Meeting ID: 361 256 8290

From: Antiviral Drug Discovery and Development Center-AD3C[ad3c@peds.uab.edu]

Attendees: 'Alana Centilli'; 'Alec Hirsch'; 'Ardina Pruijssers'; 'Ashish Pathak'; 'Babu Tekwani'; 'Bob Bostwick'; 'Carrie Evans'; Chad Petit; 'Clare O'Regan'; 'Corinne Augelli-Szafran'; 'Daniel Streblow'; 'Erica Bitten'; 'Fahim Ahmad'; 'George Painter'; 'Greg Bluemling'; 'Hope Angel'; 'Jay Nelson'; 'Jessica Smith'; 'Jim Chappell'; 'Lynn Rasmussen'; 'Maria Agostini'; 'Mark Denison'; 'Mark Heise'; 'Mark Suto'; Mary Wyatt Bowers; 'Mason Wu'; 'Michael Diamond'; 'Miranda Nebane'; 'Nichole Tower'; 'Omar Moukha-Chafiq'; Shi, Pei yong; 'Rachel Graham'; 'Ralph Baric'; Richard Whitley, M.D.; 'Ron Swanstrom'; 'Shuntai Zhou'; Stephanie Moore; 'Thomas Morrison'; 'Tim Sheahan'; 'Toni Baric'; 'Victor DeFilippis'; 'Amelia.s.george@vumc.org'; 'Hughes, Tia M'; 'kak@uab.edu'; Jessica Eagar; Tameca Winston; 'Nicole Haese'

Importance: Normal

Subject: Canceled: Monthly AD3C Project/Core Teleconference Call

Start Time: Thur 1/23/2020 3:30:00 PM (UTC-06:00)

End Time: Thur 1/23/2020 5:00:00 PM (UTC-06:00)

Required Attendees: Antiviral Drug Discovery and Development Center-AD3C; 'Alana Centilli'; 'Alec Hirsch'; 'Ardina Pruijssers'; 'Ashish Pathak'; 'Babu Tekwani'; 'Bob Bostwick'; 'Carrie Evans'; Chad Petit; 'Clare O'Regan'; 'Corinne Augelli-Szafran'; 'Daniel Streblow'; 'Erica Bitten'; 'Fahim Ahmad'; 'George Painter'; 'Greg Bluemling'; 'Hope Angel'; 'Jay Nelson'; 'Jessica Smith'; 'Jim Chappell'; 'Lynn Rasmussen'; 'Maria Agostini'; 'Mark Denison'; 'Mark Heise'; 'Mark Suto'; Mary Wyatt Bowers; 'Mason Wu'; 'Michael Diamond'; 'Miranda Nebane'; 'Nichole Tower'; 'Omar Moukha-Chafiq'; Shi, Pei yong; 'Rachel Graham'; 'Ralph Baric'; Richard Whitley, M.D.; 'Ron Swanstrom'; 'Shuntai Zhou'; Stephanie Moore; 'Thomas Morrison'; 'Tim Sheahan'; 'Toni Baric'; 'Victor DeFilippis'; 'Amelia.s.george@vumc.org'; 'Hughes, Tia M'; 'kak@uab.edu'; Tameca Winston; 'Nicole Haese'

Optional Attendees: 'Suto, Mark J.'; 'Rasmussen, Lynn'; 'Swanstrom, Ronald I'; 'Morrison, Thomas'; 'Sides, Kate'

Hello To Everyone:

Just to be safe, I am sending a second message to confirm the cancellation of the monthly AD3C Project/Core Zoom Meeting call at this time. I may have cancelled the Zoom meeting, but not removed this entry from your calendars. This message should accomplish the latter, and remove it from your Outlook calendar. At this time, because many of our institutions are not operating at full capacity, there isn't a lot of monthly progress to report at this time. When we are back to normal operations, we will send a new meeting notice.

However, if anyone would like to discuss anything during this time, please reach out to our Admin Core group and we can arrange a call as needed.

Thank you!

Sara Davis | Program Coordinator II
UAB Research and Pediatric Virology/Pediatrics/Infectious Diseases
UAB | The University of Alabama at Birmingham
CHB Room 303| 1600 7th Avenue S | Birmingham, AL 35233-1711
Cell Phone: 205.725.0543 | sadavis@peds.uab.edu

Importance:	Normal
Subject:	Canceled: Monthly AD3C Project/Core Teleconference Call
Start Time:	Thur 3/26/2020 8:30:00 PM (UTC)
End Time:	Thur 3/26/2020 10:00:00 PM (UTC)
Required Attendees:	Antiviral Drug Discovery and Development Center-AD3C; 'Alana Centilli'; 'Alec Hirsch'; 'Ardina Pruijssers'; 'Ashish Pathak'; 'Babu Tekwani'; 'Bob Bostwick'; 'Carrie Evans'; Chad Petit; 'Clare O'Regan'; 'Corinne Augelli-Szafran'; 'Daniel Streblow'; 'Erica Bitten'; 'Fahim Ahmad'; 'George Painter'; 'Greg Bluemling'; 'Hope Angel'; 'Jay Nelson'; 'Jessica Smith'; 'Jim Chappell'; 'Lynn Rasmussen'; 'Maria Agostini'; 'Mark Denison'; 'Mark Heise'; 'Mark Suto'; Mary Wyatt Bowers; 'Mason Wu'; 'Michael Diamond'; 'Miranda Nebane'; 'Nichole Tower'; 'Omar Moukha-Chafiq'; Shi, Pei yong; 'Rachel Graham'; 'Ralph Baric'; Richard Whitley, M.D.; 'Ron Swanstrom'; 'Shuntai Zhou'; Stephanie Moore; 'Thomas Morrison'; 'Tim Sheahan'; 'Toni Baric'; 'Victor DeFilippis'; 'Amelia.s.george@vumc.org'; 'Hughes, Tia M'; 'kak@uab.edu'; Jessica Eagar; Tameca Winston; 'Nicole Haese'
Optional Attendees:	'Suto, Mark J.'; 'Rasmussen, Lynn'; 'Swanstrom, Ronald I'; 'Morrison, Thomas'; 'Sides, Kate'

Hello To Everyone:

This is the notice for the monthly AD3C Teleconference. We will be trying to use Zoom, instead of our previous carrier, AT&T. The connection information is shown below. The meeting can be accessed by computer using the link below, if they have a microphone in the computer. You may also connect by phone, using the dial in numbers provided, and then the meeting ID, followed by the pound sign (#).

Join from PC, Mac, Linux, iOS or Android: https://uasystem.zoom.us/j/ **552.136**

Or iPhone one-tap :
US: +16465588656,, **552.136** or +16699006833,, **552.136**

Or Telephone: Dial US: +1 646 558 8656 or +1 669 900 6833
Meeting ID: **552.136**

As always, if you want to share any slides or materials, please send them to me by 1:00 pm the day of the call, and I will distribute them to everyone.

If I can be of assistance, please let me know.

With kind regards,

Sara Davis | Program Coordinator II

Subject: AD3C Project/Core Teleconference Call

Hello all AD3C members,

Hoping this email finds you safe and well. Although we did cancel last week's call, we would like to follow up with everyone and have a check-in. Further, we would like to update and obtain feedback from everyone on some of the COVID-19 work. Attached please find the virtual screens that we received from SR's Med Chem group:
1. Virtual screen of 102K library against exonuclease site of SARS nsP14 crystal structure.
2. Virtual screen of 122K library against conserved binding site of SARS/COVID-19 main protease crystal structures
3. Repurposing of drugs/compounds from literature according to cheminformatics analysis (not included in current HTS library).

A presentation is attached for further details. In total, 52 compounds were sorted and initially 38 compounds will be accessed for SARS/COVID-19 SAR assays (See excel file for details). Some of these will be purchased from commercial sources in coming days.

A doodle poll may be found here in order to schedule in such a tight turn around:
https://doodle.com/poll/emrk69gb327hqa9a
Please do this at your earliest convenience. Hope you all have a nice weekend and stay safe and well.

Thank you all,

Stephanie

Hi all,

I've added others from your Research Centers to this invite. Please feel free to forward this invitation to the most appropriate representative on the topic from your RC, and to other CREID Network members as you see fit.

Thank you very much,

Aaron

Subject: UPDATED: Save the date COVAX Enabling Sciences Workshop: Global and local approaches to detect and interpret SARS-CoV-2 variants

COVAX ES Workshop April 16th draft Agenda v1.pdf

Dear All,

Final agenda COVAX Enabling Sciences Workshop: Global and local approaches to detect and interpret SARS-CoV-2 variants attached.

Friendly reminder if you have not yet registered please use highlighted link by Wednesday, April 14th EOD.

Thank you.
Judy

Dear all,

We are emailing to invite you to a webinar workshop led by the COVAX Enabling Sciences SWAT Team on April 16, 2021, from 6:00-9:00 PT / 14:00-17:00 CET.

The topic of the workshop is "**Global and local approaches to detect and interpret SARS-CoV-2 variants**". The goal of the workshop is to discuss how to rapidly generate actionable information on the immunological consequences of emerging SARS-CoV-2 variants. This requires connecting local pathogen genomic sequencing and epidemiology with high quality virology and immunology. There will also be a discussion of how immunological knowledge gained in one country or region can feed into, and benefit from, large international efforts and inform global and local decision making.

This workshop is organized by the COVAX Enabling SWAT team co-led by CEPI and the Bill & Melinda Gates Foundation.

To attend the workshop, please register here by Wednesday, April 14th EOD. This workshop will be held on Zoom and you will find the Zoom link within the registration portal a couple of days before the event. Once you have registered, there will be an option to add this event to your calendar. In addition to the Zoom link being in your registration portal, our systems will also email you the Zoom link information on three occasions (the day before the event, one hour before the event, and once we go-live). *Please ensure our emails are not going into the junk folder.*

As email lists are imperfect, please forward this email invite to the appropriate contact(s) in your organization and contact Judy Hubbard at the Gates Foundation (Judy.Hubbard@gatesfoundation.com) to indicate who from your group should be invited. Please note that anyone who was forwarded the original calendar save the date may not have necessarily received this email, but may register using the same link provided above.

We look forward to your participation at the workshop.

Thank you.
Judy Hubbard, sent on behalf of

Karen Makar, PhD (BMGF)
William Dowling, PhD (CEPI)

Workshop Agenda

Global and local approaches to detect and interpret SARS-CoV2 variants

DATE	TI ME	LOCATION
Friday, April 16th, 2021	06:00 – 9:00 PT/ 15:00 – 18:00 CET	Zoom Webinar

We all share a common goal to develop safe and effective vaccines. The Enabling Sciences SWAT team aims to provide cross-cutting product-agnostic support to COVID-19 vaccine developers in the area of diagnostics, standards and animal models.

Rapid assessment of the biological impacts of new variants of SARS-CoV-2 requires the collaboration of epidemiologists, virologists and immunologists at the local and global level. However, these efforts are often disconnected from one another, resulting in delays and an incomplete picture of the implications for vaccines and diagnostics.

The objective of this workshop is to share information on how to efficiently connect local pathogen genomic sequencing, epidemiology, virology and immunology to rapidly generate actionable information on the immunological consequences of emerging SARS-CoV-2 variants. There will be a discussion of how knowledge gained in one country or region can feed into, and benefit from, large international efforts and inform global and local decision making. We will discuss ideas for best practices for assessing virus neutralization activity, and approaches to standardizing assays and protocols to improve interpretation of results generated in different labs and geographies

This workshop is convened by the COVAX Enabling Sciences SWAT team, which is co-led by CEPI and the WHO and includes members from the Bill & Melinda Gates Foundation, NIAID and industry. COVAX is the vaccines pillar of the Access to COVID-19 Tools (ACT) Accelerator, co-led by Gavi, the Coalition for Epidemic Preparedness Innovations (CEPI) and WHO. COVAX aims to accelerate the development and manufacture of COVID-19 vaccines, and to guarantee fair and equitable access to appropriate, safe and efficacious vaccines for all countries.

Time (CET)	Presentation Title *(TBD)*	Speaker(s)
15:00-15:05	Welcome and meeting objectives	*TBC, ES SWAT*
15:05-15:20	South Africa Pathogen Genomics Sequencing & AfCDC PGI program	**Tulio DeOliveira,** KRISP
15:20-15:30	Assessing immunological implications of VoCs in South Africa	**Penny Moore,** NICD

15:30-15:40	Immune escape and evidence for re-infection with P.1 in Brazil	**Ester Sabino**, U. Sao Paulo
15:40-15:50	Impact of B.1.1.7 on vaccine induced immune responses	**Ravi Gupta,** Cambridge
15:50-16:00	India Consortium for COVID-19 genomics	**Anurag Agrawal**, CSIR/IGIB
16:00-16:25	**Panel Discussion**	Moderated by **Karen Makar**, BMGF
16:25-16:30	*BREAK*	
16:30-16:40	WHO framework for response to new COVID vaccines	**Sylvie Briand,** WHO
16:40-16:50	Pulling it all together in the COG-UK	**Sharon Peacock,** COG-UK
16:50-17:00	CEPI's Agility program: a centralised approach to evaluate VoCs	**Simon Funnell**, PHE
17:00-17:10	Virus stock and sequencing QC- best practices & available resources	**Sujatha Rashid**, BEI
17:10-17:20	SARS-CoV-2 Interagency Group (SIG) Variant Assessment/Characterization	*TBC, NIAID*
17:20-17:30	ACTIV/TRACE OpenData portal	**Christine Colvis,** NIH/NCATS
17:30-17:55	**Panel Discussion**	Moderated by**: Bill Dowling,** CEPI
17:55-18:00	Wrap up & Next Steps	*TBC, ES SWAT*

From: Lane, Chelsea (NIH/NIAID) [E][mary.lane@nih.gov]

Attendees: Lane, Chelsea (NIH/NIAID) [E]; Richard Bowen; Bouvier, Nicole; Eakin, Ann (NIH/NIAID) [E]; Wolfraim, Larry (NIH/NIAID) [E]; Hewitt, Judith (NIH/NIAID) [E]; Challberg, Mark (NIH/NIAID) [E]; Young, Jennifer (AE); Vily, Aytaj (NIH/NIAID) [E]; Palin, Amy (NIH/NIAID) [E]; Sciotti, Rick (NIH/NIAID) [E]; Venkatraman Siddharthan; Julie Harvey; Bowen, Richard; Chandra Caldwell; Victoria Moore; Baric, Ralph; Christy Taylor Bray; Rebekah Viner; Beasley, David; Devin Hansen; Jennipher Hulse; Bart Tarbet; Katie Dana; Adams, Miranda (NIH/NIAID) [E]; Pickett, Thames (NIH/NIAID) [E]; Stemmy, Erik (NIH/NIAID) [E]; Baric, Toni C; Liz.grinstead@colostate.edu; Graham, Rachel; Menachery, Vineet; Brett Hurst; LeGros, Erika; Schilling, Beth A.; Tseng, Chien-Te K.; McNees, Andrew G.; Florence, Clint (NIH/NIAID) [E]; Bryan, Jonathan (NIH/NIAID) [E]; Jackson, Charles (NIH/NIAID) [E]; Zhongde Wang; Lampley, Rebecca (NIH/NIAID) [C]; Massey, Christopher; Davis, Mindy (NIH/NIAID) [E]; Taylor, Ebony (NIH/NIAID) [E]

Location: GoToMeeting

Importance: Normal

Subject: A38 Task Order Bi-weekly Call

Start Time: Fri 4/24/2020 9:30:00 AM (UTC-05:00)

End Time: Fri 4/24/2020 11:00:00 AM (UTC-05:00)

Required Attendees: Lane, Chelsea (NIH/NIAID) [E]; Julie Harvey; Bowen, Richard; Chandra Caldwell; Victoria Moore; Baric, Ralph; Christy Taylor Bray; Rebekah Viner; Beasley, David; Devin Hansen; Jennipher Hulse; Bart Tarbet; Katie Dana; Adams, Miranda (NIH/NIAID) [E]; Pickett, Thames (NIH/NIAID) [E]; Stemmy, Erik (NIH/NIAID) [E]; Baric, Toni C; Liz.grinstead@colostate.edu; Graham, Rachel; Menachery, Vineet; Brett Hurst; LeGros, Erika; Schilling, Beth A.; Tseng, Chien-Te K.; McNees, Andrew G.; Florence, Clint (NIH/NIAID) [E]; Bryan, Jonathan (NIH/NIAID) [E]; Jackson, Charles (NIH/NIAID) [E]; Zhongde Wang; Lampley, Rebecca (NIH/NIAID) [C]; Massey, Christopher; Davis, Mindy (NIH/NIAID) [E]

Optional Attendees: Richard Bowen; Bouvier, Nicole; Eakin, Ann (NIH/NIAID) [E]; Wolfraim, Larry (NIH/NIAID) [E]; Hewitt, Judith (NIH/NIAID) [E]; Challberg, Mark (NIH/NIAID) [E]; Young, Jennifer (AE); Vily, Aytaj (NIH/NIAID) [E]; Palin, Amy (NIH/NIAID) [E]; Sciotti, Rick (NIH/NIAID) [E]; Venkatraman Siddharthan; Taylor, Ebony (NIH/NIAID) [E]

****Updating our A38 task order update call frequency to biweekly instead of monthly due to the increase in model development studies and MCM studies****

Dear A38 Task Order Team,

Please find below the GoToMeeting information for the biweekly A38 task order teleconferences. Please forward the meeting to those on your team that you wish to attend (should they not be on this meeting invite).

Best,
Erik & Chelsea

A38 Task Order Update_Template.docx

AGENDA for 4/24/2020:

1. **Updates from each site [CSU, UNC, USU, UTMB]:**

- **Current animal status**
- **Current study status**
- **Timelines for availability of MCM studies**
- **Any resources needed? Any hurdles/challenges?**

2. **Alternating bi-weekly email updates [due on: 5/8/2020, 6/5/2020, etc.] – please see attached template**

Dear A38 Task Order Team,

Please find below the GoToMeeting information for the monthly A38 task order teleconferences. Please forward the meeting to those on your team that you wish to attend (should they not be on this meeting invite).

Erik and I will be updating the agenda shortly, so please stay tuned.

Best,
Erik & Chelsea

A38 Task Order Update

Establishment of Small Animal Models for Screening MCMs for the 2019 Novel Coronavirus (SARS-CoV-2)

Please include updates on the following:

- Current animal status (animal availability, colony expansion, actual numbers of animals available, etc.)
- Current study status
- Timelines for availability of MCM studies (should **emphasize** earliest possible date for study start)
- Any resources needed? Any hurdles/challenges?

Updates are required bi-weekly and will alternate between teleconference or email updates. The next alternating bi-weekly email updates are due by close of business on 5/8/2020, 6/5/2020, ... etc. Please email your site's update to Erik Stemmy ([HYPERLINK "mailto:erik.stemmy@nih.gov"]), Chelsea Lane ([HYPERLINK "mailto:mary.lane@nih.gov"]), and Thames Pickett ([HYPERLINK "mailto:pickettte@niaid.nih.gov"]).

Importance: Normal

Start Time: Fri 5/22/2020 2:30:00 PM (UTC)

End Time: Fri 5/22/2020 4:00:00 PM (UTC)

Required Attendees: Lane, Chelsea (NIH/NIAID) [E]; Julie Harvey; Bowen, Richard; Chandra Caldwell; Victoria Moore; Baric, Ralph; Taylor Bray, Christy J.; Viner, Rebekah L.; Beasley, David W.; Devin Hansen; Jennipher Hulse; Bart Tarbet; Katie Dana; Adams, Miranda (NIH/NIAID) [E]; Pickett, Thames (NIH/NIAID) [E]; Stemmy, Erik (NIH/NIAID) [E]; Baric, Toni C; Liz.grinstead@colostate.edu; Graham, Rachel; Menachery, Vineet; Brett Hurst; LeGros, Erika; Schilling, Beth A.; Tseng, Chien-Te K.; McNees, Andrew G.; Florence, Clint (NIH/NIAID) [E]; Bryan, Jonathan (NIH/NIAID) [E]; Jackson, Charles (NIH/NIAID) [E]; Zhongde Wang; Lampley, Rebecca (NIH/NIAID) [C]

Optional Attendees: Richard Bowen

Optional Attendees:	Richard Bowen; Bouvier, Nicole; Eakin, Ann (NIH/NIAID) [E]; Deye, Greg (NIH/NIAID) [E]; Wolfraim, Larry (NIH/NIAID) [E]; Hewitt, Judith (NIH/NIAID) [E]; Challberg, Mark (NIH/NIAID) [E]; Elia Brodsky; Young, Jennifer (AE); Dang, Que (NIH/NIAID) [E]

Update for 7/17:
In addition to the A38 contractor updates, Dr. Raul Andino from UCSF will also provide a brief presentation on a new camera system that his laboratory is developing to measure non-traditional endpoints for SARS-CoV-2 in mice. We will follow Dr. Andio's presentation with updates from each A38 contractor.
Best,
Chelsea
****
Dear A38 Task Order Team,

Please find below the Zoom meeting information for the monthly A38 task order teleconferences. Please forward the meeting to those on your team that you wish to attend (should they not be on this meeting invite).

Erik and I will be updating the agenda shortly, so please stay tuned.

Best,
Erik & Chelsea

Hi all,
Just to let you all know in advance, we are expecting NIAID leadership to be joining this call on Friday. Please be prepared to present all the work you have completed thus far for model development and any MCM studies (if applicable). Please also be prepared to mention your capacity for MCM studies starting in January 2021.

11/20/2020 Agenda:

- General Updates (Erik)
- A38 Sites Updates (UNC, UTMB, USU, CSU)
- Rotating check-in with individual sites (11/20: UNC; 12/4: UTMB; 12/18: USU; 1/15: CSU)

Dear A38 Task Order Team,

End Time: Fri 1/15/2021 5:00:00 PM (UTC)

Required Attendees: Lane, Chelsea (NIH/NIAID) [E]; Julie Harvey; Bowen, Richard; Chandra Caldwell; Victoria Moore; Baric, Ralph; Taylor Bray, Christy J.; Viner, Rebekah L.; Beasley, David W.; Devin Hansen; Jennipher Hulse; Bart Tarbet; Katie Dana; Adams, Miranda (NIH/NIAID) [E]; Pickett, Thames (NIH/NIAID) [E]; Stemmy, Erik (NIH/NIAID) [E]; Baric, Toni C; Liz.grinstead@colostate.edu; Graham, Rachel; Menachery, Vineet; Brett Hurst; LeGros, Erika; Schilling, Beth A.; Tseng, Chien-Te K.; McNees, Andrew G.; Florence, Clint (NIH/NIAID) [E]; Bryan, Jonathan (NIH/NIAID) [E]; Jackson, Charles (NIH/NIAID) [E]; Zhongde Wang; Lampley, Rebecca (NIH/NIAID) [C]; Massey, Christopher

Optional Attendees: Richard Bowen; Bouvier, Nicole; Eakin, Ann (NIH/NIAID) [E]; Wolfraim, Larry (NIH/NIAID) [E]; Hewitt, Judith (NIH/NIAID) [E]; Challberg, Mark (NIH/NIAID) [E]; Young, Jennifer (AE); Vily, Aytaj (NIH/NIAID) [E]; Palin, Amy (NIH/NIAID) [E]; Sciotti, Rick (NIH/NIAID) [E]

****Updating our A38 task order update call frequency to biweekly instead of monthly due to the increase in model development studies and MCM studies****

Dear A38 Task Order Team,

Please find below the GoToMeeting information for the biweekly A38 task order teleconferences. Please forward the meeting to those on your team that you wish to attend (should they not be on this meeting invite).

Best,
Erik & Chelsea

****Please note shift in time by 30 minutes to 11am EST.**

7/16/2021 Agenda:

- General Updates (Erik)
- Brief slide deck (~6-10 slides) on models developed at each A38 site. Please include:
  - Model kinetics & pathology phenotypes (as noted in your 1-pager/info sheets);
  - Whether your model is suitable for testing of vaccines, antivirals, anti-inflammatory agents, mAbs, etc., and what controls can be utilized in your model (and the optimal timing and routes for dosing, etc.);
  - What assays/reagents are available for testing of immune responses in your model (and please include any relevant cytokine data if available);
- Another 2-3 slides with your Site's final data for testing of dexamethasone. Please ensure that histopathology analyses (and any additional analyses, e.g. cytokine if appropriate) can be completed by this date.

A38 Task Order Update

Establishment of Small Animal Models for Screening MCMs for the 2019 Novel Coronavirus (SARS-CoV-2)

Please include updates on the following:

- Current animal status (animal availability, colony expansion, actual numbers of animals available, etc.)
- Current study status
- Timelines for availability of MCM studies (should **emphasize** earliest possible date for study start)
- Any resources needed? Any hurdles/challenges?

Updates are required bi-weekly and will alternate between teleconference or email updates. The next alternating bi-weekly email updates are due by close of business on 5/8/2020, 6/5/2020, ... etc. Please email your site's update to Erik Stemmy ([HYPERLINK "mailto:erik.stemmy@nih.gov"]), Chelsea Lane ([HYPERLINK "mailto:mary.lane@nih.gov"]), and Thames Pickett ([HYPERLINK "mailto:pickettte@niaid.nih.gov"]).

From: Lane, Chelsea (NIH/NIAID) [E][mary.lane@nih.gov]

Attendees: Julie Harvey; Bowen, Richard; Chandra Caldwell; Victoria Moore; Baric, Ralph; Taylor Bray, Christy J.; Viner, Rebekah L.; Beasley, David W.; Devin Hansen; Jennipher Hulse; Bart Tarbet; Katie Dana; Adams, Miranda (NIH/NIAID) [E]; Pickett, Thames (NIH/NIAID) [E]; Stemmy, Erik (NIH/NIAID) [E]; Baric, Toni C; Liz.grinstead@colostate.edu; Graham, Rachel; Menachery, Vineet; Brett Hurst; LeGros, Erika; Schilling, Beth A.; Tseng, Chien-Te K.; McNees, Andrew G.; Florence, Clint (NIH/NIAID) [E]; Bryan, Jonathan (NIH/NIAID) [E]; Jackson, Charles (NIH/NIAID) [E]

Start Time:	Fri 4/24/2020 2:30:00 PM (UTC)
End Time:	Fri 4/24/2020 4:00:00 PM (UTC)
Required Attendees:	Lane, Chelsea (NIH/NIAID) [E]; Beasley, David W.; Pickett, Thames (NIH/NIAID) [E]; Liz.grinstead@colostate.edu; Julie Harvey; Bowen, Richard; Chandra Caldwell; Victoria Moore; Baric, Ralph; Taylor Bray, Christy J.; Viner, Rebekah L.; Devin Hansen; Jennipher Hulse; Bart Tarbet; Katie Dana; Adams, Miranda (NIH/NIAID) [E]; Stemmy, Erik (NIH/NIAID) [E]; Baric, Toni C; Graham, Rachel; Menachery, Vineet; Brett Hurst; LeGros, Erika; Schilling, Beth A.; Tseng, Chien-Te K.; McNees, Andrew G.; Florence, Clint (NIH/NIAID) [E]; Bryan, Jonathan (NIH/NIAID) [E]; Jackson, Charles (NIH/NIAID) [E]
Optional Attendees:	Bouvier, Nicole; Zhongde Wang; Morrey, John; Richard Bowen

A38 Task Order Update_Template.docx

AGENDA for 4/24/2020:

1. **Updates from each site [CSU, UNC, USU, UTMB]:**

- **Current animal status**
- **Current study status**
- **Timelines for availability of MCM studies**
- **Any resources needed? Any hurdles/challenges?**

2. **Alternating bi-weekly email updates [due on: 5/8/2020, 6/5/2020, etc.] – please see attached template**

Dear A38 Task Order Team,

Please find below the GoToMeeting information for the monthly A38 task order teleconferences. Please forward the meeting to those on your team that you wish to attend (should they not be on this meeting invite).

Erik and I will be updating the agenda shortly, so please stay tuned.

Best,
Erik & Chelsea

Please join my meeting from your computer, tablet or smartphone.
https://global.gotomeeting.com/join/552.136

You can also dial in using your phone.
(For supported devices, tap a one-touch number below to join instantly.)

A38 Task Order Update

Establishment of Small Animal Models for Screening MCMs for the 2019 Novel Coronavirus (SARS-CoV-2)

Please include updates on the following:

- Current animal status (animal availability, colony expansion, actual numbers of animals available, etc.)
- Current study status
- Timelines for availability of MCM studies (should **emphasize** earliest possible date for study start)
- Any resources needed? Any hurdles/challenges?

Updates are required bi-weekly and will alternate between teleconference or email updates. The next alternating bi-weekly email updates are due by close of business on 5/8/2020, 6/5/2020, ... etc. Please email your site's update to Erik Stemmy ([HYPERLINK "mailto:erik.stemmy@nih.gov"]), Chelsea Lane ([HYPERLINK "mailto:mary.lane@nih.gov"]), and Thames Pickett ([HYPERLINK "mailto:pickettte@niaid.nih.gov"]).

Subject: covid ppmo testing

Hi Guys,
Just wondering if any of you have any suggestions for us regarding a research lab, preferably based in US, that may be interested to pursue testing of PPMO targeted against SARS2_CoV RNA. Of course, it would be necessary that the lab have BSL 3+ facilities.

From the attached paper you can see that PPMO worked well vs SARS1 in cell cultures (never got to try it in vivo). We make PPMO in our lab at OSU. PPMO are not available commercially.

We already have some testing of PPMO vs SARS2 in the works, but are interested to find a reserach lab that may wish to join in and possibly write a grant with us to pursue various project/possibilities. If you would like to discuss please let me know and perhaps we can have a quick phone call.

With Regards,
Dave

Subject: Remdesivir resistant mutants

Hey Ralph,

Bobo Paessler and his group at UTMB are working on COVID-19 work and are interested in the remedesivir mutants from the Science Translation Medicine paper. I do not have these mutants in my lab and don't have capacity to make them at the moment.

Is it possible for you to provide the MERS-CoV or MHV-CoV remdesivir mutants (virus) to him?

Alternatively, would you be willing to share the SARS/MERS recombinant plasmid system with him so that they can generate the mutants themselves. Bobo is willing to go through the formal paperwork process and will request them directly from you. I will provide the plasmids if you agree.

Thanks

VDM

Subject: WHO COVID-19 Animal Models Group Call-Agenda
Mail Attachment.ics
Webex_Meeting.ics

Dear all,

This Thursday we will have a call focused on COVID-19 enhanced disease. We will have three short presentations on that topic followed by a panel call. The panel call format will be as follows

(1) Question to be discussed: What can we learn about VAERD/ADE from animal models and how can we improve this knowledge in the future?

(**2) Background**: With more than 200 COVID-19 vaccine candidates in the pipeline and near 20 in clinical trials there is an increasing concern that some of these vaccines may cause VAERD or ADE. Most if not all of the vaccines in trials are not specifically addressing VAERD/ADE through immunological assays (e. g. Th1 vs Th2 bias, total Ab titers vs Neut Ab ratio etc)

* How can research in animal models help to address these concerns?
* How predictive are animal model studies for human VAERD?
* What should be the minimum information required from vaccine developers in preclinical and clinical investigations?

(3) Format: Each panelist would address the aforementioned questions (or other relevant points) in a 2-3 min verbal high-level single summary. This would be followed by Q/A discussion with the whole group.

Please find below the agenda and webex invite for this call. We are looking forward to your participation and input on this important discussion

Very best regards to all

César, Simon and Bill.

Agenda: WHO COVID-19 Animal Models Group Call- Thursday 17-SEP-2020 3PM CET

Presentations

1- Nadia Oreshkova (Wageningen)

2- Kate Guilfoyle (Viroclinics)

3- Clint Florence (NIH)

Panel Discussion

Panelists: Miles Carroll (PHE), Barney Graham (NIH), Jürgen Richt (KSU), Robin Levis (FDA)

Moderator: Vaseeharan Sathiyamoorthy (WHO)

Meeting number (access code): 145 274 5012
Meeting password: r2Gq3BhFUP4

Thursday, September 17, 2020
3:00 pm | (UTC+02:00) Brussels, Copenhagen, Madrid, Paris | 1 hr 30 mins

Subject: RE: WHO COVID-19 Animal Models Group Call

Dear All,

Please find below the agenda for this week's WHO COVID-19 Animal Models group call.

Best,
Lauren – César, Simon, and Bill

Agenda WHO COVID-19 Animal Models group call Thursday April 15 3PM CET (Geneva time)

1. Chris Miller (UC Davis)/Neeltje van Doremalen (RML): *Characterization of CA SARS-CoV-2 variants (B 1.427/1.429) in hamsters: A preliminary report from the NorCal SARS-CoV-2 VOC Assessment Group*
2. François Brand (Physiogenex): *SARS-CoV-2 infection induces greater disease severity in the free choice diet-induced obese NASH hamster, a metabolic comorbidities model of COVID-19*

Subject: RE: WHO COVID-19 Animal Models Group Call

Dear All,

Please find below the agenda for this week's WHO COVID-19 Animal Models group call.

Best,
Lauren – César, Simon, and Bill

Agenda WHO COVID-19 Animal Models group call Thursday April 22 3PM CET (Geneva time)

1. Brandon Beddingfield (Tulane) - *Nonhuman Primate COVID-19 Disease Model: Comparative Pathophysiology of Exposure Route and Species Selection*
2. Paul Dabisch (NBACC) - *Estimation of the infectious dose of inhaled SARS-CoV-2 in a nonhuman primate model of COVID-19*

-----Original Appointment-----

Subject: ANNOUNCEMENT: Texas Biomed Global Health Virtual Symposium

Dear all,

At Texas Biomedical Research Institute we are running a Global Health Symposium next week, where we will be tackling questions about how to handle the next pandemic, as well as we will have a video message from Dr. Tedros Adhanom Ghebreyesus and talks with the Pfizer vaccine development team among others. Attending this symposium is free. Please, feel free to past this announcement around your colleagues.

For your consideration, the announcement and link to register is below.

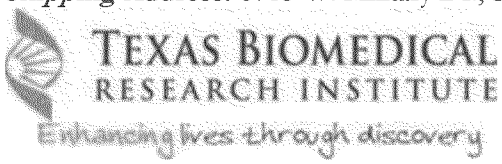
Thank you for your time reading this email and considering this invitation to attend this symposium.

Wishing you all a pleasant rest of the week,

Jordi

Jordi B. Torrelles, PhD
Professor
Lead, Population Health Program
Director, Biosafety Level 3 Program
Coordinator, Coronavirus Working Group
Texas Biomedical Research Institute
Office: (210) 258-9448
Email: jtorrelles@txbiomed.org
Web: http://www.txbiomed.org/

Mailing Address: P.O. Box 760549, San Antonio, TX 78245-0549
Shipping Address: 8715 W. Military Dr., San Antonio, TX 78227-5302



Celebrating the Institute's 80th anniversary, Texas Biomedical Research Institute is hosting the organization's first Virtual Global Health Symposium on April 29-30, featuring nearly 50 international scientists, global health and public policy leaders. #HealthStartsWithScience. Get registered today for this FREE event Here https://bit.ly/3vPkfEU

Subject: Texas Biomed's Global Health Symposium Announces Speaker Lineup

RSVP TODAY!

Welcome Speakers!

Texas Biomed is excited to announce its Global Health Virtual Symposium speaker lineup. Our program is set! We are gearing up for an exciting two days of science, policy and global health discussions!

Texas Biomed is Where Health Starts

Science that Inspires. Science that Delivers. Science that Heals.

Subject: RE: WHO COVID-19 Animal Models Group Call

Dear All,

Please find below the agenda for this week's WHO COVID-19 Animal Models group call. **Please note, you will have to download the most recent version of Zoom to attend the call.**

Best,
Lauren – César, Simon, and Bill

Agenda WHO COVID-19 Animal Models group call Thursday May 19 3PM CET (Geneva time)

1. Roy Wong (U. Iowa) - *Mouse adapted SARS-CoV-2 as a model for COVID-19*
2. Nora Gerhards (WUR) - *Efficient direct and limited indirect transmission of SARS-CoV-2 in cats*
3. Julia Port (NIH) - *Modelling aerosol transmission of SARS-CoV-2 in the Syrian hamster*

Subject: RE: WHO COVID-19 Animal Models Group Call

Dear All,

Please find below the agenda for this week's WHO COVID-19 Animal Models group call.

Best,
Lauren – César, Simon, and Bill

Agenda WHO COVID-19 Animal Models group call Thursday May 27 3PM CET (Geneva time)

1. Anja Kipar (U. Zurich) - *Viral neuroinvasion and neurotropism without neuronal damage in the hACE2 mouse model of COVID-19*
2. Dan Barouch (Harvard) - *Natural and Vaccine Immunity against SARS-CoV-2 Variants in Rhesus Macaques*
3. Antoine Nougairede (Aix Marseille Université) - *SARS-CoV-2 20I/501Y.V1 variant in a human reconstituted bronchial epithelium and in the hamster model*

-----Original Appointment-----

Subject: RE: WHO COVID-19 Animal Models Group Call

Dear All,

Please find below the agenda for this week's WHO COVID-19 Animal Models group call.

Best,
Lauren – César, Simon, and Bill

Agenda WHO COVID-19 Animal Models group call Thursday June 3 3PM CET (Geneva time)

1. Ali Fattom (Blue Willow) & Allen Lien (MGV) - *Immunogenicity and efficacy of an Intranasal COVID-19 vaccine, S2-P/NE01, in mouse and Hamster animal model. An update and proposed path for clinical evaluation*
2. Benjamin Murrell (Karolinska Institute) - *VoC booster vaccines and nanobody therapies in K18 hACE2 mice*

-----Original Appointment-----

Subject: RE: WHO COVID-19 Animal Models Group Call

Dear All,

Please find below the agenda for this week's WHO COVID-19 Animal Models group call.

Best,
Lauren – César, Simon, and Bill

Agenda WHO COVID-19 Animal Models group call Thursday June 17 3PM CET (Geneva time)

1. Sara Cherry (U Penn) - *COVID-19 Antiviral Discovery Pipeline*
2. Allison Totura (BARDA) - *SARS-CoV-2 Vaccine Candidates: Correlates of Protection Study in Rhesus Macaque*
3. Juergen Richt (KSU) - *Susceptibility of wild and domestic ruminants to experimental SARS-CoV-2 infection*

-----Original Appointment-----

Attendees: Julie Harvey; Bowen, Richard; Chandra Caldwell; Victoria Moore; Baric, Ralph; Taylor Bray, Christy J.; Viner, Rebekah L.; Beasley, David W.; Devin Hansen; Jennipher Hulse; Bart Tarbet; Katie Dana; Adams, Miranda (NIH/NIAID) [E]; Pickett, Thames (NIH/NIAID) [E]; Stemmy, Erik (NIH/NIAID) [E]; Baric, Toni C; Liz.grinstead@colostate.edu; Graham, Rachel; Menachery, Vineet; Brett Hurst; LeGros, Erika; Schilling, Beth A.; Tseng, Chien-Te K.; McNees, Andrew G.; Florence, Clint (NIH/NIAID) [E]; Bryan, Jonathan (NIH/NIAID) [E]; Jackson, Charles (NIH/NIAID) [E]; Zhongde Wang; Lampley, Rebecca (NIH/NIAID) [C]; Massey, Christopher; Richard Bowen; Bouvier, Nicole; Eakin, Ann (NIH/NIAID) [E]; Wolfraim, Larry (NIH/NIAID) [E]; Hewitt, Judith (NIH/NIAID) [E]; Challberg, Mark (NIH/NIAID) [E]; Young, Jennifer (AE)

Location: GoToMeeting

Importance: Normal

Subject: A38 Task Order Bi-weekly Call

Start Time: Fri 4/24/2020 9:30:00 AM (UTC-05:00)

End Time: Fri 4/24/2020 11:00:00 AM (UTC-05:00)

Required Attendees: Lane, Chelsea (NIH/NIAID) [E]; Julie Harvey; Bowen, Richard; Chandra Caldwell; Victoria Moore; Baric, Ralph; Taylor Bray, Christy J.; Viner, Rebekah L.; Beasley, David W.; Devin Hansen; Jennipher Hulse; Bart Tarbet; Katie Dana; Adams, Miranda (NIH/NIAID) [E]; Pickett, Thames (NIH/NIAID) [E]; Stemmy, Erik (NIH/NIAID) [E]; Baric, Toni C; Liz.grinstead@colostate.edu; Graham, Rachel; Menachery, Vineet; Brett Hurst; LeGros, Erika; Schilling, Beth A.; Tseng, Chien-Te K.; McNees, Andrew G.; Florence, Clint (NIH/NIAID) [E]; Bryan, Jonathan (NIH/NIAID) [E]; Jackson, Charles (NIH/NIAID) [E]; Zhongde Wang; Lampley, Rebecca (NIH/NIAID) [C]; Massey, Christopher

Optional Attendees: Richard Bowen; Bouvier, Nicole; Eakin, Ann (NIH/NIAID) [E]; Wolfraim, Larry (NIH/NIAID) [E]; Hewitt, Judith (NIH/NIAID) [E]; Challberg, Mark (NIH/NIAID) [E]; Young, Jennifer (AE)

****Updating our A38 task order update call frequency to biweekly instead of monthly due to the increase in model development studies and MCM studies****

Dear A38 Task Order Team,

Please find below the GoToMeeting information for the biweekly A38 task order teleconferences. Please forward the meeting to those on your team that you wish to attend (should they not be on this meeting invite).

Best,
Erik & Chelsea

A38 Task Order Update_Template.docx

AGENDA for 4/24/2020:

1. **Updates from each site [CSU, UNC, USU, UTMB]:**

- **Current animal status**
- **Current study status**
- **Timelines for availability of MCM studies**
- **Any resources needed? Any hurdles/challenges?**

2. **Alternating bi-weekly email updates [due on: 5/8/2020, 6/5/2020, etc.] – please see attached template**

Dear A38 Task Order Team,

Please find below the GoToMeeting information for the monthly A38 task order teleconferences. Please forward the meeting to those on your team that you wish to attend (should they not be on this meeting invite).

Erik and I will be updating the agenda shortly, so please stay tuned.

Best,
Erik & Chelsea

A38 Task Order Update

Establishment of Small Animal Models for Screening MCMs for the 2019 Novel Coronavirus (SARS-CoV-2)

Please include updates on the following:

- Current animal status (animal availability, colony expansion, actual numbers of animals available, etc.)
- Current study status
- Timelines for availability of MCM studies (should **emphasize** earliest possible date for study start)
- Any resources needed? Any hurdles/challenges?

Updates are required bi-weekly and will alternate between teleconference or email updates. The next alternating bi-weekly email updates are due by close of business on 5/8/2020, 6/5/2020, ... etc. Please email your site's update to Erik Stemmy ([HYPERLINK "mailto:erik.stemmy@nih.gov"]), Chelsea Lane ([HYPERLINK "mailto:mary.lane@nih.gov"]), and Thames Pickett ([HYPERLINK "mailto:pickettte@niaid.nih.gov"]).

Required Attendees:	Lane, Chelsea (NIH/NIAID) [E]; Julie Harvey; Bowen, Richard; Chandra Caldwell; Victoria Moore; Baric, Ralph; Taylor Bray, Christy J.; Viner, Rebekah L.; Beasley, David W.; Devin Hansen; Jennipher Hulse; Bart Tarbet; Katie Dana; Adams, Miranda (NIH/NIAID) [E]; Pickett, Thames (NIH/NIAID) [E]; Stemmy, Erik (NIH/NIAID) [E]; Baric, Toni C; Liz.grinstead@colostate.edu; Graham, Rachel; Menachery, Vineet; Brett Hurst; LeGros, Erika; Schilling, Beth A.; Tseng, Chien-Te K.; McNees, Andrew G.; Florence, Clint (NIH/NIAID) [E]; Bryan, Jonathan (NIH/NIAID) [E]; Jackson, Charles (NIH/NIAID) [E]; Zhongde Wang; Lampley, Rebecca (NIH/NIAID) [C]; Massey, Christopher
Optional Attendees:	Richard Bowen; Bouvier, Nicole; Eakin, Ann (NIH/NIAID) [E]; Wolfraim, Larry (NIH/NIAID) [E]; Hewitt, Judith (NIH/NIAID) [E]; Challberg, Mark (NIH/NIAID) [E]; Young, Jennifer (AE); Vily, Aytaj (NIH/NIAID) [E]

11/5/2020 Agenda:

- General Updates (Erik)
- A38 Sites Updates (CSU, USU, UNC, UTMB)
- Rotating check-in with individual sites (~~9/25: UNC~~;~~10/9: UTMB~~;~~10/23: USU~~; **11/6: CSU**)

Dear A38 Task Order Team,

Please find below the GoToMeeting information for the biweekly A38 task order teleconferences. Please forward the meeting to those on your team that you wish to attend (should they not be on this meeting invite).

Best,
Erik & Chelsea

Subject: SARS-CoV-2 Weekly Investigators Meeting - November 17
nCoV PI call attendee list.xlsx

Hi Everyone,

On November 10th, Drs. Joachimiak and Fremont treated us to a double feature:

Dr. Andrzej Joachimiak
"**Structural studies of SARS-CoV-2 proteins and their complexes**"

Dr. Daved Fremont
"**Structural mechanisms of SARS-CoV-2 antibody neutralization"**

Thank you both for presenting and to those that were in attendance!

Tomorrow, November 17th, Dr. Russell Ray will be presenting on "**Leveraging genetic tools for functional neural circuit mapping in the control of breathing for COVID-19 studies**".

We are also looking for volunteers for next week, November 24th and for future calls starting December 8th. Please let me know if you are interested in presenting.

Thanks,
Rebecca

nCoV PI call attendee list.xlsx

Hi Everyone,

On November 17th, Dr. Russell Ray presented on "**Leveraging genetic tools for functional neural circuit mapping in the control of breathing for COVID-19 studies**". Thank you to our presenter and those that attended.

Dr. Emma Hodcroft will be giving a presentation titled "**A Brief Overview of the 'Cluster 5' 'Mink Mutation' from Denmark**" on Tuesday, November 24th.

Hope everyone can join!

Rebecca

Subject: SARS-CoV-2 Weekly Investigators Meeting

Hi Everyone,

We will be incorporating COVID-19 Cohort presentations to our arsenal of talks. As a reminder, the goal for the weekly SARS-CoV-2 Investigators meeting is to provide a platform that is informative and encourages collaboration.

If you would like to present your research, please let me know. *

Subject: Second Webinar for Systems Immunology Program
When: Tuesday, March 23, 2021 4:00 PM-5:00 PM (UTC-05:00) Eastern Time (US & Canada).
Where: Zoom meeting

Dear All,

According to your availability, our second webinar will be held from 4:00 to 5:00 PM EDT on March 23th. **Ralph Baric's group will give us a 45-min presentation. We will have 15 minutes for Q&A after that. Ideally, the topic would be COVID-19 related. Please forward the invitation to the laboratories in your group**. Please use the following information to access the meeting. Please let me know if you have any questions.

Best regards,
Joy Liu

Hi everyone,

Please see updated webinar links below. Hopefully this resolves any issues people had last time with sound.

Hello everyone,

Below please find the registration link for our weekly investigators meeting regarding the nCoV. **Please do not forward**. If you would like anyone else to be added to the invitation, please let me (Marciela.degrace@nih.gov) or Erik (erik.stemmy@nih.gov) know.

Our tentative agendas will be:

- Epi Updates
- NIAID Updates
- Other HHS partner Updates, if applicable
- Investigator research updates
- Discussion and Action Items
-

updated webinar link
https://global.gotomeeting.com/join/888107805

Subject: nCoV weekly investigators meeting
When: Tuesday, February 11, 2020 9:00 AM-10:00 AM (UTC-05:00) Eastern Time (US & Canada).
Where: GoToWebinar

Hi everyone,

Please see updated webinar links below. Hopefully this resolves any issues people had last time with sound.

Hello everyone,

Below please find the registration link for our weekly investigators meeting regarding the nCoV. **Please do not forward**. If you would like anyone else to be added to the invitation, please let me (Marciela.degrace@nih.gov) or Erik (erik.stemmy@nih.gov) know.

Our tentative agendas will be:

- Epi Updates
- NIAID Updates
- Other HHS partner Updates, if applicable
- Investigator research updates
- Discussion and Action Items
-

updated webinar link

Subject: Question, data sharing in manuscript shared on a preprint server
Details about study protocol.pdf

Dear Prof/Dr. Ralph S. Baric and Vineet D. Menachery,

We hope this message finds you well. We are contacting you regarding the article posted on the preprint server, titled: Mucin 4 Protects Female Mice from Coronavirus Pathogenesis.

We are conducting a study about data sharing in manuscripts about COVID-19 shared on medRxiv and bioRxiv, and we would be very grateful if you could answer one question. Your response to this email will be considered as informed consent to participate. More details about the study protocol, principal investigator and approval of the ethics committee are provided in the attachment.

We could not find in your manuscript any statement regarding availability of raw data. Considering the importance of data sharing in a public health crisis such as COVID-19 pandemic, could you please let us know whether you have considered sharing publicly raw data generated within your study?

Thank you for considering participation in our study.

Sincerely,

Josip Strcic

A study about data sharing in manuscripts about COVID-19 published on preprint servers

This study is conducted by principal investigator Prof. Livia Puljak, MD, PhD, affiliated with the Center for Evidence-Based Medicine and Healthcare, at the Catholic University of Croatia.

The aim of the study is to explore raw data sharing in manuscripts about COVID-19 posted on preprint servers medRxiv and bioRxiv. Within the study, we have analyzed whether manuscripts about COVID-19 posted on preprint servers medRxiv and bioRxiv mention public raw data (or code) sharing. Subsequently, we are contacting corresponding authors of those manuscripts to clarify location of shared data (if authors wrote that data are publicly available, but we are unable to locate data), circumstances for sharing data if the authors indicated that data will be made available on request, and whether the authors have considered publicly sharing raw data if they did not mention anything about that in their manuscript.

The study protocol was approved by the Ethics Committee of the Catholic University of Croatia (approval number: XYXY). Participants in the study are corresponding authors of manuscripts about COVID-19 posted on preprint servers medRxiv and bioRxiv. There will be no harms and no incentives for participation in this study. Invited participants are free to refuse participation in the study. Response to our questions will be considered as informed consent for participation in our study.

All responses will be anonymized and coded, and only one investigator (who is contacting the corresponding authors) will be aware of the identity of individuals responding to the question. All other team members will receive anonymized responses.

We kindly ask participants to consent to the collection, storing and processing of data they provide. The participants are kindly informed that: (i) that they have right to demand that their data is subsequently deleted, except for the data already analyzed or published; (ii) that the data will be used for research purposes only; (iii) that they have right to ask which data were collected and ask for revisions; (iv) that all information will be analyzed in anonymous or pseudonymous mode; (v) that the principal investigator is in charge of the project management; (vi) that their data will be permanently deleted ten years after completion of the project, and (vii) that principal investigator may share fully anonymized individual participant data for research purposes, in line with the FAIR data principles (findable, accessible, interoperable and re-usable) of the EU research framework (https://bit.ly/1Y0OMaI).

Contact of the principal investigator is:

Prof. Livia Puljak, MD, PhD

livia.puljak@unicath.hr

Please contact the principal investigator if you have any questions about the study, or if you need any additional clarifications.

Thank you for considering participation in our study

Hi Everyone,

Below you will find the updated meeting link for our weekly investigators call regarding COVID-19.

Our tentative agendas will be:

- COVID-19 research presentation given by PI
- Animal Model updates
- Assay discussion
- Other Needs/Issues
- Call for presenters

ZoomGov Meeting:
https://www.zoomgov.com/j/1609711373?pwd= **552.136**

Hey Ralph and Jake,

Happy new year. Congrats on the baby, Jake.

Do you have a response to review for JVI or the original reviewer comments? I will look to see if I have them.

I'll take a look over the weekend/early next week and get comments back. Just glancing at the figures, still think they need some work for clarity.

VDM

Hi Jacob and Vineet, Here is the version of Anne's B cell paper with her final comments. Jake, can you take a look to make sure the new data you generated is appropriately presented. Vineet, I appreciate your comments. I'd also like your thoughts on where to submit this. Its been a year plus since it was reviewed at JV-should we go back or chase a sure thing. Jake, congrats on the new baby! Hope you both had a Happy Holiday and New Year. Ralph

Subject: SARS-CoV-2 Weekly Investigators Meeting - August 4, 2020
nCoV PI call attendee list.xlsx

Hi Everyone,

Thank you to all who called in to listen to the presentation given by Dr. Wrammert on July 28th. I've attached the attendance list for everyone's review. I have provided an update at the end of this email regarding the question if contractors are able to apply to the PPE FOA – the answer is YES! Keep reading for details.

Next Tuesday, August 4th, we will have two presenters:

Dr. Katia Koelle
"Defining the causes of heterogeneity in antibody responses against SAR-CoV-2"

-and-

Dr. Weina Sun

"Newcastle disease viruses (NDV) expressing the spike protein of SARS-CoV-2 as vaccine candidates"

Update regarding the PPE FOA: https://grants.nih.gov/grants/guide/pa-files/PAR-20-256.html . Contractors are allowed to apply. Contractors could source the PPE they need for COVID-19 work under contracts and direct charge the contract. Alternatively, if you need or would like to use this FOA to attempt to secure PPE, do not double charge the government for the PPE that is received. There will be additional reporting responsibilities for those receiving PPE under this FOA.

Have a great rest of the week!

Rebecca

Subject: RE: SARS-CoV-2 Weekly Investigators Meeting - August 4, 2020

CORRECTION

Hi Everyone,

Thank you to all who called in to listen to the presentation given by Dr. Wrammert on July 28th. I've attached the attendance list for everyone's review. I have provided an update at the end of this email regarding the question if contractors are able to apply to the PPE FOA – the answer is YES! Keep reading for details.

Next Tuesday, August 4th, we will have two presenters:

Dr. Sabra Klein
"Defining the causes of heterogeneity in antibody responses against SAR-CoV-2"

-and-

Dr. Weina Sun

"Newcastle disease viruses (NDV) expressing the spike protein of SARS-CoV-2 as vaccine candidates"

Update regarding the PPE FOA: https://grants.nih.gov/grants/guide/pa-files/PAR-20-256.html . Contractors are allowed to apply. Contractors could source the PPE they need for COVID-19 work under contracts and direct charge the contract. Alternatively, if you need or would like to use this FOA to attempt to secure PPE, do not double charge the government for the PPE that is received. There will be additional reporting responsibilities for those receiving PPE under this FOA.

Have a great rest of the week!

Rebecca

nCoV PI call attendee list.xlsx

Hi All,

I'm canceling the SARS-CoV-2 Weekly Investigators Meeting for August 18th only. We will resume on August 25th with Dr. Mehul Suthar as our presenter.

Thank you Dr. Cherry for your presentation today! I have attached the attendee list for everyone's review.

See you all in two weeks!
Rebecca

Subject: Systems Immunology U19 Program Annual Meeting on Oct 9th, 2020
When: Friday, October 9, 2020 10:30 AM-5:30 PM (UTC-05:00) Eastern Time (US & Canada).
Where: Virtual Zoom meeting

Dear All,

Thank you all for your help. Please see the updated agenda for our annual meeting. **Please note that the meeting will start 8:00 AM PST.** If you have any questions, please let me know ASAP. The Zoom link and the registration site will be sent out later. I look forward to meeting you in the virtual conference.

Best regards,
Joy Liu

Systems Immunology U19 Annual Meeting

Division of Allergy, Immunology and Transplantation
National Institutes of Allergy and Infectious Diseases
Friday, October 9th, 2020
Virtual Meeting via Zoom
All Times EDT

Agenda

10:30 – 11:00 AM	Check-in & A/V testing
11:00 – 11:10 AM	**Welcome/Introductory Remarks** **Joy Liu/Daniel Rotrosen,** NIAID
11:10 – 12:40 PM	**Systems Approach to Immunity and Inflammation**
11:10 – 11:40 AM	*Germline Mutagenesis with Automated Meiotic Mapping to Study Immunity in Mice* **Bruce Beutler**, UT Southwestern Medical Center
11:40 – 12:05 PM	*Systems Analysis of Innate Immune Responses to Infection* **Alan Diercks**, Seattle Children's Research Institute
12:05 – 12:35 PM	*The Hierarchical Structures of Immune Neighborhoods* **Garry Nolan**, Stanford University
12:35 – 12:40 PM	*Inflammasomes and Inflammation in Health and Disease* **Richard Ulevitch,** The Scripps Research Institute
12:40 – 1:00 PM	**Break**
1:00 – 2:30 PM	**Systems Immunogenetics of Biodefense and Emerging Pathogens in the Collaborative Cross**
1:00 – 1:40 PM	*Introduction + Project 1: SIG U19 and the Collaborative Cross, Emerging Coronaviruses and SARS-CoV2* **Ralph Baric**, University of North Carolina at Chapel Hill
1:40 – 2:05 PM	*Project 2: Influenza Virus* **Mark Heise**, University of North Carolina at Chapel Hill
2:05 – 2:30 PM	*Project 3: West Nile Virus* **Michael Gale**, University of Washington
2:30 – 2:45 PM	**Break**
2:45 – 4:15 PM	**Defining Regulators of Immunity to Acute Infection Using CRISPR Screens**

2:45 – 2:55 PM	*Program Overview and Updates* **Arlene Sharpe**, Harvard University Medical School
2:55 – 3:05 PM	*Core C: CRISPR Library + Technology Development* **John Doench,** The Board Institute
3:05 – 3:15 PM	*Core B: Bioinformatics and Data Management* **Orr Ashenberg,** The Board Institute
3:15 – 3:30 PM	*Core D + Project 1: CRISPR Screens to Discover Regulators of CD8 T cells* **Martin LaFleur**, Harvard University Medical School
3:30 – 3:45 PM	*Project 1: CRISPR Screens to Discover Regulators of CD4 T cells* **Vijay Kuchroo**, Brigham and Women's Hospital
3:45 – 4:00 PM	*Project 2: CRISPR Screens to Discover Regulators of DC* **Jonathan Kagan,** Children's Hospital Corporation
4:00 – 4:15 PM	*Project 2: CRISPR Screens to Discover Regulators of DC/T Cell Interactions* **Nir Hacohen,** The Board Institute
4:15 – 4:20 PM	**Closing Remarks** **Joy Liu,** NIAID
4:20 – 4:25 PM	**Adjourn General Meeting**
4:20 – 5:20 PM	**Systems Immunology Steering Committee Meeting** **(closed session, Steering Committee members and NIAID staff only)**
5:20 PM	**End of Meeting**

Subject: Systems Immunology U19 Program Annual Meeting on Oct 9th, 2020
When: Friday, October 9, 2020 10:30 AM-5:30 PM (UTC-05:00) Eastern Time (US & Canada).
Where: Virtual Zoom meeting

Dear All,

Thank you all for your help. Please see the updated agenda for our annual meeting. **Please note that the meeting will start 8:00 AM PST.** If you have any questions, please let me know ASAP. The Zoom link and the registration site will be sent out later. I look forward to meeting you in the virtual conference.

Best regards,
Joy Liu

Systems Immunology U19 Annual Meeting

Division of Allergy, Immunology and Transplantation
National Institutes of Allergy and Infectious Diseases
Wednesday, October 9th, 2020
Virtual Meeting via Zoom
All Times EDT

Agenda

10:00 – 11:00 AM	Check-in & A/V testing
11:00 – 11:10 AM	**Welcome/Introductory Remarks** **Joy Liu/Daniel Rotrosen,** NIAID
11:10 – 12:40 PM	**Systems Approach to Immunity and Inflammation**
11:10 – 11:40 AM	*Germline Mutagenesis with Automated Meiotic Mapping to Study Immunity in Mice* **Bruce Beutler**, UT Southwestern Medical Center
11:40 – 12:05 PM	*Systems Analysis of Innate Immune Responses to Infection* **Alan Diercks**, Seattle Children's Research Institute
12:05 – 12:35 PM	*The Hierarchical Structures of Immune Neighborhoods* **Garry Nolan**, Stanford University
12:35 – 12:40 PM	*Inflammasomes and Inflammation in Health and Disease* **Richard Ulevitch,** The Scripps Research Institute
12:40 – 1:00 PM	**Break**
1:00 – 2:30 PM	**Systems Immunogenetics of Biodefense and Emerging Pathogens in the Collaborative Cross**
1:00 – 1:40 PM	*Introduction + Project 1: SIG U19 and the Collaborative Cross, Emerging Coronaviruses and SARS-CoV2* **Ralph Baric**, University of North Carolina at Chapel Hill
1:40 – 2:05 PM	*Project 2: Influenza Virus* **Mark Heise**, University of North Carolina at Chapel Hill
2:05 – 2:30 PM	*Project 3: West Nile Virus* **Michael Gale**, University of Washington
2:30 – 2:45 PM	**Break**
2:45 – 4:15 PM	**Defining Regulators of Immunity to Acute Infection Using CRISPR Screens**

2:45 – 2:55 PM	*Program Overview and Updates* **Arlene Sharpe**, Harvard University Medical School
2:55 – 3:05 PM	*Core C: CRISPR Library + Technology Development* **John Doench,** The Board Institute
3:05 – 3:15 PM	*Core B: Bioinformatics and Data Management* **Orr Ashenberg,** The Board Institute
3:15 – 3:30 PM	*Core D + Project 1: CRISPR Screens to Discover Regulators of CD8 T cells* **Martin LaFleur**, Harvard University Medical School
3:30 – 3:45 PM	*Project 1: CRISPR Screens to Discover Regulators of CD4 T cells* **Vijay Kuchroo**, Brigham and Women's Hospital
3:45 – 4:00 PM	*Project 2: CRISPR Screens to Discover Regulators of DC* **Jonathan Kagan,** Children's Hospital Corporation
4:00 – 4:15 PM	*Project 2: CRISPR Screens to Discover Regulators of DC/T Cell Interactions* **Nir Hacohen,** The Board Institute
4:15 – 4:20 PM	**Closing Remarks** **Joy Liu,** NIAID
4:20 – 4:25 PM	**Adjourn General Meeting**
4:20 – 5:20 PM	**Systems Immunology Steering Committee Meeting** **(closed session, Steering Committee members and NIAID staff only)**
5:20 PM	**End of Meeting**

From: Baric, Toni C[antoinette_baric@med.unc.edu]

Attendees: Schughart, Klaus; Baric, Ralph S; Berhorst, Jackie; Menachery, Vineet; mtferris; Fischer, William A. II; Graham, Jessica ; Graham, Rachel; Gralinski, Lisa E; Heise, Mark T; Ireton, Renee; Kathleen Voss; Klaus Schughart (kschugha@uthsc.edu); Leist, Sarah Rebecca; Linnertz, Colton; Lund, Jennifer; Shannon McWeeney; mgale@u.washington.edu; Miller, Darla; Michael Mooney; Noll, Kelsey; Pardo Manuel de Villena, Fernando; Schaefer, Alexandra; Shaw, Ginger; Sheahan, Timothy Patrick; Suthar, Mehul S. (mehul.s.suthar@emory.edu); Swarts, Jessica; West, Ande; Renee Ireton; Graham PhD, Jessica B; Michael J Gale; Cornett, Cathy

Location: https://zoom.us/j/91792514323?pwd= **552.136**

Importance: Normal

Subject: SIG U19 recurring monthly call

Start Time: Thur 9/10/2020 12:30:00 PM (UTC-05:00)

End Time: Thur 9/10/2020 1:30:00 PM (UTC-05:00)

Required Attendees: Schughart, Klaus; Baric, Ralph S; Berhorst, Jackie; Menachery, Vineet; mtferris; Fischer, William A. II; Graham, Jessica ; Graham, Rachel; Gralinski, Lisa E; Heise, Mark T; Ireton, Renee; Kathleen Voss; Klaus Schughart (kschugha@uthsc.edu); Leist, Sarah Rebecca; Linnertz, Colton; Lund, Jennifer; Shannon McWeeney; mgale@u.washington.edu; Miller, Darla; Michael Mooney; Noll, Kelsey; Pardo Manuel de Villena, Fernando; Schaefer, Alexandra; Shaw, Ginger; Sheahan, Timothy Patrick; Suthar, Mehul S. (mehul.s.suthar@emory.edu); Swarts, Jessica; West, Ande

Optional Attendees: Renee Ireton; Graham PhD, Jessica B; Michael J Gale; Cornett, Cathy

Reminder that we will have our monthly SIG U19 call. The topic of discussion is the upcoming October meeting.

Subject: Systems Immunology U19 Program Annual Meeting on Oct 9th, 2020
When: Friday, October 9, 2020 10:30 AM-5:30 PM (UTC-05:00) Eastern Time (US & Canada).
Where: Virtual Zoom meeting

Dear All,

The Systems Immunology U19 Program Annual Meeting is approaching. There are a few things I want to remind you:

1. To ensure a seamless and smooth meeting, **please send your slides to me by COB, Oct 7.**
2. To save everyone's time, we will not have a Zoom rehearsal before the meeting. Please **log on the meeting an half hour early before the meeting to work with the NIAID MEET staff to make sure your slides are correctly uploaded.** The Zoom link will be open at least 45 minutes before the meeting.
3. **Please note that the meeting will start 8:00 AM PST.**
4. **We will use chat box for Q&As.**
5. **If you don't present, please mute yourself.**
6. **The information for the Zoom is:**

Join ZoomGov Meeting

Subject: SARS-CoV-2 Weekly Investigators Meeting - September 22nd

Hi All,

Thank you all for attending the Dr. Heath's presentation on Tuesday, September 15th and to Jim for presenting.

