22 U.S.C. 7104(g)) as implemented by 2 CFR 175.

1) Provisions applicable to a recipient that is a private entity.

   a. You as the recipient, your employees, sub-recipients under this award, and sub-recipients' employees may not—
      - Engage in severe forms of trafficking in persons during the period of time that the award is in effect;
      - Procure a commercial sex act during the period of time that the award is in effect; or
      - Use forced labor in the performance of the award or subawards under the award.

   b. We as the Federal awarding agency may unilaterally terminate this award, without penalty, if you or a sub-recipient that is a private entity—
      - Is determined to have violated a prohibition in paragraph 1)a. of this award term; or
      - Has an employee who is determined by the agency official authorized to terminate the award to have violated a prohibition in paragraph 1)a. of this award term through conduct that is either
        - Associated with performance under this award; or
        - Imputed to you or the sub-recipient using the standards and due process for imputing the conduct of an individual to an organization that are provided in 2 CFR Part 180, "OMB Guidelines to Agencies on Government-wide Debarment and Suspension (Non-procurement)," as implemented by our agency at 2 CFR Part 376.

2) Provision applicable to a recipient other than a private entity.

   a. We as the Federal awarding agency may unilaterally terminate this award, without penalty, if a sub-recipient that is a private entity—
      - Is determined to have violated an applicable prohibition in paragraph 1)a. of this award term; or
      - Has an employee who is determined by the agency official authorized to terminate the award to have violated an applicable prohibition in paragraph 1)a. of this award term through conduct that is either
        - Associated with performance under this award; or
        - Imputed to the sub-recipient using the standards and due process for imputing the conduct of an individual to an organization that are provided in 2 CFR Part 180, "OMB Guidelines to Agencies on Government-wide

Debarment and Suspension (Non-procurement)," as implemented by our agency at 2 CFR Part 376.

3) Provisions applicable to any recipient.

   a. You must inform us immediately of any information you receive from any source alleging a violation of a prohibition in paragraph 1)a. of this award term.

   b. Our right to terminate unilaterally that is described in paragraph 1)b. or 2)a. of this Article:
      - Implements Section 106(g) of the TVPA, as amended (22 U.S.C. 7104(g)), and
      - Is in addition to all other remedies for noncompliance that are available to us under this award.

   c. You must include the requirements of paragraph 1)a. of this award term in any subaward you make to a private entity.

4) Definitions. For purposes of this award term:

   a. "Employee" means either:
      - An individual employed by you or a sub-recipient who is engaged in the performance of the project or program under this award; or
      - Another person engaged in the performance of the project or program under this award and not compensated by you including, but not limited to, a volunteer or individual whose services are contributed by a third party as an in-kind contribution toward cost sharing or matching requirements.

   b. "Forced labor" means labor obtained by any of the following methods: the recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery.

   c. "Private entity":
      - Means any entity other than a State, local government, Indian tribe, or foreign public entity, as those terms are defined in 2 CFR 175.25.
      - Includes:
        - A non-profit organization, including any non-profit institution of higher education, hospital, or tribal organization other than one included in the definition of Indian tribe at 2 CFR 175.25(b).
        - A for-profit organization.

   d. "Severe forms of trafficking in persons," "commercial sex act," and "coercion" have the meanings given at Section 103 of the TVPA, as amended (22 U.S.C. 7102).

PROHIBITION ON USING FUNDS UNDER GRANTS AND COOPERATIVE AGREEMENTS WITH ENTITIES THAT REQUIRE CERTAIN INTERNAL CONFIDENTIALITY AGREEMENTS. The recipient agrees to comply with the requirements in section 743 of the Financial Services and General Government Appropriations Act, 2015 (Division E of the Consolidated and Further Continuing Appropriations Act, 2015, Pub. L. 113-235):

1) The recipient may not require its employees, contractors, or sub-recipients seeking to report fraud, waste, or abuse to sign or comply with internal confidentiality agreements or statements prohibiting or otherwise restricting them from lawfully reporting that waste, fraud, or abuse to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information.
2) The recipient must notify its employees, contractors, or sub-recipients that the prohibitions and restrictions of any internal confidentiality agreements inconsistent with paragraph 1) of this award provision are no longer in effect.
3) The prohibition in paragraph 1) of this award provision does not contravene requirements applicable to Standard Form 312, Form 4414, or any other form issued by a Federal department or agency governing the nondisclosure of classified information.
4) If the Government determines that the recipient is not in compliance with this award provision, it:
    a. Will prohibit the recipient's use of funds under this award, in accordance with section 743 of Division E of the Consolidated and Further Continuing Resolution Appropriations Act, 2015, (Pub. L. 113-235) or any successor provision of law; and
    b. May pursue other remedies available for the recipient's material failure to comply with award terms and conditions.

14. Data Collection.

Data collection activities, if any, performed under this Grant are the responsibility of the recipient. Awarding agency support of the project does not constitute approval of the survey design, questionnaire content, or data collection procedures. The recipient shall not represent to respondents that such data are being collected for or in association with the awarding agency without the specific written approval of the cognizant awarding agency official. However, this requirement is not intended to preclude mention of the awarding agency support of the project in response to an inquiry or acknowledgment of such support in any publication of this data.

15. Publications and Acknowledgement of Sponsorship.

Publication of results of the research project in an appropriate professional journal is encouraged as an important method of recording and reporting scientific information. .

The recipient agrees that in the release of information relating to the grant, such release shall include the following statement, "The project or effort depicted was or is sponsored by the Department of the Defense, Defense Threat Reduction Agency. The content of the information does not necessarily reflect the position or the policy of the federal government, and no official endorsement should be inferred." For purposes of this provision, information includes news releases, articles, manuscripts, brochures, advertisements, still and motion pictures, speeches, trade association proceedings, symposia, etc.

When issuing statements, press releases, requests for proposals, bid solicitations, and other documents describing projects or programs funded in whole or in part with federal money, all recipients receiving federal funds, shall clearly state: (i) the percentage of total costs of the

program or project which will be financed with federal money, and (ii) the dollar amount of federal funds for the project or program.

16. Authorization to Perform Activities Abroad.

If the award recipient is a foreign institution, the recipient assures that it has been duly authorized to operate and do business in the country or countries in which the grant is to be performed; that it has obtained all appropriate licenses, permits, and approvals required in connection with the grant's proposed activities; and that it will fully comply with all the laws, decrees, labor standards and regulations of such country or countries during the performance of the grant. U.S. Government funds may not be used in support of a project which is prohibited by law in the country or countries in which it is undertaken. DTRA does not assume responsibility for the recipient's compliance with the laws and regulations of the country or countries in which the activities are to be conducted.

17. Inconsistency between English Version and Translation of Grant.

The foreign recipient shall ensure that all contract correspondence that is addressed to the U.S. Government is submitted in English or with an English translation. In the event of inconsistency between the terms of the grant and any translation thereof into another language, the meaning in the English language shall control.

SECTION SF 30 BLOCK 14 CONTINUATION PAGE

SUMMARY OF CHANGES

SECTION SF 30 - BLOCK 14 CONTINUATION PAGE

The following have been added by full text:
SF 30 CONTINUATION PAGE

RQN: HDTRA1723032 002

The purpose of this modification is to do the following:

1.) Notate and provide acceptance of the EHA's revised budget of $4,065,665.00.
2.) Increase the award amount by $154,246.95 to reflect the budget increasing from $3,911,418.05 to $4,065,665.00.
3.) Provide additional funding to CLIN 0001 in the amount of $156,044.00 to subCLIN 000103, ACRN AC.
4.) Correct and update the Grant Funding Profile and Invoice Schedule.
5.) Update the Grant Points of Contact.
6.) Update the Issuing and Payment Offices.

SECTION A - SOLICITATION/CONTRACT FORM

The total cost of this contract was increased by $91,758.55 from $2,408,373.45 to $2,500,132.00.
The 'issued by' organization has changed from
DEFENSE THREAT REDUCTION AGENCY/J4C
8725 JOHN J. KINGMAN ROAD, MSC 6201
FORT BELVOIR VA 22060-6201
to
DEFENSE THREAT REDUCTION AGENCY/AL-AC
8725 JOHN J. KINGMAN ROAD, MSC 6201
FORT BELVOIR VA 22060-6201

The 'Payment will be made by' organization has changed from
DFAS COLUMBUS CENTER
DFAS-CO/NORTH ENTITLEMENT OPERATIONS
P.O. BOX 182266
COLUMBUS OH 43218-2266
to
DFAS COLUMBUS CENTER
DFAS-CO/NORTH ENTITLEMENT OPERATIONS
P.O. BOX 182317
COLUMBUS OH 43218-2317

SECTION B - SUPPLIES OR SERVICES AND PRICES

CLIN 0001
The CLIN description has changed from FRBAA14-6-2-0050_R: Base Year to FRBAA14-6-2-0050_R: Three Year Base.

The estimated/max cost has increased by $91,758.55 from $2,408,373.45 to $2,500,132.00.
The total cost of this line item has increased by $91,758.55 from $2,408,373.45 to $2,500,132.00.

CLIN 0002

The estimated/max cost has increased by $33,355.07 from $767,080.93 to $800,436.00.
The total cost of this line item has increased by $33,355.07 from $767,080.93 to $800,436.00.

CLIN 0003

The estimated/max cost has increased by $29,134.33 from $735,963.67 to $765,098.00.
The total cost of this line item has increased by $29,134.33 from $735,963.67 to $765,098.00.

SUBCLIN 000103 is added as follows:

ITEM NO	SUPPLIES/SERVICES	QUANTITY	UNIT	UNIT PRICE	AMOUNT
000103					$0.00
	Incremental Funding COST Incremental funding in the amount of $156,044.00.				
				ESTIMATED COST	$0.00
	ACRN AC				$156,044.00
	CIN: HDTRA17230320020003				

SECTION E - INSPECTION AND ACCEPTANCE

The following Acceptance/Inspection Schedule was added for SUBCLIN 000103:

INSPECT AT	INSPECT BY	ACCEPT AT	ACCEPT BY
N/A	N/A	N/A	N/A

SECTION G - CONTRACT ADMINISTRATION DATA

Accounting and Appropriation

Summary for the Payment Office

As a result of this modification, the total funded amount for this document was increased by $156,044.00 from $766,817.00 to $922,861.00.

SUBCLIN 000103:
Funding on SUBCLIN 000103 is initiated as follows:

ACRN: AC

CIN: HDTRA17230320020003

252.632-9000 GRANT FUNDING PROFILE (MAR 2012)

FUNDING PROFILE:

The amount of $922,861.00 is obligated for work to be performed during the period beginning with grant award and continuing through April 30th, 2018. Additional incremental funding planned, but not obligated, is:

Year 1 (FY17-18) $0.00
Year 2 (FY18-19) $833,274.00
Year 3 (FY19-20) $743,997.00

The Government's liability is limited to the amount obligated.

INVOICE SCHEDULE:

INVOICE NO.	INVOICE DATE	PAYMENT
1	August 01, 2017	$76,905.08

2	September 01, 2017	$76,905.08
3	October 01, 2017	$76,905.08
4	November 01, 2017	$76,905.08
5	December 01, 2017	$76,905.08
6	January 01, 2018	$76,905.08
7	February 01, 2018	$76,905.08
8	March 01, 2018	$76,905.08
9	April 01, 2018	$76,905.08
10	May 01, 2018	$76,905.08
11	June 01, 2018	$76,905.08
12	July 01, 2018	$76,905.12

**The amounts listed are estimates; invoices should be submitted for actual cost incurred.

252.601-9001 GRANTS OFFICER'S REPRESENTATIVE (GOR) (MAY 2009)

d. Grants Officer's Representative (GOR) for this Grant is:

Name: (b)(6) DNM MA
Defense Threat Reduction Agency/PI-CTB
8725 John J. Kingman Road, MS 6201
Fort Belvoir, VA 22060-6201
telephone (b)(6)
email address: (b)(6)

b. SCOPE AND LIMITATIONS OF AUTHORITY FOR DTRA GRANTS OFFICER'S REPRESENTATIVE

1. The Grants Officer's Representative (GOR) is responsible for monitoring the technical and programmatic performance of the grant or cooperative agreement (hereinafter referred to as agreement) including compliance with the agreement's reporting requirements. Perceived deviations from the agreement's terms and conditions shall be brought to the attention of appropriate recipient personnel and if not corrected, to the attention of the Grants Officer. Deviations or other occurrences indicative of the recipient's inability or unwillingness to conform to the agreement's requirements shall be brought to the immediate attention of the Grants Officer.

2. The GOR has no authority to modify the stated terms of the agreement or specifications in any manner, or to approve any action that would result in additional charges to the Government. The DTRA Grants Officer must make all such changes in writing.

3. The GOR is authorized to correspond directly with the recipient on matters within the scope and limitations of his or her authority. All such correspondence shall be signed personally by the GOR and a copy will be furnished the Grants Officer for placement in the official agreement file.

4. The GOR will provide technical advice to the recipient to the extent such advice will not alter any of the agreement's terms and conditions or result in an increase in the estimated cost of the agreement's performance as specified in the agreement. The GOR is encouraged to discuss with the recipient new ideas related to the original scope of the agreement that may be of special interest to DTRA. The GOR should also be alert for indications that any part of the research is becoming unfruitful. If, as a result of such discussions, questions arise as to the possible need for a modification, the matter shall be brought to the immediate attention of the Grants Officer. The GOR shall not direct the recipient to undertake any action that the recipient believes to be contrary to the agreement's scope, terms or conditions without the written approval of the Grants Officer.

5. Any visits to the recipient's facilities on matters pertaining to the agreement will be documented in a brief memorandum. A copy will be provided the Grants Officer for placement in the official agreement file.

6. The GOR will maintain such work files as he or she deems necessary to properly document performance of the duties and responsibilities as a GOR. Upon completion of the agreement and delivery of all required reports, such work files will be forwarded to the Grants Officer for placement in the official agreement file.

7. In performance of the GOR's duties, the GOR shall constantly stress protection of the Government's interests. Similarly, the GOR shall avoid any act which may tend to compromise the position of DTRA, any individual member of DTRA or which will impact confidence in the integrity of DTRA with the business community.

(End of Clause)

252.632-9000 GRANT FUNDING PROFILE (MAR 2012)

FUNDING PROFILE:

The amount of $1,806,135.00 is obligated for work to be performed during the period beginning with grant award and continuing through April 30th, 2019. Additional incremental funding planned, but not obligated, is:

Year 3 (FY19-20) $743,997.00

The Government's liability is limited to the amount obligated.

INVOICE SCHEDULE:

INVOICE NO.	INVOICE DATE	PAYMENT*
1	May 31, 2018	$73,606.17
2	June 30, 2018	$73,606.17
3	July 31, 2018	$73,606.17
4	August 31, 2018	$73,606.17
5	September 30, 2018	$73,606.17

Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia / Epstein
CBEP-Thrust Area 6, CC WMD

Statement of Work

Project Title: Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia

Document Date: April 11 2019

Objective: The objective of this project is to enhance capacity within the Malaysia government to characterize the distribution of and detect spillover of novel and known henipaviruses and filoviruses, (both groups include high consequence zoonotic pathogens) in indigenous populations and farms in Peninsular Malaysia. Current surveillance strategies for novel zoonotic viruses rely exclusively on molecular detection tools, but Nipah and Ebola viruses are present at low prevalence in bat species which makes infected individuals difficult to detect. By establishing a multiplexed serological assay developed to detect antibodies against any henipa- and filoviruses, the Government of Malaysia (GoM) will more effectively be able to determine the distribution of these high-impact viruses in wildlife reservoirs and detect evidence of spillover in at-risk human or livestock populations. This enhancement of human and animal surveillance in all three sectors (wildlife, livestock and human health) and training of Malaysian scientists utilizes a One Health approach and will help reduce risk of zoonotic disease emergence and spread by accelerating detection and response. These activities fulfill DTRA CBEP's mandate and are also complementary to and supportive of the aims of the USAID EPT program and the Global Health Security Agenda.

Scope: This research includes transferring state-of-the art serological reagents and Luminex-based microsphere beaded technology that will allow the Government of Malaysia to use a One Health approach to conduct serological surveillance for all known *and unknown* henipaviruses and filoviruses in wildlife, domestic animals, and humans. The study will test archived human and wildlife serum samples which are linked to PCR-tested oral, rectal, or urogenital swab samples (collected and tested under the ongoing USAID Emerging Pandemic Threats: PREDICT program and a University of Malaya study of Orang Asli healthy populations and acutely febrile hospital cases). It will also conduct a new study looking at henipa- and filovirus antibodies in livestock and farm workers and wildlife near the farms, as well as an expanded Orang Asli study focused on hunting communities living in the forest. The grantee will investigate spillover of these pathogens by screening wildlife reservoirs (e.g. bats and nonhuman primates), people, and livestock for IgG antibodies to henipaviruses and filoviruses, while also continuing to develop and transfer additional tests that will detect antibodies against novel viruses in these groups.

Our team will focus on the following major goals and milestones:

1. Improve the Government of Malaysia's capacity to conduct serological surveillance for henipaviruses and filoviruses in human and animal populations, using a One Health approach.
    - Transfer Luminex-based technology into government and university diagnostic labs in three key sectors (wildlife, livestock, and human health); conduct trainings for staff to be able to screen samples, interpret results, and perform confirmatory assays; train local graduate students; and publish and share findings among GoM partners.
2. Determine the host distribution and seroprevalence of henipaviruses and filoviruses in wildlife (e.g. bat) populations in Peninsular Malaysia associated with Orang Asli communities and livestock farms.

- Conduct cross-sectional serological studies of humans and animals for henipa- and filoviruses by testing sera from new samples collected under this project and archived samples from PREDICT. Wildlife sampling will be conducted jointly with the Dept. of Wildlife and National Parks (DWNP); livestock sampling with DVS and UPM; and human sampling with MoH. These activities provide opportunity for One Health-based disease surveillance; threat reduction; and capacity building within the Government of Malaysia.

3. Conduct surveillance for IgG antibodies against filoviruses and henipaviruses in people and domestic animals which may indicate spillover from wildlife reservoirs. Sampling activities will focus on Orang Asli communities and farms in Peninsular Malaysia and will be conducted jointly with the Ministry of Health's National Public Health Laboratory (NPHL), DWNP, and the University Putra Malaysia under the Department of Veterinary Services (DVS). Serological surveillance will allow the GoM to focus limited resources and develop interventions to reduce threat from viral outbreaks in at-risk animal and human populations.

- Qualitative studies (e.g. questionnaires) detailing human-animal contact where sampling occurs will characterize high-risk behaviors and interfaces;
- Sampling human, wildlife, and domestic animal populations in Orang Asli forest communities that practice hunting.
- Sampling domestic animals and farm workers on large and small-scale farms and associated wildlife to identify evidence of spillover.

Our research will be focused on building capacity within the Government of Malaysia to conduct serological surveillance in human and animal populations in Peninsular Malaysia where people and animals are believed to have high levels of contact. Collaborators from the Government of Malaysia (GoM)'s Department of Wildlife and National Parks (DWNP), the Ministry of Health's National Public Health Laboratory (NPHL), the Department of Veterinary Service's University Putra Malaysia (UPM), University of Malaysia (UM), The Uniformed Services University, Maryland (USU), Conservation Medicine, Ltd. (CM), The US Navy Medical Research Center, Asia (NMRC-A), and Duke-NUS Graduate Medical School, Singapore (Linfa Wang lab) will play active roles in this research. EHA's history of successful collaboration with DWNP, MoH, and DVS under prior research projects and most recently through PREDICT, as well as having a Memorandum of Agreement with the aforementioned institutions, gives us confidence that we will be able to achieve the aims of this proposal (also see letters of collaboration).

The duration of the proposed project is three years, with optional 4th and 5th years containing follow-up Orang Asli studies and farm studies so that we have longitudinal data. These option years will significantly strengthen the overall study by enhancing our ability to detect temporal patterns of infection in bat and other animal populations as well as additional opportunity to detect spillover in humans or livestock. **Through these proposed activities we would create enhanced One Health surveillance for known *and novel* henipaviruses and filoviruses in human and animal populations in Peninsular Malaysia, an emerging disease hotspot.** The proposed activities would significantly support Malaysia's surveillance priorities, DTRA CBEP Thrust Area 6 objectives, the Global Health Security Agenda (GHSA), and the USAID Emerging Pandemic Threats program by allowing the Government of Malaysia to more rapidly detect infections of high impact zoonotic agents and develop effective interventions to prevent viral

outbreaks and reduce human and animal mortality, thereby reducing the threat from these high consequence viral agents.

Background:

Nipah virus (NiV), Ebola virus (EBOV) and Marburg Virus (MARV) are emerging zoonotic viruses belonging to the genera *Henipavirus* (Family *Paramyxoviridae*), *Ebolavirus* and *Marburgvirus* (both Family *Filoviridae*) and they have each caused outbreaks in people with high mortality rate. These viruses are listed as a select agents by HHS and USDA as pathogens of significant threat to both human and animal health. Nipah virus (NiV) is a zoonotic paramyxovirus (genus *Henipavirus*) with pandemic potential that first emerged on a pig farm in Malaysia in 1997 and led to a human outbreak with more than 260 cases and 40% mortality. Old world frugivorous bats, particularly Genus *Pteropus* (Family *Pteropodidae*), are natural reservoirs for a range of henipaviruses, including Nipah virus. Filoviruses circulate both in Africa and Southeast Asia, and have also been linked to bat reservoirs. In Africa, EBOV and Sudan virus (SUDV) have caused multiple human outbreaks with mean mortality rates between 50% and 90%. The current EBOV outbreak in West Africa, by far the largest Ebola epidemic in history, has had more than 28,600 cases, primarily in Sierra Leone, Guinea, and Liberia, with a mortality rate of 40%. The outbreak in West Africa has prompted the Government of Malaysia to determine whether filoviruses are circulating in bat species resident in Peninsular Malaysia. Malaysia's experience with Nipah virus, existing technical expertise, and its current commitment to using a One Health approach to disease surveillance (e.g. surveillance for novel zoonoses under PREDICT in all three sectors: wildlife, livestock, and human health) make it an ideal place to establish an advanced serological platform for detection of henipavirus and filovirus antibodies in wildlife and at-risk livestock and human populations.