On Tuesday, September 22nd, Dr. Biao He will be giving a presentation titled: "**A single dose intranasal immunization with parainfluenza virus 5-based COVID-19 vaccine generates sterilizing immunity in nasal cavities of ferrets and cats**".

Hope you all can attend!

Best,
Rebecca

When: Friday, October 9, 2020 10:00 AM-5:00 PM (UTC-05:00) Eastern Time (US & Canada).
Where: Virtual Zoom meeting

Dear All,

Attached please see the final agendas for Systems Immunology U19 Program Annual Meeting and the following Steering Committee Meeting. Please keep in mind for the followings:

1. To ensure a seamless and smooth meeting, **please send your slides to me by COB, Oct 7.**
2. Please **log on the meeting early to work with the NIAID MEET staff to make sure your slides are correctly uploaded.** The Zoom link will be open 1 hour early before the meeting.
3. **Please note that the meeting will start at 11AM EST that is 8:00 AM PST.**
4. Please **introduce next speaker** in your session after your presentation.
5. **We will use chat box for Q&As. So please check chat box periodically to answer any questions.**
6. **Please don't use "Raise Hand" function, as we will not monitor it.**
7. According to the definition of FOA, **Steering Committee members include Arlene Sharpe, Orr Ashenberg, Ralph Baric, Mark Heise, Shannon McWeeney, Richard Ulevitch, Alan Aderem, Garry Nolan. After the general meeting, NIAID staff will introduce you to a break room for Steering Committee Meeting.**
8. **The information for the Zoom is:.**

Systems Immunology U19 Annual Meeting

Division of Allergy, Immunology and Transplantation
National Institutes of Allergy and Infectious Diseases
Friday, October 9th, 2020
Virtual Meeting via Zoom
All Times EDT

Agenda

10:00 – 11:00 AM	Check-in & A/V testing
11:00 – 11:10 AM	**Welcome / Introductory Remarks** **Joy Liu / Daniel Rotrosen,** NIAID
11:10 – 12:40 PM	**Systems Approach to Immunity and Inflammation**
11:10 – 11:40 AM	*Germline Mutagenesis with Automated Meiotic Mapping to Study Immunity in Mice* **Bruce Beutler**, UT Southwestern Medical Center
11:40 – 12:05 PM	*Systems Analysis of Innate Immune Responses to Infection* **Alan Diercks**, Seattle Children's Research Institute
12:05 – 12:35 PM	*The Hierarchical Structures of Immune Neighborhoods* **Garry Nolan**, Stanford University
12:35 – 12:40 PM	*From the bench to the bedside: CD14* **Richard Ulevitch,** The Scripps Research Institute
12:40 – 1:00 PM	**Break**
1:00 – 2:30 PM	**Systems Immunogenetics of Biodefense and Emerging Pathogens in the Collaborative Cross**
1:00 – 1:40 PM	*Introduction + Project 1: SIG U19 and the Collaborative Cross, Emerging Coronaviruses and SARS-CoV2* **Ralph Baric**, University of North Carolina at Chapel Hill
1:40 – 2:05 PM	*Project 2: Influenza Virus* **Mark Heise**, University of North Carolina at Chapel Hill
2:05 – 2:30 PM	*Project 3: West Nile Virus* **Michael Gale**, University of Washington
2:30 – 2:45 PM	**Break**
2:45 – 4:15 PM	**Defining Regulators of Immunity to Acute Infection Using CRISPR Screens**

2:45 – 2:55 PM	*Program Overview and Updates* **Arlene Sharpe**, Harvard University Medical School
2:55 – 3:05 PM	*Core C: CRISPR Library + Technology Development* **John Doench,** The Broad Institute
3:05 – 3:15 PM	*Core B: Bioinformatics and Data Management* **Orr Ashenberg,** The Broad Institute
3:15 – 3:30 PM	*Core D + Project 1: CRISPR Screens to Discover Regulators of CD8 T cells* **Martin LaFleur**, Harvard University Medical School
3:30 – 3:45 PM	*Project 1: CRISPR Screens to Discover Regulators of CD4 T cells* **Vijay Kuchroo**, Brigham and Women's Hospital
3:45 – 4:00 PM	*Project 2: CRISPR Screens to Discover Regulators of DC* **Jonathan Kagan,** Children's Hospital Corporation
4:00 – 4:15 PM	*Project 2: CRISPR Screens to Discover Regulators of DC/T Cell Interactions* **Nir Hacohen,** The Broad Institute
4:15 – 4:20 PM	**Closing Remarks** **Joy Liu,** NIAID
4:20 – 4:25 PM	**Adjourn General Meeting**
4:20 – 5:20 PM	**Systems Immunology Steering Committee Meeting** **(closed session, Steering Committee members and NIAID staff only)**
5:20 PM	**End of Meeting**

Systems Immunology U19 Annual Meeting

Steering Committee Meeting

Division of Allergy, Immunology and Transplantation
National Institutes of Allergy and Infectious Diseases
Friday, October 9th, 2020
Virtual Meeting via Zoom
All Times EDT

Agenda

4:20 – 4:25 PM Welcome/Introduction---Joy Liu / Richard Ulevitch

4:25 – 4:35 PM Follow up of action items from last meeting
- Collaboration between three U19 groups---Mark Heise
- Webinars--- Richard Ulevitch and Alene Sharpe
- Update of data deposition into ImmPort---Patrick Dun

4:35 – 4:50 PM Updates on COVID-19 research
- The Scripps U19 group --- Richard Ulevitch & Garry Nolan
- The UNC U19 group --- Ralph Baric & Mark Heise
- The Harvard U19 group --- Arlene Sharpe

4:50 – 4:55 PM Review issues and solutions

4:55 – 5:05 PM Plan for next steps
- Set up webinars
- Promote data deposition into ImmPort
- Set up a COVID-19 interest group
- Use Microsoft Teams to share data
- Other ideas

5:05 – 5:15 PM Feedbacks from NIAID leaders ---Daniel Rotrosen, Chuck Hackett, Alison Deckhut, Wolfgang Leitner

5:15 – 5:20 PM Wrap up---Joy Liu

From: Baric, Toni C[antoinette_baric@med.unc.edu]

Location: https://zoom.us/j/95848751377?pwd= **552.136**

Importance: Normal

Subject: Canceled: SIG U19 Monthly Meeting

Start Time: Thur 10/8/2020 12:30:00 PM (UTC-05:00)

End Time: Thur 10/8/2020 1:30:00 PM (UTC-05:00)

Required Attendees: Baric, Ralph S; Berhorst, Jackie; Menachery, Vineet; mtferris; Fischer, William A. II; Graham, Jessica ; Graham, Rachel; Gralinski, Lisa E; Heise, Mark T; Ireton, Renee; Kathleen Voss; Klaus Schughart (kschugha@uthsc.edu); Leist, Sarah Rebecca; Linnertz, Colton; Lund, Jennifer; Shannon McWeeney; mgale@u.washington.edu; Miller, Darla; Michael Mooney; Pardo Manuel de Villena, Fernando; Schaefer, Alexandra; Schughart, Klaus; Shaw, Ginger; Sheahan, Timothy Patrick; Suthar, Mehul S. Thanks, Ralph. I agree with you that there are likely more papers possible here, but for now. We've done a similar analysis already for just WNV (published last year in JID), but would be happy to work with the other groups using the different pathogens one-by-one.

Lisa, Alex, Vineet, and Sarah, can you read through the manuscript and add any comments/edits that you may have?

Thanks,
Jenny

Hi all,

Attached please find a draft of the manuscript we wrote up entitled “Universal predictors of mortality following virus infection”. I’m thinking of submitting it to the Journal of Clinical Investigation as a Concise Communication.

I’d be grateful for any feedback you may have, as well as a list of authors & affiliations from each of your groups to include. If you could get back to me by the end of the month at the latest, then I can get this submitted without delay. If you don’t want to be included as an author, please do let me know that too.

Thanks!
Jenny

Hi Jenny,
That is super interesting and I think that a joint paper is a great idea. So, Project 2 is on board. I will consult with Marty, and we will figure out a list of the people form Project 2 who should be included.
It would be great if you could present this at the next call.
Thanks and have a good weekend.
Mark

Subject: Paper idea - immune predictors of mortality following infection

Hi all,

Jess and I have been working on a project to correlate baseline splenic T cell frequencies and phenotypes with mortality following each of the infections used in the U19 screen. The punch line is that we can use this data to identify global baseline immune correlates or immune predictors of mortality to virus infection.

In short, we got the cleaned mortality data from Michael Mooney from each of the projects and selected lines that either: 1. Had no mortality following any of the 3 infections compared to lines that had mortality to all 3 of the infections, or 2. Had no mortality to either of the respiratory viruses compared to lines that had mortality to both of the respiratory viruses (Tables 1 and 2 in the attached document). We then graphed our flow cytometry data from spleens of uninfected mice from each of these lines to correlate T cell frequency and phenotype with protection from mortality (pages 4-6 of the attachment).

Attached are some of our findings, but overall, we've found that having more Tregs and more activated T cells prior to infection correlates with protection from lethality. I was thinking that we could write this up for a journal such as The Journal of Clinical Investigation. It's rare to have prospectively collected samples in human cohorts of infection, and so I think the CC is a really useful tool for this, provided you've done a big screen like we have.

Since this uses data from all of you, would you be willing in principle for us to go ahead with writing this up? If so, could you let me know who else should be an author from each of your groups? We'll try to present this briefly on the next call too.

I hope everyone has a nice weekend.

Jenny

I think asking Barney for guidance is best idea. I am fine adding whoever is appropriate from VIC.

May need to consider same for Simon and Lipkin, not sure if their collaborators in Africa shoudl be included or not. Small price to pay if it facilitates future collaborations.

I assume Corti sent the antibody so include him.

I'll plan on working on the draft when I get it back and will try and get a cover letter to you by tomorrow. Plaese and Saif for Editorial board members?

To: Baric, Ralph S <rbaric@email.unc.edu>; Dinnon, Kenneth Harold III <kdinnon@email.unc.edu>
Subject: Uganda Draft

Here is the latest version of the draft.

Kenny, please edit the figure legends as needed. I didn't know the time points and did them fairlly quick.

Ralph, I added David Corti and left lanzevechia on, let me know if I should take them off.

I ran it through the PNAS generator, it is over the 6 page limit, but we can submit to PNAS plus which is online only. I am fine with that.

I will send Kenny notes on the figures to change in a separate document. If we want paper down to 6 page limit, likely need to cut model slide.

I'll work on a cover letter, but i have dept. retreat Monday. Our BSL3 is shut down next week too, so I'd like to get this paper submitted next week if possible.

Hey Scott,
Please find attached the following manuscript, "Trypsin treatment unlocks barrier for zoonotic coronavirus infection." The manuscript describes our efforts to recover a virus expressing the bat spike protein from PDF2180-CoV. You contributed to this work with provision of HAE cultures and we have included you as an author.

We are planning to submit the manuscript to PNAS in the next few weeks. Please take a look over it, paying close attention to the accuracy of your name and affiliation. Also, please add any authors that might be missing and their email contact information.

We would like to have the comments this week by Friday to try and send out next week. With the busy time of year, we understand if you require more time to look over it; please just let us know that you need more time.

If I do not hear from you by Friday, I will assume you are satisfied with the manuscript in its current state.

Thank you again for your contributions to this work. We look forward to hearing from you.

I chatted with a few people about Cell Reports, and they said it has same issues as Nat. Com. with self importance and taking a long time to decide and then asking for more and more stuff.

Think Mbio might be best bet at this point. I called this morning, but didn't get through. I can chat this afternoon if you want. Otherwise, I'll start prepping for Mbio.

Subject: Re: Decision on manuscript NCOMMS-19-23910-T

I'm fine if you don't want it on a preprint. As long as it gets accepted by teh Feb Review cycle.

I guess I'd lean Cell Reports at this point. I haven't had any experience there, so not sure how it goes. I would like the variety in my CV. That being said, I also don't want them to sit on it for >60 days like Nat. Com did.

I'll work on the cover letter today and get it submitted this week at Cell Reports; happy to talk about it if you think Mbio is the better spot for it.

Cell reports or mbio—I'm getting to the point where it is time to move on to other things, so maybe mbio is best. Reviewer number 1 is a real ass wipe. I would like to find out who they are so that I can start reviewing their papers-sounds like one of the damn dutch. I would prefer to stay out of a preprint server at this point. However, if you feel its important for your grant

submissions or in your best interest..... make the call. Be glad to chat if you want to talk about journal choices. Overall, I think Nature Communication is a shit whole of a journal. Tim's paper had also got beat to shit there by an ass reviewer with strong opinions on little issues. While I wish he would just go straight to cell reports (I think he feels the same way), we are going to send the resubmission back as he did a lot of the requested work for the second time (different set of requests both times). Personnally, I think his reviewer is just looking to kill a paper. Ralph

Dear Dr Menachery,

Your manuscript entitled "Trypsin treatment unlocks barrier for zoonotic coronavirus infection" has now been seen by 2 referees, whose comments are appended below. In the light of their advice I regret to inform you that we cannot publish your manuscript in Nature Communications.

You will see that, while the reviewers find your work of some potential interest, they raise substantive concerns that cast doubt on the advance your findings represent over earlier work and the strength of the novel conclusions that can be drawn at this stage. In particular, reviewers are not convinced that the manuscript provides a sufficient conceptual advance without additional experiments providing insights into the mechanism underlying the observations. Unfortunately, these reservations are sufficiently important to preclude publication of this study in Nature Communications.

If you opted into the journal hosting details of a preprint version of your manuscript via a link on our dedicated website (https://nature-research-under-consideration.nature.com), please note that we will now remove these details as your manuscript is no longer under consideration at Nature Communications. For more information, please refer to our FAQ page at https://nature-research-under-consideration.nature.com/posts/19641-frequently-asked-questions

I am sorry that we cannot be more positive on this occasion and thank you for the opportunity to consider your work.

Best regards,
Sonja Schmid, PhD
Senior Editor
Nature Communications

Reviewers' comments:

Reviewer #1 (Remarks to the Author):

The manuscript by Menachery et al. deals with the role of trypsin-dependent protease activation on coronavirus (CoV) infections in cell cultures.
The authors used a previously generated chimeric MERS-CoV carrying the Spike gene of a MERS-CoV conspecific bat-related Coronavirus (PDF2180-CoV from Uganda) and performed cell culture experiments with and without trypsin treatment.
The finding that trypsin treatment influences cell susceptibility and probably organ tropism of MERS-related CoV is interesting, however, not overly innovative and surprising.

I have several remarks.

1. It is an intriguing but not very surprising finding that protease activation by trypsin influences CoV cell entry. Coronaviruses enter cells by receptor-mediated endocytosis using different exopeptidases (e.g. DPP4, ACE2) or by protease-mediated (HAT, TMPRSS2) direct fusion of virus particle membranes with the cellular plasma membrane. The present study shows that trypsin-treatment facilitates virus replication of bat-derived CoV but does not present a single experiment on the mechanistic details. Neither do the authors analyze the effect and mechanistic consequences of trypsin on the Spike proteins nor do they identify the proposed alternative receptor.

2. Throughout the manuscript important controls are missing.
a) The authors should confirm correct transcript sequence and expression of DPP4 in both trypsin-adapted Vero and Huh7 cell lines. These are important controls, as aberrant expression of DPP4 in immortalized cell lines may affect the conclusions.
b) The authors should show for all applied CoV that the activated protease has a direct effect on the virus (and not on a putatively new host cell receptor): the authors could e.g. “prime” virus stocks with trypsin, neutralize trypsin after incubation, then infect cells with the primed stock. Figure 5B is not sufficient and shows only HKU5-CoV infection in Vero cells co-treated with trypsin.
c) Using HAE cells the authors claim that chimeric “MERS-Uganda” does not infect the respiratory tracts of humans. How often was this experiment repeated? Were different donors tested? Again, I would expect different set-ups like virus pre-treated with trypsin, cells pre-treated with trypsin and co-treatment. The timing and the concentration of the trypsin-treatment is essential. What about other differentiated permanent cells lines like Calu-3?
d) The authors should sequence the HKU5-CoV and MERS-Uganda genomes (or at least the spike gene) after infection on trypsin-treated cells to confirm that both viruses are stable and to evaluate whether DPP4 host-adaptation (as in Letko et al., 2018) remains a contributing factor in the increased infectivity they observed.
e) The authors used an already existing MERS clone with a full-length Spike of the con-specific PDF2180-CoV. It would be important to show that the proposed recombination event led to the putative change of tropism. Different variants e.g. a MERS-CoV spike with only the S1 domain of PDF2180-CoV ,with and without the sialic acid binding domain (S1A) would be important controls.
f) What about sialic acid binding in general? Since it was shown that MERS-CoV attachment is facilitated by sialic binding I would expect that the authors show the sialic binding capacity of PDF2180-CoV to investigate how the trypsin treatment influences the attachment.
g) Another important control would be to check the susceptibility/permissiveness of bat cells (lung vs intestine) to support the hypothesis of a switch in organ tropism from bats to humans.
h) To rule out that other viral co-factors influence the entry process (and the use of DPP4) it would be beneficial to use a full-length PDF2180-CoV infectious virus.
i) Generally it would be important to titrate supernatants in order to see the influence on infectious particle production.

3. The quality of the Figures is insufficient. The immunofluorescence pictures in all of the Figures are not suitable for publication. The cells look apoptotic and there is no counterstaining to see how many cells are on the pictures. Without counterstaining the reader cannot evaluate the negative controls. There are no scale bars. I am aware that trypsin-treatment may cause these artifacts but the authors should then try to reduce trypsin concentrations or work with pretreatment of

cells and /or virus stocks instead of continuous trypsin-treatment.

4. The Western blot in Fig. 3B and the fluorescence microscopy in Fig. 3A do not correspond. The WB shows a much stronger N protein band for trypsin-negative MERS-CoV infection, whereas in Fig. 3A the RFP assay the signals appear much brighter for trypsin-positive MERS-CoV infection.

5. General remark: Instead of just saying higher and lower, please indicate x-fold or percentage when discussing differences.

Reviewer #2 (Remarks to the Author):

This submission demonstrates that two potentially zoonotic coronaviruses, MERS-Uganda and MERS-like HKU5, will infect otherwise resistant cells if trypsin protease is supplied. The conclusions, therefore, are that trypsin protease "unlocks a barrier for zoonotic coronavirus infection". These results are of interest to the field because they highlight proteases as central host susceptibility factors in zoonotic coronavirus infection. As such, they move the field beyond a focus on receptors as the most relevant host susceptibility factors. Both virus receptors and proteases must now be simultaneously considered in evaluating susceptibility to zoonotic infections. Additionally, the findings in the paper are clear and convincing, and the results support the conclusions that are put forward. Finally, the paper is very well-written.

Comments for the authors:

1. Although the report has solid findings and credible interpretations of data, in some instances it does not make particularly novel insights. It is fairly well-known that some coronaviruses can be activated for cell entry by trypsin. Furthermore, the detailed architecture of the MERS spike : human DPP4 interaction is known, and it is understood that the MERS-Uganda and the MERS-like HKU5 spike proteins do not have complete hDPP4 receptor-binding motifs in their S1 domains. This latter point predicts the results shown in Fig 3, so much so that the results do not come across as especially novel. It is recommended that the authors further emphasize the novel features in this report.

2. The report could be strengthened, with potentially novel results, by further exploring the trypsin cleavage patterns of the Uganda and HKU5 spike proteins. The results shown in Fig 5B are a good start, but more could be presented. Many additional questions could be considered. What is the cleavage status of spike proteins on MERS-Uganda and HKU5 virus particles, before and after trypsin treatment? Does trypsin prime "free" virus particles for subsequent cell entry? Or does trypsin inactivate free virus particles? Put another way, do viruses have to first be attached to cells for trypsin to activate infection? Typically, there are two cleavages in the beta-coronavirus spikes that are relevant to cell entry, a priming S1/S2 cleavage and an activating S2prime cleavage. How do these substrate sites differ between MERS spikes, PDF2180/Uganda spikes and HKU5 spikes? Which of these substrate sites are cleaved by trypsin? If trypsin only cleaves at S1/S2, then what are
the proteases cleaving at S2prime? Are there Uganda spike-cleaving proteases that are present in Caco-2 cells but absent from primary HAE? To potentially elevate the novelty of the report, some or all of these questions should be addressed.

Subject: SARS-CoV-2 Weekly Investigators Meeting - November 10th
nCoV PI call attendee list.xlsx

Hi All,

On November 3rd, Dr. Bin Zhou gave a wonderful presentation titled "**SARS-CoV-2 spike D614G variant confers enhanced replication and transmissibility**". Thank you Dr. Zhou and those that were in attendance.

Tomorrow, November 10th, we will have a double feature brought to you by:

Dr. Andrzej Joachimiak
"**Structural studies of SARS-CoV-2 proteins and their complexes**"

Dr. Daved Fremont
"**Structural mechanisms of SARS-CoV-2 antibody neutralization"**

Looking forward to seeing everyone tomorrow!
Rebecca

Subject: SIG U19 Call reminder

Hi everyone,
As a reminder, due to scheduling conflicts we have move/combined the SIG U19 Nov/Dec call to Dec 3 at 1:30 pm EST/10:30 PST. All calling information remains the same.

Have a great, safe and healthy Thanksgiving.
Toni

Subject: SARS-CoV-2 Weekly Investigators Meeting - December 1
nCoV PI call attendee list.xlsx

Hi Everyone,

Thank you for joining today's presentation, "**A Brief Overview of the 'Cluster 5' 'Mink Mutation' from Denmark**" given by Dr. Emma Hodcroft.

The links below were provided by Dr. Hodcroft:

Here's a link which will go to all of the dedicated builds:
https://nextstrain.org/groups/neherlab

Here's the individual ones that was referenced in the talk:
nextstrain.org/groups/neherlab/ncov/S.Y453F
nextstrain.org/groups/neherlab/ncov/S.N439K
nextstrain.org/groups/neherlab/ncov/denmark
nextstrain.org/groups/neherlab/ncov/S.N501/2020-11-10

On Tuesday, December 1st, Dr. Karla Satchell will be giving a presentation on "**Structural Biology of the nsp16/nsp10 2'-O-methyltransferase: Impact for Structure based Drug Design**."

Hope everyone has a great rest of the week.
For those in the US, have a wonderful Thanksgiving!

Best,
Rebecca

Subject: Re: Inquiry of your Nature Medicine paper on CoronaVirus

Dear Prof. Baric and Menachery,
I am writing to kindly follow up my inquiry, and would appreciate any clarification at your earliest convenience if at all possible. Otherwise I would have to bring this issue to the attention of your university administration, related funding agencies, and law enforcement.

Many thanks,

Linyou

> Dear Prof. Baric and Prof. Menachery,
> I am writing to kindly seek some clarification about the paper you published at Nature Medicine as attached. In particular, I was hoping to know if the CoronaVirus now widely spreading in China and worldwide is the same or any format of mutation of the virus studied in the paper. This information would be extremely important for the development of efficient strategy to control or eventual stop the spreading and also for the development of medical treatment . I would truly appreciate your response for the well being of billions of people in China whose are suffering tremendous mental and physical pain even loss of life.

Subject: SARS-CoV-2 Weekly Investigators Meeting - December 8th
nCoV PI call attendee list.xlsx

Hi Everyone,

On Tuesday, December 1st, Dr. Karla Satchell gave a presentation on "**Structural Biology of the nsp16/nsp10 2'-O-methyltransferase: Impact for Structure based Drug Design**." Thanks to our presenter and those that were able to join.

Next week, on Tuesday, December 8th, Dr. Ben Tenoever will be giving a seminar on **"Single virion tracking of SARS-CoV-2 in vivo to better understand systemic inflammation associated with COVID-19".**

If you are interested in presenting during future meetings, please reach out to me regarding your interest.

Best,
Rebecca

Subject: SARS-CoV-2 Weekly Investigators Meeting

Hi All,

Apologies for any confusion my meeting invite might have caused. The meeting is still being conducted.

The update was to make everyone aware that we will be incorporating COVID-19 Cohort presentations to the series and to welcome the newly added investigators. As always, I will send out weekly emails with the upcoming presentation for everyone's awareness.

Best,
Rebecca

Hi Ralph and Vineet,

With the nCoV case in Wisconsin, Yoshi and I were curious about the trypsin you use in your bat coronavirus manuscript.

It mentions trypsin Gibco, CA, but I am unsure of the exact product.

If you have a cat# to share, I would appreciate it!

Thanks,

Peter

Subject: SARS-CoV-2 Weekly Investigators Meeting - January 5, 2021

Happy New Year, Everyone!

Dr. Ghazi Kayali will help kick off the 2021 SARS-CoV-2 Investigators Meeting by giving a presentation on **"Incidence, household transmission, and neutralizing antibody seroprevalence of COVID-19 in Egypt: Results of a community-based cohort".** His presentation will be on Tuesday, January 5th from 9:00 – 10:00 am EST.

As a reminder, this meeting will be canceled on Tuesday, January 12th and will resume Tuesday, January 19th.

Cheers,
Rebecca

Subject: nCoV investigator call - follow up resources
200_Protocol_v28_0.pdf

Hi everyone,

It was great speaking to you yesterday. Thank you for sharing your updates. As promised, here's some information for those unable to join yesterday's call so you can stay in the loop.

Funding: While we currently do not have any new funds designated for nCoV, we are collecting supplement requests so we can be ready if/when funds arrive.

Grantees: To submit a supplement request, please follow the instructions of this NOSI. The appropriate PA to use for submission is here.

CEIRS: Please send the CEIRS concept form to me and to the Prime PI of the Center you are working with.
If you are currently funded by CEIRS and have an urgent need for nCoV funds, write me an email and we can discuss. If you have both CEIRS and grant funding, please do not submit the same work to both as we will be reviewing all requests together.

Reagents: Currently BEI has one virus isolate available and is working on making genomic RNA available. We're also aware that the European Virus archive has an isolate and RNA. We are trying to get more isolates from multiple countries into BEI – please keep me informed if you know of connections we can reach out to about this. As you develop reagents, Erik and I will work with you to help expedite their deposit into BEI, so please keep us posted on your progress.

We are also working to see if the Ad-ACE2 vector can be deposited and I'll try to update by next week. If there are other high priority reagents you would like to see in BEI, please email me so I can curate a list.

Patient Samples: CDC teams still working on outreach and consent, so we expect an extremely limited supply of PBMCs, sera and blood from US patients. For those interested in setting up a protocol for collection of samples from patients at their institution or with a collaborator abroad, a template that the NIH Vaccine Research Center uses is attached. Please keep Erik and I informed if you decide to pursue this.

Thank you all! Please don't hesitate to email with any questions and we will talk next Tuesday! Looking forward to updates from those of you doing animal model testing.

Marciela

PRÉCIS

VRC 200: A Multicenter Specimen Collection Protocol to Obtain Human Biological Specimens for Research Studies

Protocol Design: This protocol is designed to perform collection of human specimens, such as blood, mucosal secretions, skin swabs, skin biopsy, or body fluids to support research studies. These samples will be used by researchers in their work on the development of vaccines, to study the correlates of immunity related to infectious diseases and in laboratory work related to the development and/or validation of immunological assays. Standard phlebotomy and apheresis procedures will be utilized to safely obtain necessary quantities of blood and cells.

Subjects: Adults ages 18 years and older.

Protocol Plan: Subjects who consent to participate will undergo standard medical procedures to obtain biological specimens. The signed informed consent is valid for one year; at least once per year, the subject must re-consent and eligibility should be re-confirmed.

Duration: Individual subjects may donate samples as often as permitted by their institution's guidelines. The IRB-approved protocol will remain open and undergo annual continuing review by the IRB as long as there continues to be a need for human biological specimens for research studies.

Endpoints: There is no analysis plan for this protocol. This protocol will be conducted in accordance with Good Clinical Practices for human research solely for the purpose of obtaining samples for research laboratories. Samples will be identified only by protocol identification number. Subject data, such as demographic information, aspects of medical history, laboratory parameters, recent immunizations or medications, HLA type, genetic tests and other medical information may be provided (identified by study number, but not subject name) to researchers if needed to support the objectives of the laboratory research.

1. INTRODUCTION AND RATIONALE

Research at the Vaccine Research Center (VRC) is ongoing to investigate different aspects of HIV and other infectious diseases as well as to elucidate human immunology. Frequently these laboratory studies require serum, plasma, peripheral blood mononuclear cells (PBMCs) and other types of human biological specimens, such as mucosal secretions (collected by swabs), body fluids, skin swabs or skin biopsy. This protocol allows for subjects to undergo a variety of routine specimen collection procedures to obtain biological samples that will be used by laboratory researchers in their work to develop vaccines and monoclonal antibodies, to study the correlates of immunity related to infectious diseases, and to develop and/or validate immunological assays.

2. DESCRIPTION OF SPECIMEN COLLECTION PROCEDURES

2.1 SPECIMEN COLLECTION PROCEDURES

Specimens will be obtained by routine medical practice methods.

- Blood samples will be collected from a vein by standard phlebotomy techniques.
- Body fluid samples including urine, semen, saliva, skin swabs, and/or mucosal secretions will be collected by standard clinical techniques. Mucosal secretions that may be collected include nasal, oral, pharyngeal, aural, conjunctival, vaginal, cervical, rectal and penile secretions.
- Skin biopsy samples will be collected by standard biopsy technique using local anesthesia. If a subject is willing to undergo a skin biopsy, then a separate consent process for this procedure will be completed. The sample collected will not routinely be sent for a formal pathology review, but may be sent at the discretion of the clinician if there is suspicion of an undiagnosed condition.

The results of testing performed by research laboratories will not be part of the subject's medical record. This protocol alone is not intended for general longitudinal study of subjects.

Specimens collected for standard diagnostic testing (e.g., swab for diagnosis of a skin infection, urine for pregnancy testing/urinalysis, blood for HIV testing, complete blood count, chemistry panel, lipid panel, hepatic panel, hepatitis screening, PT, PTT, HLA and lymphocyte phenotyping) may be collected for documentation of medical status when needed to either support a research project or assess well-being of the subject with regard to undergoing sample collection procedures. Results of such tests are available in the subject's medical record. Other standard medical tests may be obtained as well. Study subjects will be informed of any results that suggest a new diagnosis.

2.2 APHERESIS PROCEDURES AT NIH

Each apheresis procedure will be carried out by trained members of the NIH Clinical Center Apheresis Clinic under the supervision of the medical staff of the Department of Transfusion Medicine (DTM) by recommended methods [1]. Apheresis will be done using devices and procedures that conform to standard DTM guidelines and Standard Operating Procedures (SOPs). The plasma or peripheral blood mononuclear cells (PBMCs), or both, as requested, will be harvested. The red blood cells will be returned to the subject during all procedures and the plasma will be returned when PBMCs alone are the collected sample.

Blood from apheresis donors may also be tested for hepatitis A-G as part of the research investigation. HLA typing, genetic tests and HIV testing may also be performed. Stored samples may be used later to further evaluate immune responses and to elucidate genetic factors associated with immune response.

Approximately 1.0 – 3.0 x 10^9 cells will be collected per lymphapheresis procedure. The interval between successive apheresis procedures should be 21 or more days. In addition, the following guidelines apply to HIV positive subjects:

a) Subjects with CD4 <200 cells/μL are restricted to 3 apheresis sessions/year.
b) Subjects with CD4 >200 cells/μL are restricted to 6 apheresis sessions/year.

Subjects may be asked to undergo repetitive apheresis procedures depending upon the requirements of the particular research project for which the cells or plasma are being collected. Except under special circumstances (i.e. to be decided on a case-by-case basis), no subject should be asked to undergo more than six procedures per year. The DTM omnibus protocol for collection of mononuclear cells for research use by NIH investigators (protocol #99-CC-0168) allows performance of leukapheresis every 3 weeks in healthy subjects, not to exceed 17 donations per year. The U.S. Food and Drug Administration (FDA) regulations allow cytapheresis donations at a frequency of 24 donations per year, and plasmapheresis donations twice weekly [2]. With appropriate monitoring, at these frequencies, no detrimental long-term effects on healthy donors have been documented [3-6]. Since some of the subjects on the current protocol will have HIV infection, a more conservative upper limit of six donations per year was chosen.

Physicians or other staff ordering serial apheresis procedures are responsible for monitoring the immunologic and hematologic parameters of the subjects during these procedures. Declines in CD4 count, platelet counts, etc. that are potentially procedure-related will be considered when scheduling the interval for a subsequent apheresis procedure.

All exceptions to the above guidelines need to be discussed with and cleared by the PI (or designee) and must be reviewed and approved by the NIAID IRB beforehand. Apheresis of subjects in violation of the above guidelines may result in loss of access to this protocol.

2.3 APHERESIS PROCEDURES AT EXTERNAL RESEARCH SITES

If an apheresis procedure is performed at other sites outside of NIH, local site SOPs and guidelines will be followed.

3. PROTOCOL OBJECTIVES

To obtain human biological specimens such as blood (via phlebotomy), plasma or PBMC samples (via apheresis), mucosal secretions, skin swabs, body fluids or skin biopsy to support medical research.

4. PROTOCOL DESIGN AND CLINICAL PROCEDURES

Informed consent using a site-specific IRB-approved informed consent form will be obtained by all subjects prior to participation in this protocol. This protocol also allows for remote enrollment and sample collection, with the option for remote informed consent process being conducted by telephone (see Appendix IV).

4.1 ELIGIBILITY CRITERIA

Criteria for enrollment are minimal; however, additional eligibility requirements will be confirmed by a study clinician before scheduling a subject for apheresis or skin biopsy.

4.1.1 Inclusion Criteria

A subject must meet all of the inclusion criteria, as follows:

1. Age 18 years or older
2. Able and willing to complete the informed consent process
3. Willing to provide blood or other samples that will be stored for future research
4. Able to provide proof of identity to the acceptance of the clinician completing the enrollment process; when the telephone consent process is used, the clinician performing the sample collection will review and confirm the proof of identity

4.1.2 Exclusion Criteria

A subject will be excluded from protocol participation if there is presence of a condition that the attending physician considers to be a contraindication to the specimen collection procedures.

4.2 SCREENING AND ANNUAL ELIGIBILITY VISITS

Prescreening will include education about study procedures and a discussion of the eligibility criteria and purpose of the sample collections. If the subject is willing to participate, the informed consent will be signed and eligibility criteria documented. Subjects can participate in this protocol for one year using a single consent document. The informed consent will be reviewed and signed again if it has been more than one per year since the last prior specimen collection.

Screening evaluations that are required for determining specimen collection procedural eligibility must be completed within the 56 days prior to the procedure being performed. If the required evaluations are already available in the subject's medical record within the required timeframe, they do not have to be repeated for this protocol.

Screening and specimen collection procedures may all be performed in one visit or may be split into more than one visit, as needed, to meet the needs of an individual subject or the research study.

4.2.1 Schedule of Evaluations

1. Informed Consent process and signature of consent
2. Medical History; this may be limited to information relevant to the sample collection procedures or laboratory research for which the sample will be used. If a skin biopsy is to be collected, then the subject will be asked about a history of keloid scar formation and allergies to local anesthetic medications.
3. Physical Examination; this may be limited to blood pressure, temperature, heart rate, height and weight. A more extensive physical exam is not required, but may be performed based on the medical judgment of the clinician completing the screening process, needs of the research for which the sample is being collected or if requested by the subject.

4. CBC with differential and platelets: This evaluation is typically done but may be deemed as "not required" by a study physician or advanced practitioner based upon the circumstances and type of sample collection.
5. HIV-1 Serology: This evaluation is typically done as an HIV ELISA, with confirmatory testing needed to document HIV status; sites may use HIV tests that meet local institutional policy.

   For subjects already documented in the medical record to be HIV positive a quantitative viral load measurement alone may be done. When HIV status is not considered relevant to the research sample use, it is not a required evaluation.
6. CD4 count is optional, but usually obtained for subjects already documented in the medical record to be HIV positive; CD4 count may be done, but is not required for other study subjects.
7. Collection of samples to be stored for subsequent testing for hepatitis, other pathogens, and/or genetic tests/HLA type if needed for research use of the sample.
8. Other laboratory tests, as needed, to provide medical status information to support the research study or to assess the subject's well-being.

4.3 APHERESIS

In order to undergo apheresis procedures, a subject must have no medical contraindications. All apheresis procedures performed under this protocol are solely for research purposes. Subjects participating in an active clinical research protocol may participate in the apheresis protocol if the total amount of blood drawn does not exceed NIH guidelines or a site's institutional guidelines. A study clinician will complete a checklist for apheresis eligibility before referring a subject for apheresis. At the NIH, prior to scheduled procedure, the subject must have a venous assessment performed by the Apheresis staff to determine suitability for apheresis.

4.3.1 Apheresis Eligibility Criteria

For Healthy Volunteer

A healthy volunteer must meet all of the following criteria:

1. Afebrile (temperature $\leq 37.5^0$C)
2. Weight $\geq$110 pounds
3. Adequate bilateral antecubital venous access
4. Hemoglobin $\geq$ 12.5 g/dL for females; $\geq$ 13.0 g/dL for men
5. Platelets > 150,000 K/uL
6. No cardiovascular instability as indicated by a) history of medically significant cardiac arrhythmia within the last 12 months, or b) ischemic cardiovascular disease within the last 12 months, or c) heart rate outside of the 50 - 100 beats/minute interval (on 3 successive readings), or d) blood pressure greater than 180 mmHg (systolic) or 100 mmHg (diastolic) on 3 successive readings
7. No current lung or kidney disease
8. No known coagulation disorder

9. No sickle cell disease
10. No active or chronic hepatitis
11. No intravenous injection drug use in the past 5 years
12. Not breast feeding
13. Negative beta-human chorionic gonadotropin (β-HCG) pregnancy test (urine or serum) performed by a VRC study clinician within 72 hours prior to the apheresis procedure

Infectious Disease Patient

A patient with an infectious disease must meet all of the following criteria:

1. Weight ≥ 110 pounds
2. Afebrile (temperature ≤ 37.5° C)
3. Adequate bilateral antecubital venous access
4. No cardiovascular instability as indicated by a) history of medically significant cardiac arrhythmia within the last 12 months, or b) ischemic cardiovascular disease within the last 12 months, or c) heart rate outside of the 50 - 100 beats/minute (on 3 successive readings), or d) blood pressure greater than 180/100 mmHg (on 3 successive readings)
5. No current lung or kidney disease
6. No known coagulation disorder
7. No receipt of clotting factor concentrates in the past 5 years
8. Hemoglobin ≥ 9.0 g/dL
9. Platelets ≥50,000 K/uL
10. WBC ≥ 2.0 K/uL
11. Not breast feeding
12. Negative beta-human chorionic gonadotropin (β-HCG) pregnancy test (urine or serum) performed by a VRC study clinician within 72 hours prior to the apheresis procedure

4.3.2 Apheresis Procedures

Subjects must have initial apheresis procedure within 56 days of eligibility screening. Once determined eligible for apheresis, subjects do not need to be re-screened for each subsequent apheresis procedure unless deferred by the apheresis unit.

For women of reproductive potential, a pregnancy test by blood or urine will be performed by a VRC study clinician within 72 hours prior to the apheresis procedure. Results must be negative to proceed with apheresis.

Prior to beginning the apheresis procedure, a study clinician may request in advance that other laboratory tests be collected, such as CD4+ T cell count, PCR viral load, liver function panel or other tests as needed to monitor the well-being of the subjects or samples as needed by a research laboratory. The total volume of blood samples and types of specimens collected will be recorded in the records kept for each protocol visit.

Apheresis will require two antecubital venous access sites and will involve processing of less or equal to 5 liters of whole blood. When PBMC are collected, the expected mononuclear cell yield is approximately 0.5 to 1.0 x 10^9 cells per liter processed, and the apheresis device can process about 2-3 liters per hour. Thus, 1 to 2 hours are required to process 1 to 4 liters of blood and obtain about 1 to 4 x 10^9 leukocytes.

The volume of plasma removed during an apheresis procedure may range from 100 to 600 mL, depending on the procedure. The plasma volume is not replaced per regulatory standards. Subjects will be advised to drink a 12-oz glass of a decaffeinated beverage prior to the procedure.

About 6 mL of red blood cells will also be lost through the apheresis procedure. To account for this, a volume of 6 mL will be included when calculating the total whole blood sample volumes collected per apheresis visit. The clinic staff will take into account all samples collected for this and other protocols in which the subject may be participating.

During or following an apheresis visit, if there is any concern about the well-being of the subject, the clinic may conduct appropriate medical evaluations by history-taking, physical examination, laboratory tests, and/ or other testing.

NIH Clinic Site only:

All study subjects will be treated according to standard whole blood and apheresis donation policies and procedures operative in the Department of Transfusion Medicine (DTM). The Dowling Apheresis Clinic staff at the NIH Clinical Center routinely performs a hemoglobin test prior to initiating apheresis. If a subject is found to have a hemoglobin value less than permitted by the Apheresis Clinic, then the apheresis will not be initiated and the ordering provider will be notified. The VRC Study Coordinator will provide the Apheresis center with a request for numbers and types of tubes of blood to be collected prior to beginning the apheresis.

4.4 SKIN BIOPSY

The skin biopsies will be performed by a trained professional under universal antiseptic norms. The procedure may be done using local anesthesia. In order to undergo a skin biopsy, a subject must have no medical contraindications. The clinician will complete a checklist for skin biopsy eligibility before the procedure is performed. The skin biopsy eligibility includes the following:

1. No known allergies to the local anesthetic to be used
2. No history of keloid formation
3. No known coagulation disorders
4. Not pregnant or breast feeding

Subjects will have no more than 2 skin biopsies in the same visit and no more than 6 biopsies in a 1-year period.

Formal pathology review in a CLIA certified laboratory will not be performed unless the clinician assesses that there may be a medical condition not previously diagnosed.

4.5 BODY FLUID SAMPLES

For males providing a semen specimen in clinic, a private room will be given for the donation. Semen will be collected into a clinical container made for this purpose.

Urine samples, oral secretions, swabs of mucosa (e.g. gingiva, pharynx, penis, rectum, vagina) will be collected by standard clinical techniques.

These samples may be used for routine clinical testing or delivered to investigators or collaborators for research assays or storage for future research.

4.6 CRITERIA FOR DISCONTINUING PARTICIPATION

A subject may be discontinued from protocol participation for the following reasons:

1. Subject decides to discontinue participation
2. Subject has not had any protocol visits for 1 year
3. Subject has a serious adverse event related to study procedures that is a contraindication to future specimen collection procedures
4. Subject develops a medical condition that is a contraindication to continuing study participation
5. Subject becomes pregnant
6. Subject has repeatedly fails to comply with protocol requirements
7. The site Principal Investigator, Protocol Chair, or IRB decide to stop the protocol
8. The site Principal Investigator or Protocol Chair assesses that it is not in the best interest of the subject for the subject to continue participation

Subjects discontinued from participation may return to active status at a later date provided they are determined to be eligible by undergoing the screening process again and signing a new consent. Such subjects should be returned to active status using the same study identification number assigned previously for this protocol.

4.7 CRITERIA FOR STOPPING THE PROTOCOL

This study will be stopped if the Investigators decide that no additional subjects are needed or if regulatory authorities require discontinuation of the study.

5. SAFETY AND EVENT REPORTING

5.1 DEFINITIONS

5.1.1 Adverse Event

An adverse event (AE) is any untoward or unfavorable medical occurrence in a human subject, including any abnormal sign (for example, abnormal physical exam or laboratory finding), symptom, or disease, temporally associated with the subject's participation in the research, whether or not considered related to the subject's participation in the research.

The risks of the study procedures are minimal and are generally confined to the period of the actual study visit itself. In this protocol, AEs that are non-serious will not be routinely recorded in the protocol database.

5.1.2 Serious Adverse Event

An AE is designated a Serious Adverse Event (SAE) if it has any of the following outcomes:

- results in death;
- is life-threatening (i.e., places the subject at immediate risk of death);
- results in inpatient hospitalization or prolongation of an existing hospitalization;
- results in a congenital anomaly/birth defect; **or**
- based upon appropriate medical judgment, may jeopardize the subject's health and may require medical or surgical intervention to prevent one of the outcomes listed above in this definition

For this sample collection protocol, only SAEs that occur during or within 24 hours after a protocol visit will be recorded in the study database. In this regard, the outcome of any pregnancies identified during participation in this screening protocol will **not** be followed for collection of data about possible congenital anomalies or birth defects as there are no investigational treatments or procedures associated with this screening protocol.

5.1.3 Unanticipated Problem

An Unanticipated Problem (UP) is defined as any incident, experience, or outcome that meets **all three** of the following criteria:

- is unexpected in nature, severity, or frequency in relation to the research risks that are described in the protocol, informed consent, Investigator's Brochure, other study documents or in consideration of the characteristics of the subject population being studied; **and**
- is related to participation in the research; **and**
- suggests that the research places subjects or others at a greater risk of harm (including physical, psychological, economic, or social harm) than was previously known or recognized.

Serious UP: An UP that meets the definition of an SAE or compromises the safety, welfare or rights of subjects or others.

An UP that is not an AE (UPnonAE) is an UP that does not fit the definition of an AE, but which may, in the opinion of the investigator, involve risk to the subject, affect others in the research study, or significantly impact the integrity of research data. Such events would be considered a non-serious UP. For example, for this study, we will report occurrences of breaches of confidentiality or accidental destruction of study records.

5.1.4 Protocol Deviation Definition

A Protocol Deviation is defined as any change, divergence, or departure from the IRB-approved study procedures in a research protocol that has a major impact on the subject's rights, safety, or well-being and/or the completeness, accuracy or reliability of the study data.

Non-serious Protocol deviations are characterized as:

- Those that occur because a member of the research team deviates from the protocol.
- Those that are identified before they occur, but cannot be prevented.
- Those that are discovered after they occur.

Serious Protocol Deviation: A deviation that meets the definition of a SAE or compromises the safety, welfare or rights of subjects or others.

5.1.5 Non-Compliance Definition

Non-compliance is the failure to comply with applicable NIH HRPP policies, IRB requirements, site-specific regulatory requirements or regulatory requirements for the protection of human subjects. Non-compliance is further characterized as serious, continuing or minor.

"Serious non-compliance" is defined as non-compliance that:

- Increases risks, or causes harm, to participants
- Decreases potential benefits to participants
- Compromises the integrity of the NIH-HRPP
- Invalidates the study data

"Continuing non-compliance" is non-compliance that is recurring.

"Minor non-compliance" is non-compliance that is neither serious nor continuing.

5.2 REPORTING TO THE NIAID IRB

Refer to the NIAID IRB website for the forms, procedures and most current guidance to use when reporting to the IRB.

The following will be reported within 7 calendar days of investigator awareness:

- Serious and non-serious UP
- Deaths
- Serious protocol deviations
- Serious or continuing non-compliance
- SAEs that are possibly, probably, or definitely related to the research regardless of expectedness. Only SAEs that occur during or within 24 hours after the protocol visit will be reported.

The following waiver applies to reporting anticipated protocol deviations and expected UPnonAEs: Anticipated deviations in the conduct of the protocol will not be reported to the IRB unless they occur at a rate greater than anticipated by the study team. Expected AEs will not be reported to the IRB unless they occur at a rate greater than that known to occur in healthy adults. If the rate of these events exceeds the rate expected by the study team, the events will be classified and reported as though they are unanticipated problems.

5.2.1 Annual Reporting to the IRB

The following will be reported to the IRB in summary at the time of Continuing Review:

- Serious and non-serious UP
- Expected SAEs that are possibly, probably, or definitely related to the research
- SAEs that are not related to the research
- All AEs, except expected AEs granted a waiver of reporting
- Serious and Non-Serious Protocol Deviations
- Serious, continuing, and minor non-compliance
- Any trends or events which in the opinion of the investigator should be reported

5.3 REPORTING TO A NON-NIH IRB

Each site IoR is responsible for reporting AEs, unanticipated problems, protocol deviations and non-compliance to the site IRB and other relevant local regulatory authorities in accordance with their institutional and country requirements for reporting.

Site-specific data reports will be made available through the data management contractor to facilitate expedited and continuing review reporting requirements.

5.4 DATA AND SAFETY MONITORING PLAN

The risk level of this protocol is low. The Principal Investigator and designees will monitor study data and subject safety.

6. STATISTICAL CONSIDERATIONS

This protocol does not require a statistical endpoint analysis. Data and blood samples collected as part of the protocol will be provided to laboratory investigators as needed for laboratory research analyses in a manner that does not reveal the identity of the subject.

7. STORED SAMPLES, HEPATITIS AND HIV SCREENING, AND GENETIC TESTING

To be eligible for the protocol, participants must be willing to allow stored specimens to be used in the future for studying HIV disease, immune function, and other medical conditions, and to have viral hepatitis screening, HIV testing, and genetic tests, including HLA typing, performed. If tests show evidence of any acute or chronic condition, subjects will be informed of the results and advised to seek appropriate medical care for the condition.

Intended use of the samples/specimens/data:

Samples, specimens and data collected under this protocol may be used to study HIV and other diseases, the immune system, other medical conditions, and for research assay validation. Genetic testing may be performed in accordance with the genetic testing information that was included in the study informed consent.

How stored samples, specimens and data from sample use will be stored:

All of the stored study research samples are labeled by a code (such as a number) that only the study team can link to the subject. Samples are stored at the Vaccine Immunology Testing Laboratory (VITL) in Gaithersburg, MD, at VRC laboratories, or at approved research

collaborator laboratories, which are all secure facilities with limited access. Skin biopsy samples collected for research may be stored at an approved collaborating laboratory (refer to Appendix II). Data will be kept in password-protected computers. Only investigators or their designees will have access to the stored samples and data.

How samples/specimens/data will be tracked:

Samples used by VITL will be tracked in the Laboratory Information Management System (LIMS) database. Research samples collected at each study visit will be recorded in the Advantage EDC database.

What will happen to the samples/specimens/data at the completion of the protocol:

In the future, other investigators (both at NIH and at external sites) may wish to study these samples and/or data. IRB approval must be sought prior to any sharing of samples. Any clinical information shared about those samples would similarly require prior IRB approval. The research use of stored, unlinked or unidentified samples may be exempt from the need for prospective IRB review and approval. Exemption requests will be submitted in writing to the NIH Office of Human Subjects Research, which is authorized to determine whether a research activity is exempt.

At the time of protocol termination, samples will remain in the VITL facility, VRC laboratories or approved collaborator's laboratory (refer to Appendix II). With IRB approval, stored samples may be transferred to another repository. Data will be archived by the VRC in compliance with regulatory requirements for retention of research records, or after IRB approval, records may be either destroyed or transferred to another repository.

Circumstances that would prompt the PI to report loss or destruction of samples/specimens/data to the IRB:

The NIH Intramural Protocol Violation definition related to loss of or destruction of samples will be followed in reporting to the IRB. Any loss or unanticipated destruction of samples (for example, due to freezer malfunction) or data (for example, misplacing a printout of data with identifiers) that compromises the scientific integrity of the study will be reported to the IRB. The PI will also notify the IRB if the decision is made to destroy the remaining samples.

8. HUMAN SUBJECT PROTECTIONS

This research study will be conducted in compliance with the protocol, Good Clinical Practices (GCP), and all applicable regulatory requirements.

8.1 INSTITUTIONAL REVIEW BOARD

A copy of the protocol, proposed informed consent document, other written information that is given to subjects, and any proposed advertising material will be submitted to the IRB for written approval.

The investigator will submit and, where necessary, obtain approval from the IRB for all subsequent protocol amendments and changes to the informed consent document. The investigator will notify the IRB of deviations from the protocol or serious AEs occurring at the site and other AE reports received from NIAID, VRC, in accordance with local procedures. The investigator will be responsible for obtaining annual IRB approval/renewal throughout the duration of the protocol.

8.2 SUBJECT IDENTIFICATION AND ENROLLMENT OF SUBJECTS

Participants may be subjects participating solely in this protocol or may be subjects in other VRC studies from whom more cells are needed for research than can be collected by routine phlebotomy. This is not research protocol that requires a fixed schedule of evaluations or a population in which all participants have particular health characteristics in common.

8.2.1 Participation of Children

Children are not eligible to participate in this clinical trial. The guidelines for the participation of children are in 45 CFR 46, Subpart D, 401-409. Under the Department of Health and Human Services protections for children, generally, healthy children can be studied when the research is considered as "not greater than minimal risk." Children can be involved in research with greater than minimal risk only when it presents the prospect of direct benefit to the individual child or is likely to yield generalizable knowledge about the child's disorder or condition.

8.2.2 Participation of Site Employees

Each study site will follow institutional policies regarding participation of site employees in VRC 200. Site specific policies related to employee involvement in research protocols have been provided to NIAID IRB.

NIH Clinic Site Specific:

At the VRC site, NIH employees and members of their immediate families may participate in this protocol. The VRC site will follow the Guidelines for the Inclusion of Employees in NIH Research Studies and will give each employee a copy of the "NIH Information Sheet on Employee Research Participation" and a copy of the "Leave Policy for NIH Employees Participating in NIH Medical Research Studies."

Neither participation nor refusal to participate will have an effect, either beneficial or adverse, on the participant's employment or work situation. The NIH information sheet regarding NIH employee research participation will be distributed to all potential subjects who are NIH employees. The employee subject's privacy and confidentiality will be preserved in accordance with NIH Clinical Center and NIAID policies. For the NIH employee subjects, consent will be obtained by an individual who is independent of the employee's team. If the individual obtaining consent is a co-worker to the subject, independent monitoring of the consent process will be included through the Bioethics Consultation Service. Protocol study staff will be trained on obtaining potentially sensitive and private information from co-workers or subordinates.

University of Puerto Rico Medical Sciences Campus (UPR MSC) Site Specific:

At the UPR MSC site, UPR MSC employees and students will not be enrolled in this protocol. The UPR MSC site will only enroll subjects from the community.

8.3 INFORMED CONSENT

The study informed consent form template is provided in Appendix I. The written informed consent document should be prepared in the language(s) of the potential subject population. Before a subject's participation in the protocol, it is the investigator's responsibility to ensure that written informed consent is obtained from the subject after adequate explanation of the aims, methods, anticipated benefits, and potential hazards of the protocol and before any protocol-specific screening procedures.

The acquisition of informed consent should be documented in the subject's medical records, as required by 45 CFR 46.117 and the informed consent form should be signed and personally dated by the subject and by the person who conducted the informed consent discussion. The original signed informed consent document should be retained in the medical chart and a copy of the consent form should be provided to the subject.

8.4 SUBJECT CONFIDENTIALITY

The investigator will ensure that the subject's anonymity is maintained in any reports. All records will be kept confidential to the extent provided by federal, state and local law. Medical records are made available for review within the guidelines set by the Federal Privacy Act. Direct access includes examining, analyzing, verifying, and reproducing any records and reports that are important to the evaluation of the protocol.

8.5 EVALUATION OF BENEFITS AND RISKS/DISCOMFORTS

There is no benefit to the subject for participating in this protocol, but society may benefit from knowledge gained from research on the specimen donations.

Risks of Specimen Collections: All specimen collection procedures used are common in routine medical practice.

- *Blood drawing*: The risks of blood sample collection are minimal and consist of mild discomfort at the sample collection site. The procedure may cause pain, bruising, and, rarely, infection at the site where the blood is taken.
- *Collection of samples by swabs*: rubbing swabs over the mucosal surfaces can cause momentary discomfort.
- *Skin biopsy*: any time the skin is opened, such as occurs with a skin biopsy, there is a chance of infection. Infection after a skin biopsy is rare and care will be taken to try to prevent infection. There may be pain or discomfort during the skin biopsy or while it is healing. There may be a small amount of bleeding after the skin biopsy. There is the risk of a small scar. Subjects known to form "keloid" scars are not eligible for a skin biopsy performed solely for research purposes. Rarely, the local anesthetic medicine used to numb the skin may cause an allergic reaction.
- *Apheresis*: donations may cause pain, bruising, and discomfort in the arms where the needles are placed. It may also cause chills, nausea, heartburn, mild muscle cramps and tingling sensation around the mouth or in the fingers, however this can usually be relieved by slowing or temporarily interrupting the apheresis or taking a calcium containing antacid, such as Tums®. Other possible side effects are anxiety, vomiting and lightheadedness. Temporary lowering of the blood pressure may develop. There is the rare possibility of infection, fainting or seizure. Very rarely a nerve problem at the needle placement site may occur. Also, very rarely, a machine malfunction may occur, resulting in the loss of about one unit of blood. There may be additional risks of apheresis that are unknown at this time.
- *New Diagnoses*: It is possible that the standard medical tests performed as part of this research protocol will result in new diagnoses. Depending upon the medical findings and

consequences of being provided with the new medical information about health status, the study subject may view this aspect of study participation as either a risk or a benefit.

Expected Adverse Events Associated with Apheresis:

All study subjects will be treated according to standard whole blood and apheresis donation policies and procedures operative in the DTM. Adverse reactions to apheresis procedures are rare. They include pain and bruising at needle placement sites and the loss of less than a pint of blood due to rare cases of apheresis device malfunction. Vasovagal episodes, characterized by transient hypotension, dizziness, nausea, and rarely syncope, are seen in less than 5% of procedures. Citrate toxicity, consisting of cutaneous paresthesia's, chills, nausea, and rarely muscle spasms, is caused by the citrate anticoagulant used to prevent the extracorporeal circuit from clotting, and may be seen to a mild degree in 30-50% of donations. Postural manipulation and fluid administration are used to manage vasovagal reactions. Citrate reactions are usually relieved by slowing the rate of the anticoagulant infusion and by administering oral calcium carbonate tablets.

The plastic kits used to collect the blood and apheresis products are sterilized, single-use, disposable sets. No blood products are given during these donations and procedures. A DTM physician is available in or near the Apheresis Donor Area at all times to provide short term medical care for complications or reactions resulting from the donation procedures.

Rarely, machine malfunction may results in loss of as much as a half-unit (250 mL) of whole blood.

Subjects may rarely sustain a drop in total lymphocyte count (and CD4+ T cell count) when lymphapheresis is performed frequently over a short period of time[5, 6]. The extent and duration of this drop appears to be variable and not necessarily predictable; therefore there are no absolute guidelines as to what may constitute an excessive number or frequency of procedures under these circumstances. Further, the long-term consequences, if any, of this drop are unknown, but presumably could be more significant in subjects with pre-existing baseline abnormalities in total lymphocyte or CD4+ T cell numbers, such as those with advanced HIV-1 disease or other causes of lymphocytopenia. As a safeguard, the Apheresis Clinic has guidelines to assist in determining whether it is both safe and appropriate for a given subject to undergo serial apheresis procedures. However, these guidelines are general rules that are not meant to take the place of the clinical judgment of the Principal Investigator in reviewing a subject's clinical history and deciding independently whether a subject remains eligible to undergo additional apheresis procedures. Individual scientists or other protocol personnel requesting apheresis of particular subjects are also responsible for ensuring that serial measurements of CD4+ T cell counts, platelet numbers, and other safety parameters as indicated, are performed appropriately. This is particularly important if individual subjects are having apheresis procedures performed for more than one research protocol.

8.6 COMPENSATION

Subjects will be compensated for time and inconvenience in accordance with the standards for compensation at each site. The total compensation for the subject is based on the number of study clinic visits and sample collections performed.

Compensation rates are based on site policy and are consistent with similar protocols conducted at these sites. Sites rates are as follows:

Site	Apheresis Procedures	Clinic Visits Involving Needle-stick Procedures (excluding apheresis)	Clinic Visits Without Needle-stick Procedures	Skin Biopsy	Timeline for providing compensation
VRC	$250	$175	$75	$200	After each completed clinic visit by direct deposit
UPR MSC	N/A	$100	$50	N/A	After each completed clinic visit by cash

The approximate total compensation is included in each site informed consent document. Compensation may need to be reported to the Internal Revenue Service (IRS) as taxable income.

9. ADMINISTRATIVE AND LEGAL OBLIGATIONS

9.1 PROTOCOL DOCUMENTATION AND STORAGE

The principal investigator will maintain a list of appropriately qualified persons to whom trial duties are delegated.

Source documents are original documents, data, and records from which the subject's data are obtained. These include but are not limited to hospital records, clinical and office charts, laboratory and pharmacy records, diaries, and correspondence.

The investigator and staff are responsible for maintaining a comprehensive and centralized filing system of all protocol-related essential documentation, suitable for inspection at any time by representatives from NIAID, VRC and/or applicable regulatory authorities. Elements include:

- Subject files containing completed informed consent documents, and supporting copies of source documentation
- Files containing the protocol with all amendments, copies of all correspondence with the IRB and the National Institute of Allergy and Infectious Diseases, Vaccine Research Center.

In addition, all original source documentation will be maintained and be readily available.

All essential documentation will be retained by the institution for the same period of time required for medical records retention. No protocol document will be destroyed without prior written agreement between the National Institute of Allergy and Infectious Diseases, Vaccine Research Center and the investigator.

9.2 Monitoring and Data Collection

The National Institute of Allergy and Infectious Diseases, Vaccine Research Center, regulatory authority inspectors or their authorized representatives are responsible for contacting and visiting the investigator for the purpose of inspecting the facilities and, upon request, inspecting the various records of the trial, provided that subject confidentiality is respected.

Clinical research data will be collected in a secure electronic data management system maintained by the VRC. Source documentation is entered into the subject's medical chart.

9.3 Policy Regarding Research-Related Injury

The study site will provide short-term medical care for any injury resulting from participation in this protocol. In general, no long-term medical care or financial compensation for research-related injuries will be provided by the study sites, the National Institutes of Health, or the United States Federal Government.

9.4 Multi-site Management

The Vaccine Research Center, NIAID, NIH is the coordinating center as well as a site for this protocol. Each site that will be participating will have a site Principal Investigator and Associate Investigators (see Appendix II) who have parallel roles at their respective institutions in managing the conduct of the study at their sites in compliance with all applicable regulations and good clinical practices. The protocol plan is to establish a Reliance Agreement with each collaborating study site such that the NIAID IRB is the IRB of Record for the conduct of the protocol. If a reliance agreement is not established, the site will be required to obtain a local IRB review.

9.5 Language

All written information and other material to be used by subjects and investigative staff must use vocabulary and language that are clearly understood.

9.6 Publications Resulting from this Protocol

The specimens collected through this research protocol have been used in the support of assay development and validation which does not typically result in a publication of results, as well as laboratory research studies that have been published [7-24].

APPENDIX I: INFORMED CONSENT FORM

The template informed consent forms are provided to guide development of a site-specific consent form. Only IRB-approved consent forms will be used to consent subjects for study participation.

Title: VRC 200: A Multicenter Specimen Collection Protocol to Obtain Human Biological Samples for Research Studies

VRC 200 Standard Informed Consent Form Template

INTRODUCTION

We invite you to take part in a research study at the [insert name of institution].

First, we want you to know that:

Taking part in [insert name of institution] research is entirely voluntary.

You may choose not to take part, or you may withdraw from the study at any time. In either case, you will not lose any benefits to which you are otherwise entitled. However, to receive care at the [insert name of institution], you must be taking part in a study or be under evaluation for study participation.

You may receive no benefit from taking part. The research may give us knowledge that may help people in the future.

Second, some people have personal, religious or ethical beliefs that may limit the kinds of medical or research treatments they would want to receive (such as blood transfusions). If you have such beliefs, please discuss them with your [insert name of institution] doctors or research team before you agree to the study.

Now we will describe this research study. Before you decide to take part, please take as much time as you need to ask any questions and discuss this study with anyone at [insert name of institution], or with family, friends or your personal physician or other health professional.

PURPOSE AND PROCEDURES

The purpose of this study is to collect biological specimens for research purposes. Parts of the blood are often needed in research studies. Other types of specimens sometimes needed for research are other blood components, body fluids (such as semen or urine), or secretions (for example, from the nose, mouth, or different skin areas). A skin sample (biopsy) is another type of specimen that is sometimes useful for research.

Scientists at the Vaccine Research Center (VRC) will use these samples for research studies of different diseases and immune system responses, including HIV, hepatitis, responses to infections, vaccinations and other medical research. Even if you do not have a disease, your samples can be used to try to discover ways to prevent or treat medical conditions. Standard approved medical procedures will be used to collect these samples.

The following must be true for you to be eligible for the study:

- You must be age 18 years or older
- You must be able and willing to complete the informed consent process
- You must be willing to provide samples that will be stored for future research

- You must be able to provide proof of your identity

You must sign this consent before we can begin screening. Signing this form indicates that you are willing to be screened and, if eligible, you may enroll. If the screening shows that you are not eligible for the study, you will not be enrolled. A doctor or nurse will ask you some questions about your medical history and perform a physical exam.