Preliminary data: Serological studies of Nipah virus and Ebola virus using the Luminex-based platform. Studies conducted by our group have shown that NiV viral prevalence in pteropid bats is low (~1%-3%) and there is temporal variation to shedding. Mean seroprevalence in *P. vampyrus*, which is found across Peninsular Malaysia was 32% (n=253; range 16.7% - 42.4%). In Bangladesh, we conducted a 6-year longitudinal study of *Pteropus giganteus* using the Luminex-based platform to screen bats for IgG antibodies against both Nipah virus and Ebola virus Zaire. Between 20% and 80% of adult *Pteropus giganteus* were NiV seropositive, while between 20% and 50% were EBOV seropositive (Epstein et al, *in prep*). Nipah virus infections appear to peak in June/July while EBOV appears to peak in December (see also Project Narrative). We found a diversity of genetic strains of Nipah virus in *P. giganteus* (Epstein et al., *in prep*), and viruses which are NiV-like but distinct henipaviruses. Non-neutralizing antibodies against NiV-like viruses found in goats, cattle, and pigs in Bangladesh suggests that spillover from bats to domestic animals occurs and that there is a broad spectrum of henipaviruses circulating in bats. RESTV RNA was recently identified by our group in *Mineopterus schreibersii,* a common insectivorous bat. We also detected RESTV antibodies in two fruit bat species: *Cynopterus brachyotis* and *Pteropus vampyrus:* the latter is a NiV reservoir. In Bangladesh, we found antibodies against EBOV and RESTV in 3.5% of *Rousettus leschenaultii* (n=141). *M. schreibersii*, *R. leschenaultii,* and two *Pteropus* species, including *P. vampyrus* all occur in Malaysia, yet there is no data available regarding filoviruses in wildlife in Malaysia. The possibility that multiple henipaviruses or filoviruses capable of infecting people or livestock

to be circulating in bats in Malaysia makes enhanced surveillance and early detection of these high consequence viruses critically important for reducing their threat to public health.

PREDICT

Between 2009 and 2015, EHA, CM, and the Department of Wildlife and National Parks (DWNP) have collected and archived samples, including serum, from more than 1,400, animals including bats, rodents, and macaques – all from areas where people and wildlife come into contact. While oropharyngeal, urogenital, and rectal swab samples have been or will be screened using PCR assays for viral families (including paramyxoviruses and filoviruses), corresponding sera remain archived (and untested) and will be made available for this project to test them using the Luminex-based assay.

University Malaya study of acutely ill Orang Asli patients.

We will also have access to archived and newly collected Orang Asli samples collected from acutely febrile patients at Gombak Hospital that serves the Orang Asli communities, under a separate ongoing disease study at the University of Malaya (Prof. Abu Bakar) and NMRC-A (Co-PI Pike). This study just received renewed funding to continue sampling febrile patients and expand to sample asymptomatic Orang Asli from communities across a land-use gradient, which will include individuals without animal exposure. Under this proposal we will screen sera collected from well characterized Orang Asli patients and community members using the Luminex-based platform.

***Tasks/Scientific Goals:* (Format: Year #(s). Task #. Sub-task#)**

Task 1: (Year 1-OY5). Enhance capacity within Malaysia to conduct serological surveillance for henipa- and filoviruses. The GoM has been engaged in using a One-Health approach to zoonotic disease surveillance since the NiV outbreak in 1998 and most recently via collaborations with EHA under PREDICT. However, current GoM and PREDICT surveillance activities in humans, wildlife and domestic animals are based on broad molecular assays designed to identify novel viruses (including henipaviruses and filoviruses). One of the challenges with this approach is that Nipah, Ebola, and related viruses tend to be acute and asymptomatic infections in bats, making detection of viral RNA challenging. IgG antibodies,

however, persist in bats (as well as people and livestock), reducing the sampling effort necessary to identify exposed or infected individuals in a population and also allowing for detection of asymptomatic carriers. Adding a serological component to existing surveillance will greatly enhance the government's ability to detect both known and unknown henipa- and filoviruses in wildlife, domestic animals and human populations at risk for spillover. To establish this capacity, we will provide a BioRad Bio-Plex 200 machine with computer console to NPHL and DWNP. We will provide all reagents for henipa- and filovirus assays. Following Bio-Plex installation, we will conduct a 10-day training course for lab technicians at DWNP and another at NPHL. UM has a Luminex machine and will receive assay reagents and lab staff will participate in one of the training workshops. 1 PhD student at USU will develop additional assay reagents in Y1-OY5. We will identify *either* 1 PhD or 2 Masters' students at UM and 1 PhD student at UPM to train under this project. We will provide additional training to technical staff from GoM partner labs in viral pseudo-type assay development at USU. The grantee shall:

1.1.1. Transfer BioRad Bio-Plex 200 to NPHL and DWNP labs;

1.1.2-2.1.2. Transfer Luminex-based filovirus and henipavirus reagents to DWNP, NPHL, and UM labs; the grantee will provide a BioRad Bio-Plex 200 to UPM and conduct a 10-day training workshop in Y2.

1.1.3.-2.1.3 Train lab staff to use Luminex-based assays

1.1.4- OY5.1.4 Supervise 1 UM PhD or 2 Masters' students (Y1-3), and 1 UPM PhD student

1.1.5-OY5.1.5 Convene the Science Advisory Group (annually in KL);

1.1.6-2.1.6 Develop a database for serology results and sample metadata; establish sample repository at partner labs.

Task 2. (Y1-OY5) Develop and validate Luminex-based reagents to detect henipa- and filovirus antibodies. At USU, we will engineer soluble and secreted versions of henipa- and filovirus glycoproteins, expressed in mammalian cell culture systems to accurately reflect proper synthesis including their assembly and processing into properly glycosylated higher order complexes. Constructs will be designed and tested in pilot experiments for expression and analysis, and then used to establish stably expressing cell lines. Preparative amounts of the various soluble viral glycoproteins will be made using serum-free culture conditions in suspension culture, and proteins are purified using the appropriate tag protocol (either S-tag or double strep tag (TST)) by affinity chromatography, followed by concentration and size exclusion chromatography. We will test the utility of each individual glycoprotein by Luminex, ELISA and Western blotting then provide all necessary reagents to partner labs to accomplish the testing under this project. The grantee shall:

1.2.1-2.2.1 produce Mojaing virus (MojV) and African GH-M74a G glycoproteins; Bundibugyo virus (BDBV), Tai Forest virus (TAFV), Lloviu virus (LLOV), MARV Ravn, SUDV, SUDV GpΔmucin, RESTV (monkey), and RESTV (porcine) Gp glycoproteins.

1.2.2-3.2.2 use the completed viral glycoprotein preparations and produce polyclonal rabbit serum to each individual glycoprotein; test the utility of each individual glycoprotein by Luminex-based, ELISA and Western blotting assays;

1.2.3 Provide N protein reagents to detect novel henipa- and filoviruses to partner labs.

1.2.4-OY5.2.4: If novel henipa- or filoviruses are detected using molecular assays (under

PREDICT), grantee may develop new reagents for antibodies against these viruses and negative sera will be re-screened.

Task 3. Screen archived serum samples from wildlife and Orang Asli for henipa- and filovirus antibodies using a Luminex-based platform (Y1-Y2). Grantee shall test up to 945 macaque and 175 bat archived serum samples collected under PREDICT and stored at DWNP, and up to 300 archived Orang Asli samples stored at NPHL, and up to 200 Orang Asli samples at UM. The number of samples will depend on available serum volume and quality. Results will be used to inform the Orang Asli and farm studies described in **Tasks 4 and 5**. Positive sera may be sent for confirmatory testing at USU using pseudovirus serum neutralization assays, ELISA, or Western blot. Results shall be entered into a database and shared with GoM partners.

1.3.1 Identify suitable archived animal and human sera;
1.3.2 Screen sera for henipa- and filovirus IgG antibodies at GoM and UM partner labs;
1.3.3 Confirm positive results using western blot or pseudovirus assay;
1.3.4 Enter results into database and analyze;
1.3.5-2.3.5 share results with partners.

Task 4. Serological survey of Orang Asli who hunt, wildlife, and peri-domestic animals. (Y1-OY5). Indigenous communities living in forested areas and that practice subsistence wildlife hunting are at higher risk of exposure to zoonotic viruses due to handling and butchering wildlife and therefore contact with bodily fluids. In **Y1** of this project, we will apply for IRB ethical approval to continue and expand from a pilot study currently underway (expected completion: Oct 2016). Pending IRB and IACUC approval, CM, MoH, and DWNP will work together in **Y1-Y2** to sample 100 individuals from each of 3 Orang Asli communities in Perak State (incl. Kuala Lipis and Gua Musang), **totaling 600 human blood samples over five years**. 100 people sampled per community will allow us to detect a seropositive individual with 95% confidence at a prevalence of 3%, assuming a population of 500 individuals. We will also aim to sample blood from 50 bats per each of 3 species around each study village (e.g. *Miniopterus*, *Pteropus*, and *Rousettus* spp); 30 nonhuman primates; and 30 dogs, if present, in order to be able to detect henipa- or filovirus antibodies in an individual with 95% confidence given a 5% seroprevalence (in bats) and 10% in dogs and nonhuman primates. MOH officers and CM will collect blood from Orang Asli and associated animals, and serum will be separated either in the field or at partner labs and stored at -86C at prior to testing. A sample size of 50 bats would allow us to detect differences between study locations (or time points, should we conduct follow-up studies) of 56% with 95% confidence and 80% precision. The grantee shall conduct repeated sampling of Orang Asli and peri-domestic livestock and wildlife in the same communities in Y3-OY4. If novel henipa or filoviruses identified by PREDICT, new assays will be developed in OY4 and negative samples re-tested. Molecular and serological data from Orang Asli will be co-analyzed in OY4-OY5. In addition, we will test sera collected through an ongoing UM study of Orang Asli. Up to 500 samples per year will be collected Y1-OY5, and these will be tested using the Luminex-based platform at UM. Positive samples will be confirmed at UM or USU.

<u>The grantee shall:</u>

1.4.1.-OY5.4.1 Test Orang Asli, wildlife, and peri-domestic animal samples collected under PREDICT and UM studies
1.4.2-2.4.2, Y3.4.2, OY4.4.2-OY5.4.2. Enter results into database and analyze data;
1.4.3 – 2.4.3, Y3.4.3, OY4.4.3 Confirm sero-positive samples;

1.4.4. Develop follow-up study with GoM partners to be implemented in Y3.
2.4.5 Apply for IRB and permits for follow-up study
3.4.6 Implement repeated sampling in Orang Asli villages
3.4.7 Analyze longitudinal data
OY4.4.1. If new viruses found by PREDICT, develop new sero assay and re-test samples
OY4.4.2.-OY5.4.2 Confirm additional test results and co-analyze molecular and sero data

Task 5. Develop serological and molecular virology study of farm workers, livestock, and wildlife around farms. (Y1-OY5) Grantee shall conduct a serological and molecular virology survey of farm workers and animals living on or around 2 large-scale farms (>5000 ruminants and/or pigs) and 2 small-scale farms (500-1000 ruminants and/or pigs) in Peninsular Malaysia to detect exposure to and presence of henipa- or filoviruses. Grantee shall work with DWNP to sample bats, macaques and dogs proximal to farms; and with MoH to conduct qualitative research and collect blood samples from farm workers to screen for henipa- and filovirus antibodies. Sample collection from animals and humans will also include two duplicate nasal or oropharyngeal swabs, fecal samples (animals only), and urine samples (animals only) for PCR analysis, utilizing a pan-henipavirus and panfilovirus assay developed under the PREDICT project. Grantee will work with UPM to sample and test livestock. In Y1 grantee will select appropriately sized farms. Grantee shall also locate bat caves or roosts proximal to each farm, meet farm owners, and characterize the livestock. Grantee shall apply for all necessary IRB and IACUC approvals. Grantee may commence sampling in Y2, pending approvals, and conduct a follow-up study in OY4 and OY5 (if funded). The grantee shall:

1.5.1 Meet with GoM partners to develop study;
1.5.2 Apply for ethical approvals and permits.
1.5.3. Conduct scoping visits to farms, characterize livestock and local wildlife species.
2.5.1-3.5.1 Collect wildlife, livestock, and human samples
2.5.2-3.5.2 Conduct questionnaires with farm workers
2.5.3-3.5.3 Screen samples using Luminex-based assay and PCR; confirm results
2.5.4-3.5.4 Enter data into database and analyze results
OY4.5.1-5.5.1 Repeat human, wildlife and livestock sampling at each farm
OY4.5.2-OY5.5.2 Test samples, enter results into database; analyze complete dataset
OY5.5.3 prepare manuscript based on (Y1-OY5) study

Task 6. Disseminate reports to relevant stakeholders (Y1-OY5). Grantee shall synthesize all data collected through the projects described above as well as capacity building activities in Malaysia. Scientific and general reports will be generated and provided to GoM partners and an annual report to DTRA. PhD or Masters' students will complete thesis and present at annual stakeholders meeting in KL or at scientific meeting in Malaysia. Grantee shall meet with GoM partners and SAG in Kuala Lumpur annually, according to schedule. Grantee shall present findings at scientific meetings (e.g. ASTM, ASM Biodefense, IMED, EcoHealth) to present findings according to the schedule.

1.6.1-OY5.6.1 submit progress reports to DTRA.
1.6.2-OY5.6.2 Complete annual report to local stakeholders.
1.6.3-OY5.6.3 Conduct presentations/meetings at times and places specified in the grant schedule, including DTRA Annual Technical Review.
1.6.4-OY5.6.4 Conduct annual stakeholder meetings.
3.6.5. Prepare comprehensive project report for GoM

3.6.7, OY5.6.7 UM Graduate students present thesis to committee and prepare publication in peer reviewed journal

3.6.6-OY5.6.6 Prepare and submit publications to disseminate study findings.

Project Timeline

Task	Y1	Y2	Y3	OY4	OY5
1. Enhance capacity in Malaysia for serological surveillance for all henipaviruses and filoviruses					
1.1. Transfer BioRad Bio-Plex 200 in NPHL, DWNP, and UPM labs					
1.2 Transfer serological reagents to NPHL, DWNP, UPM, and UM labs					
1.3 Training staff at partner labs					
1.4 Identify graduate students at UM and UPM					
1.5 Convene Science Advisory Group					
1.6 Develop database for serology results and sample metadata					
1.7 Training in pseudovirus development at USU					
2. Develop & validate henipavirus and filovirus reagents.					
2.1 Produce specific henipavirus and filovirus proteins					
2.2 Produce and test monoclonal antibodies against new proteins					
2.3 Transfer henipa and filo N protein assays to partner labs					
2.4. develop/validate proteins and mAbs for novel henipa- & filoviruses					
3.Screen archived wildlife and Orang Asli sera					
3.1 Identify archived wildlife and human sera at NPHL and DWNP					
3.2 Screen sera using Luminex-based platform					
3.3 Confirm positive sera with additional testing					
3.4 Enter results in database / analyze					
4. Sero-survey of Orang Asli and animals					
4.1 apply for IRB/IACUC approval					
4.2 Collect & test serum samples from Orang Asli + animals					
4.3 Enter results into database					
4.4 Confirm positive sera with additional testing					
4.5 Conduct follow-up study of Orang Asli and animals					
4.6 Analyze data					
5. Serological study of farm workers, livestock, and wildlife on farms	■	■	■	■	■
5.1 Apply for necessary permits and ethical approval	■	■			
5.2 scoping visits to potential study farms; select farms	■				
5.3 sample farm workers, livestock, and wildlife on farms		■	■		
5.4 follow-up study of farm workers, wildlife and livestock (4 farms)				■	■
5.5 Enter results into database / analyse results		■	■	■	■
6. Disseminate reports to relevant stakeholders					
6.1 annual report toDTRA					
6.2 annual report to government of Malaysia partners					
6.3 attend DTRA annual technical review					
6.4 partner meeting in Malaysia					
6.5 present results at scientific conference (e.g. ASTMH, IMED, ASM)					
6.6 prepare manuscripts for publication in peer-reviewed journal

SUMMARY OF CHANGES

SECTION A - SOLICITATION/CONTRACT FORM

The total cost of this contract was increased by $1,565,534.00 from $2,550,132.00 to $4,115,666.00.

SECTION B - SUPPLIES OR SERVICES AND PRICES

CLIN 0001

The estimated/max cost has increased by $1,565,534.00 from $2,550,132.00 to $4,115,666.00.
The total cost of this line item has increased by $1,565,534.00 from $2,550,132.00 to $4,115,666.00.

CLIN 0002

The CLIN extended description has changed from:

Serological Biosurveillance for Spillover of Henipaviruses and Filoviruses at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia.In accordance with the following attachments: SOW at Exhibit A and DTRA Terms and Conditions for Grant Awards dated 6 April 2018 at Exhibit B.

To:

FOR MISSION CONTINUITY, THE SCOPE AND VALUE FROM CLIN 0002 HAS BEEN COMBINED WITH CLIN 0001. THIS OPTION IS NOT TO BE EXERCISED.

.

The estimated/max cost has decreased by $800,436.00 from $800,436.00 to $0.00.
The total cost of this line item has decreased by $800,436.00 from $800,436.00 to $0.00.

CLIN 0003

The CLIN extended description has changed from:

Serological Biosurveillance for Spillover of Henipaviruses and Filoviruses at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia.In accordance with the following attachments: SOW at Exhibit A and DTRA Terms and Conditions for Grant Awards dated 6 April 2018 at Exhibit B.

To:

FOR MISSION CONTINUITY, THE SCOPE AND VALUE FROM CLIN 0003 HAS BEEN COMBINED WITH CLIN 0001. THIS OPTION IS NOT TO BE EXERCISED.

.

The estimated/max cost has decreased by $765,098.00 from $765,098.00 to $0.00.
The total cost of this line item has decreased by $765,098.00 from $765,098.00 to $0.00.

SUBCLIN 000106 is added as follows:

ITEM NO	SUPPLIES/SERVICES	QUANTITY	UNIT	UNIT PRICE	AMOUNT
000106					$0.00
	Funding in support of CLIN 0001 COST				
				ESTIMATED COST	
	ACRN AF CIN: HDTRA10342010001				$1,565,534.00

SECTION E - INSPECTION AND ACCEPTANCE

The following Acceptance/Inspection Schedule was added for SUBCLIN 000106:

INSPECT AT	INSPECT BY	ACCEPT AT	ACCEPT BY
N/A	N/A	N/A	N/A

SECTION F - DELIVERIES OR PERFORMANCE

The following Delivery Schedule item for CLIN 0001 has been changed from:

DELIVERY DATE	QUANTITY	SHIP TO ADDRESS	DODAAC / CAGE
POP 01-MAY-2017 TO 30-APR-2020	N/A	DEFENSE THREAT REDUCTION AGENCY/CT-BT (b)(6) 8275 JOHN J. KINGMAN RD #6201 FORT BELVOIR VA 22060 (b)(6) FOB: Destination	HDTRA1

To:

DELIVERY DATE	QUANTITY	SHIP TO ADDRESS	DODAAC / CAGE
POP 01-MAY-2017 TO 30-APR-2022	N/A	DEFENSE THREAT REDUCTION AGENCY/CT-BT (b)(6) 8275 JOHN J. KINGMAN RD #6201 FORT BELVOIR VA 22060 (b)(6) FOB: Destination	HDTRA1

SECTION G - CONTRACT ADMINISTRATION DATA

Accounting and Appropriation

Summary for the Payment Office

As a result of this modification, the total funded amount for this document was increased by $1,565,534.00 from $2,550,132.00 to $4,115,666.00.

SUBCLIN 000106:
Funding on SUBCLIN 000106 is initiated as follows:

11. THIS ITEM ONLY APPLIES TO AMENDMENTS OF SOLICITATIONS

☐ The above numbered solicitation is amended as set forth in Item 14. The hour and date specified for receipt of Offer ☐ is extended, ☐ is not extended.

Offer must acknowledge receipt of this amendment prior to the hour and date specified in the solicitation or as amended by one of the following methods: (a) By completing Items 8 and 15, and returning _____ copies of the amendment; (b) By acknowledging receipt of this amendment on each copy of the offer submitted; or (c) By separate letter or telegram which includes a reference to the solicitation and amendment numbers. FAILURE OF YOUR ACKNOWLEDGMENT TO BE RECEIVED AT THE PLACE DESIGNATED FOR THE RECEIPT OF OFFERS PRIOR TO THE HOUR AND DATE SPECIFIED MAY RESULT IN REJECTION OF YOUR OFFER. If by virtue of this amendment you desire to change an offer already submitted, such change may be made by telegram or letter, provided each telegram or letter makes reference to the solicitation and this amendment, and is received prior to the opening hour and date specified.

12. ACCOUNTING AND APPROPRIATION DATA (If required)

See Schedule

13. THIS ITEM APPLIES ONLY TO MODIFICATIONS OF CONTRACTS/ORDERS. IT MODIFIES THE CONTRACT/ORDER NO. AS DESCRIBED IN ITEM 14.

☐ A. THIS CHANGE ORDER IS ISSUED PURSUANT TO: (Specify authority) THE CHANGES SET FORTH IN ITEM 14 ARE MADE IN THE CONTRACT ORDER NO. IN ITEM 10A.

☐ B. THE ABOVE NUMBERED CONTRACT/ORDER IS MODIFIED TO REFLECT THE ADMINISTRATIVE CHANGES (such as changes in paying office, appropriation date, etc.) SET FORTH IN ITEM 14, PURSUANT TO THE AUTHORITY OF FAR 43.103(B).

☐ C. THIS SUPPLEMENTAL AGREEMENT IS ENTERED INTO PURSUANT TO AUTHORITY OF:

X D. OTHER (Specify type of modification and authority)
Grant Terms & Condtions for 10a. All other terms and condition remain unchanged

E. IMPORTANT: Contractor [X] is not, ☐ is required to sign this document and return _____ copies to the issuing office.

14. DESCRIPTION OF AMENDMENT/MODIFICATION (Organized by UCF section headings, including solicitation/contract subject matter where feasible.)
Modification Control Number: bryantl19954

The purpose of this modifiation is to Incrementally fund HDTRA1-17-1-0037 to EcoHealth Alliance grant "Serological Biosurveillance for Spillover of Henipavirusese and Filoviruses at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia" in the amount of $743,997.00

Except as provided herein, all terms and conditions of the document referenced in Item 9A or 10A, as heretofore changed, remains unchanged and in full force and effect.