You have the right to refuse any of the types of samples collections procedures at any time. You may not be offered certain types of sample collections if there is not a need for such samples by any research laboratories at the time of your visit. You may not be eligible for some types of sample collections. A study nurse or physician will check for your eligibility for the sample collections that have special requirements.

Your consent to enroll will be consent to collect samples for up to a one-year period. After that, if more samples are needed and you wish to continue participating in this protocol, you must sign a new consent form each year.

As many as 3,000 people may participate in this study. The actual number may be lower or be higher, depending on the need for research samples and the willingness of subjects to participate. Most subjects will have only one or a few samples collected. Different types of samples are discussed in the consent, but only certain types of sample types may be collected from you. This will be discussed in advance before the sample is collected.

BLOOD SAMPLES

Blood will be drawn by standard phlebotomy techniques from veins in the arms or hands only. Typically, about 100 mL (about 6 tablespoons) of blood will be drawn from your arm for testing. More or less may be drawn depending upon the research needs. The study staff will discuss the blood draw plan with you before starting.

URINE, SEMEN, SALIVA OR SWAB SAMPLES

If applicable and needed, samples of urine, semen, or saliva may also be collected for research use.

For urine and semen samples, you will collect the sample in private by yourself with a cup.

Some samples will be collected by a swab, a nurse or doctor will use a swab (like a Q-tip) to brush a part of your body, such as over a skin area or inside the nose, the mouth, vagina, or penis. For certain types of swab samples, for example around the anal area, you may collect the sample yourself, in private.

SKIN BIOPSY

If you are willing and eligible, and a skin sample is needed for research, then a separate consent will be signed, which explains the procedure and risks.

APHERESIS

We may ask you to provide blood samples collected by a procedure called "apheresis." To be eligible for apheresis:

- You must not have an unstable heart as indicated by your medical history and test results
- You must not have blood pressure greater than 180/100
- You must not have a known blood clotting disorder

- You must not be breast feeding
- If you are a woman who could get pregnant, you will have a urine or blood pregnancy test within 72 hours before the apheresis procedure. The test must show that you are not pregnant
- You must not to have a condition that the attending physician or the apheresis clinic staff considers a reason to not do an apheresis procedure

Before an apheresis is done, your weight, pulse and blood pressure will be checked, and you will have a blood test to be sure you are healthy enough to donate blood cells. You will be asked questions about your general health and medical history. You will be asked to lie on a recliner or couch.

The procedure is done using one needle placed into each arm. The kits used to collect the apheresis products are sterilized, single-use, disposable sets that are not in contact with any person's body fluids other than yours. No blood products are given to you during these procedures.

In the apheresis procedure, blood is removed through a needle in the vein of one arm, spun in a machine that permits separation of the desired blood component (white blood cells or plasma), and then the remainder is returned through a needle in the other arm. Citrate, a medication to prevent blood from clotting, is added to the blood while in the machine to prevent it from clotting.

The purpose of this procedure is to allow the investigator to obtain and study a larger number of white blood cells or plasma than would otherwise be possible by simple blood drawing. The number of white blood cells or plasma collected is a small fraction of the total amount in your body. The body quickly replaces removed cells and plasma. Similar procedures are used on a daily basis in the Blood Bank of the [insert name of institution] and by other blood banks as a means of obtaining blood products from normal donors and as a form of therapy for certain diseases. Your samples will not be used for transfusion or therapy, however. The procedure will take approximately 1-3 hours.

HEPATITIS SCREENING

Some of the blood drawn from you as part of this study may be used to screen for different types of viral liver infections, such as hepatitis. If the tests show evidence of hepatitis or other medical conditions, you will be informed of the results. If you do not have a regular physician, the study team will assist in referring you to an appropriate physician for evaluation.

GENETIC TESTING

Some of the blood drawn from you as part of this study will be used for genetic tests. Some genetic tests are done in research studies to see if genetic differences in people cause different types of immune responses. Your blood sample used in these genetic tests will not have your name on it, and the results will not be in your medical record. These tests are not used to check your health, and we will not tell you the results.

NIH Site only: A special genetic test, called HLA typing, may be done by the NIH Clinical Center medical laboratory. These results will be in your medical record, but they will not be used to check your health. Any genetic testing, including HLA typing, is for research purposes only. Any genetic information collected or learned about you will be kept confidential. Medical

records, including HLA test results, are kept securely. We will not give any genetic information that is in your medical record to anyone without your permission.

If HLA typing is done in a research laboratory, the result will not be included in your medical record.

HIV TESTING

As part of this study, we will test you for infection with the Human Immunodeficiency Virus (HIV), the virus that causes AIDS. If you are infected with HIV, you will still be able to participate in this study. We will tell you what the results mean, how to find care, how to avoid infecting others, how we report HIV infection, and the importance of informing your partners at possible risk because of your HIV infection.

STORED SAMPLES

To be eligible for the study, you must also be willing to allow some of your blood and other samples to be stored for future research on HIV disease, the immune system, or other medical conditions.

Generally, the results from the research done with your stored samples will not be given to your private doctor and will not be put in your medical record. This is because the test results, unlike routine medical testing, may be experimental or preliminary. The relevance of these tests to your care may be unknown. However, at your request, the results of any research tests will be discussed with you or your physician by one of the investigators.

Labeling of stored samples: Your stored samples will be labeled with a code (such as a number) that only the study team can link to you. Any identifying information about you will be kept confidential to the extent permitted by law.

Future studies: Your samples may be kept in storage for a long time and used in the future by medical researchers. When the study team shares your samples, they will share it with only a code on it. Some information about you, such as your gender, age, health history, or ethnicity may also be shared with other investigators.

Your stored materials will be used only for research and will not be sold or used for treating other people. The research done with your materials may be used to develop new products in the future, but you will not receive payment for such products.

RISKS

Blood drawing may cause pain, bruising, and, rarely, infection at the site where the blood is taken.

Collection of samples by swabs rubbing over the inside of the nose, inside the mouth, vagina, penis or skin can cause temporary discomfort.

Apheresis Procedure Risks: Apheresis donations are generally safe and side effects are rare. Pain, bruising or discomfort at the needle placement site may occur. Sometimes apheresis causes a tingling sensation around the mouth or in the finger, chills, nausea, heartburn or mild muscle cramps. This can usually be relieved by slowing or temporarily interrupting the apheresis or taking a calcium containing antacid, such as Tums®. Other possible side effects are anxiety, vomiting, and lightheadedness. Temporary lowering of the blood pressure may develop. There is the rare possibility of infection, fainting or seizure. There may also be a slightly increased

bleeding tendency for a few hours after the procedure due to the temporary presence of the anticoagulant. Very rarely a nerve problem at the needle placement site may occur. There are theoretical risks from re-infusion of the blood after processing by the machine such as infection or an adverse reaction to the blood components. However, these risks must be exceedingly rare if they occur, since they have not been seen in many thousands of subjects who have undergone this or similar procedures to date. Rarely the performance of frequent apheresis procedures over a short period of time can result in a drop in total blood cell counts, including the absolute CD4+ T cell count (a type of blood cell that fights infection), or a drop in the platelet count (a type of blood cell that helps blood to clot). The extent or duration of the drop in these cell counts may be unpredictable and vary from person to person. The short or long-term risks associated with these drops are also unknown, and they could possibly be more serious in those individuals whose blood counts are already below the normal range as a result of HIV-1 infection or other medical conditions.

Based upon your blood cell counts or other medical conditions, we may limit the number of times that you are eligible to undergo apheresis over a set period of time. Blood cell counts and other safety blood studies may be checked periodically during the time that you are enrolled on this protocol. You will be informed about the results of the type of routine blood tests that are done to check on the state of your health. There may be additional risks of apheresis that are unknown at this time. Any new information that may affect your willingness to participate in this study will be disclosed to you.

BENEFITS

There will be no direct benefit to you for participating in this protocol. The knowledge gained through this research may benefit others in the future.

UNKNOWN RISKS or BENEFITS

Some routine medical tests may be performed during study participation. You may learn new information about your health. Receiving a new diagnosis may be stressful. You may feel that learning new information about your health is a benefit of study participation. Or you may feel this is risk of study participation.

ALTERNATIVES

This study procedures are not being done to treat a medical condition. You may choose to not participate in any or all of the procedures discussed.

COMPENSATION

[Site specific information]

You will be compensated [insert amount] for each visit than includes an apheresis procedure, [insert amount] for each visit (without apheresis) that includes procedures that require a needle-stick, and [insert amount] for clinic visits in which there is no needle-stick. If a skin biopsy is performed, extra compensation is provided and this is discussed in the skin biopsy consent.

Compensation will be provided [add site-specific time for when compensation will be provided].

Total compensation is based on the number of study clinic visits and the type of sample collection performed. Your compensation may need to be reported to the Internal Revenue Service (IRS) as taxable income.

REASONS FOR REMOVING YOU FROM THE STUDY WITHOUT YOUR CONSENT

You may be removed from the study without your consent for the following reasons:

- The NIH doctor feels that staying in the study is harmful to you.
- The study is cancelled or stopped.
- You don't keep appointments or follow study procedures.

COSTS TO YOU FOR YOUR PARTICIPATION

There will be no charge to you or your health insurance company for any of the costs that are directly related to this study. However, the costs of any other medical care you may need during this period will be your responsibility.

OTHER PERTINENT INFORMATION

1. Confidentiality. When results of an NIH research study are reported in medical journals or at scientific meetings, the people who take part are not named and identified. In most cases, the [insert name of institution] will not release any information about your research involvement without your written permission. However, if you sign a release of information form, for example, for an insurance company, the [insert name of institution] will give the insurance company information from your medical record. This information might affect (either favorably or unfavorably) the willingness of the insurance company to sell you insurance.

The Federal Privacy Act protects the confidentiality of your [insert name of institution] medical records. However, you should know that the Act allows release of some information from your medical record without your permission, for example, if it is required by the Food and Drug Administration (FDA), members of Congress, law enforcement officials, or other authorized hospital accreditation organizations.

2. Policy Regarding Research-Related Injuries. The [insert name of institution] will provide short-term medical care for any injury resulting from your participation in research here. In general, no long-term medical care or financial compensation for research-related injuries will be provided by the National Institutes of Health, [insert name of institution] or the Federal Government. However, you have the right to pursue legal remedy if you believe that your injury justifies such action.

3. Payments. The amount of payment to research volunteers is guided by the [insert name of institution] policies. In general, patients are not paid for taking part in research studies at the [insert name of institution]. Reimbursement of travel and subsistence will be offered consistent with [insert name of institution] guidelines.

4. Problems or Questions. If you have any problems or questions about this study, or about your rights as a research participant, or about any research-related injury, contact the principal investigator, [insert name] at [insert number], or Study Coordinator, [insert name] at [insert phone number]. You may also call the Clinical Center Patient Representative at 301-496-2626.

5. Consent Document. Please keep a copy of this document in case you want to read it again.

COMPLETE APPROPRIATE ITEM(S) BELOW:

Adult Patient's Consent

I have read the explanation about this study and have been given the opportunity to discuss it and to ask questions. I hereby consent to take part in this study.

Signature of Adult Patient/Legal Representative	Date	Print Name

THIS CONSENT DOCUMENT HAS BEEN APPROVED FOR USE FROM [insert date] THROUGH [insert date].

Contact information for collaborations added after VRC 200, Version 1.0 approval:

Contact	Research Collaboration
Antonio Lanzavecchia, M.D. Institute for Research in Biomedicine Via Vincenzo Vela 6 CH-6500 Bellinzona Switzerland 41-91-8200310 lanzavecchia@irb.unisi.ch	Approved as Amendment L (OPS approval 4/11/07) The VRC will send stored specimens to a non-NIH collaborator for laboratory research related to immune responses to antigens associated with filoviruses (e.g., Ebola, Marburg) and arenaviruses (e.g. Lassa fever virus). This immunological research will include isolation of human monoclonal antibodies. The laboratory data will then be provided to VRC in support of VRC vaccine research. Hybridomas secreting the monoclonal antibodies identified through this collaboration will also be provided back to VRC as part of this collaboration.
Georgia Tomaras, Ph.D. Duke Human Vaccine Institute 106 Research Drive MSRB II, 4th Floor Duke University Medical Center 103020 Durham, NC 27710 919-684-5384 gdt@duke.edu	Approved as Version 6.0, Letter of Amendment #1 (OPS Amendment P approval 1/17/08) Coded blood samples, without personal identifying information, will be sent to the Duke Human Vaccine Institute for the conduct of *in vitro* assays that are based on previously published methods and evaluate for the viral suppression activity of activated T cells. The VRC will collaborate with this research group to use these data, as well as other measures of immunogenicity, towards the goal of better understanding of immune responses to vaccines and viral pathogens.
Rafik Sekaly, M.D. Université de Montréal, CR-CHUM Institut National de la Santé et de la Recherche Médical, U743 Montréal, Québec, H2X1P1 Canada rafick-pierre.sekaly@umontreal.ca 514-890-8000, x0728	Approved as Version 6.0, Letter of Amendment #2 (OPS Amendment R approval 2/29/08) Coded peripheral mononuclear blood cell samples, without personal identifying information, will be sent to Montreal University to perform *in vitro* gene array assays towards the goal of better understanding host genetic factors that affect immune responses.
Jacob D. Estes, Ph.D. The AIDS and Cancer Virus Program SAIC-Frederick, Inc. NCI-Frederick Fort Detrick Campus Bldg. 535, Rm. 413b Frederick, MD 21702 301-846-7641 estesj@mail.nih.gov	New in Version 7.0 Coded skin biopsy samples may be sent to the AIDS and Cancer Virus program for immunohistochemistry; evaluations may include assessments for neutrophils, B cells, T lymphocytes [including retinoid-related orphan receptor gamma t (RORgt) and interleukin 17 to assess for Th17 cells], defensins and other immunohistochemistry parameters. Microarrays may be performed on the tissue, and if sufficient quantity is available, flow cytometry to look at T cell subsets and cytokine expression.
Clemencia Pinilla, Ph.D. Torrey Pines Institute for Molecular Studies 3550 General Atomics Court San Diego, CA 92121 858-455-3783	Approved as Version 7.0, Letter of Amendment #1 (OPS Amendment X approval 9/9/08) Coded PBMC samples, without personal identifying information, will be sent to the Torrey Pines Institute for

cpinilla@tpims.org	Molecular Studies to identify new epitopes within vaccinia. These epitopes may be relevant vaccine targets and they will make possible new analyses of immune responses in vaccine evaluation and studies of disease pathogenesis.
Stephen De Rosa, Ph.D. HVTN Laboratory Program Fred Hutchinson Cancer Res Ctr 1100 Fairview Ave. North, LE-200 Seattle, WA 98109-1024 Phone: 206-667-1681 Fax: 206-667-6608 Email: sderosa@fhcrc.org Guido Ferrari, M.D. CHAVI Duke Repository Assistant Research Professor Department of Surgery Duke University Medical Center DUMC Box 2926 Durham, NC 27710 Phone: 919-684-3042 Fax: 919-684-4288 Email: gflmp@duke.edu Jill Gilmour, Ph.D. Senior Director, Clinical Research IAVI Core Laboratory 5th floor, St. Stephens Centre Chelsea and Westminster Hosp. 369 Fulham Road London, SW 10 England 9NH Phone: 44-208-746-5098 Email: jgilmour@iavi.org	Approved as Version 7.0, Letter of Amendment #2 (OPS Amendment Z approval 12/17/08) Coded blood samples, without personal identifying information, will be sent to the three research laboratories listed for work on the development of immunological assays, including virus suppression assays and a new intracellular cytokine staining method.
Terence M. Tumpey, Ph.D. Centers for Disease Control and Prevention Influenza Division, Mail Stop G-16 1600 Clifton Road N.E. Atlanta, GA 30333 Phone: 404-639-5444 Fax: 404-639-2530	Approved as Version 8, Letter of Amendment #1 (OPS Amendment CC approval 5/20/09) Coded blood samples, without personal identifying information, will be sent to Dr. Tumpey for work on the assessment of influenza immune responses.
HVTN Laboratory Program University of Washington Virology Specialty Laboratory Seattle, WA	New in Version 9.0; updated in Version 10, Letter of Amendment#2 (OPS LL approval 6/18/13) Coded blood samples, without personal identifying information, from prior HVTN study participants who need long-term follow-up HIV testing will be sent to the HVTN Laboratory. This laboratory may also collaborate on a variety of virologic assays using coded samples from VRC 200 subjects (whether or not a prior HVTN study participant).
James Crowe, M.D. Vanderbilt University, Pediatrics and Infectious Disease 1161 21st Ave South D-7240 MCN	Approved as Version 9, Letter of Amendment #1 (OPS Amendment II approval 11/29/10)

Nashville, TN 37232-2581 Phone: 615-343-8064 Email: james.crowe@vanderbilt.edu	Coded blood samples, without personal identifying information will be sent for laboratory research related to immune responses to antigens associated with filoviruses (e.g., Ebola, Marburg) and other pathogens. This immunological research will include isolation of human monoclonal antibodies. The laboratory data will then be provided to VRC in support of VRC vaccine research. Hybridomas secreting the monoclonal antibodies identified through this collaboration will also be provided back to VRC as part of this collaboration.
Joseph J. Mattapallil, D.V.M., Ph.D. Dept. of Microbiol. & Immunology F. Edward Herbert Schl. of Med. Uniformed Services University 4301 Jones Bridge Road Bethesda, MD 20814 Telephone: 301-295-3737 e-mail: joseph.mattapallil@usuhs.edu	Approved as Version 10, Letter of Amendment #1 (OPS Amendment KK. approval 4/30/12) Coded stored specimens will be provided for laboratory research related to regulation of immune responses in HIV-infected subjects. Non-identifying demographic data and antiretroviral therapy (ART) status may be provided to facilitate the analysis. The laboratory data will also be provided back to VRC as part of this collaboration.
Jason Brenchley, Ph.D. Senior Investigator NIAID, Viral Pathogenesis and Vaccine Section Laboratory of Molecular Microbiology 4 Center Drive, Room 201 Bethesda, MD 20892-0460 Phone: 301-496-1498 Email: jbrenchl@niaid.nih.gov	Approved as Version 10, Letter of Amendment #3 (OPS Amendment MM. approval 7/31/13) The VRC will send coded blood/PBMC specimens to this NIH collaborator for laboratory research related to the level of transcription factors known to be important for CD4/CD8 differentiation in sorted subsets of PBMC. Non-identifying demographic data may be provided to facilitate the data analysis.
Cristine Kinross, Ph.D. Sr. Product Manager Epicentre, an Illumina company 5602 Research Park Blvd, Suite 200 Madison, WI 53719 Phone: 608-442-6111 Email: Cristine.Kinross@epicentre.com	New in Version 11.0 The VRC will send coded specimens which will be used to sequence all HIV transcript molecules derived from cellular samples of a group of HIV-infected donors using the Illumina next generation deep sequencing platform. Epicentre's novel technology specifically removes host cell-associated transcripts from total RNA specimens, leaving only pathogen-derived material for deep sequencing. This technology will allow characterization of HIV gene expression in individual samples and comparison across samples to reveal any variation in the way the virus expresses its genes in different cells types, and in different donors.
Mary N. Carrington, Ph.D. Laboratory of Experimental Immunology Head, HLA Typing Section Center for Cancer Research National Cancer Institute Building 560, Room 21-89 Frederick, MD 21702-1201	Approved as Version 11, Letter of Amendment #1 (OPS Amendment OO. approval 2/20/14) The VRC will send coded specimens for HLA type and related immunological assessments. Non-identifying demographic data may be provided to facilitate the data analysis.

Ted C. Pierson, Ph.D. Senior Investigator Chief, Viral Pathogenesis Section Laboratory of Viral Diseases, NIAID, NIH 33 North Drive Building 33, Room 2E19A.2 Bethesda, MD 20892 301-451-7977	New in Version 12.0 The VRC will send coded specimens for neutralization assay and related immunological assessments. Non-identifying demographic data may be provided to facilitate the data analysis.
Chih-Jen Wei, Ph.D. Director, Synthetic & Immune Biology Bio-Innovation, Global Bio-Therapeutics Sanofi US 270 Albany Street Cambridge, MA 02139 Tel.: 617.665.4791 Cell: 617.571.4374 Email: chih-jen.wei@sanofi.com	Approved as Version 14.0, Letter of Amendment #1 (OPS Amendment TT. Approval 03/9/2016) The VRC will send coded blood/serum specimens to the scientific collaborator for research related to the development of a Zika virus vaccine. Non-identifying demographic data may be provided to facilitate the data analysis.
Sujatha Rashid, MS, PhD, PMP Senior Scientist, Virology BEI Resources www.beiresources.org 10801 University Boulevard Manassas, VA 20110-2209 Tel: (703) 365-2700 ext. 2660 Email: srashid@atcc.org	Approved as Version 14.0, Letter of Amendment #2 (OPS Amendment UU. Approval 03/23/2016) As requested by DMID/NIAID, the VRC will send coded blood/serum specimens to the BEI repository (https://www.beiresources.org/) and the contact person there to receive the samples is noted below. The samples will be used for Zika virus related research. Only non-identifying demographic data may be provided to facilitate the data analysis.
Joseph Campo, Ph.D. Antigen Discovery, Inc. 1 Technology Drive, STE E 309 Irvine, CA 92618 Tel: (949) 679-4068 David M. Koelle, M.D. University of Washington School of Medicine 750 Republican St, Room E651 Seattle, WA 98109 Tel: (206) 616-1940	Approved as Version 14.0, Letter of Amendment #3 (OPS Amendment VV. Approval 05/11/2016) The VRC will send coded PBMCs specimens to Antigen Discovery, Inc. and University of Washington, the contact persons there to receive the samples are noted below. The samples will be used to isolate Pf-specific T cell responses and characterize antigen specificity. Only non-identifying demographic data may be provided to facilitate the data analysis.

Dan Barouch, MD, PhD Beth Israel Deaconess Medical Center E/CLS-1047 330 Brookline Ave Boston, MA 02215 Tel: 617-735-4485 Fax: 617-735-4566 Email: dbarouch@bidmc.harvard.edu Stephen S. Whitehead, PhD Laboratory of Infectious Diseases, NIAID, NIH Bldg 33, Room 3W10A 33 North Drive, MSC 3203 Bethesda, MD 20892-3203 Telephone: 301-496-7692 Fax: 301-480-4873 Email: whitehead@niaid.nih.gov	Version 14.0, Letter of Amendment #4 The VRC will send coded blood/serum specimens to the scientific collaborators for research related to the development of a Zika virus vaccine. Only non-identifying demographic data may be provided to facilitate the data analysis.
Mark Page, PhD Division of Virology National Institute for Biological Standards and Control (NIBSC) Blanche Lane, South Mimms, Potters Bar, Hertfordshire, EN6 3QG UK Tel: 01707 641 283 Email: mark.page@nibsc.org	As part of the global initiative for assay standardization, NIBSC in conjunction with its partners (such as National Control Laboratories and WHO Collaborating Centers) will collect and analyze Zika antibody positive serum and plasma in an international collaborative study. All study data will be anonymized and statistically analyzed by NIBSC in accordance with the WHO guidelines on biological standardization. A formal report will be submitted to the WHO Expert Committee for Biological Standardization for endorsement as an International Standard.
Matthew Bonaparte, Ph.D. Sanofi Pasteur Deputy Director Project Representation Global Clinical Immunology 1 Discovery Drive Swiftwater, PA 18370 Telephone: 570-957-2493| Email: Matthew.Bonaparte@sanofipasteur.com	These serum samples will be used for development of research level serological assays to assess immune response to Zika vaccination and/or infection, and evaluation of assay specificity in the case that prior exposure to Dengue virus can be demonstrated.
Jonathan F. Smith, Ph.D. Chief Scientific Officer PaxVax 3985-A Sorrento Valley Blvd San Diego, CA 92121 Telephone: 919-622-3374 Email: jsmith@paxvax.com	The VRC will send coded blood/serum specimens to the scientific collaborator for passive transfer protection studies in non-human primates, and for the assessment of vaccine - induced immune response.

Alessandro Sette, Dr. Biol. Sci. Center Head, Division Head, and Professor Center for Infectious Disease, Division of Vaccine Discovery La Jolla Institute for Allergy and Immunology 9420 Athena Circle La Jolla, California USA Telephone: 858-752-6916 Email: alex@lji.org	The VRC will send coded blood samples to the scientific collaborator at the La Jolla institute. These samples will be used to characterize T-cell reactivity and the immune response to Zika. Only non-identifying demographic data may be provided to facilitate the data analysis.
James Rogers, PhD Manager Battelle Biomedical Research Center www.battelle.org 1425 Plain City-Georgesville Rd (St Rt 142) West Jefferson, OH 43162 Telephone: 614-424-5428 Email: rogersjv@battelle.org	The VRC will send coded blood/serum specimens to Battelle. The samples will be used for Zika virus related research and assay development. Only non-identifying demographic data may be provided to facilitate the data analysis.
David I Watkins, Ph.D. Professor of Pathology Vice-Chair Research Dept. Pathology University of Miami Leonard M. Miller School of Medicine Life Sciences Technology Park 1951 NW 7th Avenue, Suite 2340 Miami, FL 33136 Telephone: (305)243-0405 Cell: (786)879-9926 E-mail: dwatkins@med.miami.edu	The VRC will send coded serum and/or plasma samples to the scientific collaborator at the University of Miami Leonard M. Miller School of Medicine. The serum and/or plasma samples will be used for development of serological assays to assess immune response to Zika infection and/or vaccination.
Kayvon Modjarrad, M.D., Ph.D. Associate Director, Emerging Infectious Disease Threats Military HIV Research Program / Walter Reed Army Institute of Research 6720A Rockledge Drive, Suite 400, Bethesda, MD 20817 USA Telephone: 1-301-500-3623 Cell: 301-335-4707 Email: kmodjarrad@hivresearch.org	The VRC will send coded serum or plasma samples to the scientific collaborator at the Walter Reed Army Institute of Research. The serum or plasma samples will be used for the evaluation of Zika immune responses.

Marc Fischer, MD, MPH Arboviral Diseases Branch Centers for Disease Control and Prevention 970-221-6489 mfischer@cdc.gov	The VRC will send coded serum and/or plasma samples to the scientific collaborator at the Centers for Disease Control and Prevention. The serum and/or plasma samples will be used for development of serological assays to assess immune response to Zika infection and/or vaccination.
Manoj K. Pastey DVM, MS, PhD Associate Professor Head, Molecular Diagnostic Laboratory 105 Magruder Hall College of Veterinary Medicine Oregon State University Corvallis, OR 97331 Telephone: (541) 737-3940 Email: Manoj.Pastey@oregonstate.edu	The VRC will send coded samples to the scientific collaborator at OSU. The samples from HIV infected individuals will be used to identify antibodies against HIV NS2 protein by ELISA assay.
Hansi Dean, PhD Vice President and Head Discovery Research Takeda Pharmaceuticals 40 Landsdowne Street Office: 75 Sidney-3062 Cambridge, MA 02139 Telephone: (617)761-6860 Email: hansi.dean@takeda.com	The VRC will send coded serum and/or plasma samples to the scientific collaborator at Takeda Inc. The serum and/or plasma samples will be used for development of serological assays such as ELISA and neutralizing antibody assays.
Anuja Matthew, PhD, M.Sc. Research Associate Professor Institute for Immunology and Informatics University of Rhode Island 80 Washington St. Room 334B Providence, RI 02903 Tel: (401) 277-5309 Email: mathewa@uri.edu	The VRC will send coded blood/PBMCs specimens to Anuja Mathew at the University of Rhode Island. The samples will be used to assess adaptive immunity to flaviviruses including ZIKV. Dr. Matthew and her group will assess B cell and antibody responses (in supernatants) and characterize Flavivirus specificity. Only non-identifying demographic data may be provided to facilitate the data analysis.
Gregory A. Poland, M.D., MACP, FIDSA, FRCP Director, Mayo Vaccine Research Group 611C Guggenheim Building Mayo Clinic and Foundation 200 First Street, SW Rochester, MN 55905 Tel: (507) 284-4968 Email: poland.gregory@mayo.edu	The VRC will send coded blood/PBMCs specimens to the Mayo Vaccine Research Center. These samples will be used to characterize T-cell and immunologic responses to Zika. Only non-identifying demographic data may be provided to facilitate the data analysis.

Allison M.W. Malloy, MD, MSc Department of Pediatrics Infectious Disease Faculty F. Edward Hebert School of Medicine - "America's Medical School" Uniformed Services University of the Health Sciences (USU) 4301 Jones Bridge Road Rm A3028 Bethesda, Maryland, 20814 301-295-3733 allison.malloy@usuhs.edu	The VRC will send coded blood specimens to Allison Malloy at the Uniformed Services University of the Health Sciences. These samples will be used for analysis of T cells and dendritic cells from healthy volunteers for response to natural influenza virus infection. Only non-identifying demographic data may be provided to facilitate the data analysis.
Andrew Ward, Ph.D. Department of Integrative Structural and Computational Biology The Scripps Research Institute 10550 North Torrey Pines Road, La Jolla, CA 92037 (858) 784-7320 andrew@scripps.edu	The VRC will send coded serum samples to Andrew Ward at the Scripps Research Institute. These samples will be used to determine the epitopes on the HKU-1 coronavirus spike protein that are bound by polyclonal antibodies. Only non-identifying demographic data may be provided to facilitate the data analysis.
Surender Khurana, Ph.D. Div. of Viral Products Center for Biologics Evaluation and Research (CBER) US Food and Drug Administration (FDA) Bldg-52/72, Rm-1230 10903 New Hampshire Avenue Silver Spring, MD-20993 (240) 402-9632 Surender.Khurana@fda.hhs.gov	The VRC will send coded serum samples to Surender Khurana at CBER. These samples will be used for antibody analysis. Only non-identifying demographic data may be provided to facilitate the data analysis.
Carl Hansen, Ph.D. Director & CEO AbCellera Biologics Inc. 2215 Yukon Street Vancouver, BC V5Y 0A1 (778) 945-8384 carl.hansen@abcellera.com	The VRC will send coded blood samples to Carl Hansen at AbCellera. These samples will be used for antibody identification analysis. Only non-identifying demographic data may be provided to facilitate the data analysis.

APPENDIX III: TEMPLATE SKIN BIOPSY CONSENT

The sample informed consent forms are provided to guide development of a site-specific consent form. Only IRB-approved consent forms will be used to consent subjects for study participation.

Title: VRC 200: A Multicenter Specimen Collection Protocol to Obtain Human Biological Samples for Research Studies

Skin Biopsy Consent

INTRODUCTION

We invite you to take part in a research study at the [insert name of institution].

First, we want you to know that:

Taking part in [insert name of institution] research is entirely voluntary.

You may choose not to take part, or you may withdraw from the study at any time. In either case, you will not lose any benefits to which you are otherwise entitled. However, to receive care at the [insert name of institution], you must be taking part in a study or be under evaluation for study participation.

You may receive no benefit from taking part. The research may give us knowledge that may help people in the future.

Second, some people have personal, religious or ethical beliefs that may limit the kinds of medical or research treatments they would want to receive (such as blood transfusions). If you have such beliefs, please discuss them with your [insert name of institution] doctors or research team before you agree to the study.

Now we will describe this research study. Before you decide to take part, please take as much time as you need to ask any questions and discuss this study with anyone at [insert name of institution], or with family, friends or your personal physician or other health professional.

PURPOSE OF THE STUDY

You are participating in a protocol for the donation of blood, tissue, or other samples for laboratory research. This consent is to offer you the choice of making a skin biopsy donation. Skin biopsy samples can be useful in laboratory research.

A skin biopsy is a medical procedure that removes a small piece of skin. A separate consent for the skin biopsy is needed for two reasons. First, you may choose not to have a skin biopsy. Second, you should understand the way a skin biopsy is done and the risks of a skin biopsy before deciding whether to have one.

If you have a skin biopsy, it will be done at the [insert name of institution]. You will also be treated there if any side effects of the skin biopsy occur.

You will be told of any new information learned during this study that might cause you to change your mind about having a skin biopsy. When a skin biopsy is collected for research in this study, it is usually not sent to the regular hospital lab for a "pathology" report. If it is sent to see if there are any abnormal medical conditions, then you will be told before it is sent and will be informed of the result. The report will be in your medical record. Samples given to research labs and results of any test performed will be labeled only with your study identification number. The results of any tests done by research laboratories with your skin sample will <u>not</u> be in your medical record.

STUDY PROCEDURES

A skin biopsy is done in an outpatient clinic. You will receive a medicine such as lidocaine with epinephrine to reduce pain and bleeding. Medicine to reduce pain is called an anesthetic. The anesthetic may be given by injection or applied to the skin at the place where the skin biopsy will

be done. The anesthetic may sting briefly. If you have ever had an allergic reaction to a numbing medicine, such as novocaine or lidocaine, which are commonly used by dentists or surgeons, do not sign this consent until the details of your allergic reaction have been discussed with a study doctor.
After the skin is numb, a sharp, hollow instrument will be used to remove a small, circular piece of skin. The circle will be about the size of a pencil eraser. This biopsy method is called a "punch biopsy." After the punch biopsy, the skin may be closed with one or two stitches. You must follow the directions given to you for keeping the area clean until it heals. You must return to the clinic for the appointment given to you to have the stitches removed several days later. Careful methods and clean equipment will be used to prevent infection.
If you are invited to have a skin biopsy for research because it is known to be an area being treated for a local infection, then photos may be taken. You must inform the clinic promptly if you have any fever, swelling, increased pain or increased area of infection.

RISKS OF SKIN BIOPSY
Any time the skin is opened there is a chance of infection. If there is a known infection at the biopsy site then healing may take longer. Infection after a skin biopsy is rare and care will be taken to try to prevent infection. You may have pain or discomfort during the skin biopsy or while it is healing. You may have a very small amount of bleeding right after the skin biopsy. You will have a small scar. If you have skin that tends to form large scars of the type called "keloids," then you will have risk of a keloid forming at the biopsy area. A history of keloid formation increases the risk for keloid scarring from the skin biopsy. If you have a known history of keloid scarring you are advised to inform the study staff and not have a skin biopsy that is only for research purposes.
Rarely, the anesthetic medicine used to numb the skin may cause an allergic reaction. In rare cases allergic reactions to medications can be life threatening. In rare cases anesthetic medications can cause an abnormal heart rhythm. The anesthetic may also interact with certain other medicines to cause serious side effects. Be sure to review all your medications and drug use with the study staff before agreeing to have a local anesthetic. Certain antidepressant medicines and illicit drugs such as cocaine are among the drugs that can react with anesthetics to cause side effects.

BENEFITS
You may have no benefit from the skin biopsy. If your skin has a medical condition you may learn more about the cause of the problem.

COSTS TO YOU FOR YOUR PARTICIPATION
There will be no charge to you or your health insurance company for the skin biopsy or care of the skin biopsy. However, the costs of any other medical care during the period will be charged to you or your insurance company.

PAYMENT TO YOU FOR YOUR PARTICIPATION

[Site specific information]

You will be paid [insert amount] above the usual compensation for a visit that includes a skin biopsy. The skin biopsy stitches will be removed about 7-10 days later.

Compensation will be provided [add site-specific time for when compensation will be provided].

Total compensation is based on the number of study clinic visits and the type of sample collection performed. Your compensation may need to be reported to the Internal Revenue Service (IRS) as taxable income.

ALTERNATIVES

You may choose to not have a skin biopsy.

OTHER PERTINENT INFORMATION

1. Confidentiality. When results of an NIH research study are reported in medical journals or at scientific meetings, the people who take part are not named and identified. In most cases, the [insert name of institution] will not release any information about your research involvement without your written permission. However, if you sign a release of information form, for example, for an insurance company, the [insert name of institution] will give the insurance company information from your medical record. This information might affect (either favorably or unfavorably) the willingness of the insurance company to sell you insurance.

The Federal Privacy Act protects the confidentiality of your [insert name of institution] medical records. However, you should know that the Act allows release of some information from your medical record without your permission, for example, if it is required by the Food and Drug Administration (FDA), members of Congress, law enforcement officials, or authorized hospital accreditation organizations.

2. Policy Regarding Research-Related Injuries. The [insert name of institution] will provide short-term medical care for any injury resulting from your participation in research here. In general, no long-term medical care or financial compensation for research-related injuries will be provided by the National Institutes of Health, [insert name of institution], or the Federal Government. However, you have the right to pursue legal remedy if you believe that your injury justifies such action.

3. Payments. The amount of payment to research volunteers is guided by the [insert name of institution] policies. In general, patients are not paid for taking part in research studies at the [insert name of institution]. Reimbursement of travel and subsistence will be offered consistent with [insert name of institution] guidelines.

4. Problems or Questions. If you have any problems or questions about this study, or about your rights as a research participant, or about any research-related injury, contact the Principal Investigator, [insert name], at [insert phone number], or Study Coordinator [insert name] at [insert phone number].

You may also call the Clinical Center Patient Representative at (301) 496-2626.

5. Consent Document. Please keep a copy of this document in case you want to read it again.

COMPLETE APPROPRIATE ITEM(S) BELOW:

Adult Patient's Consent

I have read the explanation about this study and have been given the opportunity to discuss it and to ask questions. I hereby consent to take part in this study.

Signature of Adult Patient/Legal Representative	Date	Print Name

THIS CONSENT DOCUMENT HAS BEEN APPROVED FOR USE FROM [insert date] THROUGH [insert date].

Signature of Investigator	Date	Signature of Witness	Date
Print Name		Print Name	

APPENDIX IV: REMOTE SAMPLE COLLECTION PROCEDURES

Procedures for Obtaining Informed Consent Over the Telephone and Conducting a Remote Enrollment into VRC 200 (03-I-0263)

Obtaining consent by telephone may be used for this protocol when a subject with unusual or difficult to find characteristics that are key to research being conducted does not reside locally and is willing to have a medical care provider collect research blood samples for shipment to the VRC.

The process for obtaining consent by telephone is as follows:

- The Clinical Staff will provide forms needed for the offsite admissions process, if needed, and a current copy of the protocol consent document for remote enrollments. The Clinical Staff will also provide appropriate return-addressed shipper(s) for returning the admissions forms, signed consent document and samples collected.
- After allowing time for receipt and review of the consent document, a Clinical Staff member who is authorized to obtain consent for the protocol will contact the subject by telephone at a mutually agreeable time to discuss the consent in the presence of a witness who is with the subject.
- The Clinical Staff will ask the subject to verify his/her identity by stating their first and last name, and date of birth.
- Once verification is determined, the Clinical Staff will review the elements of the consent with the subject.
- The Clinical Staff will allow the subject to verbalize any questions or concerns and will answer all questions to the satisfaction of the subject.
- If the subject agrees to consent, the Clinical Staff will inform the subject that he/she will be placed on a speakerphone so that the audible consent can be witnessed by a witness present with the staff member.
- Each witness will state his/her name. Each witness must be an adult. The witness present in the room with the Clinical Staff member will be another Clinical Trials Core staff member.
- For the witnesses, the subject will repeat his/her own first and last name, date of birth, and read the protocol name and number from the consent document.
- The subject will sign, date and time his/her copy of the consent document. The witness with the subject will also sign and date the consent document.
- The manner of obtaining consent, date, time and the names of the person administering the consent, providing consent and the name of the witness will be documented in the research record.
- Once the consent document is received by the site and checked for accuracy, it will be signed and dated with the day the consent process was conducted; typically this will be a date prior to when the original is received. The date the original is received by the site will be documented in the research record. The original document will be filed in the

medical record and a copy of the signed consent document will be mailed back to the subject.

The procedure for assignment of a study identification number, sample processing, and sample use is as follows:

The enrollment in the study database may be completed after the offsite admissions is completed and the telephone portion of the consenting is done and the subject and witness have verified verbally that the consent document is signed. Similarly, the blood samples may be collected by a qualified medical care provider that is with the subject after the telephone portion of the consenting is done. The offsite admissions form, consent document and sample may be sent in the same shipper or separate shippers as convenient to the persons involved. Before being sent to a research laboratory for processing, any label with a subject name or personal identifier will be removed and replaced with a label using the study identification number. The blood sample may be processed for proper storage upon arrival; however, it may not be used for research purposes until the signed consent document is received by the site.

INFORMED CONSENT FORM FOR REMOTE SAMPLE COLLECTION

The template informed consent forms are provided to guide development of a site-specific consent form. Only IRB-approved consent forms will be used to consent subjects for study participation.

Title: VRC 200: A Multicenter Specimen Collection Protocol to Obtain Human Biological Samples for Research Studies

VRC 200 Standard, for Consent by Telephone

INTRODUCTION

We invite you to take part in a research study at the [insert name of institution].

First, we want you to know that:

Taking part in [insert name of institution] research is entirely voluntary.

You may choose not to take part, or you may withdraw from the study at any time. In either case, you will not lose any benefits to which you are otherwise entitled. However, to receive care at the [insert name of institution], you must be taking part in a study or be under evaluation for study participation.

You may receive no benefit from taking part. The research may give us knowledge that may help people in the future.

Second, some people have personal, religious or ethical beliefs that may limit the kinds of medical or research treatments they would want to receive (such as blood transfusions). If you have such beliefs, please discuss them with your [insert name of institution] doctors or research team before you agree to the study.

Now we will describe this research study. Before you decide to take part, please take as much time as you need to ask any questions and discuss this study with anyone at [insert name of institution], or with family, friends or your personal physician or other health professional.

PURPOSE AND PROCEDURES

The purpose of this study is to collect biological specimens for research purposes. Parts of the blood are often needed in research studies. Other types of specimens sometimes needed for research are other blood components, body fluids (such as semen or urine), or secretions (for example, from the nose, mouth, vagina, penis or different skin areas). A skin sample (biopsy) is another type of specimen that is sometimes useful for research. .

Scientists at the Vaccine Research Center will use the samples collected for research studies of different diseases and immune system responses, including HIV, hepatitis, responses to infections, vaccinations and other medical research. Even if you do not have a disease, your samples can be used to try to discover ways to prevent or treat medical conditions. Standard approved medical procedures will be used to collect these samples.

The following must be true for you to be eligible for the study:

- You must be age 18 years or older
- You must be able and willing to complete the informed consent process
- You must be willing to provide samples that will be stored for future research
- You must be able to provide proof of your identity

You must sign this consent before a research sample can be collected. This consent is for participants who are enrolling in the study through a consent process done over the telephone or

if already enrolled, having a sample collected remotely for shipment to the Vaccine Research Center at the NIH. The blood sample will be collected by a local medical care provider for this shipment.

Your consent to enroll will be consent to collect samples for up to a one-year period. After that, if more samples are needed and you wish to continue participating in this protocol, you must sign a new consent form each year.

As many as 3,000 people may participate in this study. The actual number may be lower or be higher, depending on the need for research samples and the willingness of subjects to participate. Most subjects will have only one or a few samples collected.

BLOOD SAMPLES

Blood will be drawn by standard phlebotomy techniques from veins in the arms only. Typically, about 100 mL (about 6 tablespoons) of blood will be drawn from your arm for testing. More or less may be drawn depending upon the research needs. The study staff will discuss the blood draw plan with you before starting.

HEPATITIS SCREENING

Some of the blood drawn from you as part of this study may be used to screen for different types of viral liver infections, such as hepatitis. If the tests show evidence of hepatitis or other medical conditions, you will be informed of the results. If you do not have a regular physician, the study team will assist in referring you to an appropriate physician for evaluation.

GENETIC TESTING

Some of the blood drawn from you as part of this study will be used for genetic tests. Some genetic tests are done in research studies to see if genetic differences in people cause different types of immune responses. Your blood sample used in these genetic tests will not have your name on it and the results will not be in your medical record. These tests are not used to check your health and we will not tell you the results.

NIH Site only: A special genetic test, called HLA typing, may be done by the NIH Clinical Center medical laboratory. These results will be in your medical record but they will not be used to check your health. Any genetic testing, including HLA typing, is for research purposes only. Any genetic information collected or learned about you will be kept confidential. Medical records, including HLA test results, are kept securely. We will not give any genetic information that is in your medical record to anyone without your permission.

If HLA typing is done in a research laboratory, the result will not be included in your medical record.

HIV TESTING

As part of this study, we will test you for infection with the Human Immunodeficiency Virus (HIV), the virus that causes AIDS. If you are infected with HIV you will still be able to participate in this study. We will tell you what the results mean, how to find care, how to avoid infecting others, how we report HIV infection, and the importance of informing your partners at possible risk because of your HIV infection.

STORED SAMPLES

To be eligible for the study, you must also be willing to allow some of your blood samples to be stored for future research on HIV disease, the immune system, or other medical conditions.

Generally, the results from the research done with your stored samples will not be given to your private doctor and will not be put in your medical record. This is because the test results, unlike routine medical testing, may be experimental or preliminary. The relevance of these tests to your care may be unknown. However, at your request, the results of any research tests will be discussed with you or your physician by one of the investigators.

Labeling of stored samples

Your stored samples will be labeled with a code (such as a number) that only the study team can link to you. Any identifying information about you will be kept confidential to the extent permitted by law.

Future studies

Your samples may be kept in storage for a long time and used in the future by medical researchers. When the study team shares your samples, they will share it with only a code on it. Some information about you, such as your gender, age, health history, or ethnicity may also be shared with other investigators.

Your stored materials will be used only for research and will not be sold or used for treating other people. The research done with your materials may be used to develop new products in the future, but you will not receive payment for such products.

RISKS

Blood drawing may cause pain, bruising, and, rarely, infection at the site where the blood is taken.

Collection of samples by swabs rubbing over the inside of the nose, inside the mouth vagina, penis or skin can cause temporary discomfort.

BENEFITS

There will be no direct benefit to you for participating in this protocol. The knowledge gained through this research may benefit others in the future.

UNKNOWN RISKS OR BENEFITS

Some routine medical tests may be performed during study participation. You may learn new information about your health. Receiving a new diagnosis may be stressful. You may feel that learning new information about your health is a benefit of study participation. Or you may feel this is a risk of study participation.

ALTERNATIVES

The study procedures are not being done to treat a medical condition. You may choose not to participate in any or all of the procedures discussed.

COMPENSATION

[Site specific information]

You will be compensated [insert amount] for blood samples collected by needle stick. Other payments for time and inconvenience of study visits may be offered in accordance with [insert institution] guidelines.

Compensation will be provided [add site-specific time for when compensation will be provided].

Total compensation is based on the number of study clinic visits and the type of sample collection performed. Your compensation may need to be reported to the Internal Revenue Service (IRS) as taxable income.

REASONS FOR REMOVING YOU FROM THE STUDY WITHOUT YOUR CONSENT

You may be removed from the study without your consent for the following reasons:

- The NIH doctor feels that staying in the study is harmful to you.
- The study is canceled or stopped.
- You don't keep appointments or follow study procedures.

COSTS TO YOU FOR YOUR PARTICIPATION

There will be no charge to you or your health insurance company for any of the costs that are directly related to this study. However, the costs of any other medical care you may need during this period will be your responsibility. You will not have to pay the cost of shipping the sample or completed forms.

OTHER PERTINENT INFORMATION

1. Confidentiality. When results of an NIH research study are reported in medical journals or at scientific meetings, the people who take part are not named and identified. In most cases, the [insert name of institution] will not release any information about your research involvement without your written permission. However, if you sign a release of information form, for example, for an insurance company, the [insert name of institution] will give the insurance company information from your medical record. This information might affect (either favorably or unfavorably) the willingness of the insurance company to sell you insurance.

The Federal Privacy Act protects the confidentiality of your [insert name of institution] medical records. However, you should know that the Act allows release of some information from your medical record without your permission, for example, if it is required by the Food and Drug Administration (FDA), members of Congress, law enforcement officials, or authorized hospital accreditation organizations.

2. Policy Regarding Research-Related Injuries. The [insert name of institution] will provide short-term medical care for any injury resulting from your participation in research here. In general, no long-term medical care or financial compensation for research-related injuries will be provided by the National Institutes of Health, [insert name of institution], or the Federal Government. However, you have the right to pursue legal remedy if you believe that your injury justifies such action.

3. Payments. The amount of payment to research volunteers is guided by the [insert name of institution] policies. In general, patients are not paid for taking part in research studies at the [insert name of institution]. Reimbursement of travel and subsistence will be offered consistent with [insert name of institution] guidelines.

4. Problems or Questions. If you have any problems or questions about this study, or about your rights as a research participant, or about any research-related injury, contact the principal investigator, [insert name] at [insert phone number], or Study Coordinator [insert name] at [insert phone number].
You may also call the Clinical Center Patient Representative at (301) 496-2626.

5. Consent Document. Please keep a copy of this document in case you want to read it again.

Subject: SARS-CoV-2 Weekly Investigators Meeting - January 19th

Hi Everyone,

On Tuesday, January 5th, Dr. Ghazi Kayali kicked off the New Year by giving a wonderful presentation on **"Incidence, household transmission, and neutralizing antibody seroprevalence of COVID-19 in Egypt: Results of a community-based cohort".** Thank you to our presenter and to those that were able to join.

As a reminder, this meeting will be canceled on Tuesday, January 12th and will resume Tuesday, January 19th with Dr. Rogan Grant giving a presentation on "**Self-sustaining circuits between infected alveolar macrophages and T cells in severe SARS-CoV-2 pneumonia".**

Have a wonderful weekend!
Rebecca

Subject: Changing day of SIG U19 call

Hi Everyone,
NIH has scheduled a recurring call that causes a conflict for Ralph on our SIG U19 call. I propose we change the Thursday calls, same time , but on the 1st, 3rd, or 4th Thursday of the month. Can you let me know which would work best for you.
Thank you

Toni Baric

Subject: RE: SARS-CoV-2 Weekly Investigators Meeting - January 19th

Happy Thursday almost Fri-Yay!

Just a reminder that we will be meeting on Tuesday, January 19th with Dr. Rogan Grant giving a presentation on "**Self-sustaining circuits between infected alveolar macrophages and T cells in severe SARS-CoV-2 pneumonia".**

If you are interested in presenting, please reach out to me. I know there's some really important research being conducted by this group and would like encourage you all to highlight your data.

Best,
Rebecca

Subject: SARS-CoV-2 Weekly Investigators Meeting - January 19th

Hi Everyone,

On Tuesday, January 5th, Dr. Ghazi Kayali kicked off the New Year by giving a wonderful presentation on **"Incidence, household transmission, and neutralizing antibody seroprevalence of COVID-19 in Egypt: Results of a community-based cohort".** Thank you to our presenter and to those that were able to join.

As a reminder, this meeting will be canceled on Tuesday, January 12th and will resume Tuesday, January 19th with Dr. Rogan Grant giving a presentation on "**Self-sustaining circuits between infected alveolar macrophages and T cells in severe SARS-CoV-2 pneumonia".**

Have a wonderful weekend!
Rebecca

Hi Everyone!

On Tuesday, January 19th, Rogan Grant gave a wonderful presentation on "**Self-sustaining circuits between infected alveolar macrophages and T cells in severe SARS-CoV-2 pneumonia".** Thank you to our presenter and to those that attended.

Tomorrow, January 26th, Dr. Thomas Friedrich will be sharing some information on "**SARS-CoV-2 variants in Wisconsin**". Hope you all are able to join!

Subject: SARS-CoV-2 Weekly Investigators Meeting - February 9th

nCoV PI call attendee list.xlsx

Hi Everyone,

I hope you all enjoyed both of the presentation on Tuesday, February 2nd.

Our double feature included:

Drs. Dave O'Connor and Thomas Friedrich

"COVID on campus: investigating links between SARS-CoV-2 transmission among college students and the broader community"

And

Dr. Denis Nash
"Serologic outcomes in a national, community-based cohort of U.S. adults: the CHASING COVID Cohort Study"

Thank you to all of out presenters and those in attendance.

Next Tuesday, February 9th, Dr. Sara Monteiro Pires will give a presentation on **"European Burden of Disease Network's COVID-19 activities: Fostering collaboration and methodological development".**

Best,
Rebecca

Subject: RE: nCoV weekly investigators meeting

Hello everyone,

As we discussed on the last call, it could be useful to share information certain experimental results, especially animal model work, in as close to real time as possible enable better planning of experiments by the entire group.

During the Zika response, the portal that was used for this was LabKey's Open Research Portal: https://openresearch.labkey.com/project/home/begin.view. This is a fully public portal.

Please consider if this platform might work, and we can discuss on our next call including any logistics and support needed for setting up accounts.

Thank you!

Marciela

Subject: nCoV weekly investigators meeting
When: Tuesday, February 18, 2020 9:00 AM-10:00 AM (UTC-05:00) Eastern Time (US & Canada).
Where: GoToWebinar

Hi everyone,

Please see updated webinar links below. Hopefully this resolves any issues people had last time with sound.

Hello everyone,

Below please find the registration link for our weekly investigators meeting regarding the nCoV. **Please do not forward**. If you would like anyone else to be added to the invitation, please let me (Marciela.degrace@nih.gov) or Erik (erik.stemmy@nih.gov) know.

Our tentative agendas will be:

- Epi Updates
- NIAID Updates
- Other HHS partner Updates, if applicable
- Investigator research updates
- Discussion and Action Items
-

Subject: your preprint on BioRxiv

Hi Ralph and Vincent,

I hope you are well.

I came across your preprint today (Mucin 4 Protects Female Mice from Coronavirus Pathogenesis) and thought that if you have yet to earmark it for publication in a specific journal then it would be a great fit for F1000Research. F1000Research is a post publication peer review journal that has a versioned publication system where any updates to studies can be made easily and keep readers up to date with any changes. All the peer review is open and we could publish the article formally as quickly as 7 days. We have a specific coronavirus area in our Disease Outbreaks gateway which is popular with the community due to our speed and transparency around research where it is vital to get the information out without haste.

If you think you might be interested in publishing with us, or if you have any questions then please do get in touch.

Regards

Michael Markie
Publishing Director, F1000 Platforms

Subject: hypergraphs paper accepted! need author approval

Hello all,

I'm pleased to let you know that the paper "Hypergraph Models of Biological Networks to Identify Genes Critical to Pathogenic Viral Response" has been accepted to BMC Bioinformatics pending a couple of minor editorial fixes (e.g., numbering supplementary figures properly)! Thank you all for the work to get this research out! One of the final things that needs to be included in the paper is a statement that "all authors have read and approve this manuscript." That is what I'm writing about now. I've attached the version that's nearly final (I did already include that statement in the author contributions, so that I don't forget to get it in there). It's not terribly changed from the original version that you saw, and that is up on arXiv, but there were a few additions based on an initial round of revisions. Please read it through and let me know if you have any issues. Please reply back by the end of the week. If you're not able to read through it by then and would like more time let me know. If I don't hear from you I'll take that as approval.

Thank you again!

Subject: SIG Meeting agenda
Draft Schedule for March 2020 SIGU19 meeting mth.docx

Hi Everyone,
Attached is the agenda for tomorrow. I will start the meeting with some Core A updates.
Toni

SIG-U19 Teleconference

11:00-11:20 Welcome and Overview (Ralph and Mark)

11:20-12:20 Project 1: SARS-CoV (Ralph Baric) (20 mins each)

Sarah Leist: Flow F2

Alex Schaefer: SARS

Lisa Gralinski: CC Mouse Models

12:20-1:20 Project 2: Influenza A virus (Mark Heise and Klaus Schughart)

Integrating Phenotypes Across CC Studies (Heise)

An update on human IAV studies (Schughart):

1:20-1:30 Break

1:30-2:00 Project 3: West Nile virus (Mike Gale and Jenny Lund)

2:00-2:30 Core B: An Update on CC status (Marty Ferris and FPMV)

2:30-3:00 Core C: An Update on QTL Refinement (Mike Mooney and Shannon McWeeney)

3:00-4:00 Discussion

- Other data sets/collaboration opportunities
- Papers
- Other discussion items

Subject: April reverse site visit postponed

Hi everyone,
I hope you are all staying safe and healthy. NIH has responded to our request to postpone the Systems Immunogenetics reverse site visit scheduled at the end of April. At the moment they have not chosen a new date. I will let you know as soon as it has been decided.

Take care.

Subject: Friday Viroholics seminar series: the Zoom version

Matt, Darryl, Vineet, Marion, Adolfo, Ralph and Stan:

First, thank you all for tentatively agreeing to Zoom-speak in our Friday noon (PT) virology seminar series at ASU, that is now heavily focused on coronaviruses and treating respiratory virus diseases.

Second, I hope to have a tentative April-May speaker schedule for you by the end of this week, or early next week, but in the meantime, feel free to join us electronically for this Friday's Zoom seminar on coronavirus vaccines from Brenda Hogue (https://asu.zoom.us/j/ **552.136**

Brenda G. Hogue, PhD
Professor
Biodesign Center for Immunotherapy, Vaccines and Virotherapy (B-CIVV)

Subject: COVID-19 Investigator Call March 31

Hi Everyone,
It's hard to believe it has already been a week since our last call! My apologies for being slow to get this information out to you, but below is the attendee roster from last week. In the interest of time we will not plan to do an official roll call moving forward, except for asking if there are new attendees who haven't joined before. Note that there were several folks who were identified only as "Caller #," so please let me know (**do not reply to all**) if you're not on the list and I will add you. I have also pasted below a link to NIH's grant FAQ page regarding COVID-19 in case there is information there that is useful for you.

Moving forward we are going to change the format of the meeting a bit and have one or two short (~15 minute) presentations where someone can present a highlight of their COVID-19 work. Hopefully this will stimulate more discussion of specific topics. After those talks we will then run through a few updates on some standing agenda items. As always we would like this to be a useful venue to engage with the group, so please reach out if you have other suggestions for topics or would like to volunteer to give a short update at a future meeting. See below for an agenda for tomorrow's call.

Erik

March 31 Agenda
Short Highlight 1: Fouchier Group (Sander Herfst, EMC)
Short Highlight 2: Peiris Group (HKU)
Standing items
- Animal Models
- Reagents
- Assays

Open Discussion

Subject: Supplemental Materials- Mucin 4 Protects Female Mice from Coronavirus Pathogenesis

Hello Dr. Baric and Dr. Menachery,
I am a graduate student in Dr. Candice Brinkmeyer-Langford's lab at Texas A&M University, and I came across your pre-print for "Mucin 4 Protects Female Mice from Coronavirus Pathogenesis". I am very intrigued by your paper and wanted to learn more, however, the supplemental materials referenced in the paper don't appear to be available online. Is there any way that I might obtain a copy of those supplemental materials?

Best Regards,

Koedi Lawley

Hi everyone,

Please see updated webinar links below. Hopefully this resolves any issues people had last time with sound.

Hello everyone,

Below please find the registration link for our weekly investigators meeting regarding the nCoV. **Please do not forward**. If you would like anyone else to be added to the invitation, please let me (Marciela.degrace@nih.gov) or Erik (erik.stemmy@nih.gov)

know.

Our tentative agendas will be:

- Epi Updates
- NIAID Updates
- Other HHS partner Updates, if applicable
- Investigator research updates
- Discussion and Action Items
-

updated webinar link
https://global.gotomeeting.com/join/ **552.136**

You can also dial in using your phone.
United States: +1 (571) 317-3129

Access Code **552.136**

Thank you,

Marciela DeGrace, Ph.D.
Project Officer, CEIRS

Here is the draft of the spotlight text. I'd like to have it sent to JV by the end of the day if possible.

Also, with Amy gone, who is handling the publication bills.

Thanks

Subject: Congratulations! Your Article Has Been Chosen as a JVI Spotlight!

Dear Vineet,

Congratulations! Your article, "Trypsin Treatment Unlocks Barrier to Zoonotic Bat Coronaviruses Infection " (JVI01774-19) has been selected by the editors of the Journal of Virology for inclusion in "Spotlight," a feature in the Journal that highlights research articles of significant interest from the current issue. This section follows the table of contents and includes short descriptions of five especially meritorious articles.

If you wish your article to be included in this section, please draft a short, declarative title and a brief summary of your manuscript (between 50-100 words) and forward these to me. The summary should be composed in general terms, highlighting the broad biological significance of the work. Also, please select a panel of one figure from your paper to display alongside the text in the Spotlight section. Please crop the

figure file so that it includes only the portion of the figure to be published in the Spotlight, and send the resulting high-resolution (300dpi) TIF (preferred), EPS, or PPT file to me. The figure can convey the most important experimental result of your study or an interesting image. Do not send a multi-panel figure. We only have space for a single panel. Please include a short descriptive title for the figure. The title used in the legend for the chosen figure may suffice. You will find an example of what we are aiming for in this section, attached.

As our printing deadlines are very tight, we must receive your material – the headline, paragraph of text, cropped figure file, and brief figure legend by 5 pm (Eastern Standard Time) on Tuesday the 17th of December. Please let me know if I can help you with any questions. Thank you for contributing to the Journal of Virology Spotlight.

Sincerely,
Becky Dutch

Subject: Payment for your upcoming article in Journal of Virology , ms. JVI01774-19

Dear Dr. Vineet Menachery,

Your article, Trypsin Treatment Unlocks Barrier to Zoonotic Bat Coronaviruses Infection (Manuscript # JVI01774-19), is scheduled to be published in issue 5 of Journal of Virology.

To facilitate prompt publication of your article, please use this link to the Author Services system to do any of the following:

- Pay publication fees
- Pay additional fees (Open Access, supplemental materials, etc.)
- Order reprints or eprints

https://authorservices.cadmus.com/Shibboleth.sso/Login?entityID=https://login.asm.org/idp/shibboleth&target=/DRIPShopperWeb%2Foffer.do%3FarticleID%3D3096272%26emailAddress%3Dvimenach%40utmb.edu

You may pay by credit card, or purchase order. Doing so will create a printable invoice that you can include with your payment, or submit to your funding institution as a pro-forma invoice. The invoice you create will contain information

about payment by credit card, bank wire, or check. You must use this system to create an accurate invoice for payment.

ASM Members receive substantial discounts on publication fees and when ordering reprints and eprints. If you are a current ASM member, these discounts are applied automatically when you log in. If you are just now joining or renewing, we must first receive your payment for the membership discounts to be available.

To join or renew your ASM membership, go to: www.asm.org/join.

If you experience problems with your fees or with the Author Services website, please email ASM.AuthorServicesSupport@cenveo.com.

Thank you,

ASM Reprint/Billing Account Manager.

To: Peter Daszak <daszak@ecohealthalliance.org>
Subject: Re: nature news request
Importance: High

A major component of my research has been using the pig as a model for human rotavirus vaccines since they are susceptible to disease and infection with human rotaviruses and I have long term NIH support for this research using a pig disease model (also for human noroviruses testing for antivrials!).

Do you know any source for the SARS-CoV-2 reagents I indicated below?

First: hyperimmune sera to SARS-CoV-2 nonstructural and structural proteins, respectively, for IHC and IFA assays.

Also:

1. SARS-CoV-2 S-pseudovirus;
2. Hyperimmune sera to SARS-CoV-2 nonstructural and structural proteins, respectively;
3. Human antiserum to SARS-CoV-2;
4. Human antiserum to SARS-CoV;
5. Human antiserum to MERS-CoV;
6. Human antiserum to HCoV-OC43;
7. Human antiserum to HCoV-HKU1;
8. Human antiserum to HCoV-229E;
9. Human antiserum to HCoV-NL63;

Subject: COVID-19 Weekly Investigator Call April 21

Hello Everyone,
On this week's call we'll have presentations from Matt Frieman from UMD on some of his ongoing drug testing work, and from Stanley Perlman on his model development work. As promised, below is the attendee list from last week. Note that if you had dialed in only via phone you were recorded as "Caller X," so let us know if your name is missing and we can add it to our records.

Please email Marciela and I if you would like to present on May 5th or 12th.

Thanks!
Erik

Subject: Fw: U19 flow gating strategies

I can't see this being in China, but wanted to keep you in the loop. I hope it looks interesting and we get something from all that flow data. looks like they are enthusiastic about at least one QTL, but have no idea how significant. hope your doing well. ralph

Subject: RE: U19 flow gating strategies

Hi all,
Plots and gene annotations for QTL candidates for the dendritic cell flow panel have been uploaded to Box. There are several peaks that pass the 0.5 genome-wide threshold. The peak on chr6: ~60-90Mb (for multiple phenotypes) looks particularly strong (CAST effect).

https://ohsu.box.com/s/a06uiwlm044hjt4dyxhrk6tci529dx6p

We are currently going through the other panels to identify any outliers and get the final sample sizes (we started with the dendritic panel because it had data for the most lines). Let us know if you have any questions.

Lisa, is there any update on the titer data? I think last email you mentioned there were ~30 samples that still needed to be done.

Regards,

Mike

Subject: U19 SARS flow analysis

Hi all,

Thanks for your patience. Attached is the final analysis of the SARS-infected CC mouse lines for the U19 project.