15A. NAME AND TITLE OF SIGNER (Type or print)		16A. NAME AND TITLE OF CONTRACTING OFFICER (Type or print) (b)(6) CONTRACTING OFFICER TEL: (b)(6); (b)(7)(C) EMAIL: (b)(6)

252.601-9001 GRANTS OFFICER'S REPRESENTATIVE (GOR) (MAY 2009)

d. Grants Officer's Representative (GOR) for this Grant is:
Name: (b)(6) DNM MA
Defense Threat Reduction Agency/PI-CTB
8725 John J. Kingman Road, MS 6201
Fort Belvoir, VA 22060-6201
telephone (b)(6)
email address: (b)(6)

b. SCOPE AND LIMITATIONS OF AUTHORITY FOR DTRA GRANTS OFFICER'S REPRESENTATIVE

1. The Grants Officer's Representative (GOR) is responsible for monitoring the technical and programmatic performance of the grant or cooperative agreement (hereinafter referred to as agreement) including compliance with the agreement's reporting requirements. Perceived deviations from the agreement's terms and conditions shall be brought to the attention of appropriate recipient personnel and if not corrected, to the attention of the Grants Officer. Deviations or other occurrences indicative of the recipient's inability or unwillingness to conform to the agreement's requirements shall be brought to the immediate attention of the Grants Officer.

2. The GOR has no authority to modify the stated terms of the agreement or specifications in any manner, or to approve any action that would result in additional charges to the Government. The DTRA Grants Officer must make all such changes in writing.

3. The GOR is authorized to correspond directly with the recipient on matters within the scope and limitations of his or her authority. All such correspondence shall be signed personally by the GOR and a copy will be furnished the Grants Officer for placement in the official agreement file.

4. The GOR will provide technical advice to the recipient to the extent such advice will not alter any of the agreement's terms and conditions or result in an increase in the estimated cost of the agreement's performance as specified in the agreement. The GOR is encouraged to discuss with the recipient new ideas related to the original scope of the agreement that may be of special interest to DTRA. The GOR should also be alert for indications that any part of the research is becoming unfruitful. If, as a result of such discussions, questions arise as to the possible need for a modification, the matter shall be brought to the immediate attention of the Grants Officer. The GOR shall not direct the recipient to undertake any action that the recipient believes to be contrary to the agreement's scope, terms or conditions without the written approval of the Grants Officer.

5. Any visits to the recipient's facilities on matters pertaining to the agreement will be documented in a brief memorandum. A copy will be provided the Grants Officer for placement in the official agreement file.

6. The GOR will maintain such work files as he or she deems necessary to properly document performance of the duties and responsibilities as a GOR. Upon completion of the agreement and delivery of all required reports, such work files will be forwarded to the Grants Officer for placement in the official agreement file.

7. In performance of the GOR's duties, the GOR shall constantly stress protection of the Government's interests. Similarly, the GOR shall avoid any act which may tend to compromise the position of DTRA, any individual member of DTRA or which will impact confidence in the integrity of DTRA with the business community.

(End of Clause)

252.632-9000 GRANT FUNDING PROFILE (MAR 2012)

FUNDING PROFILE:

The amount of $2,550,132.00 is obligated for work to be performed during the period beginning with grant award and continuing through April 30th, 2020.

We are currently incrementally funding CLIN 1 in the amount of $743,997.00.

CLIN 1 is now fully funded.

The Government's liability is limited to the amount obligated.

INVOICE SCHEDULE:

INVOICE NO.	INVOICE DATE	PAYMENT*
1	May 31, 2019	$61,999.75
2	June 30, 2019	$61,999.75
3	July 31, 2019	$61,999.75
4	August 31, 2019	$61,999.75
5	September 30, 2019	$61,999.75
6	October 31, 2019	$61,999.75
7	November 30, 2019	$61,999.75
8	December 31, 2019	$61,999.75
9	January 31, 2020	$61,999.75
10	February 28, 2020	$61,999.75
11	March 31, 2020	$61,999.75
12	April 30, 2020	$61,999.75

(End of Summary of Changes)

CHAPTER 5: CO TIME-HISTORIES MEASUREMENTS DURING DMMP PYROLYSIS AND OXIDATION IN SHOCK TUBE

5.1 Introduction

Montreal protocol in 1990s prohibited the use of halons as fire suppressants due to their damaging effect on ozone layer[1]. Since then phosphorous containing compounds such as dimethyl methyl phosphonate (DMMP) and tri-methyl phosphate (TMP) have been identified as replacements of halons in fire suppressants. When used in gas-phase as dopants, these organo-phosphorous compounds (OPCs) interfere with normal combustion reactions to effectively reduce flame speed of hydrogen and hydrocarbon fuels[2]. OPCs are also used as chemical warfare agents (CWA) for example Sarin, GB and VX. Structure of DMMP is similar to that of nerve agent Sarin, GB and hence used as simulant to study combustion behavior of the toxic nerve agent. The most effective ways to destroy chemical weapons is by thermal means, i.e. incineration in an enclosed reactor or by utilizing tailored explosives. It is important to understand combustion chemistry of these compounds to be able to accurate predict their performance as fire suppressants and CW simulants.

Most of the past studies on DMMP combustion have been focused on its influence as an additive in transformation, structure and propagation of hydrogen and hydrocarbon flames[2, 28, 30, 47, 66-68]. DMMP when used as additive, changes the concentration of the most reactive radicals (H, O and OH) in the flame thereby producing promoting or retarding effects. Due to large hydrocarbon moiety of DMMP, it has been found that at fuel lean conditions addition of DMMP increases the burning velocity[30]. While at stoichiometric and rich conditions, DMMP is known to be very effective in suppressing flames, about 4 to 6 times more effective than bromine – a common halon fire suppressant[2, 30]. Twarowski investigated the inhibition effect of phosphorous containing compounds (described by reactions R1-R5) by studying the

reactions of phosphine addition to water[69]. Smaller phosphorus species PO2, HOPO and HOPO2 formed because of DMMP breakdown provide an alternative pathway for recombination of H and O atoms thereby reducing their concentration in the reaction zone. These reactions are chain terminating reactions and play important role in driving the radicals to their equilibrium values[28, 30, 68]. However, in fuel lean conditions, large hydrocarbon moiety of DMMP causes concentration of H and OH radicals in flame to increase and hence there is little effect of the alternative radical combination pathway[30] responsible for producing the inhibition effects.

OH + PO2 + M = HOPO2 + M (R1)

H+HOPO2 = H2O +PO2 (R2)

H+PO2+M = HOPO +M (R3)

H+HOPO= H2+PO2 (R4)

HOPO+OH = PO2 + H2O (R5)

Werner and Cool[70] developed first kinetic model for the decomposition of DMMP in a hydrogen/oxygen flame. They created a 19 step mechanism which was based on Twarowski[69] mechanism for small phosphorus reactions, ab-initio estimates of thermochemistry calculation and experiments data obtained from laser-ionization mass spectrometry. Korobeinichev et al[47] added nine reactions and several intermediates to include 18 species and 41 reactions. The same group (Korobeinichev et al 2004[27] and Jayaweera et al 2005[28]) further updated the model with more accurate ab-initio thermochemistry estimation of small phosphorous species and reaction rate of one of the important inhibition reactions (R2). The model was validated using species concentration profiles and laminar burning velocities for phosphorous doped premixed propane/air flame at different equivalence ratios. More recently, Babushok et al[30] employed GriMech3.0[71] and Jayaweera et al[28] mechanism along with three additional

phosphorous reactions (R6 - R8) to describe DMMP combustion in lean propane flames. A more comprehensive model was independently developed by Glaude et al[72] in early 2000s for DMMP and tri-methyl phosphate (TMP) decomposition, that attempted to account for all possible DMMP reaction pathways with 41 phosphorus species and 202 phosphorus reactions.

PO+HCO = HPO+CO R6

PO2+HCO=HOPO+CO R7

$PO3+HCO=HOPO_2+CO$ R8

As understood from the literature review, kinetic mechanism development and validation for DMMP has been focused on premixed flames experiments to investigate the effects of DMMP doping in hydrocarbon (CH_4 and C_3H_8) and H_2 flames. Recently, Mathieu et al[73] measured ignition delay times of DMMP in shock tube. DMMP in O_2 and Ar mixtures (fuel lean conditions) and DMMP doped in H_2, CH_4 and C_2H_4 mixtures were investigated near 1.5 atm and T = 1055- 2010K. The experimental results were compared with model prediction using Babushok 2016[30] and Jayaweera 2005[28] mechanisms and the need for significant improvement in both the models was identified. The authors stressed the importance of more experiments data such as species time histories of intermediate products in further improvement and tuning of the kinetic models. Mechanism incorporating detailed chemistry which includes unimolecular decomposition of DMMP in pyrolytic condition along with radical interactions and reactions with O and OH at fuel lean conditions is critical to accurately predict its destruction process. In addition, it is necessary to validate the kinetic model using high fidelity experiments data acquired at a range of equivalence ratios and temperature conditions. Once an accurate method of simulant such as DMMP has been developed using theoretical and experimental techniques, the model can be extrapolated to predict combustion behavior of CW simulants.

In present work, we utilized laser absorption spectroscopy to measure intermediate CO concentration time histories behind reflected shock wave during pyrolysis and oxidation (lean, stoichiometric and rich conditions) of DMMP. Since CO is the major intermediate during DMMP combustion, these experiments data provide important kinetic target for model validation. Experiments results were compared with model prediction using Babushok[30] mechanism and a tentative kinetic model (based on AramcoMech2.0 and LLNL OPC incineration mechanism) which was recently developed by our group and validated for triethyl phosphate combustion[51]. Further analysis on the results of sensitivity analysis and reaction pathways of DMMP decomposition is provided and future work on DMMP kinetic model improvement is discussed.

5.2 Experimental methods

5.2.1 Fuel/oxidizer Mixture Preparation

Research grade DMMP (> 97% pure; Acros Organics) and gases (O_2, Ar > 99.999% purity; nexAir) were used to prepare the test gas mixtures. The mixtures were prepared monometrically and the method is similar to that described in our work on low vapor pressure compounds[51]. DMMP has a low vapor pressure of ~0.8 Torr at 25 °C[23] and tend to condense and adhere on the surface of the mixing tank and transfer lines. To prevent condensation, the mixing facility and transfer lines were heated to 100 °C. The inside surface of the stainless-steel mixing tank (volume ~ 0.33m3) is Teflon coated to make it chemically inert. The entire mixing system was well insulated to avoid cold spots that can allow fuel condensation. Before preparing the test mixture, the tank was evacuated to less 0.05Torr using a turbomolecular pump (Agilent model V301). Approx. 0.5ml of liquid DMMP was injected into the heated tank using a lure lock gas tight syringe. Partial pressures were measured with 100 Torr and 10,000 Torr full scale range baratrons (MKS Baratron E27D and 628D). A magnetically driven stirrer was used to ensure homogeneity of the mixtures. The mixtures were allowed to mix for at least 2 h prior to experiments.

At 100 °C, the vapor pressure of DMMP increases to ~50 Torr[23]. To minimize fuel condensation, the partial pressure of DMMP was kept less than 25% of its saturation vapor pressure at respective temperatures at all the times. To verify our mixture is homogenous, we measured absorbance of the test mixture at different pressures in shock tube using a CO_2 gas laser (Access laser) tuned at 1050.433cm^{-1}. DMMP has a strong and broad absorption feature centered near this wavelength[45]. The measured absorbance was plotted against concentration-pathlength 'burden' [mol/m^3 * m] as shown in Figure 5-1. The straight line shows that our mixture is homogenous, and slope of the line gives absorption cross section, [m^2/mol] of DMMP at and 80 °C (temperature, T1 of the shock tube) as calculated using Beer law (Eq. 1). Details of the laser diagnostics setup utilizing the CO_2 gas laser to measure OPC concentration is provided in our previous work[4, 51].

$$\alpha_\nu = -\ln\left(\frac{I}{I_o}\right)_\nu == n_i\sigma_i(\nu, T, P_{tot})L = \sigma_i(\nu, T, P_{tot})\frac{P_{tot}}{RT}\chi_i L \qquad (1)$$

In Eq. 1, α_ν is the absorbance at frequency ν, I and I_o are the measured intensities of laser power in test gas mixture and in vacuum respectively, n_i [mol/m^3] is the concentration of absorbing species 'i'; σ [m^2/mol] is the cross section, P_i [Pa] is the partial pressure of the absorbing species; L [m] is the length of the shock tube; R_u [J/mol-K] is the universal gas constant; T [K] is the temperature, X_i is the mole fraction of absorbing species and P_{tot} [Pa] is the total pressure of the mixture.

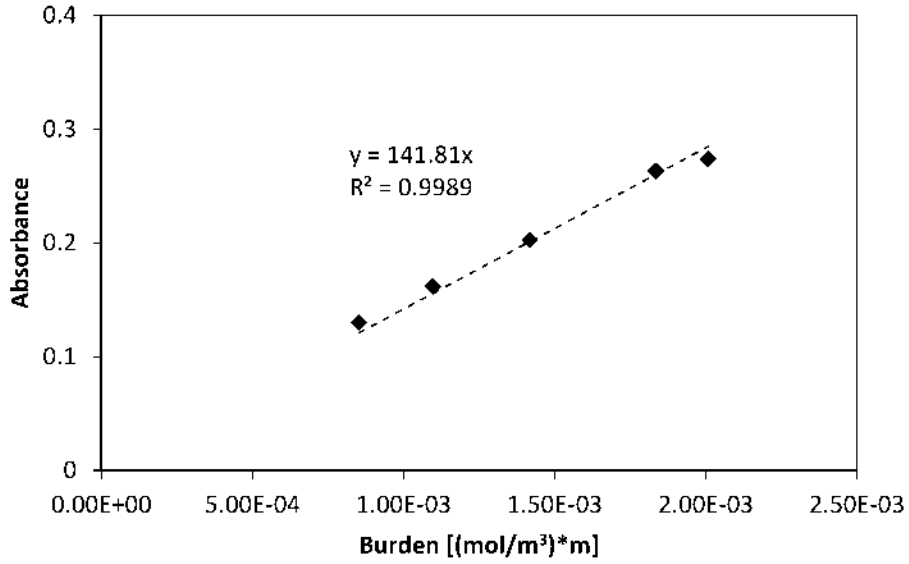

Figure 5-1: Plot of measured absorbance vs concentration-pathlength 'burden' of 0.1% DMMP/Ar mixture showing a linear trend

5.2.2 Shock tube experiments

DMMP pyrolysis and oxidation experiments were performed using high purity, stainless steel, and heated shock tube at University of Central Florida. The details of the shock tube can be found in our previous work[5]. The driven section of the shock tube was uniformly heated to 80 °C (pre-shock temperature T1) using custom made heating jackets supplied from Brisk Heat and PID temperature controllers. Ultra-high purity helium (99.999% pure) was used as a driver gas and polycarbonate diaphragms (0.127 mm thick), placed between the driven and the driver sections, upon bursting yielded pressures (P5) of ~1.7 atm behind the reflected shock wave. Incident shock velocities were measured using five piezoelectric pressure transducers (5 KHz frequency response) spaced along the last 1.4 m of the shock tube and connected to four time-interval counters (Agilent 53220A, 0.1 ns time resolution). The measured incident shock velocities were linearly extrapolated to obtain the reflected shock velocity at the end wall. Pressure and temperature behind reflected shock wave (P5 and T5) were calculated using the measured shock velocity

and pre-shock temperature and pressure (P1, T1) in normal-shock relations assuming vibrationally equilibrated gases behind both the incident and reflected shocks. Thermochemical data of DMMP for the calculation was taken from Neupane et. al. 2018[51]. Pressure, P5, was also monitored using Kistler 603B1 – a piezoelectric pressure transducer placed in the shock tube side wall at a distance of 2cm from the end-wall.

Before each experiment, the driven section was evacuated to an ultimate pressure of less than 5.0E-5 Torr using combination of roughing pumps (Agilent DS102) and a turbo molecular pump (Agilent model V301). A rotary vane pump (Agilent DS102) was used to rough the driver section of the shock tube. The shock tube was filled with P1 = 50-80 Torr of test mixture to obtain the desired temperature T5 ranging within 1200-1900 K. The shock tube configuration and use of driver inserts allowed to obtain a constant P5 behind the reflection shock region for test times of ~2.5 ms. Table 5-1 lists the experiments conditions for DMMP pyrolysis and oxidation carried out in the present work. Uncertainties in T5 and P5 were estimated to be less than 2.0% and 1.5 % respectively. Equivalence ratios (ϕ) for DMMP/O_2/Ar mixtures were determined assuming H_2O, CO_2 and $HOPO_2$ as products.

Table 5-1: Experiments conditions (Pressures and Temperatures) during pyrolysis and oxidation of DMMP

5.2.3 Laser absorption spectroscopy to measure CO concentration

Intermediate CO concentration formed during pyrolysis and oxidation of DMMP were measured using a continuous wave distributed feedback quantum cascade laser (CW-DFB QCL) operating near 4.886 μm to probe the P(23) transition line of CO (Figure 5-2). A 50/50 beam splitter was used to split the laser light into two beams: reference (I_{ref}) and transmitted (I_{tr}). The reference beam was used to monitor laser power fluctuations during the experiments. Transmitted beam was directed through the test section via two sapphire windows. A narrow band pass filter was used at downstream of shock tube to filter out emissions from hot gasses. The beam was then collected in a thermoelectrically cooled MCT (HgCdTe) Vigo Systems PVI-2TE-5.0 photovoltaic detector using a focusing mirror.

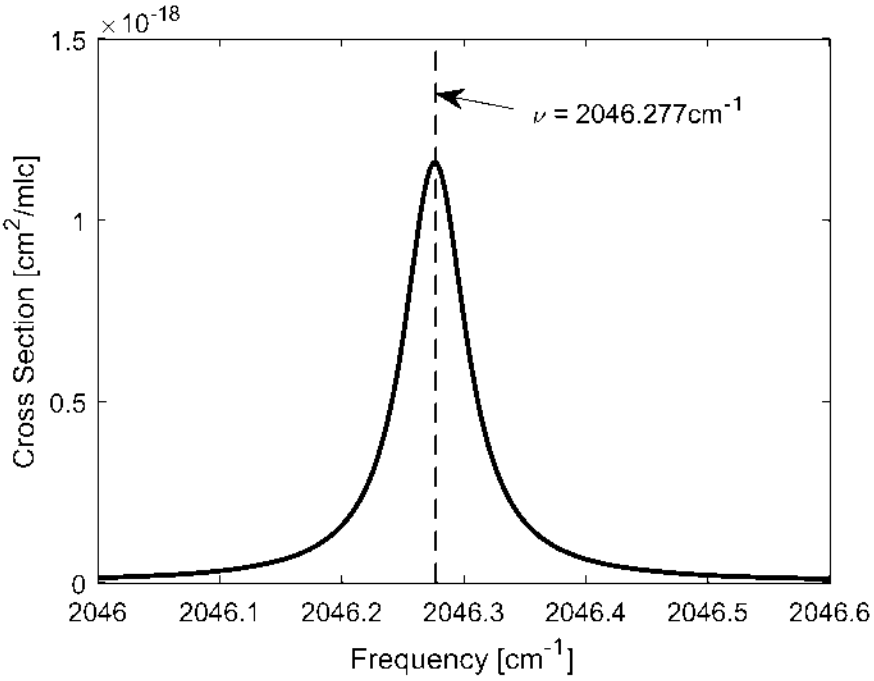

Figure 5-2: Absorption cross section of CO near 4.88μm and at 1500 K and 1.7 atm simulated using HITRAN database[39].

Bristol spectrometer was used to monitor frequency of laser beam during the experiment. Beer-Lambert law (Eq. 1) was used to calculate CO centration (X_i) from the measured absorbance time-histories. The CO cross section (σ [m^2/mol]) at T_5 and P_5 were modeled using spectroscopic parameters (line broadening and line strength) from HITRAN database[39] assuming self-broadening and fitting a Voight line shape profile. The CO cross sections at the chosen wavelength and within the temperature and pressure range of our interest were also measured in shock tube experiments performed with pure CO and Ar. The measured values agreed with HITRAN simulation results within ±5%.

Experimental pressure traces obtained during pyrolysis and oxidation of DMMP were almost constant (example

Figure 5-3) and hence constant pressure gas dynamic model was used in Chemkin-Pro for all simulations. Major combustion products formed during the process include hydrocarbons species such as CO, CO_2, CH_4, C_2H_4 and H_2O and small phosphorous species such as $HOPO_2$, HOPO, $CH3OPO_2$ and $CH3PO_2$. Within our experiment conditions (T= 1300 – 1700 K and P ≈ 1.7 atm), except for CO, other major combustion products do not have absorption feature near 4.9 μm, hence allowing for interference free measurement of CO concentration. The uncertainty in measured CO mole fraction was estimated to be 5.5% (due to combined uncertainty in spectroscopic parameters: P5, T5, path length and CO cross section) or ±50ppm (experimental uncertainty due to noise in the measured absorbance signal) whichever is greater.

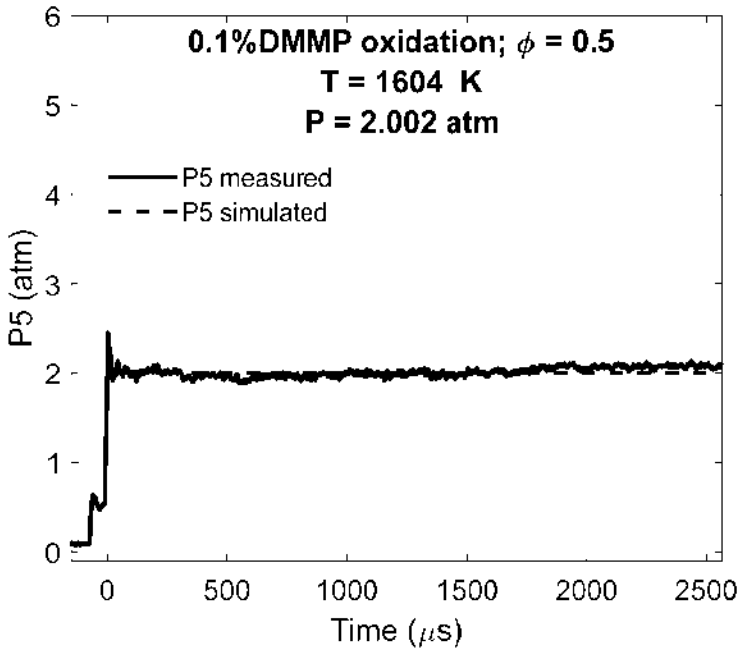

Figure 5-3: Measured pressure, P5 vs simulated pressure in Chemkin-Pro

5.3 Results and discussions

5.3.1 DMMP pyrolysis: CO concentration time-histories

The measured CO concentration time histories during 0.1% DMMP pyrolysis behind reflected shock wave at three temperatures: 1449 K, 1545 K and 1619 K are shown in Figure 5-4. Rate of CO production and the concentration of CO yield at the end of 2.5ms increased with increase in temperature. CO yield at the end of the test time at 2.5ms during pyrolysis of 0.1% DMMP are 0.035%, 0.055% and 0.087% at 1449, 1545 and 1619 K respectively. At all three temperatures, there is sharp increase of CO early on during the pyrolysis process after which the rate of production decreases for some time and then finally achieve a steady and slow rate of increase in CO concentration until the end of the test time at ~2.5ms.

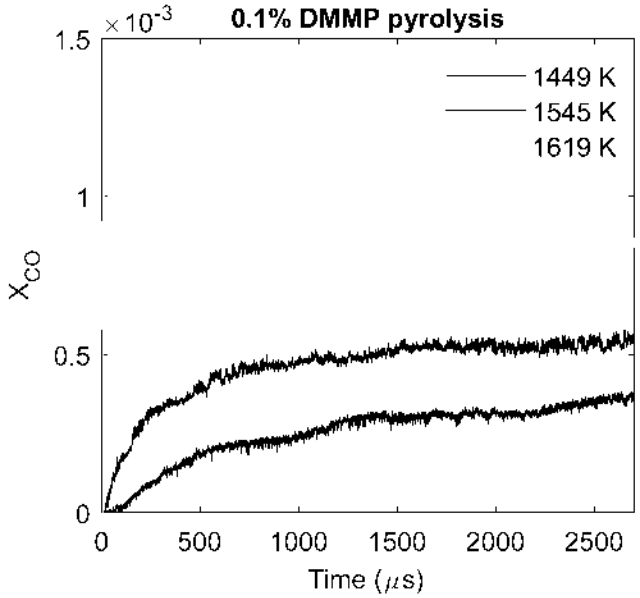

Figure 5-4: CO formed during pyrolysis of 0.1% DMMP at the three temperatures indicated in the figure. P ~ 1.7 atm.

5.3.2 DMMP oxidation: CO concentration time-histories

Plots of CO time-histories during DMMP oxidation at different temperatures and equivalence ratios are shown in Figure 5-5 (a – d). For fuel rich (Φ=2, Figure 5-5 (a)) DMMP oxidation, at lower temperatures (1366 K and 1419 K), CO is still being produced at the end of the shock tube test-time (2.5ms). The rate of formation of CO at these temperatures is higher in the beginning of the oxidation process and then decreases to slower formation rate after ~500μs. Similar trend is seen at stoichiometric(Φ=1) and lean conditions (Φ=0.5, 0.25) and at lower temperatures (Figure 5-5 (b-d)). At higher temperatures (Figure 5-5 (a), 1686 K and 1557 K) CO forms quickly and reaches a peak value within 500μs, after which it slightly decreases as CO starts to get consumed. Again, similar trend is observed at higher temperatures in stoichiometric and lean oxidation of DMMP (Figure 5-5 (b-d)). However, at similar temperatures, the rate of consumption of CO, after reaching the peak value, is faster as the mixture becomes leaner (decreasing equivalence ratio). For example, see 1686 K (phi =2) and 1690 K (phi=1) in Figure 5-5 (a) and (b) respectively. This can be attributed to higher concentration of O_2 in the mixture which allows for faster conversion of CO into CO_2.

5.3.3 Comparison with model predictions

A 0-D closed homogeneous reactor with constant pressure assumption in ANSYS Chemkin Pro software was used to simulate experimental conditions and predicted CO yield during pyrolysis and oxidation of

DMMP were compared with experiments results. 'Babushok 2016' 'Aramco2.0+LLNL' mechanisms were used for the kinetic calculations. 'Aramco2.0+LLNL' mechanism was put together in Chapter 2 and also published elsewhere[51] on combustion of tri-ethyl phosphate which is also an organo-phosphorus compound. The model is based on AramcoMech2.0 and LLNL OPC incineration mechanism for phosphorous chemistry. The model also consists of updated thermochemical data of 48 phosphorous containing species (including DMMP and its derivatives) which was based on recently proposed group values of phosphorous species[41] and theoretical calculations. DMMP and smaller phosphorous reactions in this mechanism are same as LLNL incineration mechanism. Babushok 2016 mechanism[30] is based on GriMech3.0 and Jayaweera et al[28] mechanism along with three additional phosphorous reactions (R6-R8) and was validated using flame speed data of DMMP combustion in lean propane flames.

Figure 5-6 to Figure 5-10 show the comparison of experiment and simulation results using both the kinetic models. For high temperature (1619 K) pyrolysis case (Figure 5-6c), both the models provide good prediction of CO yield. While at low temperature (1449 K) pyrolysis condition (Figure 5-6a) both the models are underpredicting the initial CO formation rate. For oxidation (Figs 5-7 to 5-10), both the models fail to predict CO yield satisfactorily. In Figures 5-7(a-b), lower temperature (1366K and 1419K) fuel rich oxidation of DMMP, the Aramco2.0+LLNL model provides fair agreement with the experiment data while the CO yield predicted by Babushok mechanism is significantly lower. On the other hand, at 1452 K and phi=1 (Figure 5-8b), Babushok mechanism provides better agreement with experiments CO yield. At higher temperature cases (T>1500K) for lean, stoichiometric and rich conditions, both the models are over predicting CO yield as compared to experiment results with Babushok 2016 mechanism being closer to the experiments. From these results of DMMP oxidation, it can be concluded that Babushok mechanism is likely to underpredict CO yield at lower temperatures (1350-1420 K) and over predict at higher temperature (>1502 K). Except for low temperature rich conditions (Figure 5-7: 1366K and 1419K), Aramco2.0+LLNL mechanism is over predicting CO yield significantly in all oxidation cases.

Note that Babushok mechanism has additional three reactions involving CO and smaller phosphorous species (R6-R8) that are not included in LLNL's phosphorous chemistry. These reactions were added to 'Aracmco+LLNL' mechanism, however they did not produce any significant change in the predicted CO yield. It is also clear from the results that both the mechanisms do not sufficiently describe combustion process of DMMP. The reaction rates of major reactions in DMMP breakdown pathways are same in both the mechanisms, so the differences in CO prediction from the two mechanisms can be attributed to a different hydrocarbon chemistry and thermochemistry of phosphorous species.

5.3.4 Sensitivity and reaction path analysis:

To further understand the performance of kinetic model at different temperatures and equivalence ratios, a detailed sensitivity and rate of production (ROP) analysis were carried out, the results of which are discussed in this section. 'Aracmco+LLNL' mechanism and ANSYS Chemkin-Pro 0-D closed homogenous constant pressure reactor were used for the analysis. Top 10 sensitive reactions contributing to CO

production/consumption during the first 500μs of oxidation and pyrolysis of DMMP were identified. Sensitivity coefficient (S) for i^{th} reaction rate (k_i) for a species is defined in Equation 2.

$$S\left(X_{species}, k_i, t\right) = \left(\frac{d\, X_{species}(t)}{d\, k_i}\right)\left(\frac{k_i}{X_{species}(t)}\right) \qquad \text{Eq. 2}$$

Important phosphorous reactions from the results of sensitivity analysis of 0.1% DMMP pyrolysis at 1405 K (low temperature case) and 1619 K (high temperature case) are shown in Figure 5-11. Solid and dashed lines represent high and low temperature cases, respectively. In both the cases, the most sensitive phosphorous reaction is R86. This is a bond fission reaction in which CH_3 group attached directly to the P atom of DMMP breaks to form CH_3 and $PO[OMe]_2$ radicals as products. This is the major pathway via which DMMP decomposition takes place during DMMP pyrolysis as shown in DMMP ROP analysis Figure 5-12. Note that sensitivity of this reaction to CO formation at high temperature (1619K) quickly peaks and then decreases to attain a negative sensitivity after 200μs of the pyrolysis reaction. Negative sensitivity coefficient means CO yield decreases with increase in reaction rate of the reaction. Reactions, R103 and R104 are two pathways of decomposition of PO[OME]2 radical (formed via R86) and have equal but opposite sensitivity coefficients to CO concentration yield. Besides these reactions, reaction R81 was also among the top 10sensitive reactions, however its sensitivity coefficient quickly peaks and then decreases to zero (not shown in the plot) within 1μs. Changing the rate of this reaction by up-to one order of magnitude did not affect the predicted CO yield. At 1619K, an additional phosphorous reaction R107 (not shown in the figure) was also among the top 10 sensitive reactions. From these results, it can be concluded that more accurate kinetic parameters of R86 optimized for wide range of temperature can significantly contribute to model improvement in DMMP pyrolysis case.

POME[OME]2=CH2O+P[OH]ME[OME] R81

POME[OME][OCH2]+H=POME[OME]2 R83

POME[OME]2=PO[OME]2+CH3	R86
PO[OME]2=CH3OPO2+CH3	R103
PO[OME]2=CH3OPO+CH3O	R104
POME[OME]OCH2=POME[OME]+CH2O	R107

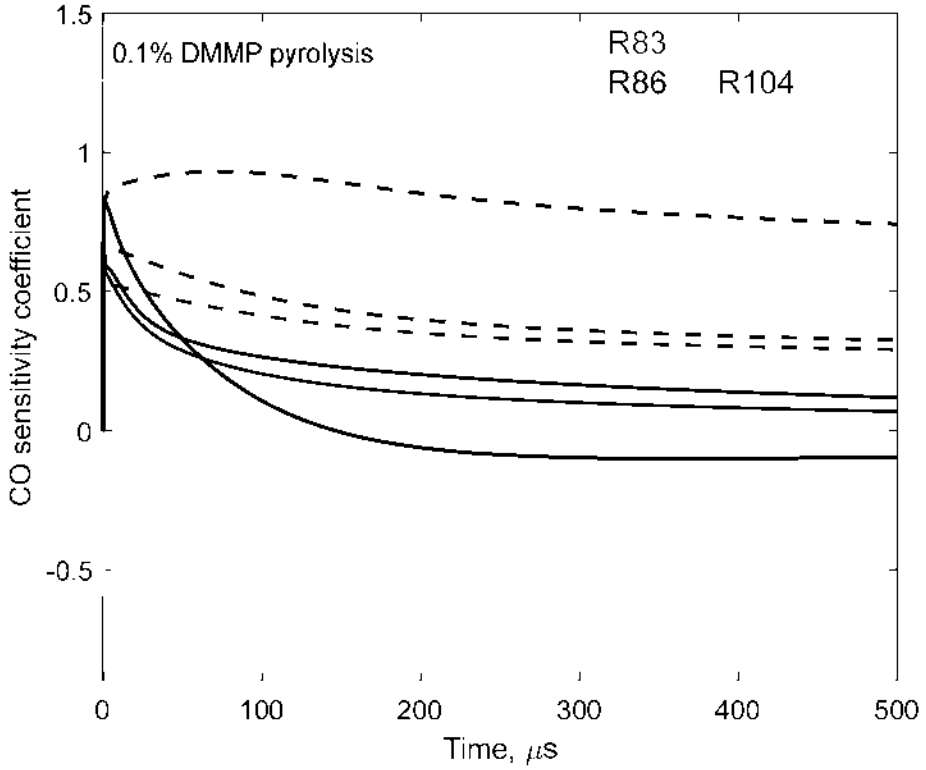

Figure 5-11: Sensitivity analysis on CO concentration yield during 0.1%DMMP pyrolysis 1405K (dashed lines) and 1619K (solid lines) showing top phosphorous reactions

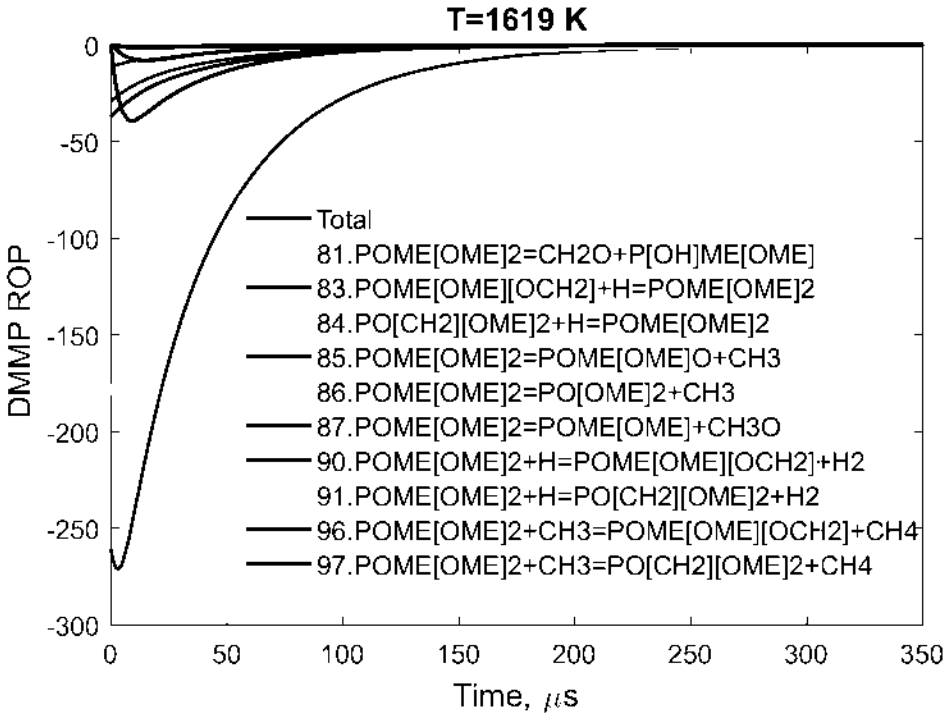

Figure 5-12: ROP analysis on DMMP during its pyrolysis at 1619 K

Similarly, sensitivity analysis was carried out for CO yield during DMMP oxidation at Φ=0.5 and T=1352 K (low temperature case) and 1604K (high temperature case) and the results are shown in Figure 5-13. At low temperature (solid lines), H-abstractions reactions of DMMP by O and OH radicals, R92 and R94, show higher sensitivities to CO yield whereas for the high temperature oxidation case, these reactions were not among the top 10 sensitive reactions. Reaction R92 showed maximum sensitivity coefficient for low the temperature oxidation case. Other reactions that were found to be important in oxidation of DMMP are same as pyrolysis and include reactions R86, R103 and R104. Two additional reactions involving CH3OPO (R38 and R183) were also among the important reactions for both low and high temperature DMMP oxidation. Radical recombination reaction, R83 was sensitive only in the high temperature oxidation case.

POME[OME]2+O=POME[OME][OCH2]+OH R92

POME[OME]2+O=POME[OME][OCH2]+OH	R94
CH3+PO2=CH3OPO	R38
CH3OPO2+O=CH3OPO+O2	R183
POME[OME][OCH2]+H=POME[OME]2	R83

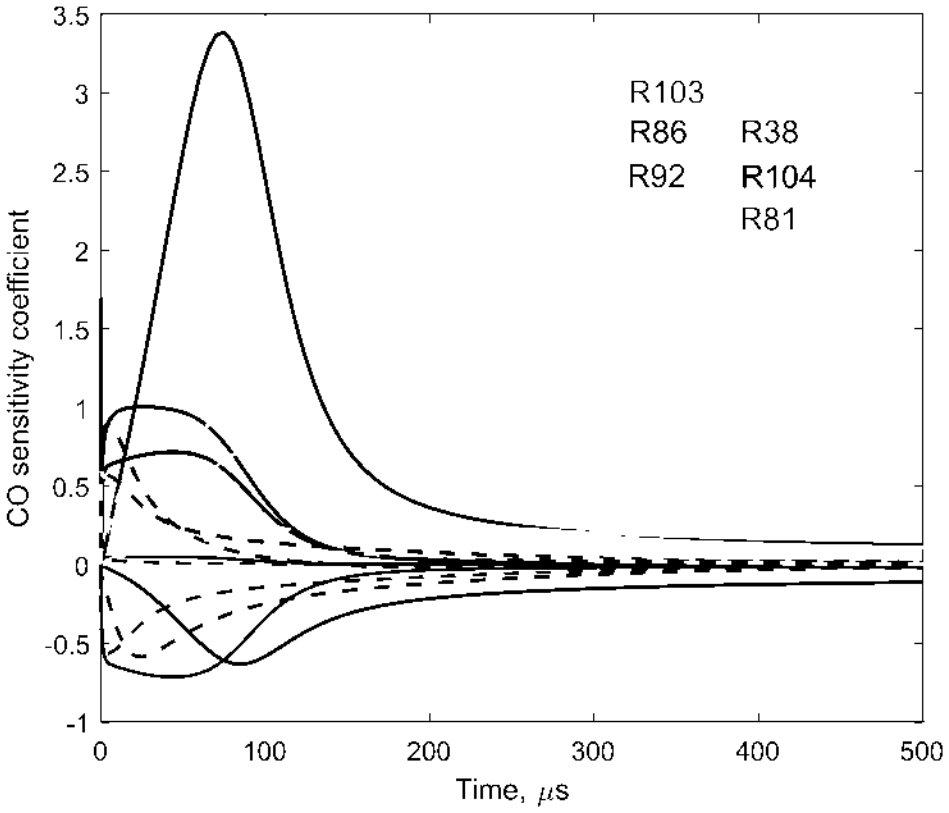

Figure 5-13: Sensitivity analysis on CO concentration yield during 0.1%DMMP oxidation at Φ=0.5 and 1352K (solid lines) and 1604K (dashed lines) showing top phosphorous reactions

For high temperature oxidation case, initial rate of formation of CO is agreeing well with the experiments (Figures 5-7d, 5-8c-d, 5-9c-d, 5-10c). However, the models proceed to overpredict CO yield by up to a

factor of 2. Note that sensitivity result in Figure 5-13 shows the top reaction in the first 500μs after the start of oxidation reaction. The sensitivity coefficient of the identified reactions peak and then decreases within the first 200μs and after which CO yield has very low sensitivities to these reactions. Hence additional sensitivity analysis for CO yield during DMMP oxidation at 1602 K was carried and to understand reactions that contribute to CO formation/consumption during the latter stage of DMMP oxidation (after 1.5us) and the top 10 reactions are shown in Figure 5-14.

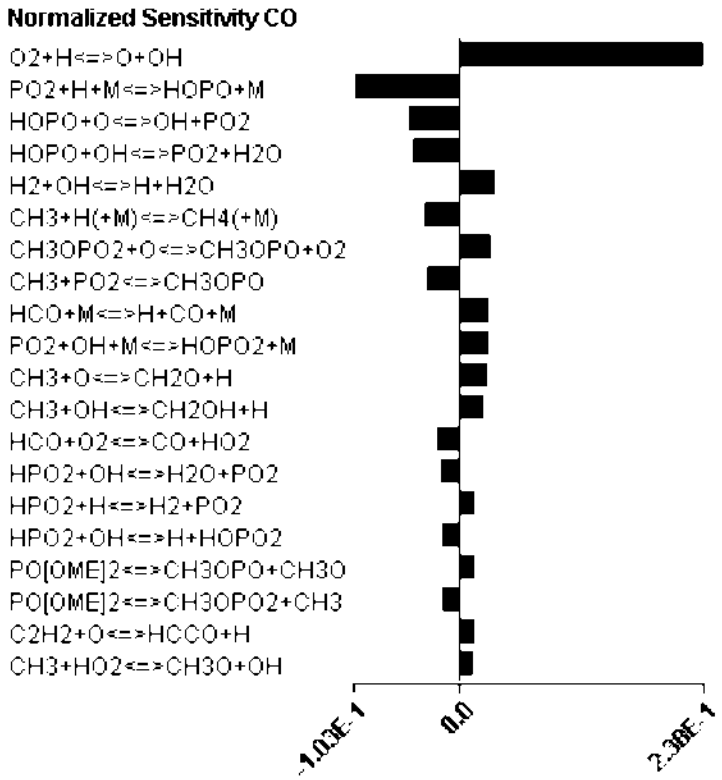

Figure 5-14: Sensitivity analysis on CO concentration yield during 0.1%DMMP oxidation at Φ=0.5 at 1.5ms

During the first 500 μs, the most sensitive reactions are the initial DMMP decomposition reactions as seen from Figure 5-13. The sensitivity analysis result (Figure 5-14) at 1.5ms after the oxidation reaction, this is

when 100% of DMMP has been consumed, indicate smaller phosphorous reactions R3, R5 and R9 as the most sensitive ones.

PO2+H+M = HOPO+M (R9)

Rates of these reactions were increased by an order of magnitude to understand their effect on CO yield. This made a significant decrease in CO yield during oxidation, while their effect of the CO yield during pyrolysis was negligible. Proper optimization of reaction rates of these reactions is suggested for future kinetics study of DMMP oxidation. In addition, further investigation into missing reactions involving hydrocarbon and smaller phosphorous species is also recommended. In addition, for low temperature oxidation cases, H-abstraction reactions of DMMP by O and OH (R92 and R94) should be investigated.