For orientation, there are 4 tabs. The first tab is a summary of the samples tested, and whether or not there were issues during the experimental and/or acquisition phases, and if these data were analyzable or not. The second, third and fourth tabs are the specific data across all animals for the lymphoid, myeloid, and dendritic cell panels, respectively. These samples are organized by date, and I have reported both the frequencies of each subpopulation as a percentage of total LCA+/CD45+ events, as well as the total cell counts. Keep in mind that there is high variability in the efficiency of the lung digestions, filter steps, staining, and acquisition that render cell counts alone as problematic. I've included them here more as secondary information to help inform how 'real' the frequencies are. For example, you might have 0.01% of total LCA events for a particular cell population, but if there are 350 events within that gate, it suggests that is a real population, and not just noise that can accompany flow experiments.

Note that there are a number of orange and yellow highlighted sample dates, and even specific data wells highlighted within certain dates. Yellow indicates those samples are not analyzable, and cannot be used for further analysis. The orange color indicates that there are issues that render that sample partially analyzable, and/or that I was not completely confident in the gates, but did the best I could to be consistent and accurate. For example, an orange sample might have a parameter that was not acquired when the flow was run, meaning that any cell population using that marker for definition can't be used, but that other markers acquired properly can still be used. Orange is also used to reference assay dates with other issues, such as parameters run partially off scale, or population frequencies that don't appear consistent with expected values. I'm happy to discuss this further, and provide visual examples to help illustrate the process I applied to analyze this data set since I realize this might be somewhat vague.

Would it be helpful to have a call to coordinate downstream QTL analysis efforts before getting in too deep? Specifically, I'd like to discuss how to approach the significant number of 'orange' samples- whether or not to leave them out of the first pass comparisons, and if it would be possible to run comparisons with and without the samples in which I have less confidence.

Thanks!

Kara

Subject: The U.S. is funding dangerous experiments it doesn't want you to know about - The Washington Post

Did you guys read this yet?
Inglesby is pushing on the fact that its not reported what it was that was discussed/changed/agreed to during this new approval process that allowed the Yoshi and Fouchier experiments/grants to be approved again.

The details of the experiments are fine to keep protected, but I would think they had to agree to additional safeguards to be allowed to do the experiments again. Wouldn't you want to know what those are so that we can potentially incorporate them into our lab SOPs and safety rules?

I am not totally against this line of reasoning by them on this.

Systems Immunology U19 Annual Meeting

April 11 – 12, 2019

National Institutes of Allergy and Infectious Diseases
5601 Fishers Lane, 1D06 Conference Room
Rockville, MD 20852

Agenda

Day 1

8:40 – 9:00AM	**Registration**
9:00 – 9:05AM	**Welcome/Introductory Remarks** **Chao Jiang,** NIAID
9:05 – 9:20AM	*Short talk 1*
9:20 – 12:05PM	(including a 15-min break) *Systems Approach to Immunity and Inflammation* **Richard Ulevitch**, The Scripps Research Institute
12:05 – 1:15PM	**Lunch break**
1:15 – 1:30PM	*Short talk 2*
1:30 – 4:15PM	(including a 15-min break) *Systems Immunogenetics of Biodefense and Emerging Pathogens in the Collaborative Cross* **Ralph Baric** and **Mark Heise,** University of North Carolina at Chapel Hill
4:15PM	**Adjourn Day 1**

Day 2

9:00 – 11:45AM	(including a 15-min break) *Defining Regulators of Immunity to Acute Infection Using CRISPR Screens* **Arlene Sharpe**, Harvard University Medical School
11:45AM	**Adjourn general meeting**
12:00 – 1:00 PM (TBD)	**Systems Immunology Steering Committee Meeting (closed session, Steering Committee members and NIAID staff only)**

Subject: SIG U19 Pilot project announcement
System Immunogenetics U19 Pilot Research Funds Available.docx

Hi All,
As promised, attached please find the announcement for the 2019-20 pilot project. My goal is to submit this as a subaward with our progress report so the recipient does not have to wait too long to get there funds.
Thanks

Toni Baric
Department of Microbiology and Immunology

Pilot Research Funds Available.

The Center for Systems Immunogenetics of Biodefense Pathogens in the Collaborative Cross at the University of North Carolina at Chapel Hill conducts innovative research focused on the identification of immune regulatory genes and variant alleles that regulate disease outcomes following SARS-CoV, Ebola, Influenza, Chikungunya and West Nile Virus infections and/or vaccinations. The program uses systems genetic based approaches in the Collaborative Cross Genetic Reference Population to map genes that regulate protective or pathogenic immune outcomes following infection or vaccination. Pilot research program goals should fall within one or more of the following areas, including: building collaborative interactions with existing Projects that extend the breadth of the Program; developing new models of human immunity and/or disease; mapping novel immune regulatory genes; responding to emerging public health emergencies; and/or translating murine immune discoveries to human disease and improved public health. Approximately $115,000 total dollars will be available for a 1 year pilot program. Interested applicants are encouraged to submit specific aims (1 page), a two page grant application outlining research goals, an NIH Biosketch, Budget, Budget Justification and a one-half page Scope of Work. Budget period is anticipated from 9/1/2019-8/31/20. The candidate selected would need to submit a signed, PHS 398 face page. All interested parties should submit their grant applications to Antoinette Baric, Program Manager (antoinette_baric@med.unc.edu) by April 12, 2019 at 5 PM ET. For more information on the Systems Immunogenetics program, please visit the website [HYPERLINK "http://www.systemsimmunogenetics.org"]

Thanks for passing this on. It would be of value to hear about the additional safeguards, although I am overall uncertain as to what NIH is doing with SARS and MERS grants, beyond the "general" statement "no PC30 safety concerns".

Hey Ralph (and Toni),

I just chatted with guys from ATI (listed below). I told them that I don't have the capacity to do the quick turn around on in vivo mouse work and recommended that they talk to you. They prefer your model to Kent's.

I told them I would make an email introduction which I'll do in a few minutes.

I am under the impression that they think they will get this DARPA funding to do the MERS work. They want me to do the in vitro work and have you do mouse work and then work back to the marmoset model at UTMB.

If you aren't interested, no worries. I am not desperate for the money and based on our conversations with them, not sure I have the ability to be as responsive as they need the project to be. I'm happy to chat over the phone about it tonight or in the morning.

Subject: Darpa project

Hey Ralph,

I have been approached by a group to working with DARPA to do some MERS work. They are currently funded to do work on CCHF and some other tick viruses and DARPA has requested a proposal to apply their approach to MERS-CoV. Since they were already working with UTMB, I was suggested as a possible person to interact with.

I've had several conversations with them over the past few weeks. They are interested in both in vitro and in vivo validation. I am going to be talking with them further in the next few days, but I am not sure that I have the capacity/interest in doing all the mosue work. If it was at UTMB, it would be Kent's model. I had suggested the UNC DPP4 mice as an alternative.

Would you be interested in participating or even leading the mouse work? I am not sure where it is going, but after talking with Scott Weaver here, it can be a good bit of money, but it is essentially contract work. It does get you into the groups that work with DARPA, so you can get to network with them and carve out a place with the program officers. I know EcoHealth is involved heavily.

The website of the guys leading the project is below. I do not know them personally, and my interactions with them have been far from illuminating. https://www.autonomous.bio/https://www.autonomous.bio/

Anyway, let me know if you have a thought or suggestion. Happy to talk over the phone about this as well.

Hope you are well.

SARS QTL table - current.xlsx

Hi all,

Here is the updated table of QTLs for Project 1. There are some extra notes to the right about details of the SARS QTLs but the left columns contain all of the important information for figures or slides. The three Ebola QTLs are in a second table below the SARS table. Please let me know if I missed anything or if you have any additional information that should be included.

thanks,

Lisa

Dear All,

Attached please find the updated agenda. Let me know if you have anything to add or change.

Here's the meeting registration link, https://palladianpartners.cvent.com/U19AnnualMeeting. For any logistic issues, please contact Grace Tollini (she is copied here).

Please let us know if you have any questions.

Thank you,
Chao

Systems Immunology U19 Annual Meeting

April 11, 2019

National Institutes of Allergy and Infectious Diseases
5601 Fishers Lane, 1D06 Conference Room
Rockville, MD 20852

Agenda

8:20 – 8:45AM	**Registration**
8:45 – 8:50AM	**Welcome/Introductory Remarks** **Joy Liu**, NIAID
8:50 – 10:50 AM	*Systems Approach to Immunity and Inflammation*
8:50 – 9:25AM	*New proteins with immune function from random germline mutagenesis* **Bruce Beutler**, UT Southwestern Medical Center
9:25 – 10:00AM	*Systems biology analysis of the innate immune response to infectious disease* **Alan Diercks**, Center for Infectious Disease Research
10:00 – 10:35AM	*TBD* **Garry Nolan**, Stanford University
10:35 – 10:50AM	*Studies of NLRP3 inflammasomes* **Richard Ulevitch**, The Scripps Research Institute
10:50 – 11:00AM	**Break**
11:00AM – 1:00PM	*Systems Immunogenetics of Biodefense and Emerging Pathogens in the Collaborative Cross*
11:00 – 11:10AM	*UNC U19 Overview* - *Program Summary* - *Unique Programmatic Capabilities* **Ralph Baric**, University of North Carolina at Chapel Hill
11:10 – 11:30AM	*Project 1: SARS-CoV* **Ralph Baric**, University of North Carolina at Chapel Hill
11:30 – 11:50AM	*Project 2: Influenza A virus* **Mark Heise**, University of North Carolina at Chapel Hill

11:50AM – 12:20PM *Project 3: West Nile Virus*
Mike Gale, University of Washington
Jenny Lund, Fred Hutchinson Cancer Research Center

12:20 – 12:35PM *Core B: Mouse Genetics Core*
Marty Ferris, University of North Carolina at Chapel Hill
Fernando Pardo Manuel de Villena, University of North Carolina at Chapel Hill

12:35 – 12:50PM *Core C: Systems Genetics and Bioinformatics Core*
Shannon McWeeney, Oregon Health & Science University

12:50 – 1:00PM *Human Correlates Analysis*
Klaus Schughart, University of Tennessee Health Science Center

1:00 – 2:00PM **Lunch break**

2:00 – 4:00PM *Defining Regulators of Immunity to Acute Infection Using CRISPR Screens*

2:00 – 2:20PM *U19 overview and updates*
Arlene Sharpe, Harvard University Medical School

2:20 – 2:35PM *CRISPR/Cas9 gene perturbation technology (Core D and Project 1)*
Martin LaFleur, Harvard University Medical School

2:35 – 2:55PM *CRISPR screens to discover regulators of CD4 T cells (Project 1)*
Vijay Kuchroo, Brigham and Women's Hospital

2:55 – 3:15PM *CRISPR screens to discover regulators of DC (Project 2)*
Jon Kagan, Children's Hospital Corporation

3:15 – 3:35PM *CRISPR screens to discover regulators of DC (Project 2)*
Nir Hacohen, The Broad Institute

3:35 – 3:55PM *Bioinformatics and data management (Core B)*
Orr Ashenberg, The Broad Institute

3:55 – 4:00PM *Wrap-up*
Arlene Sharpe, Harvard University Medical School

4:00 PM **Adjourn general meeting**

4:15 – 5:00 PM **Systems Immunology Steering Committee Meeting**

(TBD) **(closed session, Steering Committee members and NIAID staff only)**

Subject: RE: MHC paper datasets

Hey all,

One of the PIs I know at UTMB is doing some CHIPseq and MeDIP analysis and was looking at the MHC paper. He said that when he downloaded the GEO files, it only had information for chromosome 6. Is that all we uploaded? He is interested in looking at all the sequencing data to compare changes after infection vs his HIV studies.

Is it possible to send the .bed files for the seq data? Is there a reason these data weren't included in the GEO submission?

Thanks

VDM

FYI – the data is now available.

The four experiments are listed at the top of this page on the OMICs-LHV public site:
https://omics-lhv.org/data/

… and links go to mirrored pages from the OMICS-LHV LabKey site. I've just confirmed that everything is in working order.

Alex,

Please let us know when you have the GEO accession numbers for the deposited data and we will update the OMICS-LHV public site.

Thank you,

Amie

Subject: RE: MHC paper datasets

I will work with Michelle to:

1. Move the files Alex uploaded to the appropriate pages on the LabKey server.
2. Make the LabKey pages open to the public.
3. Make links to the LabKey pages available from the OMICs public page.

How do you want the study labeled on the OMICs public page?

Cc: Katrina.waters@pnnl.gov
Subject: RE: MHC paper datasets

Hey All,

Can we get this resolved today so that I can upload the corrected proofs today?

It seems the best action would be to make the files available on the omics public site in the short term and then proceed with the Geo submission. Once completed, the omics site can link to the Geo submission.

I imagine Amie can help facilitate this through Michelle, but perhaps there is someone else that should be looped in.

Thanks

VDM

To: Menachery, Vineet; Amie Eisfeld
Cc: Katrina.waters@pnnl.gov
Subject: Re: MHC paper datasets

Hi All,

I moved all relevant ChIP-Seq and MeDIP-seq files into the Dropbox in LabKey, they are in a folder named ChIP-MeDIP-Seq.

They are bed files (those are what NCBI GEO calls 'processed data files')--- they pretty much are the peak calling files; they are small enough and I hesitated to upload any seq. files. I also added an excel sheet which has all the information regarding samples, protocols, and pipelines used (this is a template which NCBI GEO provides for uploading NGS files).

I understand that I don't have admin rights to actually upload the data; so it would be great if somebody could help me here and upload them into the experimental folders in LabKey.

Amie,
you mentioned that this could be then opened for public access, is this correct?
This way we could keep the reference in the paper for submission and I can work this week on getting all the files, bed (or maybe wig files) and the raw sequencing files to NCBI Geo
-- I think I will need a day or 2 to look into the submission process; I have no experience with this; and then later we could link the GEO ID to the experiments on LabKey.

Please let me know if anything is missing and/or if you need any further information.

Thanks,
Alex

Cc: Katrina.waters@pnnl.gov
Subject: RE: MHC paper datasets

Whoever has the data needs to make sure it is available.

Alex spoke to me briefly about where to deposit it about a year ago. My impression is that she was seeking a public database for deposition. NCBI GEO takes all kinds of sequence data, so I think this would be the most logical location for deposition, so that the data can be available in the long term.

Regarding the OMICS-LHV public page – we have not used this to make any data publicly available for any publication to date. We only list the location of data deposited into public databases.

If the data are posted to the LabKey web portal, we could make that page publicly available. None of the ChIP-seq or Me-DIP data has been posted to the LabKey portal to date, although we do have pages dedicated to these experiments (see https://omics-lhv.discovery.wisc.edu/project/OMICS-Data/ICL106/begin.view? and https://omics-lhv.discovery.wisc.edu/project/OMICS-Data/ICL105/begin.view?).

A few other things:

1. We are not using the PRIDE database anymore, so unless you are using data from Systems Virology, this is not correct. All proteomics data from the current contract have been made available in the MassIVE database. If you let me know which experiments you used for the paper, I can give you the accession number.

2. Katrina should probably comment on the availability of the data through PNNL sites – this is not something we have been reporting in other papers.

3. Data and datasets have not been submitted to ViPR, so this statement should be removed.

Subject: MHC paper datasets

Hi Amie, Alex, and Katrina,

Not sure who would be responsible for this, but the PNAS paper requires availability of the raw data.

For the methylation data, we cited that it was available on the omics public page. When I clicked on the link, I saw no reference to the CHIP-SEQ data. I think Alex was working with Jason on this, but hopefully she can be provide clarity on this.

The proofs require a 48Hr turn around, although they may be more forgiving because of the holiday. Sorry for the late notice, but wanted to make sure it was all in place prior to submission.

CHIP-Seq, MeDIP-Seq, and raw proteomics data have been made available on the Omics-LHV web portal (https://omics-lhv.org/data/). Raw proteomics data corresponding to peptide identifications used to populate the AMT tag database are available at the PRoteomics IDEntification (PRIDE) database, https://www.ebi.ac.uk/pride/ (accession nos. 19,877–19,890). The raw quantitative proteomics data can be accessed at the Pacific Northwest National Laboratory Biological Mass Spectrometry Data and Software Distribution Center (omics.pnl.gov/) in the Systems Virology Contract Data folder within the Browse Available Data folder. All datasets and associated metadata have been submitted to the Virus Pathogen Resource (www.viprbrc.org/brc/home.spg?decorator=vipr).

Thanks

Subject: Updated agenda and registration link for Systems Immunology U19 Annual Meeting - April 11, 2019

Dear All,

Attached please find the updated agenda. Let me know if you have anything to add or change.

Here's the meeting registration link, https://palladianpartners.cvent.com/U19AnnualMeeting. For any logistic issues, please contact Grace Tollini (she is copied here).

Please let us know if you have any questions.

Thank you,
Chao

Subject: Thank you for attending the System Immunology Annual Meeting

Dear All,
Thank you very much for coming to this year's Systems Immunology U19 program annual meeting! It was my great pleasure meeting each of you.
After the meeting, I have received positive feedbacks from our Division Director and Branch Chief. The talks were really informative and interesting.
You have made amazing progress. We really enjoyed the meeting. The Steering Committee Meeting went well too. There were so many good ideas for
collaboration and resource sharing. We really appreciate your input. We look forward to meeting you next time.
Please feel free to talk to me if you have any feedbacks or questions.
Best regards,
Joy

Subject: Re: MHC paper datasets

Hi All,

Just to clarify,
as Ralph said, all the underlying raw data files as well as the data files used for the key conclusion were submitted in January 2018 and are publicly available at GEO under the following accession numbers:

GSE108881: Chip-Seq
GSE108882: MeDIP-Seq

Best,
Alex

Subject: RE: MHC paper datasets

So are the underlying files available somewhere publicly? If so, can I get the link to pass along.
Thanks

VDM

Subject: RE: MHC paper datasets

Hi Vineet, all the datafiles were submitted on the MeDip and Chip seq data associated with the paper. in addition, they wanted the files highlighted as key for the paper which focused on chr 6. I think you have accessed only the chr 6 data, not the underling files for the remaining data. Alex submitted all the data. ralph

Hi Vineet,

Alex was/is in charge of data dissemination for this project, and has access to all the available ChIP-seq and MeDIP data.

She should be able to answer your questions.

Thank you,

Amie

Subject: RE: MHC paper datasets

Hey all,

One of the PIs I know at UTMB is doing some CHIPseq and MeDIP analysis and was looking at the MHC paper. He said that when he downloaded the GEO files, it only had information for chromosome 6. Is that all we uploaded? He is interested in looking at all the sequencing data to compare changes after infection vs his HIV studies.

Is it possible to send the .bed files for the seq data? Is there a reason these data weren't included in the GEO submission?

Thanks

VDM

FYI – the data is now available.

The four experiments are listed at the top of this page on the OMICs-LHV public site:
https://omics-lhv.org/data/

… and links go to mirrored pages from the OMICS-LHV LabKey site. I've just confirmed that everything is in working order.

Alex,

Please let us know when you have the GEO accession numbers for the deposited data and we will update the OMICS-

LHV public site.

Thank you,

Amie

To: Menachery, Vineet; Schaefer, Alexandra
Cc: Katrina.waters@pnnl.gov
Subject: RE: MHC paper datasets

I will work with Michelle to:

1. Move the files Alex uploaded to the appropriate pages on the LabKey server.
2. Make the LabKey pages open to the public.
3. Make links to the LabKey pages available from the OMICs public page.

How do you want the study labeled on the OMICs public page?

Subject: RE: MHC paper datasets

Hey All,

Can we get this resolved today so that I can upload the corrected proofs today?

It seems the best action would be to make the files available on the omics public site in the short term and then proceed with the Geo submission. Once completed, the omics site can link to the Geo submission.

I imagine Amie can help facilitate this through Michelle, but perhaps there is someone else that should be looped in.

Thanks

VDM

Cc: Katrina.waters@pnnl.gov
Subject: Re: MHC paper datasets

Hi All,

I moved all relevant ChIP-Seq and MeDIP-seq files into the Dropbox in LabKey, they are in a folder named ChIP-MeDIP-Seq.

They are bed files (those are what NCBI GEO calls 'processed data files')--- they pretty much are the peak calling files; they are small enough and I hesitated to upload any seq. files. I also added an excel sheet which has all the information regarding samples, protocols, and pipelines used (this is a template which NCBI GEO provides for uploading NGS files).

I understand that I don't have admin rights to actually upload the data; so it would be great if somebody could help me here and upload them into the experimental folders in LabKey.

Amie,
you mentioned that this could be then opened for public access, is this correct?
This way we could keep the reference in the paper for submission and I can work this week on getting all the files, bed (or maybe wig files) and the raw sequencing files to NCBI Geo
-- I think I will need a day or 2 to look into the submission process; I have no experience with this; and then later we could link the GEO ID to the experiments on LabKey.

Please let me know if anything is missing and/or if you need any further information.

Thanks,
Alex

Cc: Katrina.waters@pnnl.gov
Subject: RE: MHC paper datasets

Whoever has the data needs to make sure it is available.

Alex spoke to me briefly about where to deposit it about a year ago. My impression is that she was seeking a public database for deposition. NCBI GEO takes all kinds of sequence data, so I think this would be the most logical location for deposition, so that the data can be available in the long term.

Regarding the OMICS-LHV public page – we have not used this to make any data publicly available for any publication to date. We only list the location of data deposited into public databases.

If the data are posted to the LabKey web portal, we could make that page publicly available. None of the ChIP-seq or Me-DIP data has been posted to the LabKey portal to date, although we do have pages dedicated to these experiments (see https://omics-lhv.discovery.wisc.edu/project/OMICS-Data/ICL106/begin.view? and https://omics-lhv.discovery.wisc.edu/project/OMICS-Data/ICL105/begin.view?).

A few other things:

1. We are not using the PRIDE database anymore, so unless you are using data from Systems Virology, this is not correct. All proteomics data from the current contract have been made available in the MassIVE database. If you let me know which experiments you used for the paper, I can give you the accession number.

2. Katrina should probably comment on the availability of the data through PNNL sites – this is not something we have been reporting in other papers.

3. Data and datasets have not been submitted to ViPR, so this statement should be removed.

Cc: Katrina.waters@pnnl.gov
Subject: MHC paper datasets

Hi Amie, Alex, and Katrina,

Not sure who would be responsible for this, but the PNAS paper requires availability of the raw data.

For the methylation data, we cited that it was available on the omics public page. When I clicked on the link, I saw no reference to the CHIP-SEQ data. I think Alex was working with Jason on this, but hopefully she can be provide clarity on this.

The proofs require a 48Hr turn around, although they may be more forgiving because of the holiday. Sorry for the late notice, but wanted to make sure it was all in place prior to submission.

CHIP-Seq, MeDIP-Seq, and raw proteomics data have been made available on the Omics-LHV web portal (https://omics-lhv.org/data/). Raw proteomics data corresponding to peptide identifications used to populate the AMT tag database are available at the PRoteomics IDEntification (PRIDE) database, https://www.ebi.ac.uk/pride/ (accession nos. 19,877–19,890). The raw quantitative proteomics data can be accessed at the Pacific Northwest National Laboratory Biological Mass Spectrometry Data and Software Distribution Center (omics.pnl.gov/) in the Systems Virology Contract Data folder within the Browse Available Data folder. All datasets and associated metadata have been submitted to the Virus Pathogen Resource (www.viprbrc.org/brc/home.spg?decorator=vipr).

Thanks

Hey Ralph (and Toni),

I just chatted with guys from ATI (listed below). I told them that I don't have the capacity to do the quick turn around on in vivo mouse work and recommended that they talk to you. They prefer your model to Kent's.

I told them I would make an email introduction which I'll do in a few minutes.

I am under the impression that they think they will get this DARPA funding to do the MERS work. They want me to do the in vitro work and have you do mouse work and then work back to the marmoset model at UTMB.

If you aren't interested, no worries. I am not desperate for the money and based on our conversations with them, not sure I have the ability to be as responsive as they need the project to be. I'm happy to chat over the phone about it tonight or in the morning.

Subject: Darpa project

Hey Ralph,

I have been approached by a group to working with DARPA to do some MERS work. They are currently funded to do work on CCHF and some other tick viruses and DARPA has requested a proposal to apply their approach to MERS-CoV. Since they were already working with UTMB, I was suggested as a possible person to interact with.

I've had several conversations with them over the past few weeks. They are interested in both in vitro and in vivo validation. I am going to be talking with them further in the next few days, but I am not sure that I have the capacity/interest in doing all the mosue work. If it was at UTMB, it would be Kent's model. I had suggested the UNC DPP4 mice as an alternative.

Would you be interested in participating or even leading the mouse work? I am not sure where it is going, but after talking with Scott Weaver here, it can be a good bit of money, but it is essentially contract work. It does get you into the groups that work with DARPA, so you can get to network with them and carve out a place with the program officers. I know EcoHealth is involved heavily.

The website of the guys leading the project is below. I do not know them personally, and my interactions with them have been far from illuminating. https://www.autonomous.bio/https://www.autonomous.bio/

Anyway, let me know if you have a thought or suggestion. Happy to talk over the phone about this as well.

Hope you are well.

Vineet, I appreciate the full story. However, your second paragraph is still at odds with your first sentence. If some data is shared without the courtesy of discussing it first with the lab that generated the data, it is flat out inappropriate. Consequently, I don't believe I accused you incorrectly, as you seem to be arguing scope. How can you offer their data for our U19 without discussing this with the PI who is directing the student? Why wasn't I brought into this discussion beforehand. If you can't understand my frustration, then you are correct and we have a problem.
Ralph

Subject: RE:

Ralph,

I don't appreciate being accused of things that I didn't do.

I did not share any QTL mapping or any other data from the U19 with them. I did share that Trim6 might be a target under the QTL for Ebola and that genetic diversity might be important. I did this in context of one of their students presenting their Ebola data on Trim6 KO mice. If that was inappropriate, I apologize.

I did share with Lisa that we have infected the Trim6KO mice with SARS and found a phenotype. Perhaps this was inappropriate as well. The researcher had offered their Ebola Trim6KO data as preliminary data if we wanted to use it in the U19 presentation. Again, perhaps this was inappropriate.

I agree that there are norms in behaviors to be followed, but accusing me of sharing data with direct competitors without knowing the full story also results in a loss of trust between members of the group.

Hi Vineet, Lisa had mentioned that you had shared our Ebola Mapping data and candidate genes with researchers at UTMB who do Ebola research, and who also happen to have a Trim6 KO. If so, this is inappropriate. It was not your data and not yours to share. As a collaborator on the U19 there are norms in behavior that have to be followed or it results in a complete loss of trust between members of the group. Ralph

Hey Jenny and Jess,

I mentioned some of my thoughts to Jess at the meeting. I also cced Lisa so that she can comment on my comments.

Let me know if you want me to look at it again. I think its a nice study.

Hi, the major goal for todays SIG U19 meeting was to discuss and select topic candidates for inclusion into the pilot program. As all the reviews aren't yet in and several can't make the call, I think we need to reschedule to next week at a time when a quorum of investigators are available for discussing the projects. We also need to make final decisions by next week for inclusion in the noncompeting renewal packet for year three of the grant. Toni can you search for a time? Please get the reviews in ASAP…thanking those who have already done so.
Ralph and Mark

I will send to her shortly and CC you and Barney.

As for Davide, he is registered to speak and attend plus strand, so I could ask him directly, but he's not scheduled to speak until later in the meeting.

We'd have to wait until next week to submit. Probably need to give Lingshu time to read the paper if she wanted, which probably pushes us to Friday. Up to you, I'm fine either way, but I don't have a relationship with him so it probably doesn't impact me going forward. I'll look and see if he's provided antibodies to others without authorship.

I'll email text to Lingshu and let me know if you want me to just talk to Corti directly next week.

Subject: RE: Uganda Draft

Hi Vineet, finally heard from Barney-he was celebrating his 40th anniversary and was out of all electronic contact for 3 weeks or so. In any event, he suggested we add Lingshu (she made the antibodies under his direction). Wang, Lingshu (NIH/VRC) [E] wangling@niaid.nih.gov You should send her a copy to make sure she is on board, before pressing go. Regarding Davide, I think he left humabs and I have no idea where he is. He hasn't answered my last 4 emails, so I think maybe we should just thank him and lanzavecchia in the acknowledgements section—he has gotten about 5-6 papers out of us so I think we have been kind. thoughts? Ralph

Ralph,

I've attached the Uganda draft and final figures following comments from various authors. I did not hear from Davide or Barney. I added Scott Randell to the author line and he read over the manuscript.

I have also attached the cover letter if you want to modify; I was planning to ask for Enjuanes, Gallagher, and Baker for reviewers. Any other suggestions? Also need editors for the editorial board, was thinking palese or Oldstone.

It is otherwise ready to go in my mind.

Subject: presubmission draft

Dear Editors at Cell Host & Microbe:

Please find our presubmission inquiry for our manuscript, "Trypsin treatment unlocks barrier for zoonotic coronavirus infection", by Menachery, Dinnon, et al.

In this work, we describe the restriction of two MERS-like bat coronaviruses and the use of exogenous trypsin to overcome this barrier. Employing a MERS-CoV reverse genetic system, we constructed a chimeric virus replacing the wild-type spike with the PDF2180-CoV spike, a MERS-like virus found in an Ugandan bat. While initially not viable, we found that the addition of exogenous trypsin rescued viral replication in Vero and human cells. The chimeric MERS virus could replicate in human gut cells, but not in human airway cells. Notably, blockade of MERS-CoV receptor DPP4 had no impact on chimeric virus replication, suggesting use of an alternate receptor. Testing of monoclonal antibodies designed against the RBD and S2 portions of the MERS-CoV spike showed no efficacy against the PDF2180-chimeric virus. Importantly, exogenous trypsin also rescued replication of a second group 2C CoV, full-length HKU5-CoV. These results indicate host protease cleavage of spike constitutes a primary barrier for group 2C CoV emergence. Coupled with receptor binding, spike activation offers a new parameter to evaluate emergence potential of coronavirus. In addition, the finding offers a means to recover previously uncultivable zoonotic coronavirus strains.

We have attached our abstract and a graphical description of our findings for you to review. WE look forward to your response.

Sincerely,

Vineet D. Menachery & Ralph S. Baric

June 25, 2019

Title: "**Trypsin treatment unlocks barrier for zoonotic coronaviruses infection.**"
Tracking #: 2019-09188
Authors: Menachery et al.

Dear Dr. Menachery,

I regret to inform you that the PNAS Editorial Board has declined your manuscript [MS# 2019-09188] for further consideration. We receive many more good papers than we can publish and the Board must carefully weigh which papers merit external review. The expert who served as editor concluded that although this work is interesting, it does not have the broad appeal needed for PNAS and is better suited for a more specialized journal.

Thank you for submitting your manuscript to PNAS. I am sorry we cannot be more encouraging this time, and I hope you will consider submitting future work to PNAS.

Sincerely yours,
May R. Berenbaum

Subject: RE: ASM nomination

Hey Ralph,

The nomination is a webform (in the link) and has a slot (4000 characters) for defining why I am deserving of the award. They only contact the references (Diamond or Yoshi or Scott) if I am a finalist. Both have already written a letter on my behalf for the Texas Star award, so I think they have text already.

I can ask Scott, but based on what I have heard, it really needs to be someone that can put the nominee's accomplishments in the perspective of your field. The people who have won that I know (Nick Heaton and Stacy Horner) had their post-doc PI nominate (Gale and Palese) them.

It has been implied that the nomination is about your record, the stature of the people who are your references, and the nominator highlighting your importance to your specific field. I think you are probably most qualified to do that.

The award does not always get many people applying. The nomination is due almost a year before the next meeting and most people miss the deadline and forget. That being said, my biggest strike for the award will be not having an independent pub from my own lab. Best is the number of papers I've published. We got favorable reviews on our JVI paper this month, but won't be back

in til later in July.

I can send my CV next week, but you can also send it at a later date, that might help.

Thanks for participating.

Hi Vineet, I'd be delighted to participate. Given the timeline, it might be better for me to write a letter and scott to nominate, as I can address why your deserving of this award for early career basic research, which I think you'd be competitive for. Not sure how quickly diamond and kawaoka can respond or whether they have made other commitments, although they are both familiar with your work. Does scott have a feel for the mechanism here? Is it better for your former mentor or current chair to nominate you for this award? Some insight into this would help. Ralph

Hey Ralph,

Would you be willing to nominate me for the ASM early career award. https://www.asm.org/Academy/ASM-Award-for-Early-Career-Basic-Researchhttps://www.asm.org/Academy/ASM-Award-for-Early-Career-Basic-Research

The application requires 1 nominator and 2 references. I'd suggest that Mike Diamond and Yoshi would be good for the nomination. You could also use Scott Weaver. I put their emails down below. The hardest part of the form is the following prompt:

Describe the nominee's outstanding contributions to the microbial sciences. Please be as specific as possible, with particular focus on why the nominee is deserving of this specific award (*no more than 4000 characters*). For more information regarding specific awards descriptions, please visit: https://www.asm.org/Academy/ASM-Awards.

If you are willing, the nomination is due by July 9th. If you don't have time, I can ask Scott Weaver or another person to nominate me. Let me know and I will send you and updated CV.ThanksVDM

16th July 2019

Dear Professor Menachery,

Thank you for submitting your Letter entitled "Trypsin treatment unlocks barrier for zoonotic coronavirus infection" for consideration in Nature Microbiology. I regret to inform you that after careful consideration and discussion with my editorial colleagues, we have decided that we cannot consider it for publication here.

As you may know, we decline a substantial proportion of manuscripts without sending them to referees, so that they may be sent elsewhere without delay. In such cases, even if referees were to certify the manuscript as technically correct, we consider that the work does not represent the type of advance that Nature Microbiology seeks to publish. These editorial judgements are based on considerations such as the degree of conceptual advance provided, the breadth of potential interest to researchers and timeliness.

In this case, we appreciate your major findings that MERS-CoV engineered with the PDF-2180 spike protein is able to infect human cell lines in presence of exogenous trypsin and in a DPP4-independent manner and that antibodies targeted against MERS-CoV, even to regions in the highly conserved S2 domain, may be ineffective against viruses expressing the PDF-2180 spike. However given the modest insights provided here into the mechanisms behind trypsin-mediated entry, your study has not matched our criteria for further consideration. We therefore feel that the paper would find a more suitable outlet in another journal.

I am sorry to have invited you to submit the paper only to reach a decision which must inevitably be disappointing. While we endeavour to assess papers as best as possible at the presubmission stage, I am sure you will understand that it is not always possible to do so accurately, given the limited information available.

Although we cannot offer publication, I have discussed your manuscript with our colleagues at Nature Communications, and they would be happy to send it out for formal peer review if you transfer the manuscript. Should you wish to have your paper reviewed at Nature Communications, please use the link to the Springer Nature manuscript transfer service in the footnote. It is not necessary to reformat your paper at this point.

Your handling editor at Nature Communications would be Dr. Sonja Schmid (Sonja.schmid@us.nature.com). If there is anything you would like to discuss before transferring the paper, please don't hesitate to contact her by e-mail.

Please note that Nature Communications is a fully open access journal. For information about article processing charges, open access funding, and advice and support from Nature Research, please consult the Nature Communications Open Access page (www.nature.com/ncomms/open_access/index.html).

I am sorry that we cannot respond more positively on this occasion.

Yours sincerely

Libera

Libera Lo Presti, PhD
Associate Editor
Nature Microbiology
4 Crinan Street
London, N1 9XW

libera.presti@nature.com

** If you wish to transfer your manuscript to Nature Communications, please use our manuscript transfer portal to initiate the transfer to this journal (or to another journal of your choice in the Nature Research portfolio). If you transfer to Nature-branded journals or to the Communications journals, you will not have to re-supply manuscript metadata and files. This link can only be used once and remains active until used.
All Nature Research journals are editorially independent, and the decision to consider your manuscript will be taken by their own editorial staff. For more information, please see our manuscript transfer FAQ page.

Subject: Uganda Paper

Hey Ralph,

The Uganda paper is out for review at Nat. Com.

I am working with David Veesler who is interested in doing a crystal structure on the Uganda spike. He has already started working on making the trimer prior to my chatting with him at plus strand. He had remembered that we had recovered the recombinant virus at the last nidovirus meeting and wanted to know our progress.

I'd like to share the submitted manuscript, but wanted to make sure you didn't have an objection. Let me know.

Thanks

VDM

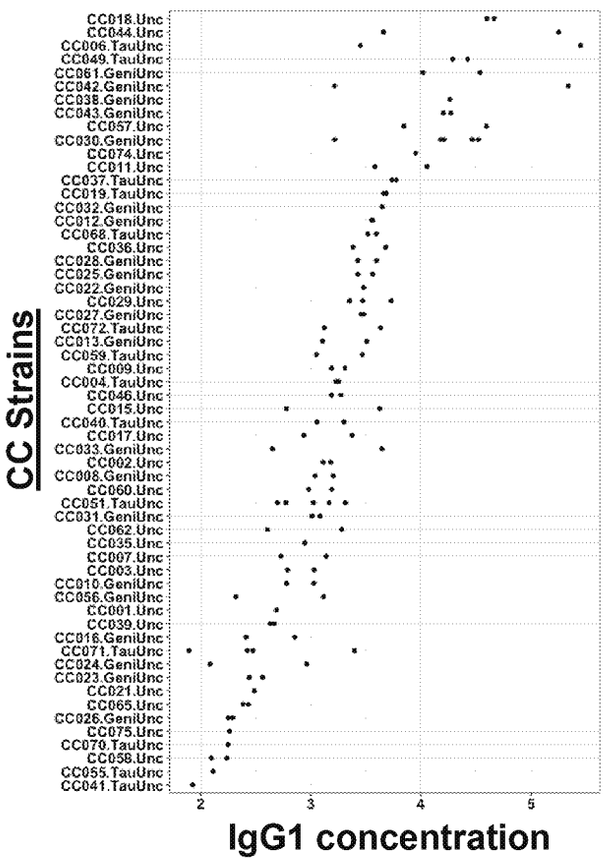
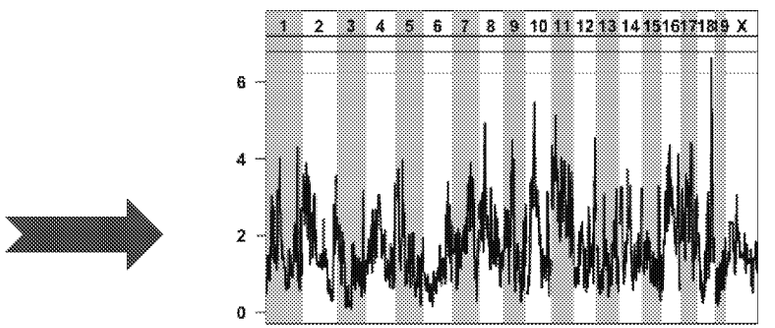
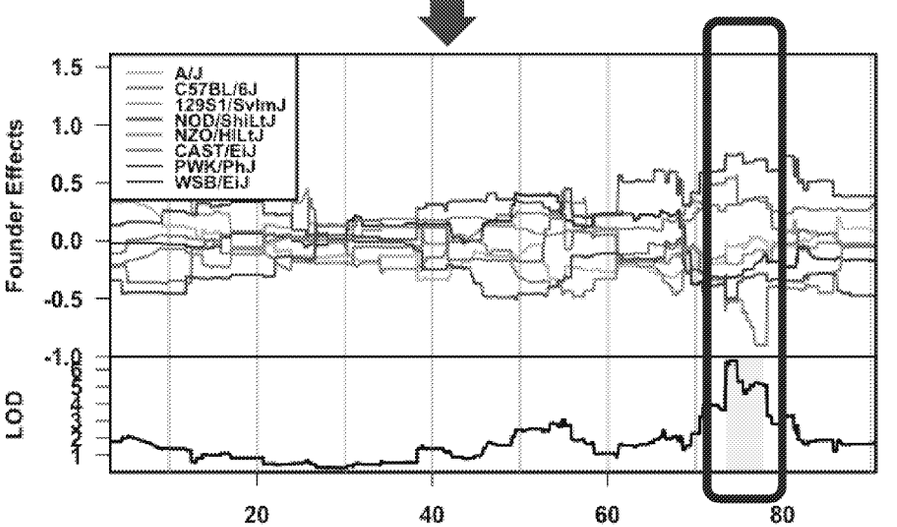
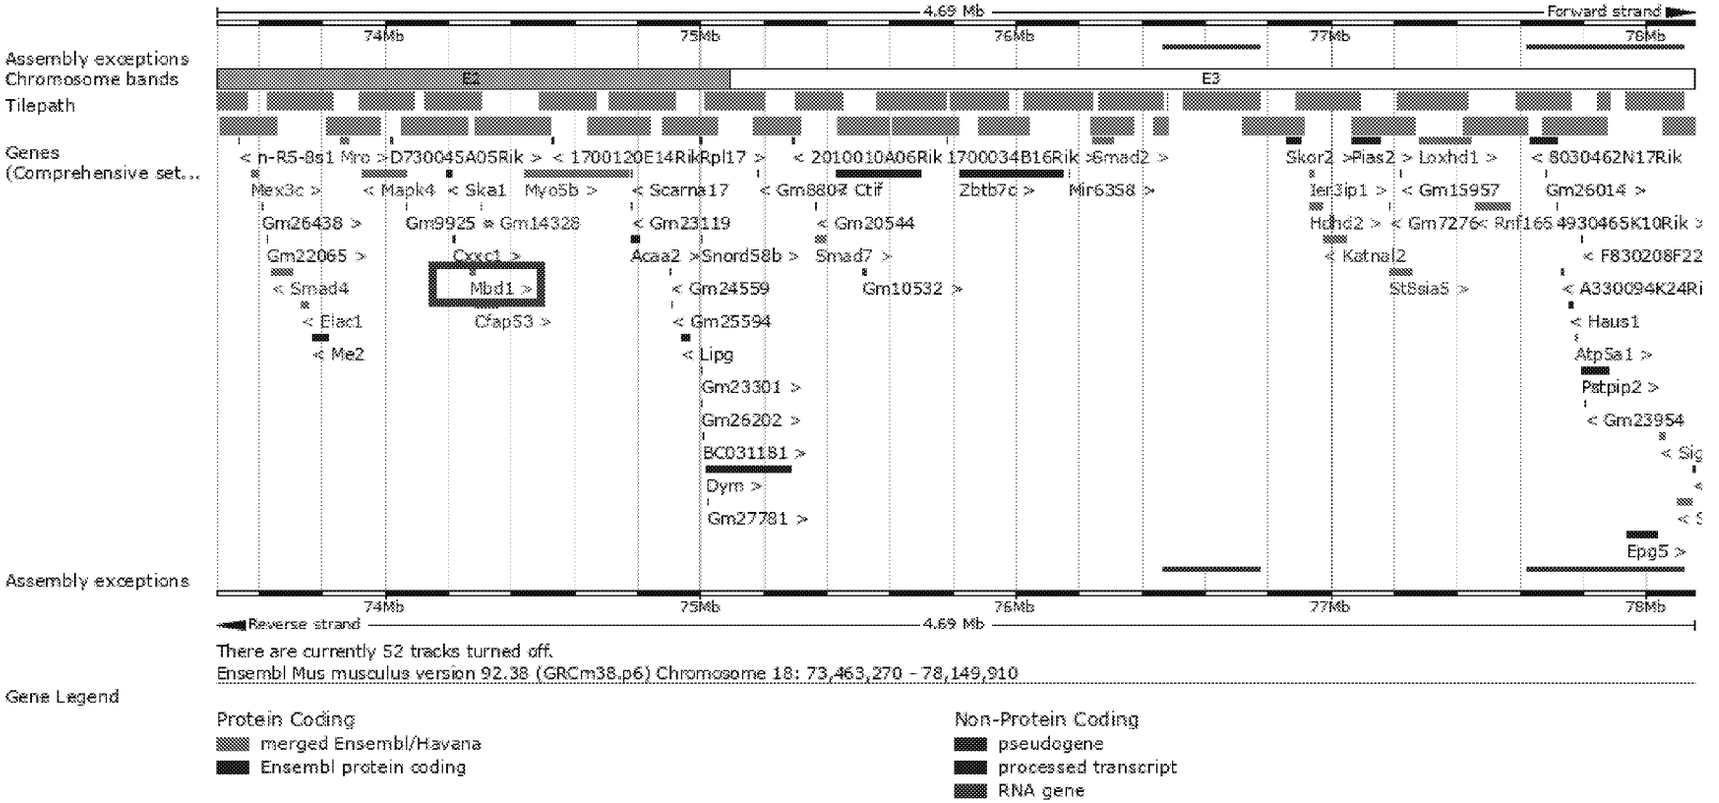
Variation in Baseline Antibody









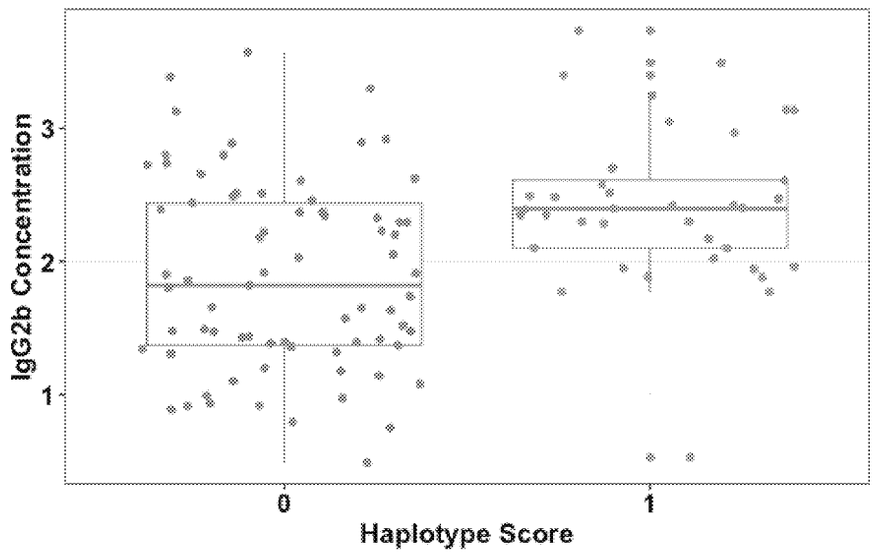
Mbd1 is the only gene that has WSB, CAST, and BL/6J private SNPs. There are no genes that have shared SNPs between the 3 high founder strains.

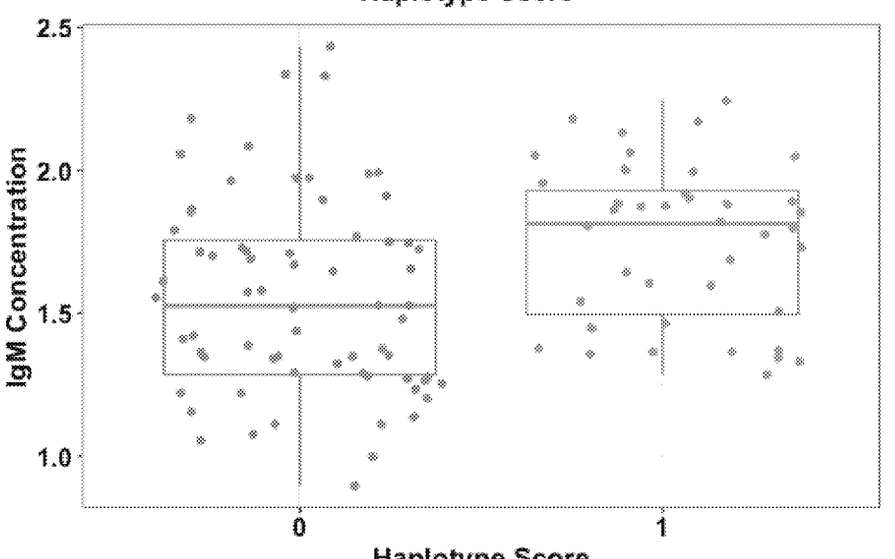
Methyl-CpG-binding domain protein 1

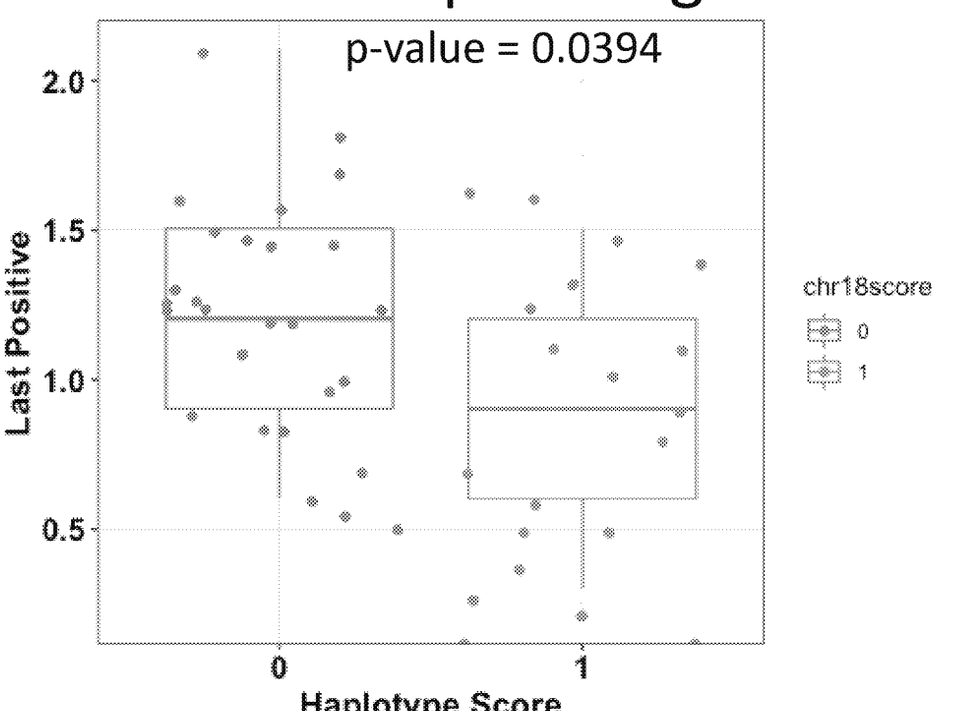
- Transcriptional Repressor
- Expression is upregulated in activated B cells
- MBD1 is involved in T cell Tolerance (Waterfield et al., 2014)

Brea Hampton

Chr. 18 QTL has broader effects on both baseline and antigen specific antibody responses







Brea Hampton

Ongoing/Next Steps

- Do baseline phenotypes or loci correlate with virus-induced disease or immune response? Analysis of existing data sets
  - Virus-induced weight loss (SARS/Flu)
  - Respiratory function (Mike M./Shannon?)
  - Virus-induced inflammatory/adaptive immune responses?
  - Relationship between immune homeostasis in the lung and periphery (Lund)?
- Do baseline immune phenotypes affect vaccine responses?
- Manuscripts!

Who do you suggest for Mbio editors

Here are the ones I have. Need to have 5

Vincent Racaniello
Mary Estes
Tem morrison
Peter Plaise
Malik Peiris
Kanta
Stacy Shultz Cherry
Anne Moscona

For reviewers, i had
Luis
Tom Gallagher
Susan Baker
Daszak
Benhur Lee
Paul Duprex

I didn't have anyone i excluded as of now.

I chatted with a few people about Cell Reports, and they said it has same issues as Nat. Com. with self importance and taking a long time to decide and then asking for more and more stuff.

Think Mbio might be best bet at this point. I called this morning, but didn't get through. I can chat this afternoon if you want. Otherwise, I'll start prepping for Mbio.

Subject: Re: Decision on manuscript NCOMMS-19-23910-T

I'm fine if you don't want it on a preprint. As long as it gets accepted by teh Feb Review cycle.

I guess I'd lean Cell Reports at this point. I haven't had any experience there, so not sure how it goes. I would like the variety in my CV. That being said, I also don't want them to sit on it for >60 days like Nat. Com did.

I'll work on the cover letter today and get it submitted this week at Cell Reports; happy to talk about it if you think Mbio is the better spot for it.

Subject: RE: Decision on manuscript NCOMMS-19-23910-T

Cell reports or mbio—I'm getting to the point where it is time to move on to other things, so maybe mbio is best. Reviewer number 1 is a real ass wipe. I would like to find out who they are so that I can start reviewing their papers-sounds like one of the damn dutch. I would prefer to stay out of a preprint server at this point. However, if you feel its important for your grant submissions or in your best interest……. make the call. Be glad to chat if you want to talk about journal choices. Overall, I think Nature Communication is a shit whole of a journal. Tim's paper had also got beat to shit there by an ass reviewer with strong opinions on little issues. While I wish he would just go straight to cell reports (I think he feels the same way), we are going to send the resubmission back as he did a lot of the requested work for the second time (different set of requests both times). Personnally, I think his reviewer is just looking to kill a paper. Ralph

Subject: Decision on manuscript NCOMMS-19-23910-T

Dear Dr Menachery,

Your manuscript entitled "Trypsin treatment unlocks barrier for zoonotic coronavirus infection" has now been seen by 2 referees, whose comments are appended below. In the light of their advice I regret to inform you that we cannot publish your manuscript in Nature Communications.

You will see that, while the reviewers find your work of some potential interest, they raise substantive concerns that cast doubt on the advance your findings represent over earlier work and the strength of the novel conclusions that can be drawn at this stage. In particular, reviewers are not convinced that the manuscript provides a sufficient conceptual advance without additional experiments providing insights into the mechanism underlying the observations. Unfortunately, these reservations are sufficiently important to preclude publication of this study in Nature Communications.

If you opted into the journal hosting details of a preprint version of your manuscript via a link on our dedicated website (https://nature-research-under-consideration.nature.com), please note that we will now remove these details as your manuscript is no longer under consideration at Nature Communications. For more information, please refer to our FAQ page at https://nature-research-under-consideration.nature.com/posts/19641-frequently-asked-questions

I am sorry that we cannot be more positive on this occasion and thank you for the opportunity to consider your work.

Best regards,
Sonja Schmid, PhD
Senior Editor
Nature Communications
http://www.nature.com/ncomms

Reviewers' comments:

Reviewer #1 (Remarks to the Author):

The manuscript by Menachery et al. deals with the role of trypsin-dependent protease activation on coronavirus (CoV) infections in cell cultures.
The authors used a previously generated chimeric MERS-CoV carrying the Spike gene of a MERS-CoV conspecific bat-related Coronavirus (PDF2180-CoV from Uganda) and performed cell culture experiments with and without trypsin treatment.

The finding that trypsin treatment influences cell susceptibility and probably organ tropism of MERS-related CoV is interesting, however, not overly innovative and surprising.

I have several remarks.

1. It is an intriguing but not very surprising finding that protease activation by trypsin influences CoV cell entry. Coronaviruses enter cells by receptor-mediated endocytosis using different exopeptidases (e.g. DPP4, ACE2) or by protease-mediated (HAT, TMPRSS2) direct fusion of virus particle membranes with the cellular plasma membrane. The present study shows that trypsin-treatment facilitates virus replication of bat-derived CoV but does not present a single experiment on the mechanistic details. Neither do the authors analyze the effect and mechanistic consequences of trypsin on the Spike proteins nor do they identify the proposed alternative receptor.

2. Throughout the manuscript important controls are missing.
a) The authors should confirm correct transcript sequence and expression of DPP4 in both trypsin-adapted Vero and Huh7 cell lines. These are important controls, as aberrant expression of DPP4 in immortalized cell lines may affect the conclusions.
b) The authors should show for all applied CoV that the activated protease has a direct effect on the virus (and not on a putatively new host cell receptor): the authors could e.g. "prime" virus stocks with trypsin, neutralize trypsin after incubation, then infect cells with the primed stock. Figure 5B is not sufficient and shows only HKU5-CoV infection in Vero cells co-treated with trypsin.
c) Using HAE cells the authors claim that chimeric "MERS-Uganda" does not infect the respiratory tracts of humans. How often was this experiment repeated? Were different donors tested? Again, I would expect different set-ups like virus pre-treated with trypsin, cells pre-treated with trypsin and co-treatment. The timing and the concentration of the trypsin-treatment is essential. What about other differentiated permanent cells lines like Calu-3?
d) The authors should sequence the HKU5-CoV and MERS-Uganda genomes (or at least the spike gene) after infection on trypsin-treated cells to confirm that both viruses are stable and to evaluate whether DPP4 host-adaptation (as in Letko et al., 2018) remains a contributing factor in the increased infectivity they observed.
e) The authors used an already existing MERS clone with a full-length Spike of the con-specific PDF2180-CoV. It would be important to show that the proposed recombination event led to the putative change of tropism. Different variants e.g. a MERS-CoV spike with only the S1 domain of PDF2180-CoV ,with and without the sialic acid binding domain (S1A) would be important controls.
f) What about sialic acid binding in general? Since it was shown that MERS-CoV attachment is facilitated by sialic binding I would expect that the authors show the sialic binding capacity of PDF2180-CoV to investigate how the trypsin treatment influences the attachment.
g) Another important control would be to check the susceptibility/permissiveness of bat cells (lung vs intestine) to support the hypothesis of a switch in organ tropism from bats to humans.
h) To rule out that other viral co-factors influence the entry process (and the use of DPP4) it would be beneficial to use a full-length PDF2180-CoV infectious virus.
i) Generally it would be important to titrate supernatants in order to see the influence on infectious particle production.

3. The quality of the Figures is insufficient. The immunofluorescence pictures in all of the Figures are not suitable for publication. The cells look apoptotic and there is no counterstaining to see how many cells are on the pictures. Without counterstaining the reader cannot evaluate the negative controls. There are no scale bars. I am aware that trypsin-treatment may cause these artifacts but the authors should then try to reduce trypsin concentrations or work with pretreatment of cells and /or virus stocks instead of continuous trypsin-treatment.

4. The Western blot in Fig. 3B and the fluorescence microscopy in Fig. 3A do not correspond. The WB shows a much stronger N protein band for trypsin-negative MERS-CoV infection, whereas in Fig. 3A the RFP assay the signals appear much brighter for trypsin-positive MERS-CoV infection.

5. General remark: Instead of just saying higher and lower, please indicate x-fold or percentage when discussing differences.

Reviewer #2 (Remarks to the Author):

This submission demonstrates that two potentially zoonotic coronaviruses, MERS-Uganda and MERS-like HKU5, will infect otherwise resistant cells if trypsin protease is supplied. The conclusions, therefore, are that trypsin protease "unlocks a barrier for zoonotic coronavirus infection". These results are of interest to the field because they highlight proteases as central host susceptibility factors in zoonotic coronavirus infection. As such, they move the field beyond a focus on receptors as the most relevant host susceptibility factors. Both virus receptors and proteases must now be simultaneously considered in evaluating susceptibility to zoonotic infections. Additionally, the findings in the paper are clear and convincing, and the results support the conclusions that are put forward. Finally, the paper is very well-written.

Comments for the authors:

1. Although the report has solid findings and credible interpretations of data, in some instances it does not make particularly novel insights. It is fairly well-known that some coronaviruses can be activated for cell entry by trypsin. Furthermore, the detailed architecture of the MERS spike : human DPP4 interaction is known, and it is understood that the MERS-Uganda and the MERS-like HKU5 spike proteins do not have complete hDPP4 receptor-binding motifs in their S1 domains. This latter point predicts the results shown in Fig 3, so much so that the results do not come across as especially novel. It is recommended that the authors further emphasize the novel features in this report.

2. The report could be strengthened, with potentially novel results, by further exploring the trypsin cleavage patterns of the Uganda and HKU5 spike proteins. The results shown in Fig 5B are a good start, but more could be presented. Many additional questions could be considered. What is the cleavage status of spike proteins on MERS-Uganda and HKU5 virus particles, before and after trypsin treatment? Does trypsin prime "free" virus particles for subsequent cell entry? Or does trypsin inactivate free virus particles? Put another way, do viruses have to first be attached to cells for trypsin to activate infection? Typically, there are two cleavages in the beta-coronavirus spikes that are relevant to cell entry, a priming S1/S2 cleavage and an activating S2prime cleavage. How do these substrate sites differ between MERS spikes, PDF2180/Uganda spikes and HKU5 spikes? Which of these substrate sites are cleaved by trypsin? If trypsin only cleaves at S1/S2, then what are
the proteases cleaving at S2prime? Are there Uganda spike-cleaving proteases that are present in Caco-2 cells but absent from primary HAE? To potentially elevate the novelty of the report, some or all of these questions should be addressed.

Who do you suggest for Mbio editors

Here are the ones I have. Need to have 5

Vincent Racaniello
Mary Estes
Tem morrison
Peter Plaise
Malik Peiris
Kanta
Stacy Shultz Cherry
Anne Moscona

For reviewers, i had
Luis
Tom Gallagher
Susan Baker
Daszak
Benhur Lee
Paul Duprex

I didn't have anyone i excluded as of now.

I chatted with a few people about Cell Reports, and they said it has same issues as Nat. Com. with self importance and taking a long time to decide and then asking for more and more stuff.

Think Mbio might be best bet at this point. I called this morning, but didn't get through. I can chat this afternoon if you want. Otherwise, I'll start prepping for Mbio.

Subject: Re: Decision on manuscript NCOMMS-19-23910-T

I'm fine if you don't want it on a preprint. As long as it gets accepted by teh Feb Review cycle.

I guess I'd lean Cell Reports at this point. I haven't had any experience there, so not sure how it goes. I would like the variety in my CV. That being said, I also don't want them to sit on it for >60 days like Nat. Com did.

I'll work on the cover letter today and get it submitted this week at Cell Reports; happy to talk about it if you think Mbio is the better spot for it.

Subject: RE: Decision on manuscript NCOMMS-19-23910-T

Cell reports or mbio—I'm getting to the point where it is time to move on to other things, so maybe mbio is best. Reviewer number 1 is a real ass wipe. I would like to find out who they are so that I can start reviewing their papers-sounds like one of the damn dutch. I would prefer to stay out of a preprint server at this point. However, if you feel its important for your grant submissions or in your best interest..... make the call. Be glad to chat if you want to talk about journal choices. Overall, I think Nature Communication is a shit whole of a journal. Tim's paper had also got beat to shit there by an ass reviewer with strong opinions on little issues. While I wish he would just go straight to cell reports

(I think he feels the same way), we are going to send the resubmission back as he did a lot of the requested work for the second time (different set of requests both times). Personnally, I think his reviewer is just looking to kill a paper. Ralph

Subject: Decision on manuscript NCOMMS-19-23910-T

Dear Dr Menachery,

Your manuscript entitled "Trypsin treatment unlocks barrier for zoonotic coronavirus infection" has now been seen by 2 referees, whose comments are appended below. In the light of their advice I regret to inform you that we cannot publish your manuscript in Nature Communications.

You will see that, while the reviewers find your work of some potential interest, they raise substantive concerns that cast doubt on the advance your findings represent over earlier work and the strength of the novel conclusions that can be drawn at this stage. In particular, reviewers are not convinced that the manuscript provides a sufficient conceptual advance without additional experiments providing insights into the mechanism underlying the observations. Unfortunately, these reservations are sufficiently important to preclude publication of this study in Nature Communications.

If you opted into the journal hosting details of a preprint version of your manuscript via a link on our dedicated website (https://nature-research-under-consideration.nature.com), please note that we will now remove these details as your manuscript is no longer under consideration at Nature Communications. For more information, please refer to our FAQ page at https://nature-research-under-consideration.nature.com/posts/19641-frequently-asked-questions

I am sorry that we cannot be more positive on this occasion and thank you for the opportunity to consider your work.

Best regards,
Sonja Schmid, PhD
Senior Editor

Reviewers' comments:

Reviewer #1 (Remarks to the Author):

The manuscript by Menachery et al. deals with the role of trypsin-dependent protease activation on coronavirus (CoV) infections in cell cultures.
The authors used a previously generated chimeric MERS-CoV carrying the Spike gene of a MERS-CoV conspecific bat-related Coronavirus (PDF2180-CoV from Uganda) and performed cell culture experiments with and without trypsin treatment.
The finding that trypsin treatment influences cell susceptibility and probably organ tropism of MERS-related CoV is interesting, however, not overly innovative and surprising.

I have several remarks.

1. It is an intriguing but not very surprising finding that protease activation by trypsin influences CoV cell entry. Coronaviruses enter cells by receptor-mediated endocytosis using different exopeptidases (e.g. DPP4, ACE2) or by protease-mediated (HAT, TMPRSS2) direct fusion of virus particle membranes with the cellular plasma membrane. The present study shows that trypsin-treatment facilitates virus replication of bat-derived CoV but does not present a single experiment on the mechanistic details. Neither do the authors analyze the effect and mechanistic consequences of trypsin on the Spike proteins nor do they identify the proposed alternative receptor.