5.4 Conclusions

Concentration time histories measurements of CO were performed for DMMP pyrolysis and oxidation at temperatures of 1300-1700K, pressures of 1.5-2.0 atm, and Φ=0.25, 0.5,1 and 2. Comparisons were made with two kinetic models: Babushok 2016 and Aramco2.0+LLNL model. Babushok mechanism is based on Twarowski[69] and Jayaweera et al[28] phosphorous chemistry and GriMech2.0[71]. Aramco2.0+LLNL mechanism has hydrocarbon chemistry from AramcoMech2.0 and phosphorous chemistry from LLNL's OPC incineration mechanism along with recently updated thermochemical data of phosphorous species. Both models exhibited fair agreement for high temperature pyrolysis (1619 K) case. For low temperature pyrolysis (1445 K), both the models underpredicted rate of CO production. For oxidation, performance of both the models were not satisfactory in terms of CO prediction. At high temperatures (>1500 K), models overpredicted CO yield significantly. At low temperatures (1330 K – 1420 K), Babushok model underpredicted CO yield and formation rates while LLNL+Aramco model exhibited fair agreement at rich conditions. Sensitivity analysis indicates that for low temperature oxidation (1300-1450 K), accurate rate

parameter of H-abstraction reactions of DMMP by O and OH radicals (R92 and R94) are needed for accurate prediction of CO yield. For higher temperature oxidation cases, reaction of smaller phosphorous species PO_2 and HOPO with H and OH radicals should be investigated along with addition of reaction pathways involving reactions of hydrocarbons with phosphorous species. Further experiments targeting phosphorous species such as PO_2 and HOPO will provide important validation target for DMMP oxidation mechanism. Lower temperature prediction of CO concentration during DMMP pyrolysis could be improved by high level theoretical calculation or direct experimental measurement of rate of reaction R86 which involves bond fission of DMMP to form $PO[OME]_2$ and CH_3 radicals.

CHAPTER 6: PYROLYSIS, OXIDATION AND DOPED STUDIES OF DIMP IN A SHOCK TUBE

6.1 Introduction

Due to the high toxicity of CW agents, laboratory experiments are carried out using OPC surrogates [74-77], whose chemical structure and properties are similar to those of the CW agents. Diisopropyl methylphosphonate (DIMP) is one of the Sarin surrogates that is considered as the closest one to reproduce the predicted rate of Sarin decomposition [78]. Molecular structures of DIMP and Sarin are shown in Fig. 1. DIMP contains two $OCH(CH_3)_2$ (isopropoxy) groups attached to the central P atom whereas in Sarin, one of the isopropoxy groups is replaced by a F atom.

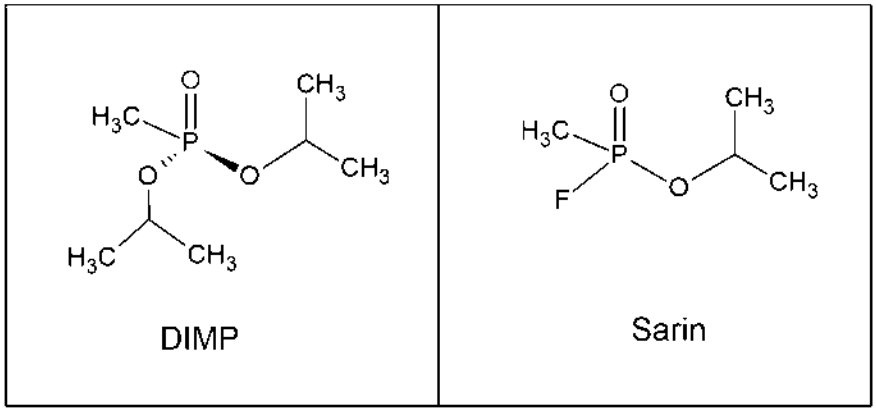

Figure 6-1. Molecular structures of DIMP and sarin

Glaude et al.[78] developed a reaction mechanism for DIMP using the experimental data from Zegers and Fisher[32] as the prime validation target. Since thermochemical data was not well defined for organophosphorus compounds, they used group additivity theory to estimate thermochemical properties

based on the data obtained from their theoretical calculations. They also used analogy with Diethyl methyl phosphonate (DEMP) to estimate rate parameters for the decomposition reaction of DIMP via six membered transition state. The pre-exponential factor was doubled considering twice the number of abstractable H atoms in DIMP than in DEMP. The activation energy for this reaction was then corrected to fit experimental data from Zeger and Fisher[32] at 799 K. Similar approach along with analogies from other OPC reactions and hydrocarbon reactions were used to estimate rate parameters for other reactions. The OPC sub mechanism developed in their work had a total of 63 species 274 reactions. At the time of their work, not many experimental works were available for DIMP to validate the developed mechanism.

In this chapter, the focus is on improving the kinetics of DIMP. Shock tube experiments were conducted with DIMP concentration varying between 0.1-0.4% in argon within the temperature range of 1300 K – 1800 K at ~1.5 atm pressure. Laser absorption spectroscopy was used to obtain carbon monoxide mole fraction time-histories during the experiments. The important unimolecular decomposition reactions of DIMP and IMP were revisited, and rates were calculated using complete basis set theoretical methods. Using the DIMP sub mechanism from Glaude et al.[78] as the base mechanism, a new reaction mechanism is developed. Additionally, reaction path analysis and sensitivity analysis are conducted to understand the important pathways and reactions leading to the formation of CO during DIMP pyrolysis.

6.2 Experimental methods

The experimental setup and methods are similar to our previous work on OPC compounds [76, 77] and therefore only details specific to DIMP are discussed here. Table 6-1 shows the experimental conditions for pyrolysis and oxidation of neat DIMP. The experimental conditions for doped studies of DIMP in methane, ethylene and hydrogen are shown in Table 6-2. As evident, these experiments capture a wide range of conditions ranging from lean to rich conditions and with different fuel loadings.

Table 6-1. Experimental conditions during pyrolysis and oxidation of neat DIMP.

6.3 Results and Discussion

6.3.1 Experimental Results

The carbon monoxide time-histories obtained during the pyrolysis and oxidation of neat DIMP mixture are shown in Figure 6-2. It is clear that with higher concentration of DIMP, more CO is produced during pyrolysis. However, the peak of CO produced during oxidation appears to be independent of the amount of oxygen present in the mixture for equivalence ratio ranging from 0.5-2.0.

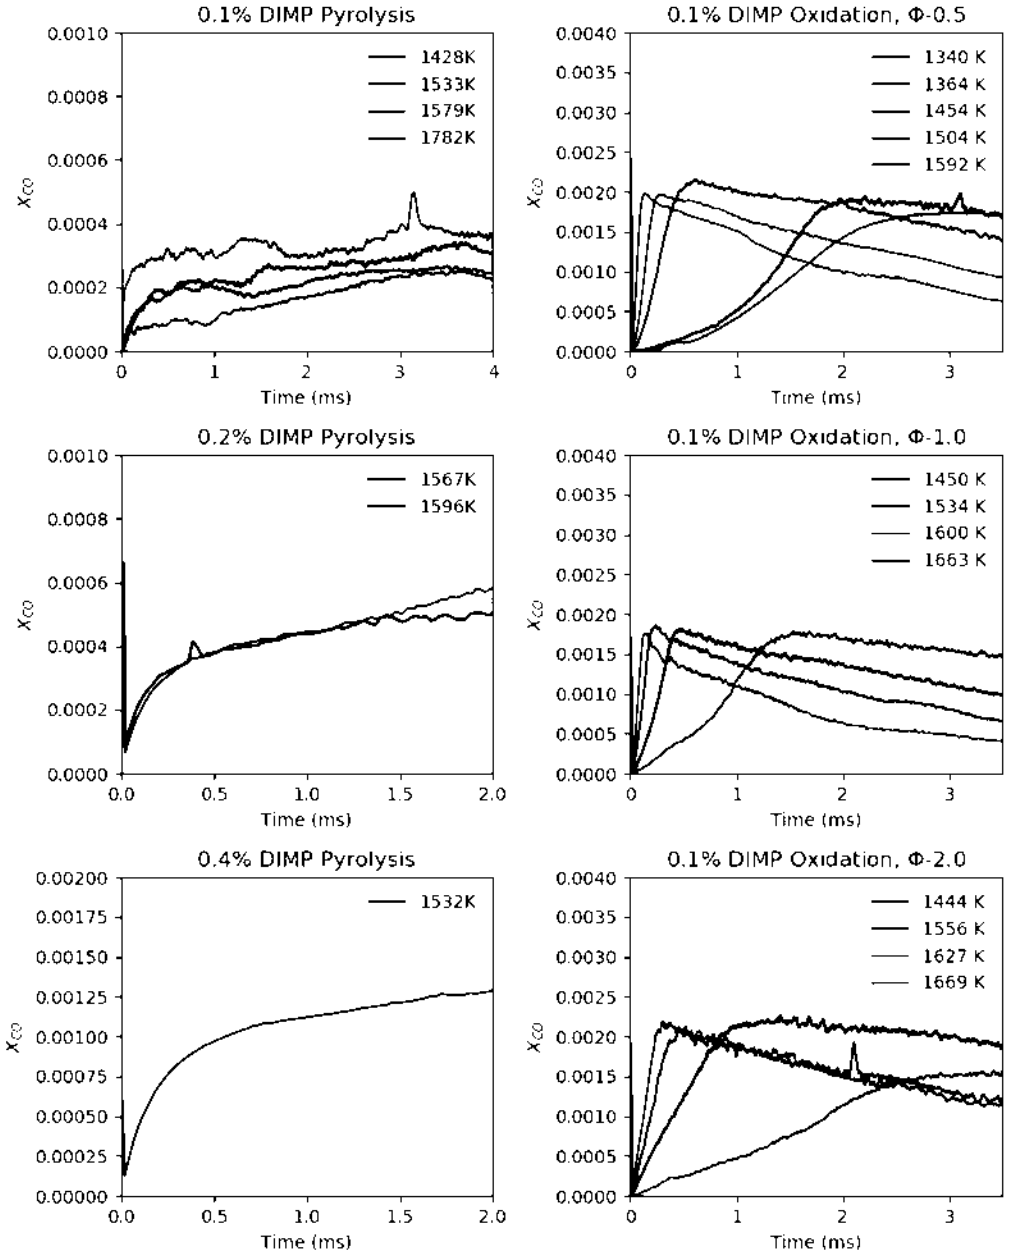

Figure 6-2. Carbon monoxide mole fraction time-histories obtained during pyrolysis of a)0.1% DIMP in argon, b) 0.2% DIMP in argon c) 0.4% DIMP in argon, d) lean oxidation, e) stoichiometric oxidation and f) rich oxidation of DIMP. Shaded region shows experimental uncertainty.

Experiments were also conducted with DIMP doped in methane, ethylene and hydrogen and the Co time-histories obtained are in Figure 6-3. To compare these results with mixtures without DIMP, respective neat mixtures were also shock heated to study the effect on CO formation time-histories.

In addition to CO time-histories, ignition delay was also captured during oxidation experiments using OH* emission signal. Results obtained are shown in Figure 6-4. As expected, leaner mixture is observed to ignite faster while the rich mixture has the largest ignition delay time. The ignition delay time obtained from DIMP doped experiments are shown in Figure 6-4. For methane, ignition becomes faster upon addition of DIMP while for ethane and hydrogen, opposite trend is observed. This can be related directly to the ignition delay of neat DIMP. When ignition delay of base fuel is longer than neat DIMP, addition of DIMP makes ignition faster. Conversely, if ignition delay of base fuel is shorter than neat DIMP, DIMP makes ignition slower.

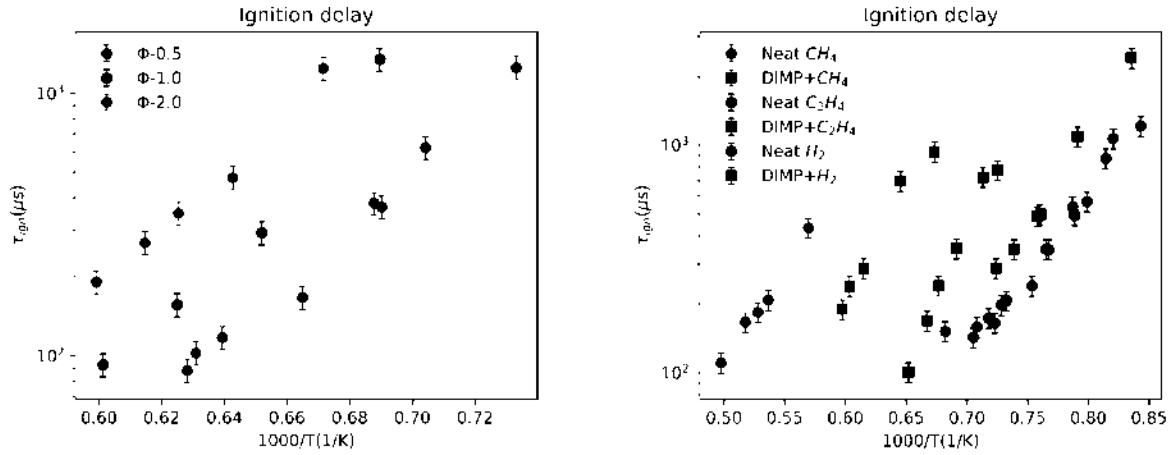

Figure 6-4. a) Ignition delay times for lean, stoichiometric and rich mixtures of 0.1% DIMP, b) Ignition delay times for mixtures of methane, ethylene and hydrogen with and without DIMP.

6.3.2 Model development

The state of the art model available for DIMP was the LLNL OPC mechanism developed by Glaude and co-workers[34]. The CO time-history prediction by this model was significantly different from experimental data obtained. Since this was the only mechanism available for public use, we used this mechanism as the base mechanism for this work. The prediction by LLNL model was improved by systematic sensitivity studies and by following steps:

1. Determining the reaction rates of key reactions in DIMP pyrolysis through ab-initio calculations. Table 6-3 shows the important reactions and their rates determined using theoretical calculations at CBS-QB3 level of theory.

Table 6-3. Calculated rates for reactions added for DIMP pyrolysis. The rate constants are expressed in the modified Arrhenius form, k = ΑTn exp(−Ea/RT). The units of the rate parameters, Α, n, and E are in cal, mol, cm, and s.

No.	Reaction	Α	n	Ea	Source

4. Adding improved sub-mechanism for isopropanol chemistry: Shock tube experiments were conducted to understand which mechanism from literature captures isopropanol kinetics better. Results revealed that under our experimental conditions, Li et. al[83] predicts CO formation to a reasonable accuracy. Performance of several isopropanol mechanisms from literature along with the shock tube experiments conducted at UCF are shown in Figure 6-5.

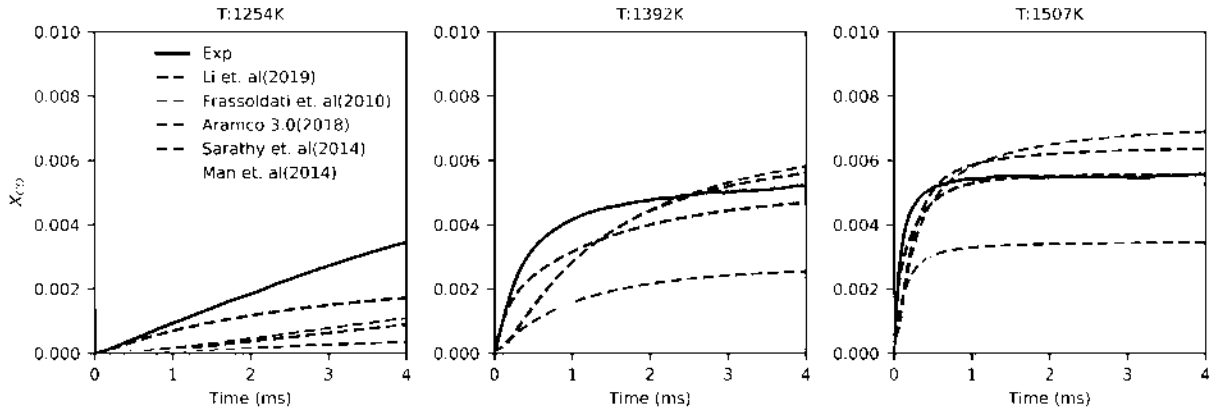

Figure 6-5. Carbon monoxide concentration time histories during pyrolysis of isopropanol. Mixture is 1% isopropanol in argon. Solid line is experimental results from this work and dashed lines are simulation results. Shaded region shows the experimental uncertainty (<10%).

5. Adding H-abstraction reactions for DIMP and IMP by O and OH:

In oxidation environment, reactions of DIMP with O atoms and OH atoms is an important pathway and hence the reaction rates for these H-abstraction reactions were determined at B3LYP level of theory. The reactions along with rates used are provided in Table 6-6. The key H- abstraction reactions forming radicals of DIMP are multiplied by a factor of 3 which is within the uncertainty limits of theoretical calculations.

Table 6-6. New reactions added for DIMP h-abstraction from theoretical calculations. The rate constants are expressed in the modified Arrhenius form, k = ATn exp(−Ea/RT). The units of the rate parameters, A, n, and E are in cal, mol, cm, and s.

6. Determining reaction rates for small phosphorous species

The role of small phosphorous species in consuming radicals through chain reactions is very well known[84]. However, the rates of those reactions are still not clear. In this work we determine rates of some of these reactions (shown in Table 6-7) which are important in prediction of oxidation of DIMP. These reactions along with their rates are shown in Table 6-7. We have also found a new reaction pathway involving phosphorous trioxide directly converting carbon monoxide to carbon dioxide and phosphorous dioxide.

Table 6-7. New reactions added for smaller phosphorous species from theoretical calculations. The rate constants are expressed in the modified Arrhenius form, k = ATn exp(−Ea/RT). The units of the rate parameters, A, n, and E are in cal, mol, cm, and s.

7. Reactions to account for char formation

One of the mechanism by which organophosphorus species inhibits fire is by char formation[85]. During the experiments conducted in this work, char formation was observed in the test section after experiments. In order to account for these, reactions shown in Table 6-8 were included in the model. It is to be noted that

we have assumed species CS1, CS2 and CS3 (representing char/soot) are inert and does not involve in further reactions. The rates for these reactions are based on experimental fitting for CO time histories of neat DIMP mixtures.

Table 6-8. New reactions added for representing char formation from DIMP. The rate constants are expressed in the modified Arrhenius form, k = ATn exp(−Ea/RT). The units of the rate parameters, A, n, and E are in cal, mol, cm, and s.

6.3.3 Validation

1. Pyrolysis of neat DIMP

Using these modifications, simulations were conducted using 0-D reactor at constant pressure for pyrolysis of DIMP. The results are shown in Figure 6-6 to 6-8. The new model predicts CO formation within uncertainty limits of experiments for 0.1%, 0.2% and 0.4% DIMP pyrolysis.

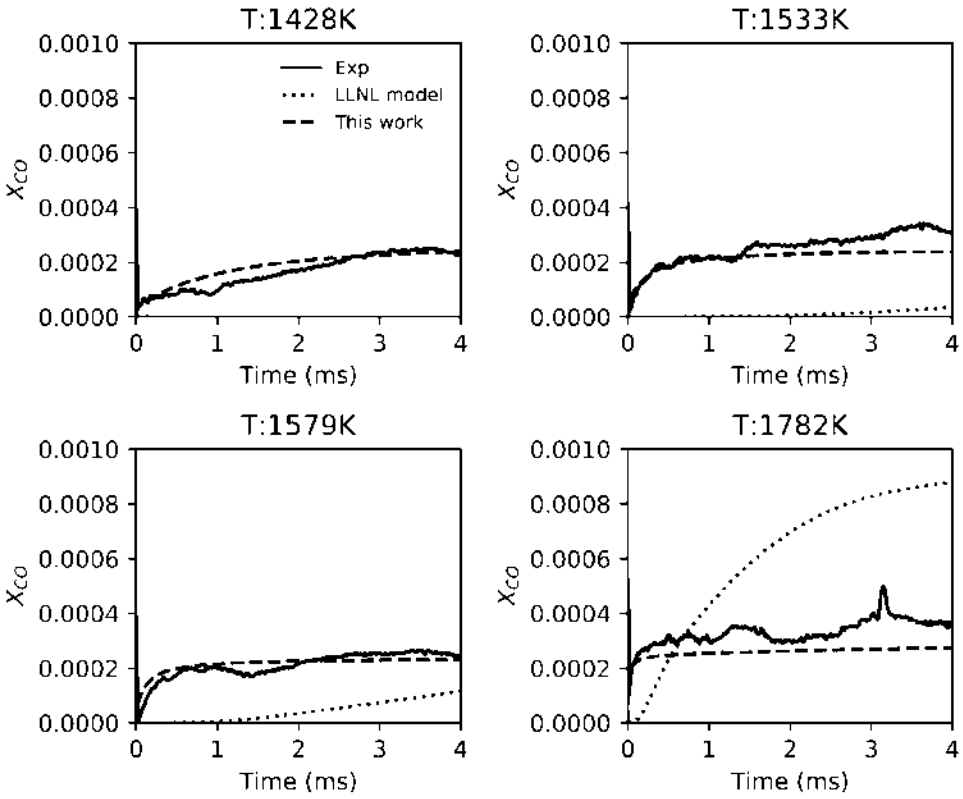

Figure 6-6. Comparison of predicted vs experimentally obtained CO mole fraction time-histories for 0.1 % DIMP in argon at different temperatures. Shaded region shows the uncertainty in experiments.

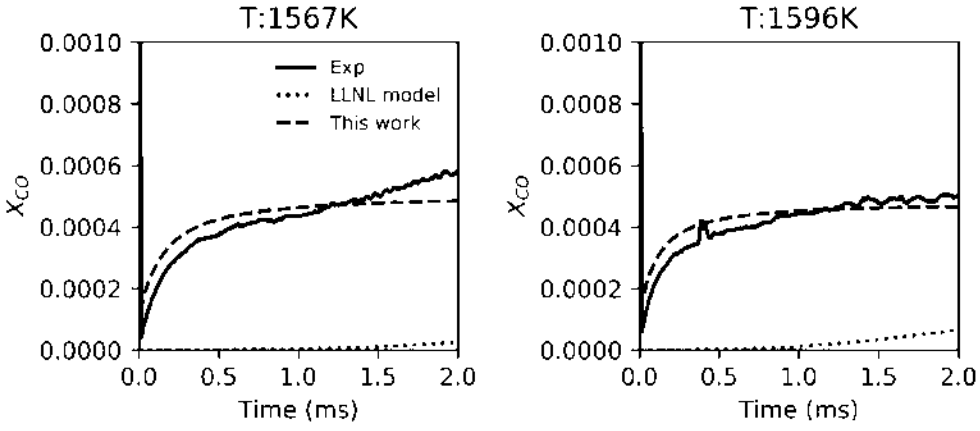

Figure 6-7. Comparison of predicted vs experimentally obtained CO mole fraction time-histories for 0.2 % DIMP in argon at different temperatures. Shaded region shows the uncertainty in experiments.

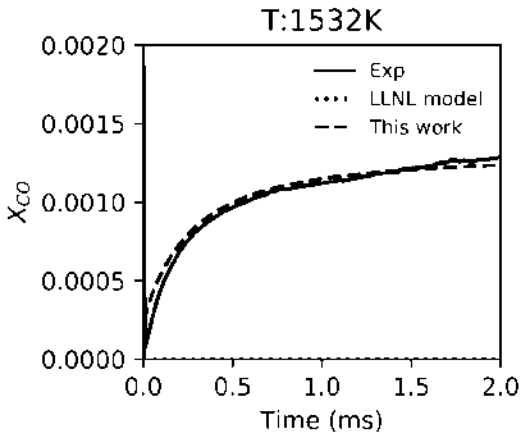

Figure 6-8. Comparison of predicted vs experimentally obtained CO mole fraction time-histories for 0.4 % DIMP in argon at different temperatures. Shaded region shows the uncertainty in experiment.

2. Oxidation of neat DIMP: Results for oxidation of DIMP at equivalence ratio 0.5, 1.0 and 2.0 are shown in figure 9,10 and 11 respectively. At high temperature, very good agreement is observed with experimental results. At temperature less than 1500 K, model predicts the trend in CO time-histories and has improved significantly from LLNL model. Further experiments are required to improve model predictions at these conditions.

Φ-0.5

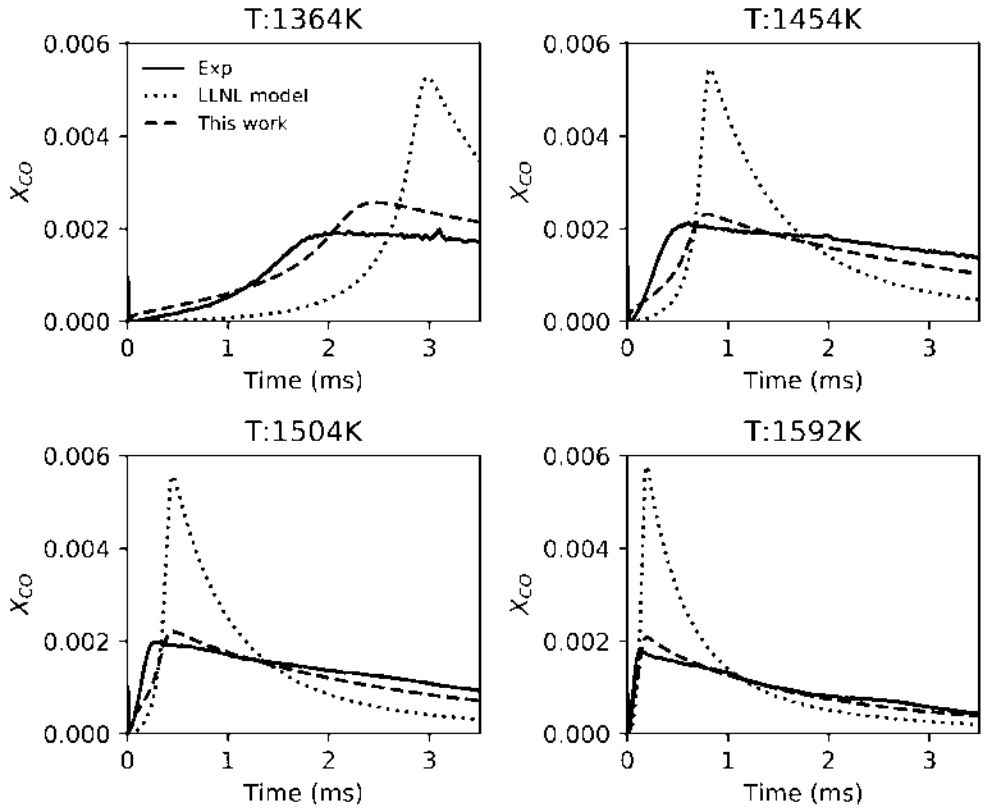

Figure 6-9. Comparison of predicted vs experimentally obtained CO mole fraction time-histories for oxidation of 0.1 % DIMP at equivalence ratio 0.5 at different temperatures. Shaded region shows the uncertainty in experiment.

Φ-1.0

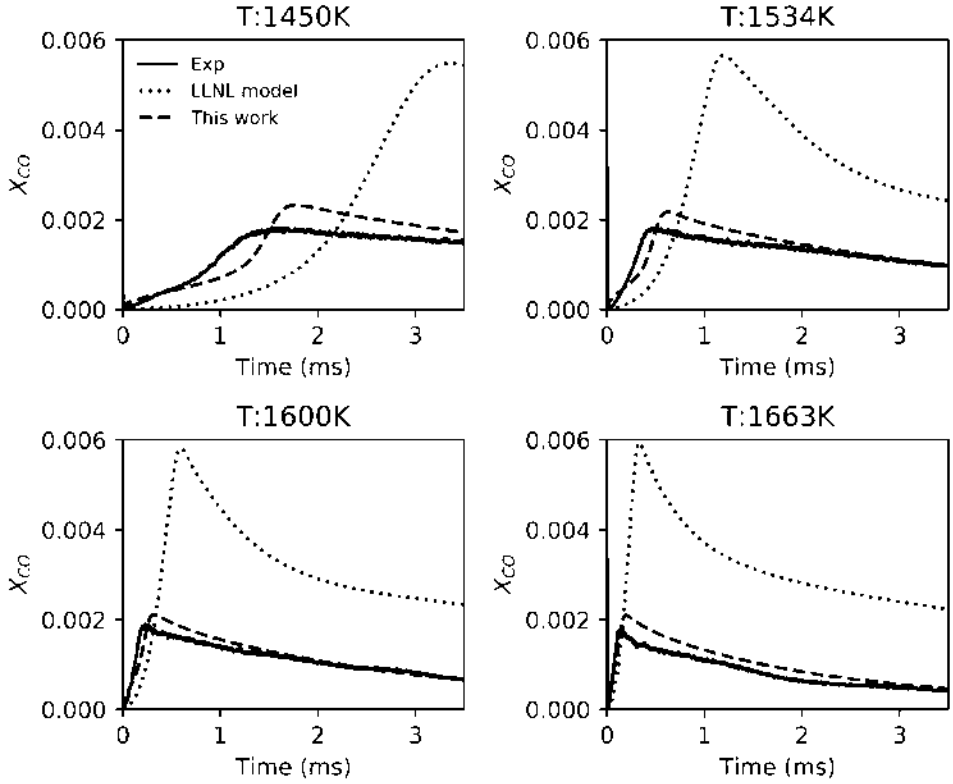

Figure 6-10. Comparison of predicted vs experimentally obtained CO mole fraction time-histories for oxidation of 0.1 % DIMP at equivalence ratio 1.0 at different temperatures. Shaded region shows the uncertainty in experiment.

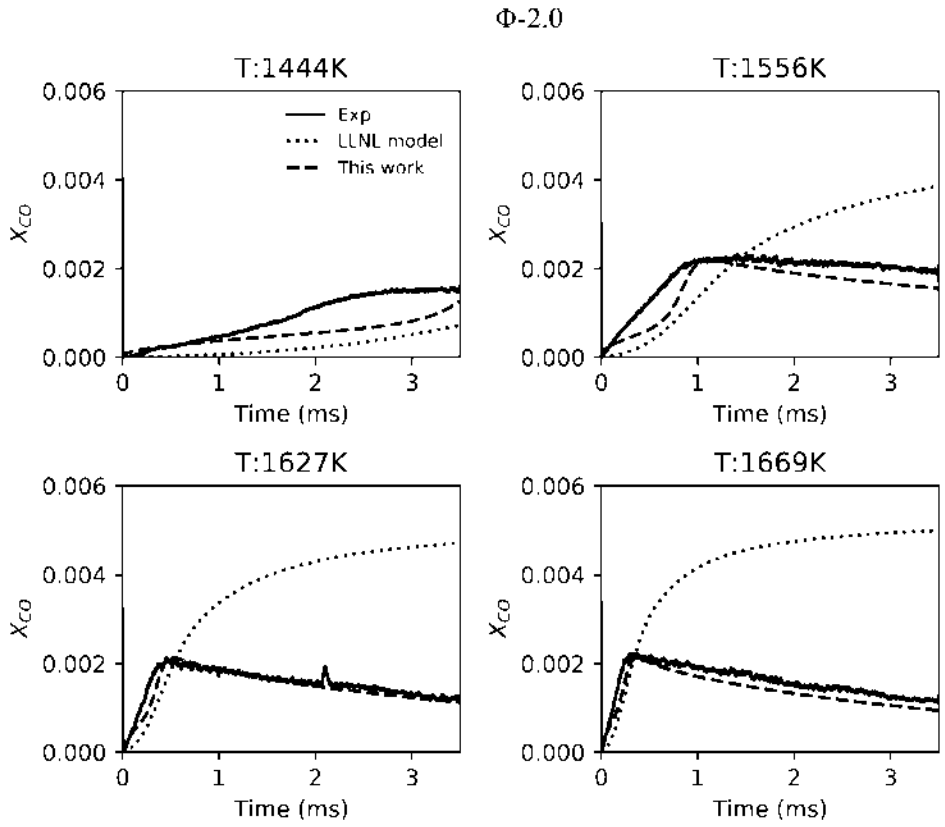

Figure 6-11. Comparison of predicted vs experimentally obtained CO mole fraction time-histories for oxidation of 0.1 % DIMP at equivalence ratio 2.0 at different temperatures. Shaded region shows the uncertainty in experiment.

3. DIMP doped in methane, ethylene and hydrogen:

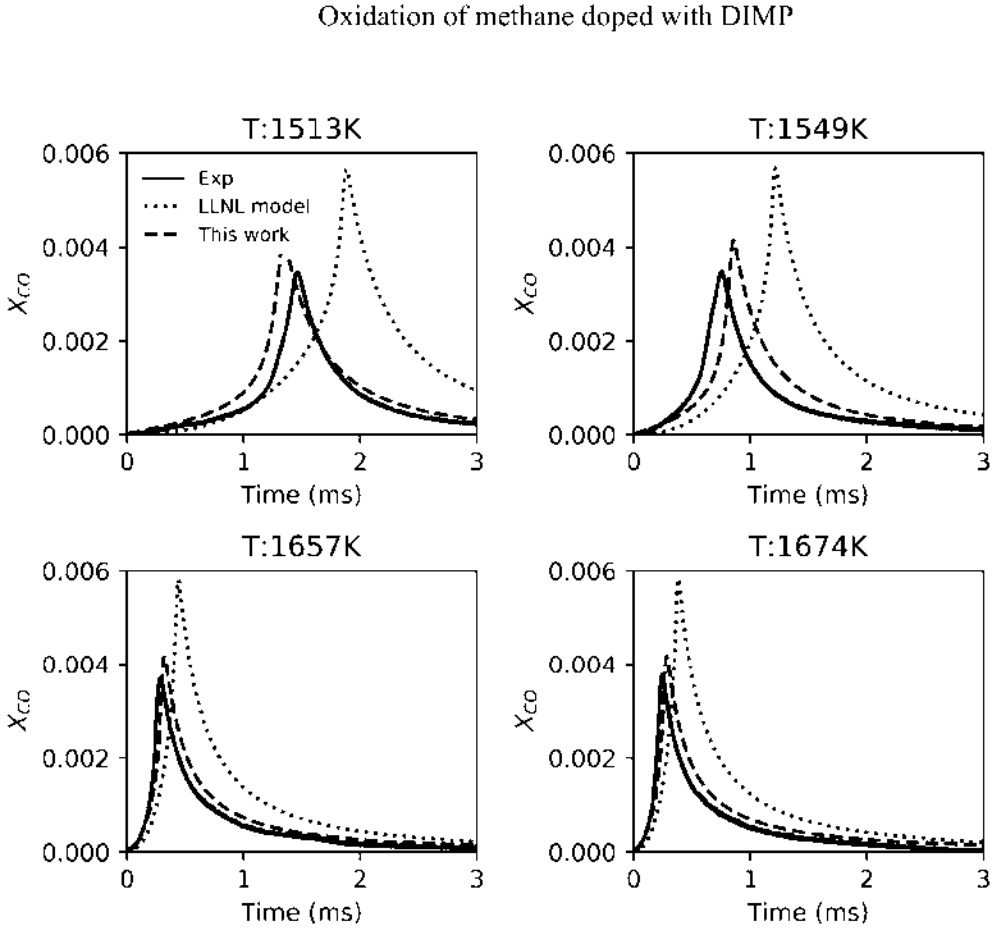

Figure 6-12. Comparison of predicted vs experimentally obtained CO mole fraction time-histories for oxidation of methane doped with DIMP.

Oxidation of ethylene doped with DIMP

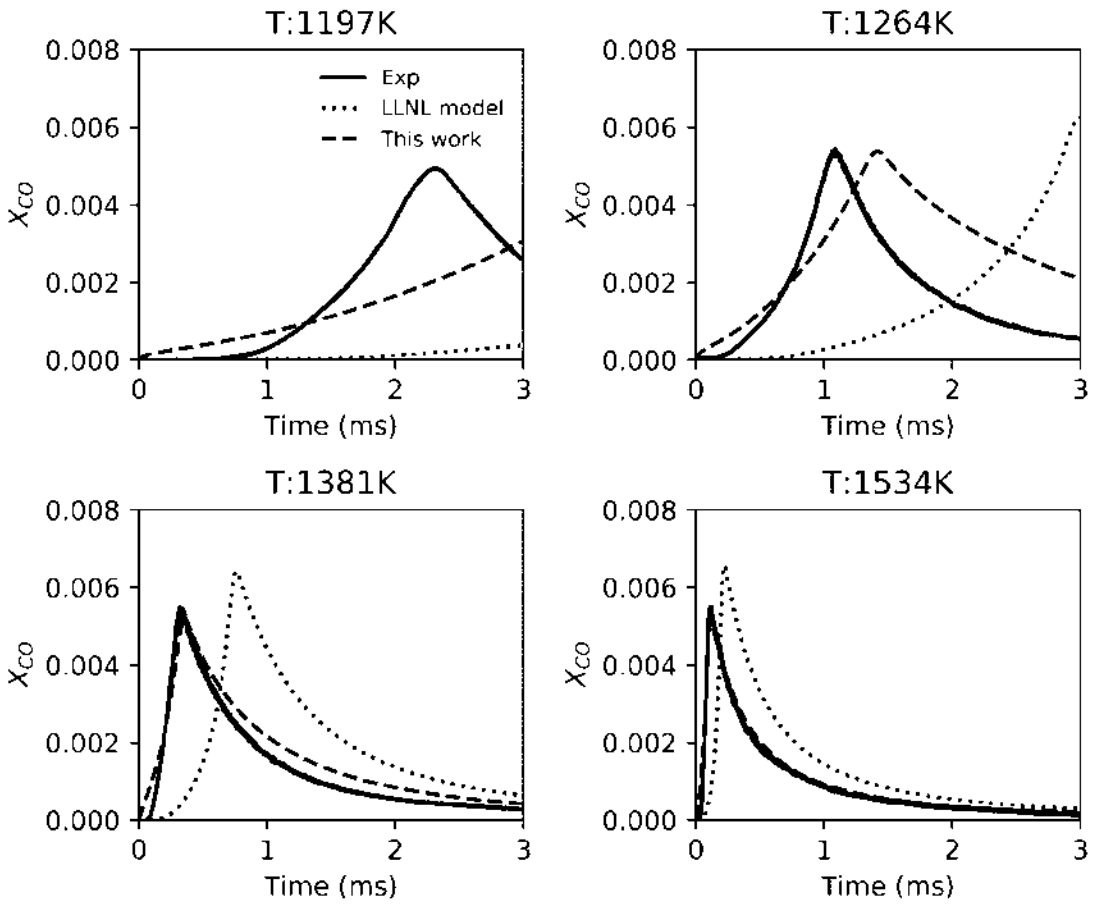

Figure 6-13. Comparison of predicted vs experimentally obtained CO mole fraction time-histories for oxidation of ethylene doped with DIMP.

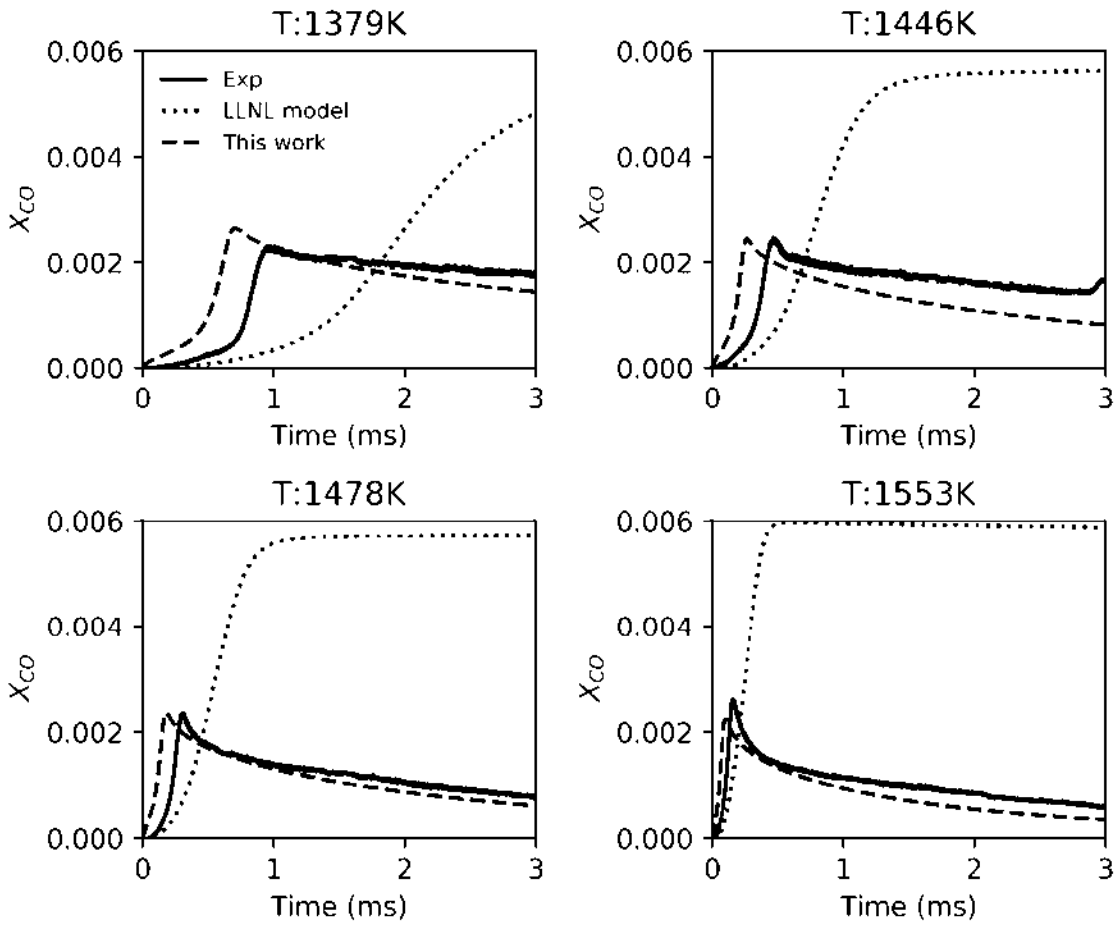

Figure 6-14. Comparison of predicted vs experimentally obtained CO mole fraction time-histories for oxidation of hydrogen doped with DIMP.

Figure 6-12 to 6-14 shows predictions by LLNL model and the model developed in this work against the experimental results. It is evident that the new model predicts CO time-histories during oxidation of DIMP doped hydrocarbons and hydrogen to a good degree of accuracy at high temperatures. Further research is required in low temperature regime to improve its predictions.

Figure 6-15 shows a comparison of ignition delay prediction by the model developed in this work with experimental results. The model captures the trend in ignition delay especially with increase in equivalence ratio. LLNL model predicts ignition delay for equivalence ratio 1 and 2 to be close to each other while the model developed in this work predicts a significant difference in ignition delay with increase in equivalence ratio. For DIMP doped experiments, ignition delay predicted by the model developed in this work is significantly better than the LLNL model.

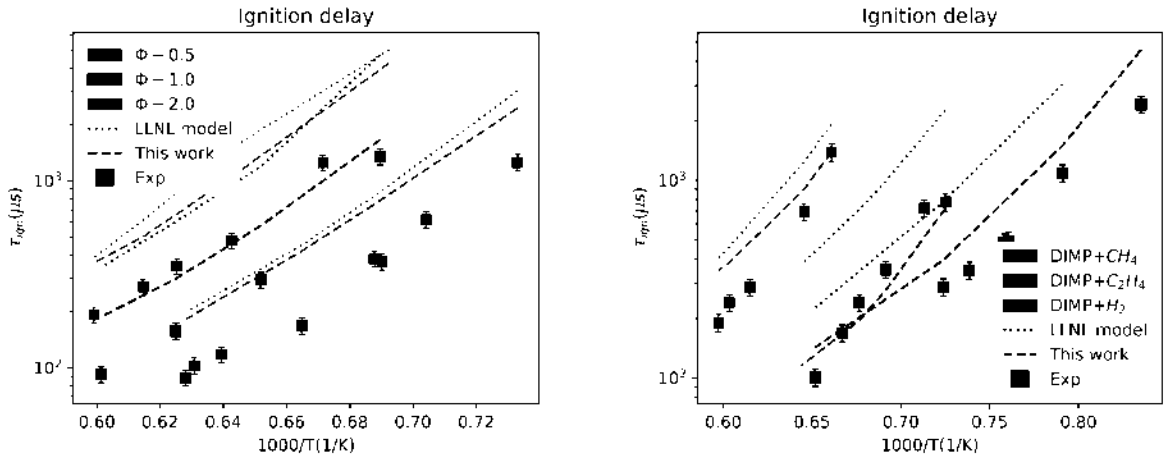

Figure 6-15. Ignition delay vs inverse temperature for a) neat DIMP oxidation and b) doped studies.