2. Throughout the manuscript important controls are missing.
a) The authors should confirm correct transcript sequence and expression of DPP4 in both trypsin-adapted Vero and Huh7 cell lines. These are important controls, as aberrant expression of DPP4 in immortalized cell lines may affect the conclusions.
b) The authors should show for all applied CoV that the activated protease has a direct effect on the virus (and not on a putatively new host cell receptor): the authors could e.g. "prime" virus stocks with trypsin, neutralize trypsin after incubation, then infect cells with the primed stock. Figure 5B is not sufficient and shows only HKU5-CoV infection in Vero cells co-treated with trypsin.
c) Using HAE cells the authors claim that chimeric "MERS-Uganda" does not infect the respiratory tracts of humans. How often was this experiment repeated? Were different donors tested? Again, I would expect different set-ups like virus pre-treated with trypsin, cells pre-treated with trypsin and co-treatment. The timing and the concentration of the trypsin-treatment is essential. What about other differentiated permanent cells lines like Calu-3?
d) The authors should sequence the HKU5-CoV and MERS-Uganda genomes (or at least the spike gene) after infection on trypsin-treated cells to confirm that both viruses are stable and to evaluate whether DPP4 host-adaptation (as in Letko et al., 2018) remains a contributing factor in the increased infectivity they observed.
e) The authors used an already existing MERS clone with a full-length Spike of the con-specific PDF2180-CoV. It would be important to show that the proposed recombination event led to the putative change of tropism. Different variants e.g. a MERS-CoV spike with only the S1 domain of PDF2180-CoV ,with and without the sialic acid binding domain (S1A) would be important controls.
f) What about sialic acid binding in general? Since it was shown that MERS-CoV attachment is facilitated by sialic binding I would expect that the authors show the sialic binding capacity of PDF2180-CoV to investigate how the trypsin treatment influences the attachment.

g) Another important control would be to check the susceptibility/permissiveness of bat cells (lung vs intestine) to support the hypothesis of a switch in organ tropism from bats to humans.
h) To rule out that other viral co-factors influence the entry process (and the use of DPP4) it would be beneficial to use a full-length PDF2180-CoV infectious virus.
i) Generally it would be important to titrate supernatants in order to see the influence on infectious particle production.

3. The quality of the Figures is insufficient. The immunofluorescence pictures in all of the Figures are not suitable for publication. The cells look apoptotic and there is no counterstaining to see how many cells are on the pictures. Without counterstaining the reader cannot evaluate the negative controls. There are no scale bars. I am aware that trypsin-treatment may cause these artifacts but the authors should then try to reduce trypsin concentrations or work with pretreatment of cells and /or virus stocks instead of continuous trypsin-treatment.

4. The Western blot in Fig. 3B and the fluorescence microscopy in Fig. 3A do not correspond. The WB shows a much stronger N protein band for trypsin-negative MERS-CoV infection, whereas in Fig. 3A the RFP assay the signals appear much brighter for trypsin-positive MERS-CoV infection.

5. General remark: Instead of just saying higher and lower, please indicate x-fold or percentage when discussing differences.

Reviewer #2 (Remarks to the Author):

This submission demonstrates that two potentially zoonotic coronaviruses, MERS-Uganda and MERS-like HKU5, will infect otherwise resistant cells if trypsin protease is supplied. The conclusions, therefore, are that trypsin protease "unlocks a barrier for zoonotic coronavirus infection". These results are of interest to the field because they highlight proteases as central host susceptibility factors in zoonotic coronavirus infection. As such, they move the field beyond a focus on receptors as the most relevant host susceptibility factors. QTL Candidate Prioritization

WNV Flow Cytometry Data

SIG U19 Call 9/12/2019
Core C

Background

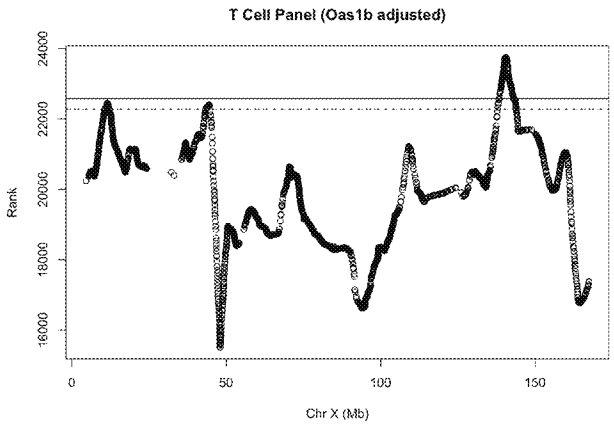
- Can we look at QTL results across phenotypes to prioritize and narrow QTL regions?
- Example Use Case: T cell measures after WNV infection
  - > 300 phenotypes
  - Many phenotypes are correlated
  - Numerous candidate QTL peaks on the X chromosome

QTL Candidate Prioritization

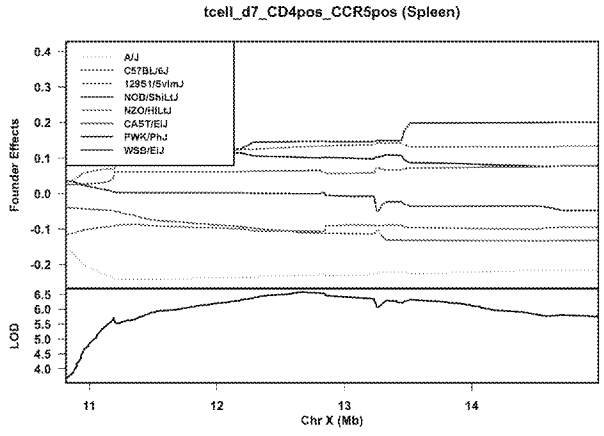
- For each phenotype, create ranks for 3Mb windows across the chromosome (based on average LOD score)
- Combine ranks across all T cell phenotypes
- Identify regions that are highly ranked across phenotypes
  - Combined ranks above 90th percentile
- Identify phenotypes that contribute most to highly-ranked regions

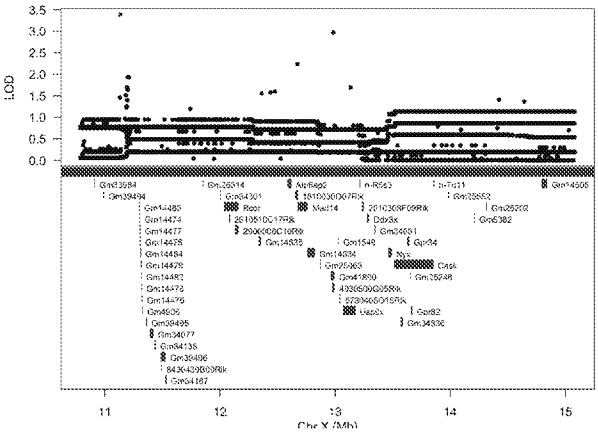
QTL Candidate Prioritization

- 3 regions prioritized:
  - ChrX: 10.79-15.08Mb
  - ChrX: 43.47-47.59Mb
  - ChrX: 137.9-143.54Mb
- Merge Analysis
  - SNP imputation and association analysis
- Variant Identification
  - Founder-specific variants



ChrX: 10.79-15.08Mb: CCR5+ CD4+ T cells

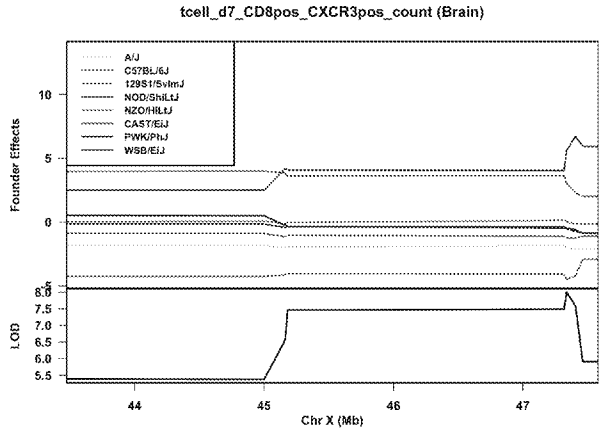


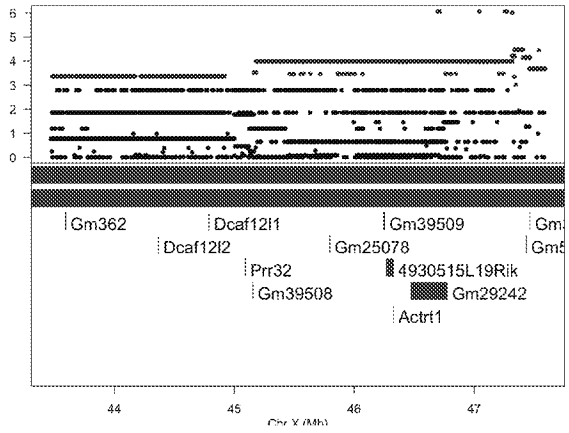


ChrX: 10.79-15.08Mb

- A/J variants:
  - Missense variant in: ***Bcor***
  - 3'UTR variant in: ***Cask***
- PWK variants:
  - Missense variants in: ***Bcor, Med14, Usp9x, Nyx, Gm14483, Gm14476, Gm14484, Gm4906, Gm5132***
  - Splice region variants in: ***Med14, Usp9x, Nyx, Cask, Gm14505***
  - 3'UTR and/or 5'UTR variants in: ***Bcor, Atp6ap2, Med14, Usp9x, Nyx, Cask, Gpr34, Gpr82, Gm5132***

ChrX: 43.47-47.59Mb: CXCR3+ CD8+ T cells



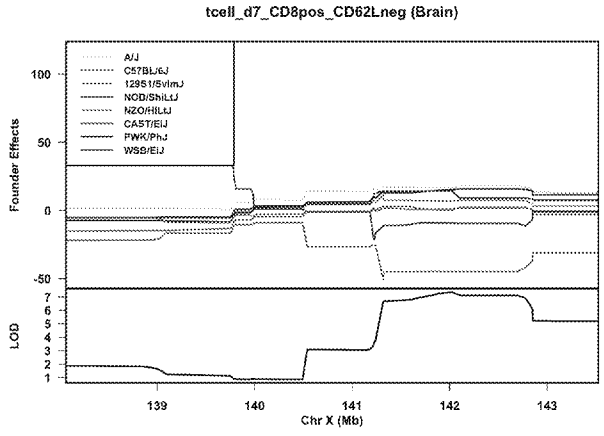


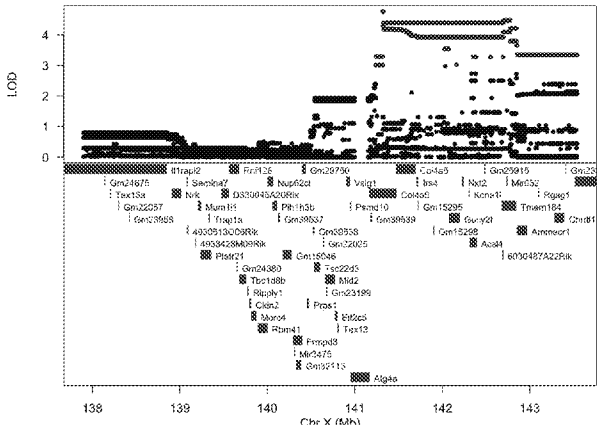
ChrX: 43.47-47.59Mb

- PWK variants:
  - Missense variant in: ***Actrt1***
  - 5' UTR variant in: ***Actrt1***
- PWK/Cast variants:
  - 3' UTR variant in: ***Dcaf12l2***
- NZO variants:
  - 3' and 5' UTR variants in: ***Dcaf12l2***
  - Synonymous variant in: ***Dcaf12l2***

* Those genes highlighted in Red contain variants with LOD > 3 in the merge analysis

ChrX: 137.9-143.54Mb
CD8+ CD62L- T Cells





ChrX: 137.9-143.54Mb

- Cast variants:
  - Missense variants in: ***Tex13a, Nrk, Rnf128, Tbc1d8b, Tsc22d3, Mid2, Vsig1, Col4a6, Col4a5, Gucy2f, Rgag1, Gm15013***
- PWK/Cast variants:
  - Missense variants in: ***Tex13a, Mum1l1, Rnf128, Tbc1d8b, Ripply1, Cldn2, Morc4, Tsc22d3, Col4a6, Ammecr1, Rgag1, Chrdl1, Gm15294***

* Those genes highlighted in Red contain variants with LOD > 3 in the merge analysis

Next Steps

- Perform merge analyses on additional T cell phenotypes to determine if the same variants are associated with multiple traits
- Apply method to other flow panels and possibly other data types with correlated measures
- Further prioritize candidates by integrating with other data:
  - Gene functions/pathways
  - Differentially expressed gene lists

In that case, I think this is one of the intervals we should focus on, and I look forward to seeing how many & which phenotypes are linked to this locus. Maybe we can do some experiments using PWK mice to see if there are T cell defects even at steady state? Actually, are any of the steady-state/mock phenotypes linked to this locus?

Subject: RE: Systems Immunology U19 program's accomplishment and next Annual meeting
Importance: High

Dear All,

I hope that you have had a great summer.

Thinking about the future of the Systems Approach to Immunity and Inflammation (U19) program, **could you provide me the accomplishment of your current program? For Richard and Ralph, could you please also separately provide me all the accomplishment since you had the program?** The accomplishment may include:

1. How many novel genes and pathways you have identified.
2. How many genes and pathways you have validated.
3. How many mutant or genetically modified mouse strains you have obtained and shared.
4. How many papers you have published.
5. How many collaboration you have established.
6. How many Ph.D. students and postdoctoral fellows you have trained (how many they have become independent).
7. How many new technologies you have generated.
8. How many new analytical tools you have created.
9. Any other information you think worth to include.

It would be greatly appreciated if you could send the information to me by next Wednesday (Sept. 25th).

Now we need to plan our next annual meeting. Because the big conference room in our building will start renovation in June next year, every branch is competing for space. We need to decide a date for reserving the room ASAP. **I will send out a doodle poll soon for our next annual meeting, so would you please respond it as early as possible?** Will April 2010 work for you? I think our last one-day meeting worked great, so I would assume we would have a one-day meeting again for next year. Please let me know if you don't like the idea.

Also, it is the time to set up a Steering Committee Meeting. Arlene had proposed the agenda. Again, **I will send another doodle poll for this Steering Committee meeting. Please respond quickly**. We will discuss following topics in our next meeting:

1. Collaborations between U19 programs
2. Webinar – need to discuss how this will work, and what topics it will cover.
3. Data deposition on ImmPort.

Please let me know if you have anything else to discuss.

Best regards,
Joy

Subject: Re: Pew Scholar Nomination

Hey Ralph,

The Pew Letter is due in 10-days or so. I've attached my most recent CV and my last biosketch from my R01. Let me know if you have any questions about the Pew Award.

I would also appreciate it if you'd be willing to nominate me for the ASV Young Investigator Award. I have spoken to some people about the award and I can have only one nominator/letter of nomination. However, I was informed that previous winners have had multiple people sign the nomination letter with one person coordinating that. With that in mind, I imagine you could ask a number of people to also endorse my nomination either in the CoV field (Perlman, Weiss, Baker, Enjuanes) or more broadly (Diamond, Gale, Pei Yong Shi, Heise, Yoshi).

The ASV award nomination is due November 15th and I need to provide a ASV specific biosketch, (assuming you are willing). If you are unable or unwilling, let me know and I can also have my chair nominate me.

Thanks

VDM

You didn't reply, but should be getting reminders from Pew each week.

I haven't heard about the paper. Got sent out July 26th according to the status. I will email Monday if I don't hear from them.

I'll send you an updated CV this week; our first paper got accepted in JVI paper and is online now.
https://www.ncbi.nlm.nih.gov/pubmed/31462558

I just sent in the CC R21 yesterday and working on an R01 for October. I am also losing my post-doc, he took a great job in industry. I assume you all are hiring post-docs? If you have anybody you can't take and good, feel free to send them along my way.

Also, chatted with Amy about her job at PNNL. Hopefully it will work out well for her.

Subject: RE: Pew Scholar Nomination

Hi Vineet, nice to hear from you and congrats on the nomination. I'll be delighted to write a letter. Pass along the pertinent info (updated cv, short project description). Nothing was attached. Or have I already answered and am currently in Oz. Hope things are going well. Any news on the paper? Ralph

Subject: Pew Scholar Nomination

Ralph,

I have been nominated by UTMB to submit an application for the Pew Scholars Program: https://www.pewtrusts.org/en/projects/pew-biomedical-scholars

Pew Biomedical Scholars
Pew has a decades-long commitment to support groundbreaking research by promising early-career biomedical scientists in the United States and Latin America. Our multiyear grants encourage informed risk-taking and collaboration among researchers.
www.pewtrusts.org

I am hoping you would be willing to provide a letter of reference for the award. They require a letter from my post-doctoral advisor and are interested in my work in your lab and as a graduate student overall.

The letters are due by October 17, 2019, but can be submitted prior to that date. They will send a weekly prompt as a reminder.

If you need to update a previous letter, I have attached a CV with recent accomplishments and manuscripts. The project I am writing for the Pew project explores transmission and super spreading in the context of coronavirus infection.

Thanks for your consideration and I have already added your name to the roster and you should hear from them in the next week or so.

Thanks

VDM

Subject: Re: mBio02431-19 Decision Letter

Hey Ralph,

Hope you are enjoying the meeting.

I made a few changes based on the 2nd reviewer. The changes are tracked here, but its only about 4-5 lines differences. I emphasize this is novel for bat CoVs and make sure to cite paper from 1988 on PEDV. I also added bat CoV (vs zoonotic) to the title and other relevant places.

I am at jury duty this week, but otherwise I think this is ready to go. I didn't make any modifications based on Rev. 1 who doesn't think this is a MERS-like virus and wants an entirely different paper.

Re: mBio02431-19 (Trypsin treatment unlocks barrier for zoonotic coronaviruses infection.)

Dear Dr. Menachery:

We have completed our review of your manuscript, and I regret to inform you that we will not be able to accept it for publication in mBio. This decision reflects the priorities of mBio and the disposition of this particular review; it is not meant to imply that the manuscript is unsuitable for publication elsewhere.

While this manuscript may not be a good fit for mBio, the editor felt that the work had merit and would like to offer you the opportunity to transfer to the following journal:

Journal of Virology (JVI): Publishes important new discoveries covering the viruses of animals, plants, bacteria, fungi, and protozoa. Key issues investigated are virus structure and assembly, viral genome replication and regulation of viral gene expression, viral genetic diversity and evolution, virus-cell interactions, cellular responses to viral infection, transformation and oncogenesis, gene delivery, viral pathogenesis and immunity, and vaccines and antiviral agents. JVI offers the option of immediate open access with payment of an Article Processing Charge (APC) in lieu of page charges.

With your consent, we will transfer your manuscript files and data. Please let us know if you would like to:

(1) Transfer the manuscript and the mBio reviews.
(2) Resubmit on your own to another ASM journal. (Use this option if you wish to send your manuscript to another ASM journal without the mBio reviews.)

Please note that each ASM journal is editorially independent; transferring your manuscript constitutes a new submission.

Your manuscript will be subject to the editorial decisions of the receiving journal. You may be asked to revise your manuscript and your manuscript may be sent out for additional review.

Enclosed are the comments generated during the review. I hope they will be useful to you.

Thank you for your interest in mBio.

Sincerely,

Arturo Casadevall
Editor in Chief, mBio
mBioEditorInChief@asmusa.org

Editor comments:

The reviewers pointed out that trypsin dependence of coronaviruses is not new, that more mechanistic insight is needed and that the paper is more suitable for a specialised virology journal.

Reviewer #1 (Comments for the Author):

This MS describes mainly technical observations regarding the spike protein of a bat-derived coronavirus (CoV) with implications on growth in cell culture. The subject is a virus sequence termed PDF-2180 (PDF) whose majority of genes cluster with MERS-CoV close enough for both viruses to fall into the same viral species. Also the spike protein of another bat-derived CoV is investigated, one that does not belong to the same species but is still part of the wider phylogenetic group (group 2C) to which the MERS virus belongs. The technical observation is that addition of trypsin to culture medium enhances replication of MERS-CoV and permits replication of a chimeric MERS-CoV whose spike protein is exchanged against that of PDF. This permissiveness includes Vero cells, HuH7 cells, as well as CaCo-2 cells.

I find the technical insight to be useful for those (few) laboratories working on CoVs. However, I cannot support most of the generalizations made with regard to the insight from these findings for the wider field of pandemic preparedness research (which is the rationale behind presenting the work to a wider audience in the target journal). I believe the finding should be presented as an interesting technical observation to a specialized journal. It could also be developed into a full paper for a discipline-specific journal, but would then need more experimental work in terms of controls and mechanistic insight.

My general concerns are: the phylogeny of PDF (as well as the related Neo-CoV) in Anthony et al (Ref 18) shows that the spike S1 domain does not group with MERS-CoV. Considering the sister relationship of MERS and PDF in the other genes, this suggests either a long-term differentiating pressure or more recent recombination (the latter is more likely). In any case, the spike protein S1 domain cannot be regarded as representative of MERS-CoV. This maybe a weakness of Anthony et al. rather than the present work, but clearly the here-presented data do not represent the evolution of receptor tropism of MERS-CoV. This virus as well as the HKU-5 virus that belongs to another species should not be referred to as "MERS-like". What we are looking at are spike proteins that have adapted to an environment with presence of trypsin (gut). The requirement of a different receptor is not sufficiently addressed because the whole phenomenon of sialic acid binding via the N-terminal spike domain (missing in MERS-CoV but present in HKU5 and other 2C viruses) is omitted. Also, the use of CaCo-2 cells as a model for the human gut is insufficient as these cells are known to constitutively express TMPRSS2, a transmembrane protease rarely found on the surface of most other permanent cell lines. It is known that CaCo-2 cells are much more permissive for MERS-CoV than other cells, so that we need some mechanistic insight into the observed effects. Telling a story ("new paradigm") about adaptive trajectories makes little sense in this light. The whole work may just describe another two CoV spike proteins that need trypsin in cell culture. This is not novel, as several other CoVs do (which is correctly mentioned in the manuscript).

Some details

-Trypsin is inactivated by serum proteins such as alpha 1 - antitrypsin. Normally, trypsin application in flu culture requires serum-free medium. The methods section is not explicit about this.
-When applying typsin to ALI cultures, are the conditions based on preliminary experience? Can a control virus be included whose growth improves upon addition of trypsin?
-DPP4 expression in all cell lines should be checked.
-Mode of action of trypsin should be studied: can virus be activated by trypsin pretreatment? Does trypsin remain active in TMPRSS2-positive cells with the clathrin pathway chemically inactivated?
-The N terminus as well as the whole aspect of sialic acid binding should be addressed experimentally
-All figures must be improved but I assume this is an issue with PDF creation. Cell nuclei should be stained.

Reviewer #2 (Comments for the Author):

This manuscript describes the results of the use of trypsin to facilitate the recovery of MERS-like bat coronaviruses, PDF2180 and HKU5. Interestingly, trypsin treatment of PDF2180 facilitates the infection of human gut tissue, but not human lung cells. They also found that blocking DPP4 was ineffective in blocking PDF2180 infection, indicating that DPP4-independent entry mechanism was used in this cell culture model. The authors confirm and extend the previously well-established finding that the presence of exogenous trypsin facilitates the recovery of coronaviruses in cell culture. The results of this study do make an important contribution to the field by evaluating gut and lung tropism and revealing that a MERS-like bat coronavirus infection is not blocked by the addition of antibodies to DPP4.
Comments for the authors' consideration:
1. The introduction section should have a paragraph about the extensively documented use of trypsin in the recovery of coronaviruses. For example, citing Hofmann and Wyler, 1988 on the propagation of PEDV in cell culture; and Wicht et al, 2014 J. Virology and the references within this paper. This paragraph should be added at line 50 of the introduction and would provide excellent rationale for the experiments described in the current study. References 18, 34, 35 and 36 should be cited in the introduction, not only in the discussion section.
2. Modify the sentences about the addition of trypsin or the activation of spike as a new paradigm (line 225) or a new strategy (line 289), or a new framework (line 298) for the recovery of emerging coronaviruses. As indicated in Wyler et al., 1988, Wicht et al., 2014, and others and cited references 18, 34, 35, and 36, this is an established strategy. The strategy was also proposed by others for the recovery of clinical samples for FIPV (Mettelman et al., 2019 Virology). The current work does provide evidence of the utility of the approach, so the results presented are important and timely for the study of emerging coronaviruses.
3. Figure 1. Remove A and B as the structural information is not needed here.
4. Figure 6. This schematic diagram could be improved to better illustrate the results of this study. Consider altering the diagram to more clearly depict how a virus that binds to a cell using a lower affinity interaction at the plasma membrane could be activated for fusion by the addition of an exogenous protease (like trypsin). What do you mean by protease incompatibility? Does this paper address anything about the use of cathepsins?

To the Editors,

Please find our revised manuscript, "Trypsin treatment unlocks barrier for zoonotic bat coronaviruses infection" by Menachery, Dinnon, et al.

We take this opportunity to thank the reviewer for the comments and suggestions. We have included new requested data and responded to all the comments of the reviewer. We thank the reviewers for the helpful comments and feel that the improved manuscript is now appropriate for publication. Detailed modifications have been highlighted in the manuscript, and the significant changes are described in the response to reviewers.

Both reviewers recognized the significance and importance of our findings. However, both reviewers asked for clarification and elaboration on specific points and additional experiments to support our conclusions. Specifically, Reviewer 1 requested modification of the text and expansion on several points of interest. In addition, we revised our description of the HAE infections to more clearly describe the experiments. Reviewer 2 requested documentation of spike cleavage and examination of the proteolytic cleavage site sequences. Each has been added to the manuscript and figures have been modified as outlined in the response to reviews.

Overall, we believe that these responses have improved the quality of the manuscript and made it more appropriate for publication in Journal of Virology. Thank you for your consideration of this revised manuscript..

Sincerely,

Dear Vineet,

Congratulations! Your article, "Trypsin Treatment Unlocks Barrier to Zoonotic Bat Coronaviruses Infection " (JVI01774-19) has been selected by the editors of the Journal of Virology for inclusion in "Spotlight," a feature in the Journal that highlights research articles of significant interest from the current issue. This section follows the table of contents and includes short descriptions of five especially meritorious articles.

If you wish your article to be included in this section, please draft a short, declarative title and a brief summary of your manuscript (between 50-100 words) and forward these to me. The summary should be

composed in general terms, highlighting the broad biological significance of the work. Also, please select a panel of one figure from your paper to display alongside the text in the Spotlight section. Please crop the figure file so that it includes only the portion of the figure to be published in the Spotlight, and send the resulting high-resolution (300dpi) TIF (preferred), EPS, or PPT file to me. The figure can convey the most important experimental result of your study or an interesting image. Do not send a multi-panel figure. We only have space for a single panel. Please include a short descriptive title for the figure. The title used in the legend for the chosen figure may suffice. You will find an example of what we are aiming for in this section, attached.

As our printing deadlines are very tight, we must receive your material – the headline, paragraph of text, cropped figure file, and brief figure legend by 5 pm (Eastern Standard Time) on Tuesday the 17th of December. Please let me know if I can help you with any questions. Thank you for contributing to the Journal of Virology Spotlight.

Sincerely,
Becky Dutch

Subject: SIG U19 face to face

Good afternoon everyone!

We have selected the date for the face to face meeting in Chapel Hill. There was not a date that worked for everyone, so we needed to pick a date that worked for most. The meeting will be March 10-12. The tentative timeline is as follows:

March 10- group dinner
March 11 meeting all day, group dinner
March 12 ½ day meeting so West Coast folks can catch the afternoon flight out.

Happy holidays to all.

Subject: nCoV weekly investigators meeting
When: Tuesday, May 19, 2020 9:00 AM-10:00 AM (UTC-05:00) Eastern Time (US & Canada).
Where: GoToWebinar

Hi everyone,

Please see updated webinar links below. Hopefully this resolves any issues people had last time with sound.

Hello everyone,

Below please find the registration link for our weekly investigators meeting regarding the nCoV. **Please do not forward**. If you would like anyone else to be added to the invitation, please let me (Marciela.degrace@nih.gov) or Erik (erik.stemmy@nih.gov) know.

Our tentative agendas will be:

- Epi Updates
- NIAID Updates
- Other HHS partner Updates, if applicable
- Investigator research updates
- Discussion and Action Items
-

updated webinar link
https://global.gotomeeting.com/join/ **552.136**

You can also dial in using your phone.

Hi everyone,

Please see updated webinar links below. Hopefully this resolves any issues people had last time with sound.

Hello everyone,

Below please find the registration link for our weekly investigators meeting regarding the nCoV. **Please do not forward**. If you would like anyone else to be added to the invitation, please let me (Marciela.degrace@nih.gov) or Erik (erik.stemmy@nih.gov) know.

Our tentative agendas will be:

- Epi Updates
- NIAID Updates
- Other HHS partner Updates, if applicable
- Investigator research updates
- Discussion and Action Items
-

updated webinar link
https://global.gotomeeting.com/join **552.136**

You can also dial in using your phone.
United States: +1 (571) 317-3129

Access Code: **552.136**

Thank you,

Marciela DeGrace, Ph.D.
Project Officer, CEIRS

Subject: SARS-CoV-2 Weekly Investigators Meeting - May 12, 2020

Hi!

Thank you Dr. Baric for your presentation on May 12th. Hopefully the discussion was helpful for everyone who dialed in.

Next week, Dr. Gavin Smith will be presenting preliminary sequencing results from recruited patients along with the detections and genomic characterization of a deletion variant.

Here is the attendance from last week. If your name is not listed and you attended the call, please let me know.

B cell paper together 10062019.docx

Hi Jacob and Vineet, Here is the version of Anne's B cell paper with her final comments. Jake, can you take a look to make sure the new data you generated is appropriately presented. Vineet, I appreciate your comments. I'd also like your thoughts on where to submit this. Its been a year plus since it was reviewed at JV-should we go back or chase a sure thing. Jake, congrats on the new baby! Hope you both had a Happy Holiday and New Year. Ralph

FIGURES

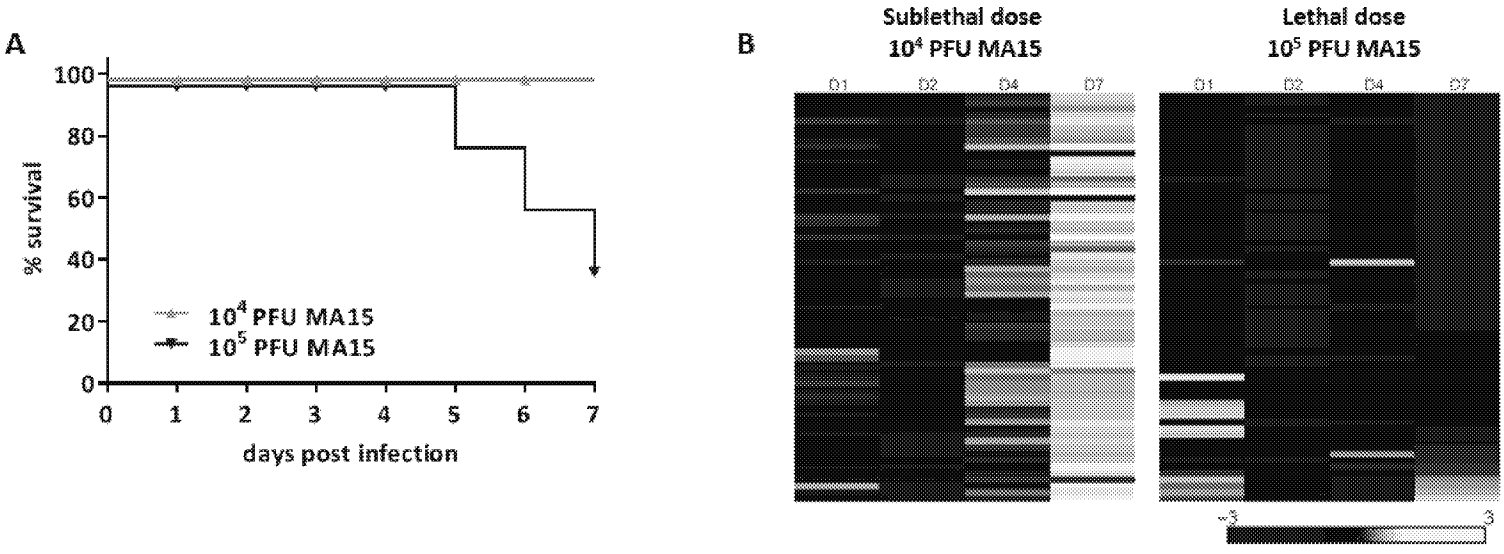

Fig 1. Bioinformatics points to an important role for B cells. 20 week old C57BL/6J mice were infected intranasally with a 50uL sublethal (10^4 PFU/mouse) or lethal (10^5 PFU/mouse) dose of MA15 SARS-CoV diluted in PBS. (A) Survival curves for infected mice. Mice dropping below 70% weight loss were humanely sacrificed and counted as succumbing to disease for the purposes of the experiment. All mice were sacrificed at 7 dpi. n=5 per group. (B) Log_2 fold change ratio of immunoglobulin family-related gene expression from the lungs of MA15 SARS-CoV-infected C57BL/6J mice after infection compared to mock infected mice. Yellow indicates increased gene expression compared to mock. Blue indicates decreased expression compared to mock. Probe and gene descriptions provided in Fig S1.

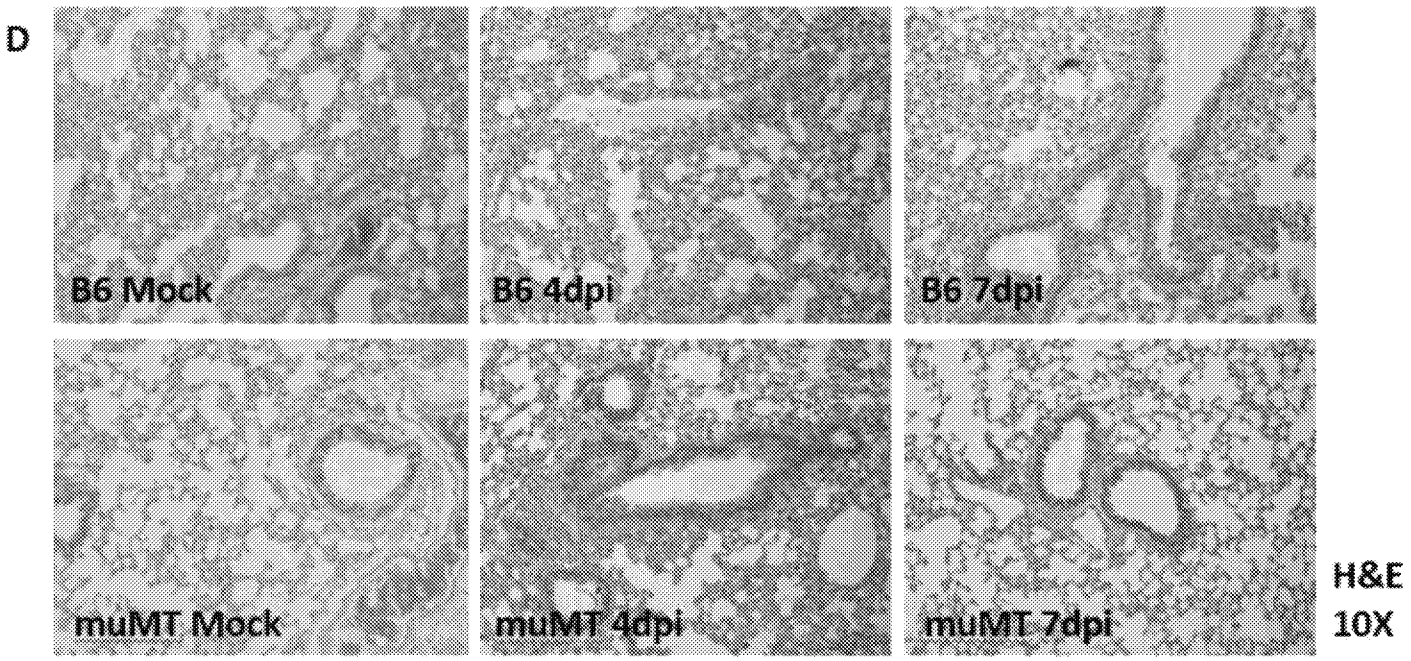

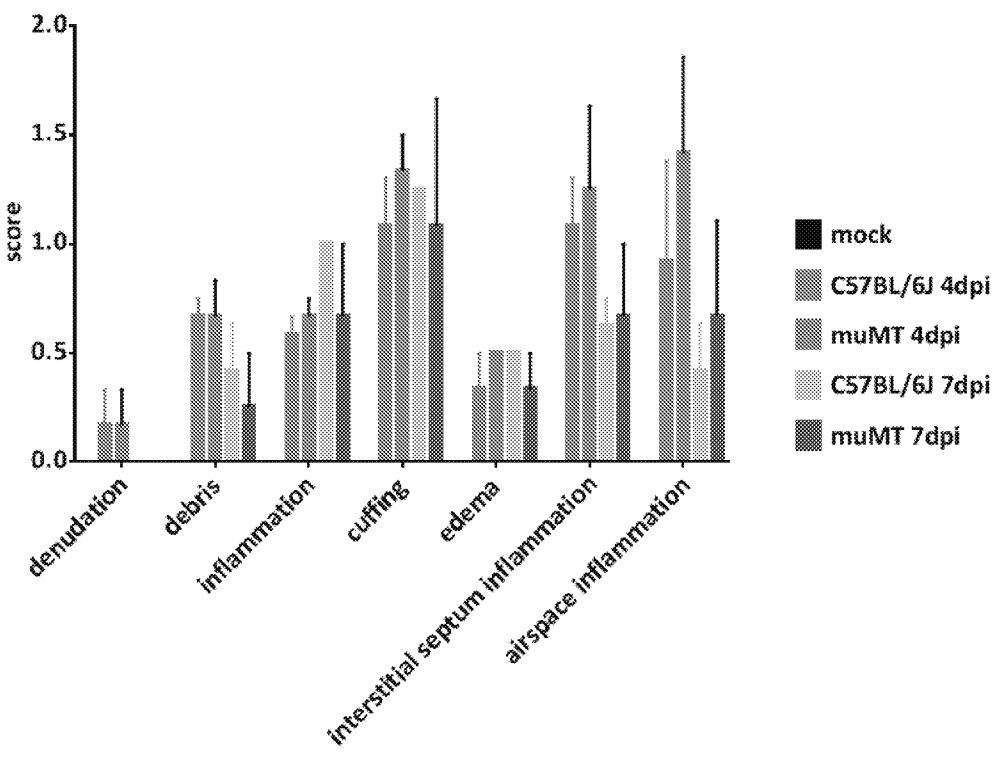

Fig 2. B cells are required to clear SARS-CoV. 10 week old C57BL/6J or muMT B cell deficient mice were infected with a sublethal dose of MA15 SARS-CoV (10^4 PFU/mouse). n=5/group. (A) Lung mean virus load was quantitated by plaque

assay. Statistical significance determined using ANOVA analysis, with **** signifying $p<0.0001$. (B) Representative images of lung sections at indicated timepoints post-infection. SARS-CoV staining was performed via immunohistochemistry using anti-SARS-N and is shown in brown. (C) Mean weight loss per group is represented as a percent of starting weight for each mouse. Mice were weighed daily. (D) Representative images of lung sections at indicated timepoints post-infection. H&E staining is shown. (E) Lung injury scores from mice at indicated times. None show significant differences between C57BL/6J and *muMT* mice at matched timepoints.

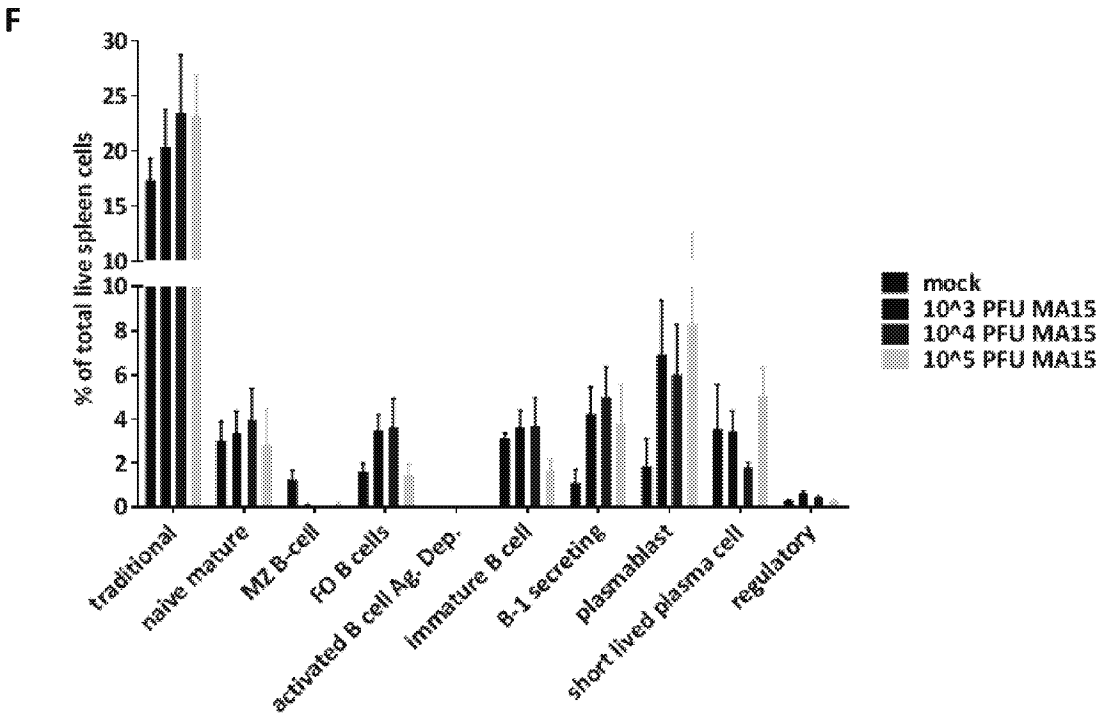

Fig 3. B cell and antibody responses do not correlate with pathogenesis. 20 week old mice were infected intranasally with a lethal (10^5 PFU/mouse) or sublethal (10^3 or 10^4 PFU/mouse) dose of MA15 SARS-CoV. n=5/group. (A) Mean weight loss per group is represented as a percent of starting weight for each mouse. Weights at each dose significantly differed from each other group at 5, 6, and 7 dpi. (B) Survival curves of infected mice. (C) Mean hemorrhage score of mouse lungs taken during 7 dpi harvest. (E) Mean total B cells as a percent of LCA+ cells. B cells are defined as B220+ and CD20+. (E) Mean SARS-S reactive immunoglobulin levels represented as EC50. (F) Splenic B cell populations after MA15 SARS-CoV infection at mock, sub-lethal, and lethal infection doses in 10 week old C57BL/6J mice – no significant differences were seen in B cell populations. All statistics performed by t test. * $p<0.01$. *** $p<0.0001$. ****$p<0.00001$.

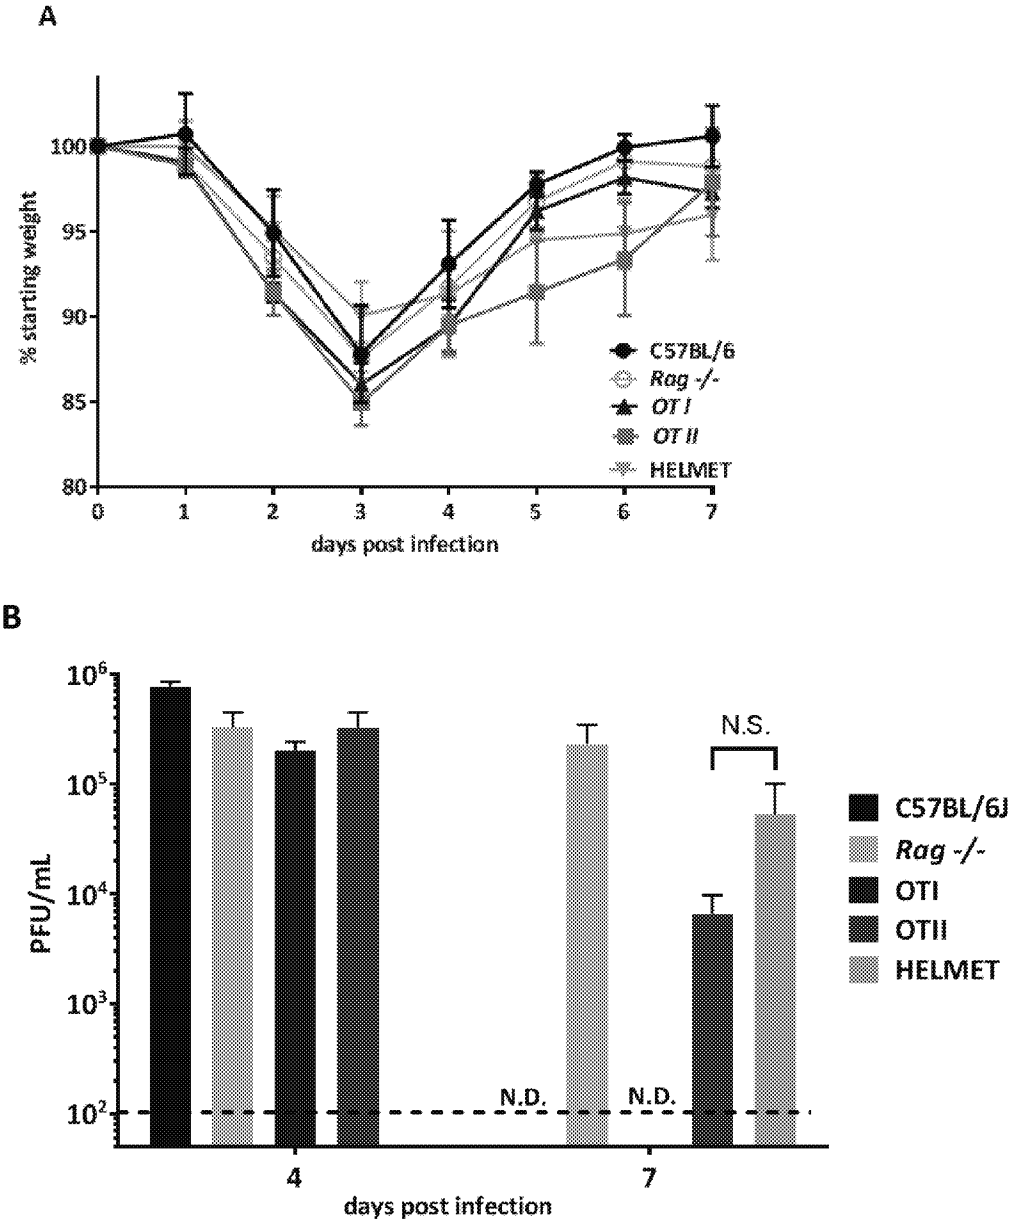

Fig 4. Lack of antigen-specific CD4+T cell responses results in delayed SARS-CoV clearance. 10 week old mice were infected with a sublethal dose of MA15 SARS-CoV (10^4 PFU/mouse). n=5/group at 4 and 7 dpi. n=3/group at 15 dpi. (A) Mean weight loss per group is represented as a percent of starting weight for each mouse. Mice were weighed daily. No significant difference between weight groups. (B) Lung mean virus load was quantitated by plaque assay. All statistics performed by t test.

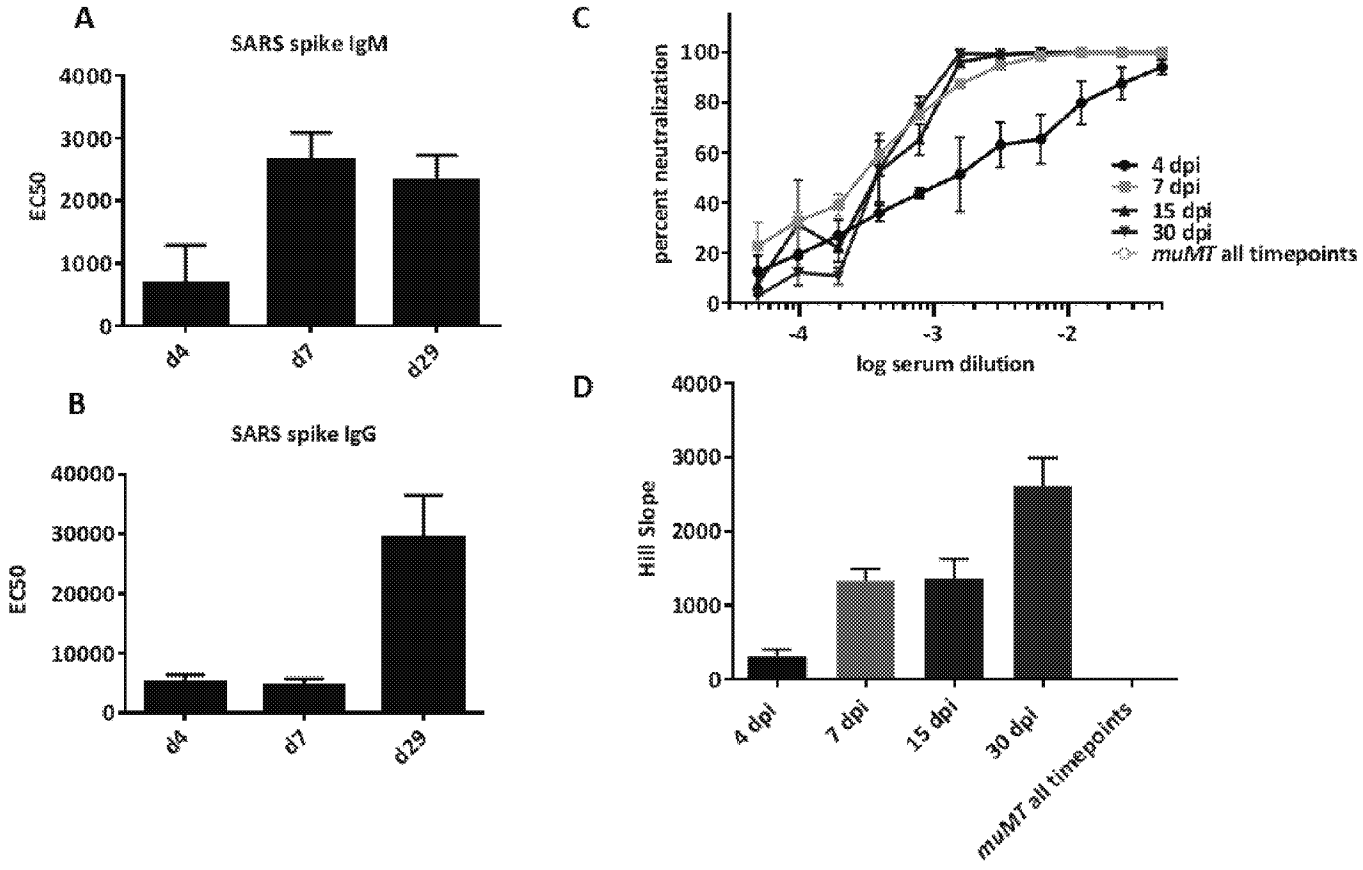

Fig 5. Serum antibodies at 7 days post infection can efficiently neutralize SARS-CoV *in vitro*. 10 week old mice were infected intranasally with a sublethal dose of MA15 SARS-CoV (10^4 PFU/mouse). n=5/group. (A-B) Mean serum IgM (A) and IgG (B) EC50 against SARS-CoV spike protein. n=5 mice/group. (C) SARS-CoV plaque neutralization and (D) hill slopes of neutralization curves were determined by plaque assay using serum taken from MA15 SARS-infected mice at the indicated timepoints.

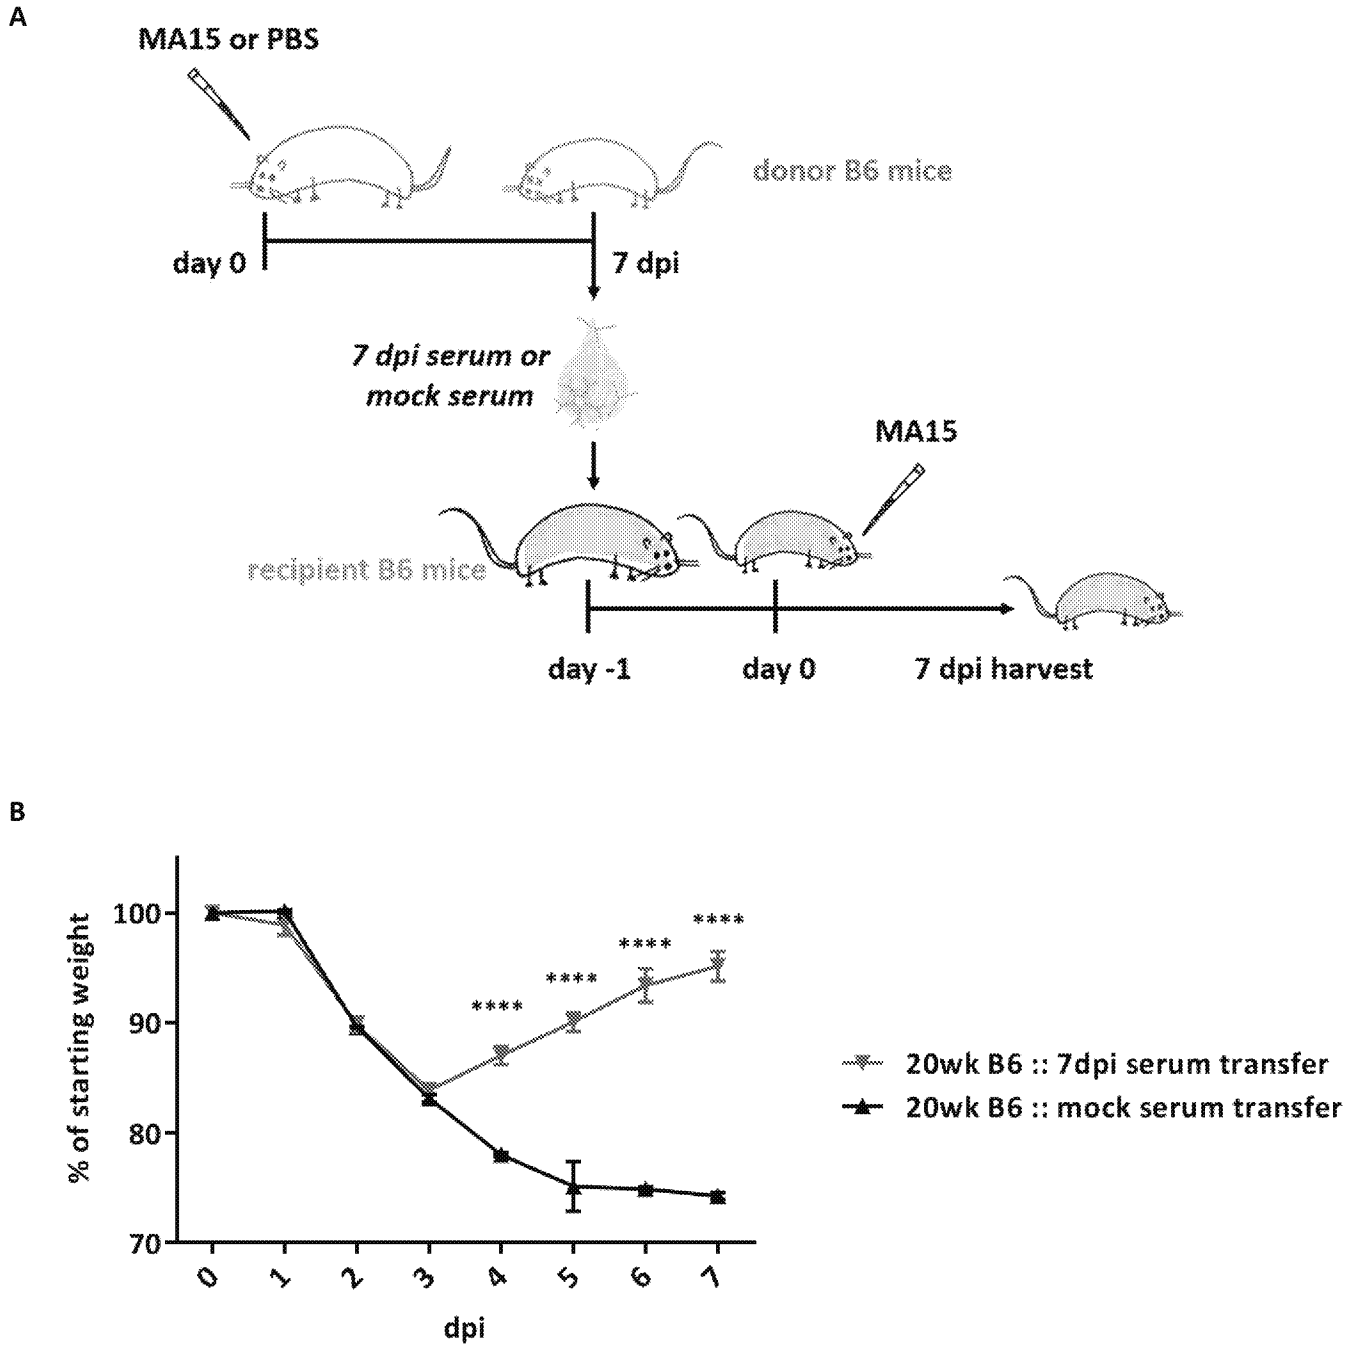

Fig 6. Prophylactic transfer of early antibody prevents mortality during lethal SARS-CoV infection through viral neutralization *in vivo*. Experimental set up of serum transfer experiments. C57BL/6J mice were infected with SARS-CoV at a sublethal dose and serum was harvested at the indicated time point after infection. Serum was transferred at a 1:1 ratio i.p. to the experimental mouse, which was infected with a lethal dose of SARS-CoV 24 hours later. Mice were weighed daily and harvested 7dpi. (A) Mean weight loss of mock serum of 7dpi serum transfer to 12 week or 20 week old C57Bl/6J mice. (B) :: shorthand for received. Statistical significance determined using ANOVA analysis, with **** signifying $p<0.0001$.

ABSTRACT

Severe acute respiratory syndrome (SARS) is a highly lethal human respiratory disease caused by a coronavirus, a virus family marked by increasingly frequent outbreaks, pre-emergent zoonotic viruses, and high mortality rates. Understanding the roles of innate, cellular, and humoral immunity in viral pathogenesis and clearance *in vivo* have the potential to illustrate novel treatments for these highly pathogenic viruses. Numerous studies have implicated innate immune cells and T cells as critical mediators of SARS-CoV pathogenesis and clearance *in vivo*. However, the role of B cells and antibodies in early SARS-CoV virus clearance and disease control has not been rigorously studied. Previous studies have demonstrated robust antibody production in late-stage convalescent patients as well as a role for SARS-CoV-specific monoclonal antibodies in prophylactic protection against viral infection and disease. In support of these findings, we show that eigengene module analyses has indicated a strong decrease in B cell and antibody-related gene expression during lethal infection as compared to sublethal infection. Using mouse strains deficient in multiple arms of adaptive immunity, we show that B cell-deficient mice become persistently infected with SARS-CoV and that early B cell and serum immune responses can mediate virus clearance during infection. Interestingly, convalescent sera from as early as 7 days post infection can be used as a prophylactic treatment to prevent lethality during a primary SARS-CoV infection. These findings demonstrate an important role for antibody and antigen non-specific B-cell help in SARS-CoV clearance, and supports a potential clinical role for early serum transfer and antibody treatment during future coronavirus outbreaks.

INTRODUCTION

Severe acute respiratory syndrome (SARS), caused by a novel coronavirus (SARS-CoV), resulted in over 8,000 cases of respiratory disease with high mortality in 2002 and 2003 [ADDIN EN.CITE <EndNote><Cite><RecNum>67</RecNum><DisplayText>(1)</DisplayText><record><rec-number>67</rec-number><foreign-keys><key app="EN" db-id="rd00vaprasew0ce99v5vzr2y050rewr92tzz" timestamp="1501042421">67</key></foreign-keys><ref-type name="Web Page">12</ref-type><contributors><authors><author>World Health Organization</author></authors></contributors><titles><title>WHO | Update 49 - SARS case fatality ratio, incubation period</title><secondary-title>WHO</secondary-title></titles><dates></dates><urls></urls><access-date>2017-07-26 04:13:05</access-date></record></Cite></EndNote>]. Patients with severe pathology developed acute lung injury associated with neutrophilia, lymphopenia, and prolonged proinflammatory cytokine expression [ADDIN EN.CITE ADDIN EN.CITE.DATA]. In surviving patients, infectious virus was cleared between 1 and 3 weeks after infection [ADDIN EN.CITE <EndNote><Cite><Author>Chan</Author><Year>2004</Year><RecNum>88</RecNum><DisplayText>(3)</DisplayText><record><rec-number>88</rec-number><foreign-keys><key app="EN" db-id="rd00vaprasew0ce99v5vzr2y050rewr92tzz" timestamp="1501082298">88</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Chan, K. 102 Several studies have demonstrated the critical importance of innate immune responses and
103 wound repair pathways in regulating SARS-CoV pathogenesis [ADDIN EN.CITE ADDIN
104 EN.CITE.DATA]; additionally, T cell responses have been found to be critical for virus
105 clearance and protection from clinical disease in mice infected with SARS-CoV. Survival has
106 been associated with robust SARS-CoV specific CD4+ and CD8+ T cell responses during
107 infection [ADDIN EN.CITE ADDIN EN.CITE.DATA]. Findings to date have shown
108 critical roles for both innate and T cell-mediated immune functions in virus clearance, however,
109 the role of B cells in primary infection and viral clearance have not yet been characterized.
110 Serum analysis of SARS-CoV-infected patients and in SARS-CoV mouse models have
111 primarily focused on the development of protective neutralizing IgG antibody responses in the
112 weeks and months after infection [ADDIN EN.CITE ADDIN EN.CITE.DATA]. The
113 SARS nucleocapsid is an immunodominant antigen during infection and the vast majority of
114 SARS-CoV reactive antibodies (80-90%) in patients bind to the nucleocapsid protein (N) [

138 During the SARS-CoV outbreak, IgG titers against the N protein as well as the spike
139 glycoprotein (S) were initially detected in patients at ~2 weeks post-infection. These IgG titers
140 peaked at approximately 4 weeks post-infection [ADDIN EN.CITE ADDIN EN.CITE.DATA
141]. Though anti-SARS-CoV IgG titers were detectable through one year post-infection, IgG
142 antibody titers declined over this period and subsequently became undetectable in many patients
143 six years after infection [ADDIN EN.CITE ADDIN EN.CITE.DATA]. At approximately
144 two weeks post-infection in human patients, antibody titers skew towards a higher IgG to IgM
145 ratio, suggesting that CD4+ T cells are highly activated after initial infection [ADDIN EN.CITE

210 database-provider>academic.oup.com</remote-database-provider><access-
211 date>2017/04/10/05:48:12</access-date></record></Cite></EndNote>]. Coupled with the
212 above studies of anti-SARS-CoV antibody responses, these results suggest the importance of
213 humoral immunity in virus clearance and convalescent sera transfer as a possible treatment for

CoV infection. However, the exact role of B cells and antibodies in the control of primary infection has not yet been critically examined.

In this study, we focus on B cell and antibody responses to MA15 during the first two weeks of infection. Previous studies have shown that *Rag*$^{-/-}$ and SCID mice, both without functional adaptive immune cells, are unable to clear MA15, whereas immunocompetent mice clear virus within 7-10 days post infection (dpi) [ADDIN EN.CITE ADDIN EN.CITE.DATA]. To investigate the role of lymphocytes and humoral immunity in virus clearance, we infected B cell-deficient (*muMT*$^{-/-}$), CD4 T cell receptor (TCR) fixed (OTII), and CD8 TCR fixed (OTI) mouse strains with MA15. While both TCR-fixed mouse strains cleared virus by 15 dpi, the *muMT*$^{-/-}$ mice were unable to clear virus from the lung, and maintained high viral titers well past 15 dpi. Because T cells have primarily been implicated as responsible for MA15 clearance, the inability to clear virus in T cell competent, B cell deficient mice was surprising. Furthermore, we show that 7 dpi convalescent serum is capable of neutralizing MA15 *in vitro*. *In vivo*, prophylactically transferred 7 dpi convalescent sera prevented mortality in 12- and 20-week old mice challenged with a lethal dose of MA15. Together, these data indicate a major role for humoral immunity in control of primary SARS-CoV infection and signal a possible new treatment avenue for CoV-mediated disease in the context of a future outbreaks.

RESULTS

Activation of antibody-related networks is decreased during lethal SARS-CoV infection.

Using existing systems biology datasets for SARS-CoV infection [ADDIN EN.CITE ADDIN EN.CITE.DATA], network analysis comparing lethal and sublethal MA15 challenge

revealed a module eigengene (dark-red), a cluster of coordinately expressed genes regulating immunoglobulin, antibody heavy, and antibody light chain transcript expression [ADDIN EN.CITE ADDIN EN.CITE.DATA]. Expression of this eigengene cluster was significantly diminished at 4 and 7 dpi in the lethal model as compared to the sublethal model of MA15 infection (Fig. 1, S. Table 1). Consistent with reports from human studies [ADDIN EN.CITE ADDIN EN.CITE.DATA], these data suggest a role for B cell and antibody responses in regulating disease progression following MA15 infection. The role of early humoral immune response to MA15 infection in viral clearance and pathogenesis has yet to be systematically evaluated. Based on these factors, we decided to explore the role of B cells and antibodies within the first 7 dpi of MA15 infection.