6.4 Conclusions

Shock tube experiments were conducted for pyrolysis of a chemical warfare surrogate DIMP within temperature range of 1428 - 1782 K at near 1.5 atm pressure. Laser absorption spectroscopy was used to obtain carbon monoxide mole fraction time-histories for DIMP concentrations ranging from 0.1-0.4%. Shock tube experiments were conducted for isopropanol pyrolysis and performance of models available in the literature for capturing CO mole fraction time-histories were evaluated. Li et al.[83] model was identified as a suitable candidate for isopropanol sub mechanism. Thermochemical properties of key species involved in DIMP pyrolysis were calculated using CBS-QB3 composite method. This method combined with transition state theory was also employed to evaluate reaction rates of important reactions involved in DIMP pyrolysis. The reaction rate parameters for MOPO were adopted from nitromethane kinetics while those for reactions of MPA were obtained from the literature. Other reactions involved in DIMP pyrolysis were estimated from analogous reactions of similar species. These new reaction rates and isopropanol sub mechanism were merged with DIMP sub mechanism from LLNL OPC mechanism to obtain new reaction mechanisms for DIMP. In general, the model improved the prediction of CO during high temperature pyrolysis and oxidation of DIMP significantly compared to literature models.

Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia / Epstein
CBEP-Thrust Area 6, CC WMD

Statement of Work

Project Title: Serological Biosurveillance for Spillover of *Henipaviruses* and *Filoviruses* at Agricultural and Hunting Human-Animal Interfaces in Peninsular Malaysia

Document Date: May 2016

Objective: The objective of this project is to enhance capacity within the Malaysia government to characterize the distribution of and detect spillover of novel and known henipaviruses and filoviruses, (both groups include high consequence zoonotic pathogens) in indigenous populations and farms in Peninsular Malaysia. Current surveillance strategies for novel zoonotic viruses rely exclusively on molecular detection tools, but Nipah and Ebola viruses are present at low prevalence in bat species which makes infected individuals difficult to detect. By establishing a multiplexed serological assay developed to detect antibodies against any henipa- and filoviruses, the Government of Malaysia (GoM) will more effectively be able to determine the distribution of these high-impact viruses in wildlife reservoirs and detect evidence of spillover in at-risk human or livestock populations. This enhancement of human and animal surveillance in all three sectors (wildlife, livestock and human health) and training of Malaysian scientists utilizes a One Health approach and will help reduce risk of zoonotic disease emergence and spread by accelerating detection and response. These activities fulfill DTRA CBEP's mandate and are also complementary to and supportive of the aims of the USAID EPT program and the Global Health Security Agenda.

Scope: This research includes transferring state-of-the art serological reagents and Luminex-based microsphere beaded technology that will allow the Government of Malaysia to use a One Health approach to conduct serological surveillance for all known *and unknown* henipaviruses and filoviruses in wildlife, domestic animals, and humans. The study will test archived human and wildlife serum samples which are linked to PCR-tested oral, rectal, or urogenital swab samples (collected and tested under the ongoing USAID Emerging Pandemic Threats: PREDICT program and a University of Malaya study of Orang Asli healthy populations and acutely febrile hospital cases). It will also conduct a new study looking at henipa- and filovirus antibodies in livestock and farm workers and wildlife near the farms, as well as an expanded Orang Asli study focused on hunting communities living in the forest. The grantee will investigate spillover of these pathogens by screening wildlife reservoirs (e.g. bats and nonhuman primates), people, and livestock for IgG antibodies to henipaviruses and filoviruses, while also continuing to develop and transfer additional tests that will detect antibodies against novel viruses in these groups.

Our team will focus on the following major goals and milestones:

1. Improve the Government of Malaysia's capacity to conduct serological surveillance for henipaviruses and filoviruses in human and animal populations, using a One Health approach.
    - Transfer Luminex-based technology into government and university diagnostic labs in three key sectors (wildlife, livestock, and human health); conduct trainings for staff to be able to screen samples, interpret results, and perform confirmatory assays; train local graduate students; and publish and share findings among GoM partners.
2. Determine the host distribution and seroprevalence of henipaviruses and filoviruses in wildlife (e.g. bat) populations in Peninsular Malaysia associated with Orang Asli communities and livestock farms.

- Conduct cross-sectional serological studies of humans and animals for henipa- and filoviruses by testing sera from new samples collected under this project and archived samples from PREDICT. Wildlife sampling will be conducted jointly with the Dept. of Wildlife and National Parks (DWNP); livestock sampling with DVS and UPM; and human sampling with MoH. These activities provide opportunity for One Health-based disease surveillance; threat reduction; and capacity building within the Government of Malaysia.

3. Conduct surveillance for IgG antibodies against filoviruses and henipaviruses in people and domestic animals which may indicate spillover from wildlife reservoirs. Sampling activities will focus on Orang Asli communities and farms in Peninsular Malaysia and will be conducted jointly with the Ministry of Health's National Public Health Laboratory (NPHL), DWNP, and the University Putra Malaysia under the Department of Veterinary Services (DVS). Serological surveillance will allow the GoM to focus limited resources and develop interventions to reduce threat from viral outbreaks in at-risk animal and human populations.

- Qualitative studies (e.g. questionnaires) detailing human-animal contact where sampling occurs will characterize high-risk behaviors and interfaces;
- Sampling human, wildlife, and domestic animal populations in Orang Asli forest communities that practice hunting.
- Sampling domestic animals and farm workers on large and small-scale farms and associated wildlife to identify evidence of spillover.

Our research will be focused on building capacity within the Government of Malaysia to conduct serological surveillance in human and animal populations in Peninsular Malaysia where people and animals are believed to have high levels of contact. Collaborators from the Government of Malaysia (GoM)'s Department of Wildlife and National Parks (DWNP), the Ministry of Health's National Public Health Laboratory (NPHL), the Department of Veterinary Service's University Putra Malaysia (UPM), University of Malaysia (UM), The Uniformed Services University, Maryland (USU), Conservation Medicine, Ltd. (CM), The US Navy Medical Research Center, Asia (NMRC-A), and Duke-NUS Graduate Medical School, Singapore (Linfa Wang lab) will play active roles in this research. EHA's history of successful collaboration with DWNP, MoH, and DVS under prior research projects and most recently through PREDICT, as well as having a Memorandum of Agreement with the aforementioned institutions, gives us confidence that we will be able to achieve the aims of this proposal (also see letters of collaboration).

The duration of the proposed project is three years, with optional 4th and 5th years containing follow-up Orang Asli studies and farm studies so that we have longitudinal data. These option years will significantly strengthen the overall study by enhancing our ability to detect temporal patterns of infection in bat and other animal populations as well as additional opportunity to detect spillover in humans or livestock. **Through these proposed activities we would create enhanced One Health surveillance for known *and novel* henipaviruses and filoviruses in human and animal populations in Peninsular Malaysia, an emerging disease hotspot**. The proposed activities would significantly support Malaysia's surveillance priorities, DTRA CBEP Thrust Area 6 objectives, the Global Health Security Agenda (GHSA), and the USAID Emerging Pandemic Threats program by allowing the Government of Malaysia to more rapidly detect infections of high impact zoonotic agents and develop effective interventions to prevent viral

outbreaks and reduce human and animal mortality, thereby reducing the threat from these high consequence viral agents.

Background:

Nipah virus (NiV), Ebola virus (EBOV) and Marburg Virus (MARV) are emerging zoonotic viruses belonging to the genera *Henipavirus* (Family *Paramyxoviridae*), *Ebolavirus* and *Marburgvirus* (both Family *Filoviridae*) and they have each caused outbreaks in people with high mortality rate. These viruses are listed as a select agents by HHS and USDA as pathogens of significant threat to both human and animal health. Nipah virus (NiV) is a zoonotic paramyxovirus (genus *Henipavirus*) with pandemic potential that first emerged on a pig farm in Malaysia in 1997 and led to a human outbreak with more than 260 cases and 40% mortality. Old world frugivorous bats, particularly Genus *Pteropus* (Family *Pteropodidae*), are natural reservoirs for a range of henipaviruses, including Nipah virus. Filoviruses circulate both in Africa and Southeast Asia, and have also been linked to bat reservoirs. In Africa, EBOV and Sudan virus (SUDV) have caused multiple human outbreaks with mean mortality rates between 50% and 90%. The current EBOV outbreak in West Africa, by far the largest Ebola epidemic in history, has had more than 28,600 cases, primarily in Sierra Leone, Guinea, and Liberia, with a mortality rate of 40%. The outbreak in West Africa has prompted the Government of Malaysia to determine whether filoviruses are circulating in bat species resident in Peninsular Malaysia. Malaysia's experience with Nipah virus, existing technical expertise, and its current commitment to using a One Health approach to disease surveillance (e.g. surveillance for novel zoonoses under PREDICT in all three sectors: wildlife, livestock, and human health) make it an ideal place to establish an advanced serological platform for detection of henipavirus and filovirus antibodies in wildlife and at-risk livestock and human populations.

Preliminary data: Serological studies of Nipah virus and Ebola virus using the Luminex-based platform. Studies conducted by our group have shown that NiV viral prevalence in pteropid bats is low (~1%-3%) and there is temporal variation to shedding. Mean seroprevalence in *P. vampyrus,* which is found across Peninsular Malaysia was 32% (n=253; range 16.7% - 42.4%). In Bangladesh, we conducted a 6-year longitudinal study of *Pteropus giganteus* using the Luminex-based platform to screen bats for IgG antibodies against both Nipah virus and Ebola virus Zaire. Between 20% and 80% of adult *Pteropus giganteus* were NiV seropositive, while between 20% and 50% were EBOV seropositive (Epstein et al, *in prep*). Nipah virus infections appear to peak in June/July while EBOV appears to peak in December (see also Project Narrative). We found a diversity of genetic strains of Nipah virus in *P. giganteus* (Epstein et al., *in prep*), and viruses which are NiV-like but distinct henipaviruses. Non-neutralizing antibodies against NiV-like viruses found in goats, cattle, and pigs in Bangladesh suggests that spillover from bats to domestic animals occurs and that there is a broad spectrum of henipaviruses circulating in bats. RESTV RNA was recently identified by our group in *Mineopterus schreibersii,* a common insectivorous bat. We also detected RESTV antibodies in two fruit bat species: *Cynopterus brachyotis* and *Pteropus vampyrus:* the latter is a NiV reservoir. In Bangladesh, we found antibodies against EBOV and RESTV in 3.5% of *Rousettus leschenaultii* (n=141). *M. schreibersii*, *R. leschenaultii*, and two *Pteropus* species, including *P. vampyrus* all occur in Malaysia, yet there is no data available regarding filoviruses in wildlife in Malaysia. The possibility that multiple henipaviruses or filoviruses capable of infecting people or livestock

to be circulating in bats in Malaysia makes enhanced surveillance and early detection of these high consequence viruses critically important for reducing their threat to public health.

PREDICT
Between 2009 and 2015, EHA, CM, and the Department of Wildlife and National Parks (DWNP) have collected and archived samples, including serum, from more than 1,400, animals including bats, rodents, and macaques all from areas where people and wildlife come into contact. While oropharyngeal, urogenital, and rectal swab samples have been or will be screened using PCR assays for viral families (including paramyxoviruses and filoviruses), corresponding sera remain archived (and untested) and will be made available for this project to test them using the Luminex-based assay.

University Malaya study of acutely ill Orang Asli patients.
We will also have access to archived and newly collected Orang Asli samples collected from acutely febrile patients at Gombak Hospital that serves the Orang Asli communities, under a separate ongoing disease study at the University of Malaya (Prof. Abu Bakar) and NMRC-A (Co-PI Pike). This study just received renewed funding to continue sampling febrile patients and expand to sample asymptomatic Orang Asli from communities across a land-use gradient, which will include individuals without animal exposure. Under this proposal we will screen sera collected from well characterized Orang Asli patients and community members using the Luminex-based platform.

***Tasks/Scientific Goals:* (Format: Year #(s). Task #. Sub-task#)**

Task 1: (Year 1-OY5). Enhance capacity within Malaysia to conduct serological surveillance for henipa- and filoviruses. The GoM has been engaged in using a One-Health approach to zoonotic disease surveillance since the NiV outbreak in 1998 and most recently via collaborations with EHA under PREDICT. However, current GoM and PREDICT surveillance activities in humans, wildlife and domestic animals are based on broad molecular assays designed to identify novel viruses (including henipaviruses and filoviruses). One of the challenges with this approach is that Nipah, Ebola, and related viruses tend to be acute and asymptomatic infections in bats, making detection of viral RNA challenging. IgG antibodies,

however, persist in bats (as well as people and livestock), reducing the sampling effort necessary to identify exposed or infected individuals in a population and also allowing for detection of asymptomatic carriers. Adding a serological component to existing surveillance will greatly enhance the government's ability to detect both known and unknown henipa- and filoviruses in wildlife, domestic animals and human populations at risk for spillover. To establish this capacity, we will provide a BioRad Bio-Plex 200 machine with computer console to NPHL and DWNP. We will provide all reagents for henipa- and filovirus assays. Following Bio-Plex installation, we will conduct a 10-day training course for lab technicians at DWNP and another at NPHL. UM has a Luminex machine and will receive assay reagents and lab staff will participate in one of the training workshops. 1 PhD student at USU will develop additional assay reagents in Y1-OY5. We will identify *either* 1 PhD or 2 Masters' students at UM and 1 PhD student at UPM to train under this project. We will provide additional training to technical staff from GoM partner labs in viral pseudo-type assay development at USU. The grantee shall:

1.1.1. Transfer BioRad Bio-Plex 200 to NPHL and DWNP labs;

1.1.2-2.1.2. Transfer Luminex-based filovirus and henipavirus reagents to DWNP, NPHL, and UM labs; the grantee will provide a BioRad Bio-Plex 200 to UPM and conduct a 10-day training workshop in Y2.

1.1.3.-2.1.3 Train lab staff to use Luminex-based assays

1.1.4- OY5.1.4 Supervise 1 UM PhD or 2 Masters' students (Y1-3), and 1 UPM PhD student

1.1.5-OY5.1.5 Convene the Science Advisory Group (annually in KL);

1.1.6-2.1.6 Develop a database for serology results and sample metadata; establish sample repository at partner labs.

Task 2. (Y1-OY5) Develop and validate Luminex-based reagents to detect henipa- and filovirus antibodies. At USU, we will engineer soluble and secreted versions of henipa- and filovirus glycoproteins, expressed in mammalian cell culture systems to accurately reflect proper synthesis including their assembly and processing into properly glycosylated higher order complexes. Constructs will be designed and tested in pilot experiments for expression and analysis, and then used to establish stably expressing cell lines. Preparative amounts of the various soluble viral glycoproteins will be made using serum-free culture conditions in suspension culture, and proteins are purified using the appropriate tag protocol (either S-tag or double strep tag (TST)) by affinity chromatography, followed by concentration and size exclusion chromatography. We will test the utility of each individual glycoprotein by Luminex, ELISA and Western blotting then provide all necessary reagents to partner labs to accomplish the testing under this project. The grantee shall:

1.2.1-2.2.1 produce Mojaing virus (MojV) and African GH-M74a G glycoproteins; Bundibugyo virus (BDBV), Tai Forest virus (TAFV), Lloviu virus (LLOV), MARV Ravn, SUDV, SUDV GpΔmucin, RESTV (monkey), and RESTV (porcine) Gp glycoproteins.

1.2.2-3.2.2 use the completed viral glycoprotein preparations and produce polyclonal rabbit serum to each individual glycoprotein; test the utility of each individual glycoprotein by Luminex-based, ELISA and Western blotting assays;

1.2.3 Provide N protein reagents to detect novel henipa- and filoviruses to partner labs.

1.2.4-OY5.2.4: If novel henipa- or filoviruses are detected using molecular assays (under

PREDICT), grantee may develop new reagents for antibodies against these viruses and negative sera will be re-screened.

Task 3. Screen archived serum samples from wildlife and Orang Asli for henipa- and filovirus antibodies using a Luminex-based platform (Y1-Y2). Grantee shall test up to 945 macaque and 175 bat archived serum samples collected under PREDICT and stored at DWNP, and up to 300 archived Orang Asli samples stored at NPHL, and up to 200 Orang Asli samples at UM. The number of samples will depend on available serum volume and quality. Results will be used to inform the Orang Asli and farm studies described in **Tasks 4 and 5**. Positive sera may be sent for confirmatory testing at USU using pseudovirus serum neutralization assays, ELISA, or Western blot. Results shall be entered into a database and shared with GoM partners.

1.3.1 Identify suitable archived animal and human sera;
1.3.2 Screen sera for henipa- and filovirus IgG antibodies at GoM and UM partner labs;
1.3.3 Confirm positive results using western blot or pseudovirus assay;
1.3.4 Enter results into database and analyze;
1.3.5-2.3.5 share results with partners.

Task 4. Serological survey of Orang Asli who hunt, wildlife, and peri-domestic animals. (Y1-OY5). Indigenous communities living in forested areas and that practice subsistence wildlife hunting are at higher risk of exposure to zoonotic viruses due to handling and butchering wildlife and therefore contact with bodily fluids. In **Y1** of this project, we will apply for IRB ethical approval to continue and expand from a pilot study currently underway (expected completion: Oct 2016). Pending IRB and IACUC approval, CM, MoH, and DWNP will work together in **Y1-Y2** to sample 100 individuals from each of 3 Orang Asli communities in Perak State (incl. Kuala Lipis and Gua Musang), **totaling 600 human blood samples over five years**. 100 people sampled per community will allow us to detect a seropositive individual with 95% confidence at a prevalence of 3%, assuming a population of 500 individuals. We will also aim to sample blood from 50 bats per each of 3 species around each study village (e.g. *Miniopterus*, *Pteropus*, and *Rousettus* spp); 30 nonhuman primates; and 30 dogs, if present, in order to be able to detect henipa- or filovirus antibodies in an individual with 95% confidence given a 5% seroprevalence (in bats) and 10% in dogs and nonhuman primates. MOH officers and CM will collect blood from Orang Asli and associated animals, and serum will be separated either in the field or at partner labs and stored at -86C at prior to testing. A sample size of 50 bats would allow us to detect differences between study locations (or time points, should we conduct follow-up studies) of 56% with 95% confidence and 80% precision. The grantee shall conduct repeated sampling of Orang Asli and peri-domestic livestock and wildlife in the same communities in Y3-OY4. If novel henipa or filoviruses identified by PREDICT, new assays will be developed in OY4 and negative samples re-tested. Molecular and serological data from Orang Asli will be co-analyzed in OY4-OY5. In addition, we will test sera collected through an ongoing UM study of Orang Asli. Up to 500 samples per year will be collected Y1-OY5, and these will be tested using the Luminex-based platform at UM. Positive samples will be confirmed at UM or USU.
The grantee shall:

1.4.1.-OY5.4.1 Test Orang Asli, wildlife, and peri-domestic animal samples collected under PREDICT and UM studies
1.4.2-2.4.2, Y3.4.2, OY4.4.2-OY5.4.2. Enter results into database and analyze data;
1.4.3 – 2.4.3, Y3.4.3, OY4.4.3 Confirm sero-positive samples;

1.4.4. Develop follow-up study with GoM partners to be implemented in Y3.
2.4.5 Apply for IRB and permits for follow-up study
3.4.6 Implement repeated sampling in Orang Asli villages
3.4.7 Analyze longitudinal data
OY4.4.1. If new viruses found by PREDICT, develop new sero assay and re-test samples
OY4.4.2.-OY5.4.2 Confirm additional test results and co-analyze molecular and sero data

Task 5. Develop serological study of farm workers, livestock, and wildlife around farms. (Y1-OY5) Grantee shall conduct a serological survey of farm workers and animals living on or around 2 large-scale farms (>5000 ruminants and/or pigs) and 2 small-scale farms (500-1000 ruminants and/or pigs) in Peninsular Malaysia to detect exposure to henipa- or filoviruses. Grantee shall work with DWNP to sample bats, macaques and dogs proximal to farms; and with MoH to conduct qualitative research and collect blood samples from farm workers to screen for henipa- and filovirus antibodies. Grantee will work with UPM to sample and test livestock. In Y1 grantee will select appropriately sized farms. Grantee shall also locate bat caves or roosts proximal to each farm, meet farm owners, and characterize the livestock. Grantee shall apply for all necessary IRB and IACUC approvals. Grantee may commence sampling in Y2, pending approvals, and conduct a follow-up study in OY4 and OY5 (if funded). The grantee shall:

1.5.1 Meet with GoM partners to develop study;
1.5.2 Apply for ethical approvals and permits.
1.5.3. Conduct scoping visits to farms, characterize livestock and local wildlife species.
2.5.1-3.5.1 Collect wildlife, livestock, and human samples
2.5.2-3.5.2 Conduct questionnaires with farm workers
2.5.3-3.5.3 Screen samples using Luminex-based assay; confirm results
2.5.4-3.5.4 Enter data into database and analyze results
OY4.5.1-5.5.1 Repeat human, wildlife and livestock sampling at each farm
OY4.5.2-OY5.5.2 Test samples, enter results into database; analyze complete dataset
OY5.5.3 prepare manuscript based on (Y1-OY5) study

Task 6. Disseminate reports to relevant stakeholders (Y1-OY5). Grantee shall synthesize all data collected through the projects described above as well as capacity building activities in Malaysia. Scientific and general reports will be generated and provided to GoM partners and an annual report to DTRA. PhD or Masters' students will complete thesis and present at annual stakeholders meeting in KL or at scientific meeting in Malaysia. Grantee shall meet with GoM partners and SAG in Kuala Lumpur annually, according to schedule. Grantee shall present findings at scientific meetings (e.g. ASTM, ASM Biodefense, IMED, EcoHealth) to present findings according to the schedule.