B cell-deficient mice are not able to clear MA15.

To determine the role of B cells and antibody in viral clearance, we infected 10-week old B cell-deficient (*muMT*$^{-/-}$) [ADDIN EN.CITE <EndNote><Cite><Author>Kitamura</Author><Year>1991</Year><RecNum>83</RecNum><DisplayText>(31)</DisplayText><record><rec-number>83</rec-number><foreign-keys><key app="EN" db-id="rd00vaprasew0ce99v5vzr2y050rewr92tzz" timestamp="1501076080">83</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Kitamura, D.</author><author>Roes, J.</author><author>Kuhn, R.</author><author>Rajewsky, K.</author></authors></contributors><auth-address>Institute for Genetics, University of Cologne, Germany.</auth-address><titles><title>A B cell-deficient mouse by targeted disruption of the membrane exon of the immunoglobulin mu chain gene</title><secondary-

As expected, control mice retained virus at high titer in the lung through 4 dpi, followed by rapid virus clearance to below the limit of detection by 7 dpi. Surprisingly, *muMT*$^{-/-}$ mice retained high viral titers in the lung through 90 dpi despite the presence of an otherwise intact immune system. We stained lung histology sections from later timepoints for SARS N protein. In control animals, we detected no viral antigen, but SARS N antigen staining was clearly evident at late time points in the *muMT*$^{-/-}$ model, consistent with our lung titer data (Fig 2B). Both B6 and *muMT*$^{-/-}$ mice demonstrated equivalent weight loss and recovery, despite *muMT*$^{-/-}$ mice retaining high virus titer in the lungs at later timepoints (Fig. 2C). Additionally, pathology scoring on histological slides showed no significant difference in lung injury or recovery between B6 and *muMT*$^{-/-}$ mice (Fig 2D-E), suggesting that total viral clearance is not required for recovery from SARS disease, consistent with previous findings [ADDIN EN.CITE ADDIN EN.CITE.DATA]. These data support the hypothesis that B cells are directly or indirectly required for clearance of MA15 infection following primary challenge.

To determine whether B cell or antibody responses to SARS-CoV infection were differential between lethal and sublethal infections, we infected 20 week old B6 mice with a mock, low, sublethal, or lethal dose of MA15 (Fig. 3). We monitored mice and weight daily through 7 dpi (Fig. 3A-B), then harvested mice for lung hemorrhage scoring, flow cytometry analysis of the lung and spleen, and serum antibody titer (Fig. 3C-F). Serum antibody was analyzed by ELISA against purified SARS-S protein for anti-SARS-CoV IgG and IgM. We observed no significant differences in splenic B cell numbers, B cell activation, or serum antibody titer between infectious doses (Fig. 3F). These data together suggest that though B cell

329 and antibody responses impact viral clearance in the lung, the lack of these responses do not
330 impact weight loss and recovery from lung injury in the MA15 model under these treatment
331 conditions.
332
333 **Lack of antigen-specific CD4+ T cell responses results in delayed MA15 clearance.**
334 To further characterize interactions that may explain the critical role for B cells, we
335 sought to evaluate the role of T lymphocytes in MA15 clearance by infecting OTI and OTII
336 (fixed CD8 or CD4 TCR, respectively) mice with a sublethal dose of MA15 (Fig. 4) [ADDIN
337 EN.CITE ADDIN EN.CITE.DATA]. Wild-type B6 mice were used as an
338 immunocompetent control and *Rag*$^{-/-}$ mice were used an immunodeficient control. All mice
339 displayed similar weight loss and recovery phenotypes during infection, suggesting that neither
340 CD4+T nor CD8+T MA15-specific responses are individually required for recovery from
341 disease (Fig. 4A). At 4 dpi, B6, OTI, OTII, and *Rag*$^{-/-}$ mice retained high titers of MA15 in the
342 lung. However, by 7 dpi, B6 and OTI mice had cleared virus in the lung, suggesting that MA15-
343 specific CD8+T cells are not required for clearance in this model (Fig 3B). However, viral
344 clearance in OTII mice was delayed until 15 dpi. These data suggest that a CD4+T cell response
345 to MA15 infection contributes to, but is not essential for, viral clearance. Because of the
346 importance of CD4+T cell help in B cell activation in response to viral infection [ADDIN

366 urls><url>https://www.ncbi.nlm.nih.gov/pubmed/25677493</url></related-
367 urls></urls><custom2>PMC4414089</custom2><electronic-resource-
368 num>10.1038/nri3803</electronic-resource-num></record></Cite></EndNote>], this delay in
369 clearance in the OTII model points to a role for CD4+T cell activation of B cells in viral
370 clearance during the first week of infection. Together, these data further support a role for B cell
371 and antibody responses in MA15 clearance early in infection [ADDIN EN.CITE ADDIN
372 EN.CITE.DATA].
373
374 **Antigen-specific B cells are not required for SARS-CoV clearance.**

We next investigated B cell function and antigen specificity and its impact on virus control and clearance. For these purposes, we used the HELMET mouse strain, wherein B cells are present in normal levels carry B cell receptors only reactive to HEL, the hen egg lysozyme, rendering them unable to create viral antigen-specific antibodies [ADDIN EN.CITE ADDIN EN.CITE.DATA]. HELMET mice were infected with a sublethal dose of MA15, as above, and were monitored and weighed daily. HELMET mice showed similar weight loss and recovery to other mouse strains (OTI, OTII, *Rag*$^{-/-}$, B6), suggesting that a fixed BCR did not result in increased pathology during infection (Fig. 4A). However, MA15-infected HELMET mice maintained high virus titers in the lung through 7 dpi, but, eventually cleared virus infection by 15 dpi (Fig 4B). These data suggest an important role for antigen-specific B cells in early viral clearance in the lung, but are also consistent with previous findings outlining the capability of virus-specific T cells to clear virus from the lungs [ADDIN EN.CITE ADDIN EN.CITE.DATA]. Importantly, the results suggest that B cells or antibody are needed in an antigen-independent capacity to help prime T cell-mediated clearance. Together, the data indicate an overlapping and complementary role for virus-specific B and T cells in MA15 clearance in the lung.

Convalescent serum at 7 days post infection can efficiently neutralize MA15 *in vitro*.

In order to analyze serum antibody responses to MA15 infection over time, we infected B6 mice with a sublethal dose of MA15 and harvested sera at 4, 7, and 29 dpi (Fig. 5). We analyzed sera for IgG and IgM antibody concentration against purified SARS-S glycoprotein. During infection, IgM responses against MA15 were established within the first week, peaked early and remained high through 29dpi (Fig. 5A). IgG responses were evident early infection, but

peak titers were evident at 29dpi, which is a common antibody kinetic response to acute viral infection [ADDIN EN.CITE <EndNote><Cite><Author>Prince</Author><Year>2014</Year><RecNum>124</RecNum><DisplayText>(39)</DisplayText><record><rec-number>124</rec-number><foreign-keys><key app="EN" db-id="rd00vaprasew0ce99v5vzr2y050rewr92tzz" timestamp="1570411486">124</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Prince, H. 422 (Linking)</isbn><accession-num>25165026</accession-num><urls><related-
423 urls><url>https://www.ncbi.nlm.nih.gov/pubmed/25165026</url></related-
424 urls></urls><custom2>PMC4266349</custom2><electronic-resource-
425 num>10.1128/CVI.00487-14</electronic-resource-num></record></Cite></EndNote>] (Fig.
426 5B). Sera neutralization titers were determined using Vero cell neutralization assays against
427 MA15, with neutralization reported as the 50% effective concentration of antibody (EC_{50}).
428 Serum antibodies at all timepoints showed a time-dependent neutralization of MA15 (Fig 5C-D).
429 Surprisingly, as early as 7 dpi, convalescent sera was able to efficiently neutralize virus *in vitro*
430 and displayed similar neutralization efficiency to 15 dpi convalescent sera. This early
431 neutralization response may explain the requirement for B cells in MA15 clearance during early
432 MA15 infection.
433
434 **Prophylactic transfer of early antibody protects from MA15 pathogenicity.**
435 In order to determine whether inoculation with 7 dpi convalescent sera can protect
436 against lethal MA15 infection, we again purified sera from MA15-infected B6 mice at 7 dpi.
437 Sera from infected mice was pooled then used to intraperitoneally inoculate 20 week old B6
438 mice prior to receiving a lethal inoculation of MA15 24 hours later (Fig. 6A). We monitored
439 mice for weight loss daily then harvested at 7 dpi or when moribund. Passive transfer of
440 convalescent sera from 7 dpi protected mice following lethal MA15 challenge from severe
441 disease and weight loss (Fig. 6B). These data suggest that early convalescent sera could be used
442 prophylactically to neutralize virus and prevent mortality in coronavirus infection.
443

DISCUSSION

Lethal SARS-CoV infection causes an immune-mediated disease marked by dysregulated innate immune responses, cytokine levels, and T cell responses, which contribute to severe disease and death [ADDIN EN.CITE <EndNote><Cite><Author>Channappanavar</Author><Year>2014</Year><RecNum>30</RecNum><DisplayText>(16)</DisplayText><record><rec-number>30</rec-number><foreign-keys><key app="EN" db-id="rd00vaprasew0ce99v5vzr2y050rewr92tzz" timestamp="1501036947">30</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Channappanavar, Rudragouda</author><author>Zhao, Jincun</author><author>Perlman, Stanley</author></authors></contributors><titles><title>T-cell-mediated immune response to respiratory coronaviruses</title><secondary-title>Immunologic research</secondary-title><alt-title>Immunol Res</alt-title></titles><periodical><full-title>Immunologic research</full-title><abbr-1>Immunol Res</abbr-1></periodical><alt-periodical><full-title>Immunologic research</full-title><abbr-1>Immunol Res</abbr-1></alt-periodical><pages>118-128</pages><volume>59</volume><number>0</number><dates><year>2014</year><pub-dates><date>2014/08//</date></pub-dates></dates><isbn>0257-277X</isbn><urls><related-urls><url>http://www.ncbi.nlm.nih.gov/pmc/articles/PMC4125530/</url></related-urls><pdf-urls><url>https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4125530/pdf/nihms597563.pdf</url></pdf-urls></urls><electronic-resource-num>10.1007/s12026-014-8534-z</electronic-resource-num><remote-database-provider>PubMed Central</remote-database-provider><access-date>2017/05/07/21:20:57</access-date></record></Cite></EndNote>]. Conversely, survival is associated with activation of virus-specific T cells which contribute to early virus clearance and

diminish clinical disease [ADDIN EN.CITE ADDIN EN.CITE.DATA]. In this study, we extend these studies to show that B cell and antibody responses also play a critical role in disease control and virus clearance during MA15 infection in lethal B6 mouse models. Using a systems based approach, we utilized eigengene modules to predict an important role for B cell responses in protection from lethal disease outcomes, then used a panel of genetically immunodeficient mice and convalescent serum transfer experiments to support the hypothesis that early B cell and antibody responses also play an important role in protection from severe MA15 infection and by contributing to virus clearance.

Our systems biology approach applies robust statistical modeling to large expression datasets in order to discover coordinated expression patterns associated with lethal and sublethal viral infections. This has led to the discovery of key signaling and expression pathways in SARS-CoV pathogenesis and disease [ADDIN EN.CITE ADDIN EN.CITE.DATA]. As in human infections [ADDIN EN.CITE ADDIN EN.CITE.DATA], transcriptomic analysis comparing lethal and non-lethal MA15 infection of the mouse lung revealed that B cell activation and antibody production was impaired in lethal, but not sublethal, infection, suggesting a role for humoral immunity in SARS-CoV pathogenesis and clearance. Additionally, previous studies have shown that while MA15 was cleared from the lungs of wild-type mice within 7 dpi, immunodeficient SCID and *Rag*$^{-/-}$ mice retained high titers of virus in the lung up to three weeks after infection [ADDIN EN.CITE ADDIN EN.CITE.DATA]. Because SCID and *Rag*$^{-/-}$ mice lack functional lymphocytes, these findings pointed to a critical role for lymphocytes in viral clearance within the first week of infection.

During primary infection, SARS-CoV infects the lung epithelium where dendritic cells are able to sequester viral antigen and migrate to the lymph node in order to activate

lymphocytes through direct antigen presentation, MHC activation, and secondary activation signals [ADDIN EN.CITE ADDIN EN.CITE.DATA]. Consequently, virus-specific T cells act as effectors that activate and recruit subsequent immune cell populations [ADDIN EN.CITE <EndNote><Cite><Author>Channappanavar</Author><Year>2014</Year><RecNum>30</RecNum><DisplayText>(16)</DisplayText><record><rec-number>30</rec-number><foreign-keys><key app="EN" db-id="rd00vaprasew0ce99v5vzr2y050rewr92tzz" timestamp="1501036947">30</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Channappanavar, Rudragouda</author><author>Zhao, Jincun</author><author>Perlman, Stanley</author></authors></contributors><titles><title>T-cell-mediated immune response to respiratory coronaviruses</title><secondary-title>Immunologic research</secondary-title><alt-title>Immunol Res</alt-title></titles><periodical><full-title>Immunologic research</full-title><abbr-1>Immunol Res</abbr-1></periodical><alt-periodical><full-title>Immunologic research</full-title><abbr-1>Immunol Res</abbr-1></alt-periodical><pages>118-128</pages><volume>59</volume><number>0</number><dates><year>2014</year><pub-dates><date>2014/08//</date></pub-dates></dates><isbn>0257-277X</isbn><urls><related-urls><url>http://www.ncbi.nlm.nih.gov/pmc/articles/PMC4125530/</url></related-urls><pdf-urls><url>https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4125530/pdf/nihms597563.pdf</url></pdf-urls></urls><electronic-resource-num>10.1007/s12026-014-8534-z</electronic-resource-num><remote-database-provider>PubMed Central</remote-database-provider><access-date>2017/05/07/21:20:57</access-date></record></Cite></EndNote>]. Additionally, virus-specific T cells migrate to the site of infection and secrete antiviral cytokines, chemokines, and cytotoxic molecules which lead to inflammation, increased antigen presentation, inhibition of

513 viral replication, and direct killing of virus-infected cells [ADDIN EN.CITE ADDIN
514 EN.CITE.DATA]. Based on current studies, SARS-CoV clearance early after infection is
515 thought to be heavily regulated by T cell activities, as opposed to B cell or antibody-mediated
516 processes. However, Chen et al. determined that depletion of CD4+T cells, but not CD8+T cells,
517 delayed viral clearance and led to a poor virus-specific antibody response in aged Balb/c mice in
518 response to SARS-CoV Urbani infection, suggesting a role for helper T cell activation of B cells
519 and subsequent antibody-aided viral clearance [ADDIN EN.CITE ADDIN EN.CITE.DATA
520].

521 Studies with similar viruses have addressed the question of the role of humoral immunity
522 in viral clearance. Immunocompromised *Rag*$^{-/-}$ mice fail to clear another coronavirus, murine
523 hepatitis virus (MHV-1), instead maintaining high viral titers within the lung for weeks
524 following primary infection [ADDIN EN.CITE ADDIN EN.CITE.DATA]. Additionally,
525 Chachu et al. determined that *muMT*$^{-/-}$ and HELMET mice did not clear murine norovirus as
526 efficiently as immunocompetent mice due to a lack of virus-specific antibody responses [

Consonant with our findings reported with SARS-CoV, adoptive transfer of polyclonal or monoclonal antibodies against murine norovirus led to viral clearance, suggesting a distinct role for antibody in virus clearance [ADDIN EN.CITE ADDIN EN.CITE.DATA]. In the case of adoptive transfer of virus-neutralizing antibody, various SARS-CoV studies have used exogenous monoclonal SARS-

559 specific IgG to induce sterilizing immunity to primary infection but also to drive virus clearance
560 [ADDIN EN.CITE ADDIN EN.CITE.DATA]. These data demonstrate that virus-specific
561 antibody will protect animals from lethal disease and clear virus after infection
562 Based on a number of elegant studies [ADDIN EN.CITE ADDIN EN.CITE.DATA
563], it is clear that T cell responses play a significant role in SARS-CoV clearance and the control
564 of severe disease outcomes [ADDIN EN.CITE ADDIN EN.CITE.DATA]. In our study,
565 *muMT*$^{-/-}$ mice, lacking mature B cells and membrane-bound IgM, were not able to clear MA15
566 virus. Our *muMT*$^{-/-}$ findings are novel to the current dogma of the field and support a significant
567 role for B cells in MA15 clearance. Consonant with our findings, influenza, a respiratory (-
568)ssRNA virus, is not efficiently cleared from the lungs of *muMT*$^{-/-}$ mice [ADDIN EN.CITE
569 <EndNote><Cite><Author>Topham</Author><Year>1998</Year><RecNum>101</RecNum>

589 (Linking)</isbn><accession-num>9420305</accession-num><urls><related-
590 urls><url>https://www.ncbi.nlm.nih.gov/pubmed/9420305</url></related-
591 urls></urls><custom2>PMC109454</custom2></record></Cite></EndNote>]. However, MA15
592 failed to be effectively cleared even after 90 dpi, when high viral titers were still present in the
593 lung. These data support the hypothesis that B cell and/or antibody responses are required for
594 MA15 clearance during primary infection. While *muMT*$^{-/-}$ mice lack mature B cells in the B6, but
595 not BALB/c [ADDIN EN.CITE ADDIN EN.CITE.DATA] mouse model, we note that
596 *muMT*$^{-/-}$ mice can also use a different pathway to produce some CD19+/CD0+/IgD+ B1 cells and
597 to produce non-specific IgE and IgG antibodies [ADDIN EN.CITE ADDIN EN.CITE.DATA
598]. However, our data suggest that these cells and activities do not appear to function in MA15
599 clearance.

600 To address the role of T lymphocytes in our MA15 clearance model, we investigated
601 whether mice deficient in virus-specific CD4+T cells (OTII) or CD8+T cells (OTI) showed the
602 same inability to clear virus that was seen in *Rag*$^{-/-}$, SCID, and *muMT*$^{-/-}$ mice. OTI mice, which
603 lack a virus-specific CD8+T cell response, were able to clear virus on the same timescale as B6
604 mice, while OTII mice, which lack a virus-specific CD4+T cell response, demonstrated delayed

viral clearance in the lung. These data corroborate previous findings in which depletions of CD4+T cells and CD8+T cells in senescent Balb/c demonstrated delayed MA15 clearance after infection [ADDIN EN.CITE ADDIN EN.CITE.DATA]. One of the primary roles of CD4+T cells during a respiratory viral infection is to help in B cell activation [ADDIN EN.CITE

679 num>10.1038/nri3803</electronic-resource-num></record></Cite></EndNote>]. It is likely that
680 the observed delay of MA15 viral clearance in OTII mice, or CD4+ T cell depleted mice in Chen
681 et. al. [ADDIN EN.CITE ADDIN EN.CITE.DATA], is likely due to impaired B cell
682 activation and therefore delayed or weakened antibody responses. Because HELMET mice
683 eventually clear virus, the data also support the idea that antigen non-specific B cells may play a
684 key role in T cell priming/help and T cell-mediated clearance.

685 Passive immunotherapy approaches are being developed to prevent and treat several
686 human medical conditions where alternative therapeutic options are absent, including MERS-
687 CoV infection [ADDIN EN.CITE ADDIN EN.CITE.DATA]. Our data support previous
688 passive transfer experiments in humans, which have appeared to enhance protection from lethal
689 disease after SARS-CoV infection [ADDIN EN.CITE

713 database-provider>academic.oup.com</remote-database-provider><access-
714 date>2017/04/10/05:48:12</access-date></record></Cite></EndNote>]. In support of these
715 findings, we showed that 7 dpi convalescent mouse sera was able to efficiently neutralize MA15
716 in in vitro neutralization assays. Moreover, prophylactic transfer of 7 dpi convalescent sera
717 significantly protected mice in a lethal MA15 challenge. While sera was chosen from patients
718 late after infection and with high antiviral IgG and IgM titers (26), our data suggests that
719 neutralizing sera isolated from convalescent patients much earlier after infection could neutralize

virus in patients, possibly protecting from severe disease and mortality. The ongoing MERS-CoV outbreak and discovery of SARS-like CoVs circulating in bats and other wild animals suggest that recurrence of another coronavirus-mediated disease remains a possibility [ADDIN EN.CITE ADDIN EN.CITE.DATA] and that passive immunotherapy might serve as a rapid response treatment option [ADDIN EN.CITE ADDIN EN.CITE.DATA]. Thus, rapid treatment using sera transfer could be an important factor in suppressing viral replication and mortality in the early days of an outbreak.

Our systems based studies clearly demonstrated significant differences in B cell immunoglobulin gene expression responses following lethal infection in mice. In humans, patients with poor outcomes had poor ISG and immunoglobulin gene expression levels, persistent chemokine levels, and deficient anti-SARS spike antibody production as well [ADDIN EN.CITE ADDIN EN.CITE.DATA], demonstrating concordant outcomes in mouse and human models. SARS-CoV clearance is a complex phenotype both in humans and in mice and appears to be heavily regulated by both T cell function and early induction of neutralizing antibodies. Future studies focusing of the role of B cell activation and antibody secretion in the initial days of viral infection may provide critical new insights into pathogenic mechanisms of emerging coronaviruses, leading to new therapeutic regiments for disease control and public health preparedness.

METHODS

ETHICS STATEMENT AND BIOSAFETY

Mouse studies were carried out in accordance with the recommendations for the care and use of animals by the Office of Laboratory Animal Welfare at the NIH. IACUC at UNC-CH approved the animal studies performed under IACUC protocol 15-155. All virus work was performed in a certified biosafety level 3 (BSL3) laboratory containing redundant exhaust fans while wearing personal protective equipment including HEPA-filtered powered air purifying respirators, Tyvek suits, hoods, and boots; work was additionally confined to a class II biological safety cabinet.

CELL CULTURE AND VIRUS

Recombinant mouse-adapted SARS-CoV (MA15) was generated, passaged once, and titered on Vero E6 cells. For viral titering, the right bottom lobe of each mouse was homogenized then serially diluted to assess plaque forming units (PFU) in Vero E6 cells, with a detection limit of 100 PFU, as previously described by our group [ADDIN EN.CITE <EndNote><Cite><Author>Frieman</Author><Year>2008</Year><RecNum>92</RecNum><DisplayText>(5)</DisplayText><record><rec-number>92</rec-number><foreign-keys><key app="EN" db-id="rd00vaprasew0ce99v5vzr2y050rewr92tzz" timestamp="1501082558">92</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Frieman, M.</author><author>Baric, R.</author></authors></contributors><auth-address>University of North Carolina, 210 McGaveran-Greenberg Hall, CB 7435, Chapel Hill, NC 27599, USA.</auth-address><titles><title>Mechanisms of severe acute respiratory syndrome pathogenesis and

778
779 **ANIMALS AND INFECTIONS**
780 Mice were obtained from the Jackson labs (Bar Harbor, ME), housed and bred in pathogen-free
781 conditions in accordance with guidelines established by the Department of Comparative
782 Medicine at UNC-CH. Strains used include C57BL/6J (B6), *muMT*$^{-/-}$, HELMET (HELMET),
783 *Rag*$^{-/-}$, OTI, and OTII mice. All mice were female. During infection, mice were maintained in
784 SealSafe ventilated caging system in a BSL3 laboratory, equipped with redundant fans as

785 previously described by our group (5). Before viral infection, mice were anesthetized by
786 administering 50 µl ketamine/xylazine mixture intraperitoneally and then infected intranasally
787 with 50 µl virus solution or control PBS. 10-week old mice were used in sublethal models or 20-
788 week old mice in lethal models. Twenty week aged mice were infected with 10^4 PFU MA15, a
789 lethal dose and 10-12-week old mice were infected with 10^5 PFU MA15, a sublethal dose [
790 ADDIN EN.CITE ADDIN EN.CITE.DATA]. Following sedation and infection, mice were
791 monitored daily for weight loss and survival, as well as for signs that the animals were moribund
792 (including labored breathing, lack of movement and lack of grooming). Mice that reached 20%
793 weight loss were placed under exception and monitored at least twice daily. Mice deemed
794 moribund or near 30% weight loss were euthanized at the discretion of the researcher. Mice were
795 euthanized with an isoflurane overdose followed by major organ removal, at various time points,
796 to collect lung tissues. Cervical dislocation was used as a secondary euthanasia method. All are
797 approved methods of the Institutional Animal Care and Use Committee (IACUC) at the UNC-
798 CH.
799
800 **ELISA AND NEUTRALIZATION ASSAYS**
801 ELISA plates were coated in carbonate buffer (0.8ug/mL of SARS-S antigen) overnight and
802 blocked at 4°C, before serum was serially diluted 2-fold 10 times with 3 replicates per sample
803 and added to a 96-well plate. HRP conjugated secondary was used at 1:2000 for 1 hour, then
804 developed in Thermo Scientific Pierce 1-Step Ultra TMB ELISA Substrate then stopped in 0.1M
805 sodium fluoride, and read by plate reader at 450nm.
806

To perform plaque reduction neutralization assays ($PRNT_{50}$) serum was serially diluted 2-fold and incubated with 100 PFU of the MA15 for 1 hour at 37°C. The virus and antibodies were then added to a 6-well plate with 1 $\times 10^5$ Vero E6 cells/well with n=2 replicates per sample. After 1 hour incubation, cells were overlaid with 0.8% agarose in media. Plates were incubated for 48 hours then stained with neutral red for 3 hours, and plaques were counted. The percentage of plaque reduction was calculated as [1 − (no. of plaques with antibody/no. of plaques without antibody)] × 100.

HISTOLOGICAL ANALYSIS AND LUNG SCORING

Lung samples were fixed in 10% phosphate-buffered formalin for >7 days, then moved to new formalin solution at 4°C before removal from BSL3. Fixed samples were them placed in cassettes, rehydrated, and moved to ethanol solution prior to submission to the Lineberger Comprehensive Cancer Center Animal Histopathology Core for processing and sectioning. Histopathology tissue sections were boiled in Tris-EDTA buffer for antigen retrieval, then stained using anti-SARS-S antibody and HRP-conjugated secondary antibody. HRP was developed using DAB (Thermo Scientific Metal Enhanced DAB Substrate Kit), then counterstained. Histopathology was scored, blinded to infection and animal status, for airway disease, vascular disease, parenchymal pneumonia, diffuse alveolar damage, eosinophils and immunohistochemistry on a scale of 0–3 (0, none; 1, mild; 2, moderate; 3, severe). Gross hemorrhage of lung tissue was observed during harvest and scored on a scale of 0 (no hemorrhage in any lobe) to 4 (extreme and complete hemorrhage in all lobes of the lung).

FLOW CYTOMETRY

The left lung of each mouse was used for flow cytometric staining of inflammatory cells. Mouse lungs were perfused with PBS before harvest. Tissue was dissected and digested in RPMI (Gibco) supplemented with DNAse and Collagenase (Roche) in an incubated shaker. Samples were strained using a 70 micron filter (BD) and any residual red blood cells were lysed using ACK lysis buffer, stained, then fixed in 2% formalin solution. Cells were stained in three separate panels using: (1) FITC anti-Ly-6C clone AL21 (BD), PE anti-SigLecF clone E50-2440 (BD), PETR anti-CD11c clone N418 (MP), PerCP anti-B220 clone RA3-6B2 (MP), PE-Cy7 anti-Gr–1 clone RB6-8C5 (eBio), eF450 anti-CD11b clone M1/70 (eBio), APC anti-LCA clone 30-F11 (eBio), APC-eF780 anti-MHC class II clone M5/114 (eBio) or (2) FITC anti-CD94 clone 18d3 (eBio), PE anti-CD3Ɛ clone 145-2C11 (eBio), PETR anti-CD4 clone RM4-5 (MP), PerCP anti-CD8 clone 53–6.7 (BD), PE-Cy7 anti-CD49b clone DX5 (eBio), eF450 anti-LCA clone 30-F11 (eBio), AF647 anti-CD19 clone 6D5 (Biolegend), APC-eF780 anti-B220 clone RA3-6B2 (eBio), (3) BB515 anti-CD19 (BD), APC-R700 CD45R (BD), BV606 anti-IgD (BD), BV421 anti-IgM (BD), PE anti-CD21 (BD), APC anti-CD138 (BD), BV737 anti-CD80 (BD), BV786 anti-CD5 (BD), APC-Cy7 anti-MHCII (BD). Samples were run in the UNC Flow Cytometry Core Facility on a Beckton Dickinson LSR II and analyzed in FlowJo, as previously described by our group [ADDIN EN.CITE ADDIN EN.CITE.DATA].

ADOPTIVE SERUM TRANSFER

Whole blood was harvested from sublethally infected or mock-infected animals at various timepoints after infection and moved to EDTA serum tubes and spun down. Serum was collected, measured for volume, and pooled by harvest date and stored at -80°C. A 1:1 volume

(500uL) of serum was transferred to uninfected mice intraperitoneally one day prior to intranasal infection. Infection and subsequent mouse handling was performed as described above.

GENE ANALYSIS AND NETWORK MODULES

All infection response networks, network modules, and heat maps were generated and analyzed within our previous publication (28).

ACKNOWLEDGMENTS

This work was supported by funds from the National Institute of Allergy and Infectious Diseases, National Institutes of Health, Department of Health and Human Services, research grants AI106772 and AI00625 (RSB) and T32 PHS GRANT 5 T32 AI 7419-22. AB is a recipient from NIH training grant T32 AI007419. The UNC Flow Cytometry Core Facility is supported in part by P30 CA016086 Cancer Center Core Support Grant to the UNC Lineberger Comprehensive Cancer Center. Animal histopathology was performed by the Animal Histopathology & Laboratory Medicine Core at the University of North Carolina, which is supported in part by an NCI Center Core Support Grant (5P30CA016086-41) to the UNC Lineberger Comprehensive Cancer Center.

Subject: FW: COVID seminar series
Viroholics Seminar Series Spring Summer 2020 Friday Revised V11.docx

To all the Speakers in the 2020 ASU Viroholics (COVID-edition) seminar series:

Everyone, I am happy to report that we have come to terms in principle with the American Society for Virology (ASV) for their web site to host the recorded seminars for our COVID-19 seminar series once we are finished our schedule at the end of June.

For those of you who have agreed to have your talks recorded, there is nothing you need do, unless you have any issues with this plan to archive the talks at the ASV.

Other than that, please join us this Friday at 12 noon PT/3pm EST: our speaker will be Kanta Subbarao (Australia), who will need to get up at an ungodly hour in order to present to us at our much-more-godlier hour here in North America.

Hi Grant,
ASV Exec Committee is fine with this, so we'll just need to work out the details. Will we be actually hosting the videos on our site, or providing a link to them elsewhere (YouTube, etc.)?

Just let us know when you're ready. I've cc'd Andréa (asv@asv.org) too.

Cheers,
Kathy

Hi Grant,
It sounds terrific. Let me run it by the Exec committee and see if they agree.

We have a beta version of a new website, which we hope to get up soon - we have to choose the images from those being submitted, and give it one more look, then we're good to go. So we could just design a place for this right from the start.

Do you think you need to get permission from the speakers for us to have it on the website? (Maybe you already did…)

Have a great weekend!
Kathy

Hi All!

Thank you Dr. Richt for a wonderful presentation and to those who called in. I have attached my attendance tracker for your awareness.

Next week, Drs. Gaur and Hoffman will be presenting their research on testing asymptomatic healthcare workers.

Please reach out to me if you'd like to present during a future call.

Best,
Rebecca

Subject: SARS-CoV-2 Weekly Investigators Meeting
When: Tuesday, June 2, 2020 9:00 AM-10:00 AM (UTC-05:00) Eastern Time (US & Canada).
Where: Zoom; https://www.zoomgov.com/j/1609711373?pwd=MkhZdGN4UzhHT2s5VndqWTFBc2J0QT09

Hi Everyone,

Below you will find the updated meeting link for our weekly investigators call regarding COVID-19.

Our tentative agendas will be:

- COVID-19 research presentation given by PI
- Animal Model updates
- Assay discussion
- Other Needs/Issues
- Call for presenters

ZoomGov Meeting:
https://www.zoomgov.com/j/1609711373?pwd= **552.136**

Meeting ID: 160 971 1373
Password: **552.136**

Subject: RE: SARS-CoV-2 Weekly Investigators Meeting

Hi All!

Thank you Dr. Richt for a wonderful presentation and to those who called in. I have attached my attendance tracker for your awareness.

Next week, Drs. Gaur and Hoffman will be presenting their research on testing asymptomatic healthcare workers.

Please reach out to me if you'd like to present during a future call.

Best,
Rebecca

Subject: SARS-CoV-2 Weekly Investigators Meeting
When: Tuesday, June 2, 2020 9:00 AM-10:00 AM (UTC-05:00) Eastern Time (US & Canada).
Where: Zoom; https://www.zoomgov.com/j/1609711373?pwd=MkhZdGN4UzhHT2s5VndqWTFBc2J0QT09

Hi Everyone,

Below you will find the updated meeting link for our weekly investigators call regarding COVID-19.

Our tentative agendas will be:

- COVID-19 research presentation given by PI
- Animal Model updates
- Assay discussion
- Other Needs/Issues
- Call for presenters

ZoomGov Meeting:
https://www.zoomgov.com/j/1609711373?pwd=552.136

Meeting ID: 160 971 1373
Password: 552.136

Subject: SARS-CoV-2 Weekly Investigators Meeting
nCoV PI call attendee list.xlsx

Hi!

Thank you all for attending this week's SARS-CoV-2 Investigators meeting and to Drs. Gaur and Hoffman from St. Jude for their

wonderful presentation.

Next week, we will have two presenters:

Laura Hughes, PhD (Scripps) – 10 minutes with Q and A
Efficiently collecting, sharing, and integrating COVID-19 data is critical to scientific research. Outbreak.info aggregates COVID-19 epidemiology, data, and resources into a single location.

And

Wes Van Voorhis, MD PhD and Isabelle Phan, 35 minutes with Q and A
Two topics:
1) a prediction method for sensitive and specific diagnostic epitopes for SARS-CoV-2 antibody detection and their validation in the ELISA format; and,
2) Compound screening of repurposing libraries of SARS-CoV-2 biochemical targets, nsp15 (endonuclease), nsp16/nsp10 (2'-O-Me-transferase), and nsp14 (Guanine-N7-Me-transferase).

Thank you,
Rebecca

Subject: article - "Characteristics of Microbes Most Likely to Cause Pandemics and Global Catastrophes"
Adalja2019_Chapter_CharacteristicsOfMicrobesMostL.pdf

Happy New Year!
I hope that you are both doing well.
I just wanted to send along this article in case you hadn't already seen it - "Characteristics of Microbes Most Likely to Cause Pandemics and Global Catastrophes." It is attached. It specifically references coronaviruses, and I thought it might be useful as a citation in papers or grants.

Best Wishes,
Anne

Characteristics of Microbes Most Likely to Cause Pandemics and Global Catastrophes

Amesh A. Adalja, Matthew Watson, Eric S. Toner, Anita Cicero and Thomas V. Inglesby

Abstract Predicting which pathogen will confer the highest global catastrophic biological risk (GCBR) of a pandemic is a difficult task. Many approaches are retrospective and premised on prior pandemics; however, such an approach may fail to appreciate novel threats that do not have exact historical precedent. In this paper, based on a study and project we undertook, a new paradigm for pandemic preparedness is presented. This paradigm seeks to root pandemic risk in actual attributes possessed by specific classes of microbial organisms and leads to specific recommendations to augment preparedness activities.

1 Introduction

The recent global experience with severe infectious disease epidemics has triggered much interest in understanding the broader pandemic threat landscape. A substantial proportion of pandemic and biological threat preparedness activities have focused on list-based approaches that were in part based on pandemic influenzas of the past, historical biological weapon development programs, or recent outbreaks of emerging infectious diseases (e.g., SARS, MERS, Ebola) (Centers for Disease Control and Prevention 2017; Casadevall and Relman 2010). But such an approach inherently fails to account for agents not currently known or those without historical precedent. For that reason, preparedness activities that are limited to these approaches may hamper preparedness and lessen resilience.

The purpose of this study was to analyze the characteristics of pathogens that could be capable of causing a global catastrophic biological risk (GCBR). These would be events in which biological agents—whether naturally emerging or reemerging, deliberately created and released, or laboratory engineered and escaped—could lead to sudden, extraordinary, widespread disaster beyond the collective capability of national and international governments and the private sector to control. If unchecked, GCBRs would lead to great suffering, loss of life, and sustained damage to national governments, international relationships, economies, societal stability, or global security (Schoch-Spana et al. 2017).

Given the severe potential public health consequences of pandemic events, there needs to be a vital interest in developing and maintaining a flexible, rapid, and robust

response capability. Anticipating the forms of microbial threats that might cause future pandemics can help strengthen preparedness and response capacities. This paper proposes a framework for considering future pandemic threats and provides recommendations for how this framework should inform pandemic preparedness.

2 Methodology

Review of the published literature and previous reports: The project team surveyed the current biomedical literature on the topic of emerging infectious disease characteristics, the pathogenic potential of microbes, and related topics. The literature review was microbe- and species-agnostic, encompassing all classes of microorganisms and host species. The literature review was accomplished with extensive PubMed searches on these subjects. Relevant US government policy and strategy were reviewed.

Interviews: The project team interviewed more than 120 technical experts who work in and are intimately knowledgeable about this field. Interviewees were drawn from academia, industry, and government. Our goal was to ascertain the experts' views about the essential traits needed for a pathogen to become a GCBR, to contextualize historical outbreaks in light of these traits, and to determine which currently known infectious disease agents possess such characteristics.

Pandemic Pathogen Meeting: The project team completed a preliminary analysis that synthesized the results of our literature review and expert interviews. Those findings were used to design and facilitate a meeting held on November 9, 2017, that included many of those who had been interviewed for this project. The meeting was held at the Johns Hopkins Center for Health Security in Baltimore, MD. The purpose of the meeting was to gain additional insight and input into the project analysis, examine assumptions, and test possible recommendations. Participants included representatives of US and foreign academic institutions, the federal government, and other independent subject matter experts.

This paper is based on the findings of the project and is modification of the project report (Johns Hopkins Center for Health Security 2018).

3 Findings

3.1 Specific Microbial Characteristics Are Probably the Most Important Factors Regarding Global Catastrophic Biological Risks

3.1.1 The Alchemy of a Pandemic Pathogen

When a pathogen has the capacity to cause a pandemic, it will possess several attributes that other microbes, capable of causing only sporadic or limited human infections, will lack. These traits can be divided into several categories: spread via respiratory transmission; capable of spread during incubation period prior to symptom onset; no preexisting host immunity; and other possible intrinsic microbial characteristics. Many of these characteristics have been captured and are reflected, in equation form, by Casadevall (Casadevall 2017).

3.1.2 Modes of Transmission

Microbes have varied routes of transmission, ranging from blood and body fluids to vector-borne to fecal–oral to respiratory (airborne and respiratory droplet). While each mode of transmission is capable of causing large outbreaks if sustained human-to-human transmission is possible and left unchecked, certain modes of transmission are more amenable than others to intervention. For example, the transmission of an infectious disease caused by blood and body fluid transmission can be halted with infection control measures such as gloves or gowns.

Of the various modes of transmission, the respiratory route is the mechanism most likely to lead to pandemic spread. This is chiefly due to the fact that interventions to interrupt this method of spread are more difficult to implement when the simple and universal act of breathing can spread a pathogen. The prolific spread of influenza, pertussis, measles, and rhinoviruses is testament to this fact (Herfst et al. 2017).

By contrast, although pathogens spread by the fecal–oral route, such as *Vibrio cholera* and the hepatitis A virus, can generate explosive outbreaks, even a modicum of sanitary infrastructure can quench the outbreak.

Vector-borne outbreaks are a special case of a non-respiratory-spread agent. Indeed, the only postulated extinction of a mammalian species by an infectious organism, the Christmas Island rat, was caused by a vector-borne trypanosome (Wyatt et al. 2008). For most of the agents that use this class of transmission, the spread is limited by a geographically and climatologically restricted vector habitat. Humans can protect against vectors, and they can change where they live, but the Christmas Island rat could not. These factors have generally served to limit the pandemic potential of microbes that are spread by vectors.

Exceptions to this general limitation of vector-borne viruses include microbes spread by *Anopheles* and *Aedes* mosquitoes. Pathogens spread by these mosquitoes

have higher pandemic potential, given the geographic breadth of their spread. For example, most of sub-Saharan Africa is hospitable to the malaria-transmitting *Anopheles* mosquitoes, while residents in 75% of US counties—as well as half the world's population—are regularly exposed to *Aedes* mosquitoes that serve as vectors for high viremia flaviviruses and alphaviruses. Such phenomena are borne out by the prolific spread of dengue, chikungunya, and Zika (Sinka et al. 2012; Centers for Disease Control and Prevention 2017).

3.1.3 Timing of Transmission

The onset and duration of the period when a person is contagious during an infection also play a major role in spread. Diseases that are contagious during a late stage of infection, when infected people are very sick and therefore have more limited opportunities for spread, may be delimited in their spread. On the other hand, diseases that are contagious prior to symptom development, during the incubation period, or when only mild symptoms are present have greater opportunities for spread as infected individuals are able to conduct their activities of daily living with little or no interruption.

Modeling studies with simulated outbreaks have shown that the presence or absence of this timing of transmission factor can be decisive in whether an outbreak can or cannot be controlled. If a microbe is contagious before a person is seriously ill while the disease is still incubating, then there is higher potential for pandemic spread. Historical examples reinforce this idea, as the only human infectious disease to be vanquished from the planet—smallpox—was one that was not contagious during the incubation period (Fraser et al. 2004). By contrast, a microbe such as the influenza virus, which is contagious prior to symptom development and has a wide range of clinical severity, is able to infect widely and is not amenable to control (Brankston et al. 2007).

3.1.4 Host Population Factors and Intrinsic Microbial Pathogenicity Characteristics

Microbial pathogenicity cannot, in reality, be separated from host characteristics. As elucidated by Pirofsky and Casadevall's host damage framework, disease is a complex interplay between a host immune system and a microbe (Pirofski and Casadevall 2008). In congruity with this paradigm, host features and microbial pathogenicity are discussed together.

For a microbe to cause a GCBR-level pandemic, it will be necessary for a significant proportion of the human population to be immunologically naïve to the agent so that the microbe would have a high number of susceptible humans to infect. Additionally, large quantities of a sufficiently effective countermeasure (vaccine or antimicrobial agent) would not be available. Immunologic naïveté would be expected with a zoonotic pathogen. The microbe, correspondingly, would

have to possess the ability to evade the host immune response through virulence factors, immunological camouflage, or other features that allow a productive infection to ensue.

Additionally, human receptors that are utilized by a pandemic-causing microbe would likely be widespread in the population, facilitating permissive infection in the majority of humans. Receptors may also provide target organ tropism for the agent, allowing severe disease to occur (e.g., lower respiratory tract and central nervous system).

Case fatality rates (CFRs) need not be inordinately high to cause a GCBR-level event, as evidenced by the 2.5% CFR reported for the 1918 influenza pandemic—the event closest to an actual human GCBR in the modern era (Taubenberger and Morens 2006). A low but significant CFR adheres to the host density threshold theorem. According to this commonly held theorem, a microbe that kills too many of its hosts will run out of susceptible hosts and be extinguished (Cressler et al. 2016). While this may be true of pathogens that are closely linked to one host species, it is not applicable to sapronotic diseases such as amebic encephalitis and cholera (in certain contexts), which can infect and kill without jeopardizing future transmission or survival. Indeed, many extinction-level amphibian infectious diseases are sapronotic in nature, such as the chytrid disease of salamanders and frogs (Fisher 2017).

Additionally, a GCBR-level event may not confer direct mortality. Reproductive effects (i.e., in the manner of rubella or Zika) or carcinogenic effects (e.g., HTLV-1) could, in many ways, be highly detrimental to the future of humanity, as they could lead to significant curtailment of lifespans and diminishing birth rates, which could ultimately result in significant population collapse (Rasmussen et al. 2017; Tagaya and Gallo 2017).

3.2 *RNA Viruses Are the Class of Microbe that Could Cause a GCBR, Though Other Microbial Classes Could Evolve or Be Engineered in Ways that Pose These Risks*

Given the right context, any microbial organism could evolve or be engineered to be a GCBR. However, the most likely cause of a GCBR presently is a virus, with RNA viruses being the most probable (Woolhouse et al. 2013).

3.3 *Bacteria: Broad-Spectrum Antimicrobials Limit Pandemic Potential of Pathogens*

Historically, bacterially caused infections such as plague have had incredible impacts on the human species (Raoult et al. 2013). However, the development of antibacterial therapies, beginning with the sulfonamides in 1935 and then penicillin

in 1942, has severely limited the ability of this class of microbes to cause a GCBR-level pandemic. In addition, the relatively slower speed of replication and accumulation of mutations also disadvantages this class over viruses. For example, a human infected with the hepatitis C virus (an RNA virus) produces trillions of virions per day, whereas the doubling time of *Yersinia pestis*, the cause of plague, is 1.25 h (Neumann et al. 1998; Deng et al. 2002).

The public health crisis of multiple-drug-resistant bacteria, such as carbapenem-resistant enterobacteriaceae (CRE) and others, is very alarming (Logan and Weinstein 2017). The spread of these bacterial agents, for which few if any treatments exist, threatens the entire practice of modern medicine, from cancer chemotherapy to joint replacement therapy. However, these organisms, which have variable attributable mortality, tend to be unable to efficiently infect human hosts that are not compromised or hospitalized. As such, the risk to the general public is constrained.

Large outbreaks of cholera and plague have represented true public health emergencies in Yemen and Madagascar, but their spread reflects severe infrastructure deficiencies caused by war and supply constraints rather than true global pandemic risk (Qadri et al. 2017; Roberts 2017).

3.3.1 Fungi: Thermal Growth Restriction Limits Pandemic Potential

Fungi represent prolific pathogens outside of the mammalian species. Outbreaks of chytrid fungal disease in frogs and salamanders as well as snake fungal disease represent true existential threats to affected species (Fisher 2017). However, fungi are largely thermally restricted, and only limited members of this class of microbes can infect warm-blooded organisms such as mammals (Casadevall 2012). Indeed, a fungal filter is hypothesized to have existed and may be partly responsible for mammalian warm-bloodedness. The success of the mammalian-adapted fungus that causes white-nose syndrome in bats is facilitated by the lower body temperature that occurs during their hibernation (Foley et al. 2011).

Human infections with fungi tend to be severely damaging only in an immunocompromised host. The human innate immune system contends with countless fungal spores that are present in every breath of air. As such, many endemic fungal diseases, such as histoplasmosis or coccidioidomycosis, do not cause harm in the majority of immunocompetent humans infected. Even newly emerging fungi such as *Candida auris* and *Cryptococcus gattii* are largely subjected to this limitation (Chowdhary et al. 2017; Centers for Disease Control and Prevention 2010). One of the most widespread fungal outbreaks—the *Exserohilum* fungal meningitis outbreak—was abetted by direct injection of a contaminated medical product into the spinal region of humans, which is not a usual mechanism of infection (Casadevall and Pirofski 2013).

Without thermal adaptation (which might be feasible with deliberate manipulation), fungi, many of which are sapronotic and do not rely on or need mammalian hosts, will not constitute a pandemic threat to humans.

3.3.2 Prions: Select Transmission Characteristics Limit Pandemic Potential

Prions—transmissible infective proteins—are one of the most fascinating and understudied of infectious agents. These agents, which are responsible for diseases such as kuru and new variant Creutzfeldt-Jakob disease (vCJD, the human form of "mad cow disease") in humans, cause scrapie, chronic wasting disease, and bovine spongiform encephalopathy in other mammalian species (Chen and Dong 2016).

Though highly damaging to humans and other species they infect, prions require specific conditions for spread. New variant Creutzfeldt-Jakob disease was to date the most highly publicized outbreak of a human prion disease; it resulted in 229 human cases tied to the consumption of beef products primarily in England in the 1990s and the 2000s (Hilton 2006). Other modes of transmission of CJD tied to iatrogenic spread via contaminated surgical instruments or cadaveric hormone products ceased once protective measures were put in place (Bonda et al. 2016). Kuru, a geographically restricted prion disease, was spread via human cannibalism in Papua New Guinea, and the outbreak abated once that practice was ended in the 1960s (Liberski et al. 2012).

The transmission characteristics of prion diseases are such that very extraordinary circumstances, on a par with human cannibalism or massive food contamination, must be present for a GCBR-level risk to be present for humans. Additionally, and almost by definition, such an event would be slow-moving (prions were once known as "slow viruses").

3.3.3 Protozoa: Limited Pandemic Pathogen

Protozoal organisms have the distinction of being the only infectious disease to have caused the extinction of a mammalian species. The Christmas Island rat, unable to outrun its vector, was felled by a vector-borne trypanosome (*T. lewisi*) during the early twentieth century on the Australian island (Wyatt et al. 2008). Human forms of trypanosomiasis have not risen to such a level of concern.

Human protozoal infections have exerted tremendous pressure on the species, and it is hypothesized that half of all humans who have lived died of malaria, which still kills approximately half a million humans annually (World Health Organization 2017). However, the development of antimalarial compounds and vector avoidance strategies has proved successful when they are able to be employed appropriately, and they have relegated malaria to a pathogen whose impact is amenable to control. Nonetheless, one aspect of malaria is of particular concern: the development and spread of artemisinin-resistant forms, which render treatment extremely challenging with little to no effective antimalarial agents left for use. Largely confined to specific regions of Asia, such as Cambodia and Myanmar, this organism poses severe treatment challenges and, if artemisinin-resistant forms were to spread to Africa, could represent a continent-wide catastrophic biologic risk (Haldar et al. 2018).

3.3.4 Other Microbial Classes with Limited Pandemic Risk

Ameba, ectoparasites, and helminths all have limited pandemic risk, as they are constrained by pathogenicity, transmissibility, or both. Clonally transmissible tumors—such as the notable devil facial tumor disease in Tasmanian devils—are rare occurrences in humans, with restricted modes of transmission (maternal–fetal and organ transplantation).

Space-adapted organisms (e.g., salmonella that originates on Earth but spends time in the space station before coming back to earth) can exhibit enhanced virulence; however, they still are susceptible to antibiotic treatment and normal control measures: There is no evidence they pose greater epidemic risk than normal salmonella (Wilson et al. 2007). An alien microbe species that is obtained on Mars or meteorites and brought back to earth, one of the focuses of the planetary protection program at the National Aeronautics and Space Administration (NASA), was not deemed by our interviewees and meeting participants to be likely to pose a threat. And if such a species were found, it would be unlikely to be adaptable to an Earthlike planet environment, as adaptations to its home planet's markedly different environments would likely preclude adaptations to Earth. Even though the chances of serious biological risk posed by such a sample return are deemed to be low, there are many uncertainties, and the highest level biocontainment procedures are being considered for specimens that might harbor such non-Earth-based organisms (National Research Council 2009).

3.3.5 Viruses: Several Factors Contribute to Heightened Pandemic Risk

Traditionally, viruses have been ranked at the highest level of pandemic risk, and dedicated preparedness efforts often focus solely on viruses. A disproportionate focus on viruses is justified, however, based on several aspects unique to the viral class of microbes.

The high rate of replication of viruses—for instance, over 1 trillion hepatitis C virions are produced per day in a human infection—coupled with the mutability inherent in such short generation times gives viruses an unrivaled plasticity. This plasticity allows for host adaptability, zoonotic spillover, and immune system evasion.

The lack of a broad-spectrum antiviral agent—like ones available for bacterial and even fungal organisms—also confers a special status on viruses. With no off-the-shelf treatment available to contain a viral outbreak, and likely no vaccine, containment efforts, at least in the early stages, will likely need to be made in the absence of a medical countermeasure (Zhu et al. 2015).

There is a strong consensus that RNA viruses represent a higher pandemic threat than DNA viruses (Kreuder Johnson et al. 2015). This assessment is derived from the fact that the stability of RNA as a genomic material is less than that of DNA, giving more genomic pliability to the RNA viruses. DNA viruses such as smallpox

do challenge this assumption, and concern exists surrounding the related risks of monkeypox viruses, which are increasingly spreading in the absence of a smallpox vaccine campaign (Kantele et al. 2016). As monkeypox outbreaks continue to occur with longer chains of transmission, employing smallpox vaccines in target populations might be considered.

Another aspect of viral characterization is the location of replication. Viruses with greater capacity for widespread have been shown in studies to be more likely to replicate in the cytoplasm of a cell (Pulliam and Dushoff 2009; Olival et al. 2017). This is postulated to be due to the higher affinity a virus must have for a particular type of host in order to be permitted entry into its nucleus, and this greater affinity would limit its zoonotic potential because it would be likely to be strongly tied to its usual host. In general, it is DNA viruses that tend to have a nuclear replication cycle, while RNA viruses have a cytoplasmic cycle. Strikingly, smallpox—a DNA virus with proven ability to cause pandemics—is a cytoplasmic replicator, while influenza—an RNA virus with proven ability to cause pandemics—has a nuclear replication cycle. The exceptions to these rules argue against any overly strict adherence to them.

Other factors that may increase a virus' potential to cause a global catastrophic risk include a segmented genome (as exemplified by influenza viruses), a comparatively smaller genome size, and high host viremia (e.g., vector-borne flaviviruses). For example, the flu virus' segmented genome makes novel genetic assortment an eventuality, while a large genome may prevent nimble mutations. However, with each characteristic it is impossible to find a general rule, as exceptions abound.

Among currently studied viruses, the influenza A viruses are widely judged to pose the greatest pandemic risk based on historical outbreaks and viral characteristics (Silva et al. 2017; Imai et al. 2017). Analysis of influenza risks is made in the Centers for Disease Control and Prevention (CDC)'s Influenza Rapid Assessment Tool (IRAT) which ranks H7N9 as the most concerning influenza virus strain (Centers for Disease Control and Prevention 2017).

There are several viral groups other than the orthomyxoviruses (which include the H7N9 strain of influenza A) that are spread by respiratory routes, possess RNA genomes, and merit enhanced attention: paramyxoviruses (especially these three genera: respirovirus, henipavirus, and rubulavirus), pneumoviruses, coronaviruses, and picornaviruses (especially these two genera: enterovirus and rhinovirus). Based on our analysis and their inherent characteristics, these viral groups are the most likely source of a GCBR-level threat.

3.4 *Viral Catalogs Are Scientifically Valuable but Are not Themselves Able to Predict the Next Pandemic*

There are efforts under way to construct viral catalogs of as many viruses as possible. The explicit aim of these projects is to reduce the uncertainty of outbreaks by extensively cataloging as many viral species as possible, so that a virus that causes a disease is less likely to be truly unknown. At the meeting and interviews for this project, a number of experts expressed concern that, while efforts to catalog and broadly sequence viruses in the animal world would provide new scientific discovery, we should not expect that it will identify the source of the next pandemic or that it can change the work being done for pandemic preparedness. Broad viral sequencing would uncover many novel viruses. However, the vast majority of discovered viruses will not have the ability to infect humans let alone the prospect of widespread in the population. Only a few viruses possess this ability.

This work should be pursued with the objective of fundamental viral scientific discovery, rather than the goal of near-term improvement in pandemic preparedness.

3.5 *Increasing Specific Diagnoses of Infectious Disease Syndromes Would Provide Valuable Information and Increase the Chances of Identifying a Pathogen Capable of Causing a Major Epidemic or Pandemic*

In the clinical practice of medicine, syndromic diagnosis—that is, making a non-specific diagnosis, such as "sepsis," "pneumonia," or "viral syndrome," with little to minimal laboratory testing—is the norm. Specific diagnosis (i.e., sending patient samples for definitive laboratory diagnosis) is often eschewed if it does not affect clinical management, is costly, and is not revealed with routine tests, and/or if the patient recovers. This practice has become enshrined not only in resource-poor areas in which access to diagnostic testing may be limited, but also in resource-rich areas, like North America and Western Europe, where specific diagnoses are viewed as superfluous.

However, the yield from pursuing an etiologic diagnosis in infectious syndromes such as atypical pneumonia, sepsis, encephalitis, meningitis, and clinically significant fevers of unknown origin may be considerable, as it will provide important insight into the ongoing torrent of threats posed by the microbial world. By causing an infection with enough severity to come to medical attention, the culpable microbes have already established that they are damage-causing pathogens to humans—a feat that only a sliver of the microbial world can accomplish (Woolhouse et al. 2016). Many of these microbial diagnoses cannot be made through the routinely ordered diagnostics. Therefore, a special effort would need to

be made to get to a microbial diagnosis. If that were to be done more frequently and at a more strategic level around the world, it would provide an opportunity to develop new situational awareness regarding which microbes are circulating and infecting humans—information that is clinically valuable in its own right and more attuned to uncovering GCBR-level pathogens than broad viral cataloging.

Such efforts should not be limited to exotic "hot spots" of disease emergence but should be practiced in localities that are broadly representative of where these conditions occur. Particular hot spots of emergence due to the presence of unique risk factors may be higher yield overall, but they should not be the sole sites of investigation. Infectious disease emergence can occur anywhere, as evidenced by the 2009 H1N1 pandemic, which was first recognized as the etiology behind a mild pediatric upper respiratory infection in California and West Nile fever emerging in cases of undifferentiated encephalitis in the New York City metropolitan area in the late 1990s (Centers for Disease Control and Prevention 2009; Nash et al. 2001).

Such a program would have significant cost and infrastructure implications in resource-constrained regions, so it would be most logical to set up sentinel or strategic sites for pursuing this level of microbial diagnosis in ways that are broadly representative. In developed nations such as the USA, these programs are available but underutilized because of lack of awareness or perceived lack of value by clinicians, for whom it will often not likely change therapeutic decisions.

3.6 Human Factors and/or the Occurrence of Complex Disasters Can Elevate Pathogens to GCBR Levels

Many participants in the project voiced the view that any microbe's pandemic potential could be substantially enhanced by human factors and poor preparedness, which could exacerbate a pathogen's spread or damage-causing potential.

Specific issues identified included gaps in hospital preparedness, medical countermeasure manufacturing capacity, medical countermeasure manufacturing locations, impacts on critical workforce members, and cascading effects on vital programs such as food production. For example, concentration of intravenous fluid manufacturing plants in Puerto Rico created massive shortages after a hurricane took the plants offline in 2017 (Wong 2017). The inability of hospitals to surge to meet enhanced patient needs for ventilators or ICU beds is another potential constraint.

Human factors could also take the form of mistaken actions that are based on political considerations but are not supported by an evidence-based medical rationale, or scientific mistakes based on human error, such as misidentifying a microbe or misinterpretation of scientific or epidemiologic data. For example, early in the SARS outbreak, mistakes regarding the etiology of the viral agent occurred, and the 2014 West African Ebola outbreaks were initially thought to be cholera, delaying response efforts for months (World Health Organization 2014).

Some participants in this study were of the view that such factors as these could outweigh any intrinsic property possessed by a microbe or any physiologic vulnerability possessed by a human. Magnification by human error could cause delays in response or awareness, allowing a pathogen to spread wider and deeper into the population and rendering containment more difficult, sowing panic, and severely stressing the healthcare infrastructure of a region. The majority view, however, was that intrinsic microbial characteristics are the main driver of a microbe's ability to cause a pandemic.

4 Recommendations

4.1 Preparedness for Pandemic and Global Catastrophic Biological Threats Should Acknowledge the Microbial Characteristics that Pose the Greatest Dangers

Pandemic preparedness should place a high priority on preparing for RNA viral threats, given their frequent spread by respiratory route, cytoplasmic replication, and high mutability. Surveillance, science, and countermeasure development programs and efforts should logically allocate significant resources to this class of microbes. Except for influenza and certain coronaviruses, there are not major preparedness efforts being made for other viruses in this class of microbes.

While RNA viruses were at the top of the list of concerns, other classes of microbes, such as bacteria, fungi, and protozoa, should not be completely dismissed given characteristic that pose special concerns.

Cultivating and maintaining expertise in the epidemiology, surveillance, and pathogenicity of all classes of microbes, with explicit incorporation of a One Health approach—which incorporates and integrates information from infectious diseases of plants, amphibians, and reptiles—will help foster the broad capacities needed for emerging pandemic and global catastrophic biological risks.

4.2 Pathogen List-Based Approaches and Precedents Are not Sufficient to Address Pandemic and Catastrophic Biological Risks

Pathogen-based lists, both USA and global, based on influenza precedents, historical biological weapon programs, and emerging infectious diseases were responsible for galvanizing early activities in the field of pandemic preparedness and have helped drive many important contributions. But these lists could create a sense of confidence regarding the prediction of future pandemic threats.

Lists can become frozen in the minds of those in the field and may be viewed as exhaustive rather than as starting points. Additionally, inclusion in lists could also be sought for political (and not epidemiologic) reasons if inclusion carries with it the prospect of enhanced funding for a long-neglected endemic problem.

One of the chief rationales behind this project was to attempt to move away from a strict list-based approach when considering pandemic threats and to develop a framework grounded in the facts of a microbe's biology and epidemiology. We recommend that risk assessment be rooted in the actual traits that confer pandemic or global catastrophic biological risks as opposed to a pathogen's presence on some earlier developed list.

4.3 Improving Surveillance of Human Infections with Respiratory-Borne RNA Viruses Should Be a Higher Priority

As respiratory-borne RNA viruses have been identified as possessing heightened pandemic potential, it is important to strengthen surveillance activities around these viruses where they currently exist and establish them where they are not yet in place. Currently, of the respiratory-borne RNA viruses, only influenza and certain coronaviruses receive high priority for surveillance.

While some efforts to understand coronaviruses, in the wake of SARS and MERS, exist, there is no systematic laboratory surveillance of coronavirus infections in humans. Similarly, no such program exists for rhinoviruses, parainfluenza viruses, RSV, metapneumoviruses, and similar viruses. Since this class of viruses is most likely to hold the future pandemic pathogen, constructing an influenza-like surveillance approach that better characterizes the prevalence, patterns, and geographic distribution of these viruses should be a priority.

Such an approach would focus on human infections, characterizing the epidemiology, virologic features, antiviral susceptibility (if applicable), and clinical manifestations in a fashion that mimics the extensive influenza surveillance conducted by the CDC and other international entities.

4.4 An Increased Emphasis on Developing a Specific Pipeline of Various Antiviral Agents for RNA Respiratory Viruses—Both Broad Spectrum and Virus-Specific—Would Add Resilience Against Pathogens that Pose Pandemic and Global Catastrophic Biological Risks

Currently, outside of anti-influenza antivirals, there is only one FDA-approved antiviral for the treatment of respiratory-spread RNA viruses (ribavirin). Of the six FDA-approved influenza antivirals—amantadine, rimantadine, baloxavir, zanamivir, oseltamivir, and peramivir—all target influenza viruses specifically and have no activity outside influenza, with two influenza A-specific agents (amantadine and rimantadine) rendered virtually obsolete because of resistance. The other antiviral agent (inhaled ribavirin) is approved for the treatment of respiratory syncytial virus (RSV) but has very limited use due to poor efficacy and major toxicity concerns for both RSV and parainfluenza viruses.

There are currently no approved antivirals for any other respiratory-spread RNA viruses in the world. Prioritization of antiviral compounds against this group of viruses may lead to acceleration of drug development and (government and non-government) incentivizing programs. Such antiviral compounds would have an advantage over many other emerging infectious disease countermeasures: These viruses exact a considerable toll in the form of community infections each year, providing a basis for a traditional pharmaceutical market as well as one for emerging infectious disease.

Pursuing not only broad-spectrum RNA antivirals, but also those specifically targeted to specific viruses such as RSV, would increase the likelihood of yield.

Nontraditional molecules, such as monoclonal antibodies and immunomodulators, should also be investigated for a role in the treatment and prevention of RNA virus respiratory infections (Walker and Burton 2018). Such adjunctive treatments may lead to improved clinical outcomes. To date, only one virally targeted monoclonal antibody is FDA-approved: pavalizumab for prevention in high-risk infants.

4.5 Vaccines Against RNA Respiratory Viruses, Including a Universal Influenza Vaccine, Should Be Pursued with Increased Priority

As with the above discussion regarding antivirals, the need for vaccines against respiratory-borne RNA viruses should also be prioritized. Currently, aside from influenza, for which a moderately effective but technically limited vaccine exists, there are no other vaccines for respiratory-borne RNA viruses. Experimental vaccines targeting RSV have made it into late clinical development only to fail.

Several important initiatives in this realm do exist and could be augmented to move beyond specific targets that have already been recognized. For example, the Coalition for Epidemic Preparedness Innovations (CEPI) has selected a coronavirus (MERS-CoV) and a paramyxovirus (Nipah) for vaccine development incentivizing (Røttingen et al. 2017). Such a program could, in potential future initiatives, select additional vaccine targets from this group of viruses and even encourage the development of broadly protective vaccines against groups of viruses—for example, a vaccine that protects against all four strains of human parainfluenza viruses, both MERS and SARS CoVs, and both Hendra and Nipah viruses.