1.6.1-OY5.6.1 submit progress reports to DTRA.
1.6.2-OY5.6.2 Complete annual report to local stakeholders.
1.6.3-OY5.6.3 Conduct presentations/meetings at times and places specified in the grant schedule, including DTRA Annual Technical Review.
1.6.4-OY5.6.4 Conduct annual stakeholder meetings.
3.6.5. Prepare comprehensive project report for GoM
3.6.7, OY5.6.7 UM Graduate students present thesis to committee and prepare publication in peer reviewed journal
3.6.6-OY5.6.6 Prepare and submit publications to disseminate study findings.

Project Timeline

Task	Y1	Y2	Y3	OY4	OY5
1. Enhance capacity in Malaysia for serological surveillance for all henipaviruses and filoviruses					
1.1. Transfer BioRad Bio-Plex 200 in NPHL, DWNP, and UPM labs					
1.2 Transfer serological reagents to NPHL, DWNP, UPM, and UM labs					
1.3 Training staff at partner labs					
1.4 Identify graduate students at UM and UPM					
1.5 Convene Science Advisory Group					
1.6 Develop database for serology results and sample metadata					
1.7 Training in pseudovirus development at USU					
2. Develop & validate henipavirus and filovirus reagents.					
2.1 Produce specific henipavirus and filovirus proteins					
2.2 Produce and test monoclonal antibodies against new proteins					
2.3 Transfer henipa and filo N protein assays to partner labs					
2.4. develop/validate proteins and mAbs for novel henipa- & filoviruses					
3.Screen archived wildlife and Orang Asli sera					
3.1 Identify archived wildlife and human sera at NPHL and DWNP					
3.2 Screen sera using Luminex-based platform					
3.3 Confirm positive sera with additional testing					
3.4 Enter results in database / analyze					
4. Sero-survey of Orang Asli and animals					
4.1 apply for IRB/IACUC approval					
4.2 Collect & test serum samples from Orang Asli ~ animals					
4.3 Enter results into database					
4.4 Confirm positive sera with additional testing					
4.5 Conduct follow-up study of Orang Asli and animals					
4.6 Analyze data					
5. Serological study of farm workers, livestock, and wildlife on farms	■	■	■	■	■
5.1 Apply for necessary permits and ethical approval	■	■			
5.2 scoping visits to potential study farms; select farms	■				
5.3 sample farm workers, livestock, and wildlife on farms		■	■		
5.4 follow-up study of farm workers, wildlife and livestock (4 farms)				■	■
5.5 Enter results into database / analyse results		■	■	■	■
6. Disseminate reports to relevant stakeholders					
6.1 annual report toDTRA					
6.2 annual report to government of Malaysia partners					
6.3 attend DTRA annual technical review					
6.4 partner meeting in Malaysia					
6.5 present results at scientific conference (e.g. ASTMH, IMED, ASM)					
6.6 prepare manuscripts for publication in peer-reviewed journal					

AMENDMENT OF SOLICITATION/MODIFICATION OF CONTRACT

1. CONTRACT ID CODE	PAGE OF PAGES
	1 | 9

2. AMENDMENT/MODIFICATION NO.	3. EFFECTIVE DATE	4. REQUISITION/PURCHASE REQ. NO.	5. PROJECT NO. (If applicable)
P00002	24-Mar-2020

CODE 3MMU3	FACILITY CODE	

11. THIS ITEM ONLY APPLIES TO AMENDMENTS OF SOLICITATIONS

☐ The above numbered solicitation is amended as set forth in Item 14. The hour and date specified for receipt of Offer ☐ is extended, ☐ is not extended.

Offer must acknowledge receipt of this amendment prior to the hour and date specified in the solicitation or as amended by one of the following methods: (a) By completing Items 8 and 15, and returning _____ copies of the amendment; (b) By acknowledging receipt of this amendment on each copy of the offer submitted; or (c) By separate letter or telegram which includes a reference to the solicitation and amendment numbers. FAILURE OF YOUR ACKNOWLEDGMENT TO BE RECEIVED AT THE PLACE DESIGNATED FOR THE RECEIPT OF OFFERS PRIOR TO THE HOUR AND DATE SPECIFIED MAY RESULT IN REJECTION OF YOUR OFFER. If by virtue of this amendment you desire to change an offer already submitted, such change may be made by telegram or letter, provided each telegram or letter makes reference to the solicitation and this amendment, and is received prior to the opening hour and date specified.

12. ACCOUNTING AND APPROPRIATION DATA (If required)

See Schedule

13. THIS ITEM APPLIES ONLY TO MODIFICATIONS OF CONTRACTS/ORDERS. IT MODIFIES THE CONTRACT/ORDER NO. AS DESCRIBED IN ITEM 14.

☐ A. THIS CHANGE ORDER IS ISSUED PURSUANT TO: (Specify authority) THE CHANGES SET FORTH IN ITEM 14 ARE MADE IN THE CONTRACT ORDER NO. IN ITEM 10A.

☐ B. THE ABOVE NUMBERED CONTRACT/ORDER IS MODIFIED TO REFLECT THE ADMINISTRATIVE CHANGES (such as changes in paying office, appropriation date, etc.) SET FORTH IN ITEM 14, PURSUANT TO THE AUTHORITY OF FAR 43.103(B).

☐ C. THIS SUPPLEMENTAL AGREEMENT IS ENTERED INTO PURSUANT TO AUTHORITY OF:

X D. OTHER (Specify type of modification and authority)
Terms & Conditions, Paragraph 5 Modification of the Grant

E. IMPORTANT: Contractor ☒ is not, ☐ is required to sign this document and return _____ copies to the issuing office.

14. DESCRIPTION OF AMENDMENT/MODIFICATION (Organized by UCF section headings, including solicitation/contract subject matter where feasible.)

Modification Control Number: robinson20960

The purpose of this modification is to:

(1) Combine the scope and value from Option CLINs 0002, 0003, 0004, and 0005 into base CLIN 0001.

(2) Extend the PoP of CLIN 0001 through August 18, 2024 at no addtional cost to the Government.

(3) Update Grant POC.

(4) Update grant funding profile and invoice schedule.

Except as provided herein, all terms and conditions of the document referenced in Item 9A or 10A, as heretofore changed, remains unchanged and in full force and effect.

15A. NAME AND TITLE OF SIGNER (Type or print)		16A. NAME AND TITLE OF CONTRACTING OFFICER (Type or print) (b)(6) / CONTRACTING OFFICER TEL: (b)(6) EMAIL: (b)(6)

SECTION SF 30 BLOCK 14 CONTINUATION PAGE

SUMMARY OF CHANGES

SECTION A - SOLICITATION/CONTRACT FORM

The total cost of this contract was increased by $3,990,550.00 from $998,464.00 to $4,989,014.00.

SECTION B - SUPPLIES OR SERVICES AND PRICES

CLIN 0001

The unit price amount has increased by $3,990,550.00 from $998,464.00 to $4,989,014.00.
The unit of issue Lot has been added.
The total cost of this line item has increased by $3,990,550.00 from $998,464.00 to $4,989,014.00.

CLIN 0002

The CLIN extended description has changed from:

Reducing the Threat of Rift Valley Fever through Ecology, Epidemiology, and Socio-Economics.In accordance with the following attachments: SOW at Exhibit A dated December 5,2018 and DTRA Terms and Conditions for Grant Awards, dated April 6, 2018 at Exhibit B.

To:

FOR MISSION CONTINUITY, THE SCOPE AND VALUE FROM CLIN 0002 HAS BEEN COMBINED WITH CLIN 0001. THIS OPTION IS NOT TO BE EXERCISED.

The pricing detail quantity has decreased by 1.00 from 1.00 to 0.00.
The total cost of this line item has decreased by $998,181.00 from $998,181.00 to $0.00.

CLIN 0003

The CLIN extended description has changed from:

Reducing the Threat of Rift Valley Fever through Ecology, Epidemiology, and Socio-Economics.In accordance with the following attachments: SOW at Exhibit A dated December 5,2018 and DTRA Terms and Conditions for Grant Awards, dated April 6, 2018 at Exhibit B.

To:

FOR MISSION CONTINUITY, THE SCOPE AND VALUE FROM CLIN 0003 HAS BEEN COMBINED WITH CLIN 0001. THIS OPTION IS NOT TO BE EXERCISED.

The pricing detail quantity has decreased by 1.00 from 1.00 to 0.00.
The total cost of this line item has decreased by $997,709.00 from $997,709.00 to $0.00.

CLIN 0004
The CLIN extended description has changed from:

Reducing the Threat of Rift Valley Fever through Ecology, Epidemiology, and Socio-Economics.In accordance with the following attachments: SOW at Exhibit A dated December 5,2018 and DTRA Terms and Conditions for Grant Awards, dated April 6, 2018 at Exhibit B.

To:

FOR MISSION CONTINUITY, THE SCOPE AND VALUE FROM CLIN 0004 HAS BEEN COMBINED WITH CLIN 0001. THIS OPTION IS NOT TO BE EXERCISED.

The pricing detail quantity has decreased by 1.00 from 1.00 to 0.00.
The total cost of this line item has decreased by $997,193.00 from $997,193.00 to $0.00.

CLIN 0005
The CLIN extended description has changed from:

Reducing the Threat of Rift Valley Fever through Ecology, Epidemiology, and Socio-Economics.In accordance with the following attachments: SOW at Exhibit A dated December 5,2018 and DTRA Terms and Conditions for Grant Awards, dated April 6, 2018 at Exhibit B.

To:

FOR MISSION CONTINUITY, THE SCOPE AND VALUE FROM CLIN 0005 HAS BEEN COMBINED WITH CLIN 0001. THIS OPTION IS NOT TO BE EXERCISED.

The pricing detail quantity has decreased by 1.00 from 1.00 to 0.00.
The total cost of this line item has decreased by $997,467.00 from $997,467.00 to $0.00.

SUBCLIN 000103 is added as follows:

ITEM NO	SUPPLIES/SERVICES	QUANTITY	UNIT	UNIT PRICE	AMOUNT
000103					$0.00
	Funding for CLIN 0001 FFP				
				NET AMT	$0.00
	ACRN AC CIN: HDTRA10343770001				$3,990,550.00

SECTION C - DESCRIPTIONS AND SPECIFICATIONS

The following have been modified:

252.601-9002 GRANT REFERENCE INFORMATION (MAY 2009)

a. This grant is awarded as a result of Broad Agency Announcement (BAA) **HDTRA1-14-24-FRCWMD-BAA**, Research and Development Enterprise, Basic and Applied Sciences Directorate, Basic Research for Combating Weapons of Mass Destruction (C-WMD).

b. **CFDA #:** 12.351

c. **Authority:** 10 U.S.C. 2358 as amended

SECTION E - INSPECTION AND ACCEPTANCE

The following Acceptance/Inspection Schedule was added for SUBCLIN 000103:

INSPECT AT	INSPECT BY	ACCEPT AT	ACCEPT BY
N/A	N/A	N/A	N/A

SECTION F - DELIVERIES OR PERFORMANCE

The following Delivery Schedule item for CLIN 0001 has been changed from:

DELIVERY DATE	QUANTITY	SHIP TO ADDRESS	DODAAC / CAGE

POP 19-AUG-2019 TO 18-AUG-2020	N/A	DEFENSE THREAT REDUCTION AGENCY/CT-I (b)(6) 8725 JOHN J. KINGMAN ROAD MSC 6201 FORT BELVOIR VA 22060-6201 (b)(6) FOB: Destination	HDTRA1

b. SCOPE AND LIMITATIONS OF AUTHORITY FOR DTRA GRANTS OFFICER'S REPRESENTATIVE

1. The Grants Officer's Representative (GOR) is responsible for monitoring the technical and programmatic performance of the grant or cooperative agreement (hereinafter referred to as agreement) including compliance with the agreement's reporting requirements. Perceived deviations from the agreement's terms and conditions shall be brought to the attention of appropriate recipient personnel and if not corrected, to the attention of the Grants Officer. Deviations or other occurrences indicative of the recipient's inability or unwillingness to conform to the agreement's requirements shall be brought to the immediate attention of the Grants Officer.

2. The GOR has no authority to modify the stated terms of the agreement or specifications in any manner, or to approve any action that would result in additional charges to the Government. The DTRA Grants Officer must make all such changes in writing.

3. The GOR is authorized to correspond directly with the recipient on matters within the scope and limitations of his or her authority. All such correspondence shall be signed personally by the GOR and a copy will be furnished the Grants Officer for placement in the official agreement file.

4. The GOR will provide technical advice to the recipient to the extent such advice will not alter any of the agreement's terms and conditions or result in an increase in the estimated cost of the agreement's performance as specified in the agreement. The GOR is encouraged to discuss with the recipient new ideas related to the original scope of the agreement that may be of special interest to DTRA. The GOR should also be alert for indications that any part of the research is becoming unfruitful. If, as a result of such discussions, questions arise as to the possible need for a modification, the matter shall be brought to the immediate attention of the Grants Officer. The GOR shall not direct the recipient to undertake any action that the recipient believes to be contrary to the agreement's scope, terms or conditions without the written approval of the Grants Officer.

5. Any visits to the recipient's facilities on matters pertaining to the agreement will be documented in a brief memorandum. A copy will be provided the Grants Officer for placement in the official agreement file.

6. The GOR will maintain such work files as he or she deems necessary to properly document performance of the duties and responsibilities as a GOR. Upon completion of the agreement and delivery of all required reports, such work files will be forwarded to the Grants Officer for placement in the official agreement file.

7. In performance of the GOR's duties, the GOR shall constantly stress protection of the Government's interests. Similarly, the GOR shall avoid any act which may tend to compromise the position of DTRA, any individual member of DTRA or which will impact confidence in the integrity of DTRA with the business community.

(End of Clause)

252.632-9000 GRANT FUNDING PROFILE (MAR 2012)

FUNDING PROFILE:
The amount of $998,000.90 is obligated for work to be performed during the period beginning with grant award and continuing through August 18, 2020. Additional incremental funding planned, but not obligated, is:

FY19 $463.10

The Government's liability is limited to the amount obligated.

INVOICE SCHEDULE

1	9/19/2019	$83,205.33
2	10/19/2019	$83,205.33
3	11/19/2019	$83,205.33
4	12/19/2019	$83,205.33
5	1/19/2020	$83,205.33
6	2/19/2020	$83,205.33
7	3/19/2020	$83,205.33
8	4/19/2020	$83,205.33
9	5/19/2020	$83,205.34
10	6/19/2020	$83,205.34
11	7/19/2020	$83,205.34
12	8/19/2020	$83,205.34

Exhibit B	DTRA Terms and Conditions	18	06-APR-2018

DEFENSE THREAT REDUCTION AGENCY (DTRA)
GENERAL TERMS AND CONDITIONS FOR GRANT AWARDS

Table of Contents

1. **Terms and Conditions Incorporated by Reference.**

   The DoD Research and Development General Terms and Conditions, dated July 2016, are hereby incorporated by reference and are available for download at website http://www.onr.navy.mil/Contracts-Grants/submit-proposal/grants-proposal/grants-terms-conditions.aspx.

2. **Acceptance of Grant.**

   The recipient is not required to countersign the Grant document; however, the recipient agrees to the conditions specified in the Research Grant and the Articles contained herein unless notice of disagreement is furnished to the Grants Officer within fifteen (15) calendar days after the date of the Grants Officer's signature. In case of disagreement, the recipient shall not assess the Grant any costs of the research unless and until such disagreement(s) is resolved.

3. **Recipient Responsibilities.**

   The recipient will bear primary responsibility for the conduct of the research and will exercise judgment towards attaining the stated research objectives within the limits of the Grant's Terms and Conditions.

   The Principal Investigator(s) (PI) specified in the Grant award will be continuously responsible for the conduct of the research project and will be closely involved with the research effort. The PI, operating within the policies of the recipient, is in the best position to determine the means by which the research may be conducted most effectively.

4. **Standards for Financial Management Systems.**

   Where the Federal Government guarantees or insures the repayment of money borrowed by the recipient, DTRA, at its discretion, may require adequate bonding and insurance if the bonding and insurance requirements of the recipient are not deemed adequate to protect the interest of the Federal Government.

   DTRA may require adequate fidelity bond coverage where the recipient lacks sufficient coverage to protect the Federal Government's interest.

   Where bonds are required in the situations described above, the bonds shall be obtained from companies holding certificates of authority as acceptable sureties, as prescribed in 31 CFR Part 223, "Surety Companies Doing Business with the United States."

5. **Modification of the Grant.**

   The only method by which this Grant may be modified is by a formal, written modification signed by the Grants Officer. No other communications, whether oral or in writing, are valid.

   Prior Approvals are required as follows:

   1) Expenditures on equipment costing $5,000 or more not specifically identified in the budget at time of award. (Approval via written notification from the Grants Officer.)
   2) Expenditures for foreign travel not specifically identified in the budget at time of award. (Approval via written notification from the Grants Officer.)

3) Prior approval is not required to transfer amounts budgeted for indirect costs to absorb increases in direct costs, or vice versa.
4) Prior approval is not required to carry forward an unobligated balance to a subsequent period of performance under this award.

6. Payments.

The 2 CFR 200 governs responsibilities concerning payments, with the following clarifications:

Recipients shall submit requests for payment using Invoicing, Receipt, Acceptance, and Property Transfer (iRAPT) at https://wawf.eb.mil/. Any request for advance payments must be approved by the Administrative Grants Office shown in Block 6 of the award. The request shall be submitted to the Administrative Office identified in Block 6 of the Research Grant by entering the following routing codes:

1) *Pay Office DoDAAC*: See Block 12 (Code) on the first page of the Grant.
2) *Invoice Type*: Grant and Cooperative Agreement Voucher.
3) *Issue By DoDAAC*: See Block 5 (Code) on the first page of the Grant.
4) *Admin DoDAAC*: See Block 6 (Code) on the first page of the Grant.
5) *Grant Approver*: Same as Admin DoDAAC (Leave Ext. blank).

Payments will be made by the Defense Finance and Accounting Service (DFAS) office specified in the Research Grant (Block 12).

A foreign awardee must have a U.S. bank account and be signed up for electronic payments (electronic funds transfers (EFT)).

7. Funding Increments and/or Options.

The recipient is advised that the Grantor's obligation to provide funding for increments and/or options included in the Grant is contingent upon satisfactory performance in the judgment of the DTRA Scientific Officer/Technical Monitor and the availability of funds. Other factors will be considered before options will be exercised (for example, expenditure rate and current programmatic objectives). Accordingly, no legal liability on the part of the Grantor exists unless or until funds are made available to the Grantor and notice of such availability is confirmed in writing to the recipient. Refer to the Funding Profile in Section G of the Grant for additional incremental funding planned, but not currently obligated for the Grant.

Funding Increments – In no event is the Government obligated to reimburse the recipient for expenditures in excess of the total funds allotted by the Government to this agreement. Recipients should note that low expenditure rates reported on payment requests may be cause for deferral of future increments. The Government anticipates unilateral modifications for funding increments.

Options – If the agreement contains Option(s), the Government reserves the right to exercise the Option(s) unilaterally.

8. Patent Rights.

Patent Rights are governed by 37 CFR 401.14 with the following clarifications: All DTRA-related disclosures, confirmatory licenses to the government, patent applications, and other communications should be submitted as detailed herein.

The 37 CFR Part 401 invention reporting requirements are summarized in the table below. Unless otherwise indicated in the "Submission to DTRA" column, the grantee is required to upload the following types of invention information using iEdison (https://s-edison.info.nih.gov/iEdison/), a single web interface for government grantees to report details of inventions and patents. If the grantee organization is not already an iEdison registrant, then iEdison registration is required prior to submission of the below invention reports. The grant shall not be closed out until all invention reporting requirements are met.

Action	When	Discussion	37 CFR Reference	Submission to DTRA
Invention Report: The grantee must submit a report of any "subject" invention. The report must identify inventor(s), federal agency(ies), grant number(s), and date of any public disclosure. Date of submission establishes time frames for all future actions. Must be complete in technical detail. The report should be directed to the lead agency.	Within 2 months of inventor's initial report to the grantee contractor organization.	There is no single format for disclosing the invention to the government. The communication should include the title of the invention, date of any public disclosure, names of all inventors, source(s) of federal funding (i.e. grant number), a written description of the invention in technical detail. The invention disclosure should be signed by the inventor(s); at the very least signed by a grantee institutional official.	401.14(a)(2) 401.14(c)(1)	Submit electronically by uploading either a PDF, TIFF, or text file through iEdison.
Rights to Inventions on Subcontracts: Subcontractors retain rights to their subject inventions.	Same reporting responsibilities, obligations and time frames as prime grantee organization.	Prime grantee organization cannot require ownership of subcontractor's subject invention(s).	401.14(g)(1) 401.14(g)(2)	Invention disclosure, confirmatory license, and proof of gov't support clause shall be submitted electronically through iEdison.
Election of Title to Invention: Grantee organization must notify the federal agency sponsor that it will retain ownership of invention and take steps to commercialize the invention.	Within 2 years of reporting the invention to the lead federal agency sponsor. (If disclosed publicly, this period is decreased.)		401.14(b) 401.14(f)(1) 401.14(c)(2)	Submit electronically through iEdison.
Confirmatory license The grantee organization must provide a nonexclusive, nontransferable, irrevocable, paid-up license for the government to practice or have the invention practiced on its behalf throughout the world.	Commensurate with report of any initial patent filing, unless the invention is being licensed as an unpatented biological material or research tool.		401.14(f)(1)	Submit electronically by uploading either a PDF or TIFF file through iEdison.
Nonelection of Title to Invention: Grantee organization must notify the federal sponsor that it will not retain ownership of an invention.	Within 2 years of reporting to federal agency sponsor. (If disclosed publicly, this period is decreased.)	Effectively a waiver to the government. After further review the federal agency sponsor may elect title on behalf of the government. Title does not actually vest with the government until government elects to retain title.	401.14(c)(2) 401.14(d)	Submit electronically through iEdison.