Additionally, the heightened interest at the National Institutes of Health (NIH) in a universal influenza vaccine in the wake of the moderately severe 2017–18 influenza season should be channeled to provide significantly increased resources to this endeavor (Paules et al. 2017). As certain avian influenza viruses are of the highest threat tier, a universal influenza vaccine (even one that just protects against A strains) could substantially hedge against an influenza virus attaining GCBR status.

4.6 A Clinical Research Agenda for Optimizing the Treatment of Respiratory-Spread RNA Viruses Should Be Funded by Pharmaceutical Companies, Governments, and Medical Device Companies and Pursued by Clinical Centers

As was evident during the 2009 influenza pandemic and subsequent influenza seasons, the treatment of influenza is suboptimal, despite evidence-based guidance. The status of the treatment for other respiratory viruses is even less defined.

While there currently is not a robust antiviral armamentarium against these viruses, there are important clinical questions that occur with their treatment that merit further study. For example, what adjunctive therapies are useful? What coinfections may be present? At what stage of illness are rescue oxygenation devices warranted? As many of these viruses are highly prevalent in the community and are frequently encountered by clinicians in both outpatient and inpatient settings, finding answers to these questions would render clinicians more adept at dealing with pandemic versions of these viruses.

With respect to influenza, there is a growing literature on the use of antiviral agents in combination with anti-inflammatory agents such as nonsteroidal anti-inflammatory agents (NSAIDs) and macrolide antibiotics (Hung et al. 2017). Untangling the nuances of these treatment effects in order to develop robust guidance would have an impact on the ability to cope with an influenza-driven GCBR.

4.7 *Special Review Is Warranted for Respiratory-Borne RNA Virus Research that Could Increase Pandemic Risks*

Because of the higher likelihood that a GCBR-level threat might emerge from the group of RNA viruses with respiratory-spread, special attention to research on these agents is warranted if such research could increase pandemic risks. While much research on this class of viruses would be low risk and managed by appropriate approaches to biosafety, experimentally engineered antiviral resistance, vaccine resistance, or enhanced transmission, for example, would raise major biosafety and biosecurity concerns. The 1977 appearance of the H1N1 influenza A strain was thought to have resulted from laboratory escape (Zimmer and Burke 2009). It is important to understand the kinds of work being performed with these agents and, in particular, to know of experiments that are being done or are being proposed that would result in increased pandemic risks. Those experiments should have their own special review and approval process that is consistent with the risks and assesses the risks and benefits of this work before approval or funding of this work.

4.8 *Pursuing Microbiologically Specific Diagnoses of Infectious Disease Syndromes Should Become More Routine Globally*

As unknown infectious syndromes abound in all locations, and any given infectious syndrome may have as its etiology a potentially unknown or unappreciated microbe, specific diagnosis should be a routine endeavor. Atypical pneumonias, central nervous system infections, and even upper respiratory infections often are treated without any etiologic agent being identified.

As diagnostic technologies and devices improve in breadth, speed, and ease of use, the increasing uptake of these devices will provide a new opportunity to enhance situational awareness of an infectious syndrome in any location where they are deployed. Such devices are currently being used in research projects in the developing world. The more routine use of devices, such as multi-analyte molecular diagnostic devices, has the capacity to provide a fuller picture of the microbiological epidemiology of any given syndrome, illuminating what has heretofore been biological dark matter (Doggett et al. 2016; Kozel and Burnham-Marusich 2017). Coupled with heightened surveillance of respiratory-borne RNA viruses, the ability to capture an early signal of a potential pandemic pathogen will be greatly enhanced.

To date, certain considerations have limited the uptake and use of these devices: cost, perceived lack of clinical impact, and constraints on hospital resources such as isolation beds. Impacts on hospitals might be noted in laboratory testing volume as

well as costs. However, when these devices are viewed in the context of pandemic preparedness, the cost-effectiveness calculation should change. These considerations could be moderated if they are considered part of a hospital's emergency preparedness activities and not exclusively as clinical (they also have benefit for antibiotic stewardship activities in both inpatient and outpatient settings). In fact, the use of these devices should be considered on a par with mechanical ventilators, vaccines, antivirals, and antibiotics in the context of pandemic preparedness. Pilot projects demonstrating the feasibility of procuring such devices for infectious disease emergency preparedness could be conducted.

5 Conclusion

Understanding the microbial characteristics most importantly regarding the risks of pandemic or global catastrophic biological threats can help strengthen pandemic preparedness activities. While RNA viruses pose the greatest risks, there are characteristics of other microbial classes that cause special concerns and are important to consider in scientific research agendas and in public health preparedness efforts. This analysis leads to a series of recommendations related to disease surveillance, antiviral and vaccine development, clinical research, and research oversight. Taken together, assessment of key microbial class characteristics plus the focused actions that follow this assessment can broadly help improve preparedness for pandemic and global catastrophic risks.

nCoV PI call attendee list.xlsx

Happy Friday!!!

Hope everyone enjoyed the two presentations on Tuesday, June 16th given by Dr. Hughes and Drs. Van Voorhis and Phan.

Drs. Thomas and Ellebedy will be presenting their research updates next Tuesday, June 23rd on the topic of:
Comparing COVID-19 to influenza: immunological insights from a cohort of moderate and severe infections

Have a great weekend!

Cc: Frieman, Matthew <MFrieman@som.umaryland.edu>
Subject: Re: CoV question

HKU1 and OC43 don't have a known ORF3b or ORF8. The accessory ORFs don't have much homology across families.

I do question if there is sufficient abundance of those proteins to generate ab response against them. Dont' know much about it or if anyone has really looked. I'd think 8 before 3B.

Subject: CoV question

Ralph/Matt/Vineet

Reviewing a paper (what else is new). Quick question....

Do OC43 and HKU1 (other betacoronaviruses) have ORF3b and ORF8 proteins?

I don't think so, but I want to be sure

This is about potential X-reactivity of these antigens to anti-SARS-CoV-2 sera....if the OC43 and HKU1 don't have these proteins, the SARS-2 proteins might be useful for SARS-CoV-2 diagnostics (apart from MERS-CoV and SARS-CoV)

Yes?

Mike

Hi All,

also, can everybody please add people who need to be on the paper -
make sure that names and middle initials are spelled correctly
and add the correct affiliations?

That would be great!

Thanks,
Alex

Hi all,

please find attached our draft discussing Group-2b coronavirus infection in the CC-RIX and 2 independent CC-F2 screens.

It would be great if you could have a look at it and give me comments back by next Wednesday (July 8th).

Thanks and wishing everybody a (hopefully) restful holiday weekend,
Alex

Subject: SARS-CoV-2 Weekly Investigators Meeting - July 7, 2020
nCoV PI call attendee list.xlsx

Happy Friday, Everyone!

Thank you to all that called in (attendee list attached) and to our presenter, Dr. Krammer, for his presentation last Tuesday.

On Tuesday, July 7th, Dr. Michael Chan will be reviewing "**Experimental platforms to study SARS-CoV-2**".

Have a safe and wonderful weekend.

Rebecca

Subject: Call for Pilot Proposals
System Immunogenetics U19 Pilot Research Funds Available.docx

Good afternoon,
Attached please find the call for pilot grants for the SIG U19. As requested on the phone call, if you are going to post on social media, please include the website for further information.

Thanks!

Toni Baric

Dept of Microbiology & Immunology

9025 Burnett Womack Bldg CB# 7292

Chapel Hill, NC 27599-7292

919-966-3507

tcbaric@med.unc.edu

Pilot Research Funds Available.

The Center for Systems Immunogenetics of Biodefense Pathogens in the Collaborative Cross at the University of North Carolina at Chapel Hill conducts innovative research focused on the identification of immune regulatory genes and variant alleles that regulate disease outcomes following SARS-CoV, Ebola, Influenza, Chikungunya and West Nile Virus infections and/or vaccinations. The program uses systems genetic based approaches in the Collaborative Cross Genetic Reference Population to map genes that regulate protective or pathogenic immune outcomes following infection or vaccination. Pilot research program goals should fall within one or more of the following areas, including: building collaborative interactions with existing Projects that extend the breadth of the Program; developing new models of human immunity and/or disease; mapping novel immune regulatory genes; responding to emerging public health emergencies; and/or translating murine immune discoveries to human disease and improved public health. Approximately $115,000 **total** dollars will be available for a 1-year pilot program. Interested applicants are encouraged to submit:

1. Specific aims (1 page)
2. Research Approach (2 page) application outlining research goals
3. NIH Biosketch
4. Budget
5. Budget Justification
6. Scope of Work (1/2 page)
7. Unsigned PHS 398 Face Page

Budget period: 9/1/2020-8/31/21

The candidate selected would need to submit a signed, PHS 398 face page. All interested parties should submit their grant applications to Antoinette Baric, Program Manager (antoinette_baric@med.unc.edu) by March 1, 2020 at 5 PM ET. For more information on the Systems Immunogenetics program, please visit the website [HYPERLINK "http://www.systemsimmunogenetics.org"]

Fig4A.pdf

Hi All,

I just realized,
that a phenotype plot got duplicated in the figures--- specifically Fig4Aiii

please find attached to this email the corrected version:

Sorry about that!
Alex

Hi All,

also, can everybody please add people who need to be on the paper -
make sure that names and middle initials are spelled correctly
and add the correct affiliations?

That would be great!

Thanks,
Alex

Hi all,

please find attached our draft discussing Group-2b coronavirus infection in the CC-RIX and 2 independent CC-F2 screens.

It would be great if you could have a look at it and give me comments back by next Wednesday (July 8th).

Thanks and wishing everybody a (hopefully) restful holiday weekend,
Alex

Subject: FW: Viroholics COVID-19 Seminar Series, ASV Virtual Workshops, and getting involved with ASV

Viroholics Speakers:

This is just to confirm that all of the 2020 ASU Viroholics COVID seminar recordings for which we had permission have now been posted on the ASV website.

Thank you all for your support, and let us collectively defeat this pandemic!

And stay safe, everyone.....

Grant

Subject: Viroholics COVID-19 Seminar Series, ASV Virtual Workshops, and getting involved with ASV

Virtual Workshops 2020. A BIG thank you is due to the volunteers who made the virtual workshops a huge success. We are especially grateful to Stephanie Karst, ASV Program Chair, and Andréa Garcia and Hailey Goran in the ASV Office. There were 56 organizers who planned and hosted 46 different workshops. Among the workshops, 430 abstracts were presented with approximately 5900 total participants from at least 40 different countries.

Viroholics Seminar Series. The Viroholics Seminar Series, hosted by Arizona State University, recorded a COVID-19 edition with many experts in the field. You can see the program and watch the seminars here: Viroholics Seminar Series

Get involved with ASV! Dedicated ASV members volunteer their time to run the Society and plan the annual meeting. ASV is made up of several committees, and the following committees are looking for new members. This is a great way to contribute to ASV and network with other scientists.

- Travel Award
- Communications
- Education and Career Development

If you are interested, contact the committee chair or the ASV Office. Find committee information here.

ASV 2021 Satellites. There will not be a call for satellite proposals for ASV 2021. The satellites originally selected for ASV 2020 are now planned for ASV 2021.

Time sensitive public affairs matter for ASV members. A rule has been proposed by the current US administration that, if finalized would severely restrict asylum. The ASV and other scientific societies (such as the American Academy of Pediatrics, AAP) have been approached to comment on the rule change. This rule change is part of larger issues that affect how research science is done, and the ASV Executive Committee wanted to make you aware of this. **The public has until July 15, 2020 to comment on the proposal.**

If you would like to comment, a Toolkit document from the AAP and a document from the American Immigration Lawyers Association is linked here. The instructions for how to comment are here (scroll down to “addresses.”)

Questions or concerns? Please email asv@asv.org

Subject: Comments from Mike Diamond

HI all,

Just got comments from Mike back----
he thinks FACS downstream analysis and gating schemes need to be in the suppemental

Do you have this data available?

Alex

Subject: SARS-CoV-2 Weekly Investigators Meeting
nCoV PI call attendee list.xlsx

Hi All,

Thank you all who joined (attendance attached) and to our presenter, Dr. Michael Chan. Next Tuesday, July 14th, Dr. Vineet Menachery will be giving a presentation on "Exploration of the SARS-CoV-2 furin cleavage site".

Towards the end of the call, the question was asked "if there was the hACE2 ad-vector available in BEI". Dr. Stemple followed up after the call with the response that this one is available: https://www.beiresources.org/Catalog/animalviruses/NR-52390.aspx

Have a great weekend!
Rebecca

Subject: SIG U19 monthly call

Hi everyone,
Just a reminder that we will have our monthly SIG U19 call on Thursday January 9, 1:30 ET/10:30 PT. Mark will be presenting.

Calling numbers:

Phone: 1-800-747-5150
Passcode: **552.136**
Germany, calling number below:
08001014525

access code **552.136**

Best regards,

Toni Baric

Department of Microbiology and Immunology

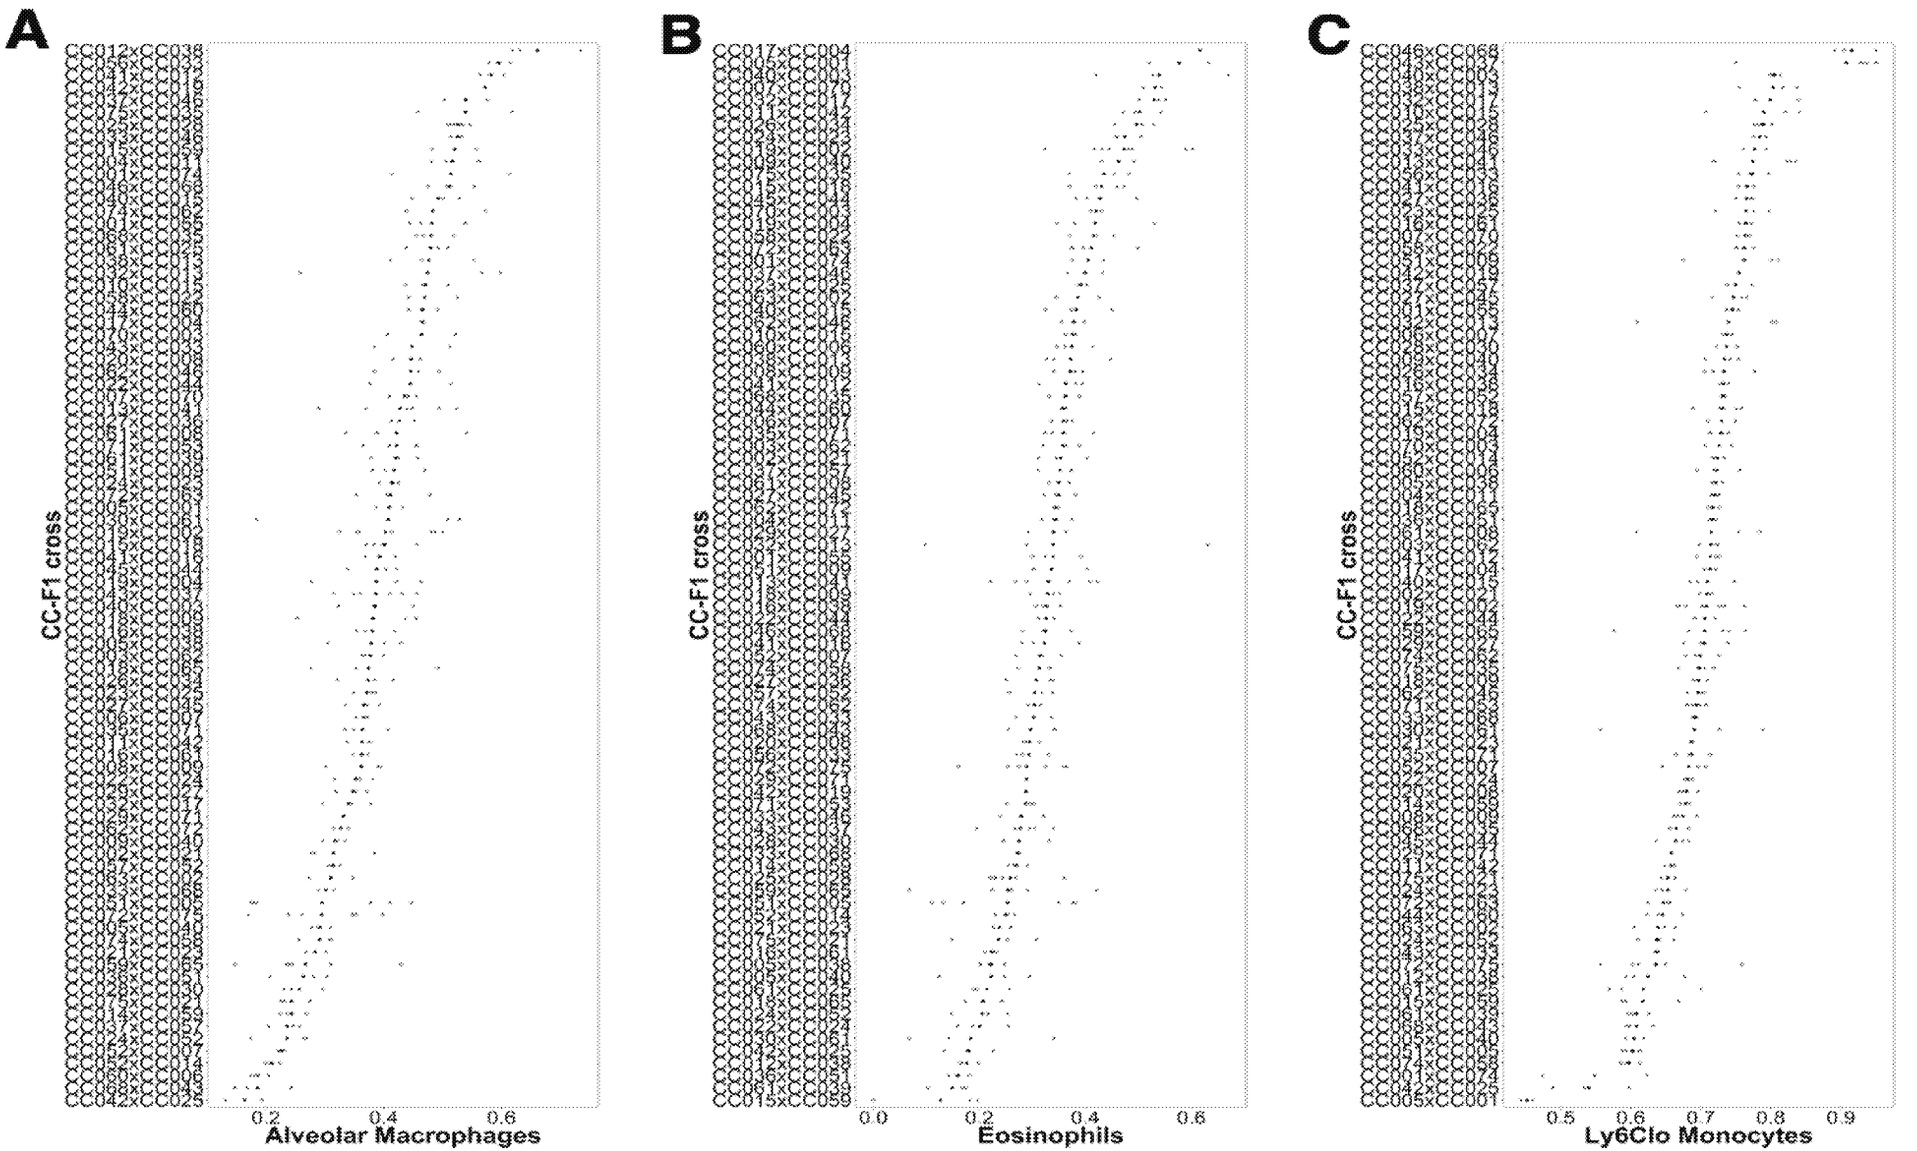
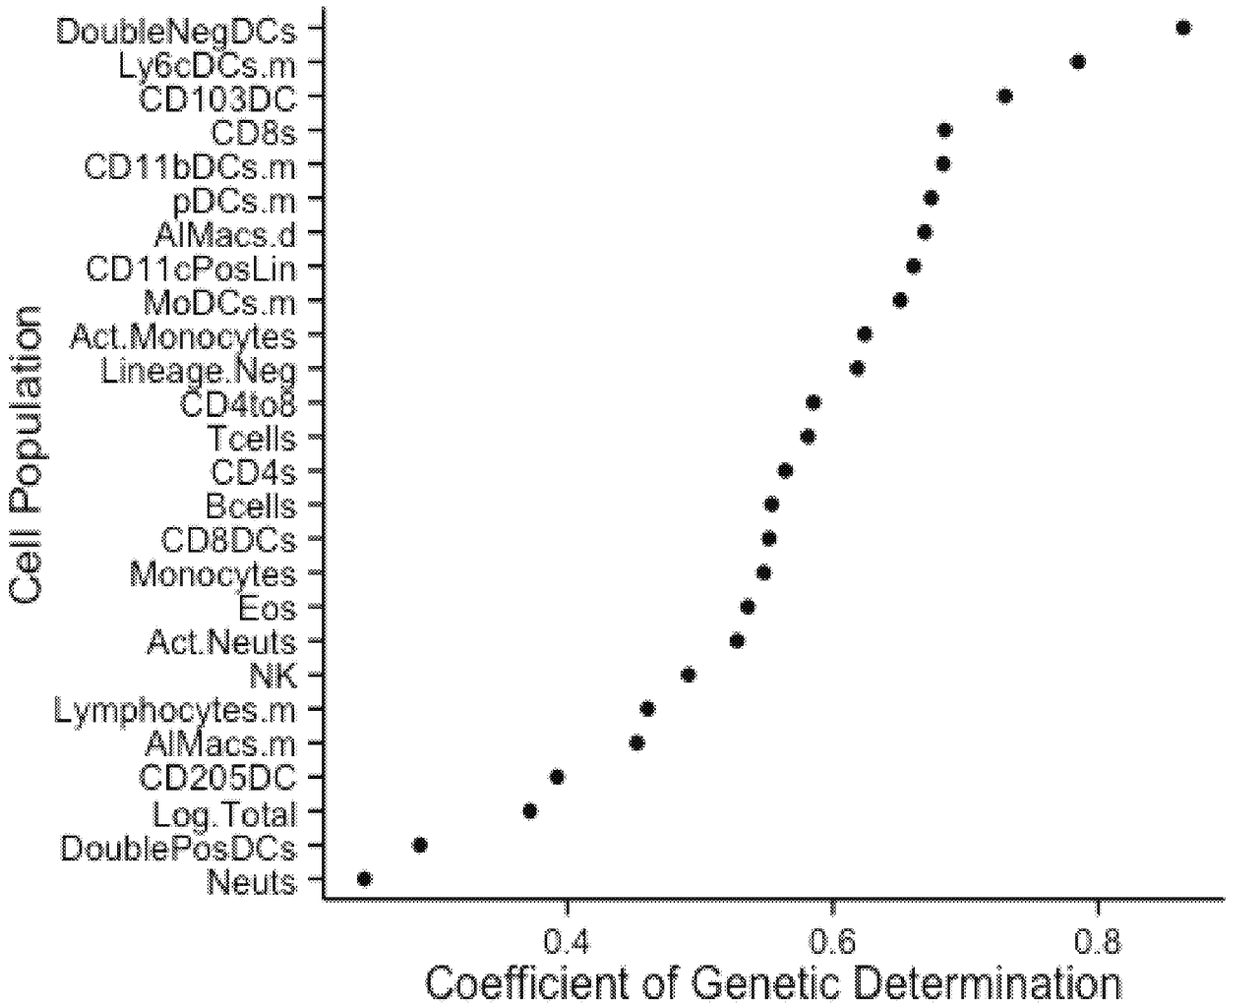
Do Baseline Immune Loci Affect Virus-Induced Disease or Immunity?

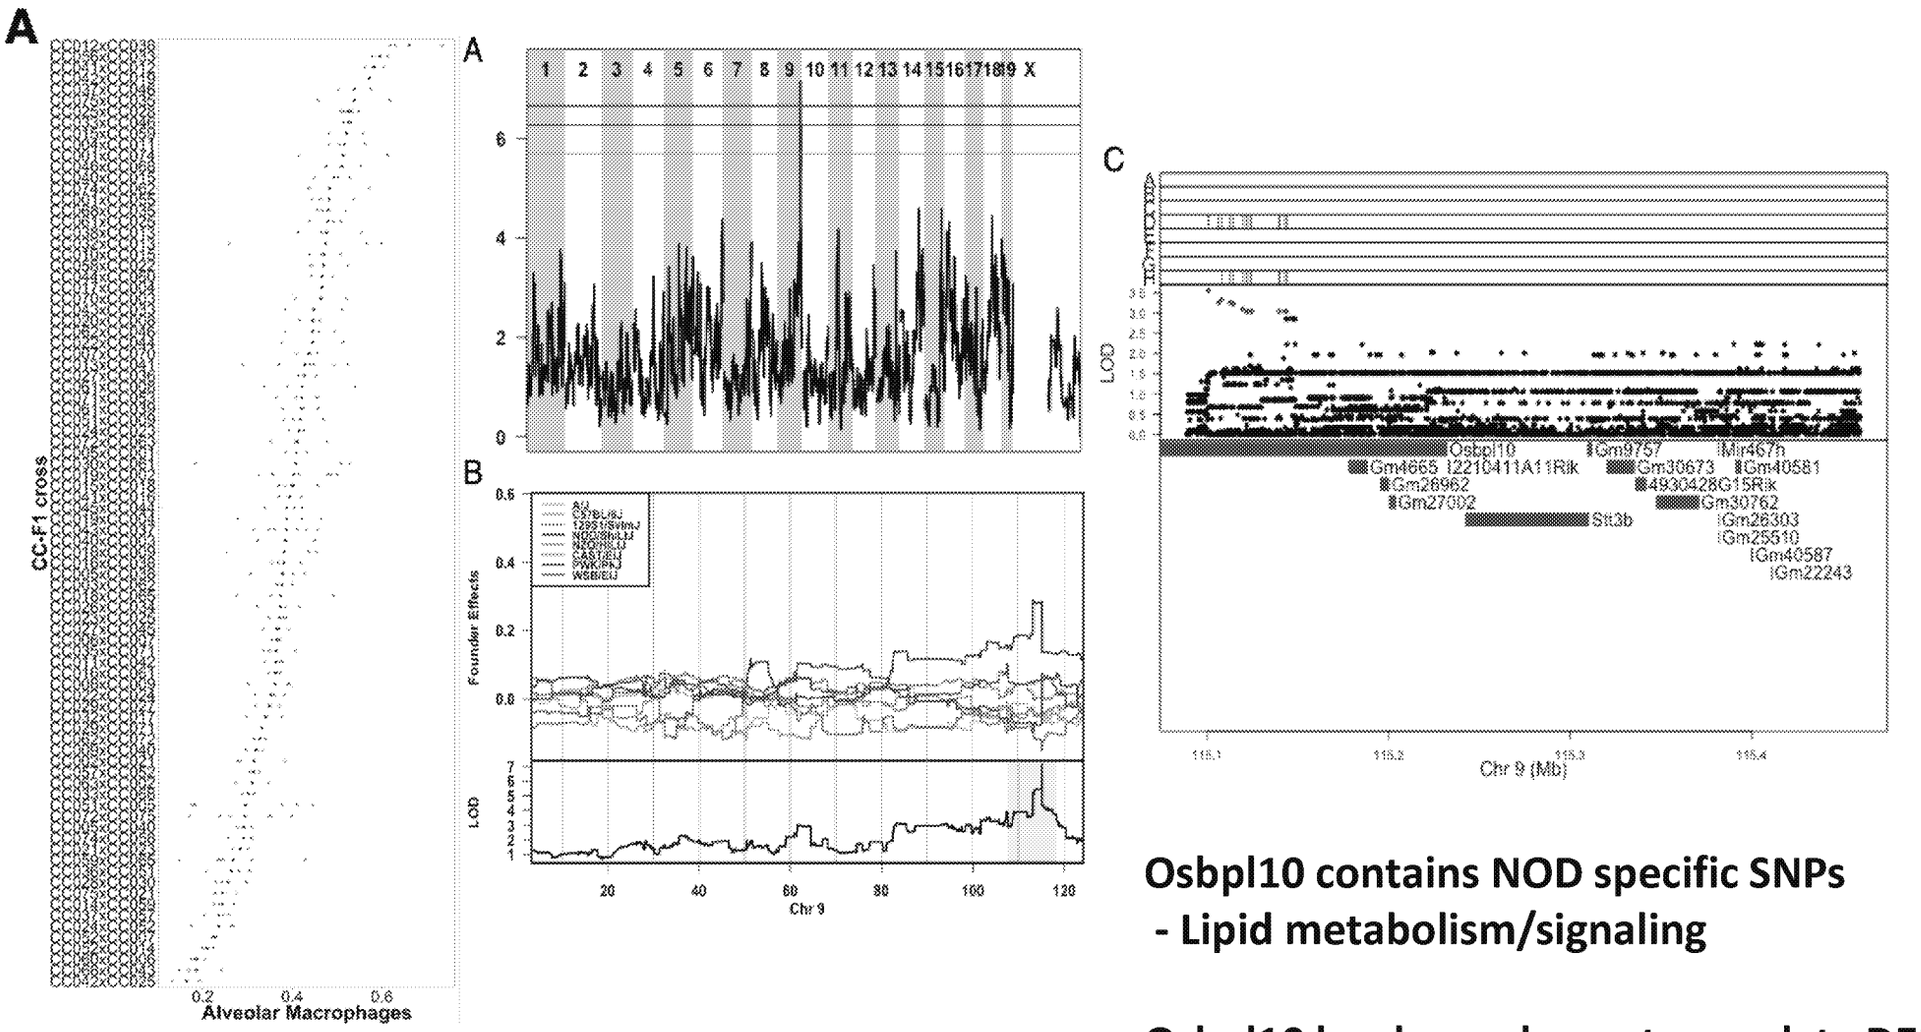
Lung Leukocyte Populations are highly variable across CC RIX lines



Heritability of Baseline Lung Cell Populations



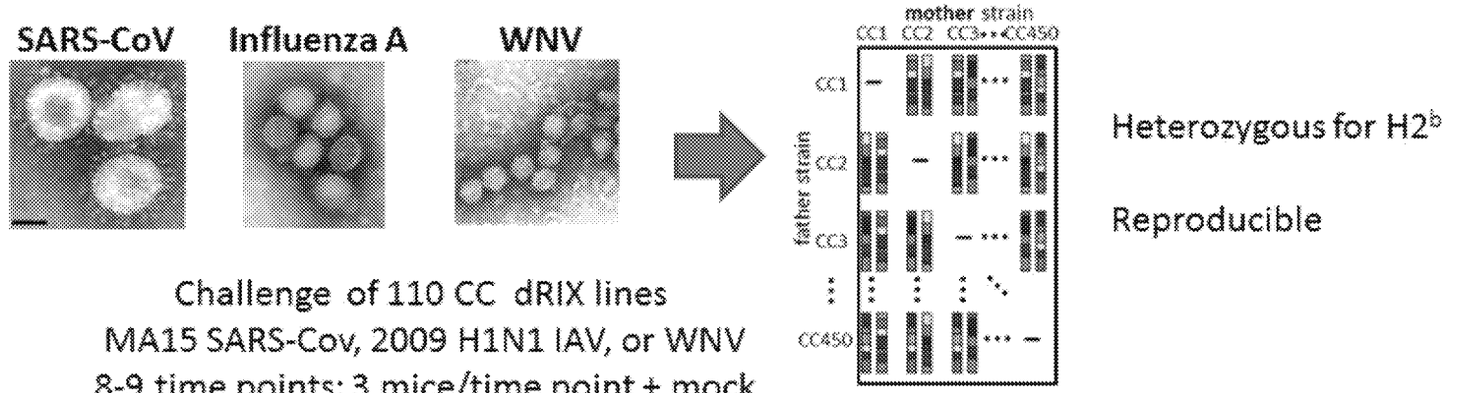
A QTL On Chr. 9 Regulates Alveolar Macrophage #s in the Lung

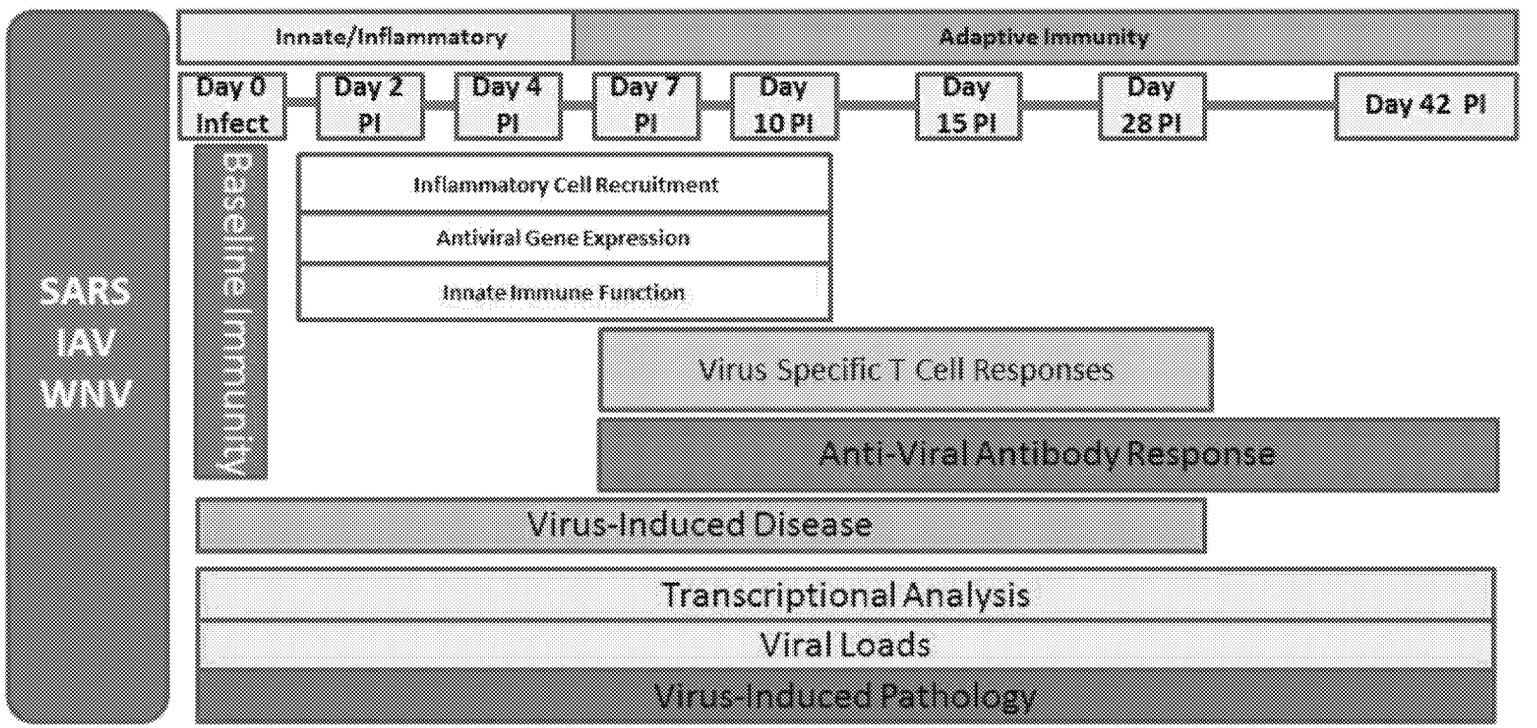


Osbpl10 contains NOD specific SNPs
- Lipid metabolism/signaling

Osbpl10 has been shown to regulate DENV replication
PLoS Path. DOI:10.1371/journal.ppat.1006220 February 27, 2017

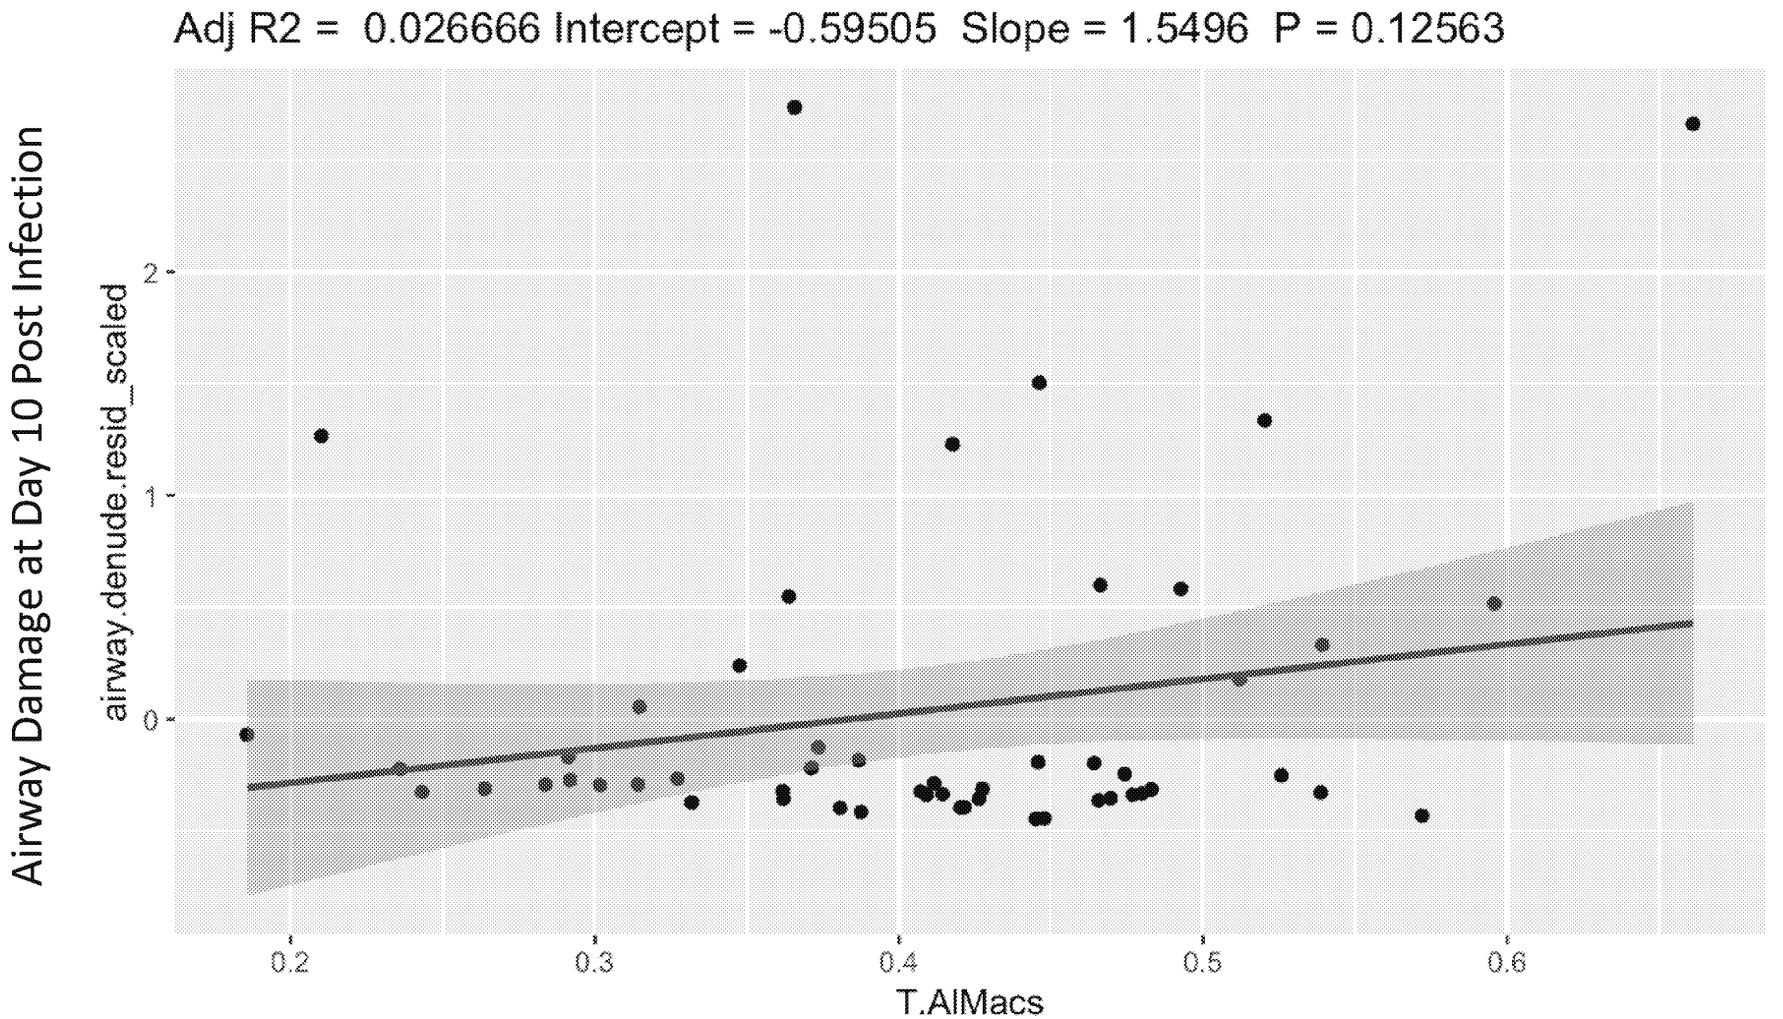
Brea Hampton





- Challenge groups of animals (n=3 mice/dRIX line/time point)
- Compare immune responses to 3 viruses across 110+ CC RIX lines
- Map QTL and identify candidate genes

Does Variation in Baseline Lung Leukotyes Correlate With Susceptibility to Virus-induced Disease?



Brea Hampton

Using Nested Models to Test Whether Specific Loci/Haplotypes Correlate with Other Phenotypes

We use an ANOVA framework to test whether there is an increase in statistical fit when we include information on baseline QTL haplotypes, relative to variation already explained by RIX and other factors included in the base model.

Base model: virus-induced phenotype = RIX + error
Full model: virus-induced phenotype = RIX + baselineQTL + error

***For IAV-induced phenotypes we include Mx1 status in the models.**

Brea Hampton
Marty Ferris

Alveolar Macrophage Variation is Associated with IAV Susceptibility

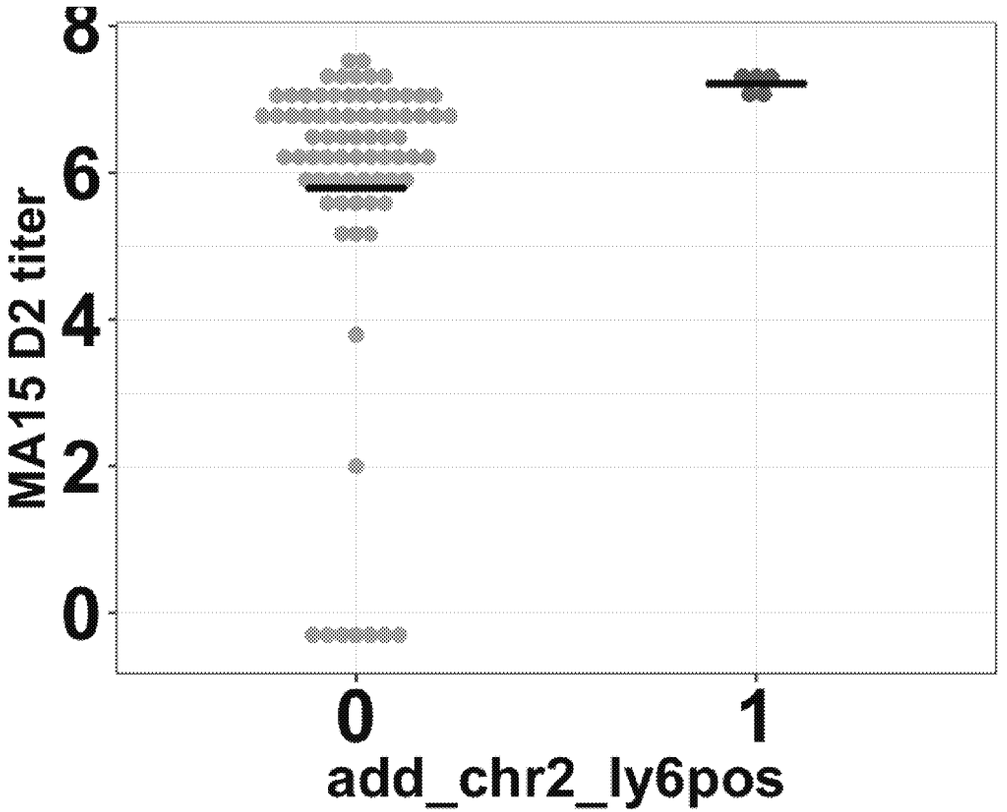
Inflammatory Macrophages and SARS-CoV

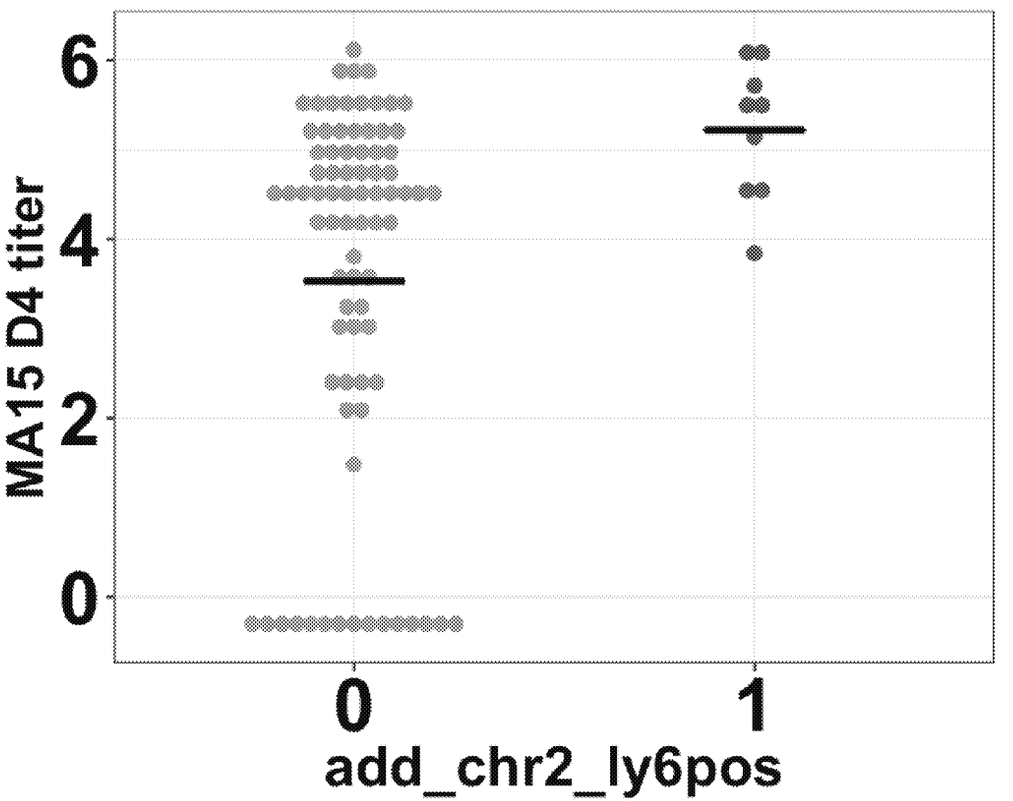
Cell Host Microbe. 2016 Feb 10;19(2):181-93. doi: 10.1016/j.chom.2016.01.007.
Dysregulated Type I Interferon and Inflammatory Monocyte-Macrophage Responses Cause Lethal Pneumonia in SARS-CoV-Infected Mice.
Channappanavar R[1], Fehr AR[1], Vijay R[2], Mack M[3], Zhao J[4], Meyerholz DK[5], Perlman S[6].

1) Type I interferon expression leads to recruitment of inflammatory Macs (Ly6c+, CD11b+)

2) Inflammatory Macs promote lung damage and disease, while also impairing T cell responses without affecting viral loads

3) Depletion of inflammatory Macs with anti-CCR2 protects from disease





Presence of at least one WSB/EiJ allele at this locus is associated with increased viral titer at early timepoints post-infection.

Conclusions

- Baseline lung leukocyte populations are highly variable across the CC
- This variation is highly heritable and we have identified a number of QTL associated with variation in these populations.
- Several genetic loci associated with baseline leukocyte variation are also associated with variation in virus-induced disease.
  - Is this association due to effects on baseline leukocytes or other effects of the causal variant under the locus?
  - Are any of these loci broadly associated with virus-susceptibility?

Subject: Call for Pilot Proposals

Good afternoon,
Attached please find the call for pilot grants for the SIG U19. As requested on the phone call, if you are going to post on social media, please include the website for further information.

Thanks!

nCoV PI call attendee list.xlsx

Hi All,

Apologies for the last minute email.

Last week, Dr. Benjamin Miller gave a fantastic presentation on "**Analyzing the Human SARS-CoV-2 Antibody Response Using Arrayed Imaging Reflectometry**." I have attached the attendee list for review.

Tomorrow, Dr. Jens Wrammert, will be giving a presentation on "**Antibody and B cell Responses in Acute and Convalescent COVID-19 patients**."

Hope everyone can attend!

Thanks,
Rebecca

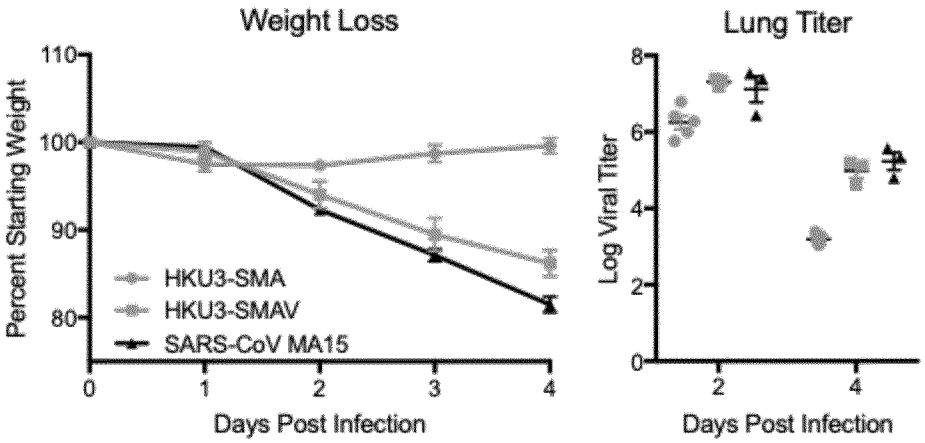
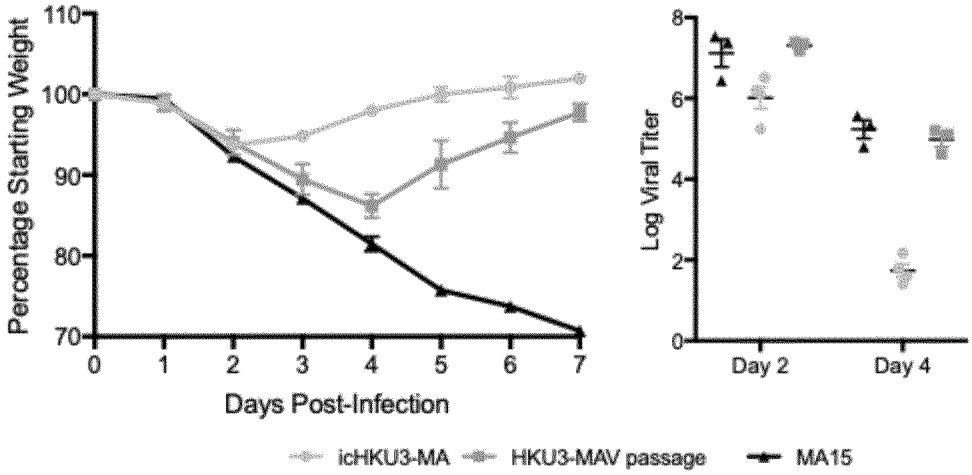
Subject: Re: HKU3 data

Hey Alex, Ralph, and Lisa,

I tried to thumb through what I had from Sudhakar. Haven't been able to decipher it all. What I do have is the following graph I made. The Bat-SRBD-MA is from Rachel's original experiment (circa 2008) that she gave to me. The Bat-SRBD-MAv is an experiment that I did compared to MA15 before I left in 2017. If you want this data, I can send you the PRISM file. This study was done with plaque purified stock that Sudhakar made as far as I understand.



This data is from the same experiment where i compared it with the icHKU3-SMAv and found that the ic version was attenuated compared to plaque purified virus



Let me know if this is what you want and I'll try to find the raw data and PRISM file to send. I have files from Sudhakar,

but not really sure the conditions/ages, etc for those. I can try to decipher, but it will take some time.

As far as I know, the histology for these experimetns was still at UNC for this experiment. Likely still in formalin if I had to bet. I can send you the labels if you think we need to have the histology.

VDM

Subject: HKU3 data

Hi Vineet,

Lisa mentioned that you might have some in vivid or in vitro data with the HKU3 Virus Sudharkar passaged?

It would be great if you could send me the data, we might put it into the manuscript as supplement data characterizing the HKU3 virus?

Thanks,
Alex

Subject: ACTIV Discussion: Viral Stocks

Hi,

ACTIV would like to request someone from the Baric Lab or who has significant CoV experience to participate on a call today at 1pm (EDT) regarding the growth of SARS-CoV-2 stocks.

The immediate purpose of these stocks would primarily be for in vivo animal challenge studies, so the objective is to grow high titer stocks that also have few AA changes in the spike glycoprotein.

Please let me know if you can participate or have someone in mind, and Clint (NIAID) or I will forward the invite.

Thanks,
Allison

Subject: Re: HKU3 data

Hi Vineet,

thanks for digging out your HKU3 data---

We decided to go ahead and sequence the isolate that we have in the BSL3 first, and then eventually add all the HKU3 information into the paper in the revised version.

It would be great if you could provide the Prism files for the data comparing Rachel's original virus with Bat-SRBD-MAv; we could add that to the paper together with the sequences of both viruses (Rachel has submitted hers to GenBank already; Bat-SRBD-MAv will be added as soon as we have the seq.).

Thanks and Happy Sunday,
Alex

Subject: SARS-CoV-2 Weekly Investigators Meeting - August 11, 2020
ViPR_IRD_WorkShop2020.pdf
nCoV PI call attendee list.xlsx

Hi All,

Today, we were treated to a double feature brought to you by:

Dr. Sabra Klein
"Defining the causes of heterogeneity in antibody responses against SAR-CoV-2"
-and-
Dr. Weina Sun
"Newcastle disease viruses (NDV) expressing the spike protein of SARS-CoV-2 as vaccine candidates"

Thank you both for presenting on such short notice and to everyone that attended the meeting. The attendance is attached for your reference. I've also attached a flyer for the ViPR Workshop. If interested in attending, the registration link is embedded in the PDF.

On Tuesday, August 11th, Dr. Sara Cherry will be giving a presentation titled "**COVID-19: Can we identify new antivirals?**"

Have a great week!
Rebecca

ViPR
Virus Pathogen Resource

BV-BRC Virtual Workshops for SARS-CoV-2 and the Coronaviridae virus family

The BRC team will be offering a series of online webinars and workshops, with a focus on SARS-CoV-2 and the Coronaviridae virus family. Each session will include a short 15 minute live demo of ViPR tools, followed by an optional mini-tutorial. The ViPR team will then remain online for the remainder of the hour for hands on Q&A. Each session will be accompanied by tutorial documents that will allow the users to walk through the exercises on their own even after the sessions have ended.

Users will learn how to search for data, use comparative analysis tools, and save data to their workbench for later analyses.

Registration links for individual sessions can be found below. Registered users will receive an online meeting link, along with a mini-tutorial exercise shortly before the start of webinar/workshop.

Tues Aug 4, 2020, 8:00 AM PDT	I- Genomes and Annotation.	Registration
Tues Sep 1, 2020, 8:00 AM PDT	II- Comparative genomics.	Registration
Tues Oct 6, 2020, 8:00 AM PDT	III- SARS-CoV-2 Assembly & Annotation.	Registration
Tues Nov 3, 2020, 8:00 AM PDT	IV- Host response omics data.	Registration
Tues Dec 1, 2020, 8:00 AM PDT	V- Coronaviridae orthologue group prediction.	Registration

Great, thank you Lisa.

I will forward the invite, it may say that it is from Rosa Maria Alvarez because she organized the meeting.

Hi Allison,
I can participate in this call from the Baric laboratory side of things.
thanks,
Lisa

Subject: ACTIV Discussion: Viral Stocks

Hi,

ACTIV would like to request someone from the Baric Lab or who has significant CoV experience to participate on a call today at 1pm (EDT) regarding the growth of SARS-CoV-2 stocks.

The immediate purpose of these stocks would primarily be for in vivo animal challenge studies, so the objective is to grow high titer stocks that also have few AA changes in the spike glycoprotein.

Please let me know if you can participate or have someone in mind, and Clint (NIAID) or I will forward the invite.

Thanks,
Allison

All –

We are working to re-schedule. Kara (key member of the ACTIV team) wasn't available today.

Thanks –

Clint

Great, thank you Lisa.

I will forward the invite, it may say that it is from Rosa Maria Alvarez because she organized the meeting.

Hi Allison,
I can participate in this call from the Baric laboratory side of things.
thanks,
Lisa

Subject: ACTIV Discussion: Viral Stocks

Hi,

ACTIV would like to request someone from the Baric Lab or who has significant CoV experience to participate on a call today at 1pm (EDT) regarding the growth of SARS-CoV-2 stocks.

The immediate purpose of these stocks would primarily be for in vivo animal challenge studies, so the objective is to grow high titer stocks that also have few AA changes in the spike glycoprotein.

Please let me know if you can participate or have someone in mind, and Clint (NIAID) or I will forward the invite.

Thanks,
Allison

Subject: A Hypothesis: The Receptor Site Removing Virus
ABA1A8EE-AA0D-43FF-A77A-5E8C95648572.jpeg

Good Day Doctor,

In line with the call of the times, I am inclined to submit a hypothesis(although not back-up by evidence) regarding what I think is the real mechanism of action Sars CoV virus which makes it so elusive.

Hypothesis of Sars CoV 2 and similar viruses upon early entry to host. Evolution of viruses which are zoonotic in nature(The Glycoprotein Receptor Site Removing Virus).

Congratulations to the scientific community for breakthrough Doctor about Dexamethasone. I have an inkling as to how steroids help. My hypothesis closely resembles that study Doctor. Because steroids help in immunosuppression especially the role of macrophages.

My Hypothesis approaches to paradox and is not likely to be generally accepted. Please read my hypothesis Doctor. Thank you.

I am so puzzled by its(SARS CoV2) mechanism, that I hypothesized:

SARS CoV 2 during the early phase of entry

The Sars CoV 2 virus, is like all viruses attack by the immune system during the early phase of entry. However, It is a unique Virus. During humoral and cell mediated response in the early phase of entry, Sars CoV 2 can easily elude immune response whenever threatened by removing off its receptor sites composing of S epitopes. Leaving the virus with only the capsid. And in its absence, the immune system is thought to have shut down, then Sars CoV 2 S epitopes from the capsids start to agglutinate or regenerate (this removing and attaching / regenerating of epitopes is my hypothesis Doctor) and the whole process starts again and again. ''Many years ago Doctor, in the year 2000, I read an old scientific American journal saying that some scientist remove the receptor sites of a similar to HIV virus in caterpillars and what astonished them is that the immune system instead of attacking it, it instead shut off''. Doctor normally when a virus enters the host, it will be recognized through membrane-bound Pattern Recognition Receptors (PRRs), the complement system and other mechanisms (including cross-reactive antibodies to previously encountered structures that are cross-reactive, such as related viruses). Membrane-bound PRRs will trigger direct phagocytosis while soluble PRR will opsonize (tag) the particle for uptake by phagocytic cells. They will ingest the particle and degrade it (proteolytic enzymes, reactive oxygen species such as H2O2). However, I believe with my hypothesis, viral capsid with no epitopes, its molecular pattern will still be recognized thru Pathogen Associated Molecular Patterns (PAMP), TLR 3 and TLR 7 together with Rig-1. But it cannot make the membrane bound PRRs phagocitized the viral capsid without epitopes...everything is over functioning but no complete phagocytosis will happen and that's why cytokine storm occur. The process continue until SARS-CoV-2 reaches and uses the SARS-CoV receptor ACE2 for entry and the serine protease TMPRSS2 for S protein priming. I believe the SARS CoV 2 is doing a self defense mechanism of detaching its own S epitopes in order not to be phagocitized, soluble PRRs will tag the particle for uptake by phagocytic cells but it will not be phagocitized since it can easily remove its epitopes. I also know that viruses cannot synthesize proteins on their own (when it is still outside the target cell),but somehow SARS CoV 2 is able to do this removing and attaching / or regenerating its epitopes at a faster rate than the immune system. I believe there is an enzymes or acid that causes it but is still unknown....somehow it removes its own receptor S epitopes immediately after opsonization and when the Phagocytic cell is about engulf it.

As to the treatment, I can only speculate , but I really believe this phenomenon of viral removal of glycoprotein is cause by chemical reactions from phagocytic cells...theoretically, e.g during classical pathway of complement activation, if somehow we can inhibit phagocytic cells for a while so that the epitopes will not be detached and allow normal antigen cell death to be tag and opsonized thru C5b-9 (C4bC2aC3bC5bC6C7C8C9 thru Membrane Attack Complex to occur), then it would have been tricked(but this is only speculations and causes immunosuppression). Somehow we must develop a mechanism to fight back receptor site removing viruses, assuming of course-only if my hypothesis is correct...but again this(Treatment) is only speculation. But the principle is not to allow the antigen to remove its epitopes. Doctor, this idea is very unique and original. No literature, in my very limited resources has ever been written about this hypothesis - virus shedding its epitopes. However, I really believe this is the piece of the puzzle that really fits. Although no literature exist to prove it's an

epitope shedding virus, still no literature also says it's not either. I really think- please forgive me to be so blunt Doctor, but no vaccines in the classical sense can solve this pandemic...still, I am praying my theory is wrong and an effective vaccine can be found...but if not, we really need a different approach. This is the reason, I think why reinfection (is thought to occur) happens and why development of effective antibodies is quite impossible for now. I'm just glad to have told my hypothesis to you Doctor. Doctor, I believe this is the evolution of some viruses which are zoonotic in nature even the Sars-CoV-2, "the receptor site removing viruses". And we are entering to a new era in Science. Thank you for your time Doctor. Forgive me for bothering you again but I really believe we can give supportive care now and reduce a large percentage of death. Please I request for anonymity.

''Some findings suggest they have found T cells but no antibodies".

Membrane bound PRR's triggers direct phagocytosis. Although opsonize it never reaches C5b-9 since SARS CoV 2 manage to remove its epitopes. APC still interacts with T Cells though ...e.g macrophages who cannot destroy the SARS CoV 2 Virus (since it's an epitope shedding virus...from my earlier hypothesis) still tries to communicate with T Cells and since there are some particle from shed epitope- they are being shown and communicated by APC...that's why T Cells are activated and mediated per se. PAMP, TLR 3, TLR 7 and Rig-1 still recognizes the capsid with no epitope and the immune system attacks thru T Cells. Cytotoxic T cells becomes present in large numbers in convalescent individuals because SARS CoV 2 already invaded a lot of cells which activated Program Cell Death. Over time, in convalescent individuals antibody rapidly declined to undetectable levels but T Cells keep on recognizing the Capsid. It makes perfect sense.

Please study my Hypothesis Doctor. I really believe Dexamethasone is thought to be effective not because of its anti inflammatory effect but because it can inhibit monocytes and thus macrophages migration. It's a paradox...from my hypothesis- the more you inhibit macrophages the more the virus dies. You may want to look at other macrophage inhibiting drugs. I'll just attach a picture for better understanding of my hypothesis. I have no other agenda. I request for anonymity Doctor.

Antibodies are supposed to be cross reactive to same strain SARS CoV 2 Virus. Reinfection doesn't make sense. I hope somebody can solve this paradox soonest. Just maybe this is pointing to the right direction and by some miracle you may want to investigate this further since there is no advance science in my part of the world. My name is Romel, I am currently working as an Agricultural Pilot. I also have a BS in Biology many years ago. I have no other agenda Doctor.

Thank you again Doctor

Respectfully,

Romel

Importance: High

Dear Colleagues,

Thank you very much for sending me the titles of your presentations.

Attached please find the drafted agenda for our Systems Immunology U19 Program Annual Meeting on Oct. 8-9. Please let me know if you have any questions or suggestions. Once you think it is ok, I will finalize the agenda.

Thank you.

Best,
Joy

Systems Immunology U19 Annual Meeting

October 8-9, 2020

National Institutes of Allergy and Infectious Diseases

Agenda

October 8:

12:00 – 12:10 PM	**Welcome/Introductory Remarks** **Joy Liu/Daniel Rotrosen,** NIAID
12:10 – 2:10 PM	*Systems Approach to Immunity and Inflammation*
12:10 – 12:50 PM	*Germline Mutagenesis with Automated Meiotic Mapping to Study Immunity in Mice* **Bruce Beulter**, UT Southwestern Medical Center
12:50 – 1:20 PM	*Systems Analysis of Innate Immune Responses to Infection* **Alan Diercks**, Seattle Children's Research Institute
1:20 – 1:55 PM	*The Hierarchical Structures of Immune Neighborhoods* **Garry Nolan**, Stanford University
1:55 – 2:10 PM	*Inflammasomes and Inflammation in Health and Disease* **Richard Ulevitch,** The Scripps Research Institute
2:10 – 2:20 PM	**Discussion**
2:20 – 2:40 PM	**Break**
2:40 – 4:40 PM	*Systems Immunogenetics of Biodefense and Emerging Pathogens in the Collaborative Cross*
2:40 – 2:45 PM	*Introduction: SIG U19 and the Collaborative Cross* **Ralph Baric**, University of North Carolina at Chapel Hill
2:45 – 3:20 PM	*Project 1: Emerging Coronaviruses and SARS-CoV2* **Ralph Baric**, University of North Carolina at Chapel Hill
3:20 – 3:50 PM	*Project 2: Influenza Virus* **Mark Heise**, University of North Carolina at Chapel Hill
3:50 – 4:20 PM	*Project 3: West Nile Virus* **Michael Gale**, University of Washington
4:20 – 4:30 PM	*Core B: Mouse Genetics Core* **Marty Ferris**, University of North Carolina at Chapel Hill
4:30 – 4:40 PM	*Core C: Systems Genetics and Bioinformatics Core* **Shannon McWeeney,** Oregon Health & Science University
4:40 – 4:50 PM	**Discussion**

4:50 – 4: 55 PM	**End of Day 1**

October 9:

12:55 – 1:00 PM	**Welcome back** **Joy Liu, NIAID**
1:00 – 3:00 PM	*Defining Regulators of Immunity to Acute Infection Using CRISPR Screens*
1:00 – 1:10 PM	*Program Overview and Updates* **Arlene Sharpe**, Harvard University Medical School
1:10 – 1:25 PM	*CHIME Technology Updates and CD8 T Cell Screens* **Martin LaFleur**, Harvard University Medical School
1:25 – 1:45 PM	*Project 1: CRISPR Screens to Discover Regulators of CD4 T cells* **Vijay Kuchroo**, Brigham and Women's Hospital
1:45 – 2:05 PM	*Project 2: CRISPR Screens to Discover Regulators of DC* **Jon Kagan,** Children's Hospital Corporation
2:05 – 2:25 PM	*Project 2: CRISPR Screens to Discover Regulators of DC/T Cell Interactions* **Nir Hacohen,** The Board Institute
2:25 – 2:40 PM	*Core B: Bioinformatics and Data Management* **Orr Ashenberg,** The Board Institute
2:40 – 2:50 PM	*Core C: CRISPR Library* **John Doench,** The Board Institute
2:50 – 3:00 PM	*CRISPR Technology Development* **Katie Geiger-Schuller,** The Board Institute
3:00 – 3:10 PM	**Discussion**
3:10 – 3:15 PM	**Adjourn General Meeting**
3:15 – 3:35 PM	**Break**
3:35 – 4:35 PM	**Systems Immunology Steering Committee Meeting** **(closed session, Steering Committee members and NIAID staff only)**
4:35 – 4:40 PM	**End of Meeting**

Subject: SARS-CoV-2 Weekly Investigators Meeting - August 25th
nCoV PI call attendee list.xlsx

Hi All,

On Tuesday, August 11th, Dr. Sara Cherry gave a wonderful presentation titled "**COVID-19: Can we identify new antivirals?**". Thank to all who attended the meeting and to Dr. Cherry for her presentation.

Our next presenter will be Dr. Mehul Suthar on Tuesday, August 25th. Dr. Suthar's presentation is titled "**Immunity to SARS-CoV-2 infection in humans**". Hope everyone can join!

Have a great weekend!
Rebecca

Subject: hypergraphs paper ready to submit
Hyperbio_centrality_paper.pdf

Hello all,

Thank you for your patience as my project team worked on revisions to the hypergraph paper you all saw back in January (wow has it been that long already?!). In our opinion we are ready to submit to BMC Bioinformatics but I am sending you all a copy now in case anybody has any final changes, acknowledgements, etc. that need to be included. In addition to anything in the content of the paper you wish to comment on, I ask that you please double check the following:

*) Your affiliation(s) - is this up to date? Any changes needed?
*) Author contributions - please make sure what I have listed for you is appropriate and adequate
*) Acknowledgements - please let me know what grants should be acknowledged for any of your experimental or analysis work

I will be submitting this for our internal approval process on Monday. Once that is approved, unless there are any objections, I will submit to the journal. Please try to get me comments before COB Friday, August 28. I hope to submit the following week.

Subject: Re:
B cell paper figures 10062019 - JK neut.docx

Hi Ralph and Vineet,
My apologies for the delayed response. The first 6 weeks were a bit difficult (adjusting is a good word for that time), but now we're past that and have a happy baby. Couldn't be happier!

I attached the neut curves that I got for D15. This confirms that HELMET mice have some neutralizing response (Tem Morrison's group has also shown this previously).

Given VDM's last email, I'm curious what the next step is - I don't have time in the immediate future to address the reviewer's comments to send back to JVI.

-Jake

On Mon, Jan 6, 2020 at 5:02 PM Menachery, Vineet <vimenach@utmb.edu> wrote:

> Hey Jake and Ralph,
>
> Happy new year to you both. Congrats on the baby. Hopefully you are adjusting well. You have so much to look forward to.
>
> In regards to the paper, I have read through it, skimming and looking through the figures. I still think that the manuscript needs a lot of work. Anne did not address the reviewer comments and I still find the paper confusing and sloppy.
>
> Based on what is here, I do not think it can go back to JVI. It still needs to be cleaned up quite a bit in the text for clarity. I would recommend dropping figure 3 altogether, as the point is lost and not especially clear. Similarly, I would take the HELMET data out of figure 4 and have it on its own as figure 5. FInally, figure 5-6 should be combined. The text needs to be modified here too to be much more careful in the discussion.
>
> Overall, there is good data here and a clear story. Unfortunately, in the current form, it is very difficult to get to that conclusion.
>
> VDM

Hi Jacob and Vineet, Here is the version of Anne's B cell paper with her final comments. Jake, can you take a look to make sure the new data you generated is appropriately presented. Vineet, I appreciate your comments. I'd also like your thoughts on where to submit this. Its been a year plus since it was reviewed at JV-should we go back or chase a sure

thing. Jake, congrats on the new baby! Hope you both had a Happy Holiday and New Year. Ralph

FIGURES

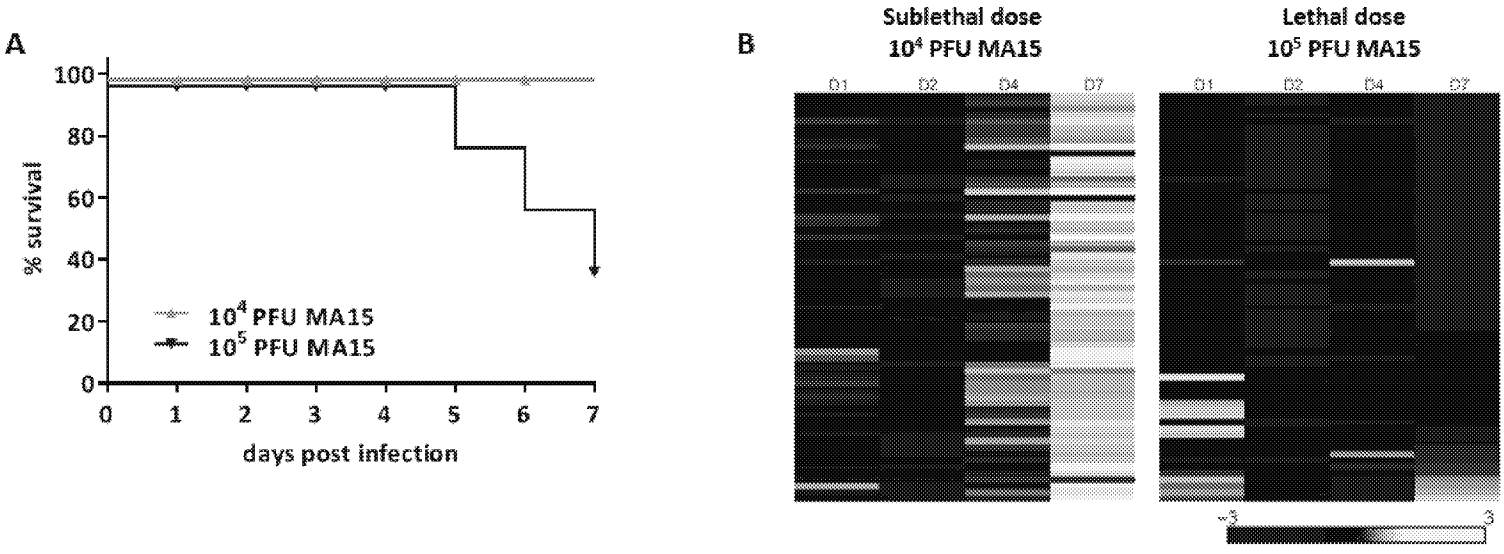

Fig 1. Bioinformatics points to an important role for B cells. 20 week old C57BL/6J mice were infected intranasally with a 50uL sublethal (10^4 PFU/mouse) or lethal (10^5 PFU/mouse) dose of MA15 SARS-CoV diluted in PBS. (A) Survival curves for infected mice. Mice dropping below 70% weight loss were humanely sacrificed and counted as succumbing to disease for the purposes of the experiment. All mice were sacrificed at 7 dpi. n=5 per group. (B) Log_2 fold change ratio of immunoglobulin family-related gene expression from the lungs of MA15 SARS-CoV-infected C57BL/6J mice after infection compared to mock infected mice. Yellow indicates increased gene expression compared to mock. Blue indicates decreased expression compared to mock. Probe and gene descriptions provided in Fig S1.

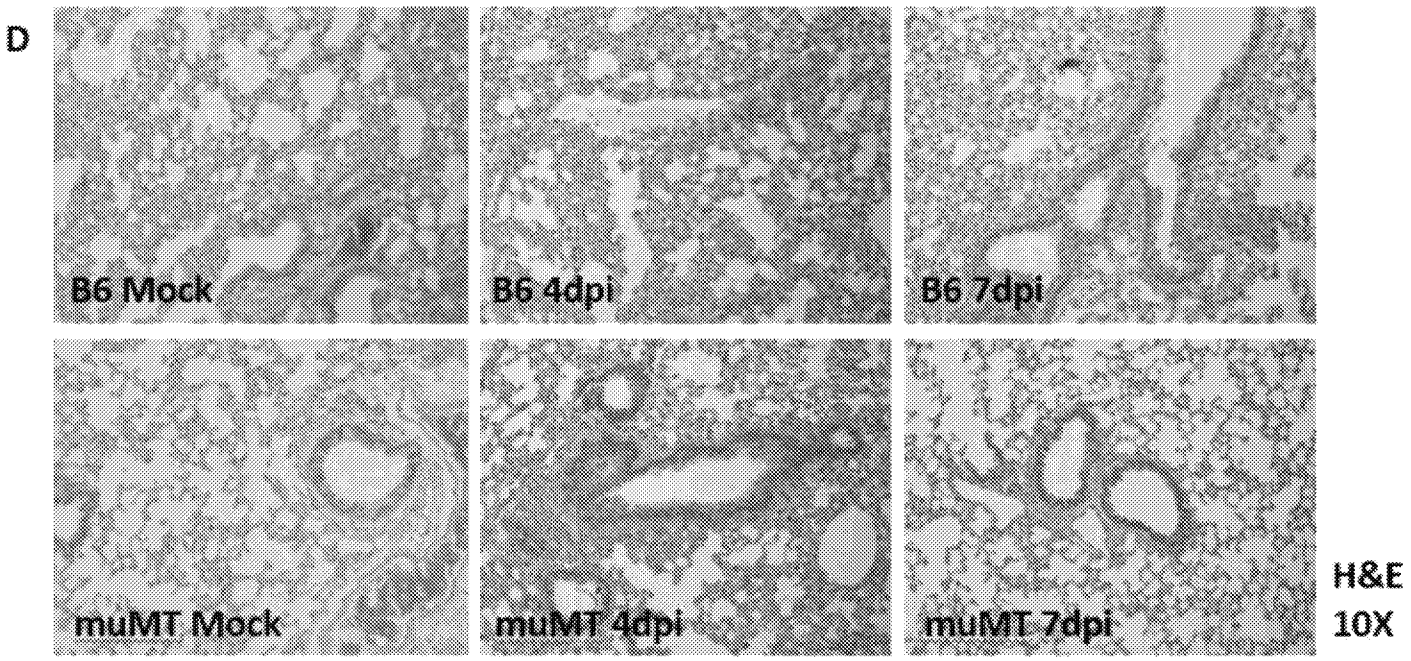

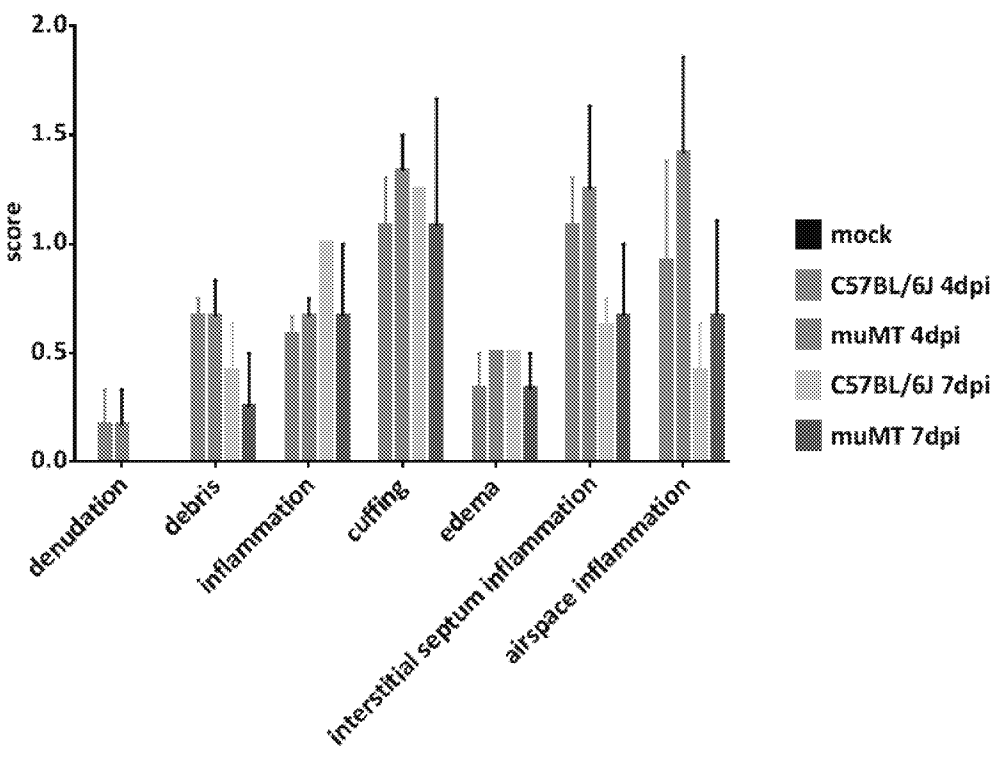

Fig 2. B cells are required to clear SARS-CoV. 10 week old C57BL/6J or muMT B cell deficient mice were infected with a sublethal dose of MA15 SARS-CoV (10^4 PFU/mouse). n=5/group. (A) Lung mean virus load was quantitated by plaque

assay. Statistical significance determined using ANOVA analysis, with **** signifying $p<0.0001$. (B) Representative images of lung sections at indicated timepoints post-infection. SARS-CoV staining was performed via immunohistochemistry using anti-SARS-N and is shown in brown. (C) Mean weight loss per group is represented as a percent of starting weight for each mouse. Mice were weighed daily. (D) Representative images of lung sections at indicated timepoints post-infection. H&E staining is shown. (E) Lung injury scores from mice at indicated times. None show significant differences between C57BL/6J and *muMT* mice at matched timepoints.

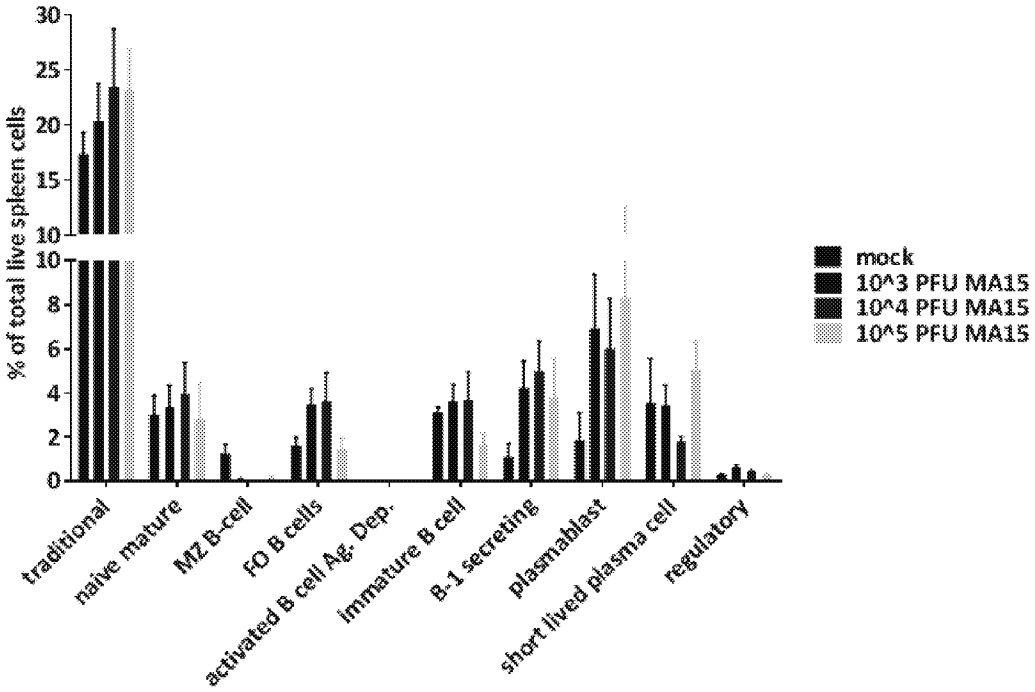

Fig 3. B cell and antibody responses do not correlate with pathogenesis. 20 week old mice were infected intranasally with a lethal (10^5 PFU/mouse) or sublethal (10^3 or 10^4 PFU/mouse) dose of MA15 SARS-CoV. n=5/group. (A) Mean weight loss per group is represented as a percent of starting weight for each mouse. Weights at each dose significantly differed from each other group at 5, 6, and 7 dpi. (B) Survival curves of infected mice. (C) Mean hemorrhage score of mouse lungs taken during 7 dpi harvest. (E) Mean total B cells as a percent of LCA+ cells. B cells are defined as B220+ and CD20+. (E) Mean SARS-S reactive immunoglobulin levels represented as EC50. (F) Splenic B cell populations after MA15 SARS-CoV infection at mock, sub-lethal, and lethal infection doses in 10 week old C57BL/6J mice – no significant differences were seen in B cell populations. All statistics performed by t test. * $p<0.01$. *** $p<0.0001$. ****$p<0.00001$.

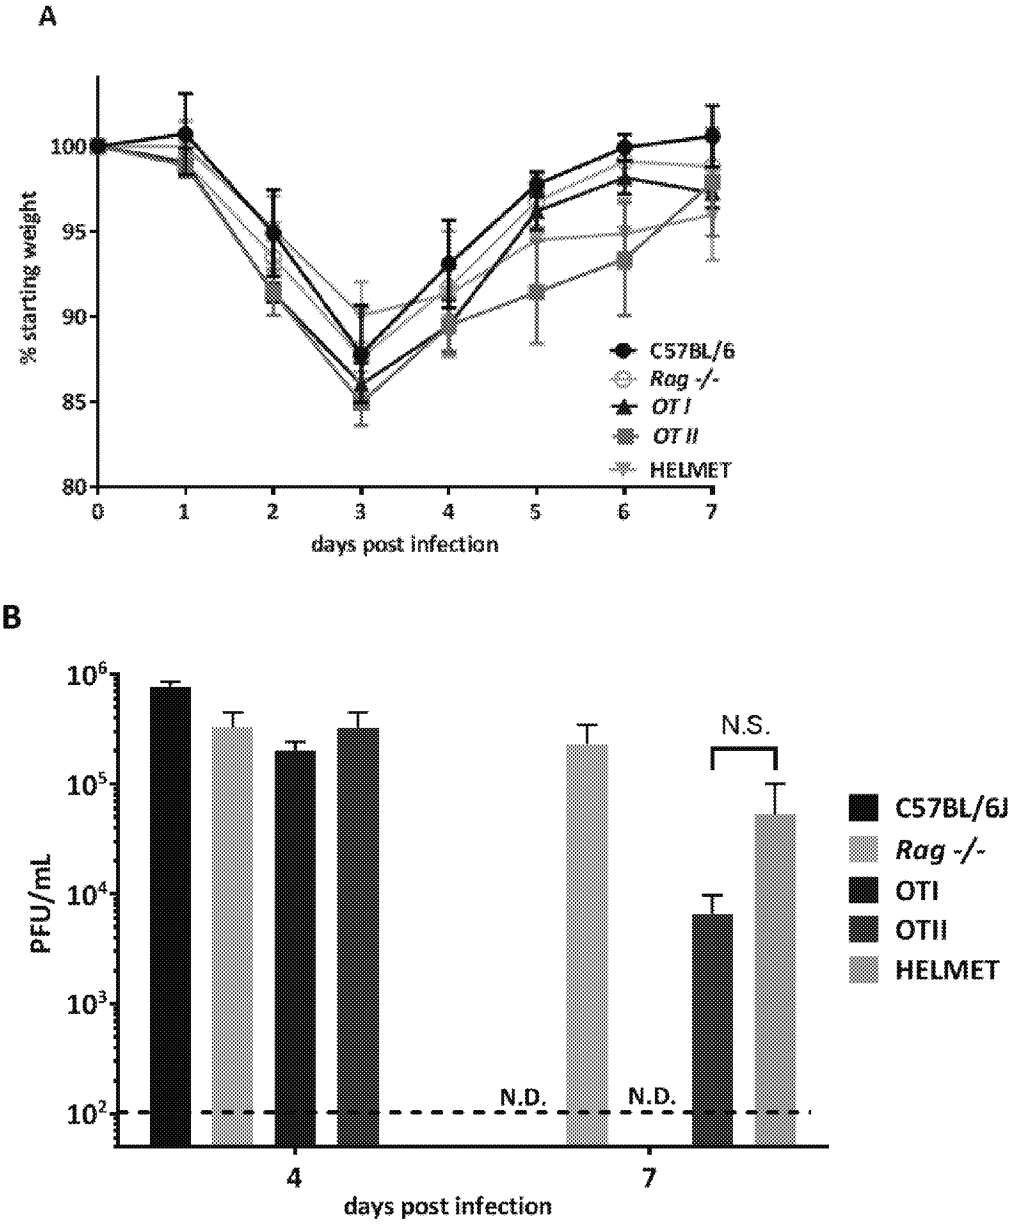

Fig 4. Lack of antigen-specific CD4+T cell responses results in delayed SARS-CoV clearance. 10 week old mice were infected with a sublethal dose of MA15 SARS-CoV (10^4 PFU/mouse). n=5/group at 4 and 7 dpi. n=3/group at 15 dpi. (A) Mean weight loss per group is represented as a percent of starting weight for each mouse. Mice were weighed daily. No significant difference between weight groups. (B) Lung mean virus load was quantitated by plaque assay. All statistics performed by t test.

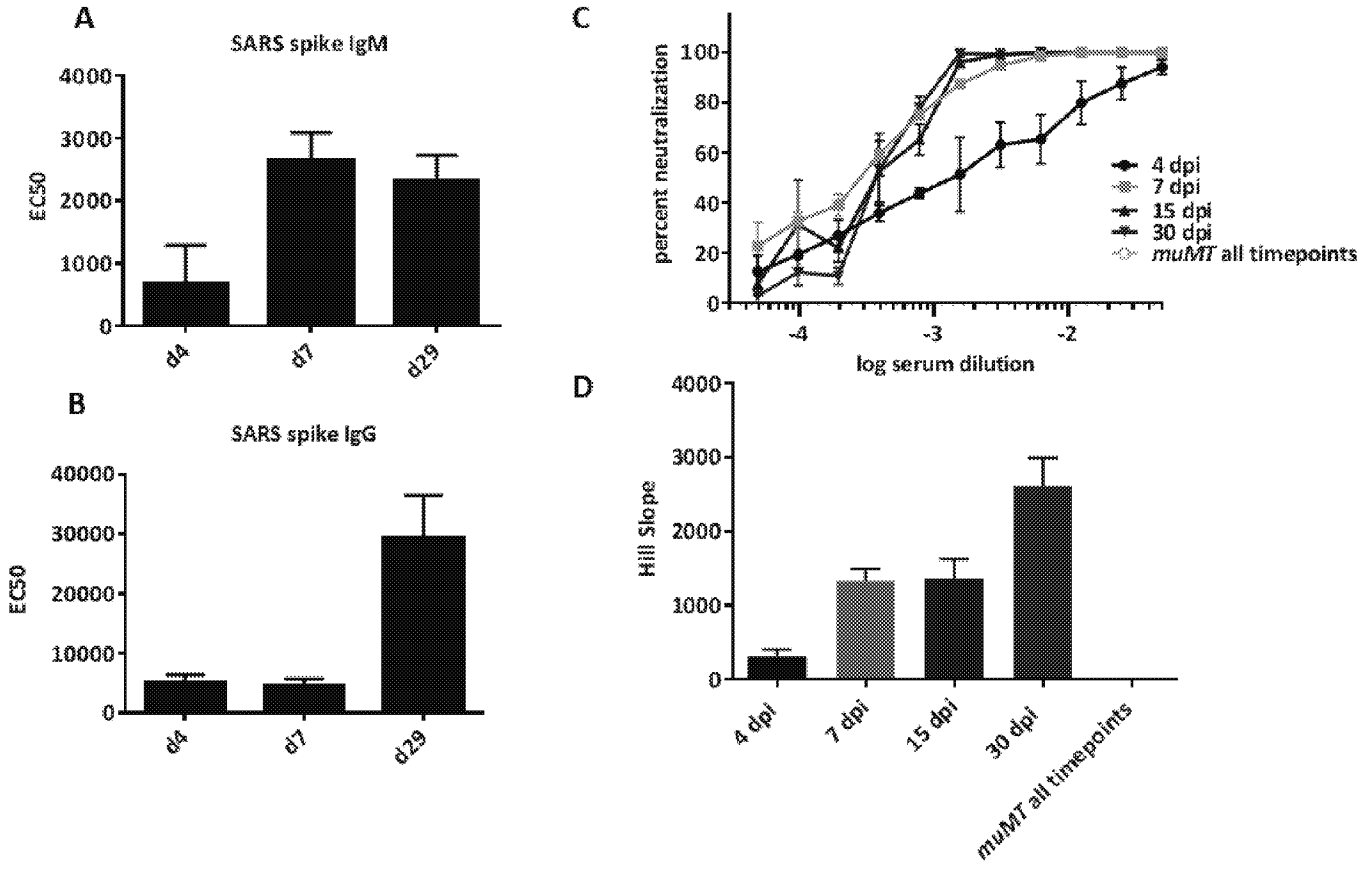

Fig 5. Serum antibodies at 7 days post infection can efficiently neutralize SARS-CoV *in vitro*. 10 week old mice were infected intranasally with a sublethal dose of MA15 SARS-CoV (10^4 PFU/mouse). n=5/group. (A-B) Mean serum IgM (A) and IgG (B) EC50 against SARS-CoV spike protein. n=5 mice/group. (C) SARS-CoV plaque neutralization and (D) hill slopes of neutralization curves were determined by plaque assay using serum taken from MA15 SARS-infected mice at the indicated timepoints.

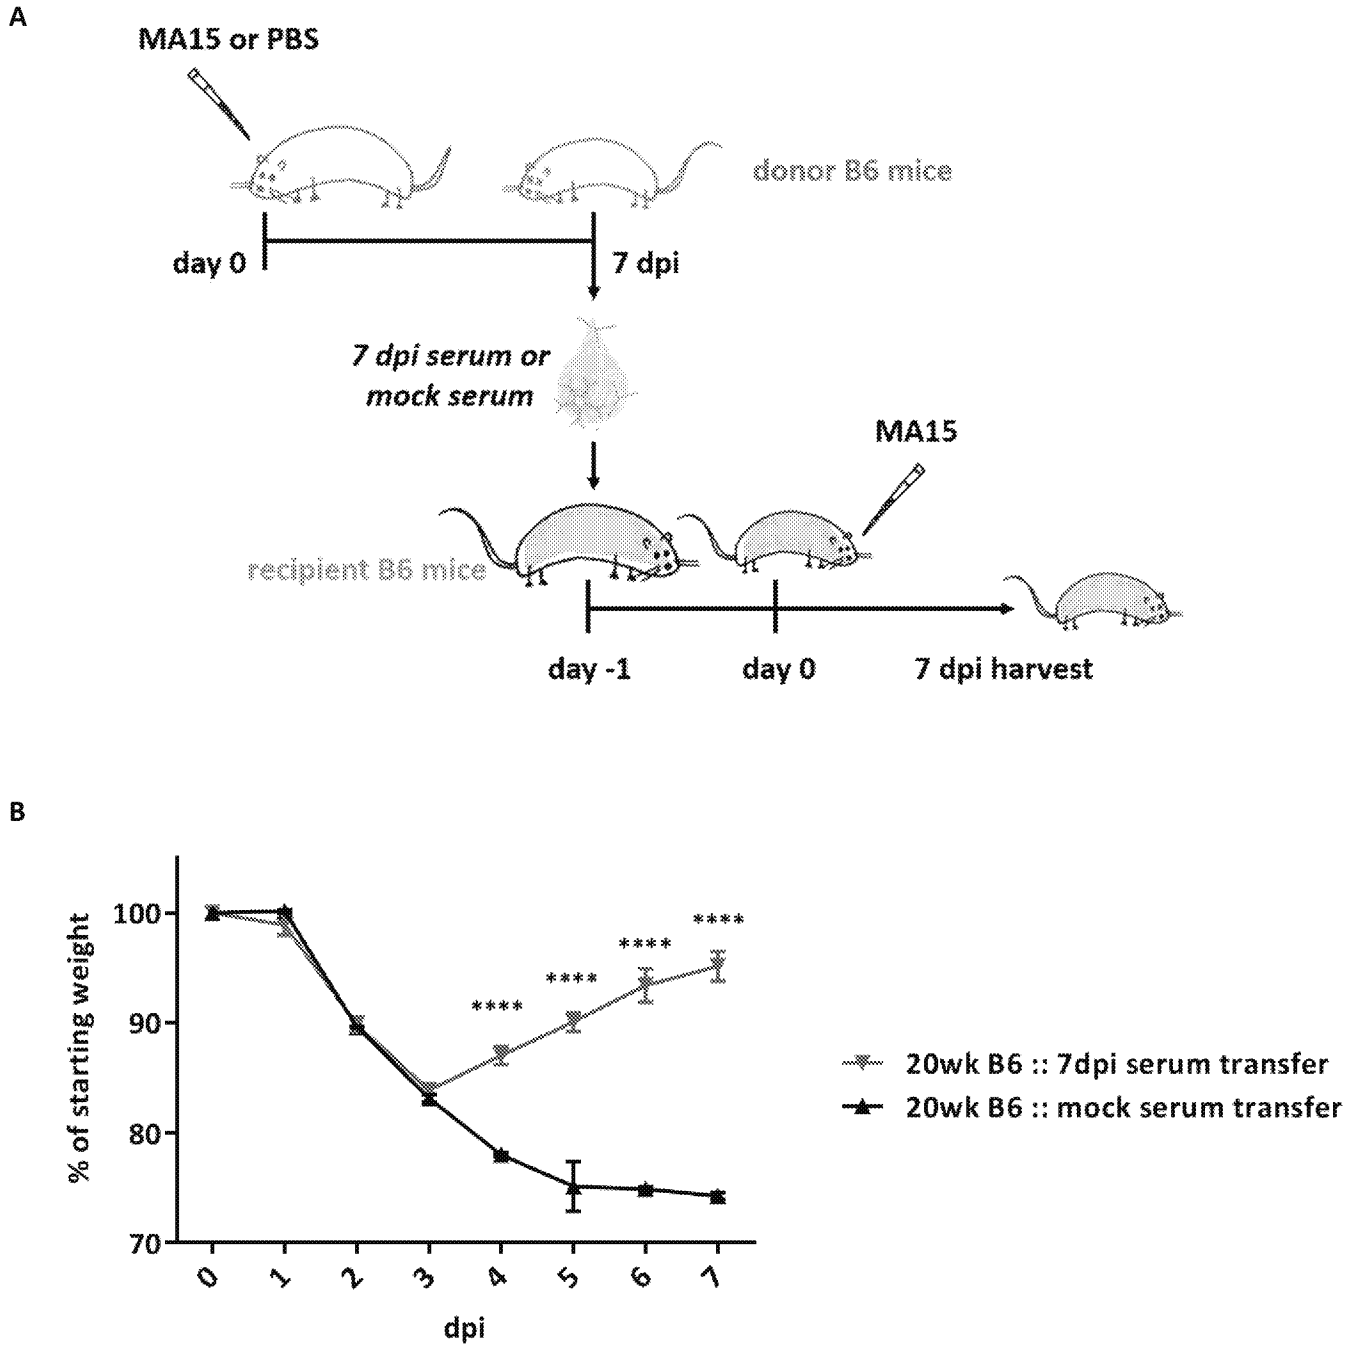

Fig 6. Prophylactic transfer of early antibody prevents mortality during lethal SARS-CoV infection through viral neutralization *in vivo*. Experimental set up of serum transfer experiments. C57BL/6J mice were infected with SARS-CoV at a sublethal dose and serum was harvested at the indicated time point after infection. Serum was transferred at a 1:1 ratio i.p. to the experimental mouse, which was infected with a lethal dose of SARS-CoV 24 hours later. Mice were weighed daily and harvested 7dpi. (A) Mean weight loss of mock serum of 7dpi serum transfer to 12 week or 20 week old C57Bl/6J mice. (B) :: shorthand for received. Statistical significance determined using ANOVA analysis, with **** signifying $p<0.0001$.

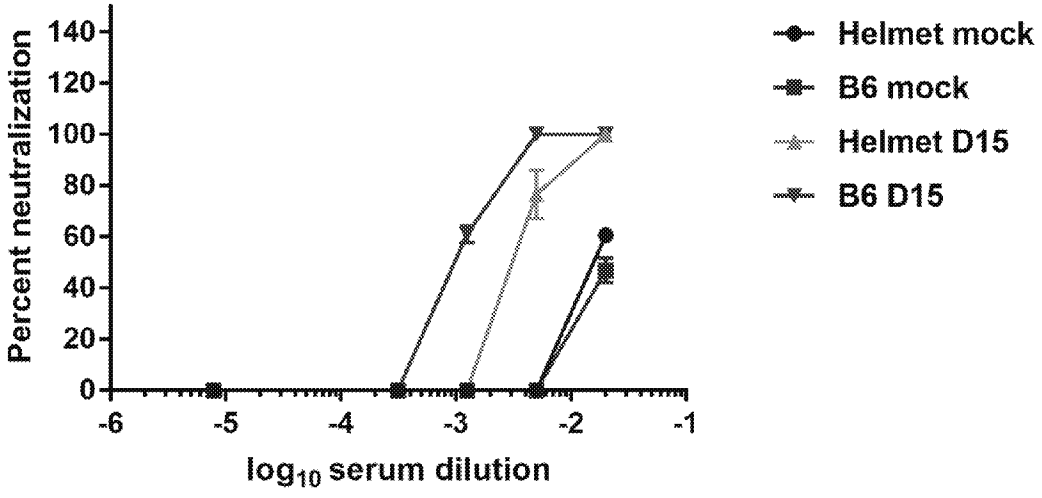
Supplementary Figure 2.



Supp Figure 2. HELMET mice have decreased neutralizing antibody responses. 10 week old mice were infected intranasally with a sublethal dose of MA15 SARS-CoV (10^4 PFU/mouse). n=5/group. SARS-CoV plaque neutralization and were determined by plaque assay using serum taken from MA15 SARS-infected mice at 15 days post-infection.

Hi Vineet, Thanks for all this, I was a lot later. Great progress,go for it. Glad to hear your R21 came through along with the RO1. I know it's a relief. Just hoping you and **552.117** are in a safe location as Laura comes on shore. Stay safe, hope the **552.117** **552.117** are doing well.
Ralph

Subject: Progress report

Hey Ralph,

Sorry, I lost track of time with the progress report. See attached with some of the progress with the PARP9 story my student Craig is working on. We had a fundable score on my aging CC R21 but NOA. If it is funded, I was going to do a F2 with CC032XCC072. This will help resolve the SARS titer qtl. I will plan on doing it with SARS2 if the MA virus also causes age dependent disease; otherwise I'll do SARS1.

I added the publications that cited U19 funding which might not already overlap with what you have. Let me know if I need anything else. Again, sorry it is late.

nCoV PI call attendee list.xlsx

Hi All,

On Tuesday, August 25th, Dr. Mehul Suthar gave a wonderful presentation titled "**Immunity to SARS-CoV-2 infection in humans".** Thank you all who attend (attendee list attached) and to Dr. Suthar for his presentation.

On Tuesday, September 1st, we will be treated to a double feature brought to you by:

Dr. Natalie Thornburg
"Using virus isolation from clinical specimens to understand the transmission potential and dynamics of SARS-CoV-2"
-and-
Dr. Yu (Lucy) Cong
"Characterization of SARS-CoV-2 Induced Disease in Golden Syrian Hamsters by ^{18}F-FDG PET/CT"

Looking forward to another set of great presentations!

Have a great rest of the week!
Rebecca

Subject: SARS-CoV-2 Weekly Investigators Meeting - September 8, 2020
nCoV PI call attendee list.xlsx

Hi All,

On Tuesday, September 1st, were treated to a double feature brought to you by:

Dr. Natalie Thornburg
"Using virus isolation from clinical specimens to understand the transmission potential and dynamics of SARS-CoV-2"
-and-
Dr. Yu (Lucy) Cong
"Characterization of SARS-CoV-2 Induced Disease in Golden Syrian Hamsters by ^{18}F-FDG PET/CT"

Thank you both for presenting and for those that attended.

On Tuesday, September 8th, Dr. Katia Koelle will be giving a presentation titled "**Phylodynamic and recombinant analysis of circulating SARS-CoV-2 diversity**".

Hope you all have a wonderful holiday weekend!

Rebecca

Subject: FW: Registration site for Systems Immunology U19 Annual Meeting

Dear Colleagues,

I hope that you had a great Labor Day weekend.

This is to inform you that the registration site for our Systems Immunology U19 Annual Meeting on October 9th has been open. Please feel free to use the following link to register and forward it to your colleagues if you need. Please note that this meeting is only limited to the three U19 groups.

https://www.cvent.com/d/v7qsxw.

If you have any question, please let me know. We will send out the Zoom link later.

Best regards,
Joy Liu

Subject: SARS-CoV-2 Weekly Investigators Meeting - September 15th
nCoV PI call attendee list.xlsx

Hi All,

Thank you all for attending the Dr. Koelle's presentation on Tuesday, September 8th and to Katia for presenting.

On Tuesday, September 15th, Dr. Jim Heath will be giving a presentation titled: "**The origins of immune dysfunction in severe COVID-19**."

Hope you all can attend!

Best,
Rebecca

nCoV PI call attendee list.xlsx

Hi All,

On Tuesday, September 22nd, Dr. Biao He gave a wonderful presentation titled: "**A single dose intranasal immunization with parainfluenza virus 5-based COVID-19 vaccine generates sterilizing immunity in nasal cavities of ferrets and cats**". Thank you Dr. He for presenting and to those who attended.

Coming up on September 29th, Dr. Susan Weiss will be giving a presentation on "**Coronavirus Activation and Antagonism of dsRNA Induced Antiviral Pathways**".

I am looking for presenters starting on October 13th. Please let me know if you're interested in presenting.

Best,
Rebecca

From:	Baric, Toni C[antoinette_baric@med.unc.edu]
Attendees:	Gralinski, Lisa E; Menachery, Vineet; Baric, Ralph S; Ralph Baric
Location:	https://zoom.us/j/91896758073?pwd= **552.136**
Importance:	Normal
Subject:	Call to discuss SIG Annual Meeting
Start Time:	Sun 10/4/2020 7:30:00 AM (UTC-05:00)
End Time:	Sun 10/4/2020 8:00:00 AM (UTC-05:00)
Required Attendees:	Gralinski, Lisa E; Menachery, Vineet; Baric, Ralph S
Optional Attendees:	Ralph Baric

Antoinette Baric is inviting you to a scheduled Zoom meeting.

Subject: SARS-CoV-2 Weekly Investigators Meeting - October 6, 2020
nCoV PI call attendee list.xlsx

Hi All,

On September 29th, Dr. Susan Weiss gave a wonderful presentation on "**Coronavirus Activation and Antagonism of dsRNA Induced Antiviral Pathways**". Thank you to our presenter and all who attended.

Dr. Martha Nelson will be giving a presentation on "**How Coronavirus Took Hold in North America and in Europe**" during our next Tuesday SARS-CoV-2 Investigators call on October 6th.

Hope everyone has a great weekend!
Rebecca

Subject: FW: arXiv submission submit/3403313

Hello all,

The BMC Bioinformatics submission was completed on 10/1 and I received a subsequent request from the journal to post the preprint on arXiv or bioRxiv because of the relevance with the current SARS-CoV-2 outbreak. I submitted to arXiv today and it will go live on Thursday. Check out the information below. If you see anything wrong with the submission let me know ASAP and I'll edit the submission if I can. I'll pass along the paper password, once I receive it, for you to "claim" it if you like.

Subject: arXiv submission submit/3403313

Dear arXiv user,

We have received your submission to arXiv. Your temporary submission identifier is: submit/3403313.

You may update your submission at:
https://nam11.safelinks.protection.outlook.com/?url=https%3A%2F%2Farxiv.org%2Fsubmit%2F3403313&data=02%7C01%7Cvimenach%40utmb.edu%7Ce0a80e92996f44b9830508d86a4b3b55%7C7bef256d85db4526a72d31aea2546852%7C0%7C0%7C637376218646557405&sdata=BSoZs4EqDzaD%2B3p4Z4K6FQXxhS5Q%2Fi%2FtqpGByu1gQBA%3D&reserved=0

Your article is currently scheduled to be announced at Thu, 8 Oct 2020 00:00:00 GMT.
Updates before Wed, 7 Oct 2020 18:00:00 GMT will not delay announcement.

Note that all submissions are subject to arXiv moderation, which may result in a delay.
Information about moderation is at:
https://nam11.safelinks.protection.outlook.com/?url=https%3A%2F%2Farxiv.org%2Fhelp%2Fmoderation&data=02%7C01%7Cvimenach%40utmb.edu%7Ce0a80e92996f44b9830508d86a4b3b55%7C7bef256d85db4526a72d31aea2546852%7C0%7C0%7C637376218646557405&sdata=thrR0iBgdLJ7PVL2M7RuV2q6mBlRDVoySxNJBjY6flM%3D&reserved=0.
General information about submission status is at:
https://nam11.safelinks.protection.outlook.com/?url=https%3A%2F%2Farxiv.org%2Fhelp%2Fsubmit_status&data=02%7C01%7Cvimenach%40utmb.edu%7Ce0a80e92996f44b9830508d86a4b3b55%7C7bef256d85db4526a72d31aea2546852%7C0%7C0%7C637376218646557405&sdata=NheVTN4fay2Y8biUsCdSNmjN3YE4T4%2Fnnu5eMMpI6os%3D&reserved=0
and your submission status is displayed at:
https://nam11.safelinks.protection.outlook.com/?url=https%3A%2F%2Farxiv.org%2Fuser%2F&data=02%7C01%7Cvimenach%40utmb.edu%7Ce0a80e92996f44b9830508d86a4b3b55%7C7bef256d85db4526a72d31aea2546852%7C0%7C0%7C637376218646557405&sdata=GBjVbJjJuNFVECI46lg7spVtwU0Frdm9YaS5LOjsxhc%3D&reserved=0

The abstract will appear in the subsequent mailing as displayed below, except that the submission identifier will be replaced by the official arXiv identifier.

A paper password will be emailed to you when the article is announced.
You should share this with co-authors to allow them to claim ownership.

If you have a problem that you are not able to resolve through our help pages
at:
https://nam11.safelinks.protection.outlook.com/?url=https%3A%2F%2Farxiv.org%2Fhelp%2F&data=02%7C01%7Cvimenach%40utmb.edu%7Ce0a80e92996f44b9830508d86a4b3b55%7C7bef256d85db4526a72d31aea2546852%7C0%7C0%7C637376218646557405&sdata=Hhpn66JIPD914yWnUBq2hLS4BTY%2Bo0VidDpAeLsYS4U%3D&reserved=0 contact help@arxiv.org with a description of the issue and reference the submission identifier.

\\
Background: Representing biological networks as graphs is a powerful approach to reveal underlying patterns, signatures, and critical components from high-throughput biomolecular data. However, graphs do not natively capture the multi-way relationships present among genes and proteins in biological systems.
Hypergraphs are generalizations of graphs that naturally model multi-way relationships and have shown promise in modeling systems such as protein complexes and metabolic reactions. In this paper we seek to understand how hypergraphs can more faithfully identify, and potentially predict, important genes based on complex relationships inferred from genomic expression data sets.
Results: We compiled a novel data set of transcriptional host response to pathogenic viral infections and formulated relationships between genes as a hypergraph where hyperedges represent significantly perturbed genes, and vertices represent individual biological samples with specific experimental conditions. We find that hypergraph betweenness centrality is a superior method for identification of genes important to viral response when compared with graph centrality.
Conclusions: Our results demonstrate the utility of using hypergraphs to represent complex biological systems and highlight central important responses in common to a variety of highly pathogenic viruses.

Subject: SIG U19 Meeting Update

Hi Everyone,
Ralph and I would like to thank everyone for all the work on the SIG-U19 reverse site visit. The presentations were well received and Program was very happy with the U19's progress and productivity. They were especially impressed with the level of collaboration within this program, as well as the new collaborations between the different U19 groups.

However, there is some bad news. During the steering committee meeting Program announced that they will not be putting the U19 program forward for renewal due to changing funding priorities. Therefore, the program will end after the current 5 year funding period in 2022. This is clearly disappointing, but they did want to give all three groups as much lead time as possible to explore other funding opportunities. Given the expertise and resources that our groups have built over the past 8+ years, Ralph and I both think that there are several different options that we can pursue with respect to R01's or even PPGs. Therefore, we would like to set up a call amongst the PIs to discuss the results of the steering committee meeting, as well as ways to go forward. Therefore, Toni will follow up with everyone to schedule a call.

Thank you again for all the work on the program and we are looking forward to talking further.

Ralph and Mark

Subject: SARS-CoV-2 Weekly Investigators Meeting - October 20th
nCoV PI call attendee list.xlsx

Hi All,

On October 13th, Dr. Ben Tenoever gave a wonderful presentation on "**Leveraging the Host Response to SARS-CoV-2 to Identify Effective Antivirals**". Thank you to our presenter and all who attended.

Dr. Jacob Hou will be giving a presentation on "**SARS-CoV-2 D614G Variant Exhibits Enhanced Replication ex vivo and Earlier Transmission in vivo**" during our next Tuesday SARS-CoV-2 Investigators call on October 20th.

Hope everyone has a great rest of the week!
Rebecca

Subject: SARS-CoV-2 Weekly Investigators Meeting - October 27
nCoV PI call attendee list.xlsx

Hi All,

On October 20th, Dr. Jacob Hou gave a presentation on "**SARS-CoV-2 D614G Variant Exhibits Enhanced Replication ex vivo and Earlier Transmission in vivo**". Thank you to our presenter and all who attended.

Next Tuesday, October 27th, Drs. Ralph Baric and Mark Heise giving a presentation on "**Countermeasure testing in SARS-CoV2 Mouse Models**".

Hope everyone is able to attend!
Rebecca

Subject: Nov and Dec SIG U19 call conflicts

Good morning,
Looking ahead on the calendar for November and December, both Mark and Ralph have 2 day long meetings for another center grant. We are proposing to cancel November call and have the call Dec 3 at 1:30 EST/10:30 PST.

Please let me know if it is possible for you to make this call.

Thank you

Toni Baric

Subject: SARS-CoV-2 Weekly Investigators Meeting - November 3rd
nCoV PI call attendee list.xlsx

Hi!

On October 27th, members from Dr. Ralph Baric and Dr. Mark Heise laboratories gave two great presentations on "**Countermeasure testing in SARS-CoV2 Mouse Models**". Thank you to both presenters and to those that attended.

Next week, on November 3rd, Dr. Bin Zhou or Dr. David Wentworth will be giving a presentation titled "**SARS-CoV-2 spike D614G variant confers enhanced replication and transmissibility**".

Have a great rest of the week!
Rebecca

Good morning,
Looking ahead on the calendar for November and December, both Mark and Ralph have 2 day long meetings for another center grant. We are proposing to cancel November call and have the call Dec 3 at 1:30 EST/10:30 PST.

Please let me know if it is possible for you to make this call.

Thank you

Subject: DARPA Project

Ralph,
I have been working on a DARPA proposal with Autonomous Therapeutics on MERS-CoV with a quick turn around.

Ariel and Pau (CCed) are funded for another DARPA project to generate therapeutic interferring particles and are looking to apply their approach for MERS on this specific supplement call.

We have been chatting for a few weeks and they are interested in both in vitro and in vivo experiments with their MERS-CoV targeted TIPs. I am currently planning to work with them on the in vitro side, but suggested they talk directly with you about the DPP4 288/330 model.

I do not think my lab has the capacity to do the in vivo mouse experiments and they prefer the 288/330 model. If the TIPs work in mice, we would extend the work to marmosets at UTMB.

They will contact you directly and I know they are on a short turn around time; I cced Toni as well to see if you'd have time in your schedule. I'll be doing harvests in the morning, so no need to include me on any of the calls.

Thanks

Ralph,
I don't appreciate being accused of things that I didn't do.

I did not share any QTL mapping or any other data from the U19 with them. I did share that Trim6 might be a target under the QTL for Ebola and that genetic diversity might be important. I did this in context of one of their students presenting their Ebola data on Trim6 KO mice. If that was inappropriate, I apologize.

I did share with Lisa that we have infected the Trim6KO mice with SARS and found a phenotype. Perhaps this was inappropriate as well. The researcher had offered their Ebola Trim6KO data as preliminary data if we wanted to use it in the U19 presentation. Again, perhaps this was inappropriate.

I agree that there are norms in behaviors to be followed, but accusing me of sharing data with direct competitors without knowing the full story also results in a loss of trust between members of the group.

Vineet, I appreciate the full story. However, your second paragraph is still at odds with your first sentence. If some data is shared without the courtesy of discussing it first with the lab that generated the data, it is flat out inappropriate. Consequently, I don't believe I accused you incorrectly, as you seem to be arguing scope. How can you offer their data for our U19 without discussing this with the PI who is directing the student? Why wasn't I brought into this discussion beforehand. If you can't understand my frustration, then you are correct and we have a problem.
Ralph

Subject: MERS-Uganda Virus Manuscript

Good afternoon,
Please find attached the following manuscript, "Trypsin treatment unlocks barrier for zoonotic coronavirus infection." The manuscript describes our efforts to recover a virus expressing the bat spike protein from PDF2180-CoV. Each of you has contributed to this work and have been included as an author.

We are planning to submit the manuscript to PNAS in the next few weeks. Please take a look over it, paying close attention to the accuracy of your name and affiliation. Also, please add any authors that might be missing and their email contact information.

My apologies for emailing Friday before a US holiday weekend. Ideally, we would like to have the comments back by next Thursday, May 30th. With the busy time of year, we understand if you require more time to look over it; please just let us know that you need more time.

I will email a reminder on Tuesday. If I do not hear from you by Thursday afternoon, I will assume you are satisfied with the manuscript in its current state.

Thank you again for your contributions to this work. We look forward to hearing from you.

Subject: U19 Progress Report Blurb UTMB
U19 Progress Report UTMB 060519.docx

U19 Progress Report- UTMB

During the reporting period, we have focused on identifying the causitive gene associated with HrS2, a QTL associated with low viral titer following infection of preCC mice with SARS-CoV. This region, spanning 5.4bMb on chromosome 16 explains 22% of the variation in day 4 titer. Allele effects indicated low titer was associatd with the PWK allele and subsequent analysis narrowed gene targets to genes with SNPs private to PWK. The resulting list identified 48 genes including several mucins, genes involved in apoptosis and T cell activation, and two members of the poly (ADP-ribose) polymerase (PARP) family, PARP9 and PARP14. Previous efforts had identified Muc4 as a priority candidate and studies in Muc4 KO mice revealed changes in pathogenesis. However, no change in viral titer was observed, arguing that Muc4 did not drive changes in viral titer.

We subsequently focused on Parp9 and Parp14 as a potential candidate genes. Previous work by our collaborator, Matthew Daugherty (UCSD), had identified PARP9 and PARP14 as highly evolving genes in the mamamlian genome. His work had predicted that viruses target these PARP proteins driving their diversity in primates. Similarly, previous studies had implicated a role for PARP9 in modifying STAT1 signaling following IFN stimulations. In additions, PARP9 and PARP14 are reported to regulate each other and driving Th1 and Th2 responses respectively. We used *in silico* measures to predict that PARP9 may be cleaved by coronavirus 3CLpro [ADDIN EN.CITE <EndNote><Cite><Author>Kiemer</Author><Year>2004</Year><IDText>Coronavirus 3CLpro proteinase cleavage sites: possible relevance to SARS virus pathology</IDText><DisplayText>(26)</DisplayText><record><dates><pub-dates><date>Jun 6</date></pub-dates><year>2004</year></dates><keywords><keyword>Artificial Intelligence</keyword><keyword>Binding Sites/genetics</keyword><keyword>Coronavirus 229E, Human/enzymology/pathogenicity</keyword><keyword>Cysteine Endopeptidases/*metabolism</keyword><keyword>Humans</keyword><keyword>Neural Networks (Computer)</keyword><keyword>Proteins/*metabolism</keyword><keyword>SARS

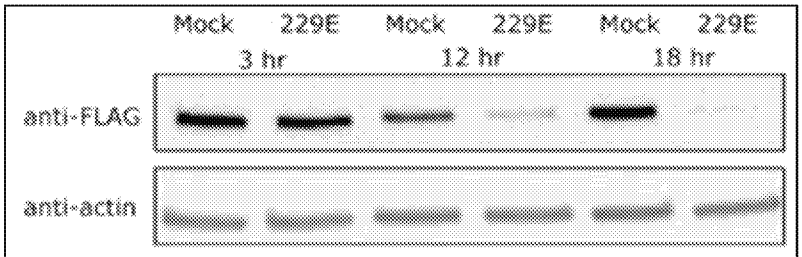

Figure X: PARP9 protein degraded over the course of CoV infection. Huh7 cells were transfected with FLAG-tagged human PARP9 protein 24 hours prior to infection. Cells were subseqeuntly infected with Human CoV-229E at MOI 1 and protein collected at indicated times and probed fof protein expression.

We first overexpressed human PARP9 in human hepatoma cells (Huh7), a suitable cell line for infection with human CoV 229E (HCoV-229E). Over a time course of 3 hr to 18 hr post infection, we observed a decrease in overexpression of PARP9 in the context of HCoV-229E infection (**Fig. 2**), compared to a housekeeping control (β-actin). These results provide the first example that CoVs are capable of antagonizing PARP9 protein, and provide additional evidence that CoVs have developed mechanisms to combat host PARPs, subverting an otherwise protective role of PARPs in CoV infection. Similar down regulation of human PARP9 has been observed following MERS-CoV infection of Vero cells overexpressing PARP9 (data not shown), indicating that targeting is conserved across multiple CoVs. Ongoing studies will extend these finding to SARS-CoV and explore changes in mouse Parp9 with alleles from CC lines inlcuding B6 and PWK. We predict that the PWK allele of Parp9 may be resistant to degradation resulting in the lower titer QTL found in the original CC screen. We will also characterize CoV targeting of human PARP14 using similar over expression and infection approaches.

To the Editors,

Please find enclosed manuscript, "Trypsin treatment unlocks barrier for zoonotic coronaviruses infection" by Menachery, Dinnon, et al. In this work, we describe the restriction of two MERS-like bat coronaviruses and the use of exogenous trypsin to overcome this block. The results demonstrate that proteolytic activation of spike, not receptor binding, is the major barrier to emergence of these two group 2C coronaviruses. With implications for virus emergence and surveillance, we believe the work is both appropriate and timely for publication in PNAS.

The recent outbreaks of Zika, Ebola, and MERS-CoV highlight a significant threat posed by cross-species transmission leading to human disease. Coupled with global air travel and unequal public health infrastructures, the impact of emerging viral outbreaks is potentially devastating in terms of human health as well as economic impact. However, despite a wealth of metagenomics data identifying novel coronavirus strains, correlates to evaluate emergence potential are still lacking. Therefore, in this manuscript, we use metagenomics data and reverse genetic systems to generate chimeric virus strains in order to identify and prepare for potential pre-pandemic viruses.

Focusing on PDF-2180 CoV, a MERS-like virus sequence isolated in Uganda, we generated a chimeric strain expressing the PDF-2180 spike in the context of MERS-CoV. While initially not viable, we found that the addition of exogenous trypsin rescued viral replication in Vero and human cells. The chimeric virus could replicate in human gut cells, but not in human airway cells. Notably, blockade of the MERS-CoV receptor DPP4 had no impact on replication of the chimeric, bat-spike expressing virus suggesting use of an alternative receptor. Monoclonal antibodies targeted against MERS-CoV had no efficacy against this chimeric MERS-Uganda spike virus. Importantly, exogenous trypsin also rescued a second group 2C coronavirus, HKU5-CoV, indicating that proteolytic cleavage, not receptor binding, was the primary barrier for emergence of these two zoonotic coronaviruses in human cells. Overall, the results of our studies demonstrate that host protease cleavage may be a primary barrier for coronavirus emergence. Coupled with receptor binding, spike activation offers a new parameter to evaluate emergence potential of coronavirus. In addition, the finding offers a novel means to recover previously uncultivable zoonotic coronavirus strains.

Considering these factors, we believe that the manuscript will be of interest to a wide range of readers including those interested in translation of metagenomics data, emerging infectious disease, and public health preparedness. We would like to suggest that Drs. Yoshihiro Kawaoka, Peter Palese, or Linda Saif serve as editors for this manuscript. We would also like to recommend Drs. Luis Enjuanes, Thomas Gallagher, and Peter Daszak as potential reviewers.

Sincerely,

It was ok. Not much in terms of CoV stuff other than structure from Veesler. Good networking and lots of ideas.
I'll send a draft of the presubmission inquiry today. I am heading to my parents tomorrow, so I will try and send it tonight or in the morning if you can make comments (or if you want to send). I'll CC you on the email and work toward reformatting as needed.

I talked to both the Nat Micro and CHM editors at the plus strand meeting. I will put in a presubmission inquiry to Cell Host and see what they say. Since I didn't talk about it at the +strand meeting, they wouldn't be familiar with the story.

I'll work on reformating; size wise we should be good for either journal. Editor told me that they wouldnt say yes in the respone, but they will say no if they aren't interested.

Title: "**Trypsin treatment unlocks barrier for zoonotic coronaviruses infection.**"
Tracking #: 2019-09188
Authors: Menachery et al.

Dear Dr. Menachery,

I regret to inform you that the PNAS Editorial Board has declined your manuscript [MS# 2019-09188] for further consideration. We receive many more good papers than we can publish and the Board must carefully weigh which papers merit external review. The expert who served as editor concluded that although this work is interesting, it does not have the broad appeal needed for PNAS and is better suited for a more specialized journal.

Thank you for submitting your manuscript to PNAS. I am sorry we cannot be more encouraging this time, and I hope you will consider submitting future work to PNAS.

Sincerely yours,
May R. Berenbaum
Editor-in-Chief

Subject: Presubmission Inquiry: Barrier to Coronavirus Emergence
Attachments: Presubmission Abstract.pdf

Dear Editors at Cell Host & Microbe:

Please find our presubmission inquiry for our manuscript, "Trypsin treatment unlocks barrier for zoonotic coronavirus infection", by Menachery, Dinnon, et al.

In this work, we describe the restriction of two MERS-like bat coronaviruses and the use of exogenous trypsin to overcome this barrier. Employing a MERS-CoV reverse genetic system, we constructed a chimeric virus replacing the wild-type spike with the PDF2180-CoV spike, a MERS-like virus found in an Ugandan bat. While initially not viable, we found that the addition of exogenous trypsin rescued viral replication in Vero and human cells. The chimeric MERS virus could replicate in human gut cells, but not in human airway cells. Notably, blockade of MERS-CoV receptor DPP4 had no impact on chimeric virus replication, suggesting use of an alternate receptor. Testing of monoclonal antibodies designed against the RBD and S2 portions of the MERS-CoV spike showed no efficacy against the PDF2180-chimeric virus. Importantly, exogenous trypsin also rescued replication of a second group 2C CoV, full-length HKU5-CoV. These results indicate host protease cleavage of spike constitutes a primary barrier for group 2C CoV emergence. Coupled with receptor binding, spike activation offers a new parameter to evaluate emergence potential of coronavirus. In addition, the finding offers a means to recover previously uncultivable zoonotic coronavirus strains.

We have attached our abstract and a graphical description of our findings for you to review. We look forward to your response.

Sincerely,

Vineet D. Menachery & Ralph S. Baric

Abstract

Using an ever-expanding database of viral metagenomics sequences, we are positioned to identify high-risk pathogens poised to seed future outbreaks and probe molecular mechanisms associated with emergence. In this work, we examine restriction of a MERS-like CoV sequence isolated from a Ugandan bat, PREDICT/PDF-2180. Using reverse genetics, a chimeric virus expressing the spike ecto-domain of PDF-2180 within the MERS-CoV backbone had been generated, but had failed to recover infectious virions. However, addition of exogenous trypsin facilitated virus recovery and passage in Vero cells and productive infection of human cells. Importantly, blocking DPP4, the receptor for MERS-CoV, did not ablate infection of the PDF-2180 chimeric virus. In addition, therapeutics targeting the MERS-CoV spike proved ineffective in limiting the PDF-2180 chimeric virus. Notably, trypsin treatment also rescued replication of a related group 2C bat CoV, HKU5-CoV, suggesting that proteolytic spike activation may broadly limit zoonotic coronavirus infection. Together, these results indicate that proteolytic processing is a critical factor for infection and represents an important barrier in the emergence of zoonotic coronaviruses in new animal populations.

Subject: RE: ASM nomination

Hey Ralph,

The nomination is a webform (in the link) and has a slot (4000 characters) for defining why I am deserving of the award. They only contact the references (Diamond or Yoshi or Scott) if I am a finalist. Both have already written a letter on my behalf for the Texas Star award, so I think they have text already.

I can ask Scott, but based on what I have heard, it really needs to be someone that can put the nominee's accomplishments in the perspective of your field. The people who have won that I know (Nick Heaton and Stacy Horner) had their post-doc PI nominate (Gale and Palese) them.

It has been implied that the nomination is about your record, the stature of the people who are your references, and the nominator highlighting your importance to your specific field. I think you are probably most qualified to do that.

The award does not always get many people applying. The nomination is due almost a year before the next meeting and most people miss the deadline and forget. That being said, my biggest strike for the award will be not having an independent pub from my own lab. Best is the number of papers I've published. We got favorable reviews on our JVI paper this month, but won't be back in til later in July.

I can send my CV next week, but you can also send it at a later date, that might help.

Thanks for participating.

Hi Vineet, I'd be delighted to participate. Given the timeline, it might be better for me to write a letter and scott to nominate, as I can address why your deserving of this award for early career basic research, which I think you'd be competitive for. Not sure how quickly diamond and kawaoka can respond or whether they have made other commitments, although they are both familiar with your work. Does scott have a feel for the mechanism here? Is it better for your former mentor or current chair to nominate you for this award? Some insight into this would help. Ralph

Hey Ralph,

Would you be willing to nominate me for the ASM early career award. https://www.asm.org/Academy/ASM-Award-for-Early-Career-Basic-Researchhttps://www.asm.org/Academy/ASM-Award-for-Early-Career-Basic-Research

The application requires 1 nominator and 2 references. I'd suggest that Mike Diamond and Yoshi would be good for the nomination. You could also use Scott Weaver. I put their emails down below. The hardest part of the form is the following prompt:
