We want to thank our customers for rating us #1 in TV customer satisfaction among paid TV providers by the 2015 American Customer Satisfaction Index.

FREQUENTLY ASKED QUESTIONS

How can I review my bill in more detail?

Review your bill at verizon.com/billview. Select 'View Details'.

How do I sign up for paper free billing?

You can enroll in paper free billing at verizon.com/paperfree.

If a credit or adjustment is applied, where do I find this on my bill?

Credits and Adjustments are located on page 3 of your bill. It may take up to two billing cycles for credits to be applied to your account and appear on your bill. You can also visit verizon.com/billview. Simply click Payment/Adjustment History on left navigation.

baseline analysis

(b)(6)

I hope this email finds you well. Please find attached a request to authorize my travel to Washington DC from 23 August – 2 September in support of completing the PACOM regional landscape analysis. This travel will be executed under TD 007, and will support the following:

Facilitation and completion of the internal review, QAQC, and draft version of the PACOM regional landscape analysis, which will be presented and submitted to CBEP regional leadership on 2 September. My travel to DC will facilitate coordination with SME's, and project personnel, finalizing the draft submission, and supporting review, and editing of the compiled open-source research. This will include, review and completion of QAQC'd materials, as well as completing additional QAQC requirements to evaluate level of confidence in gathered data, weighting and quantifying data and materials, where appropriate, and completion of the risk / gap analysis. In addition, travel is requested to attend the bi-weekly meeting with regional leads in support of submitting the draft deliverables, presenting the analysis to date, providing status updates, and continued discussion on the way forward.

If you have any questions, or require further information, please let me know.

Thank you so much (b)(6)

Subject: 1849,1850,1851 cancel registration

Dear (b)(6)

Your email for cancellation was received on the 29-May-2015, therefore we allow you to cancel registration 1851, 1850 and 1849 with us, however, an administrative charge of S$100 will be imposed on each cancellation. (please refer to our website on the details of our cancellation policy:http://www.a-pba.org/conference/registration.aspx)

We will do a telegraphic transfer to refund the money (amount to be refunded as per calculation stated below), therefore **please let us have the bank details (including the swift code).**
Please note that ALL bank charges of each telegraphic transfers (for the refund) will be borne by the recipient.

Cancellation Policy

All cancellation must be made in writing to the Conference Secretariat. Cancellations received on or before 1 June 2015 will be refunded in full less an administrative charge of SGD 100.00. No refund will be made for cancellation received after 1 June 2015.

Dear (b)(6)

It was great to see you last week and I hope you enjoyed your weekend. As mentioned at the T&M Kickoff, please find attached the revised travel request to the Philippines, extending (b)(6) stay from 27 June through 02 July to accompany (b)(6) at partner meetings in Manila facilitating scientific engagement and research activities. My travel on this request remains the same and I will depart as planned on 27 June. If you have any questions, please contact me at anytime.

Thank you very much. We look forward to your approval of this request.

Hi (b)(6)

Please find attached RevA for TD-007. As discussed previously, this Rev is extending the PoP to 31 Dec 2015 to allow additional time for completion and government acceptance of the PACOM Landscape Analysis. Please continue to coordinate directly with the Technical Points (b)(6) for any technical matters relating to this TD. No changes to the already approved proposal are required at this time.

Cheers,
Carl

TD 009 NHLS BS&S Training - South Africa

Objectives

Reduce the risk of laboratory exposures of potentially dangerous pathogens through increased BS&S capabilities of South Africa's National Health Laboratory Service (NHLS) to, ultimately, mitigate risk associated with handling potential hazards and protect individuals operating in potentially hazardous environments.

Period of Performance: 05/16/2015-05/15/2016

CLIN	Total ROM	Total Invoiced	Total Remaining
1002	$205,037.00	$40,107.77	$164,929.23
1003	$111,454.09		$111,454.09
1004	$4,092.47		$4,092.47
1005	$15,024.00		$15,024.00
TOTAL	$335,607.56	$40,107.77	$295,499.79

CLIN 1002 – Labor

Labor costs for this project include PM and PC activities, such as maintenance of the objective 1 activities from the base year, coordinating the efforts of the NHLS team, proposal development, initiation of procurements, and subcontract modification development to incorporate Objectives 2 and 3. Costs also include accruals of labor projected for NHLS staff for this time period.

Program Manager: 84.5 Hours

Metabiota's (b)(6) performed as Program Managers while Metabiota identified ideal candidates for the position. During this time, they participated in proposal development, including the assisting with the development of the overall project budget and the drafting of text for both the technical and management approaches. (b)(6) over as Program Manager in June and finalized proposal development. He also oversaw development of project plan. Dennis provided oversight for subcontract modification and coordination of the project activities, including communications with DTRA/A&AS and the subcontractor team in South Africa.

NHLS Program Manager (b)(6) led coordination with Metabiota and oversaw efforts of South African team to meet project goals. He also secured quotes for procurement of materials and equipment from South African vendors for comparison with US vendors. Leading coordination of approvals of paperwork through NHLS management.

Trainer 1: 59 Hours

(b)(6) led the development of the project plan and led subcontract modification to include drafting of SOW, project charter, and project schedule. She provided expertise in contract development to assist NHLS performers in understanding DOD requirements. She drove coordination of project activities, including communications with the subcontractor team in South Africa and the initiation of procurement activities.

Research and Data Analyst: 18.5 Hours

(b)(6) participated in proposal development to include the drafting of text for both the technical and management approaches.

(b)(6) of NHLS Participated in subcontract modification discussions. He assisted in securing quotes for procurement of materials and equipment from South African vendors and coordinating approvals of paperwork through NHLS management.

Subject Matter Expert 3: 74 Hours

(b)(6) provided historical knowledge and data to the new program manager and assisted with his transition to include assisting with budget development and the drafting of text for both the technical and management approaches. She coordination with NHLS team on continuation of Objective 1 from the base year. Secured quotes for procurement of materials and equipment from US vendors.

CLIN 1003 – Materials and Supplies

No material costs have been incurred.

CLIN 1004 – ODCs

DBA insurance is being acquired for all Metabiota personnel or subcontractors working outside of the United States but this cost has not been finalized or invoiced at this time.

CLIN 1005 – Travel

No travel costs have been incurred at this time.

TOTAL	$335,607.56	$85,138.33	$250,469.23

CLIN 1002 – Labor

Program Manager: 55.25 Hours

(b)(6) provided oversight to development of the fit testing training materials for fit testing. The identified the best vendors and initiated purchase and shipping of the PortaCount Pro fit testing equipment and iPad Air tablets. They also oversaw preparation of the Fit test Scale up and Master level training plans for finalization.

Trainer 1: 102.5 Hours

(b)(6) provided coordination of bi-weekly stakeholder meetings assisting to ensure deliverables are being completed on time and as scheduled. She reviewed reports and invoices submitted by the performers and provided oversight by coordinating and facilitating meetings with the performers. She also prepared the CLS forms and Training Event Plans for SHE officer master level training. Michelle Morgan participated in review and submission of final training materials, and coordination of NHLS trainees in preparation for the fit testing training event.

Research and Data Analyst: 91 Hours

(b)(6) prepared comprehensive fit-testing training materials based on the manufacturer's protocols and other open-source reference information. She also developed a training agenda. Research and Data Analysts at NHLS utilized hours to participate in bi-weekly meetings and prepare draft reports and cost estimates to ensure the program remains on target. In addition, they provided coordination for the fit testing and videography components.

Subject Matter Expert 1: 12 hours

(b)(6) utilized hours to review training materials for final approval.

CLIN 1003 – Materials and Supplies

Costs invoiced are inclusive of the iPad Air tablets.

CLIN 1004 – ODCs
No costs invoiced

CLIN 1005 – Travel
No costs invoiced.

Executive Summary

In response to Defense Threat Reduction Agency's Cooperative Biological Engagement Program (DTRA CBEP) regional leadership tasking via the Academic Engagement Partnership (AEP) contract vehicle, and through collaboration with the South Africa's National Health Laboratory Services' (NHLS), Metabiota, Inc. seeks to support the DTRA CBEP mission through the conduction of country-specific, high-value training programs to increase the effectiveness of NHLS biosafety and biosecurity (BS&S) activities. These proposed efforts will focus on delivering tailored support for increased BS&S awareness, equipment assurance of proper functionality, and ensured laboratory staff protection.

Through this activity, Metabiota will engage with NHLS in order to direct technical support in the development and implementation of BS&S initiatives. Established through legislation in 2001 to connect public health system laboratories, NHLS is the largest diagnostic pathology service in South Africa. Laboratory and related public health services are provided by the NHLS to over 80% of the population through a national network of laboratories in all nine provinces, employing over 6,700 people. NHLS activities comprise diagnostic laboratory services, research, teaching and training, and production of sera for snake antivenin, reagents, and media. Its specialized divisions include the National Institute for Communicable Diseases, National Institute for Occupational Health, National Cancer Registry and Antivenin Unit.

This document outlines the approach that Metabiota will employ to accomplish the requirement. In short, Metabiota intends to:

1. Facilitate the completion and dissemination of a standardized BS&S training video materials for laboratory personnel throughout the NHLS network laboratories;
2. Expand the in-country Occupational Health and Safety Information System (OHASIS) capabilities by supporting the development of a new module for increased quality assurance and quality control procedures for monitoring laboratory equipment certifications and maintenance; and
3. Facilitate the development of a Fit Testing respiratory protection-training program to be disseminated via Safety, Health, and Education (SHE) Officers.

Project Overview

Background

Emerging infectious diseases (EIDs) are a challenge for medical and public health infrastructures and pose a significant threat to security and stability across the globe. To manage these threats, DTRA CBEP aims to reduce potential impacts of biological threats by enhancing biological safety and security, awareness of biological risks, and knowledge related to biological pathogens globally.

To do so, DTRA CBEP works collaboratively with partner nations, other USG agencies, and the

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health; promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. In AFRICOM, specifically, DTRA CBEP seeks to secure and consolidate select agents and enhancing BS&S standards in order to strengthen the region's ability to detect, diagnose, survey, and report emerging and re-emerging diseases of international security concern.

In response to DTRA CBEP AFRICOM regional leadership tasking, and through collaboration with the NHLS, Metabiota seeks to support the DTRA CBEP mission through the conduction of country-specific, high-value training programs to increase the effectiveness of NHLS' BS&S activities. These proposed efforts will focus on delivering tailored support for increased BS&S awareness, equipment assurance of proper functionality, and ensured laboratory staff protection.

As comprehensive employee BS&S training programs can mitigate potential EID risks by aiming to prevent exposures to healthcare workers and laboratory personnel, this collaborative training will support the DTRA CBEP mission of improving global health security with the inclusion specialized capacity-building efforts.

Metabiota's field experience and decades of expertise allows us to be well positioned to support the implementation of all of the associated activities, as well as scientific engagement in AFRICOM's area of responsibility.

Goals and Objectives

This activity aims to provide NHLS with continuous quality assurance oversight and to mitigate potential risks to healthcare workers and laboratory personnel exposed to EIDs by conducting training to improve biological safety in NHLS's laboratory network thereby managing the risk of accidental or intentional release of EID causative agents. The delivery of these requirements will cultivate continued learning throughout the NHLS network of laboratories and further expand in-country monitoring and quality improvement activities.

To achieve this purpose, Metabiota and their collaborative partners will:

1. Complete and distribute a standardized BS&S video training courses;
2. Expand in-country OHASIS capabilities by developing new IT modules allowing for comprehensive equipment maintenance requirement monitoring;
3. Develop and conduct a training-of-trainer (TOT) program for the conduction of Fit Testing Respiratory Protection Training Program to be disseminated via SHE Officers.

To accomplish these goals DTRA CBEP will engage Metabiota to administer the BS&S Training in South Africa in collaboration with NHLS.

Impact

Through the implementation of the BS&S training in South Africa facilitated by Metabiota, DTRA CBEP will be able to:

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

- Develop and enhance EID BS&S systems and build regional capabilities;
- Ensure safe EID collection and handling practices supporting the implementation of international standards of BS&S;
- Provide quality assurance oversight to regional public healthcare system personnel;
- Support public health capacity building in the region and foster scientific research and collaboration through the development and implementation of basic research activities.

This activity will provide a measurable and achievable result in building scientific capacity in South Africa, contributing to the promotion of a global network of research collaborations, and the development of a sustainable infrastructure for advancing scientific research, including the early detection of emergent threats.

Training engagements are critical to capacity building efforts in host countries and supporting the early detection and response to emerging threats, thus safeguarding the world from infectious disease threats.

Risk Management

In order to maintain our course of action and guarantee trainings that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix found below. Identifying and acknowledging the risks associated with not implementing this training, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost						
In Country Travel Arrangements	Significant in-country travel is required for these projects, and our estimates may be under the true number	4	4	**Medium-High**	Consult often with NHLS and have them cost estimate with actual travel costs before arrangements have been booked.	Medium
Schedule						
Material Procurement	Various items will be purchased in the USA and shipped to NHLS in South Africa while some items will be purchased locally. There may be some confusion and delays over which items to ship and which to purchase locally in RSA.	4	3	Medium	Engage a local logistics organization to provide in-country support with rapid turn-around and solid track record in supporting USG operations. Consult with NHLS in enough time to establish USA versus SRA purchases to allow for enough time to procure items to keep the projects on schedule.	(b)(4); (b)(6)
Receiving Deliverables on Schedule from NHLS	NHLS is a large organization with a highly centralized authority structure that serves as a bottleneck for decision-making, thus the timely preparation and delivery of deliverables may be	4	4	(b)(4); (b)(6)	Maintain frequent communication and consultations with NHLS to ascertain partner progress in meeting completion of the deliverables and work to de-escalate decision-making needs.	Med

	affected.					
Performance						
Writing of SOPs for Fit Testing to coincide with delivery of Portacounters into RSA.	NHLS may not have developed SOPs for its Fit Testing Objective by the time Portacounters arrive in RSA from the USA.	4	3	**Med-High**	Coordinate NHLS development of Fit Testing SOPs with timeline of purchasing Portacounters and shipping them to RSA. Provide assistance to development of Fit Testing SOPs as needed.	(b)(4); (b)(6)

Implementation Plan

Introduction

Metabiota will employ its existing organizational leadership to interface, as needed, with the Regional Science Manager and Regional Program Manager to direct the operational and administrative support required ensuring implementation of the BS&S training. Our Program Manager will oversee the training programs with the support of a subject matter expert, travel coordinator, grants manager, trainers, and research and data analysts, to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Communications Protocols

To accomplish event implementation, Metabiota will maintain open lines of communication and will use a phased approach of engagement, maintaining project tracking and scheduled deliverables. This phased approach will be coordinated directly with the NHLS Program Manager, Trainer, Research and Data Analyst, and SME collaborators to ensure the event is implemented according to DTRA CBEP requirements, in the assigned timeframes, and supportive of the DTRA CBEP mission. In addition, Metabiota will maintain routine communication with DTRA CBEP to ensure they have full visibility on the training engagement and development activities, status and process of execution.

Technical Approach

Phases of Technical Approach

Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following phases are required for this project:

Phase 1: Biosafety & Biosecurity Training Video Distribution
Phase 2: Monitoring of Equipment Maintenance Enhancement (OHASIS)
Phase 3: Respirator Fit Testing of Employees

Phase 1 – Biosafety & Biosecurity Training Video Distribution (1 July – 31 December)

Objective: Complete the development a professionally produced video and related materials or

a ToT program to standardize and introduce laboratory safety-related information.

Process: Metabiota, in coordination with DTRA CBEP and NHLS, is completing a professionally produced video and related materials (*e.g.*, standard operating procedures (SOPs)) for a ToT program to standardize and introduce laboratory safety-related information. In continued support of this effort, Metabiota and NHLS will procure the necessary equipment and consumable required for distributing these training videos to laboratory personnel, visitors, security personnel, and contract maintenance workers.

Under the direction of NHLS SHE Officers, laboratory personnel will be trained to oversee delivery of introductory video trainings and associated SOPs to personnel within their home-based facility. There are no labor or travel costs associated with dissemination of training materials. The only costs associated with the completion of this objective are associated with procurement of equipment and consumables required for distributing the completed videos. Training videos will be rolled out via Apple Air tablet computers to academic institutions and regional centers, whereas DVDs will be provided to more rural facilities within the network. Metabiota had not previously budgeted for procurement of these materials, as it was assumed that CLS would manage this activity. Moving forward, Metabiota will procure all tablets and DVD's for this objective and leverage the CLS Single Shipper mechanism to ensure materials are shipped to the Republic of South Africa in compliance with all export/import regulations.

Deliverables:

- Deliverable 1: Submission of training materials and post-action report for the conduction of laboratory personnel training to oversee the distribution and delivery of BS&S video trainings and associated SOPs to personnel.

Phase 2 – Monitoring of Equipment Maintenance Enhancement (OHASIS) (1 Oct 2015 – 30 April 2016)

Objective: Ensure all BS&S associated equipment is properly calibrated, functioning, and maintained.

Process: To manage potential risks due to human error and paper-based record keeping as well as provide increased oversight, Metabiota will develop a module for the enhancement of OHASIS, an online health monitoring system that is currently used by all facilities within the NHLS network to record and investigate incidents, record employee health, note vaccinations given, and document trainings completed. Metabiota will additionally coordinate with the NHLS to develop and distribute an online e-learning training and manual for the SHE Officers.

The enhancement module is intended to allow for laboratories to monitor the maintenance requirements of equipment so as to ensure proper functionality through the existing OHASIS program, thereby improving BS&S. Additionally, this module will provide reports on laboratory equipment including, biological safety cabinets, autoclaves, centrifuges, fume hoods, and other local exhaust ventilation systems.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

The enhancement module will be piloted in three laboratories over the course of four to five weeks, during which online training materials and manuals will be tested. Metabiota will communicate, troubleshoot, and share developments with the Canadian developers, in line with current agreements. NHLS will proceed to roll out OHASIS module training on its own schedule with no additional labor hours requested.

Deliverables:

- Deliverable 1: Rollout of enhanced equipment maintenance module for OHASIS
- Deliverable 2: Development and conduction online e-learning training and a training manual for SHE Officers

Phase 3 – Respirator Fit Testing of Employees (1 July 2015 – 30 April 2016))

Objective: Develop and initiate a Master Trainer ToT Fit Testing Program to ensure proper fit of PPE and optimize biosafety for all laboratory personnel. This program will include initial scale up and Master-level training of NHLS staff. As a result, the NHLS will have personnel capable of conducting internal ToT events, which will allow for them to reach the estimated 3,000 laboratory staff in need of Fit Testing.

Process: To manage risks associated with aerosol exposures in the laboratory setting, Metabiota will develop a Master Trainer ToT Fit Testing Program with the NHLS. This training will use specialized Fit Test equipment to identify the appropriate respirator for a given person. To enable the NHLS to reach the estimated 268 locations and 3,000 staff in need of Fit Testing, many of whom are in rural areas, Metabiota will develop Fit Test SOPs, map initial scale up plan, develop Trainer and Master Trainer selection criteria, and conduct initial Fit Test trainings for a select starting cohort of NHLS staff.

Deliverables:

- Deliverable 1: Submission of training scale-up plan, training materials, and post-action reports for the conduction of the Master Trainer ToT Fit Testing Program
- Deliverable 2: Submission of Trainer and Master Trainer cohort list, training timeline for scale-up completion for fit testing all 3,000 NHLS employees, and post-action reports.

Management Approach

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the Program Manager, Research and Data Analyst, Travel Coordinator and a team of Research Collaborators and Subject Matter Experts that will be tasked with specific assignments to support the development and implementation of the training based on their administrative and scientific expertise. This team of experts will ensure the overall project management and tasks associated with the training are met at every level using best practices and that only the highest level of scientific rigor and expertise is applied to this effort.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Initiation

Prior to initiating any action, Metabiota and DTRA CBEP will secure a clear understanding of the objectives and mission of this undertaking, and make sure all stakeholders agree to it. Following authorization to proceed by DTRA CBEP, Metabiota will move into the planning and execution of the trainings and IT enhancement activities.

Execution

The core project management team will maintain oversight and implementation of the project at all times and will ensure timely execution of the training events and tracking objectives to ensure the project remains on schedule and within budget. The project will be managed according to the phased implementation plan and will be course-corrected as needed to ensure project goals are met. The following tools will be used to guarantee the project schedule will be maintained:

Project Administration:

1. Weekly team meetings and conference calls will be held to internally review the project achievements, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Coordinator and will include the PM, Research and Data Analysts, SMEs and AEP leadership, as needed, based on the requirements and stage of implementation.
2. Metabiota will conduct routine communication with DTRA CBEP regional leadership and in-country collaborators to provide routine status updates and ensure project implementation.

Project Reporting:

1. Weekly status reports will be provided by the PM to senior Metabiota leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course-correction as needed to ensure training goals are met.

Monitoring and Controlling

1. Routine risk assessment will be performed internally among the Metabiota project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with DTRA CBEP regional leadership to ensure the project remains on track and is implemented according to standard.
3. Routine oversight and coordination will be performed to ensure NHLS is performing in-country logistical requirements to ensure successful execution of the project phases. Monitoring will include both administrative and fiscal oversight.

Timeline

Phase	Q3 2015			Q4 2015			Q1 2016			Q2 2016		
	July	Aug	Sept	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	June
Phase 1: BS&S Training Video Distribution												

Phase 2: Monitoring of Equipment Maintenance Enhancement (OHASIS)												
Phase 3: Respirator Fit Testing of Employees												

Completion
Metabiota will drive the project to completion in a timely manner by maintaining a focused project schedule with routine meetings and communication with DTRA CBEP regional leadership. This will allow for continued coordination, while maintaining targeted objectives. As the activity progresses, Metabiota will provide all required deliverables and after action reports to allow for lessons learned and continuation of solid execution and implementation of activities. Metabiota believes that the experience and management it will bring to this project, in collaboration with DTRA CBEP will guarantee success.

Cost Management
The Metabiota team and all partners will maintain an acute focus on cost management to ensure that the training is delivered at a reasonable cost to the government. Our team will provide full oversight of NHLS to ensure accurate and responsive financial reporting and will facilitate cost savings to the Government wherever possible. Metabiota will follow procurement regulations ensuring the best price is received under the time constraints using all means available.

Budget Narrative

Period of Performance
The Period of Performance for this effort is 16 May 2015 – 15 May 2016.

Labor
Costs for direct labor to support this activity is required for the following personnel:

- Metabiota Program Manager: (b)(6) will oversee the execution of program objectives towards the completion of DTRA CBEP goals at the regional level, and will lead communication with DTRA CBEP for this activity. (b)(6) will do so by maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. (b)(6) will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables erstwhile ensuring the program remains within scope, budget, and timeline.
- Metabiota Trainer I: (b)(6) will ensure the execution of project objectives towards the completion of DTRA CBEP goals at the project level. (b)(6) (b)(6) will do so by managing stakeholder and subcontractor coordination and project execution, with a focus on project milestone achievement and stakeholder buy-in development and maintenance. (b)(6) will regularly communicate project status

with (b)(6) and will assist him in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder (b)(6) will also assist (b)(6) in ensuring all project requirements and deliverables are fulfilled while concurrently ensuring the project remains within scope, budget, and timeline.

- NHLS Grants Manager: (b)(6) will act as the Project Manager for each of the three proposed requirements, overseeing the design and implementation of all project activities. (b)(6) is currently the National Manager for the Safety Health and Environment Program for the National Health Laboratory Service (b)(6) has over 33 years experience in working in environmental health law enforcement including audits and evaluations, noise control, pollution control, waste management, public relations, occupational health and safety policy formulation, audit tool development and health project development and management.
- NHLS Subject Matter Expert II (b)(6) Information Manager, also supports work for the National Institute for Occupational Health (NIOH), a division of NHLS will be providing thirteen (13) years of experience in OHS research, data management, data cleaning, data extraction, information management and information technology management. (b)(6) is experienced in electronic records management, development of patient information systems, electronic patient records, occupational health information systems. In addition, (b)(6) has expertise in software development life cycle, user interface and user experience development and is the lead developer and project manager for the OHASIS information system project. Alongside (b)(6) will provide guidance and support on the IT infrastructure configuration and management for the OHASIS module development.
- NHLS Trainer I: (b)(6) is the National Deputy Manager for the Safety Health and Environment program for NHLS, where she manages and coordinates the functions and duties of five (5) qualified SHE Officers, develops and implements a Health & Safety (H & S) program for the NHLS according to international best practice and in compliance with the Occupational Health and Safety (OHS) Act and the relevant regulations, advises line management and staff on the application of relevant OHS policies and procedures to ensure compliance to legislation. Additionally, (b)(6) collates data from all OHS Audits conducted in the NHLS, generate reports and communicate results to Laboratory, Business and Executive managers. (b)(6) will provide leadership and support for the development and implementation of the BS&S video project, as well as the Fit testing training efforts.
- NHLS Research and Data Analysts (3) (b)(6) is a registered Occupational Hygienist with the Southern Institute for Occupational Hygiene (ROH-SAIOH), currently working for the National Institute for Occupational Health (NIOH), a division of NHLS. (b)(6) is responsible for conducting risk assessments and occupational hygiene surveys including illumination, noise, ventilation, hazardous chemical substances, ergonomics, environmental pollution (land, water and air) and waste management in a wide range of industries. Presently (b)(6) is involved in teaching and research in respirator fit testing, facial anthropometry and designing effective respirator protection programs. (b)(6) will act in this capacity in support for the Fit Testing project, under the leadership of (b)(6)

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

(b)(6) is the Finance and Administration Manager for NHLS and has been with the organization for 15 years. He holds a national diploma in Cost Accounting and has worked as a Financial Manager for two business units within NHLS (Northern and Central) as well as two institutes within NHLS (NICD and NIOH). (b)(6) has worked with NHLS as Senior Bookkeeper for 11 years and has a total of 22 years experience working within corporate financial environments. He holds a degree in Business Communications and the major aspects of his duties include project coordination, budgeting and management accounting, event planning and co-ordination. Both (b)(6) will be assisting (b)(6) n project coordination, integration of new efforts with existing records (including the integration of the OHASIS module) and the scheduling and planning of training events.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials

Materials, equipment, and supplies are required to support training efforts, project activities, information dissemination, fit testing requirements, and general administrative costs. Material and equipment purchases are executed on a cost-reimbursable basis. The values in the proposal reflect estimates generated during the proposal development process and are subject to change based on market rates, currency fluctuations, expiring quotes, and other factors. During procurement, the actual bill of materials may change to reflect these factors. Materials will include:

- Tablet Computers, BS&S ToT program, the SHE officers will require twenty-five (25) tablet computers (Apple iPad Air) for dissemination to the identified NHLS locations. Spread throughout South Africa are nine (9) academic sites that will receive tablets (one per site), which serve as referral centres and have more than one laboratory on site. In addition, there are four (4) Regional Offices that require a total of eight (8) tablets; two (2) tablets per Regional Office, as these offices all have Administration facilities as well as laboratories. The three (3) institutes are situated on two different sites where two of the institutes share a common reception area, thus a provision is made for two (2) per site for a total of four (4) tablets. The Corporate head office has the largest number of visitors and also does a lot of training, therefore the allocation of four (4) tablets is proposed. Training on the use of the tablets, as well as the process through which to offer and administer video training will be provided at the identified facilities by experienced SHE Officers on a one on one basis with the people identified by the facility manager as being responsible for administering the video training material. It is intended that the academic centres be issued the tablet computers.
- Training video DVDs, any facilities that will not receive tablets, videos will be placed on DVD and delivered to the identified laboratories and centres by internal mail at the expense of the NHLS by the SHE Department. Any instruction on the use of the DVDs would be by means of SOPs.
- PortaCount Fit Tester, Fit testing requirement. NHLS will require the following supplies: five (5) PortaCount Pro+ Respirator Fit Tester with a 3 year calibration plan

(PortaCount Pro+ which includes AC adapter with Universal Plug Set, 8026 Particle Generator, alcohol cartridge, alcohol fill capsule, storage cap, two zero check filters, Model 8016 alcohol supplies, 3/16 and 1/4 inch hose adapters, two spare alcohol wicks, 100 sampling probes, insertional probe, neck strap, carrying case, FitPro Test software CD, Flash memory drive (1GB), USB cable, operation and service manual and two-year warranty); seven (7) Fit Test Probe Kits (1kit includes 500 probes, 500 Pushnuts); six-thousand (6000) 3M or Kimberly Clark N95 respirators; six-thousand (6,000) respirator adaptors; and five (5) boxes of isopropyl alcohol (16x30ml bottles).

Metabiota will make every effort to procure required materials based on best value (cost, quality, and longevity). Metabiota anticipates that CLS will manage shipping, and all related costs (e.g., export compliance), of items procured CONUS to the Republic of South Africa. Metabiota will coordinate with CLS contractors through DTRA CBEP to ensure this process is executed in an effective and efficient manner.

Metabiota, through NHLS, will execute transfer of custody with each individual recipient institution upon receipt of shipments of both the iPad tablets and the PortaCounts. NHLS has a equipment tracking system, and all pieces of equipment procured through this effort will be assigned a tracking number and tag upon receipt. This documentation will be copied and retained by both Metabiota and NHLS.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for NHLS personnel for the period of performance for this engagement. Metabiota personnel performing on this project are already insured.

Subcontracts

A Subcontract will be issued to NHLS to support their labor requirements on this engagement, as well as materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested to support NHLS project personnel to facilitate implementation and conduct training activities in this effort. The proposed projects require domestic (South Africa) travel for test site introduction of the OHASIS pilot modules, and for the Fit testing training. The travel estimates in the budget reflect averaged costs for airfare, lodging, and meals to multiple different locations in South Africa for travel by NHLS project personnel. Metabiota does not anticipate any international travel of its USA staff to South Africa.

Travel on the Metabiota AEP contract is cost-reimbursable with no fee attached, and thus the numbers here represent a best estimate as to the costs that are expected to be incurred. These figures represent an estimate provided to Metabiota by NHLS and verified as being reasonable by Metabiota through internet searches. Ground transportation was not broken out as a separate

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

piece as airfare searches and taxi fare searches suggested that the estimates for airfare should provide enough headroom to cover ground transportation. Metabiota is aware that DTRA prefers not to pay full USG per diems to foreign nationals. As none of the travelers will be US citizens, per diem costs are set at the NHLS proposed rate, which is lower than USG standards for South Africa.

Conclusion

Metabiota is committed to supporting our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP AFRICOM in the implementation of the Biosafety and Biosecurity Training with the National Health Laboratory Services in South Africa. Metabiota will ensure, through strong project management and risk mitigation that the training will be executed in an efficient and timely manner delivering a top quality course geared to support enhanced biosurveillance and biosafety efforts in the region.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Appendix A- Team Metabiota Overview

Metabiota, Inc. is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota currently supports a number of the Defense Threat Reduction Agency Cooperative Biological Engagement Program (DTRA CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. In these roles Metabiota provides support to U.S. Government (USG) Partners in reducing the risk of biological threats worldwide through a collaborative and agile approach to biological risk management.

In coordination with DTRA CBEP regional leadership and in-country partners, Metabiota has built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact DTRA CBEP objectives.

Through this activity, Metabiota will engage South Africa's National Health Laboratory Services (NHLS) in order to direct technical support in the development and implementation of the biosafety and biosecurity (BS&S) initiatives. Established through legislation in 2001 to connect public health system laboratories, NHLS is the largest diagnostic pathology service in South Africa. Laboratory and related public health services are provided by the NHLS to over 80% of the population through a national network of laboratories in all nine provinces, employing over 6,700 people. NHLS activities comprise diagnostic laboratory services, research, teaching and training, and production of sera for snake antivenin, reagents, and media. Its specialized divisions include the National Institute for Communicable Diseases, National Institute for Occupational Health, National Cancer Registry and Antivenin Unit.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

	(b)(6)	(b)(6)	
1	[redacted] an ongoing activity initiated in the contract Base Year, please clarify the number of labor hours allocated to specific activities prior to July 1, and their associated costs	May [SME3 - 72 hours] for proposal development, project integration (e.g., invoicing, subcontracts for T&M, management of Obj 1 activities). June [PM - 55 hours, SME1 - 17.5 hours, SME3 - 1 hour, PDA - 18.5 hours] for proposal development, including meetings with NHLS while transitioning to the T&M contract, as well as program management to prepare for implementation of Obj 2 & 3 July [PM - 19.5 hours, SME1 - 41.5 hours, SME3 - 1 hour, PDA - 10 hours] - stakeholder meeting, while waiting through implementation, and subcontracts associated with the T&M The increase in hours are, primarily, tied to the change in contract mechanism. The new total of 1712 includes all hours needed to complete Obj 2 and 3 from the NHLS side, as well as Metabiota program/project management hours (Program Managers and Project Coordinators are no longer accounted for under the PMO, but instead are billed per project). The T&M contract takes into account Metabiota PM/PC hours [582 total, figured at approximately 20% of time	N/A
2	The original proposal dated September 9, 2014 proposed 855 total labor hours and included 5 individuals to support the effort. The new proposal submitted July 1, 2015, included a total number of labor hours of 1712, and included a total of 9 individuals to support the effort. Please explain the rationale behind the two fold increase in the proposed number of hours and individuals required to support the same activity given that the scope did not change. In addition, please clarify if the 855 hours originally planned were fully expended (and if so, on what activities) or if those hours are a part of the 1712 hours included in the latest proposal submission	2014 - Cassidi Jones (175), Michelle Morgan (200), Shanaz Hampson (100), Lincoln Darwin (240) ***4 persons*** 2015 - Dennis Lee (479), Rachel Campbell (368), David Jones (240), Jay Hua (80), Adrian Michee (30), Lincoln Darwin (240), Michelle Morgan (120), Jeanneath Manganyi (120) ***8 persons*** Jeanneath was in the budget narrative for the original proposal, but did not have hours allocated in the budget - this was an error totaling 120 hours. Of the original 855 hours, only 255 hours were expended towards Objective 1, as only Objective 1 was approved originally. Early discussions with NHLS PM, David Jones, suggested that NHLS appreciated the financial support provided by DTRA for these objectives. Furthermore, David noted that without this support, NHLS would simply not have the resources to execute these tasks. Importantly, he verbally acknowledged that the labor hours requested were, likely, insufficient to complete the outlined objectives; however, labor was something the NHLS personnel could manage to cover from a corporate perspective. To this end, the hours outlined for NHLS to complete these objectives are minimal and most likely insufficient, but proposed as part of a good faith estimate/effort for meeting programmatic requirements. NHLS is/was prepared to manage additional hours at their expense to complete	N/A
3	Metabiota define the acronym "OHASIS" as the Overseas Humanitarian Assistance Shared Information System, however the definition should be Occupational Health and Safety Information System. Please correct.	Not sure how this came to be - the text has been corrected	p. 3
4	The "Travel Cost" matrix breaks down costs into the categories of: airfare, lodging, and meals and incidentals. In many cases, ground transportation is a cost included in travel estimates; however, it does not appear to be specified in the proposal. Please clarify if there is a need for ground transportation.	Travel on the Metabiota AEP contract is cost-reimbursable with no fee attached, and thus the numbers here represent a best estimate as to the costs that are expected to be incurred. These figures represent an estimate provided to Metabiota by NHLS and verified as being reasonable by Metabiota through internet searches. Ground transportation was not broken out as a separate piece as airfare searches and taxi fare searches suggested that the estimates for airfare should provide enough headroom to cover ground transportation. Metabiota is aware that DTRA prefers not to pay full USG per diems to foreign nationals. As none of the travelers will be US citizens, per diem costs are set at the NHLS proposed rate, which is lower than US G standard.	Technical Proposal, p13
5	The "Travel Cost" matrix defines the allotted funds for lodging, meals, and incidentals, but the proposed rates fall below the USG Foreign Per Diem Rates included in the proposal. Please confirm that the proposed costs are correct.	This explanation has been added to the budget narrative.	
6	Metabiota proposed the provision of 25 tablet Apple iPad Air. However, the technical proposal did not discuss the property transfer process. Please clarify the plan to accomplish this activity.	Metabiota, through NHLS, will execute transfer of custody with each individual recipient institution upon receipt of shipment of both the iPad tablets and the PortaCounts. This documentation will be copied and retained by both Metabiota and NHLS	Technical Proposal, p13
		This information has been added to the budget narrative	
7	The materials estimate section lists 25 Apple Lightening to USB Cables twice and with two different costs. Please clarify the disparate costs and explain why they are not duplicative	Materials and equipment purchases are executed on a cost-reimbursable basis. The values in the proposal reflect estimates generated during the proposal development process, and are subject to change based on market rates, currency fluctuations, expiring quotes, and other factors. During procurement, the actual bill of materials may change to reflect these factors. The budget narrative has been amended to reflect the above. Here, Metabiota has priced out two different lengths of cables (1m vs. 2m) from South African vendors. Both are included in the estimate for both flexibility in specific use cases and realized, e.g., as charging cables typically have a length only shorter (in, per than tablets through daily wear. The budget has been amended to clarify the two lengths of cables.	Technical Proposal, p12 Budget, Materials tab
8	Under 'Phase 2' Deliverable 2, Metabiota proposed to develop and conduct online e-learning training and training manuals. Please clarify how many trainings are planned and confirm that adequate hours were included in the proposal to support the training	Metabiota and NHLS will pilot the OHASIS module at up to three institutions. During these sessions, the online training materials and manuals will be tested. I would consider the goal to be more akin to beta testing than formal trainings - once the module and its instructional systems are complete, NHLS intends to roll it out to more than just the three institutions in the pilot program, but will do so on its own timeline. As indicated in the response to #2, the hours proposed were suggested by NHLS and may in truth be insufficient, but NHLS have agreed to cover the costs of any additional labor that is required to accomplish the objective.	Technical Proposal, p8
9	Under 'Phase 3, Process' Metabiota proposed conducting initial Fit Testing trainings for a select starting cohort of National Health Laboratory Services (NHLS) Staff. However, Metabiota did not specify the number of initial training sessions. Please clarify the level of effort required.	Metabiota is working with NHLS to determine the best path forward. Initial planning had suggested the possibility of deploying the core training team out to each major location to conduct trainings, but through discussions with NHLS we are now considering a single centralized training where the teams which will be assigned to each Portacount unit would be trained simultaneously. They may be supported or observed in subsequent fit-testing efforts by the lead trainer. The level of effort required for this effort is already included in this budget	N/A

10	Under 'Management Approach,' Metabiota included 'Initiation' as an activity. However, initiation was included as an activity to be performed under the original technical directive provided in the contract Base Year. All proposed "Phases" are a continuation of ongoing activities. If any hours are allocated towards this activity, CBEP recommends removing them from the current proposal.	No hours have been allocated to "Initiation" in this proposal or corresponding budget. The text in the "Management Approach" is essentially how we approach all projects under AEP, and the standardized text was included for completeness of understanding	N/A
11	In May 2015, Metabiota provided a status update of NHLS BS&S on-going activities which estimates a four month completion timeline on proposed Phase 1 and Phase 2 activities. Under the current proposal, Metabiota provides a timeline of six months for Phase 1 and seven months for Phase 2. Since the scope did not change, please clarify the cause for the increase in the proposed schedule.	While implementing activities associated with Obj 1, Metabiota encountered the internal bureaucracy associated with approvals and forward movement on the NHLS side. As an example, NHLS posted a tender for the videography component in August, which closed on 15 September 2014 as planned. But was not approved until 27 January 2015. It took ~135 days to gain the final approval from the NHLS CEO, which was required prior to the start of any Obj 1 activities. We felt it prudent to build a buffer of three additional months to account for NHLS internal approval processes.	N/A

TD 010 One Health Epi Training - South Africa

Objectives

Increase the operational biosafety and bio-surveillance capacity through training events and the development of standard operating procedures for emergent disease outbreak response, supporting interagency cooperation and a unified training approach.

Period of Performance: 05/16/2015 - 12/3/2015

CLIN	Total ROM	Total Invoiced	Total Remaining
1002	$124,815.63	$22,820.66	$101,994.97
1003	$663.20	$0.00	$663.20
1004	$576.60	$0.00	$576.60
1005	$8,496.50	$0.00	$8,496.50
TOTAL	$134,551.93	$22,820.66	$111,731.27

CLIN 1002 – Labor

Per contractual agreement with DTRA CBEP it was determined that this non-legacy project will not begin incurring operational costs prior to technical direction approval. Listed below is a breakdown of labor activity associated with proposal development and related proposal development communication with DTRA CBEP representation.

Program Manger: 48 Hours

(b)(6) was responsible for leading the development of the original technical proposal and for managing and assigning tasks to all those involved in the process. He was responsible for communication to DTRA during this time. (b)(6) assumed the management role upon his arrival at Metabiota and took over the responsibility of maintaining communication with DTRA CBEP representation, setting up bi-weekly calls, developing a communication plan, and ensuring that the Metabiota project team was prepared for the approval of the technical direction.

Trainer 1:

(b)(6) was tasked with building out the technical proposal at the direction of (b)(6) and with input from (b)(6) She was also responsible for providing expertise on government and DOD requirements, working with (b)(6) to develop a communication strategy with all stakeholders.

Trainer 3: 12.5 Hours

Robyn Woodbury's activities included technical support for proposal development with regard to training scheduling and timeline development regarding the materials review process.

Subject Matter Expert 3: 30 Hours

(b)(6) provided technical expertise in proposal development (b)(6) was tasked to ensure that adequate time and Level of Effort was assigned to each labor category from a technical perspective. She was also tasked with providing advice and insight to the program manager and program coordinator regarding the development of the operational phase timeline.

1005	$8,496.50		$8,496.50
TOTAL	$134,551.93	$50,392.30	$84,159.64

CLIN 1002 – Labor

Program Manger: 48 Hours

(b)(6) provided facilitation and oversight to the program. His efforts included leading separate biweekly calls with both DTRA CBEP representation and project performers in country. Jay provided oversight to the development of the project schedule and the project communication plan. He additionally lead coordination efforts to both support the review and analysis of the One Health Epidemiology landscape in South Africa, and to prevent duplication of efforts on behalf of the subject matter experts.

Additionally, and to ensure understanding among the project team, (b)(6) ead individual calls with each in-country stakeholder. This provided an opportunity for direct questions and thorough explanation of project purpose and scope.

Trainer 1: 57.5 Hours

(b)(6) assisted with completion of Module 1 review and analysis by developing content outlines for all subject matter experts supporting this component. In addition she coordinated bi-weekly stakeholder meetings and Bi-Weekly calls with DTRA CBEP and participated in meetings regarding technical completion of the effort (b)(6) was additionally responsible for taking meeting notes and disseminating relevant information to relevant project stakeholders.

Subject Matter Expert 2: 30 Hours

(b)(6) completed the module 1 review and analysis of one health epidemiology materials, and engaged in conversation with other subject matter experts contributing to this project. She provided weekly reports to (b)(6) regarding her progress and contribution to the one health epidemiology landscape review and analysis, and presented suggestions to support effective communication between all project subject matter experts..

(b)(4) ; (b)(6)

#	DTRA Comment	Metabiota Response	Location
[redacted]			
1	Under the 'Labor' section of the 'Budget Narrative,' Metabiota proposed SME III or Trainer III to be included "as needed," but these positions are listed as FTEs in the labor matrix and are a part of the total budget. Please clarify the actual number of hours needed, if any,for these labor categories.	Please note that the "FTE" designation implies these individuals are Metabiota personnel and will be matrixed into this activity as necessary. The use of FTE does not imply that these individuals are assigned to this particular project full time. Specifically, these labor hours had been assigned to both an employee who is no longer part of the organization as of 12 August 2015, in Trainer III (Robyn Woodbury), as well as a yet to be determined SME III Clinician - identified in the narrative in the case that an individual with practical medical knowledge is needed to review or prov de advisement on the development of training materials . Both of these labor hour catergories were set to be filled by full - time Metabiota staff on an as needed basis; however, after examination of the current needs for the program, each of these labor categories have have been reduced and altered. Trainer III hours have been reduced 50% and changed in category to Trainer II. SME III hours have been reduced 75%. Metabiota still anticipates a need to employ the expertise of individuals who qualify at each of these labor categories. Changes have been made to the budget, and the budget narrative has been updated. Please also note that the budget provided for this effort is a rough order of magnitude (ROM) and is not contractually binding. The hours proposed are in a best faith estimate for effectively and efficiently executing the requirement. If hours are not needed, the USG will not be billed for them.	TD-010 OHE-SA Budget 20150826 'labor detail'; Metabiota Technical and Cost proposal pg. 12-13
2			
3	3. Metabiota proposed the need for a program manager, a project coordinator, and a subject matter expert III. Since this is an ongoing activity, CBEP anticipates that personnel under these labor categories will pick up from where previous efforts stopped. Please clarify how Metabiota will ensure no duplication of effort and how each labor category will continue work from past activities.	Metabiota will proceed using the same personel for the positions of coordinator and subject matter expert III. However, a new porgram manager, Jay Miller, has been hired and will take over the role from Dennis Lee. Mr. Miller has been briefed by Metabiota AEP leadership on the expectations a nd standing of the project and will proceed in kind. As a whole, Metabiota staff will avoid duplication of efforts through careful planning and tracking of activities asspicated with all tasks outlined in TD-010. Metabiota will adhere to a strict schedule from the beginning of phase 1 that ensures culpability regarding the accomplishme nt of each task and prevents duplicate billing	TD-010 OHE-SA Budget 20150826 'labor detail'; Metabiota Technical and Cost proposal pg. 12-13.
4	4. The 'Travel Cost' matrix breaks down costs into the categories of: airfare, lodging, and meals and incidentals. In many cases, ground transportation is a cost included in travel estimates; however, it does not appear to be specified in the proposal. Please clarify if there is a need for ground transportation.	There will be a need for ground transportation in country. This oversight has been rectified. Per person cost estimates have been calculated based on previous travel to the region and incorporated into the budget.	TD-010 OHE-SA Budget 20150826 'travel costs reimburseable';
5	5. It is unclear what the proposed "office supplies" and "in-country communications capabilities" are expected to be, or how Metabiota arrive at the estimates proposed. Please clarify the basis of estimate for the proposed materials and supplies, and review the proposed materials budget for completeness.	We anticipate the need to have general office supplies and presentation materials during Metabiota's in country efforts. We will additionally require some significant capacity for in-country communication including cellular and wifi usage. These costs have been itemized within the budget and are based on previous travel to the region.	TD-010 OHE-SA Budget 20150826 'Materials'; Metabiota Technical and Cost proposal pg. 13-14.

Metabiota's Technical and Cost Proposal

"DTRA/CBEP Review and Tailor One Health Epidemiology Training Materials
for Republic of South Africa (OHE-RSA)

Executive Summary

In response to Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) regional leadership tasking via the Academic Engagement Partnership (AEP) contract vehicle, Technical Direction 010, Metabiota, Inc. seeks to support the DTRA CBEP mission through the conduction of a tailored review and, if found necessary, modification of existing One Health Epidemiology (OHE) Walter Read Army Institute of Research (WRAIR) Training Modules One and Two for key stakeholders in the Republic of South Africa (SA).

Through this activity, Metabiota will engage with key South African stakeholders including the Centers for Disease Control and Prevention – South Africa (CDC-SA), U.S. Department of Agriculture – South Africa (USDA-SA), and South Africa. This task will allow for the development of modified training materials, based on existing OHE materials developed by epidemiologists from the Walter Reed Army Institute of Research (WRAIR), to ensure that successive trainings will meet the specific training objectives and requirements of South Africa. Current OHE training materials cover basic epidemiology (Module One) and outbreak investigations (Module Two). These modules introduce basic concepts of epidemiology, statistics, outbreak investigation, surveillance, One Health, and clinical recognition of pathogens with bioterror potential.

These proposed efforts will focus on enhancing South African capacity to conduct OHE trainings, thereby enhancing the capacity to conduct disease prevention, detection, surveillance and response activities. Moreover, this activity will concurrently facilitate cooperative scientific engagement amongst key stakeholders in South Africa in support of the DTRA CBEP mission.

This document outlines the approach that Metabiota will employ to accomplish the requirement. In short, Metabiota intends to:

1. Conduct a comprehensive review of existing OHE WRAIR training materials, a landscape review of current status and understanding of South African training requirements and objectives, and coordinate revision or addition discussions.
2. Develop final revision recommendations of existing OHE materials.
3. Identify OHE training material approval requirements for South Africa and provide scientific and technical support for the facilitation of host country approval.

Project Overview

Background

Over the past few decades, we have experienced a dramatic increase in the rate of emergence and re-emergence of infectious diseases. On average, one new virus emerges every 19 months, most often with origins in animal populations. The threat of emerging pathogens affecting humans worldwide continues to increase; and underscores the need for effective, integrated human and animal disease surveillance, reporting, diagnostics and response capabilities.

To manage these risks, DTRA CBEP aims to reduce potential impacts of biological threats by enhancing biological safety and security (BS&S), awareness of biological risks, and knowledge

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

related to biological pathogens globally. To do so, DTRA CBEP works collaboratively with partner nations, other USG agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health; promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. In AFRICOM, specifically, DTRA CBEP seeks to enhance One Health Epidemiology capabilities and develop and maintain local and regional operational and training capacity in order to sustainably manage the threat of infectious disease events.

In support of this approach, Metabiota intends to administer a high-value review and revision process with key South African stakeholders in order to support strategic DTRA CBEP objectives by increasing local and regional capacity to conduct OHE trainings through collaboration on topics critical to biological threat reduction, and enhancing the regional capacity to for biorisk management thereby managing the threat of infectious disease events. The teams on-the-ground experience and decades of expertise makes Metabiota well positioned to support the implementation of this activity, as well as scientific engagement in the AFRICOM's area of responsibility.

Goals and Objectives

This activity aims to facilitate approval of OHE training materials by the relevant stakeholders in the government of South Africa. Metabiota will provide DTRA CBEP partners in South Africa with support to properly orient existing OHE training materials to best fit their country-specific objectives and requirements as well as understand the necessary steps for host country approval of the OHE trainings. The delivery of these requirements will cultivate OHE knowledge and in-country capacity expansion in South Africa and allow for further opportunities for national and regional engagements.

To achieve this purpose, Metabiota and their collaborative partners will:

- Identify and collaborate with key South Africa stakeholders to develop a communication plan for the OHE training material review
- Conduct a comprehensive SME review of existing OHE training materials to provide technical support to the South African stakeholders
- Conduct a training landscape review describing the training objectives and requirements of South Africa
- Develop recommendations for revision or additions to existing OHE training materials based on identified South African training needs
- Provide scientific and program management support to facilitate host country approval of OHE training
- Develop a proposed training event plan based on specific training needs and requirements for South Africa. (i.e. type and number of trainees, etc.)

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Impact

Through the implementation of a Metabiota facilitated review of existing OHE training materials with key South Africa stakeholders, and the identification of South African requirements for host-county OHE training approvals, DTRA CBEP will have:

- Enhanced South Africa's capacity to conduct OHE trainings, thereby enhancing their national and regional capacity to conduct disease prevention, detection, surveillance and response activities for pathogens with bioterror potential.
- Facilitated cooperative scientific engagement amongst key stakeholders in South Africa and enhancing their networks for collaborative research and disease detection and control activities.

This activity will provide a measurable and achievable result in the coordination of approval for OHE training materials while promoting a collaborative network with key local stakeholders in South Africa.

Risk Management

In order to maintain course action and guarantee trainings that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown on the next page as Table 1. Identifying and acknowledging the risks associated with not implementing this training, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Schedule and Performance						
Technical Engagement/Input	Key South African stakeholders not engaged in the process and do not provide review comments and feedback in timely manner	5	3	**Med-High**	Metabiota will work closely with CBEP to identify and engage the most appropriate coordination points of contact for each key stakeholder	Med
Communication	Effective, informative, and ongoing communication with key SA stakeholders to allow for coordination of efforts and meet the deliverables	4	4	(b)(4); (b)(6)	Metabiota will hold regularly scheduled conference calls with key SA stakeholders and CBEP to encourage ongoing discussion throughout all phases of this effort	Med
Fluidity in Process and Coordi	Identifying the necessary tasks to facilitate host country approval will be an iterative process, and the overal objective must be maintained through the multiple iterations	5	5	Med	Metabiota will discuss goals and objectives for each iteration of the review and revision process to ensure that overall objective is met	(b)(4); (b)(6)

Implementation Plan

Introduction

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager and Regional Program Manager, and Country Manager to direct the operational and administrative support required to ensure implementation of OHE RSA. Our Program Manager will oversee these activities, with the support of Research and Data Analyst, Project Coordinator, stakeholder collaborators and SMEs to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Communications Protocols

Metabiota will maintain open communications with international collaborators necessary for implementing the training, to include local and regional stakeholders. In addition, Metabiota will maintain routine communication with DTRA CBEP to ensure they have full visibility on the training engagement, status and process of execution.

Technical Approach

Phases of Technical Approach

Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following phases are required for this project:

Phase 1: Initiation and Coordination
- *Subtask 1: Identification of Stakeholders*
- *Subtask 2: Requirements Review*

Phase 2: Training Materials and Landscape Review
Phase 3: Host Country Approval Facilitation Support

Phase 1 – Initiation and Coordination (July 1 – September 15, 2015)

Subtask 1: Identification of Stakeholders
Objective: Identify all relevant stakeholders necessary for training material approval and develop and establish a working communications plan for coordination of project efforts.

Process: Metabiota, in coordination with DTRA CBEP, will identify POCs with key in-country stakeholders including, but not limited to, the Centers for Disease Control and Prevention – South Africa (CDC-SA), U.S. Department of Agriculture – South Africa (USDA-SA), and key entities within the government of South Africa including but not limited to the Department of Agriculture, Forestry and Fisheries (DAFF), National Department of Health (NDOH), and National Institute for Communicable Diseases (NICD).

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Subtask 2: Requirements Review
Objective: Understand South Africa approval requirements and processes.

Process: In coordination with key in-country stakeholders, Metabiota will determine what processes are required to secure host country approval of training materials. During this time, the lead Metabiota SME will conduct a comprehensive review of the existing OHE training materials to enable them to provide the South African stakeholders with technical support during the materials review process. Based upon their initial assessment of SA needs and training materials, the lead SME may require additional SME resources. As coordination proceeds, Metabiota will solicit an opinion from key SA stakeholders as to the suitability of the current training materials for South African training needs and determine whether they currently meet the standards for approval.

Deliverables:

- Deliverable 1: Submission of key stakeholder POC list and communication plan.
- Deliverable 2: Submission of South African host country approval requirements and process report.
- Deliverable 3: Submission of SME OHE review report.

Phase 2 – Training Landscape Development (September 16, 2015 - December 31, 2015)
Objective: Develop an understanding of South African training objectives and requirements and identify potential revisions or additions to existing OHE materials.

Process: Metabiota will coordinate with stakeholder POCs to develop an understanding of South Africa's training objectives and requirements for the conduction of OHE trainings and for the host-country approval of OHE training materials. Metabiota SME's will provide stakeholders with an overview of the existing OHE training materials and preliminary recommendations for areas of review. Based on stakeholder input, Metabiota will develop a training landscape review.

Deliverables:

- Deliverable 1: Submission of the landscape review report.

Phase 3 – Host Country Approval Facilitation Support (September 1-February 29, 2016)
Objective: Identify revisions or additions to OHE training materials, and provide support to South African stakeholders in obtaining host country approval of OHE trainings and training materials.

Process: Metabiota will provide recommendations for revisions or additions to the existing training material based on inputs gathered from key stakeholders in previous stages. Metabiota SME's will engage, facilitate, and support SA stakeholders in their efforts to make any modifications necessary for host country approval. During this time, Metabiota SMEs and Program Management will coordinate with SA stakeholders to ensure proper technical and

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

program management support is provided to facilitate the host country approval process. Near the end of this phase, Metabiota will convene an in-country working group meeting with SA stakeholders to facilitate any final modifications to the material. At this time, if the SA environment allows for it, Metabiota will develop an OHE training plan with the SA stakeholders.

Deliverables:

- Deliverable 1: Submission of OHE training material revision or addition recommendations.
- Deliverable 2: Provide monthly updates on OHE training material host country approval.
- Deliverable 3: Submission of post-action report and OHE training plan recommendations.

The below table describes the detailed technical approach that Metabiota will take to complete this effort and provide the required deliverables. The following table (Timeline) describes the anticipated timeline of each phase.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Technical Approach

Program Element	Program Tasks	Resources Required	Key Milestones and Deliverables	Projected Timeline
Phase 1.1: Coordination	• Develop list of SA and USG stakeholders necessary for training material approval • Develop communication plan for coordinating with all relevant stakeholders	• SME III – Epidemiology • Program Manager (PM) • Project Coordinator (PC)	1. Establish communication with key stakeholders 2. Communication Plan	Months 1-2
Phase 1.2: Requirements Review	• Develop understanding of requirements and process for training material approval • Conduct comprehensive review of existing OHE training materials • Gather initial assessment by SA stakeholders of status of training materials.	• SME III – Epidemiology • SME III/Trainer III (as needed) • Program Manager (PM) • Project Coordinator (PC)	1. Documented process for approval of materials 2. Complete review of existing OHE training materials	Months 1-2
Phase 2: Training Landscape Development	• Coordinate with key stakeholders to understand SA training objectives and requirements; based on input from key stakeholders develop training landscape review • Provide overview of existing OHE training materials; coordinate with key stakeholders to understand SA concerns with training materials and why	• SME III – Epidemiology • SME III/Trainer III (as needed) • PM • PC	1. Obtain clear understanding of SA training objectives and requirements 2. Training Landscape Review	Months 3-6
Phase 3: Facilitation of Host Country Approval	• Develop recommendations in conjunction with SA stakeholders for revision of materials or additional content. • Provide scientific/technical and program management support to facilitate host country approval of OHE training	• SME III – Epidemiology • SME III/Trainer III (as needed) • PM • PC	• Recommendations for OHE training materials revisions or additions • Facilitate SA approval for OHE training materials • Post-action report and OHE training plan	Months 3-6

Timeline

Phase	Q3 2015			Q4 2015			Q1 2016		
	July	Aug	Sept	Oct	Nov	Dec	Jan	Feb	Mar
Phase 1: Initiation and Coordination									
Phase 2: Training Landscape Development									
Phase 3: Host Country Approval Facilitation Support									

Management Approach

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the Program Manager, Trainer, and Subject Matter Experts based on their administrative and scientific expertise. This team of experts will ensure the overall project management and tasks associated with this effort are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

Initiation

Prior to initiating any action, Metabiota and DTRA CBEP will secure a clear understanding of the objectives and mission of this undertaking, and make sure all stakeholders agree to it. Following authorization to proceed by DTRA CBEP, Metabiota will move into the planning and execution of the community outreach and regional workshop activities.

Execution

The core project management team will maintain oversight and implementation of the project at all times and will ensure rapid execution of this effort, tracking objectives to ensure the project stays on schedule to finalize the adapted training materials. The project will be managed according to the phased implementation plan and will be course corrected, as needed to ensure target end-goals are reached. The following tools will be used to guarantee the project schedule will be maintained:

Project Administration

1. Weekly team meetings and conference calls will be held to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Coordinator, and will include the Regional Program Manager, Training Coordinator,

This material shall not be disclosed outside the U.S Government and shall not be duplicated, used or disclosed in a whole or in part for any purpose other than to evaluate this material. If, however, a contract is awarded to this offeror as a result of- or in connection with- the submission of this material, the U.S Government shall have the right to duplicate, use or disclose the data to the extent provided in the resulting contract. This restriction does not limit the U.S Government's right to use information contained in this material if it is obtained from another source without restriction.

SMEs, and AEP leadership, as needed based on the requirements and stage of implementation.
2. Routine calls and communication will be held with DTRA CBEP regional leadership and Metabiota to provide routine status updates and ensure project implementation expectations are met.

Project Reporting

1. Weekly status reports will be provided by the Program Manager to senior Metabiota leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction, as needed to ensure project goals are met.

Monitoring and Controlling:

1. Routine risk assessment will be performed internally among the Metabiota project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with DTRA CBEP regional leadership to ensure the project remains on track and is implemented according to standard.
3. Routine oversight and coordination will be performed to ensure stakeholders are performing in-country requirements to ensure successful execution of this activity. Monitoring will include both administrative and fiscal oversight when appropriate.

Completion

Metabiota will drive the project to completion in a timely manner by maintaining a focused project schedule with routine meetings and communication with DTRA CBEP regional leadership. This will allow for continued coordination, while maintaining targeted objectives. As the activity progresses, Metabiota will provide all required deliverables and after action reports to allow for lessons learned and continuation of solid execution and implementation of activities. Metabiota believes that the experience and management it will bring to this project, in collaboration with DTRA CBEP will guarantee success.

Cost Management

The Metabiota team and all collaborators will maintain an acute focus on cost management to ensure that project deliverables are met at a reasonable cost. Metabiota will provide full oversight of all partners to ensure accurate and responsive financial reporting and will facilitate cost savings to the Government wherever possible. Metabiota will follow procurement regulations ensuring the best price is received under the time constraints using all means available.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Budget Narrative

Period of Performance

The Period of Performance for this effort is May 16, 2015 to March 31, 2016.

Labor

Costs for direct labor to support this activity is required for the following personnel:

- Metabiota Program Manager: The Metabiota PM, (b)(6), will oversee the execution of program objectives towards the completion of DTRA CBEP goals at the regional level, and will lead communication with DTRA CBEP for this activity. The PM will do so by maintaining oversight of stakeholder coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other potential DTRA CBEP subcontractors meet all project requirements and deliverables erstwhile ensuring the program remains within scope, budget, and timeline. (b)(6) who assumed this role on July, 7 2015, took over responsibilities from (b)(6) and was briefed comprehensively on the project's status and progress. He will be responsible for ensuring efficiency and effectiveness of hours assigned and for preventing any duplication of effort on this project.
- Metabiota Project Coordinator (Trainer I): The Metabiota PC, (b)(6) will ensure the execution of project objectives towards the completion of DTRA CBEP goals at the project level. The PC will do so by managing stakeholder coordination and project execution, with a focus on project milestone achievement and stakeholder buy-in development and maintenance. The PC will regularly communicate project status with the Metabiota PM, and will assist the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will also assist the PM in ensuring all project requirements and deliverables are fulfilled while concurrently ensuring the project remains within scope, budget, and timeline (b)(6) (b)(6) will remain active in this capacity throughout the period of performance and will ensure that no duplication of effort occurs within her scope.
- Metabiota SME II – Epidemiologist, (b)(6) will assist in the coordination with DTRA CBEP and key SA stakeholders, to obtain understanding of training objectives and requirements in SA, conduct comprehensive review of existing materials, assist in development of training landscape review, provide recommendations for revisions of existing material or for additional material content, and provide necessary scientific/technical support to facilitate approval of OHE training in SA. (b)(6) was involved in very early project activities and is well aware of all accomplishments and activities to date. Moving forward, she will remain active in the SME II capacity throughout the period of performance and will ensure that no duplication of effort occurs within her scope.
- Metabiota Trainer III-Training Coordinator, (b)(6) will ensure effective development of the technical and cost proposal for this project specifically with

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

regard to training scheduling and execution. (b)(6) is responsible for aiding in the development of the technical proposal and will not be involved in any aspect of the project from 08/01/2015 and beyond.

- As needed. Metabiota SME III or Trainer II – Based on communications with key stakeholders and the training objectives or requirements identified in SA, the expertise of either a clinician or a secondary Metabiota epidemiologist (b)(6) will be engaged for this activity to assist in conducting comprehensive review of existing materials, assist in development of training landscape review, and provide recommendations for training strategies or revisions and additions to training material. The hours budgeted for these two positions assume a scenario where stakeholders indicate a significant need for additional expertise in assessing materials and training landscape, and facilitating host country approval of materials. Of note, (b)(6) has been involved in the One Health Epidemiology training in Uganda and may provide additional consistency from an integration standpoint. Hours proposed for these labor categories are based on a best estimate for effectively and efficiently executing the requirements. Should these hours not be required for this project, the government will not be billed for them.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials

Materials and supplies are required to support project activities including stakeholder outreach and coordination, training material production, and host country approval facilitation. Materials will need to be procured in country by Metabiota staff. These items will be used to facilitate final modifications to training documents, and will allow for effective communication while promoting operational safety. These items will include:

- Office supplies to support the facilitation of final training modifications
  -Writing tools
  -Stationary
  -Folders
  -General presentation support materials
- Printing services to ensure the effective communication during facilitation of final training modifications
  -Printing of sample training materials
  -Printing of materials for presentation to working groups
- Local cellular communication to ensure safety and logistical success for the in country team:
  -Local SIM Cards from in country provider
  -Credit for local calls from in country provider
- Internet usage tools to ensure capacity for consistent communication with US based stakeholders.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

-Internet and data usage credit from in country provider

Costs have been estimated based on previous travel and work in the region.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. Metabiota personnel performing on this project are already insured.

Travel

Funds are requested for three Metabiota staff to travel to South Africa to facilitate final modifications to training materials. Metabiota staff will support project implementation, coordinate stakeholders, and provide technical support for obtaining host country OHE training approval to the key South African stakeholders.

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP AFRICOM in the implementation of Review and tailor of WRAIR OHE Modules One and Two training materials. Metabiota will ensure, through strong project management and risk mitigation that the training will be executed in an efficient and timely manner delivering a top quality course geared to support enhanced biosurveillance and biosafety efforts in the region.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Appendix A - Team Metabiota Overview

Metabiota is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota currently supports a number of Defense Threat Reduction Agency's Cooperative Biological Engagement Program (DTRA CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. Metabiota's mission aligns well with CBEP and the entire Metabiota team is focused on supporting our USG Partners in reducing the risk of biological threats worldwide, and employs a collaborative and agile approach to biological risk reduction.

To ensure a successful event, Metabiota, in coordination with DTRA CBEP regional leadership and in country partners have built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact DTRA CBEP objectives.

This material shall not be disclosed outside the U.S Government and shall not be duplicated, used or disclosed in a whole or in part for any purpose other than to evaluate this material. If, however, a contract is awarded to this offeror as a result of- or in connection with- the submission of this material, the U.S Government shall have the right to duplicate, use or disclose the data to the extent provided in the resulting contract. TD 011 Ukraine TADR Activity Project 4 (TAP-4)

Objectives

The overarching focus of TAP-4 is to establish and standardize a regional alliance between several CBEP partner countries within Eastern Europe to raise awareness to and provide education on ASF.

Period of Performance: 05/16/2015 - 01/31/2015

CLIN	Total ROM	Total Invoiced	Total Remaining
1002	$111,733.00	$38,283.07	$73,449.93
1003	$105.27	$0.00	$105.27
1004	$2,768.39	$0.00	$2,768.39
1005	$16,462.50	$8,122.49	$8,340.01
TOTAL	$131,069.16	$46,405.56	$84,663.60

CLIN 1002 – Labor

The primary labor costs for TAP-4 have been subject matter expertise in the form of two Trainer 2's from SAFOSO AG. The SAFOSO trainers implemented the 3rd training workshop in Lviv, Ukraine for the regional African swine fever (ASF) outreach program involving Armenia, Georgia, Kazakhstan, and Ukraine. The SAFOSO trainers also implemented a training-of-trainers in Kyiv, Ukraine, specific to the Ukrainian veterinary community. Additionally, PM and PC costs have been incurred in finalizing the SAFOSO subcontract under the T&M mechanism, managing requests from the Ukrainian participants, and in preparing for the final workshop to be held in Tbilisi, Georgia in November.

Program Manager: 64.5 Hours

Dennis Lee led proposal development, including the development of the overall project budget and the drafting of text for both the technical and management approaches. He oversaw subcontract development to include editing of SOW and ensuring progress through Metabiota's contracts shop as well as project activities, including communication with BTRIC personnel integrating efforts with the Ukrainian veterinarians.

Trainer 1: 23 Hours

(b)(6) was responsible for assisting with proposal development, to include the drafting of text for both the technical and management approaches, and assisting with ensuring CDRLs such as Training Event Plans, Travel Authorization Requests, and more are delivered in a timely fashion. She Participated in calls with DTRA/A&AS to assist PM in ensuring all relevant information was delivered.

Trainer 2: 155 hours

SAFOSO trainers (b)(6) ed the development of workshop agendas and coordination of the various country participants in developing tailored training materials for use in each country's respective outreach efforts. They also developed the Ukraine-specific workshop where a training of trainers occurred to teach the Ukrainian veterinary community how to conduct outreach.

CLIN 1003 – Materials and Supplies

No material costs have been incurred.

CLIN 1004 – ODCs
No ODCs were incurred in the T&M period.

CLIN 1005 – Travel
Travel costs were incurred for both Brad Brooks and SAFOSO trainers during the 3rd training workshop in Lviv. The travel costs for SAFOSO have not yet been invoiced; existing travel costs here come from the portion of (b)(6) travel that followed the transition to the T&M.

TD 01 Travel 6 C

TD 011 Ukraine TADR Activity Project 4 (TAP-4)

Objectives

The overarching focus of TAP-4 is to establish and standardize a regional alliance between several CBEP partner countries within Eastern Europe to raise awareness to and provide education on ASF.

Period of Performance: 05/16/2015 - 01/31/2015

CLIN	Total ROM	Total Invoiced	Total Remaining
1002	$111,733.00	$44,274.15	$67,458.86
1003	$105.27		$105.27
1004	$2,768.39		$2,768.39
1005	$16,462.50	$13,413.15	$3,049.35
TOTAL	$131,069.16	$57,687.30	$73,381.87

CLIN 1002 – Labor

Program Manager: 45 Hours

(b)(6) provided program oversight maintaining regular communications with performers and stakeholders. He coordinated Metabiota efforts (both BTRIC and AEP) in preparation for the final workshop in Tbilisi, Georgia, including review and submission of travel authorization requests and CLS forms.

Trainer 1: 35 Hours

(b)(6) completed all requirements to prepare for the final regional workshop in November in Tbilisi, Georgia, including drafting CLS forms and all other travel requirements. She participated in communications with Ukrainian performers and with DTRA/A&AS to assist ensuring final deliverables remain on schedule.

Trainer 2: -27.5 hours

67.5 Hours for (b)(6) were incorrectly invoiced and are therefore being credited back to the government. (b)(6) led the workshop participants from each country, including Ukraine, through the process of developing educational materials (flyers and posters) and developed a survey to attempt to measure the impact of the educational outreach activities. Unfortunately, due to the ongoing ASF outbreak in Ukraine, the actual distribution of materials by the Ukrainians has been impacted. SAFOSO also participated in regular calls with Metabiota, and led the development of the agenda for the final regional workshop.

CLIN 1003 – Materials and Supplies

No costs invoiced.

CLIN 1004 – ODCs

No costs invoiced.

CLIN 1005 – Travel

No costs invoiced

Executive Summary

In response to Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) regional leadership tasking via the Academic Engagement Partnership (AEP) contract vehicle, Technical Direction 011, Metabiota, Inc. seeks to support the DTRA CBEP mission by conducting awareness-raising and knowledge enhancement activities regarding African Swine Fever (ASF) in Ukraine as part of a broader regional ASF engagement effort between Ukraine, Armenia, Georgia, and Kazakhstan. These proposed efforts will focus on development and enhancement of disease prevention, detection, surveillance and response capacity within Ukraine, while concurrently facilitating cooperative research and scientific engagement in the greater region in support of the DTRA CBEP mission.

Through this activity, Metabiota will engage with SAFOSO AG, a Swiss consulting company with expertise in veterinary health-related capacity building and training efforts, Ukrainian subject matter experts (SME), and other local and regional stakeholders in order to direct technical support in the development and implementation of public awareness initiatives, including risk assessments and mitigation strategies to reduce the threat of ASF in domestic and wild swine populations.

This document outlines the approach that Metabiota will employ to accomplish the requirement. In short, Metabiota intends to:

1. Facilitate the rollout and observe an independent outreach teaching exercises program conducted by Ukrainian SMEs for laymen that have regular contact with swine populations in order for them to recognize clinical and epidemiological patterns of ASF.
2. Support the expansion of in-country understanding of common sources and routes of ASF exposure, preventative measures, economic impacts of ASF, how to recognize symptoms, and how to respond to suspected cases.
3. Support Ukrainian stakeholder engagement with regional research scientists and other biological risk management stakeholders through cooperative pursuits and enhancing host-nation capacity to conduct disease surveillance and response.

Project Overview

Background

Especially dangerous pathogens in agriculture are a challenge for animal health and food security infrastructures and pose a significant threat to security and economic stability across the globe. To manage these threats, DTRA CBEP aims to reduce potential impacts of agricultural biological threats by enhancing biological safety and security (BS&S), awareness of biological risks, and knowledge related to biological pathogens globally.

To do so, DTRA CBEP works collaboratively with partner nations, other USG agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health; promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

secure facilities in a sustainable manner. In Eastern Europe and Central Asia, specifically, DTRA CBEP seeks to increase regional collaboration on topics critical to biological threat reduction and enhance the regional capacity to perform biorisk management and mitigate the threat of infectious disease events.

Since emerging in the region, many ASF cases have occurred in pig farms along shared boundaries. Although surveillance of wild boars and commercial pigs for ASF is ongoing, reemergence and spread of the disease remains a threat to commercial swine populations through interactions of wild boar with domestic swine raised within small private farms or backyards, uncontrolled movement of domestic pigs and, swill feeding. As Former Soviet Union (Eastern European - EE) countries serve as geographical land barriers between the Russian Federation, where ASF is endemic, and Western Europe and Asia, raising awareness among swine farmers, veterinarians, and other key personnel is an integral component in preventing the spread of this disease.

TAP-4 was originally developed under the Biological Threat Reduction Integrating Contract (BTRIC) mechanism in 2013. However, this funding mechanism, including all ongoing research efforts, ceased February 2014. In an effort to complete the final TAP-4 stages and meet previously identified goals and objectives, DTRA CBEP tasked Metabiota with implementing TAP-4 in Ukraine to raise awareness and enhance local ASF knowledge, and to aid the establishment and standardization of a regional alliance between several DTRA CBEP EE partner countries.

In support of this approach, Metabiota intends to provide administrative and technical support for the rollout of an independent outreach teaching exercise program conducted by Ukrainian SMEs, in addition to supporting a regional workshop designed to increase collaboration on topics critical to biological threat reduction, and enhancing the regional capacity to perform biorisk management and mitigate the threat of infectious disease events. The teams on-the-ground experience and decades of expertise makes us well positioned to support the implementation of these and associated activities, as well as scientific engagement in Ukraine and the other engaged countries.

Goals and Objectives

This activity aims to provide DTRA CBEP partners in Ukraine with support to manage the risk of further spread of ASF within its and its regional counterparts' borders. The delivery of these requirements will cultivate continued knowledge enhancement throughout Ukraine and expanded in-country and regional disease surveillance and control capacities.

To achieve this purpose, Metabiota and their collaborative partners will:

- Identify and educate those persons who work with swine to recognize clinical and epidemiological patterns of ASF including farmers, hunters, and wild fauna management as well as those engaged in the commercial pork supply chain; Engage project collaborators from Armenia, Georgia, Kazakhstan, and Ukraine, who

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

will collaboratively develop strategies for enhancing ASF public awareness in their respective countries;
- Employ a Regional Joint ASF Working Group that will oversee development and implementation of project objectives;
- Foster fellowship between project participants through achievement of a common goal that illuminates shared interests, concerns, and challenges, providing a basis upon which to increase the capacity for future collaborative pursuits.

Impact

Through the implementation of Metabiota-facilitated ASF trainings in Ukraine and the establishment of a regional ASF alliance between CBEP EE partner countries, DTRA CBEP will have:
- Developed and enhanced disease surveillance systems targeting pathogens of security concern (ASF) and built upon regional detection and response capabilities;
- Supported collaborative awareness efforts in the region and foster collaborative scientific research by providing funding and infrastructure to key stakeholders.

This activity will provide a measurable and achievable result in raising awareness of ASF among DTRA CBEP EE partner countries and facilitating efforts in Ukraine to formally educate those who play a pivotal role in the prevention of ASF. Moreover, this activity will concurrently promote a sub-regional network of strategic collaborators and developing a sustainable infrastructure for advancing scientific research, including early detection of emergent threats.

Risk Management

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Schedule						
Project Coordination	Each regional workshop requires coordination of several entities in a timely fashion in order to have a successful event.	3	3	Medium	Establish and hold regular calls with all stakeholders as final workshop dates grow nearer.	(b)(4); (b)(6)
Performance						
Political Instability	Ukraine's current political situation may lead to risks of being unable to safely complete in-country work, especially in eastern Ukraine.	4	4	(b)(4); (b)(6)	Metabiota has in-country personnel knowledgeable of the operating environment, and will coordinate closely with trainees to focus on safer areas of the country.	Med

Implementation Plan

Introduction

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager and Regional Program Manager, and Country Manager to direct the operational and administrative support required to ensure implementation of ASF Community Awareness Trainings and Regional Collaboration. Our Program Manager will oversee these activities, with the support of both CONUS and OCONUS Metabiota staff to ensure that all

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Communications Protocols

Metabiota will maintain open communications with international collaborators necessary for implementing the training, to include regional partners facilitating the training engagement and logistics. In addition, Metabiota will maintain routine communication with CBEP to ensure they have full visibility on the training engagement, status and process of execution.

Technical Approach

As this project is an ongoing effort, the technical approach outlined below covers only the highlights of the activities to be conducted for the portion of the project's period of performance that lies in the Metabiota AEP Option Year (16 May 2015 onward). A full description of project activities can be found in the previously approved Form A.

Phases of Technical Approach

Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following phases are required for this project:

Phase 1: Regional Meeting #3: Training Workshop 2, Lviv, Ukraine
Phase 2: Independent Outreach Teaching Exercises Rollout and Observation
Phase 3: Regional Meeting #4, Summary Workshop, Tbilisi, Georgia
Phase 4: Summary Report Development

Phase 1 – Regional Meeting #3: Training Workshop 2; Lviv, Ukraine, May 18 – 22

Objective: Build on the accomplishments from Regional Meeting #1 (Kick Off Meeting: Yerevan, Armenia) and #2 (Training Workshop 1: Almaty, Kazakhstan) to continue adaptation of materials for country specific distribution.

Process: Metabiota, in coordination with DTRA CBEP and CLS, will provide Ukrainian SMEs with support to participate in a collaborative workshop with representatives from the other countries involved, conducted and observed by SAFOSO under the direction of Metabiota contractual agreements. The second training workshop will build off of the first training workshop, and, include adaptation of materials for country specific distribution, define the approach for education and distribution based on country specific infrastructure and policy. It will also include discussions lead by each country on current diagnostics and response procedures (if any) and potential improvements). The benefits to including all stakeholders in this training stage is to get an understanding of the strengths and weaknesses of implementation in each country and lessons that may be applied to country specific approaches.

Deliverables:

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

- Deliverable 1: Adapted materials and a strategy for SME Training-of-Trainer (ToT) training to be conducted in each country.

Phase 2 – Independent Outreach Teaching Exercises (June 29 – early November)
Objective: Facilitate technical support and observation of an outreach teaching exercise program conducted by Ukrainian SMEs for laymen that have regular contact with swine populations in order for them to recognize clinical and epidemiological patterns of ASF.

Process: Metabiota, in coordination with DTRA CBEP, will provide four Ukrainian SMEs with support to participate in a ToT program, conducted and observed by SAFOSO under the direction of Metabiota contractual agreements. At the conclusion of these ToT activities, Ukrainian SMEs will initiate community outreach teaching exercises, targeting known ASF risk areas, by identifying and educating those persons who work with swine to recognize clinical and epidemiological patterns of ASF including farmers, hunters, and wild fauna management as well as those engaged in the commercial pork supply chain.

During Regional Meeting #2 (Almaty, Kazakhstan), it was determined that Oblast-level veterinarians would be the optimal recipients for the initial ToT event, which will take place in Kiev, Ukraine and under the supervision of SAFOSO. Oblast Veterinarians will be educated on: signs and symptoms of ASF, diagnostics, reporting, epidemiology, and economic impact. Additionally, Oblast Veterinarians will be provided fliers and posters, which have been tailored for use in Ukraine, to take back to their respective oblasts. The aforementioned materials will then be incorporated into the day-to-day activities of the Oblast Veterinarians, which include regular visits to villages, small farms, as well as oversight of hunting activities.

Deliverables:

- Deliverable 1: Submission of community outreach target audience criteria, location justifications, and participant lists for each of the 12 trainings (500 training participants max).
- Deliverable 2: Submission of training materials, evaluations, and post-action reports for the conduction of 12 outreach teaching exercises.

Phase 3 – Regional Meeting #4 Summary Workshop; Tbilisi, Georgia, November 2015
Objective: Support Ukrainian stakeholder engagement with regional research scientists and other biological risk management stakeholders through cooperative pursuits and enhancing host-nation capacity to conduct disease surveillance and response, including ASF-specific public awareness programs.

Process: Metabiota, in coordination with DTRA CBEP, will provide four Ukrainian SMEs with support to participate in a three-day summary workshop, taking place in Tbilisi, Georgia. Under the guidance of SAFOSO, the Ukrainian SMEs will present their work, experiences, and shared lessons learned with their regional counterparts implementing sister DTRA CBEP-supported ASF risk management programs.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Through this workshop, Metabiota aims to support the establishment of a Regional Joint ASF Working Group that will oversee the development and implementation of project objectives. Moreover, Metabiota aims to foster fellowship between various DTRA CBEP project participants through the achievement of a common goal that illuminates shared interests, concerns, and challenges, providing a basis upon which to increase the capacity for future collaborative pursuits.

Deliverables:

- Deliverable 1: Submission of participant lists, indicating role and presentation topics, for the Regional Workshop (#4).
- Deliverable 2: Submission of workshop presentation materials, evaluations, and post-action reports for all travelers.

Phase 4 – Summary Report Development (November 2015 – February 2016)
Objective: Capture processes developed, lessons learned, and overall status of ASF in Ukraine.

Process: The Metabiota team, including SAFOSO, will work jointly with the teams from the sister projects to develop final reports capturing lessons learned and the current status of ASF in Ukraine. These reports may be submitted for publication, in order to pass on the knowledge learned to other countries that may be dealing with ASF, or be presented at an international meeting attended by project collaborators and members of the Regional Joint ASF Working Group.

Deliverables:

- Final report detailing overall processes and lessons learned, possibly for submission to a peer-reviewed journal.
- Progress report on status of ASF in project countries, for presentation internationally.

Management Approach

Project Team Structure

Metabiota's project team will include the AEP program leadership, the Program Manager, Project Coordinator, Travel Coordinator and a team of Research Collaborators and Subject Matter Experts that will be tasked with specific assignments to support the development and implementation of this activity based on their administrative and scientific expertise. This team of experts will ensure the overall project management and tasks associated with the training are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

Subcontract – SAFOSO

In order to effectively disseminate information and raise public awareness within the scope of this project, Metabiota is seeking support from the larger, European-driven ASF prevention effort known as "Targeted research effort on African swine fever" (ASFORCE). ASFORCE is a consortium of 17 laboratories and organizations from Western Europe and the Russian

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Federation (RF), which was established to combat the spread of ASF and improve ASF research in the region. Within ASFORCE, SAFOSO has conducted multiple ASF workshops to raise ASF awareness within the RF. By leveraging those trainers used in ASFORCE to raise awareness in the EE states, and particularly Ukraine, the use of SAFOSO to conduct this activity may provide information and networking expansion opportunities between the EE states and their Western European counterparts on ASF topics.

Initiation

Prior to initiating any action. Metabiota and DTRA CBEP will secure a clear understanding of the objectives and mission of this undertaking, and make sure all stakeholders agree to it. Following authorization to proceed by DTRA CBEP, Metabiota will move into the planning and execution of the community outreach and regional workshop activities.

Execution

The core project management team will maintain oversight and implementation of the project at all times and will ensure rapid execution of all phases, tracking objectives to ensure the project stays on schedule and within budget to complete this activity. The project will be managed according to the phased implementation plan and will be course corrected, as needed to ensure target end-goals are reached. The following tools will be used to guarantee the project schedule will be maintained:

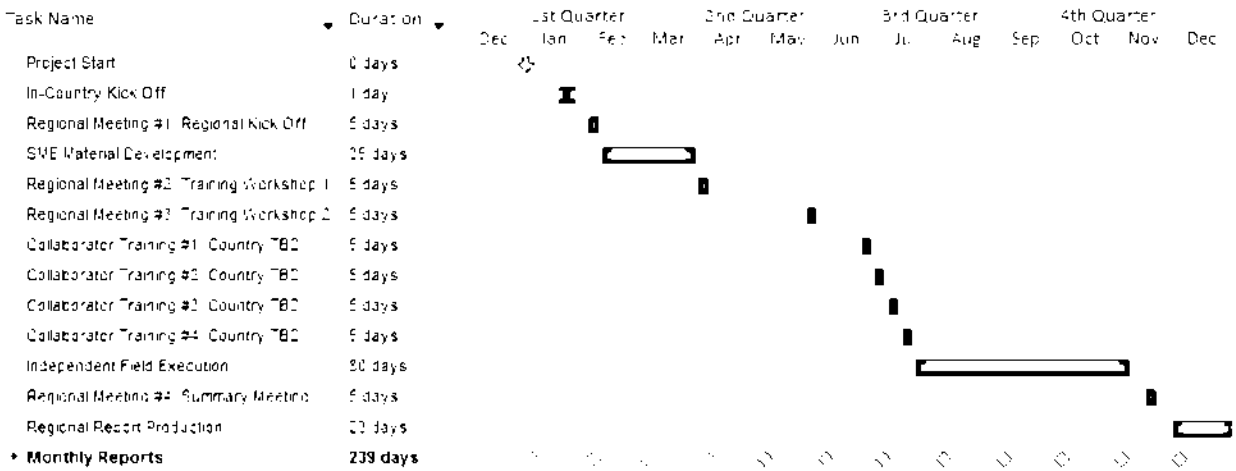
Project Administration:

1. Weekly team meetings and conference calls will be held to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Coordinator and will include the Program Manager, Training Coordinator, and AEP leadership, as needed based on the requirements and stage of implementation.
2. Routine calls and communication via email will be held with DTRA CBEP regional leadership and Metabiota to provide routine status updates and ensure training implementation.

Project Reporting:

1. Weekly status reports will be provided by the Program Manager to senior Metabiota leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction, as needed to ensure training goals are met.

Monitoring and Controlling



1. Routine risk assessment will be performed internally among the Metabiota project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with DTRA CBEP regional leadership to ensure the project remains on track and is implemented according to standard.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

3. Routine oversight and coordination will be performed to ensure SAFOSO is performing all necessary requirements to ensure successful execution of the training. Monitoring will include both administrative and fiscal oversight.

Timeline

The original TAP-4 timeline under the BTRIC mechanism can be found below. As this activity has consistently stayed true to this original schedule, Metabiota will complete Phase 1-4 of this activity as originally planned. beginning with Phase 1- Regional Meeting #3. Phase 2 - In-Country ToT will take the scheduling place of Collaborator Training #1 in the anticipated schedule.

Completion

Metabiota will drive the project to completion in a timely manner by maintaining a focused project schedule with routine meetings and communication with DTRA CBEP regional leadership. This will allow for continued coordination, while maintaining targeted objectives. As the activity progresses, Metabiota will provide all required deliverables and after action reports to allow for lessons learned and continuation of solid execution and implementation of activities. Metabiota believes that the experience and management it will bring to this project, in collaboration with DTRA CBEP will guarantee success.

Cost Management

The Metabiota team and all partners will maintain an acute focus on cost management to ensure that this activity is delivered at a reasonable cost to the government. Our team will provide full oversight of SAFOSO to ensure accurate and responsive financial reporting and will facilitate cost savings wherever possible. Metabiota will follow procurement regulations ensuring the best value is obtained under the time constraints using all means available.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Budget Narrative

Period of Performance

The Period of Performance for this effort is May 16, 2015 to January 31, 2015.

Labor

Costs for direct labor to support this activity is required for the following personnel:

- Metabiota Program Manager (b)(6) will oversee and execute the project to include management of deliverables, logistics, procurement, tracking of project requirements, and implementation. The program manager will also be responsible for final decision making, coordinating with and reaching consensus with representatives of the sister programs in Armenia, Georgia, and Kazakhstan, and assisting with the drafting of the final deliverable reports.
- Metabiota Trainer I (b)(6) will assist in coordinating project activities, to include assisting in management of deliverables, logistics, procurement, tracking of project requirements, deliverables and logistics. Trainer I will also aid in coordination with representatives of the sister programs in Armenia, Georgia, and Kazakhstan, and assisting with the drafting of the final deliverable reports.
- SAFOSO Trainer II: (b)(6) will conduct ToT training and observational activities and Regional Workshop oversight, and assist with the drafting of the final deliverable reports.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials

Significant materials and supplies are not anticipated to be required for this effort. However, we are budgeting for a small quantity of office supplies in case last-minute printing of agendas, training materials, or workshop materials is required to successfully execute and support in-country project activities.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for SAFOSO staff for the period of performance for this engagement. Metabiota personnel performing on this project are already insured.

Subcontracts

A Subcontract will be issued to SAFOSO for time provided by their Trainers, as well as materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Travel is requested to support all SAFOSO Trainers to facilitate project implementation and conduct training and supportive activities in this effort.

Travel is also requested for Metabiota Program Manager and Trainer I to travel to Tbilisi, Georgia, to participate in the Regional Summary Workshop.

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP's mission in Ukraine in the implementation of Community Outreach to Support Understanding of African Swine Fever (ASF) Ecology and Epidemiology in Eastern Europe (EE): Training and Implementation for Methods and Strategies for Control and Prevention (Ukraine TO4 TAP4. Metabiota will ensure, through strong project management and risk mitigation, that the training will be executed in an efficient and timely manner delivering a top quality program geared to support enhanced biosurveillance and biosafety efforts in the region.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Appendix A - Team Metabiota Overview

Metabiota is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota currently supports a number of Defense Threat Reduction Agency's Cooperative Biological Engagement Program (DTRA CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. Metabiota's mission aligns well with DTRA CBEP and the entire Metabiota team is focused on supporting our USG Partners in reducing the risk of biological threats worldwide, and employs a collaborative and agile approach to biological risk reduction.

To ensure a successful event, Metabiota, in coordination with DTRA CBEP regional leadership and in country partners have built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact DTRA CBEP objectives.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

TD 012 Ukraine Project 2 (UP-2)

Objectives

The overarching objectives of this project are to develop both explanatory and predictive, spatially-explicit models to explore the geography and ecology of EDPs, specifically Francisella tularensis, the causative agent of tularemia, and Bacillus anthracis, the causative agent of anthrax, across Ukraine at multiple spatial scales.

Period of Performance: 05/16/2015 - 05/16/2016

CLIN	Total ROM	Total Invoiced	Total Remaining
1002	$433,233.00	$26,469.00	$406,764.00
1003	$135,002.37	$2,979.14	$132,023.23
1004	$172,190.60		$172,190.60
1005	$56,587.08		$56,587.08
TOTAL	$797,013.05	$29,448.14	$767,564.91

CLIN 1002 – Labor

The primary labor costs on Metabiota AEP for UP-2 have been program management (PM) and project coordination (PC) costs. The main drivers of the costs were incurred in planning for expeditions by the US collaborators (WRAIR, UF, KSU) on this project to Ukraine to work with the Ukrainian scientists. Additionally, some PM/PC costs incurred are associated with the work necessary to transition to a T&M contract, including proposal development and subcontract development. We have accrued some labor costs for (b)(6) (KSU) effort in continuing his efforts on land use/land cover analysis and in preparing for the August field trip.

Program Manager: 94.50 Hours

(b)(6) led proposal development, including the development of the overall project budget and the drafting of text for both the technical and management approaches. He provided oversight on subcontract development to include editing of SOWs., coordination of the project activities, including communication with BTRIC personnel integrating efforts and procurement efforts for biological safety cabinet (BSC) re-certification and laboratory and field collection supplies for Ukrainian institutes. He also leads a twice-monthly telecom with project stakeholders including WRAIR, UF, KSU, and DTRA.

Trainer 1: 65.50 Hours

(b)(6) assisted with proposal development, including the drafting of text for both the technical and management approaches. She provided coordination of the project training activities, including communication with BTRIC personnel integrating efforts. She assisted with procurement efforts for BSC re-certification and laboratory and field collection supplies for Ukrainian institutes. Ensured progress of the subcontracts (including purchase orders) through the Metabiota contracts shop.

Subject Matter Expert 3: 20 Hours

(b)(6) provided Land cover/land use subject matter expertise. He participated in project activities to include teleconferences and preparation for field collection exercise. Assisted in developing an alternative plan for biotope mapping validation.

CLIN 1003 – Materials and Supplies
Metabiota contracted for BSC re-certification at UCDCM, IVM, and VOLC in order to ensure safety of project participants.

CLIN 1004 – ODCs
To date, the ODCs accrued on UP-2 represent a subcontract to CRDF to pay Ukrainian personnel for their efforts on the project. This subcontract captures their labor and CRDF's fee. Metabiota understands that these ODCs may be required to be re-characterized as labor if Metabiota AEP is given the opportunity to implement foreign local national (FLN) labor categories. The Ukrainians on this project at IVM and UCDCM have continued (to the best of their capabilities) in analyzing previously collected samples and the data generated. These accrued costs have not been invoiced.

CLIN 1005 – Travel
No travel costs were incurred under Metabiota AEP.

1. 1. CONTRACT
Metabiota No. 2015-11-PO

DATA

2. INTRODUCTION

2.1. The present Contract (hereinafter referred to as "the Contract") is concluded by and between:

- Metabiota, Inc., a company organized under the laws of the State of California, U.S.A., and represented by Lisa Kralovec (hereinafter referred to as "the Company"), on the one part, and

- "KV-Automatization" Ltd., having the legal entity under the laws of Ukraine, represented by Director Kostiantyn Dudkin, acting on the grounds of the Statute of the Company (hereinafter referred to as "the Vendor"), on the other part,

each a "Party" and collectively "Parties".

2. The signatories of this Document are the authorized representatives of the institutions

2 2 КОНТРАКТ
Metabiota No. 2015-11-PO

ДАТА

2. ВСТУП

2.1. Цей контракт (далі «Контракт»), укладений між

- Метабіота Інк., компанією, що створена за законами штату Каліфорнія, США, в особі Лізи Краловец, (далі «Замовник»), з одного боку, та

- ТОВ «КВ-Автоматизація», яке є юридичною особою згідно законодавства України, в особі директора Костянтина Дудкіна, який діє на підставі статуту (далі «Виконавець»), з іншого боку,

спільно іменуються «Сторони», а окремо – «Сторона».

2.2. Особи, що підписали цей Документ, є уповноваженими представниками Сторін.

3. SUBJECT OF THE CONTRACT

3.1. The Vendor having provided and the Company having bought the Services in accordance to the list of services (Attachment 1) to the Contract, which is signed by Parties and is deemed as its integral part.

3.2. The Services shall be provided for the Partnership Project entitled "Development of the Epidemiological Forecasting System for Zoonotic Diseases Employing GIS Technologies" (hereinafter referred to as the "Project"), which is implemented under the "Silk Road" Program of Ukraine. Agreements for the Project from the "American State Agency for Science, Innovation and Information" N. 696-2-568 from 8.09.2014 г.

3. ПРЕДМЕТ КОНТРАКТУ

3.1. Виконавець надав, а Замовник купує послуги відповідно до переліку («Деталізація послуг») до цього контракту (далі «Контракт»), що підписаний Сторонами та є його невід'ємною частиною.

3.2. Послуги надаються для партнерського проекту під назвою «Розробка системи епідеміологічного прогнозування розповсюдження зоонозних інфекційних захворювань з використанням геоінформаційних технологій» («Проект»), що виконується в Україні за Програмою «Шовковий шлях» Фонду американських досліджень та розвитку (США) згідно з виконанням проекту поміж Державним агентством з питань науки, інновацій та інформатизації, № 696-2-568 від 8.09.2014 р.

4. SERVICES TO BE PERFORMED BY THE VENDOR

4.1. The Vendor on Company's request shall provide the Services for certification and fumigation of 7 bio-safety cabinets certification of 2 Vertical Lamina Flow Clean Bench (ESCO) and 1 Polymerase Chain Reaction Cabinet (ESCO) listed in the Attachment 1. The fixed price Scope of Work (Attachment 1) is an integral part of this Subcontract.

4. ПОСЛУГИ ВИКОНАВЦЯ

4.1. Виконавець на вимогу Замовника надасть послуги з сертифікації та фумігації 7 шаф біологічної безпеки, сертифікація Vertical Laminar Flow Clean Bench (ESCO) та 1 Polymerase Chain Reaction Cabinet (ESCO), що перелічені у Додатку 1. Опис обсягу робіт (Додаток 1) за фіксованою ціною є невід'ємною частиною цього Договору.

5. PRICE AND ENTIRE VALUE OF THE CONTRACT

5.1. The firm-fixed price of this Contract is $2830.

5.2. The prices of the Services are valid within 60 days.

5. ЦІНА ТА ЗАГАЛЬНА ВАРТІСТЬ КОНТРАКТУ

5.1. Фіксована вартість цього Контракту складає 2830 дол. США.

5.2. Вартість послуг дійсна протягом 60 днів.

6. TERMS OF PAYMENT

6.1. The payment [illegible]

6. УМОВИ ОПЛАТИ

6.1. Умова оплати: 100% передоплата

D012 materials 1C

prepayment.

6.2. Invoicing. The invoice shall be submitted in English and Ukrainian as one electronic copy to the Company. The invoice shall be submitted via email to invoices@metabiota.com.

6.3. All bank charges in Ukraine are for the Vendor's account. All bank charges outside of Ukraine are the Metabiota's expenses.

6.2 Рахунки. Рахунок подається до Замовника у електронному вигляді. Рахунок надсилається електронною поштою на адресу invoices@metabiota.com.

6.3. Банківські витрати на території України несе Виконавець. Банківські витрати за межами території України несе Замовник.

7. TERMS OF SERVICES

7.1. The Services approved for purchase in the Attachment 1 shall be completed within 2 weeks after receipt of payment by the Vendor.

7.2. The act of signing the transfer acceptance of the services performed at the sites indicated in the Attachment 1 is considered as the delivery date of services.

7. УМОВИ НАДАННЯ ПОСЛУГ

7.1. Послуги, що замовлені до оплати у Додатку 1, мають бути виконані протягом 2 тижнів після отримання оплати Виконавцем.

7.2. Датою надання послуг вважається дата підписання акту приому-передачі виконаних робіт по об'єктах, що вказаний у Додатку 1.

8. GENERAL PROVISION

8.1. All the relations between the Parties of the present Contract are the subject to norm of the material law of Ukraine.

8.2. This Contract is prepared in English and Ukrainian language versions, which have equal validity except in the event of a dispute regarding interpretation of this Contract, at which time the English language version shall govern.

8.3. All amendments to this Contract are integral part of the entire agreement:

- Attachment 1 "List of Services"
- Attachment 2 "Invoice №24"

8. ЗАГАЛЬНІ УМОВИ

8.1. Всі відносини між сторонами цього Контракту регулюються на основі законів України.

8.2. Цей Договір складено англійською та українською мовами, які мають однакову юридичну силу, але у випадку протиріч між текстами перевагу має текст складений англійською мовою.

8.3. Всі додатки до цього договору є невід'ємною його частиною:

- Додаток №1 «Перелік послуг»
- Додаток 2 «Рахунок №24»

TD 012 Ukraine Project 2 (UP-2)

Objectives

The overarching objectives of this project are to develop both explanatory and predictive, spatially-explicit models to explore the geography and ecology of EDPs, specifically Francisella tularensis, the causative agent of tularemia, and Bacillus anthracis, the causative agent of anthrax, across Ukraine at multiple spatial scales.

Period of Performance: 05/16/2015 - 05/16/2016

CLIN	Total ROM	Total Invoiced	Total Remaining
1002	$433,233.00	$162,102.76	$271,130.24
1003	$135,002.37	$134,961.51	$40.86
1004	$172,190.60		$172,190.60
1005	$56,587.08		$56,587.08
TOTAL	$797,013.05	$297,064.27	$499,948.78

CLIN 1002 – Labor

Program Manager: 94 Hours

(b)(6) led regular project coordination calls with the UP-2 collaborators and the Metabiota personnel based in Ukraine and assisted the UP-2 collaborators with developing alternate plans to reach research goals when travel planned by non-Metabiota subcontracted collaborators did not occur on schedule. (b)(6) ewed and submitted travel authorization requests and travel documentation for (b)(6) ugust trip which was ultimately cancelled.

submitted a revised technical and cost proposal addressing DTRA concerns about labor costs, materials, and travel. A new, revised TD was further issued after this proposal was submitted and (b)(6) contributed inputs toward a second, further revised technical and cost proposal which proposed costs that took into consideration transition of the project back to the BTRIC. This proposal was accepted. Additionally, related to the transition to the BTRIC, (b)(6) led communications on changes to the invoicing with CRDF Global, who is being leveraged as the intermediary in processing payments to the Ukrainian participants on project UP-2.

Trainer 1: 55.50 Hours

(b)(6) conducted routine communications with the project team to direct and guide progress on this project as well as routine project administration efforts including reconciliation and payment of invoices (b)(6) drafted travel documentation for (b)(6) travel which was ultimately cancelled. She also participated in facilitating the transition of UP-2 to BTRIC by contributing inputs toward a second, further revised technical and cost proposal which proposed costs that took into consideration transition of the project back to the BTRIC.

Subject Matter Expert 3: 157.5 Hours

The hours reflect a reconciliation of under-accruing hours against the actual hours invoiced. (b)(6) at KSU performed a reorganization of land use/land cover classification in preparation for data validation. Additionally, he designed a validation protocol for land cover/land use classification, which ultimately was not used due to the cancellation of August travel. Following cancellation of the trip (b)(6) worked with other project personnel (primarily (b)(6) at University of Florida) on developing a new validation protocol which would use only existing field data. He continues to work with (b)(6) on developing this protocol. (b)(6) designed and developed software tools to extract biophysical information such as vegetation density, canopy temperature, and soil moisture from MODIS image data, and is currently downloading and preprocessing MODIS data in preparation for biophysical analysis.

Additionally, KSU updated and upgraded the servers on which the UP-2 geophysical data was held, and (b)(6) participated in this process to ensure the integrity of previously collected data.

Research and Data Analyst: 983.95 Hours

CRDF Hours invoiced include the close out of the IVM, UCDCM and VOLC Ukranian agreements for the second quarter. No further costs will be incurred on AEP.

(b)(6) hours were incurred in assisting (b)(6) in his research activities.

CLIN 1003 – Materials and Supplies

CLIN 1004 – ODCs

No costs invoiced.

CLIN 1005 – Travel

No costs invoiced.

#	DTRA Comment	Metabiota Response	Location
1	**Direct Labor - The role of the proposed graduate students is not clear. They are proposed for 1000 hours of direct labor, but the exact nature of the work being done, support being provided, or the expertise that would contribute to the project objectives is not described.**	**Labor narrative has been explained in the proposal.** **In summary, when working with US-based academics, typically the principal investigators (PIs) will only contribute fractional time to any given project while the bulk of the analysis and work is being done by graduate students or post-doctoral employees. The professors provide direction and guidance to the students. This is the model that UP-2 has employed from the beginning.** **Here we expect one (1) graduate student (billing as an RDA) to be working half-time during the 2015-2016 academic year at KSU on data validation, data analysis, and manuscript writing on the land conversion and use portion of the UP-2 project. This will be done under the guidance of [redacted] at KSU.** **Additionally, we anticipate two (2) graduate students (billing as RDAs) to be working part-time (20 hours per student per two-week pay period, that is 25%) during the 2015-2016 academic year at UF on data analysis, GIS mapping, and manuscript development related to the [redacted]**	**Technical Proposal, budget narrative, direct labor**
2	Materials - The proposal indicates that new tires are required for the TAOR Response Vehicle in order to use the TRV to travel to remote regions, however, it is not clear if Metabiota is proposing to replace those tires - no amount is specified for that expense in the budget.	Metabiota is not proposing to acquire tires for the TRV, this was a holdover from an earlier iteration of the document The standalone budget narrative has been updated to remove reference to the tires for the TRV The figures provided in the budget and the corresponding budget narrative represent a good faith estimate at capturing potential costs. As travel is cost-reimbursable only, Metabiota views this figure more akin to a ceiling to travel and thus we tend to estimate on the high side for both travel and costs in order to avoid the need to add additional funding to CLIN 1005 later in the contract. That said, we have tried to improve clarity in the budget narrative around this piece	Budget narrative
3	Travel - The purpose of graduate student travel is not clear. They are proposed for two trips, but there is no clear justification as to why the graduate students are required to travel (same issues as for Direct Labor).	The KSU graduate student will not travel, and the budget narrative has been amended to clarify this The UF graduate student(s) may travel depending on the requirements of the specific trip. In the past, [redacted] (a UF graduate student) traveled to Ukraine to work with both his PI [redacted] and the Ukrainian team involved in GIS mapping activities. As indicated previously, typically the graduate students are deeply involved in the data analysis and thus when odd questions about specific points in the data set or methodology arise, the graduate students are the ones best positioned to provide the clarifications needed to move forward. At this time we still project that the UF students will travel to Kyiv to work on data analysis with the Ukrainians	Technical Proposal, budget narrative
N/A	Travel tab updates	The small mammal sampling / ground truthing trip is obsoleted by events. This eliminates US SME [redacted] travel from Kyiv to Volyn. It also eliminates a further US SME trip ([redacted] ng of 2016 to Kyiv. However, in order to accomplish the data validation, we are now considering bringing 3 Ukrainian participants in the mapping analysis to Gainesville to learn and work on the data validation piece of the biotope mapping/land cover/land use. Executive Summary

In response to Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) regional leadership tasking via the Academic Engagement Partnership (AEP) contract vehicle, Technical Direction 012, Metabiota, Inc. seeks to support the DTRA CBEP mission through the conduction of research to identify the current distribution of especially dangerous pathogens (*F. tularensis* and *B. anthracis)* throughout regions of Ukraine, which is a critical step in mitigating risk of exposure to the aforementioned causative agents. This research effort will help improve disease detection and reporting measures in the Ukrainian human and animal health sectors in support of the DTRA CBEP mission.

This document outlines the approach that Metabiota will employ to accomplish the requirement. In short, Metabiota intends to:

1) Develop a historical GIS-based analyses of tularemia (UCDC) and anthrax (SSCIBSM) data sets, including pathogen passports, field collection records, and field responses (nationwide).
2) Conduct active surveillance for *Francisella tularensis* in ticks and small mammal host populations, with the integration of appropriate culture and PCR-based analyses for detection of the pathogen.
3) Conduct surveillance of livestock herds and environmental sampling for *Bacillus anthracis*, with the integration of appropriate PCR-based detection assays.
4) Develop advanced spatial analyses using GIS and remote sensing approaches to define the geographic distributions of the pathogens and landscape dynamics that effect those distributions.

Project Overview

Introduction

Especially dangerous pathogens (EDPs), including those found naturally in the environment, are a challenge for public health and security infrastructures and pose a significant threat to security and economic stability across the globe. To manage these threats, DTRA CBEP aims to reduce potential impacts of biological threats by enhancing biological safety and security (BS&S), awareness of biological risks, and knowledge related to biological pathogens globally.

To do so, DTRA CBEP works collaboratively with partner nations, other USG agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health; promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. In CENTCOM, specifically, DTRA CBEP seeks to increase the understanding of natural incidences of pathogens of security concern in Ukraine in an effort to better manage the threat the threat of infectious disease events.

UP-2: Incorporating GIS, Remote Sensing, and Laboratory Diagnostics into Human and Veterinary Disease Surveillance for Tularemia and Anthrax in Ukraine was originally

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

developed and implemented under the Biological Threat Reduction Integrating Contract (BTRIC) mechanism in 2011. However, this funding mechanism, including all ongoing research efforts, ceased February 2014. In an effort to complete the original research objectives, DTRA CBEP Ukraine leadership tasked Metabiota with implementing the remainder of UP-2 under the AEP program. Through this activity, Metabiota will conduct high-value research that will support strategic DTRA CBEP objectives by increasing regional collaboration on topics critical to biological threat reduction and enhancing the regional capacity to perform biorisk management and mitigate the threat of infectious disease events.

Goals and Objectives

This activity aims to develop both explanatory and predictive, spatially-explicit models to explore the geography and ecology of EDPs, specifically *Francisella tularensis*, the causative agent of tularemia, and *Bacillus anthracis*, the causative agent of anthrax, across Ukraine. Metabiota will do so by using historical data to explore the distribution, seasonality, and ecology of zoonoses at the national scale, while active surveillance and field efforts will concentrate on local scale patterns of land cover change in relation to disease agent, host, and/or vector distributions.

To achieve these purposes, Metabiota will divide this activity into four specific objective categories to learn from the history of these zoonoses while also proactively managing any future threats. These goals are organized to provide long-term, sustainable teams across UP institutes to maintain this and future efforts. Metabiota and their collaborators will:

1) Develop a historical GIS-based analyses of tularemia (UCDC) and anthrax (SSCIBSM) data sets, including pathogen passports, field collection records, and field responses (nationwide).
2) Conduct active surveillance for *Francisella tularensis* in ticks and small mammal host populations, with the integration of appropriate culture and PCR-based analyses for detection of the pathogen.
3) Conduct surveillance of livestock herds and environmental sampling for *Bacillus anthracis*, with the integration of appropriate PCR-based detection assays.
4) Develop advanced spatial analyses using GIS and remote sensing approaches to define the geographic distributions of the pathogens and landscape dynamics that effect those distributions.

Threat Reduction Outcomes

This research will provide valuable insight into the distribution, causative agents, and threat level of tularemia and anthrax in Ukraine. This will not only be beneficial to Ukraine, but can be used in the global network of research collaborations and for advancing scientific research, including the early detetction of emergent disease threats. Research is critical to capacity building and supports early detection and response to emerging threats, thus safeguarding the world from infectious disease thrests. Scientists working on UP-2 will be trained in molecular diagnostic techniques, which will improve time of detection and, potentially, enable earlier treatment. Additionally, these learned skills could be applied to a variety of non-programmatic and more common diseases that are currently circulating in Ukraine. Early identification and response will mitigate potential loss of human and animal life and associated economic burdens.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Increased biosafety acumen when working with pathogens, particularly especially dangerous pathogens (EDPs), is a cornerstone of CBEP engagement. As part of this effort, laboratory personnel will be trained to properly implement biosafety protocols, including donning and doffing personal protective equipment (PPE), as required by the agent in question. Participants will be trained in modern field approaches to rodent and tick collection, reservoir identification, and diagnostic analyses. All engaged personnel will be trained to follow internationally recognized reporting measures (e.g., IHR).

Furthermore, as part of the project implementation process, project stakeholders will provide regular updates to DTRA via Contract Data Requirement Lists (CDRLs). Information presented within these reports will help all stakeholders (e.g., USG and host country ministries) understand potential areas of future engagement to further bolster the host countries capabilities.

Through the implementation of Metabiota-facilitated tularemia and anthrax research, DTRA CBEP will have:

- Developed predictive models for the incidence of tularemia and anthrax.
- Improved and enhanced disease detection, reporting and response systems across Ukraine.
- Assisted the adoption and use of safe handling techniques during collection and analysis of samples to include proper handling, transport, and storage of samples.
- Increased scientific capabilities of Ukrainian partners through research collaboration and by fostering an environment of scientific partnership.

Implementation Overview

Metabiota anticipates UP-2 implementation to closely reflect the process successfully completed the first two years of the project under the BTRIC mechanism, which resulted in nine scientific manuscripts published or in review. Importantly, members of the original development and implementation teams have been secured to continue this engagement. In securing the original research team, Metabiota has ensured that all institutional knowledge of UP-2 remains intact, including those relationships with Ukrainian scientists, which took years to foster. Notably, some UP-2 implementing partners currently lie outside of Metabiota AEP authority, including the BTRIC, Walter Reed Army Institute of Research (WRAIR), and University of Florida (UF). The management approach below includes descriptions of how these parties will be managed.

The experimental approach remains consistent with the approach outlined in the Form A that was approved under the BTRIC and the approach documented in the Technical Proposal submitted under the base year of the AEP contract. Project collaborators have identified high priority tasks and strategies for moving forward, which are outlined in the technical approach below.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Management Approach

Project Team Structure

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager and Country Manager as needed to direct the operational and administrative support required implement the research project. Our Program Manager will oversee research efforts with the support of a Project Coordinator, Travel Coordinator, Research Collaborators and Subject Matter Experts to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Currently, only Kansas State University is contracted directly through Metabiota AEP. (b)(6) (b)(6) t WRAIR are to be funded via a MIPR with DTRA CBEP. University of Florida is funded through the Penn State University (PSU) AEP vehicle. However, we are proposing to bring UF's Research Collaborators into the Metabiota AEP in October 2015 after their current funding via the PSU AEP expires.

This team of experts will ensure the overall project management and tasks associated with the project are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

Communications Protocols

Metabiota will maintain open communications with both American and Ukrainian collaborators necessary for implementing the project, including any and all partners facilitating logistics for this effort such as DTRO-K (Defense Threat Reduction Office-Kyiv) and Contractor Logistics Support (CLS). In addition, Metabiota will maintain routine communication with DTRA CBEP to ensure they have full visibility on the research project's effort, status, and process of execution.

Execution

The core project management team will maintain oversight and implementation of the project at all times and will ensure rapid execution of research, tracking objectives to ensure the project stays on schedule to complete the training exercises. The project will be managed according to the phased implementation plan and will be course corrected, as needed to ensure target end-goals are reached. The following tools will be used to guarantee the project schedule will be maintained:

Project Administration:

1. Conference calls will be held twice each month to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Metabiota and will include the Program Manager, Project Coordinator, Travel Coordinator, Research Collaborators, AEP leadership, and Metabiota BTRIC Ukraine personnel as needed based on the requirements and stage of implementation.

2. Routine calls and communication will be held with DTRA CBEP regional leadership and Metabiota to provide routine status updates and ensure successful implementation.
3. Metabiota will sit in the lead position of this project from an administrative standpoint. While we recognize that it is an unconventional arrangement to have a private company lead scientific collaborators from US academic institutions, a US government agency, and foreign government agencies, this structure successfully implemented the first two years of this project.

Project Reporting:

1. Weekly status reports will be provided by the Program Manager to senior Metabiota leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction, as needed to ensure training goals are met.

Monitoring and Controlling

1. Routine risk assessments will be performed internally among the Metabiota project management team to ensure the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine oversight and coordination will be performed to ensure all relevant parties (including DTRO-K, BTRIC Ukraine, and CLS) are performing in-country logistical requirements to ensure successful execution of the training. Monitoring will include both administrative and fiscal oversight.
3. Routine communications will be maintained with DTRA CBEP regional leadership to ensure the project remains on track and is implemented according to standard.

Completion

Metabiota will drive the project to completion by 15 May 2016 by maintaining a focused project schedule with routine meetings and communication with DTRA CBEP regional leadership to allow for continued coordination, while maintaining targeted objectives. As the activity progresses, Metabiota will provide all required deliverables and after action reports to allow for lessons learned and continuation of activity implementation. Metabiota believes that the experience and management it will bring to this project, in collaboration with DTRA CBEP, will guarantee success.

Technical Approach

Key portions of the proposal are highlighted below. Specific technical details on the work to be performed are listed in the attached Form A. Task numbers referenced herein correspond to those from the approved Form A.

Tularemia Project

Project collaborators have identified 3 high priority tasks and strategies for execution:

Priority 1: Task 2.3 PCR and Culture Diagnostics for *Francisella tularensis*
Priority 2: Task 4.3 Remote Sensing
Priority 3: Task 2.1 Survey Methods for Mammals

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Priority 1: Task 2.3 PCR and Culture Diagnostics for Francisella tularensis

All samples collected in the field (1,245 rodents and 5,546 ticks) were transported to UCDC for culture and PCR-based diagnostics of *F. tularensis*. Approximately, 60% of samples have been tested using classical and/or modern diagnostic techniques. Results have been varied, with no positive cultures identified, but with several positive PCR results (b)(6) will travel to UCDC, review the technology and hardware, and implement the collaboratively developed standard operating procedures and safety protocols for the work required. As part of this task, field samples will be analyzed for *F. tularensis*.

UCDC and US personnel are well suited and qualified for the diagnostic work, and the bulk of exposure phase in this study is to biovar B, where risk of infection is less. BSL 2+ (BSC) conditions and protocols will be maintained throughout the project, with the option to work in BSL-3 if a *F. tularensis* isolate is confirmed by bacteriological and PCR tests.

Metabiota's project team will employ a two-pronged strategy of both real-time and conventional PCR for diagnostic work in the *F. tularensis* portion of UP-2, using extracted DNA from both animal blood and culture positive plates at UCDC. First, initial screens will be conducted using real-time PCR assays, unlabeled oligonucleotide primers, and published primer sequences that are proven for the agents. Second, we will use primers for conventional PCR that are highly specific for *F. tularensis* and use this assay to regularly test random selections from the library of strains cataloged in UP-2 field efforts. The conventional PCR assay will detect genetic loci not targeted by the real-time assays and provide QC via direct comparison with the selected real-time PCR assays. This conventional PCR assay will provide a sub-type by PCR of either biovar A (subspecies *tularensis*) or B (subspecies *holarctica*). If feasible, DNA aliquots from PCR-confirmed positives and potential near-neighbors may be sent to the US for further confirmatory validation. The presence of biovar A is not suspected but, if found would indicate a more serious human public health risk and warrant further attention.

Priority 2: Task 4.3 Remote Sensing

Because the distribution of tularemia is affected by both land use and land cover (LULC), development of remotely sensed LULC maps is a major component of the UP-2 project. Prior to suspension of the project, the first phase of land cover mapping was nearly complete. This first phase consisted of mapping LULC at 30m spatial resolution using remotely sensed data from the LANDSAT TM\ETM+ sensor series. The classification scheme used was largely based on the European Environmental Administration (EEA) CORINE classification scheme. It was chosen for the following two reasons: 1) it uses hierarchical, generalized classes that can be decomposed into more detailed land use and land cover categories based on available information, and 2) it is compatible with the EEA EUNIS habitat/biotope mapping scheme, allowing project researchers to more directly relate land cover to the habitat of potential tularemia hosts.

At the time of project suspension, CORINE level 1 and 3 maps had been completed, but not validated. The EUNIS habitat map had not been completed. The three major remote sensing

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

tasks for the restarted project will therefore be: convert the CORINE classes to EUNIS categories based on the Level 3 LULC maps, 2) validate the level 1 and 3 CORINE maps and the EUNIS map by field survey, and 3) provide these maps along with a quantitative assessment of their accuracy to the modeling component of activity, using an existing but currently inactive web-based geodatabase.

Conversion of the CORINE map to EUNIS categories is a straightforward process, which will be done using the guidelines outlined in Moss and Davis, 2002. The resulting product will be a 30m resolution habitat/biotope product. The final step in the process will be to relate these "generic" habitat types to the habitat preferences of small mammals in the study area in order to categorize each biotope as potential habitat for specific tularemia hosts. This will be done using a rule-based decision tree classifier, trained using the existing trapping data. Validation of all mapped products will be done via field survey. A stratified random sample of validation sites will be generated for the study site using sampling software tools available in Arc-GIS. These sites will then be visited during the autumn field survey. Each site will be described, photographed, and its land cover and habitat type assessed. For sites where accessibility is difficult, the assessment will be done at a distance using a distal surveying technique developed by the Remote Sensing Research Lab at Kansas State University and used successfully at other field sites (Koch et al., 2007). Once the survey is collected, it will be compared to the LULC maps using standard metrics for evaluating map accuracy (Khorram et al, 2004).

High risk sites (HRS) will be identified in the region by applying previously described methods (b)(6) . Results from the local field surveys and laboratory analyses that detect *F. tularensis* in small mammals generate a spectral signature of HRS by establishing the relationship between the likelihood of a location yielding infected small mammals and the environmental conditions measured by remote sensing data. Depending on the outcome of laboratory testing, alternative models can be developed. Outcome measures of sites yielding either infected animals or not (binary), abundance of infected animals (counts,) or the population density of infected animals (rates) can be used as the outcome to be measured in this design.

Environmental predictors of the outcome are derived from remote sensing data and use the ground truth data obtained during field sampling for final interpretation. Environmental inputs from remote sensing can use the original data, such as reflectance intensities in various portions of the electromagnetic spectrum, land use/land cover classifications or more traditional data products interpreted from the remote sensing data, such as band ratios to identify vegetation greenness, moisture, soil minerals, or drainage patterns.

Once a classifier of *F. tularensis* in mammal populations is identified for the region, a follow-up validation survey is required to confirm the robustness of the results. Predictions of other sites that are likely to have mammals with *F. tularensis* are derived from the remote sensing data and are one of the outputs of the analysis (e.g. see Figures 7 and 8). A final field season will be devoted to randomly selecting and surveying a sufficient number of new locations (40-50 sites as in previous years) to determine if the probability of infection in local mammal populations

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

matches that predicted from the model.

Priority 3: Task 2.1 Survey Methods for Mammals

The original UP-2 effort conducted small mammal collections under protocols approved by the Institutional Animal Care and Use Committee (IACUC) of Johns Hopkins University (JHU) and secondarily approved by the U.S. Army's Medical Research and Materiel Command's Animal Care and Use Review Office (ACURO). These approvals have expired in the intervening time period. The original collaborator from JHU has moved to the University of Florida – Gainesville (UF), the home institution of some of the other project collaborators. They are in the process of seeking new IACUC approval through UF. Importantly, no small mammal collection events will take place until approved IACUC and ACURO protocols are in place.

Currently we are anticipating one field expedition in autumn 2015, but may try to execute an additional trip in spring 2016. Historically, during weeklong sampling trips, we have covered five sites early in the week and another set of five sites later in the week. This covers 10 locations during a weeklong trip with an additional day or two for ancillary collections at some sites. During an optional second week of sampling, the sampling scheme will be repeated at 10 new locations. In total, this method has resulted in sampling at ~20 sites during each 2-week spring survey and 20 sites during each 2-week autumn survey. All mammal collections have been mapped with PDA-GIS handheld device and stored for integration into the master GIS stored at UCDC.

Specimens from collected animals will be processed according to protocols for *F. tularensis* detection and frozen tissues and blood samples will be deposited in appropriate transport and storage liquid and go to UCDC. These materials will be accessioned to UCDC. Results of pathogen detection in individual animals will be linked with the capture records to identify the species that are commonly infected, where they occur relative to geographic location and habitat characteristics as well as their demographic characteristics (e.g. sex bias, age bias, season of capture, etc).

Vector surveillance efforts will focus primarily on ticks, with some secondary effort to collect ectoparasites from small mammals surveyed during the project. All tick sampling will accompany mammal collections and occur at each mammal sampling site. Tick sampling is accomplished by two means: flagging/dragging, and collections from animal hosts (Ginsberg and Ewing, 1989). Collection locations will be mapped using handheld GPS devices. Pertinent ecological and environmental data (e.g. vegetative cover, temperature, elevation, slope, aspect, etc.) will be collected for each of the sampling locations in all oblasts and their associated rayons. All data will be downloaded into a database and analyzed using appropriate software, such as ArcGIS.

Anthrax Project

Project collaborators have identified 4 high priority tasks and strategies for execution:

Priority 1: Task 4.2 Ecological Niche Modeling

Priority 2: Subtask 3.1.1 Sampling of Blood from Animals without Clinical Symptoms
Priority 3: Task 3.1 Sampling at Places of Conntemporary and Recent (2-5 years) Anthrax Outbreaks
Priority 4: Task 3.2 Laboratory Analyses

Priority 1: Task 4.2 Ecological Niche Modeling

This study will develop both "ecological niche models" and "distributional models". Ecological niche models are those that develop predicted geographic distributions of a target species' ecological niche. Ecological niche modeling has been shown to be useful in several disease studies (b)(6)

We also will employ the Genetic Algorithm for Rule-Set Production (GARP). GARP is a genetic algorithm that evolves ecological niche models iteratively through training and testing. The outcomes are rule sets, in the form of logic strings, which describe the relationships between the point locality data (outbreak localities) and environmental data layers (b)(6)

(b)(6)

In addition, this study will employ a number of distributional modeling approaches to identify areas of potential disease presence. Distributional models follow a more classical approach to modeling and identifying areas of greatest likelihood for the existing distribution of point localities to occur (b)(6) There are important academic differences in ecological niche and distributional modeling assumptions and predictions, and the exercises will provide modeling experience to UP-2 personnel that will train scientists in academic discussions on modeling approaches.

A large number of environmental data layers that represent global data coverage have successfully been employed in other disease modeling projects. These include raster coverage data sets of soil type, vegetation indices, climatic and precipitation parameters (including several biologically important derivatives of climate and precipitation), elevation, livestock densities, and human population. These data sets are available at several resolutions ranging from 250 m x 250 m to 8 km x 8 km. The UP-2 GIS efforts will leverage these environmental data sets to develop ecological models and spatial analyses to better understand the geographic distribution and transmission cycles of these EDPs.

While the majority of remote sensing proposed in UP-2 will be dedicated to the study of tularemia, we will use the Tasseled Cap (Kauth-Thomas) Transformation (TCAP) on Landsat 5 data for our field sampling sites. Elsewhere, we have successfully identified local-scale conditions on the landscape where soil minerals and organic material are concentrated by topography and hydrology. These identifiable areas have discrete remote sensing signatures that may link outbreak conditions to specific locations on the landscape. We will perform a preliminary TCAP analysis of satellite data specific to the field sampling for anthrax in UP-2.

Site access to veterinary laboratories for foreign scientists has, at times, been challenging. To ensure overall success of this requirement, it is imperative that (b)(6) work

closely with Institute of Veterinary Medicine (IVM) personnel. Should site access issues persist, IVM personnel will travel to the UF's SEER and KSU's Remote sensing laboratories for additional training with (b)(6) respectively.

Priority 2: Subtask 3.1.1 Sampling of Blood from Animals without Clinical Symptoms
Blood will be taken from wild boars through ongoing wildlife sampling for swine fever in Ukraine (outside the scope of this project). Blood samples will be drawn aseptically into sterile tubes containing Na-EDTA. To date, veterinary personnel in UP-2 have up to 1000 serum samples from the past several years. These samples are available for UP-2 to test and map at the rayon level. This work will expand the (b)(6) ork on wild boar anthrax testing.

Priority 3: Task 3.1 Sampling at Places of Contemporary and Recent (2–5 years) Anthrax Outbreaks
If time and schedule permits, we will initiate two 10-day field trips to areas with anthrax outbreaks documented in the last two to five years. When active anthrax outbreaks are reported, the UP-2 field team from IVM will travel to the site, map the outbreak with GPS units, collect samples from dead animals and blood from any living members of the affected herds. We will also initiate soil and environmental sampling efforts in these areas to test for the presence of spores in the area. These sampling trips will focus on recent historical outbreak data and local veterinary knowledge. We will initiate a laboratory inspection and review for biosafety and quality control in the first quarter of this project.

Environmental samples will be taken in sterile bags. Soil at the place of the outbreak will be taken from the depths of 4 cm as well as from the surface of the ground. Grass at the place of the outbreak will be taken near the ground surface or with roots. These materials will be tested for the presence of *B. anthracis* using PCR.

Priority 4: Task 3.2 Laboratory Analyses
For PCR analyses, either the commercially available kit or in-house developed methodologies will be used. In-house primers are designed to perform multiplex PCR using electrophoresis. The in-house methodology comprises the module for total DNA extraction from different types of pathological samples as well as from environmental samples as well as the module for amplification of pX01 and pX02 plasmid markers and 1 chromosomal marker. Additionally, up to 7 chromosomal markers (VNTR locus and gene *sap*) and several markers from both plasmids (*cap*, total *pA* gene) will be amplified and monitored. The set of primers amplifying these markers ensures reliable *B. anthracis* detection and its differentiation from antracoides. DNA aliquots from extraction preparations from new field samples may also be sent to the US for confirmatory molecular diagnostics.

Risk Management
In order to maintain course action and guarantee trainings that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown on the next page as Table 1.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Identifying and acknowledging the risks associated with not implementing this training, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Schedule						
Project Coordination	UP-2 involves a significant number of parties on both the US and Ukrainian sides, putting implementation activities at risk of delay or cancellation.	5	3	Medium	Establish and hold regular calls with all stakeholders and identify multiple possible implementation dates. Identify critical components as early as possible and redirect efforts when it becomes clear targeted implementation dates will not be achievable.	(b)(4); (b)(6)
Performance						
Political Instability	Ukraine's current political situation may lead to risks of being unable to safely complete in-country work.	3	5	(b)(4); (b)(6)	Metabiota has in-country personnel knowledgeable of the operating environment, and will coordinate closely with DTRO-K and all other relevant parties to operate as safely as possible.	
Procurement of perishable supplies	Some consumables necessary for the implementation of this project must be procured in the US, and shipped via single shipper.	5	4		Work with CLS on streamlining procurement and continue seeking options to procure supplies in country.	Medium
Loss of key research collaborators	Two key research collaborators are only funded through September via PSU AEP.	4	5		Issue a subcontract to UF research collaborators to work via Metabiota AEP.	(b)(4); (b)(6)

Cost Management

The Metabiota team and all partners will maintain an acute focus on cost management to ensure that the training is delivered at a reasonable cost to the government. Our team will provide full oversight to ensure accurate and responsive financial reporting and will facilitate cost savings to wherever possible. Metabiota will follow procurement regulations ensuring the best value is obtained under the time constraints using all means available.

Budget Narrative

Period of Performance

The Period of Performance for this effort is May 16, 2015 to May 15, 2016.

Labor

Costs for direct labor to support this activity is required for the following personnel:

- Metabiota Program Manager: to oversee implementation of the research project to include management of deliverables, logistics, procurement, and tracking of project requirements. The Program Manager will lead coordination activities between US-based research collaborators, DTRA, and the Ukrainian collaborators.
- Metabiota Project Coordinator (Trainer I): to assist in coordinating project activities, to include assisting in management of deliverables, logistics, procurement, tracking of project requirements, deliverables and logistics. The Project Coordinator will assist the Program Manager in the coordination of all Research Collaborators.
- Kansas State University Research Collaborator (Subject Matter Expert III, (b)(6) (b)(6) nd Research and Data Analyst (graduate student to be appointed): to execute remote sensing-related tasks and integrate these data with ecological niche modeling and laboratory analyses. (b)(6) contribution to the project will be: 1) supervision of the completion of the land cover mapping component of the project, 2) lead field excursion to Volyn Oblast, Ukraine to complete validation of land cover mapping component, 3) supervise and contribute to creation of biophysical data layers to support pathogen distribution mapping.
  Graduate student salary is requested to support one research assistant half-time throughout the project. The research assistant will have a 9-month appointment. Duties of the research assistant will include; 1) assist with production of the final product and archiving of land cover maps, 2) acquire remote sensing data and assist (b)(6) in creating biophysical layers, and 3) other tasks as directed by the project PI.
- University of Florida Research Collaborators (Subject Matter Experts III, (b)(6) and (b)(6) and Research and Data Analysts, 2 graduate students to be appointed), to execute animal sampling, GIS mapping, and ecological niche modeling-related tasks and integration with remote sensing and laboratory analyses. These individuals are currently funded through September 2015 via the PSU AEP vehicle. Metabiota AEP is proposing to add these individuals in October 2015 to maintain operational continuity.
  (b)(6) is leading the spatial epidemiology portion of this project, including the GIS mapping and ecological niche modeling related tasks. He also works closely with the collaborators at WRAIR that are focusing on the biological analysis of small mammal and tick samples for tularemia and boar sera and soil samples for anthrax in order to ensure that the data entered into the spatial epidemiology portion of the project is of the highest quality. He is expected to travel to Kyiv to work closely with collaborators at both UCDCM and IVM.
  (b)(6) contribution to the project includes leading small mammal trapping and his involvement in the subsequent data analyses in spatial epidemiology with (b)(6) (b)(6) . He interacts closely with (b)(6) from KSU in order to ensure that the biotope mapping in the land use/land cover portion of the project proceeds as projected. UF is requesting two graduate students at 25% effort (20 hours per student per pay period) during the 2015-2016 academic year to assist with data analysis, GIS mapping, and manuscript development related to the UP-2 project. These students will operate under the guidance of (b)(6)

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials

Materials and supplies are required to support laboratory and field sampling efforts, to include PPE, laboratory reagents and consumables. Every effort will be made to procure materials locally. For those items that cannot be procured in Ukraine, Metabiota will work with CLS to use their single shipper service for transport of those items to Ukraine.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all subcontractors for the period of performance of this project. Metabiota personnel performing on this project are already insured.

Additionally, a subcontract to CRDF will be issued in order to pay Ukrainian collaborators for their time while working on UP-2.

Subcontracts

A subcontract will be issued to Kansas State University for time provided by their staff, as well as computer licenses they will procure in support of this effort. Assuming Metabiota assumes support in October 2015 of the research collaborators from the University of Florida, a subcontract will also be issued to University of Florida for time provided by their staff. Costs are captured under the appropriate labor categories in CLIN 1002 and licenses in CLIN 1003 of the budget.

Travel

International travel is requested to support research partners to facilitate project implementation and conduct training and supportive activities in this effort. ~~We anticipate sending Kansas State University Research Collaborator to Volyn, Ukraine during autumn 2015 to perform remote sensing and ground truthing activities. The proposed project also requires local travel of Ukrainian participants to Volyn to conduct field sampling, remote sensing, and ground truthing research activities in autumn 2015.~~ These trips have been overtaken by events. We are still projecting Ukrainian participants to travel to two (2) sites within the country to do soil sampling, but the staff required will be reduced and no US collaborators will travel on these trips.

Assuming Metabiota assumes support in October 2015 of the research collaborators from the University of Florida, we are also budgeting for two (2) one-week trips to collaborate with laboratorians at UCDC and IVM~~, and one (1) one-week trip for an additional field sampling expedition in spring 2016~~. The additional field sampling expedition in spring 2016 is no longer regarded as feasible and has been struck from potential costs.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Travel within and to the US is requested to support a new approach to the data validation of the biotope mapping in the land use/land cover portion of the project. Three (3) participants from Ukraine will be brought to Gainesville, Florida to work with (b)(6) (b)(6) KSU) will also require support to travel from Manhattan, Kansas to Gainesville.

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP in the implementation of the UP-2: Incorporating GIS, Remote Sensing, and Laboratory Diagnostics into Human and Veterinary Disease Surveillance for Tularemia and Anthrax in Ukraine. Metabiota will ensure, through strong project management and risk management that the activity will be executed in an efficient and timely manner delivering a top quality research project geared to support enhanced biosurveillance and biosafety efforts in the region.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Team Metabiota Overview

Metabiota is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota currently supports a number of Defense Threat Reduction Agency Cooperative Biological Engagement Program (DTRA CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. Metabiota's mission aligns well with DTRA CBEP, and the entire Metabiota team is focused on supporting our USG Partners in reducing the risk of biological threats worldwide, and employs a collaborative and agile approach to biological risk reduction.

To ensure successful project implementation, Metabiota, in coordination with DTRA CBEP regional leadership and in-country partners have built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact DTRA CBEP objectives.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

TD 013 One Health Epi Training - Uganda

Objectives

Increase the operational biosafety and bio-surveillance capacity of Ugandan and Nigerian National and Regional Response Teams through training events and the development of standard operating procedures for emergent disease outbreak response, supporting interagency cooperation and a unified training approach.

Period of Performance: 05/16/2015-02/29/2016

CLIN	Total ROM	Total Invoiced	Total Remaining
1002	$302,676.76	$50,421.31	$252,255.45

CLIN 1002 – Labor

One health Epidemiology training Uganda is a legacy project that required a multi-faceted and specifically talented team to execute the proposal development and initial operational and reporting stages of this effort. Listed below is a breakdown of the labor activity used to support such activities.

Program Manager: 120 Hours

Program Management hours were used to support interim program managers (b)(6) PhD, and (b)(6) was tasked with leading the development of the proposa (b)(6) was tasked with general program oversight during the time before (b)(6) MSPH, would take over the management of the program on a permanent basis (b)(6) set up and led stakeholder meetings and provided direction to the program coordinator to ensure timely submission of CDRLs to DTRA (b)(6) ook over these responsibilities upon his arrival to Metabiota. He set and led additional stakeholder meetings with DTRA CBEP representation that had been deemed necessary, developed a communication protocol with all stakeholders, took over the responsibility for timely submission of all CDRLs, and developed operational solutions to the changing training landscape through thorough communication in in-country stakeholders.

Research and Data Analyst: 97 Hours

(b)(6) activities included the building out of the original technical proposal at the direction of interim Program Manager, (b)(6) , and with input from (b)(6) During the operation phase of this project (b)(6) was tasked under [redacted] gram Manager, (b)(6) with the development of CCR forms, CLS forms, TAF forms, Training Event Plans. She was responsible for maintaining a schedule for the timely submission of the mentioned deliverables, and for overall support to the program manager as tasked. (b)(6) was also responsible for recording and distributing minutes for all stakeholder calls. Research and Data Analyst provided final edits on proposal submission.

Trainer 1: 17 Hours

(b)(6) provided technical support regarding training scheduling and level of effort allocation during the proposal development stage of this proje(b)(6) was also tasked operationally to join bi-weekly stakeholder calls, and to support (b)(6) with the development of training event plans as needed.

Trainer 3: 81 Hours

Hours were allocated to support Metabiota International Training Manage(b)(6), PhD. These hours were used to provide technical expertise with regard to the development and design of the training schedules, and for the development of the training trip report for a training that took place while the technical direction was under FFP.(b)(6) additionally supported permanent program manager(b)(6) by attending stakeholder calls and providing technical expertise as needed; she also provided support to (b)(6) in the development and submission of training event plans as needed.

Subject matter 1: 16 Hours

Hours were used to support Metabiota Program Coordinator(b)(6) (b)(6) provided technical and coordination support during proposal development as well as initial program coordination support. She was tasked to work under the direction of(b)(6) during his interim effort as program manger for this effort.

Subject Matter Expert 3: 17 Hours

Hours were used to support Metabiota Senior Scientist,(b)(6) MD, PhD for the purpose of providing high technical expertise to the program manager during proposal development. He was also tasked with contributing to the development of the initial training trip report.

CLIN 1002 – Labor

Program Manager: 150.5 Hours

(b)(6) served as the program manager for this effort, providing facilitation and oversight. His efforts included leading separate biweekly calls with both DTRA CBEP representation and CDC Uganda as the in country performer. He oversaw completion and submission of all required travel and training documentation to include the Training event plan, CLS coordination, Travel Cost Estimates and the training trip report. He submitted all mentioned travel and training CDRLs in support of Cohort 9 Module 2 training set to take place in Jinja, Uganda. He submitted all mentioned travel and training CDRLs in support of Cohort 10 Module 1 set to take place in Kabarole, Uganda (b)(6) traveled to Jinja, Uganda in support of the Cohort 9 Module 1. He worked to manage the visiting Metabiota Project Team during all in country operations. He participated in, and led, daily pre training meetings. He observed the training in full, and lead all efforts to compile trip notes. During the trainings (b)(6) was also tasked with the coordination and management of epidemiology expert trainer and Metabiota Independent Consultar (b)(6)

Research and Data Analyst: 179 Hours

(b)(6) coordinated bi-weekly stakeholder meetings. She prepared agendas and meeting minutes for both DTRA CBEP communications as well as CDC Uganda Communications. She assisted with completion of travel documents including the CLS forms, CCR forms, Bills of material, and travel authorization forms. (b)(6) also assisted with the completion of the independent consultant agreement form for trainer (b)(6) She coordinated and participated in pre-travel trip plans, and worked with Metabiota travel coordinator (b)(6) to ensure that visas, flights, ground transportation, and international communication capacity were available for the traveling team. During the training (b)(6) sereved as the main contact point for program manage (b)(6) She was responsible for daily check ins and responding to any issues that came up. Upon completion of the travel and training (b)(6) was responsible for compiling and editing the team notes in support of the training trip report. She was finally responsible for communicating with CDC Uganda to ensure that any missing information from team travel reports was filled in.

Trainer 1: 132.5 Hours

Metabiota Epidemiologist (b)(6) was responsible for the development and completion of the pre-training and travel risk report. (b)(6) was also responsible for attending Bi-weekly calls with both DTRA CBEP and CDC Uganda. He was finally tasked to participate in all pre travel planning efforts.

(b)(6) assisted with completion of Cohort 9 module 1 training. Local National Metabiota Independent Consultant (b)(6) served as lead trainer during the event, and gave daily lectures to the training participants.

(b)(6) provided training oversight by taking observational notes throughout the entirety of the lecture (b)(6) also participated and engaged the trainees during breakout sessions.

Both (b)(6) were tasked to attend and or participate in every lesson presented during module 1 of cohort 9. They were additionally tasked to participate in daily pre-training meetings.

Subject Matter Expert 3: 91.5 Hours

Metabiota Senior Scientist (b)(6) traveled to Uganda as part of the project team in order to oversee implementation of Cohort 9 Module 1 (b)(used his extensive expertise in the field to provide expert advice to both the trainers and implementers during and before each daily training sessio (b)(6) recorded notes during the trainings and offered comments on both the materials and presentation as a whole.

(b)(6) was additionally involved in bi-weekly calls with both DTRA CBEP representation and CDC Uganda. He was additionally tasked to participate in all pre-travel planning activies.

CLIN 1003 – Materials and Supplies

Costs were incurred to maintain international communications throughout the training in October - Cohort 9 Module 1 in Jinja, Uganda. Costs included the acquisition of cellular communication credit to support local and international emergency calling, as well as cellular credit to provide backup online access in lieu of Wi-Fi provided by the hotel.

CLIN 1004 – ODCs

No costs invoiced

CLIN 1005 – Travel

Travel costs invoiced include air travel fo (b)(6) to travel to Uganda to complete the October training of Cohort 9 Module 1. Travel costs also include the hiring and fueling of a manned 4X4 vehicle in country. Further travel costs included those to support per-diem needs for all travelers an (b)(6) . All lodging for the Metabiota project team and (b)(6) was expensed to this category.-diem In addition charges for late cancellation of flights due to last minute training cancellation are being invoiced along with supporting documentation.

Subject: FW: Draft Invitation Letters for the District Level Epidemiology Training (July 13 - 17, 2015)
Date: Wednesday, July 8, 2015 at 4:08:04 PM Eastern Daylight Time
From: (b)(6)
To:

I did not see your name copied on this one, but maybe it was? FYI and forwarding anyway.

On 7/8/15, 3:47 PM, (b)(6) TRA J3-7 (US)" (b)(6) wrote:

All,

At this point, I am unable to confirm the location of the training (and it sounds from separate emails from the CDC team that Wakiso is no longer the preferred location anyway), nor am I sure of the employment status of the trainers... per CDC's (b)(6) last email to me, the trainers are not necessarily MoH employees, but that leaves open the question as to who these trainers are then in the first place, if they are not part of the MoH. The LoIs to the trainees would be sent very late at this point as well, so participation would likely be lower than it should.

I therefore ask that this training be deferred.

What I need from each party for this training to take place in the future...

CDC (b)(6)

1. The status of the trainers. Are they CDC employees, or MoH employees, or otherwise? If they are employees of the Government of Uganda, then they will receive no independent consulting agreements, or payments, through Metabiota or TTI/CLS or anyone else, for that matter.

2. Updated training event info to reschedule this training for August / September (i.e., date, location/venue, trainees, etc.) so that Metabiota can update and resubmit a CLS form for processing by TTI.

3. New letters of invitation specifying who is receiving per diem/financial/logistical support, and in what amount, and for what purpose.

Metabiota (b)(6)

1. Based on the answer above, I may give revised technical direction to set up contracts for the payment of the trainers if and only if they are

TD 13 # 3f

not under the employ of the Government of Uganda.

2. A revised CLS form for the rescheduled training utilizing the info from CDC requested above

VR,

(b)(6)

Subject: Re: Draft Invitation Letters for the District Level Epidemiology Training (July 13 - 17, 2015)

Much appreciated (b)(6)

We will standby and await feedback from (b)(6) : your conditions below.

Per the Ambassadors memo and your guidance below, we will not establish Independent Consulting Agreements with the trainers.

If it is determined that trainers will conduct training sans additional payment, and other conditions are okay, our team is ready to travel to Uganda in support of this training event.

Best regards,
(b)(6)

On 7/7/15, 3:17 PM, (b)(6) wrote:

(b)(6)

We will confirm with CLS/TTI ASAP the name and location of the venue in Wakiso; this information will likely be available first thing tomorrow morning. However, please confirm that the training can continue under the following conditions:

1. Trainers are not given extra payments

2. Training remains in Wakiso

3. Training can proceed if you get this information in the next 24

TD 13# 39

hours (i.e., given that the training is supposed to start in less than a week, are we already too late for sending the LoIs... will we get the trainees we're inviting at this late hour?)

(b)(6)

Although technical direction should probably come from (b)(6) understand you spoke with (b)(6) about needing direction from DTRA on whether MB should conduct the training themselves and whether trainers should be paid extra or not. To clarify: per the Ambassador's memo, trainers are not to receive extra payments, nor are we asking Metabiota to conduct the training themselves.

Subject: RE: Draft Invitation Letters for the District Level Epidemiology Training (July 13 - 17, 2015)

(b)(6)

I just discussed some of these issues with (b)(6) As i have not been involved with these before, ill do my best to explain below the pressing issues we need to address, hopefully by today.

1. I think the issue about the per diems, allowances, etc from the Ambassadors memo are understood and will be communicated to the participants. I also believe the coordination has been taking place.
The issue has been communication with (b)(6)
(b)(6) has not been in communication with (b)(6) nd given or confirmed to them the exact name and location of the venue. They are not able to put this on the LOI's that need to be sent out. Just stating "Wakiso" isn't sufficient.
3. If the venue hasn't been confirmed by (b)(6) r it's able to be changed at this point, we would prefer it either be moved to (b)(6)
(b)(6) Entebbe location will allow better coordination by (b)(6) since they are not allowed to stay at the Wakiso venue during the week due to local USG travel restrictions. They will also need to lock up and transport all laptops each night and set them up each morning if they aren't staying at the venue. If it can be in Entebbe, this will make it easier to handle logistics for setting up the trainings.
4. If the venue can be changed to Jinja, then we can more easily bring

TD 13# 31
TITAN01

all participants and coordination staff, and allow for them to stay at the venue.
5. At least 5 participants are from the Wakiso/Kampala area and aren't eligible for allowances. We will likely loose these participants attendance because, depending on the venue location, they will not be able ot travel on their own each day to attend. These people will likely have to be included in the next out of town training.

We need for someone at DTRA to communicate to (b)(6) d have them tell (b)(6) he exact venue name and location, or have them change the venue to one of the above options. After this, we can send LOIs and then work on logistics for setting up and managing the training for the week.

Thank you,
(b)(6)

Sent: Monday, July 06, 2015 4:12 PM
To (b)(6)
Cc
Subject: FW: Draft Invitation Letters for the District Level Epidemiology Training (July 13 - 17, 2015)

(b)(6)

After reviewing the letters of invitation (LoIs) to the trainings, I wanted to highlight a few things:

1. The training will be held in Wakiso district, and that there is a statement in the LoIs that staff based in Wakiso will not be receiving per diem / logistical or financial support, which is great.

2. No per diem amounts or services (such as transport refunds or accommodations, which are referenced in the CLS) are specified for receipt by trainers or trainees; only that they won't receive per diem if they do not attend all classes. I was previously informed that we were getting resistance from the MoH trainers and trainees based on the amounts / support they received was not in line with what they were promised in their LoIs, but this doesn't seem to be the case here.... either way, please someone let me know what document they (i.e., the trainees/trainers) will reference if they request further services/support or are dissatisfied with any support they receive. It may be best to include a line explaining what the per diem is intended for (e.g., "to cover your meal and incidental expenses during your

TO 13#3
Travel

participation" or something similar). Additionally, the CLS form should

3. Given that I've been receiving separate emails from each of you on this subject, has the pre-coordination with development of LoIs and planning for training not occurred, per our request during the teleconference between all OHE stakeholders/parties held the week of 21 May (b)(6) sking for confirmation of the location, where the letters (b)(6) ent clearly show the location being Wakiso.... not being critical, but having such pre-training teleconferences or meetings, as we agreed would happen, would prevent me from being the limiting factor/roadblock in planning these events, if I am otherwise occupied or out of office.

4. Per the AMB's memo, no salary "top-ups" for trainers are authorized. The attached memo (b)(6) sent dated May 6th, 2014 negotiates what we will pay for "facilitation fees", "honoraria", or otherwise "top-ups"
for trainers, but this memo is superseded by the Ambassador's memo, dated April 8th, 2015.... so no facilitation fees are to be paid.

5. For everyone on the Ugandan side, 140,000 UGX is the most we can pay (per Ambassador's memo referenced above), so whatever the exchange rate may be, that is the amount each individual based outside of Wakiso is to receive. The following individuals are listed on the last CLS I saw as being from Wakiso and therefore should not be receiving extra payments... (b)(6)

(b)(6)

If I got anything wrong here from your perspective, please let me know. I don't want to damage our relationship with the MoH but things like the AMB's memo superseding the CDC-MoH discussions over "top-ups" and "facilitation fees" seems pretty clear to me, despite what we've previously discussed or agreed to.

All,

I do hope these LoIs go out tomorrow, pe (b)(6) quest, and that I receive a revised CLS with payments and services being in line with CBEP and Embassy regulations, but if this can't happen, we may need to postpone or cancel the training

Dear Dr. (b)(6)

For you consideration, please find attached a travel request for activities tentatively scheduled for 6-17 July in Uganda. As discussed on the 21 May DTRA call, all necessary travel documents (CCR's and Training Event Plans) have been submitted and approved. Metabiota is requesting travel authorization in support of a Clinician Training event in Fort Portal, Uganda (6-10 July) and a One Health Epi training event in Hoima, Uganda (13-17 July).

We recognize that the OHE event in Hoima may not take place. Per conversations held with project stakeholders on 21 May, Metabiota is awaiting guidance from DTRA and the US Embassy in Uganda to determine appropriate levels of support for project trainees and trainers. Additionally, Metabiota has not received a Letter of Technical Direction for OHE training activities.

We are submitting the attached travel request in case trainings are approved.

Please do not hesitate to contact us if you have any questions.

Best regards,

(b)(6)

TD 014 Grant Writing Mentorship and Workshop – Kenya-

Objectives

The objective is to conduct a 6-day workshop and provide continuing mentorship on the skills required to successfully write scientific publications to a cohort of 20 scientists to be selected from the attendees of the Regional Conference on Zoonotic Diseases in Eastern Africa held in Kenya in March 2015.

Period of Performance: 07 02 15-05 15 16

CLIN	Total ROM	Total Invoiced	Total Remaining
1002	$85,141.00	$11,383.90	$73,757.11
1003	$7,880.00		$7,880.00
1004	$3,542.00		$3,542.00
1005	$17,420.00		$17,420.00
TOTAL	$113,983.00	$11,383.90	$102,599.11

CLIN 1002 – Labor

Program Manager: 56 Hours

(b)(6) worked together to prepare the proposal in response to the technical direction including holding several meetings with stakeholders to fully understand the requirements. Upon approval (b)(6) established bi-weekly stakeholder calls to ensure deliverables were met and the program remains successful. (b)(6) has since held bi-weekly calls with Kenyan stakeholders (b)(6) (b)(6) as well as DTRA CBEP representation. He has also led the development of and dissemination of the project charter for TD-014.

Subject matter 1: 28.5 Hours

(b)(6) assisted in the proposal development and participated in the bi-weekly calls with stakeholders. She assisted (b)(6) in the development of a project charter to assist with tracking of labor and deliverable completion. (b)(6) additionally began outreach efforts in support of identifying subject matter experts to support this effort in later phases.

#	DTRA Comment	Metabiota Response	Location
[redacted]	[redacted]	[redacted]	[redacted]
1			**TD-014 Kenya Writing Workshop budget 2015-08-16 'Labor breakout'CTR-CBEP_AEP_TD-14RevA_KE_Writing Workshop_14Sep2015, Section 9.**
2	For Phase 2 -Participant Identification and SME Matching: Metabiota proposed a PM (94 hours or approximately 13.4 hours/week for 7 weeks), a SME1 (105 hours or 15 hours/week for 7 weeks) and a SME3 (101 hours or approximately 14.4 hours/week for 7 weeks). The conference organizers have already selected the 20 participants; therefore Metabiota should remove this phase from the proposal. Additional communications regarding the SME assignments should occur during Phase 1 and should be part of the not to exceed 6 hours/week. The hours allocated to this phase should be removed from the proposal. Total hours to be removed: 300 hours.	Metabiota acknowleges that participant identification has already occurred and that SME matching will now be a component of phase 1. Phase 2 has been eliminated and the budget has been updated accordingly.	TD-014 Kenya Writing Workshop budget 2015-08-16 'Labor breakout'CTR-CBEP_AEP_TD-14RevA_KE_Writing Workshop_14Sep2015, Section 9.

3	For Phase 3 -Hypothesis Development and Article Framing: Metabiota proposes a PM (109 hours or 8.4 hours/week for 13 weeks; 1 SME1 (218 hours or approx. 17 hours/week for 13 weeks), 2 SME2s (103 hours each or approx. 8 hours/week), 3 SME3s (103 hours each or approx. 8 hours/week for 13 weeks), and 5 RDAs (140 hours each or approx. 11 hours/week for 13 weeks). CBEP expectation is to provide the participants with the right skills to take their manuscripts to the next level, with the goal that that next level will be good enough for acceptance to a peer-reviewed journal. It is for that reason that these efforts were not requested in the letter of technical direction. The SMEs will not need to contact the participants before the workshop due to the coordination through the Kenyan POCs and SMEs. Metabiota's SMEs (one from Metabiota and two Kenyans to be identified) will review the participants' manuscripts prior to the workshop. Each SME should not spend more than 20 hours total to complete the review and assessment of the manuscripts prior to the workshop as well as conduct any additional coordination among the SMEs. The SMEs will work together to determine if/how the manuscripts will be divided up as each SME may not need to conduct a detailed review of each manuscript. There may be additional SMEs identified for participation in all workshop activities (including pre- and post- workshop activities) by the Kenyan stakeholders but their time will not be funded by Metabiota. PM oversight of the SME's review	Metabiota acknowleges that SMEs will not be tasked with communication with participants prior to the workshop. Their roles have been specified for participant manuscript review during this phase and they been alloted 20 hours each. The PM will coordinate this effort with the mentioned allotment of 5 hours. All other roles have been eliminated and the phase title has been changed in kind.	TD-014 Kenya Writing Workshop budget 2015-08-16 'Labor breakout';CTR-CBEP_AEP_TD-14RevA_KE_Writing Workshop_14Sep2015, Section 9.
4	For Phase 4-Writing Workshop Implementation: Metabiota proposed a PM (72 hours), 1 SME1 (72 hours), 2 SME2s (72 hours each), and 3 SME3's (72 hours each). The TD specified Metabiota to develop a six day workshop but the dates proposed go beyond six days (Feb 1-14, 2016). The dates should be revised to reflect the following workshop outline: 1) the main workshop will consist of 5 days (Monday-Friday) where the SME's will work together with the participants, 2) 1 day after the workshop for the SME's to finalize the review of the manuscripts, and 3) the travel days needed to travel between the U.S. in Kenya. PM participation during the workshop is acceptable; however it is not clear what the PM will do full time during the workshop. Oversight should not necessitate as many hours as the SMEs efforts during the workshop, therefore Metabiota should reduce the number of PM hours to reflect those hours spend only on this project, or provide additional clarification regarding PM tasks during the 6 working days to justify a full-time workload. The labor hours for each SME should not exceed 72 hours.	Metabiota acknowleges that the project will not last more than 6 days and that the window will be adjusted to reeflect this. PM hours have been reduced to 4 hours per day during the workshop to ensure that the referenced time is soleley focused on the project. New total PM hours: 54 (inclusive of international travel needs). SME I has been left at 72 (inclusive of internationl travel needs) to allow for full engagement and support in country. SME IIIs (Kenya Based) have been reduced to 52 hours (inclusive of domestic travel needs) to allow for full engagement and support in country during the workshop.	TD-014 Kenya Writing Workshop budget 2015-08-16 'Labor breakout'; CTR-CBEP_AEP_TD-14RevA_KE_Writing Workshop_14Sep2015, Section 9.
5	For Phase 5- Paper Finalization and Publication Submission: Metabiota proposed a PM (49 hours or 5.4 hours/week for 9 weeks), 1 SME1 (97 hours or 11 hours/week for 9 weeks), 2 SME2's (72 hours each or 8 hours/week for 9 weeks), 3 SME3's (72 hours each or 8 hours/week for 9 weeks) and 5 RDA's (136 hours each). As stated in the TD, CBEP will not be supporting or overseeing the submission of these manuscripts; for that reason, this phase should be removed from the proposal. Post-workshop activities will be captured below in proposed Phase 6.	Metabiota acknowleges that no oversight of submission will be provided, and phase 5 has been eliminated. Relevant post work shop activities have been migrated to the next phase.	TD-014 Kenya Writing Workshop budget 2015-08-16 'Labor breakout';CTR-CBEP_AEP_TD-14RevA_KE_Writing Workshop_14Sep2015, Section 9.

6	For Phase 6 -Post-submission Assistance and Summary Report Development: Metabiota proposed a PM (10 hours), a SME1/Project Coordinator (10 hours), 2 SME2's (20 hours each), and 3 SME3's (20 hours each). As stated in the TD, CBEP will not be overseeing the submission or the post-submission process for the participants thus this phase is not necessary and should be removed from the proposal. Post-workshop efforts will include the three SMEs spending no more than 20 hours each over 2-4 weeks to continue coordination with each other and potentially other SMEs (not funded via Metabiota) as well finalize any needed review or revision of the manuscripts with the workshop participants. Again, this may need to be divided between SMEs to stay within the 20 hour maximum. PM oversight of the SME's final review and coordination activities should not exceed 5 hours total	Metabiota acknowleges that it will not provide oversight to the submission or post submission process - and that it will only provide final review and revision of workshop participants manuscripts's. This effort will be performed only by Metabiota SME I and Kenyan National SME III's with oversight from the Metabiota PM.	TD-014 Kenya Writing Workshop budget 2015-08-16 'Labor breakout';CTR-CBEP_AEP_TD-14RevA_KE_Writing Workshop_14Sep2015, Section 9.
7	For Materials and Supplies: Metabiota proposed the access of scientific articles from online journals. Metabiota proposed that each of the 20 participants will need access to 20 articles at a cost (b)(4) per article for a total cost of (b)(4); CBEP agrees that the access to journals will be necessary but the maximum number of articles per participant proposed is excessive. CBEP expects participants to have relevant papers they have used in the past (to develop draft manuscripts papers and the presentations given at the One Health Conference). Therefore, it seems more appropriate to lower the access per participant to no more than 10 articles per person. This is an average and downloads should be managed by the SMEs. A total number of 200 papers is authorized however this is the maximum, which does not need to be met, and should be used as needed per participant, not necessarily divided evenly if some participants do not require additional resources. This section should be revised to reflect this vision.	Materials and supply costs for jounrals have been reduced to (b)(4); This will allow for an average of 10 articles per person for all 20 participants. Access to articles will only be purchased on a justifiable and as needed basis.	TD-014 Kenya Writing Workshop budget 2015-08-16 'materials'; CTR-CBEP_AEP_TD-14RevA_KE_Writing Workshop_14Sep2015, Section 9.
8	For Travel: Metabiota proposes (b)(4); (b)(6) e fee per traveler; it is unclear what this expense covers, and CBEP generally does not consider "service fee" an allowable expense. More information is needed to justify this fee.	Recognizing that CBEP does not consider "service fee" an allowable expense, th(b)(4); (b)(6) e has been removed.	TD-014 Kenya Writing Workshop budget 2015-08-16 'travel';CTR-CBEP_AEP_TD-14RevA_KE_Writing Workshop_14Sep2015, Section 9.

TD-014 Kenya Writing Workshop budget 2015-08-16 'materials';CTR-CBEP_AEP_TD-14RevA_KE_Writing Workshop_14Sep2015, Section 9.

9

For Communication: Metabiota proposes costs for international calling and data plans for each traveler at a cost (b)(4); (b)(6) for a total cost of (b)(4); (b)(6) More information is needed regarding the type of data plan to be purchased and the options that are available (e.g. quotes) for different plans available for a single 1-week trip to determine if these expenses are reasonable and appropriate. More justification is needed regarding the need for every single person to have a full plan (calling and data plan) including the proposed use (CBEP will only support the use of the mobile phones for activities directly related to the workshop, not other business).

1). Reliable and well respected Kenyan cellcom provider Safricom offers prepaid data plans a(b)(4); (b)(6)
(b)(4); (b)(6)

It is expected that SMEs and potentially the PM, in a supporting role) will need to acces journal articles to support the research of workshop participants. Each individual will also require a USB modem internet device, aslo available through Safaricom and costin(b)(4); (b)(6)
(b)(4); (b)(6)
(b)(4);). We additionally propose that there is a need to provide all SMEs, and the PM(b)(4);
(b)(4); (b)(6)
(b)(4); (b)(6) worth of general purpose cellular communication credit per day to ensure saftely and cohesion among the visiting team.

Subject: RE: TD 015 - Vietnam Health Informatics Support Services Budget and Budget Narrative
Date: Wednesday, August 19, 2015 11:29:54 AM

Hi (b)(6)

Metabiota's proposal submitted on 11 Aug 2015 in support of Technical Directive 015 is hereby approved for implementation with a ceiling price of (b)(6)

The Contractor should use its best efforts to perform the work specified in the Technical directive within the estimated ceiling price. The Contractor should notify the Contracting Officer in writing whenever it has reason to believe that the costs for this Technical Directive are expected to go over the established ceiling price.

Cheers,
(b)(6)

Subject: TD 015 - Vietnam Health Informatics Support Services Budget and Budget Narrative

Dear (b)(6)

As requested, please find attached Metabiota's budget and budget narrative in response to TD 015 Vietnam Health Informatics Support Services. The final report and attachments will be sent immediately following this email via AMRDEC, as it is too large to email. The report has simultaneously been sent to CDC personnel by (b)(6)

If you have any questions, please contact me at anytime.

V/r, (b)(6)

TD 015 Health Informatics Support Services - Vietnam

Objectives

Improve Vietnam Ministry of Health systems (processes and software) to support public health disease reporting and response capacity and improve compliance with National and International Health Regulations (e.g., IHR 2005).

Period of Performance: 05/16/2015 – 06/30/2015

CLIN	Total ROM	Total Invoiced	Total Remaining
1002	$51,805.00	$51,804.80	$0.20
1003	$0.00	$0.00	$0.00
1004	$0.00	$0.00	$0.00
1005	$0.00	$0.00	$0.00
TOTAL	$51,805.00	$51,804.80	$0.20

The period of performance for this activity extended 1.5 months into Option Year 1 of the AEP contract to accommodate close out activities conducted by Dr. Shields in Vietnam and completion of the final report to the optimal extent.

CLIN 1002 – Labor

Costs for direct labor to support this activity were incurred for the following personnel:

Program Manager: 8 Hours

Metabiota SEA Program Manager (b)(6) to allow for continued program management activities and oversight for the duration of the period of performance. Tasks included: coordination with (b)(6) in closing out all activities for the project, to include contract invoicing and close out, receipt and review of the final report and submission of the report to CBEP and CDC personnel.

Visiting Scientist: 176 Hours

Visiting Scientist (b)(6) to allow for continued contact and key meetings with in- country partners, supporting completion of the evaluation report in a timely manner in order to identify gaps in the capability and capacity of the existing disease reporting and response systems, as well as supporting information systems software and other tools to meet the Vietnam National and International Health Regulation's (IHR 2005) reporting requirements in the scope of GHS Agenda. In addition, labor hours in this period included close out and demobilization activities in Vietnam, as well as completion and submission of the final report and attachments.

CLIN 1003 – Materials and Supplies

No costs were incurred during this period.

CLIN 1004 – ODCs

No additional costs were incurred. Costs for DBA insurance were previously incurred for (b)(6) time in Vietnam.

CLIN 1005 – Travel
No costs were incurred during this period.

Subject: HDTRA1-14-C-0104 Technical Direction for Continued Health Informatics support in Vietnam.

Dear (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to complete deployment activities of a health informatics subject matter expert (SME) in Hanoi, Vietnam through May 2015, in accordance with SOW section 4.3, Task 2. Metabiota was previously issued a Technical Direction Memo to proceed with the fulfillment of a Global Health Security Information Systems and Surveillance contract position to be stationed in Vietnam; authorizing disclosure of position requirements and soliciting candidates for the position. In support of this effort, the SME assessed, designed and implemented activities to assist the Vietnam Ministry of Health, including the General Department of Preventive Medicine, four regional institutes, provincial and district laboratories and others involved in disease surveillance, report and response.

The deliverable of a final report prepared by the SME will be provided to the CBEP POCs identified below upon completion of contract.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with the DTRA CBEP Points of Contact listed below.

CBEP POCs: CBEP Vietnam Country Manager (b)(6)

TD 016 Georgia GIS

Objectives

Provide GIS subject matter expertise to project teams responsible for DTRA CBEP research projects GG-19, GG-20, and GG-27. Subject matter expertise will be responsible for providing mentoring to Georgian scientists both via remote communication and in person.

Period of Performance: 09/15/15 – 05/15/16

CLIN	Total ROM	Total Invoiced	Total Remaining
1002	$123,494.00	$8,488.52	$115,005.49
1003	$0.00		$0.00
1004	$1,754.00		$1,754.00
1005	$14,257.00		$14,257.00
TOTAL	$139,505.00	$8,488.52	$131,016.49

CLIN 1002 – Labor

Program Manager: 57 Hours

(b)(6) prepared and submitted a proposal in response to the technical direction. He identified the most qualified performer to be (b)(6) with the University of Florida and began negotiations to establish a subcontract agreement. He also had discussions with the project teams and reviewed the Forms A for the three CBR projects after they were provided by DTRA A&AS. After incorporating this new knowledge, Dennis submitted a revised proposal to the government to include research and data analyst hours and the proposal was approved.

Subject matter 1: 4.5 Hours

(b)(6) assisted in development of the proposal and in the drafting of the subcontract documents.

CLIN 1003 – Materials and Supplies

No costs invoiced.

CLIN 1004 – ODCs

No costs invoiced.

CLIN 1005 – Travel

8. DESCRIPTION (NOT TO EXCEED 1 PAGE)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide expertise in geographic information systems (GIS) modeling and regional Single Nucleotide Polymorphisms (SNPs) at the Richard G. Lugar Center for Public Health Research in Georgia in accordance with SOW, Section 4.4, Task 2 and Task 4. This expertise should be provided by a scientist (SME I or SME II) with experience of working with Former Soviet Union (FSU) researchers and should focus on providing subject matter expertise in GIS modeling and regional SNPs for CBEP-funded research projects GG-19, GG-20 and GG-27.

For GG-19, this expertise should include guidance and mentorship of National Center for Disease Control (NCDC) staff on using GIS to determine a risk assessment for exposure to environmental and animal sources of *Francisella tularensis*, and should focus on producing risk assessment maps.

For GG-20, the expert should provide mentorship to Laboratory of Ministry of Agriculture (LMA) and National Food Agency (NFA) personnel on using GIS techniques to manage and visualize (map) the ecological niche and distribution models of *Coxiella burnetii* and conduct advanced spatial and temporal modeling and statistical analysis of datasets.

For GG-27, the expert should aid in the identification and selection of regional foci of *Bacillus anthracis* and the corresponding environmental sampling sites, conduct spatial genetic pattern analysis and risk factor mapping of *B. anthracis* using GIS, aid in the production of GIS models of the geographic distribution of *B. anthracis* across the south Caucasus, and serve as a subject matter expert on regional Single Nucleotide Polymorphisms (SNPs), including a well-established Georgian SNP typing panel. Mentorship activities should focus on providing guidance in stringent metrics and international standards in GIS and SNP data interpretation and analysis to NCDC, LMA and NFA scientists.

It is expected that implementation of this requirement will be approximately 13 weeks worth of effort consisting of (a) 3 x 1 week trips (detailed below), (b) up to 1 week before each trip for preparation activities, (c) up to 1 week after each trip for reporting and follow-up actions, and (d) up to 4 additional weeks of effort for coordination and remote reach-back support. The expert is expected to conduct two trips to Tbilisi, Georgia, to provide on-site mentorship to Georgian colleagues for GG-19, GG-20 and GG-27 research projects. Timing for these trips should be determined based on project needs. The expert is also expected to conduct a third trip to attend the regional GG-27/AJ TAP-11 kick-off meeting in Baku, Azerbaijan in October 2015.

The period of performance for this effort will be from 15 September 2015 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $150,000 is requested by 4 September 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide expertise in geographic information systems (GIS) modeling and regional Single Nucleotide Polymorphisms (SNPs) at the Richard G. Lugar Center for Public Health Research in Georgia in accordance with SOW, Section 4.4, Task 2 and Task 4. This expertise should be provided by a scientist (SME I or SME II) with experience of working with Former Soviet Union (FSU) researchers and should focus on providing subject matter expertise in GIS modeling and regional SNPs for CBEP-funded research projects GG-19, GG-20 and GG-27

For GG-19, this expertise should include guidance and mentorship of National Center for Disease Control (NCDC) staff on using GIS to determine a risk assessment for exposure to environmental and animal sources of *Francisella tularensis*, and should focus on producing risk assessment maps.

For GG-20, the expert should provide mentorship to Laboratory of Ministry of Agriculture (LMA) and National Food Agency (NFA) personnel on using GIS techniques to manage and visualize (map) the ecological niche and distribution models of *Coxiella burnetii* and conduct advanced spatial and temporal modeling and statistical analysis of datasets.

For GG-27, the expert should aid in the identification and selection of regional foci of *Bacillus anthracis* and the corresponding environmental sampling sites, conduct spatial genetic pattern analysis and risk factor mapping of *B. anthracis* using GIS, aid in the production of GIS models of the geographic distribution of *B. anthracis* across the south Caucasus, and serve as a subject matter expert on regional Single Nucleotide Polymorphisms (SNPs), including a well-established Georgian SNP typing panel. Mentorship activities should focus on providing guidance in stringent metrics and international standards in GIS and SNP data interpretation and analysis to NCDC, LMA and NFA scientists.

It is expected that implementation of this requirement will be approximately 13 weeks worth of effort consisting of (a) 3 x 1 week trips (detailed below), (b) up to 1 week before each trip for preparation activities, (c) up to 1 week after each trip for reporting and follow-up actions, and (d) up to 4 additional weeks of effort for coordination and remote reach-back support. The expert is expected to conduct two trips to Tbilisi, Georgia, to provide on-site mentorship to Georgian colleagues for GG-19, GG-20 and GG-27 research projects. Timing for these trips should be determined based on project needs. The expert is also expected to conduct a third trip to attend the regional GG-27/AJ TAP-11 kick-off meeting in Baku, Azerbaijan in October 2015.

The period of performance for this effort will be from 15 September 2015 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $150,000 is requested by 4 September 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES).

Proposal Development & Initiation
Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8 and leverages information gleaned from discussions with A&AS contractors. A key assumption for this effort is that the Georgian scientists are generally capable of conducting GIS analyses on their own. It is anticipated that the plan for TD-016 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as SME I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:
From the information provided in Box 8, Metabiota assumes that these projects are ongoing affairs led by a third party. In order to effectively ensure that a GIS SME is available to provide the requested in-country mentoring, the Metabiota PM and PC will, upon approval of the TD, continue to engage relevant DTRA CBEP stakeholders to identify how, where, and when project status updates are communicated (for example, monthly teleconference, weekly email exchanges, etc.). Upon approval and receipt of additional information re: GG 19, 20, and 27, the Metabiota PM and PC will identify a GIS SME and work to establish a subcontract or independent consulting arrangement with the SME. The Metabiota PM, PC, and GIS SME will participate in these communications in order to understand when in-country mentoring activities will be required. The Metabiota PM and PC will work with the GIS SME to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or the appropriate DTRO (Tbilisi or Baku).

Mentoring:
Mentoring will consist of both in-country and remote mentoring. After assessing the need for in-person GIS mentoring, the PM, PC, and GIS SME will work with the project teams to elucidate the specific goals, and requirements of each mentoring request to ensure that the mentoring visit is conducted efficiently and effectively. The GIS SME will work with the PM, PC, and appropriate stakeholders in each respective project to create a list of tasks to be accomplished by the Georgian scientists leading up to the mentoring visit, to create a list of topics for the GIS SME to be prepared to assist with during the mentoring visit, and to facilitate the communication and exchange of any necessary data or concepts both prior to and following each mentoring visit.

Reach-back support:
Based on our understanding of the requirements, Metabiota does not expect to be required to provide primary GIS analysis support to any of the three projects, but does expect the GIS SME to be available to occasional y provide remote guidance or limited assistance with data analyses. Through regular communications with the respective project teams, Metabiota will be made aware of any additional subject matter expertise requests. The GIS SME will address these needs as they arise.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost, Schedule, Performance, Quality						
Unable to communicate with DTRA CBEP technical POCs	The short turnaround combined with the holiday likely led to the non-response to Metabiota requests for communication and background materials on the three Georgia projects. Therefore, the proposal was developed without sufficient context into the true level of GIS subject matter expertise needed to accomplish project goals. Thus our proposed labor solution may be inadequate, impacting cost. It may also impact schedule, performance, and quality, as we may proceed to identify a SME who is incapable of meeting project requirements in a timely fashion or to the satisfaction of project stakeholders.	5	4	(b)(4); (b)(6)	Upon approval, continue efforts to contact DTRA Technical POCs and all other relevant stakeholders (for example, A&AS). During proposal development Metabiota has researched multiple possible SMEs who could potentially address project requirements.	**Med-High**
Schedule / Performance						
The TD indicates potential travel in October	TD was received on 1 September, and indicates travel for an unspecified window in October, placing Metabiota at risk for not meeting CDRL deadlines. Missing the CCR CDRL deadline may result in travel authorization being denied.	5	5	(b)(4); (b)(6)	Ask DTRA if Metabiota may proceed with project coordination activities sans approval; also ask for possibility of receiving formal exemption of meeting CCR deadlines for this first travel.	**Med-High**

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN).

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$123,504
1003	MATERIALS	$0
1004	ODCs	$1,754
1005	TRAVEL	$14,257
TOTAL		**$139,514.62**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES)

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:
Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As our Subject Matter Expert may be an independent consultants or subcontractor, the Metabiota PM will additionally provide management oversight of the project subcontractors (GIS SME) and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the

acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM and will manage the GIS SME, including all subcontractors, to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline.

The PC will lead coordination with project stakeholders and will coordinate in-country mentorship dates. The PC will participate in regular communications between the project stakeholders and the GIS SME. The PC will coordinate with stakeholders in order to plan and execute logistical arrangements, and drive the coordination required to sufficiently gather the answers to the logistical questions that will arise in the planning and execution of requested travel for mentoring activities.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the GIS SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Subject Matter Expert 2: The SME 2 will serve as the GIS SME. The SME 2 will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each project, the needs and expectations of the Georgian scientists, and the GIS subject matter expertise needed. The SME 2 will provide both in-country and remote mentoring as directed by the respective project leads.

Materials
No materials are expected to be procured for this effort.

Other Direct Costs
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts
Subcontracts will be issued to SMEs, RDAs, and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel is requested to support the GIS SME to Tbilisi, Georgia for two (2) one-week trips to provide mentoring as needed. Travel is also requested to support the GIS SME to Baku, Azerbaijan for one (1) one-week trip to attend the project kickoff of GG-27/AJ TAP-11. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide expertise in geographic information systems (GIS) modeling and regional Single Nucleotide Polymorphisms (SNPs) at the Richard G. Lugar Center for Public Health Research in Georgia in accordance with SOW. Section 4.4, Task 2 and Task 4. This expertise should be provided by a scientist (SME I or SME II) with experience of working with Former Soviet Union (FSU) researchers and should focus on providing subject matter expertise in GIS modeling and regional SNPs for CBEP-funded research projects GG-19, GG-20 and GG-27.

For GG-19, this expertise should include guidance and mentorship of National Center for Disease Control (NCDC) staff on using GIS to determine a risk assessment for exposure to environmental and animal sources of *Francisella tularensis*, and should focus on producing risk assessment maps.

For GG-20, the expert should provide mentorship to Laboratory of Ministry of Agriculture (LMA) and National Food Agency (NFA) personnel on using GIS techniques to manage and visualize (map) the ecological niche and distribution models of *Coxiella burnetii* and conduct advanced spatial and temporal modeling and statistical analysis of datasets.

For GG-27, the expert should aid in the identification and selection of regional loci of *Bacillus anthracis* and the corresponding environmental sampling sites, conduct spatial genetic pattern analysis and risk factor mapping of *B. anthracis* using GIS, aid in the production of GIS models of the geographic distribution of *B. anthracis* across the south Caucasus, and serve as a subject matter expert on regional Single Nucleotide Polymorphisms (SNPs), including a well-established Georgian SNP typing panel. Mentorship activities should focus on providing guidance in stringent metrics and international standards in GIS and SNP data interpretation and analysis to NCDC, LMA and NFA scientists.

It is expected that implementation of this requirement will be approximately 13 weeks worth of effort consisting of (a) 3 x 1 week trips (detailed below), (b) up to 1 week before each trip for preparation activities, (c) up to 1 week after each trip for reporting and follow-up actions, and (d) up to 4 additional weeks of effort for coordination and remote reach-back support. The expert is expected to conduct two trips to Tbilisi, Georgia, to provide on-site mentorship to Georgian colleagues for GG-19, GG-20 and GG-27 research projects. Timing for these trips should be determined based on project needs. The expert is also expected to conduct a third trip to attend the regional GG-27/AJ TAP-11 kick-off meeting in Baku, Azerbaijan in October 2015.

The period of performance for this effort will be from 15 September 2015 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $150,000 is requested by 4 September 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation
Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8 and leverages information gleaned from discussions with A&AS contractors. A key assumption for this effort is that the Georgian scientists are generally capable of conducting GIS analyses on their own. It is anticipated that the plan for TD-016 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as SME I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:
From the information provided in Box 8, Metabiota assumes that these projects are ongoing affairs led by a third party. In order to effectively ensure that a GIS SME is available to provide the requested in-country mentoring, the Metabiota PM and PC will, upon approval of the TD, continue to engage relevant DTRA CBEP stakeholders to identify how, where, and when project status updates are communicated (for example, monthly teleconference, weekly email exchanges, etc.). Upon approval and receipt of additional information re: GG 19, 20, and 27, the Metabiota PM and PC will identify a GIS SME and work to establish a subcontract or independent consulting arrangement with the SME. The Metabiota PM, PC, and GIS SME will participate in these communications in order to understand when in-country mentoring activities will be required. The Metabiota PM and PC will work with the GIS SME to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or the appropriate DTRO (Tbilisi or Baku).

Mentoring:
Mentoring will consist of both in-country and remote mentoring. After assessing the need for in-person GIS mentoring, the PM, PC, and GIS SME will work with the project teams to elucidate the specific goals, and requirements of each mentoring request to ensure that the mentoring visit is conducted efficiently and effectively. The GIS SME will work with the PM, PC, and appropriate stakeholders in each respective project to create a list of tasks to be accomplished by the Georgian scientists leading up to the mentoring visit, to create a list of topics for the GIS SME to be prepared to assist with during the mentoring visit, and to facilitate the communication and exchange of any necessary data or concepts both prior to and following each mentoring visit.

Reach-back support:
Based on our understanding of the requirements, Metabiota does not expect to be required to provide primary GIS analysis support to any of the three projects, but does expect the GIS SME to be available to occasiona ly provide remote guidance or limited assistance with data analyses. Through regular communications with the respective project teams Metabiota will be made aware of any additional subject matter expertise requests. The GIS SME will address these needs as they arise.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost, Schedule, Performance, Quality						
Unable to communicate with DTRA CBEP technical POCs	The short turnaround combined with the holiday likely led to the non-response to Metabiota requests for communication and background materials on the three Georgia projects. Therefore, the proposal was developed without sufficient context into the true level of GIS subject matter expertise needed to accomplish project goals. Thus our proposed labor solution may be inadequate, impacting cost. It may also impact schedule, performance, and quality, as we may proceed to identify a SME who is incapable of meeting project requirements in a timely fashion or to the satisfaction of project stakeholders.	5	4	(b)(4); (b)(6)	Upon approval, continue efforts to contact DTRA Technical POCs and all other relevant stakeholders (for example, A&AS). During proposal development Metabiota has researched multiple possible SMEs who could potentially address project requirements.	**Med-High**
Schedule / Performance						
The TD indicates potential travel in October	TD was received on 1 September, and indicates travel for an unspecified window in October, placing Metabiota at risk for not meeting CDRL deadlines. Missing the CCR CDRL deadline may result in travel authorization being denied.	5	5	(b)(4); (b)(6)	Ask DTRA if Metabiota may proceed with project coordination activities sans approval; also ask for possibility of receiving formal exemption of meeting CCR deadlines for this first travel.	**Med-High**

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL

TOTAL		**$139,514.62**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:
Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As our Subject Matter Expert may be an independent consultants or subcontractor, the Metabiota PM will additionally provide management oversight of the project subcontractors (GIS SME) and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the

acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipat ng, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM and will manage the GIS SME, including all subcontractors, to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline.

The PC will lead coordination with project stakeholders and will coordinate in-country mentorship dates. The PC will participate in regular communications between the project stakeholders and the GIS SME. The PC will coordinate with stakeholders in order to plan and execute logistical arrangements, and drive the coordination required to sufficiently gather the answers to the logistical questions that will arise in the planning and execution of requested travel for mentoring activities.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the GIS SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Subject Matter Expert 2: The SME 2 will serve as the GIS SME. The SME 2 will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each project, the needs and expectations of the Georgian scientists, and the GIS subject matter expertise needed. The SME 2 will provide both in-country and remote mentoring as directed by the respective project leads.

Materials
No materials are expected to be procured for this effort.

Other Direct Costs
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts
Subcontracts will be issued to SMEs, RDAs, and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel is requested to support the GIS SME to Tbilisi, Georgia for two (2) one-week trips to provide mentoring as needed. Travel is also requested to support the GIS SME to Baku, Azerbaijan for one (1) one-week trip to attend the project kickoff of GG-27/AJ TAP-11. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide expertise in geographic information systems (GIS) modeling and regional Single Nucleotide Polymorphisms (SNPs) at the Richard G. Lugar Center for Public Health Research in Georgia in accordance with SOW, Section 4.4, Task 2 and Task 4. This expertise should be provided by a scientist (SME I or SME II) with experience of working with Former Soviet Union (FSU) researchers and should focus on providing subject matter expertise in GIS modeling and regional SNPs for CBEP-funded research projects GG-19, GG-20 and GG-27.

For GG-19, this expertise should include guidance and mentorsh p of National Center for Disease Control (NCDC) staff on using GIS to determine a risk assessment for exposure to environmental and animal sources of *Francisella tularensis*, and should focus on producing risk assessment maps.

For GG-20, the expert should provide mentorship to Laboratory of Ministry of Agriculture (LMA) and National Food Agency (NFA) personnel on using GIS techniques to manage and visualize (map) the ecological niche and distribution models of *Coxiella burnetii* and conduct advanced spatial and temporal modeling and statist cal analysis of datasets.

For GG-27, the expert should aid in the identification and selection of regional foci of *Bacillus anthracis* and the corresponding environmental sampling sites, conduct spatial genetic pattern analysis and risk factor mapping of *B. anthracis* using GIS, aid in the production of GIS models of the geographic distribution of *B. anthracis* across the south Caucasus, and serve as a subject matter expert on regional Single Nucleotide Polymorphisms (SNPs), inc uding a well-established Georgian SNP typing panel. Mentorship activities should focus on providing guidance in stringent metrics and international standards in GIS and SNP data interpretation and analysis to NCDC, LMA and NFA scientists.

It is expected that implementation of this requirement will be approximately 13 weeks worth of effort consisting of (a) 3 x 1 week trips (detailed below), (b) up to 1 week before each trip for preparation activities, (c) up to 1 week after each trip for reporting and follow-up actions, and (d) up to 4 additional weeks of effort for coordination and remote reach-back support. The expert is expected to conduct two trips to Tbilisi, Georgia, to provide on-site mentorship to Georgian colleagues for GG-19, GG-20 and GG-27 research projects. Timing for these trips should be determined based on p·oject needs. The expert is also expected to conduct a third trip to attend the regional GG-27/AJ TAP-11 kick-off meeting in Baku, Azerbaijan in October 2015.

The period of performance for this effort will be from 15 September 2015 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $150,000 is requested by 4 September 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES).

Proposal Development & Initiation

Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8 and leverages information gleaned from discussions with A&AS contractors. Originally, a key assumption for this effort was that the Georgian scientists are generally capable of conducting GIS analyses on their own. After discussions with some individuals familiar with the level of expertise in Georgia and the scientific goals sought to be accomplished in the stated projects, Metabiota believes that the Georgian scientists will require an increased level of support when conducting GIS analyses. It is anticipated that the plan for TD-016 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as SME I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project

Project Coordination:

From the information provided in Box 8, Metabiota assumes that these projects are ongoing affairs led by a third party. In order to effectively ensure that a GIS SME is available to provide the requested in-country mentoring, the Metabiota PM and PC will, upon approval of the TD, continue to engage relevant DTRA CBEP stakeholders to identify how, where, and when project status updates are communicated (for example, monthly teleconference, weekly email exchanges, etc.). Upon approval and receipt of additional information re: GG 19, 20, and 27, the Metabiota PM and PC will identify a GIS SME team and work to establish a subcontract or independent consulting arrangement with the SME team. The Metabiota PM, PC, and GIS SME(s) will participate in these communications in order to understand when in-country mentoring activities will be required. The Metabiota PM and PC will work with the GIS SME(s) to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any

need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or the appropriate DTRO (Tbilisi or Baku).

Mentoring:
Mentoring will consist of both in-country and remote mentoring. After assessing the need for in-person GIS mentoring, the PM, PC, and primary GIS SME will work with the project teams to elucidate the specific goals, and requirements of each mentoring request to ensure that the mentoring visit is conducted efficiently and effectively. The primary GIS SME will work with the PM, PC, and appropriate stakeholders in each respective project to create a list of tasks to be accomplished by the Georgian scientists leading up to the mentoring visit, to create a list of topics for the primary GIS SME to be prepared to assist with during the mentoring visit, and to facilitate the communication and exchange of any necessary data or concepts both prior to and following each mentoring visit.

Reach-back support:
Based on our updated understanding of the requirements and the proposed scope of the projects, Metabiota now expects to be required to provide significant GIS analysis support to the three projects, but does expect to place a significant focus on transitioning this expertise to the Georgians. Through regular communications with the respective project teams, Metabiota will be made aware of any additional subject matter expertise requests. The GIS SME will address these needs as they arise.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost, Schedule, Performance, Quality						
Disconnect between requirements provided in TD and requirements as indicated in Forms A	The original proposal was developed without sufficient context into the true level of GIS subject matter expertise needed to accomplish project goals. After receiving Forms A for each of the three research projects and having discussions with the GIS SME who designed the work and the project leads, Metabiota feels that there is a disconnect between the requirements provided in the TD and the true GIS subject matter expertise needed to successfully achieve the scientific goals of the projects Thus our original labor solution appears to be inadequate, potentially impacting cost It may also impact schedule, performance, and quality, as GIS subject matter expertise will be executed on a smaller budget than originally planned in the scientific proposals	5	4	(b)(4); (b)(6)	Metabiota is attempting to manage costs by negotiating with the GIS SME team. There may still be significant performance, schedule, and quality risks if GIS SME team's negotiated level of effort is insufficient to accomplish goals	Med-High
Cost						(b)(4); (b)(6)
Proposed level of effort by original GIS SME team is far beyond what was budgeted	After receiving Forms A for each of the three research projects and having discussions with the GIS SME who designed the work and the project leads, Metabiota believes the labor category mix and anticipated level of effort is incorrect. The GIS SME who was originally involved with the three CBR projects estimates this effort to require at a minimum one full-time GIS technician to provide manpower to perform advanced data analysis in addition to higher level SME2 mentorship	5	4	(b)(4); (b)(6)	Metabiota has proposed containing cost inflation by issuing a firm-fixed price level of effort subcontract instead of a time & materials contract.	
Performance						
No material costs were anticipated in the requirements	The GIS SME originally involved with the three CBR projects indicated a low level desire to run some additional laboratory tests to generate cleaner data to feed into the GIS analyses under some of the CBR projects. This requirement was not stated or anticipated prior to the submission of our original proposal, and thus if these additional materials are truly needed, the successful performance of the project may be at risk.	5	2	Med	Metabiota's understanding is that these additional tests (and thus additional materials) are more of a nice to have, rather than a need to have. As each of these projects is being funded through at least one other mechanism, Metabiota will coordinate closely with the CBR projects' leads and potentially seek other avenues for those procurements should they be determined to be an urgent need.	

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN).

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$123,494
1003	MATERIALS	$0
1004	ODCs	$1,754
1005	TRAVEL	$14,257
TOTAL		**$139,504.14**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:
Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As some of our Subject Matter Experts and Research and Data Analysts may be independent consultants or subcontractors, the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including subcontractors and independent consultants throughout the span of the project.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM and will manage the GIS SME, including all subcontractors, to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline.

The PC will coordinate with the project stakeholders to identify travel dates. The PC will participate in regular communications between the project stakeholders and the GIS SME. The PC will drive the coordination required to sufficiently gather the answers to the logistical questions that will arise in the planning and execution of requested travel for mentoring activities.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the GIS SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Subject Matter Expert 2: The SME 2 will serve as the primary GIS SME. The SME 2 will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each project and the GIS subject matter expertise needed. The SME 2 will provide both in-country and remote mentoring as directed by the respective project leads.

Research and Data Analysts (RDAs): It is anticipated that the SME 2 will employ multiple RDAs with GIS expertise to assist him in mentoring the Georgian scientists in the advanced GIS techniques proposed in the three research projects and to assist in performing data analysis, technical writing, and other research duties as needed.

Materials
No materials are expected to be procured for this effort.

Other Direct Costs
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts
Subcontracts will be issued to SMEs, RDAs, and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget. Metabiota anticipates issuing a firm-fixed price level of effort (FFPLOE) contract to the GIS SME team as a mechanism for controlling costs, as Metabiota expects that the cost for the total number of hours worked by the SME2 and RDAs to far exceed the previously budgeted amount.

Travel
Travel is requested to support the GIS SME to Tbilisi, Georgia for two (2) one-week trips to provide mentoring as needed. Travel is also requested to support the GIS SME to Baku, Azerbaijan for one (1) one-week trip to attend the project kickoff of GG-27/AJ TAP-11. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide expertise in grantsmanship at the Richard G. Lugar Center for Public Health Research and at the Laboratory of the Ministry of Agriculture in Georgia in accordance with SOW, Section 4.3, Task 3 and Section 4.5, Task 5. This expertise should be provided by a scientist (SME I or SME II) with experience in proposal development mentoring and should provide guidance in preparing and submitting grant proposals to the DTRA Broad Agency Announcement (BAA) or other competitive research solicitations. More specifically, the mentor should focus on providing mentorship in the following areas: (a) assist National Center for Disease Control (NCDC) researchers with accurate development of direct and indirect costs as part of the proposal preparation, (b) assist Laboratory of Ministry of Agriculture (LMA) personnel with proposal development and submission processes to include development of scientific hypotheses, analysis of research data, drafting of white papers and full proposals, and reviewing proposal evaluations and recommendations.

It is expected that implementation of this requirement will require approximately 13 weeks of effort consisting of 2 x 1 week trips to Tbilisi, Georgia, with additional time allotted for pre- and post-trip activities and follow-up actions, in order to provide on-site mentorship to Georgian colleagues. Timing for these trips should be determined based on project needs. An additional 7 weeks of effort is anticipated for coordination, document reviews, and remote reach-back support.

The period of performance for this effort will be from 21 September 2015 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $150,000 is requested by 17 September 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

TD 017 Georgia SME Grantsmanship

Objectives

Provide mentorship in all aspects of Grantsmanship to POCs at the Lugar Center in Georgia. In particular, Metabiota will provide guidance on understanding direct indirect costs to NCDC, and work with LMA on all aspects of Grantsmanship.

Period of Performance: 09/21/15 – 05/15/16

CLIN	Total POP	Total Invoiced	Total Remaining
1002	$125,669.00	$14,608.58	$111,060.42
1003	$1,842.00		$1,842.00
1004	$948.00		$948.00
1005	$8,273.00		$8,273.00
TOTAL	$136,732.00	$14,608.58	$122,123.42

CLIN 1002 – Labor

Program Manager: 25.5 Hours

(b)(6) drafted and prepared the final proposal in response to the technical direction received in August, including the development of the project budget. He identified the most qualified performers and held meetings to discuss requirements, negotiated terms, and finalized the subcontract agreement in order to begin implementation. Additionally, he scheduled and participated in meetings with the grantsmanship mentoring recipients to discussed the effort with all stakeholders.

Research and Data Analyst: 4 Hours

(b)(6) provided administrative support to (b)(6) in preparation of subcontract documents.

Subject matter 1: 15 Hours

(b)(6) assisted with the review of the Technical Direction requirements and preparation of the final proposal. She then prepared the required documents necessary to finalize the subcontract agreement with the performers. She also participated in project coordination calls with (b)(6) and (b)(6)

Subject Matter Expert 2: 52 Hours

Subcontractor (b)(6) employed SME's (b)(6) to begin discussions with stakeholders to fully understand the needs in order to perform effectively. SMEs also participated in negotiations and finalization of the subcontract agreement. (b)(6) MEs began development of a comprehensive grantsmanship mentoring plan, tailored to each institute, including preliminary schedules for tasks.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide on-site expertise in microbiology research activities at the Richard G. Lugar Center for Public Health Research in Georgia in accordance with SOW Section 4.2, Task 2, Section 4.4, Task 4, Section 4.5, Task 5, and Section 4.6, Task 6. This expertise can be provided by a visiting scientist and/or scientific mentor and should focus on providing subject matter expertise in microbial research for CBEP-funded research projects conducted at the Lugar Center. The expertise should include guidance and mentorship on designing and implementing experimental procedures, troubleshooting methodology, and analyzing data for on-going research projects at the Lugar Center. The expert should provide technical and scientific assistance in the conduct of research projects and implementation of new diagnostics, new technology and sustainability initiatives. Additionally, the expert should assist to improve communications and integration between Georgian institutes and with international agencies collaborating on Lugar Center research efforts.

Mentorship activities should focus on providing guidance in stringent metrics and international standards in data collection, analysis and data interpretation. Additionally, the research mentor should assist Georgian researchers with manuscript preparation of CBEP-funded research for submission to peer-reviewed scientific journals. This on-site interaction should facilitate motivation towards independent knowledge-building inquiry and critical thinking skills needed for future sustainable research.

The period of performance for this effort will be from 21 September 2015 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $380,000 is requested by 17 September 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

TD 019 Georgia Visiting Scientist Microbiology

Objectives

Metabiota will provide subject matter expertise in microbiology for the purpose of providing mentorship and guidance to Georgian scientists at the Lugar Center, especially in support of CBEP-funded research projects.

Period of Performance: 09/21/15 – 05/15/16

CLIN	Total ROM	Total Invoiced	Total Remaining
1002	$361,460.00	$46,377.37	$315,082.63
1003	$2,472.00		$2,472.00
1004	$14,180.00		$14,180.00
1005	$4,217.00		$4,217.00
TOTAL	$382,329.00	$46,377.37	$335,951.63

CLIN 1002 – Labor

Program Manager: 42 Hours

(b)(6) repared and submitted the proposal response to the technical direction received in August. This included communications with CBR project leads to ensure full understanding of the needs of this technical direction. His hours were then used to identify the performer (b)(6) and oversee the coordination of his contractual agreements, including the negotiation of terms, and began the process of onboarding (b)(6) to the program.

Subject matter 1: 4 Hours

(b)(6) utilized hours to assist with the proposal development.

Visiting Scientist 139 Hours

(b)(6) hours were used in supporting work at the Batumi Zonal Diagnostic Laboratory on avian influenza PCR work by troubleshooting their assays at the Lugar Center. Metabiota VS assisted with troubleshooting of Rotor-Gene PCR instruments at Batumi. He began assisting NCDC with preparations and planning for the installation of a GC/MS instrument funded by UNICRI to enhance NCDC relationships with international organizations and provide the foundation for a potential proteomics capability which may be leveraged in future research, as well as biosafety and biosecurity efforts. He also met with a field team from LMA to help prepare them for a seroprevalence study among animal workers and animals.

CLIN 1003 – Materials and Supplies

No costs invoiced.

CLIN 1004 – ODCs

No costs invoiced.

CLIN 1005 – Travel

No costs invoiced.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision extends the Period of Performance (PoP) for TD-018 from 15 May 2016 to 15 November 2016. This PoP extension is to continue providing on-site expertise in microbiology research activities at the Richard G. Lugar Center for Public Health Research in Georgia. Metabota should coordinate directly with the Technical POCs identified below. Your technical approach as outlined in TD-019, proposed budget, and basis of estimate for continuing this requirement, not to exceed $342,000 is requested by 17 May 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below. No further changes to the previously approved proposal are required at this time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation:
Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8 of the original version of the TD. A key assumption for this effort is that the Georgian scientists are generally capable of conducting microbiological analyses on their own but that the requested support personnel will occasionally be asked to directly perform microbiological analyses. A second key assumption for this effort is that it is expected to be a full-time expat position. It is anticipated that the plan for TD-019 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:
From the information provided in Box 8, Metabiota assumes that the unspecified CBEP-funded research projects are ongoing affairs led by third parties. In order to effectively ensure that an appropriate microbiology subject matter expert (microbiology SME, billed as a Visiting Scientist/VS) is available to provide the requested mentoring, the Metabiota PM and PC will, upon approval of the TD, continue to engage relevant DTRA CBEP and Lugar Center stakeholders to identify how, where, and when project status updates are communicated (for example, monthly teleconference, weekly email exchanges, etc.) and what the onboarding and daily requirements are for working at the Lugar Center. Upon approval and receipt of additional information, the Metabiota PM and PC will identify a VS and work to either onboard them as a Metabiota employee, or establish a subcontract or independent consulting arrangement with the VS. The Metabiota PM, PC, and VS will participate in project communications in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the VS to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO-Tbilisi.

Mentoring and Performance of Microbiological Research.
Mentoring will consist of in-country mentoring. Based on our understanding of the requirements, Metabiota does not expect to be required to provide primary microbiological analysis support to the various projects being conducted at the Lugar Center. The PM and PC will maintain regular communications with the VS to ensure that the VS has all required resources for mentoring. After assessing the need for microbiology mentoring, the VS will work with the PM, PC, and other appropriate stakeholders to develop mentoring work plans. The VS will then implement the mentoring work plans, only assisting with actual analyses and scientific writing when necessary

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN)
Table 1: Incremental funding requested for 16 May 2016 – 15 November 2016, per CLIN. Please note that labor rates have changed.

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$323,696.71
1003	MATERIALS	$0
1004	ODCs	$0
1005	TRAVEL	$0
TOTAL		**$323,696.71**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES

Labor

Costs for direct labor to support this activity is required for the following personnel:

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

The Metabiota PM will additionally provide management oversight of the microbiology SME and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and any subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM. The PC will manage the microbiology SME, to include leading regular coordination calls with the microbiology SME, participating in regular communications between the project stakeholders and the microbiology SME, and coordinating with the microbiology SME to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline. The PC will aid the PM and VS in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the microbiology SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Visiting Scientist: The VS will serve as the microbiology SME. The VS will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each project, the needs and expectations of the Georgian scientists, and the microbiological subject matter expertise needed. The VS will provide mentoring as directed by the respective project leads. The VS will be working full time on this effort.

Materials

No additional material procurements are anticipated on this effort, and thus no additional funds are being requested on this CLIN through the extended period of performance.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be applied for labor costs incurred overseas. Metabiota maintains a blanket DBA policy for all personnel and will add the VS and any other performers meeting DBA requirements to this policy as they are engaged. A reconciliation of the total DBA will be performed prior to final invoicing to ensure accuracy of the charges, in accordance with total hours worked. If necessary, final invoicing will be adjusted to reflect the final DBA allocation numbers. At this time, no additional funds are being requested for DBA, as the previously requested amount for CLIN 1004 should be sufficient to cover further DBA costs.

Travel

Travel is requested to support the deployment of the VS to Batumi, Georgia or other locations within Georgia as needs arise. At this time, no additional funds are being requested for travel, as the previously requested amount for CLIN 1005 should be sufficient to cover one additional trip. Travel on the AEP contract is cost reimbursable.

Subject: TD-020: Gabon Initial Engagement SME Support
Date: Tuesday, December 08, 2015 9:10:17 AM
Attachments: CTR-CBEP_AEP_TD-020_Gabon_Engagement SME.docx

Hi (b)(6)

I hope this message finds you well. Please find attached, TD-020 for SME support for initial engagement activities with Gabonese ministerial officials, historical context, technical advise on gap analyses, and CBEP engagement approaches with the Government of Gabon. Response to TD is requested by COB 09 December 2015, for a PoP start of 14 December 2015. Please feel free to communicate directly with the Technical POCs identified in box 15 of the TD (also copied here), if you have any technical questions.

TECHNICAL DIRECTIVE (TD)

1. CONTRACT NUMBER	2. CONTRACTOR	3a.TD NUMBER	3b.REV
HDTRA1-14-C-0104	METABIOTA	20	

4. TD TITLE	5. TOTAL TD ESTIMATE.
Gabon Initial Engagement SME Support	HOURS. (b)(6) DOLLARS: $ **$50,000**

6. CONTRACING OFFICER REPRESENTATIVE	7. CONTRACTOR POC
NAME: (b)(6)	NAME (b)(6)
PHONE (b)(6)	PHONE EMAIL (b)(6)

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide a Subject Matter Expert (SME) support on Gabon health systems and laboratory capabilities in accordance with SOW, Section 4.4, Task 2. This SME will provide technical support to the CBEP Gabon Country Manager for initial engagement activities with Gabonese ministerial officials, provide historical context and technical advice on gap analyses, and recommend CBEP engagement approaches with the Government of Gabon.

It is expected that implementation of this requirement will be approximately 100 hours of work consisting of (a) 1 x 7 day trip with CBEP representatives to Gabon in late Jan 2016, (b) bi-weekly (every other week) coordination meetings (est. 1 hour/each) before the trip, (c) weekly coordination meetings (est. 1 hours/each) for approximately 2 months after the trip, (d) written report conveying personal knowledge and expertise as well as engagement recommendations following the trip, (e) review of country engagement strategy documents (est. 5 hours).

The period of performance for this effort will be from 14 December 2015 to 31 March 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $50,000 is requested by 9 December 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

Dear (b)(6)

Thank you for the response. Please find attached the countersigned TD. We will follow up with the appropriate DTRA CBEP POCs moving forward.

Best regards,
(b)(6)

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide grantsmanship training and subject matter expert (SME) assistance for the coordination of project design, research proposal development, and implementation of a pilot biosurveillance study in Uganda, in accordance with SOW section 4.4, 4.5 and 4.6. Tasks 4, 5 and 6.

Coordination of such efforts shall focus on the following topics: Ecological and bio-surveillance for Rift Valley fever (RVF) among domestic and wild animal populations in Uganda; Exploring the distribution and characteristics of avian influenza (AI) viruses in migratory waterfowl and poultry in Uganda; and Genetic and epidemiological insights into the occurrence of peste des petits ruminants virus (PPRV) among sheep, goats, cattle, and wildlife in northern Uganda.

The project design and research proposal(s) to be coordinated by Metabiota shall emphasize bio-surveillance of RVF, PPRV, and AI in Uganda and how the collection of this data would help enhance the surveillance capabilities of the country at the national level. It shall also include assistance in the development of standard operating procedures (SOPs) for the projects (e.g., biosafety/biosecurity, sample collection/handling/transport, laboratory analysis, data analysis) with the goal of enhancing local capabilities and developing the skills necessary for the early detection and prevalence determination of RVF, AI, and PPR. Metabiota will perform the following activities during the period of performance:

1. Phase One: Metabiota shall collaborate with CBEP's Ugandan research partners and coordinate with them to develop a work plan for implementation of all of the activities noted below, including project design (development of a research plan) and development of a high-quality, competitive research proposal or proposals (more details below). Metabiota should provide a PM and a SME1 to manage this coordination. The SME1 and PM should reach out directly to the POCs listed below to discuss their vision for the development of a research grant and to discuss additional SME support needed. Ugandan partners on this project are SMEs in various areas and their skills/expertise should be leveraged in accomplishing the goals of this project. The Metabiota PM and SME1 should also review the concept notes already developed by the collaborators that describe their research interests. The SME1 hours required for this should not exceed 25 hours total for maximum 3-5 weeks of coordination. PM oversight should not exceed 25 hours total for this phase.

   Ugandan collaborators should include personnel from the following institutions/organizations:
   a. The National Animal Disease Diagnostics and Epidemiology Centre (NADDEC). POC (b)(6) (b)(6).
   b. The National Livestock Resources Research Institute (NaLIRRI). POC (b)(6) (b)(6)
   c. The African Field Epidemiology Network (AFENET). POC (b)(6)
   d. The Ministry of Health, Division of Veterinary Public Health (MoH-DVPH). POC (b)(6) (b)(6)
   e. The Uganda Wildlife Authority. POC Dr (b)(6)
   f. CDC- POC (b)(6)
   g. The Ministry of Health, Uganda Virus Research Institute (MoH-UVRI). POC (b)(6) (b)(6)
   h. Ministry of Agriculture, Animal Industry and Fisheries (MAAIF). (b)(6) Tel. contact (b)(6)

   Phase One deliverables: Work plan with project design and timeline with clear roles and responsibilities

2. Phase Two: Metabiota shall assist the collaborators identified in Phase 1 with the development of a detailed research plan (experimental design) and research proposal(s), including budget, for epidemiologic studies/bio-surveillance research of RVF, AI, and PPR in Uganda based on the needs and research interests of the identified collaborators. These needs are already described in three concept notes developed by the Ugandan collaborators. The determination of whether one joint proposal or separate proposals will be developed will be made in partnership with Ugandan collaborators. The research plan shall include comprehensive descriptions of the hypothesis and research questions; development of a list of materials

and supplies to accomplish the research studies; and SOPs planned for the collection of samples, including field, laboratory, and data analytics, as well as a discussion of biosafety and biosecurity risks and mitigations (e.g. infectious sample transport and handling). CBEP expectation is for Metabiota to provide the collaborators with SME support (Metabiota and Ugandan SMEs) to inform the development of the proposal(s) that the Ugandan collaborators will write. Metabiota is not expected to write the grant proposal, but to provide oversight regarding the development of hypotheses, research design, and the research proposal writing process. The concept notes are well-developed, but will need to be strengthened to provide additional detail on sample size calculations, sample analysis procedures, data analysis methods, and other specifics to make them competitive research proposals. Metabiota should support the Ugandan collaborators in exploring potential funding options, not only DTRA, and assist them in tailoring their proposal(s) to specific funding opportunities.

To complete this task, Metabiota should provide up to 3 SMEs, including 1-2 from Metabiota and one Ugandan non-governmental SME (i.e. AFENET). Each SME should spend no more than 60 hours total over a maximum of 6 weeks to provide input/feedback and grantsmanship expertise to the research plan (experimental design) and the research proposal(s) developed by the Ugandan collaborators. PM oversight of the SMEs' review and coordination of activities should not exceed 30 hours total for Phase Two.

Phase Two deliverables: Project proposal(s) with budgets and SOPs

3. Phase Three: After completion of activities described in Phase 2, Metabiota shall also provide technical expertise to train stakeholders and work with them to conduct small pilot studies in Uganda to test the SOPs developed for the larger surveillance studies in the proposal(s) to determine their effectiveness and the viability of the project design on a smaller scale. Metabiota shall provide no more than 5 medium-level trainers to assist in the pilot studies. Trainers may be a mix of Metabiota and Ugandan trainers or mostly/all Ugandan trainers, which would be viewed as a strong approach to enhance sustainability of CBEP's investment. The training should consist of one in-country activity as well as continued coordination via email, phone, webinar, or a similar lower-cost communication/coordination mechanism throughout the pilot study period.

   Phase Three, Part One: Preparation and coordination in advance of the in-country training and pilot studies should take no more than 6 weeks, and may begin during Phase Two to maximize efficiency, especially for the definition of the scope and timelines for the pilot studies and the procurement of materials needed for the pilot studies. Coordination will be between Metabiota and all the POCs listed above, as well as identified SMEs/trainers, if different from the above. Training materials should be discussed and obtained during this phase. The training materials will be developed from the project proposal and SOP documents, existing training materials owned/obtained by the Ugandan collaborators, and additional supplemental material as needed. If Metabiota and Ugandan collaborators agree that some necessary training materials do not already exist and need to be developed, the team may work together to augment existing materials. A PM, SME1, and a maximum of 5 medium-level trainers would be an appropriate mix to accomplish the efforts in this phase. Trainers should have expertise in the Ugandan public health, veterinary, and wildlife systems as well as local research methods and processes. Not all people need to participate in all tasks at all times during this planning and coordination, and resources should be conserved to include only the necessary individuals at each step. SME1 hours during Phase Three, Part One should not exceed 40 hours; 55 hours if training materials need to be developed. Hours per trainer for preparation and coordination should not exceed 10 hours; 25 hours if they need to participate in development of training materials. PM hours dedicated to oversight of this planning and preparation should not exceed 30 hours.

   Phase Three, Part Two: The in-country training shall be conducted over a period of 10 working days (5 days per week for 2 separate weeks and should include no more than 20 trainees, to be identified by the Ugandan collaborators, across the 3 pilot studies). The training may be conducted as one comprehensive event, providing overarching skills, knowledge and guidance in a way that it will benefit all three projects; or it may be divided into sections for more focused training on the individual projects; or it may be a combination, with some parts together and some break-out or working group sessions that are more specific. Metabiota should collaborate with the Ugandan POCs and trainers to determine the best approach. The PM, SME1 and trainers' time should not exceed 10 hours per day of training. One day before or after the training for in-person coordination for the pilot studies would be appropriate and should not exceed 8 hours of labor each for the PM, SME1, trainers, and pilot study project leads. It would be acceptable for the trainers and pilot study project leads to be the same people in some cases, as appropriate. PM level of effort should be less than the SME1 given oversight vs. implementation role.

   Phase Three, Part Three: Metabiota will provide management oversight and support to the Ugandan partners in implementation of three pilot field studies. The Ugandan collaborators are in the process of receiving appropriate permits and sample collection can only commence following DTRA Research Oversight Board (ROB) approvals. This activity shall include the procurement of materials and supplies required for the pilot studies, not to exceed $100,000. Metabiota shall work with the Ugandan partners to identify the most efficient, cost-effective way to

procure materials and supplies. Pilot study project leads and field technicians' level of effort should not exceed 680 hours over 8 weeks for pilot study implementation and oversight. There should be no more than 3 pilot study project leads and 11 technicians total supported by Metabiota for all three pilot studies. PM and SME1 hours dedicated to pilot study implementation guidance and oversight should not exceed 60 hours over 8 weeks. PM level of effort should be less than the SME1 given oversight vs. technical SME support role.

The following information and study objectives are provided for reference for proposal development (longer term objectives) and pilot study design/implementation (shorter term objectives). The concept notes developed by the Ugandan collaborators are attached for more detail. The pilot studies should focus on validating the SOPs developed as part of the longer-term study design and proposal development in Phase 2, and on conducting sample collection, lab analysis, and data analysis on a small subset of the various animal populations noted below.

Study 1 - The portion of the project regarding ecological and biosurveillance for Rift Valley Fever (RVF) among domestic and wild animal populations In Uganda shall address the following objectives:

a. Determine the inter-epidemic seroprevalence of RVF in a sample population of relevant domestic animals and wildlife in study areas with clearly identified serotypes. Training in this area should establish better methods for the biosurveillance of epizootic and zoonotic diseases in Uganda.
b. Create/improve contingency plans for RVF outbreaks ready for implementation at the central and local district levels through collaboration with a Ugandan government representative specializing in disease prevention and control as well as outbreak containment in Uganda.

Study 2 - The portion of the project focused on exploring the distribution and characteristics of avian influenza viruses (AIVs) in migratory waterfowl and poultry in Uganda shall include these specific objectives:

a. Establish temporal and spatial distribution and prevalence of AIVs in a sample population of waterfowl and domestic poultry in Uganda.

Study 3 - The portion of the project regarding the genetic and epidemiological insights into the occurrence of peste des petits ruminants virus (PPRV) among sheep, goats, and cattle in northern Uganda shall include these objectives:

a. Determine the prevalence of PPRV in wild animal species in the Kidepo Valley National Park and in goats, sheep, and cattle in Nakapiripirit district of Uganda.
b. Use of RT-PCR to detect the presence of PPRV and competitive ELISA to determine the presence of specific PPRV antibodies.
c. Development of a questionnaire to obtain data on existing control measures, livestock movement patterns, PPRV vaccination practices and prevalence, and other relevant epidemiological and surveillance factors.

For the pilot studies, an appropriate scope would include the following:

Study 1 - Pilot study will include no more than 1,000 serum samples collected from 768 domestic animals (cattle, sheep and goat) and 232 wild animal ruminant and porcine species. Laboratory analysis will be limited to serology (ELISA). Data analysis will include determination of RVF antibody seroprevalence. ELISA will be conducted at the CDC lab at UVRI with participation as appropriate by relevant project collaborators.

Study 2 - Pilot study will include no more than 1,000 serum samples collected from two distinct locations with measurably high levels of interface between the wild birds, domestic poultry, and humans. Samples should be collected from approximately 590 domestic poultry and 410 wild poultry, split evenly between both locations. Laboratory analysis will be limited to ELISA for Influenza A viruses and PCR-based molecular analyses, both to be conducted at NADDEC.

Study 3 - Pilot study will include no more than 1,000 serum samples collected each from two distinct locations. The samples should be from approximately 232 cattle and 768 sheep or goats split evenly between the two locations. Development and piloting a questionnaire to assess PPRV risk factors such as vaccination practices, livestock movement and PPRV control measures will be part of the study. Laboratory analysis will be limited to serological and molecular techniques and data analysis will include determination of PPRV antibody seroprevalence and risk factors for PPRV. ELISA and PPR will be conducted at NADDEC. Metabiota shall not pay for Ugandan government collaborators' time for activities completed as part of their normal job/position and role within their institution. Time shall not be paid to government collaborators for Phase One or Phase Two. Ugandan government collaborators can be compensated for time if they are included as trainers, pilot study project leads, and field technicians for Phase Three. AFENET is not a government organization. CDC will not be compensated for time related to this project. All other POCs listed above are Ugandan government collaborators.

Travel costs for Ugandan participants related to the training event and field studies should only include ground transport, lodging, and per diem costs for participants working a distance of greater than one hour travel time from their home, and any requested ground transport, lodging, or per diem payments shall be cleared with CBEP prior to making commitments to cover these costs. Local participants in the training and field work (living one hour or less from the location of their work that day) will not have travel, lodging, or per diem costs covered.

Phase Three deliverables: Pilot studies implemented: PCR and ELISA results provided to CBEP; results and analyses developed into a pilot project summary of conclusions per project and provided to CBEP; and summary of conclusions provided to the Ugandan national authorities for disease surveillance and control.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Phase 0: Proposal Development & Initiation (Task 1: March 7-9, 2016)

Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-022 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as a Research and Data Analyst (RDA)) time to identify the optimal strategy, including required deliverables and other programmatic requirements, which may be a part of project implementation.

The Metabiota PM and PC coordinated with Dr. Mary Guttieri, Metabiota's Executive Vice President (EVP) in charge of Science Integration and communication with our regional scientific networks to identify the appropriate SMEs in grantsmanship, experimental design, and biosurveillance to develop and augment project work plans and training materials. Ultimately, this measure was taken to ensure our technical and cost solutions were of the highest quality and sustainable, respectively.

Key assumptions:

1. Metabiota received unofficial communication supporting an extension of its contract from May 16, 2016 to November 15, 2016, this technical response has been developed with the key assumption that this additional time will be allotted to this project.
2. Metabiota assumes DTRA CBEP representatives will provide Metabiota with the concept notes referred to in Box 8 upon the approval of this TD.
3. Metabiota assumes that DTRA CBEP representatives involved in the development of this technical direction will be available for a kick-off meeting to discuss any associated historical engagement with the research collaborators and their respective needs and constraints.
4. Metabiota assumes changes to the budget (e.g., labor categories) will be acceptable to DTRA. An RDA was added to provide flexibility when implementing; however, this has not affected the overall project budget.
5. Metabiota assumes our response should align with narrative from Box 8, which does not align with the figures provided in Box 5.
6. Metabiota assumes that there will be a need to develop training materials during phase 3 part 1 in preparation for phase 3 part 2, and has incorporated the necessary LOE into this technical proposal.
7. Metabiota recognizes guidelines regarding compensation of Ugandan government personnel, as outlined in the Ambassador's memo (8 April 2015). Metabiota has developed a basis of estimate that plans for the highest cost scenario (e.g., no Ugandan government personnel). Upon receiving names and affiliations of all project participants, Metabiota will work with DTRA CBEP to adjust the basis of estimate accordingly.

Phase 1: Work Plan Development (Task 1: March 21-April 22, 2016)

Upon approval of the TD, Metabiota will engage DTRA CBEP to ensure a mutual understanding of project goals and objectives is realized, as well as to obtain the concept notes referred to in Box 8. Metabiota will additionally engage with the eight Ugandan collaborators provided in Box 8 as well as other key stakeholders to obtain additional information such as possible existing work plans, research plans, and training materials for grantsmanship and standard operating procedures for related biosurveillance activities. The Metabiota PM, PC, and SMEs will participate in regular project communications with stakeholders to ensure mutual understanding of project goals, actions, and status.

Metabiota SMEs will conduct a review of the concept notes referred to in Box 8 to establish a baseline for outreach to the identified Ugandan stakeholders. Metabiota will then conduct a series of data calls with these Ugandan stakeholders in order for the SMEs familiarize themselves with the current capabilities and needs of the identified stakeholders, and to identify an appropriate path forward for the work plan. This work plan will identify a timeline of implementation and key milestones and goals for both the development of a detailed research plan (from which, Pilot training and design study will be extracted), as well as development of research proposals (ex. number of proposal submissions, drafts of white papers, etc.). The work plan will include activities providing grantsmanship support, mentorship, and subject matter expertise to key Ugandan stakeholders throughout proposal development, Pilot training and study design and verification, and proposal editing and submission process. Metabiota will submit the work plan draft(s) to DTRA CBEP for review and approval.

Phase 2: Research Plan and Proposal Development (Tasks 1, 4: April 25-June 24, 2016)

Metabiota SMEs will execute the work plan as approved by DTRA CBEP in Phase 1. In doing so, Metabiota will coordinate with the identified Ugandan stakeholders to support the development of a detailed research plan as well as research proposals for epidemiologic studies/bio-surveillance research of RVF, AI, and PPR based on the needs and research interests identified in Phase 1.

Metabiota SMEs will provide support to the Ugandan stakeholders to develop a comprehensive research plan, which will include a detailed list of materials and supplies needed to accomplish the research studies. Moreover, the research plan will include detailed SOPs planned for the collection of samples, including field, laboratory, and data analytics as well as identification of biosafety and biosecurity risks and associated mitigation methods. From this overarching research plan, the Metabiota SMEs and Ugandan stakeholders will develop up to three (3) pilot study plans to test the SOPs developed in the research proposals for their effectiveness and viability of project design. In doing so, the Metabiota SMEs will provide support, mentorship, and expertise in the development, strengthening, and tailoring of these research plans through the submission proves while the Ugandan stakeholders are expected to write and finalize these plans based on the guidance they are provided. Metabiota will submit the final research plan(s), research proposals (including financials) and proposed SOPs for DTRA CBEP's review and approval.

Phase 3, Part 1: Preparation and Coordination for In-country Training and Pilot Studies (Tasks 1, 3, 4: March 28-Aug 11, 2016)

Metabiota will coordinate with the Ugandan stakeholders to identify the most appropriate participants for both training and Pilot study activities. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured for the SMEs and FLNs as needed. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS via the DTRA CBEP Technical Point of Contact.

Metabiota will coordinate with the Ugandan Stakeholders to identify training needs as discussed in Phase 1 and further identified in Phase 2 SOP development. To meet these needs, Metabiota will reuse existing training materials and SOPs for applicable biosurveillance activities as much as possible. However, due to the limited information currently available regarding the intended pilot research plans, Metabiota expects to use SMEs to adapt and develop training materials for effective delivery of training. Metabiota SMEs will develop new materials, which may including slide presentations, videos, etc. to effectively leverage the learning environment. Metabiota will also develop, as appropriate, pre-tests and post-tests for monitoring and evaluation purposes. Training materials, after development and adaptation, will be delivered to DTRA CBEP for technical review and Public Affairs Office approval.

Phase 3, Part 2: Conduction of In-country Training (Task 1, 3, 4: August 4-24, 2016)
Metabiota SMEs will execute a 10-day training activity for up to 20 participants who will be taking part in the three identified pilot studies followed by a 1-day pilot study coordination day with the pilot study leads. Metabiota anticipates a mix of lecture and hands-on training being necessary, however, Metabiota SMEs will adjust the training approach based on the Stakeholder feedback obtained in Phase 1. Metabiota SMEs will be available for virtual "office hours" and to answer written communications from participants as needed throughout the conduction of pilot studies. Metabiota SMEs will also conduct pre-/post- training testing and evaluations and provide feedback to the participants on their performance. FLNs will be used to facilitate training activities to the extent possible.

Phase 3 Part 3: Conduction of Pilot Studies (Task 1, 4, 6: August 18-Oct 26, 2016)
Metabiota SMEs will coordinate with the pilot study leads for the conduction of three pilot field studies, involving up to three pilot study leads and 11 technicians over a period of 8 weeks. Metabiota SMEs will be available for virtual "office hours" and to answer written communications from all participants as needed throughout the conduction of the pilot studies. Metabiota will provide management oversight and support for the conduction of these pilot studies, and will support the Ugandan collaborators in obtaining all required approvals for project continuation, including but not limited to ROB approvals. Metabiota will coordinate with all Stakeholders to identify the necessary materials required to conduct all pilot effort(s). Inclusive of this, Metabiota will provide any necessary support (SME or logistical) to in-country participants when navigating the procurement process. All materials will be identified and procured with sustainment in mind. Metabiota will submit pilot study summaries, including individual pilot study results, analyses, and conclusions as well as a summary of implementation conclusions to DTRA CBEP for communication to the Ugandan national authorities for disease surveillance and control

Final Project Report
Metabiota PM, PC, and SMEs will all contribute inputs to a final report relaying all actions taken for project implementation through all phases, lessons learned, and identifying next step opportunities upon completion of all deliverables. Results of pre- and post- testing and evaluations from training will also be provided to DTRA CBEP.

Monitoring and Evaluation
In order to develop a comprehensive approach to continuous monitoring and evaluation of this project throughout implementation, Metabiota has developed a comprehensive monitoring and evaluation plan which can be found in the attached Appendix A (Supplemental Information) Part 5.

Risk Management:
In order to anticipate and overcome obstacles included (but not limited to) those listed in Risk Management Matrix found in the attached Supplemental Information Part 2, Metabiota has identified and captured the risks associated with implementing this activity, including contingency planning and course correction measures which will lead to overall regional risk reduction, as outlined in the attached Risk Management Matrix.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

LABOR	$111,755.22
MATERIALS	$105,270.00
ODCs	$3,679.55
TRAVEL	$32,930.50
	$253,635.27

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES).

All phases:
Task 1 - Project Coordination: Metabiota will provide consistent and cohesive technical and administrative leadership, direction, program management, implementation oversight, and coordination of all project activities.

Metabiota Program Manager (PM) The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of DTRA CBEP goals at the country and regional level in direct support of this activity and the DTRA CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the RDA to ensure all day-to-day activities for the project are completed on time, and to the quality required by DTRA CBEP.

Metabiota Project Coordinator: The Metabiota RDA will act as a Project Coordinator (PC) throughout the planning and execution of project objectives. The PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will manage the SMEs and FLNs and lead coordination with the Ugandan Stakeholders, to include leading regular coordination calls with the project team and assist in participant coordination.

Note* - Metabiota recognizes that the RDA labor category was not included to Box 8 of this TD. Upon review of internal support (e.g., Project Coordinators) and to allow greater project implantation flexibility, Metabiota has proposed the use of an RDA instead of a SME 1 for all project coordination. Importantly, while hours have been added for project coordination, the overall cost for the Project Coordinator role remains unchanged between RDA and SME 1.

A key requirement to ensure effective program initiation, execution, and closeout is ensuring clear communication between all project stakeholders. To ensure the project in managed according to CBEP standards, the PM and PC will be responsible for the following:

Initiation and Program Integration: The PM, with PC support, developed the project proposal to include the project timeline, identification and integration of project requirements, deliverables, subcontractors, SMEs, and trainers to ensure project success. Upon acceptance of the proposal, the

PM will hold a kick-off meeting with team members and partners to review the project plan and schedule, establish routine communication to support project implementation, initiate education on the contract requirements, and begin project implementation. Routine communication with all stakeholders will ensure that all deliverables, including required CDRLs, are met and submitted according to the project schedule and contract requirements.

The PM and PC will work closely with Ugandan POC's identified in Box 8 (Phase 1) to understand their respective vision for this effort, including the development of a work plan for implementing all identified activities. In addition, the PM and PC will coordinate communication between Ugandan POC's and the identified grantsmanship/BSV SME's (e.g., project team members) to ensure alignment of project plans with DTRA CBEP goals when developing the research project design and high-quality and competitive research proposal(s) (Phase 2). Lastly, the PM and PC will coordinate all aspects of training implementation (Phase 3), to include identification and appropriate engagement of FLNs, to include a Study Leads and Study Technicians, to support in-country training and BSV pilot studies (Phase 3) by interfacing regularly (see Communication Management) with project personnel to ensure that in-country and overall project objectives and requirements are met in full. The PM will ensure that FLNs are engaged according to contract and project requirements, and have the experience, background, and skills necessary to support training implementation. FLNs are budgeted at the AFRICOM FLN I rate.

The PM will ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include; overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Project Close out: The Metabiota PM and PC will oversee project closeout, to include completion of grant proposals, wrap-up of training, and finalization and submission of all identified deliverables, including final reports. The PM will also ensure the conclusion of subcontracts and other employment agreements.

Additional communication strategies and programmatic safeguards, including 1) Human Resources Management, 2) Communications Management, 3) Risk Management, 4) Schedule Management, 5) Cost Management, 6) Quality Management, and 7) Technical Resource Management can be found in Appendix A (Supplemental Information).

Task 3 – Qualified Trainers (QT): Metabiota will provide financial support to in-country Qualified Trainers (Phase Three, Parts One and Two) via subcontracts of independent consultant agreements with the yet to be identified trainers. Metabiota recognizes the importance of identifying Ugandan nationals to fill these roles in order to foster relationships and build regional capacity. Metabiota will work with all project stakeholders to identify the appropriate trainers. Currently, it is presumed that all qualified trainers will be billed at the AFRICOM FLN 1 rate.

Task 4 - Subject Matter Experts (SMEs): Metabiota will provide ongoing technical support and expertise through the use of SMEs, to include the development of 1) a work plan for implementing all identified activities, 2) project design, and 3) development of high-quality and competitive research proposal(s). Metabiota SMEs engaged for this effort will provide expertise and input on the development and revision of existing training materials, development and revision of SOPs, as well as mentoring of study participants in grantsmanship and BSV training activities. SMEs will predominately operate remotely throughout Phases 1, 2, and most of Phase 3 and will thus provide mentorship through regular written communication and video teleconferencing with project participants, as necessary. Importantly, the SMEs for this effort are Kenyan nationals and geographically situated in Nairobi, Kenya which will ease operating delays due to time zone differences. Moreover, the identified SMEs possess excellent operational knowledge of East Africa and capabilities in technical writing, biosurveillance techniques, and one health concepts related to infectious disease research. For Phase Three, Part Two, SMEs will implement the training efforts and will work in partnership with FLN project participants to administer the courses, provide QA/QC of all materials, engage trainees in capacity building and scientific discussions supporting training concepts and implementation, and assist in the development of a gap analysis report. SMEs on this effort will be performing the functions of both SMEs and Qualified Trainers (QTs). In line with government guidance, the SMEs will be billing at the SME I labor rate, which is the equivalent cost of QT I.

Metabiota will subcontract Africa Biomedical Laboratories (ABL, Nairobi, Kenya) for SME support of this effort. The use of regionally accessible, African Nationals helps to build regional capabilities and networks, and ensures overall project success.

Task 6 – Research Activity Projects: Metabiota will provide financial support to Study Leads and Study Technicians (Phase Three, Part Three) via subcontracts of independent consultant agreements with the yet to be identified participants. Metabiota will work with all project stakeholders to identify the appropriate project participants. It is currently presumed that all project participants will be billed at the AFRICOM FLN 1 rate.

Note* - Metabiota is aware of guidance provided by the US Ambassador to Uganda regarding salary support to Government of Uganda personnel. If the Trainers, Study Leads, or Study Technicians are direct employees of the Ugandan Government (e.g., Ministry of Health, Agriculture, Wildlife, etc.), Metabiota will adjust their engagement strategy to reflect the Ambassadors guidelines. The budget for this project will be impacted accordingly.

Reach back programmatic support to include finance, accounting, and contracts, will be provided as part of CLIN 1001 (FFP) and will not be separately invoiced.

Materials

As defined in Box 8 (Phase Three, Part Three) this activity shall include the procurement of materials and supplies required for the pilot studies, not to exceed $100,000. Metabiota will work with the Ugandan partners to identify the most sustainable, efficient, cost-effective way to procure materials and supplies for executing BSV pilot studies. The identification of sustainable supplies will be critical for continuing BSV-related activities, which will be described in greater detail within newly developed grant proposals (Phase Two). Any materials procured by Metabiota will be shipped via CLS. If materials can be secured and provided to the trainers/trainees locally or online, shipping will not be required. Additionally, Metabiota will work with SMEs based in Kenya to help identify sustainable and reliable vendors of biomedical supplies.

Given the nature of this effort (e.g., BSV), Metabiota anticipates the need to procure personal protective equipment such as Tyvek suits, gloves, goggles, booties, and N95 respirators, as well as consumables and other paraphernalia such as chlorine, plastic wash basins, buckets, disinfectant sprayers, and anti-fog spray will also be procured. A final list of materials required for this effort will be identified in coordination with all project stakeholders.

Following discussions with all project stakeholders, and if warranted, USB internet devices and internet access cards will be procured and provided to project participants in-country to ensure they have access to a stable internet connection during remote coordination and training sessions, which are included to all phases of this effort. USB internet devices will be procured and tested in-country to avoid shipping charges and to ensure they are

operational on the ground. USB internet devices and access cards will be monitored by the FLNs to ensure they are used for project purposes only, and are maintained according to equipment/material guidelines for the duration of the course.

General office supplies will be procured to support in-country training activities and routine project needs for the execution of the training courses. Office supplies will be procured locally and will include, but may not be limited to, pens, paper, thumb drives, binders, etc.

Metabiota will conduct market research and ensure the best value is secured, maintaining quality and technical requirements for all procurement of goods. Metabiota will coordinate directly with CLS and third-country vendors for all necessary shipping requirements, and will work closely with CLS and DTRO to ensure customs clearance requirements are met and goods delivered according to project timelines and CDRL requirements. Metabiota will ensure cost management for all procured supplies and will coordinate directly with CBEP and CLS to support additional requirements for the hands-on training events to include such items as printing of the developed and adapted training materials, training certificates for participants, and translation services, if needed.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project working abroad. DBA insurance will be applied for labor costs incurred overseas. DBA will be applied to the PM, SMEs/Trainers, FLNs, and other contractors, engaged on this effort, for the duration of the program. Metabiota maintains a blanket DBA policy for all personnel and will add the SMEs and FLNs, and other performers meeting DBA requirements, to this policy as they are engaged. A rate of (b)(6) of their total compensation will be billed to the project on a monthly basis. A reconciliation of the total DBA will be performed prior to final invoicing to ensure accuracy of the charges, in accordance with total hours worked. Final invoicing will be adjusted, if necessary, to reflect the final DBA allocation numbers.

Subcontracts

Subcontracts will be issued to SMEs, FLNs, and/or their home organization(s) as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the labor or materials budgets.

Travel

Travel is requested to support the Program Manager, SME, and qualified Ugandan trainers to Kampala, Uganda to implement training efforts for project participants (Phase Three, Part Two). The travel budget represents the estimated amount required. Travel on the AEP contract is cost reimbursable.

All Metabiota personnel slated to travel are current with regard to ISOPREP, SERE, and AT/FP trainings, as required by CBEP. Additionally, the SME's leveraged for this effort are Kenyan Nationals and therefore do not require the aforementioned travel trainings/documents.

Our travel budget assumes training will be held in Kampala over the course of two weeks, including one day before or after for in-person coordination, as described in Phase Three, Part Two of this proposal. If, through discussion with the Ugandan stakeholders, an alternative schedule is created or an alterative location is desired, travel costs may be impacted accordingly.

>Dear (b)(6)
>
>Please find our response to your questions/comments below:
>
>1. Under Key Assumption 7: It assumes the participants engaged are not Ugandan government officials, and therefore fall outside of the U.S. Ambassador's memo (8 April 2015) outlining compensation of Ugandan Government personnel. However, many of the partners involved in the project are part of the UG government and will have to follow the US Ambassador's memo guidelines. In the risk management chart (page 3), the issue is addressed by stating Metabiota will work with the regional partners to ensure that we follow the memo's guidelines and will communicate this to the participants. It is our understanding that if the training or the sampling is outside the home district of the UG government employee, they can receive a stipend (maximum of 140k shillings).
>
>Metabiota: Narrative for Assumption 7 has been changed to the following: "Metabiota recognizes guidelines regarding compensation of Ugandan government personnel, as outlined in the Ambassador's memo (8 April 2015). Metabiota has developed a basis of estimate that plans for the highest cost scenario (e.g., no Ugandan government personnel). Upon receiving names and affiliations of all project participants, Metabiota will work with DTRA CBEP to adjust the basis of estimate accordingly."
>
>
>2. Clarification needed on the role of (b)(6) as technical resources and SMEs. Task 3 indicates that qualified Ugandan partners will be utilized, but the supplemental information contains the CVs of Kenyan partners. Is there a reason why Ugandan collaborators are not being utilized in the training?
>
>Metabiota: Box 8, Phase Two suggests that Metabiota would provide up to 3 SMEs, including 1-2 from Metabiota and one Ugandan non-governmental SME (I.e. AFENET). (b)(6) have extensive regional experience, including efforts in Uganda, in veterinary sciences, surveillance, and diagnostics, making them ideal MetabiotaSMEs.
>
>Box 8, Phase Three suggests Metabiota engage no more than five medium-level trainers, preferably from Uganda, to assist in pilot studies. Further, that the trainers may be a mix of Metabiota and Ugandan trainers. Metabiota has every intention to identify and use four medium-level trainers from Uganda. However, for the sake of consistency in integration, as well as technical expertise, we felt it would be helpful if one of the SME's from Task 2, also supported efforts for Task 3.
>
>
>3. Clarification also needed on the role of (b)(6) With the identification of (b)(6) as regional SMEs, it is unclear what role (b)(6) ll play in identifying SMEs.
>
>Metabiota: As part of our internal management strategy (b)(6) leads scientific integration across all programs and communication with our regional scientific networks, which includes Africa Biomedical Laboratories ((b)(6) . Within AEP, upon receiving a new TD, we engage leadership, including (b)(6) to identify appropriate scientific personnel. In this instance, (b)(6) was engaged upon receipt of the TD and ABL was identified as the most appropriate SME's for this effort. In light of this, the narrative should have been written in past tense. Importantly (b)(6) time is not billed to AEP.
>
>Additionally, I have attached updated narrative to Box 9 of our TD-022 response. All adjusted narrative has been highlighted yellow.
>
>If you have any additional questions, please let me know if you have any additional questions.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

This revision extends the Period of Performance (PoP) for TD-024 from 30 June 2016 to 31 July 2016. This PoP extension is to provide enough time to continue developing a Film Narrative of Epigenetics and Genomics of Infectious Diseases in the Middle East, South Asia and CBEP collaborations in the CENTCOM Region and route through DTRA PAO office. In addition, contractor shall add closed caption features to the film narrative and all subsequent copies via various media types develop under this TD not to exceed $2,000. Metabiota should coordinate directly with the Technical POCs identified below. No additional changes to the previously approved proposal are required at this time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES).

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE).

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to develop a Film Narrative of Epigenetics and Genomics of Infectious Diseases in the Middle East, South Asia and CBEP collaborations in the CENTOM Region in accordance with SOW section 4.3, Task 3.

Metabiota shall develop a 2-5 minute film narrative of the Middle East and South Asia Conference on Epigenetics and Genomics of Infectious Diseases, which was held at the Royal Scientific Society (RSS) on March 7-8, 2016 in Amman, Jordan. The visual narrative (2-5 minutes) objectives are to document the Jordan conference and describe other science initiatives and the outcomes of CBEP's engagements in the Middle East and South Asia. Metabiota shall develop the specific script in coordination with CBEP CENTCOM regional managers. The footage and interviews that Metabiota has from the conference can be utilized for the visual narrative. The visual narrative should be completed by June 30 2016. Total costs for the narrative shall not exceed $60,000.

Deliverables:

- A short film narrative of 2-5 minutes on 3 DVDs. Final film must go through Public Affairs Office (PAO) approval at DTRA.

The period of performance for this effort will be from May 1 to June 30 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $60,000.00 is requested by 19 April. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE).

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to develop a Film Narrative of Epigenetics and Genomics of Infectious Diseases in the Middle East, South Asia and CBEP collaborations in the CENTOM Region in accordance with SOW section 4.3, Task 3.

Metabiota shall develop a 2-5-minute film narrative of the Middle East and South Asia Conference on Epigenetics and Genomics of Infectious Diseases, which was held at the Royal Scientific Society (RSS) on March 7-8, 2016 in Amman, Jordan. The visual narrative (2-5 minutes) objectives are to document the Jordan conference and describe other science initiatives and the outcomes of CBEP's engagements in the Middle East and South Asia. Metabiota shall develop the specific script in coordination with CBEP CENTCOM regional managers. The footage and interviews that Metabiota has from the conference can be utilized for the visual narrative. The visual narrative should be completed by June 30 2016. Total costs for the narrative shall not exceed $60,000.

Deliverables:

- A short film narrative of 2-5 minutes on 3 DVDs. Final film must go through Public Affairs Office (PAO) approval at DTRA.

The period of performance for this effort will be from May 1 to June 30 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $60,000.00 is requested by 19 April. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Phase 1: Proposal Development & Initiation (Task 1)

Metabiota developed a project plan and implementation strategy that aligns with the narrative from Box 8. It is anticipated that the plan for TD-24 is considered a living document, and it is expected that revisions to the plan may be necessary following stakeholder meetings. During proposal development, Metabiota will use Program Manager (PM) and Project Coordinator (PC, billed as a Subject Matter Expert 1) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Metabiota assumes the following:

1. The PoP assigned to this project will allow enough time for PAO approval of the final video. However, if PAO approval extends beyond the project timeframe, Metabiota will work with AEP regional leadership and the COR to adjust the PoP or allow for final approval of the video outside of the project timeframe, as appropriate and within contractual compliance;
2. Production services required for this project will be complete within 3 weeks allowing enough time for PAO approval of the final video. Should services required extend past this timeframe, Metabiota will work with the CBEP CENTCOM regional leads (and COR, if necessary) to adjust the schedule accordingly;
3. Box 8 of TD-24 states that this project will be completed in accordance with section 4.3, Task 3, which refers to Qualified Trainers (QTs). Based on the requirements, Metabiota has replaced Qualified Trainers with Task 4- Subject Matter Experts. Metabiota assumes this will be acceptable in the execution of the project and engagement of SMEs for this effort.

Project Coordination (Task 1)

The Project team will be led by an experienced Program Manager (PM), Carlyle Gollogly, and supported by a highly effective Project Coordinator (PC), Emily Varanay, MPA, to cover Task 1 – Project Coordination. The PM and PC were selected for this project, because they implemented TD-07 the Middle East South Asia Epigenetics and Genomics of Infectious Disease Conference and have the historical knowledge to effectively and efficiently manage the requirements identified for TD-24. In addition, Metabiota will engage Dr. Kavita Berger, PhD, from Gryphon Scientific LLC to assist in narrative development as a SME under Task 4. Dr. Berger was the PI and senior technical implementer on TD-07, working closely with Ms. Gollogly and Ms. Varanay.

Note: The Metabiota PM confirms subcontractor knowledge of the contractual requirements prior to TD approval

Phase 2: Preparation (Task 1)

Upon TD approval, the PM will establish routine communications with project team members and CBEP to initiate project implementation. The PM will hold a kick-off meeting within 5 days of approval, with participation from the AEP PMO, project team members and key CBEP stakeholders to review project requirements and ensure a mutual understanding of project goals and objectives is realized. The PM and PC will review the project communications plan, schedule, risk register and other items critical to support project implementation during the kickoff. The PM, with assistance from the PC, will identify and engage the videography firm required to execute production of the video. The PM will lead coordination and integration of the project team with CBEP stakeholders to develop the narrative and complete the film.

The project team will ensure that all necessary documentation required prior to initiating tasks is completed correctly and submitted on time, including CTR CLS Form (CDRL A016) and the Monthly Reports (CDRL A001). The project team will work closely with CBEP regional leads, A&AS support

staff, and CLS to ensure that all logistics requirements are coordinated and implemented according to the project schedule and contractual requirements. The Metabiota Travel Coordinator will coordinate with the project team to assist in the request of travel requirements supporting this effort and will ensure that travel arrangements are secured, immediately following approval by the COR, and in line with the project schedule and execution requirements.

Sub-Phase 2.1: Film Narrative Development and Adaptation (Tasks 1.4)

Metabiota will select and engage a videography firm to produce the film, following sourcing of an appropriate vendor for this engagement. The project team will engage the CBEP regional leads to ensure the technical requirements are clearly determined and will select a service provider at best cost to the government, meeting the requirements identified. Upon engagement of the videography firm, Metabiota will transfer the existing, unedited video footage and interviews collected during the Middle East and South Asia Conference on Epigenetics and Genomics of Infectious Diseases, held at the Royal Scientific Society (RSS) from 7-8 March 2016 to the firm in order to produce the film. The unedited video footage, interviews, and photographs captured during this event will provide the raw material to effectively and relevantly document the Jordan conference and describe other science initiatives and the outcomes of CBEP's engagements in the Middle East and South Asia. The Metabiota team will work directly with CBEP regional leads and the videography firm to determine the narrative and produce the film.

Sub-Phase 2.2: Coordination for Material Shipment (Task 1)

Shipment of materials and final edited film, if deemed necessary, will be handled via CLS. The project team will deliver the final edited and PAO approved film utilizing the appropriate CLS forms (CDRL A0016 and associated forms) to the CBEP team for appropriate routing, adhering to contract timelines and deliverable schedule. The Metabiota team will work closely with CBEP, A&AS, and CLS staff members to coordinate and execute any logistical requirements, as needed.

Phase 3. Implementation (Tasks 1.4)

The Metabiota Project Team will develop and create a 2-5 minute film narrative of the Middle East and South Asia Conference on Epigenetics and Genomics of Infectious Diseases, held at the Royal Scientific Society (RSS) on March 7-8, 2016 in Amman, Jordan. The film will be produced in the English language and may include visual frames of speakers on stage, panning of audience, and snapshots of the discussion panels, poster session, and participants asking questions and engaging with speakers. The film may also include short interviews with conference organizers, Scientific Advisory Board members, speakers, presenters, and attendees concerning the importance, relevancy, and benefits of the conference, among other topics. The film will be produced utilizing the technical expertise of the film editors, Metabiota team, and CBEP regional leads to showcase the conference and highlight the scientific initiatives and engagements stemming from this event and CBEP efforts in the region. Suitable background music will be included, as well as sub-titles, if deemed necessary. Metabiota will ensure that the film is adjusted/edited according to guidelines received from CBEP, and other key stakeholders. CLS will be engaged to provide logistical support (CDRL A0016), should it be required for this effort. In addition, Metabiota will ensure PAO approval of the film, and will coordinate with the technical team to address any necessary changes prior to completion and final delivery of the product.

To support implementation efforts, the Metabiota PM will travel to Washington DC for meetings with CBEP regional leads and the project team to develop the narrative and review the video footage. The PM will participate in working sessions, brainstorming, and technical development of the film narrative during scheduled in person meetings to ensure execution of the narrative and completion of the project. In addition, the PM will meet with the videography firm to review performance and completion of tasks associated with this project.

Phase 4: Project Closeout (Task 1)

The project team will close out all activities associated with this project, to include final reporting, invoicing, and submission of all relevant CDRLs according to the outlined schedule. In addition, the project team will contribute to lessons learned conversations with CBEP detailing enhancements that could be made should this type of project be repeated, as necessary and requested by CBEP regional leads. Finally, unedited and edited film, and other relevant materials will be provided to CBEP.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$38,933
1003	MATERIALS	$10,695
1004	ODCs	$0
1005	TRAVEL	$2,993
TOTAL		**$52,620.93**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES,.

Labor

Costs for direct labor to support this activity is required for the following personnel:

Metabiota Program Manager (PM): The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of CBEP goals in direct support of this activity and the CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the SME 1 to ensure day-to-day activities for the project are completed on time, and to the quality required by CBEP. The PM will participate in routine conference calls and other forms of communication with CBEP regional leads and SMEs to ensure project execution. The PM will oversee the subcontractors on this effort, to include the services provided by the videography company in execution of the film. The PM will ensure all contract CDRLs are met and delivered according to the project timeline, and contract requirements.
LOE: 80 hours

Metabiota Project Coordinator: A SME 1 will act as a Project Coordinator (PC) throughout the planning, execution and close out of project objectives and activities. The PC will support the planning and execution of CBEP objectives towards the completion of project goals by participating in proposal development, stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will participate in routine project communications, to include leading regular coordination calls with the project team, CBEP, the videography company, and other key stakeholders.
LOE: 60 hours

SME 3 (b)(6) from Gryphon Scientific will be engaged to support technical development of the film narrative for this project. Having coordinated the MESA Epigenetics and Genomics of Infectious Diseases Conference with the Metabiota team, she is critical in ensuring the conference message is received and communicated through the film. (b)(6) will work directly with Metabiota and CBEP to develop the narrative, review the footage, and provide subject matter expertise to the team and the production services in development and execution of the film. Should

edits or revisions be required following CBEP and PAO guidelines (b)(6) will participate in editing and refining the narrative to be delivered in the final product (b)(6) will be responsible for all monthly reporting and deliverables assigned to the Gryphon subcontract by Metabiota in execution of this project.
LOE: 80 hours

Reachback programmatic support to include finance, accounting, and contracts, will be provided as part of CLIN 1001 (FFP) and will not be separately invoiced.

Materials
Training Materials: Two (2) external hard drives will be procured to store the photos, raw video footage, and the final edited video.

Production Services: Metabiota will engage a videography firm to produce the short video for this effort. This will include identification of sound bites, completion of film transcripts, editing, and production of the video.

Metabiota will conduct market research and ensure the best price is secured, maintaining quality and technical requirements for all procurement of goods. Metabiota will coordinate directly with CLS for all shipping requirements, and will ensure cost management for all procured supplies, as necessary to complete the scope of this effort.

Subcontracts
The subcontract with Gryphon Scientific will be modified to include labor hours and materials required for implementation of this project. Costs are captured under the labor and materials budgets.

Travel
Travel costs will be cost reimbursable and provide best cost to the government following JTR regulations. Travel is requested for the PM to meet with the project team, Gryphon SME, CBEP, the videography company, and other key stakeholders to support the execution of Phase 3, and ensure development of the film narrative and completion of the project. The PM will travel to Washington DC to take part in in person meetings, brainstorming activities, narrative development and review of film footage and sound bites developed by the videography company supporting this project.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to develop a writing workshop for Ethiopian collaborators from the Ethiopian Public Health Institute (EPHI) and National Animal Health Diagnostic and Investigation Center (NAHDIC) in accordance with SOW, Section 4.1, 4.2, 4.3, 4.4. This technical directive provides guidance to assist Metabiota in establishing a proposed implementation approach and budget for the period of performance from April 2016 to May 2016. During the PoP, Metabiota shall provide the following:

a. Metabiota shall reach out directly to (b)(6), the main POC from EPHI and (b)(6) the main POC from NAHDIC, to discuss the participant list, as the collaborators have already identified the workshop participants and will provide the names to Metabiota. Metabiota shall provide a PM and a SME1 for the pre-coordination of the workshop. The hours required for the pre-coordination should not exceed 10 hours/week for three weeks each for the PM and the SME1. Communication will (b)(6) should also include the discussion of the venue and logistic details regarding the implementation of the workshop
b. Metabiota shall use already developed training material for the workshop when possible, including PowerPoint presentations and hands-on exercises aimed at developing grantsmanship skills. For the curriculum planning and the development of new material, if needed, Metabiota shall not exceed a total of 20 hours of one SME1 effort.
c. The in-country writing workshop provided by Metabiota shall cover all aspects and skills within the grant writing process, especially those specific to grants.gov submission system used for the DTRA Fundamental Research for Combating Weapons of Mass Destruction Broad Agency Announcement (FRCWMD-BAA). Specific technical subjects that shall be included in the workshop are: hypothesis development; research proposal development (including the development of an abstract, white paper, and full proposal); literature reviews; identifying appropriate technical methodologies; biosafety and biosecurity requirements; human subjects and animal care and use approval process and requirements; collaboration development; analysis and discussion of expected results; project budgeting; and the grant submission process relevant to Thrust Area 6 of the FRCWMD-BAA through grants.gov. The workshop shall include hands-on assignments which focus on scientific writing and distinguishes the unique styles associated with abstracts, white papers, and full proposals ensuring the participants are fully prepared for future grant proposal development. The writing workshop shall be no more than five (5) days with a maximum number of 15 partner participants, with up to ten (10) participants identified as part of (b)(6) research team and up to five (5) participants identified by (b)(6) Metabiota shall provide up to two (2) SME1s (preferably the same personnel that were involved in the pre-coordination activities) for in-country presentations and hands-on training of the workshop participants. Both SME1s will be expected to arrive one (1) day prior to the workshop and leave no later than one (1) day after the workshop is completed. It is anticipated that approximately 50 hours/SME will be required for successful in-country preparation and execution of the workshop.
d. Metabiota shall include a final survey incorporating the participants' thoughts on how the workshop helped develop their writing skills as a deliverable to DTRA/CBEP.
e. Following the completion of the workshop, Metabiota shall guide one EPHI-led and one NAHDIC-led team to apply their new skills to develop materials for submission to the BAA (abstract, white paper, full proposal). The EPHI-led team shall draft proposal material for the project that has been in pre-coordination with CBEP: "Prevalence and associated risk factors of Rift Valley and Crimean-Congo hemorrhagic fever viruses in humans and livestock in pastoral areas in Ethiopia" or a research project of their preference. The NAHDIC-led team shall also draft proposal material for submission to the BAA in alignment with CBEP's research interests and mission scope. Metabiota shall provide remote technical assistance to both teams to apply the lessons learned to develop an abstract, white paper, and full proposal materials for submission to Thrust Area 6 of the FRCWMD-BAA. Metabiota shall provide up to two (2) SME1 (preferably the same personnel who participated in the in-country writing workshop) to receive and review the materials from the Ethiopian partners and to provide comments. The Ethiopian partners and the SMEs shall discuss feedback, via email, telephone or skype, regarding the abstract, white paper, and full proposal on a weekly basis for approximately 10 weeks for a maximum average of 5 hours/week, 50 hours total, per each team (the total hours may be divided unevenly during the 10 week period as the development of the full proposal will take the bulk of the discussion/feedback time). The reviews of the materials shall include not only feedback on the technical aspects of the documents but all aspects of the writing process. Program Management support for activities described in c.-e. Metabiota shall provide a PM; the hours required for the PM should not exceed 2 hours/week for eleven weeks.
f. If a white paper is requested by DTRA/CBEP, it is expected that EPHI-led and NAHDIC-let teams will submit it in a timely manner without Metabiota's assistance. However, upon receipt of comments or requested revisions of the white paper, Metabiota shall assist the Ethiopian partners in the development of a response to reviewers' comments. It is anticipated that this support may require up to 20 hours total per team to assist in the development of a response to reviewers.

Deliverables:

1. Survey of participants incorporating participants' thoughts on the workshop and how it assisted them as scientific writers.
2. Deliverables expected (described in section e. and f.):
   Deliverable #1: Abstract submitted by EPHI-led and NAHDIC-led teams, appropriate to Thrust Area 6 of the DTRA FRCWMD-BAA.
   Deliverable #2: White paper (including any requested clarifications and/or revisions) submitted by EPHI-led and NAHDIC-led teams appropriate for submission to grants.gov and Thrust Area 6 of the DTRA FRCWMD-BAA, if requested following successful review of the submitted abstract.
   Deliverable #3: Full proposals developed by EPHI-led and NAHDIC-led teams appropriate for submission to Thrust Area 6 of the DTRA BAA.

The period of performance for this effort will be from 2 May 2016 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $61,000 is requested by 29 April 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Phase 0: Proposal Development & Initiation (April 27-April 29, 2016)

Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-025 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as a Research and Data Analyst I RDA)) time to identify the optimal strategy, including required deliverables and other programmatic requirements, which may be a part of project implementation.

The Metabiota PM and PC coordinated with (b)(6) Metabiota's Executive Vice President (EVP) in charge of Science Integration and communication with our regional scientific networks to identify the appropriate SMEs in technical writing and grantsmanship, to develop and augment project work plans and training materials. Ultimately, this measure was taken to ensure our technical and cost solutions were of the highest quality and sustainable, respectively.

Key Assumptions:

1. Metabiota received unofficial communication supporting an extension of its AEP contract from May 15, 2016 to November 15, 2016, this technical response has been developed with the key assumption that this additional time will be allotted to this project.
2. Metabiota assumes the need to acquire PAO approvals for any and all training materials developed in support of the Technical Writing and Grantsmanship Workshop
3. The Metabiota project team will receive all necessary or relevant concept notes or supporting documentation associated with this project immediately upon technical approach approval
4. Metabiota assumes that workshop participants representing EPHI and NAHDIC as Technical Writing and Grantsmanship Workshop participants have already been identified and notified of their potential for inclusion in a 5-day training event
5. Metabiota assumes that no more than 25% of all training materials developed in support of the Technical Writing and Grantsmanship Workshop will be novel, and that existing developed training materials will be identified and utilized
6. Metabiota will provide SME support to EPHI-led and NAHDIC-led teams for concept development and submission to the BAA, but does not expect to support concept identification.
7. Metabiota assumes that engagement with EPHI and NAHDIC throughout this project will involve a single lead point of contact from each respective organization, and that direct communication with individual team members from these organizations will not be necessary
8. Metabiota assumes all workshop participants are proficient in English and no translation of materials or interpretation of lectures will be necessary.
9. Metabiota assumes all workshop participants are in possession of a functional wi-fi enabled laptop with a standard business productivity software suite (Microsoft Office, Apple iWork, Google Docs).

Phase 1 – Project Coordination and Workshop Preparation (May 2-November 15, 2016)

Sub-Phase 2.1: Stakeholder Coordination (May 2-November 15, 2016)

Upon approval of the TD, Metabiota will engage DTRA CBEP for a project kick-off call to ensure that a mutual understanding of project goals and objectives are realized, ensure that any historical documentation relevant to project implementation is received, and establish a bi-weekly reporting and communication protocol. Metabiota will additionally engage identified Ethiopian points of contact representing EPHI and NAHDIC to establish consensus on project goals and the intended path forward. Metabiota will also establish regular bi-weekly communications with Ethiopian stakeholders and identify an associated communication protocol. In an effort to reduce personnel coordination risk and ensure that effective communication is maintained, Metabiota will clearly identify the expected roles and responsibilities of EPHI and NAHDIC team leaders as the primary and sole contact points for their organizations.

Sub-Phase 2.2: Workshop Materials Development (May 2-June 10, 2016)

Metabiota will seek existing workshop materials that cover subjects relevant to proposal writing. Metabiota may utilize materials available internally, from open-access sources, or from subcontractors engaged as SMEs. Once selected, Metabiota will review these materials and identify any additions that need to be made. While the workshop will cover proposal writing in general, Metabiota expects to provide some direction on writing to DTRA BAA Thrust Area 6 specifically. In light of this, Metabiota will develop any supplements to the existing workshop material that are necessary to convey this information. Metabiota assumes these supplements will constitute up to 25% new material. The final materials will include PowerPoint presentations and hands-on learning exercises covering hypothesis development, research proposal development, literature reviews, methods selection, biosafety and biosecurity requirements, human and animal subject use requirements, development of collaborations, analysis and discussion of expected results, budget development, and the grant submission process specific to BAA Thrust Area 6. Metabiota will also develop a post-workshop survey to solicit feedback from participants on the relevance and utility of the workshop. Once all materials have been internally reviewed and finalized Metabiota assumes it will be necessary to submit them to DTRA for PAO approval.

Deliverables:

- Deliverable 1: Submission of developed post workshop survey to DTRA CBEP representation
- Deliverable 2: Submission of Technical Writing and Grantsmanship Workshop Materials to DTRA CBEP for PAO approval

Sub-Phase 2.3: Workshop Implementation Preparation (May 2-August 12, 2016)

Metabiota expects a total of no more than (15) previously identified participants will be invited to the Technical Writing and Grantsmanship Workshop including no more than (10) representing (b)(6) team from EPHI and no more than (5) representing (b)(6) team from NAHDIC. Immediately upon engagement with identified Ethiopian stakeholders, Metabiota will work collaboratively with team leads representing EPHI and NAHDIC to clearly identify workshop participants, dates and a location for the event. Metabiota will develop and submit a Training Event Plan (TEP) detailing this information to DTRA CBEP no later than 60 days prior to workshop implementation. As all in-country logistical support services relevant to this workshop will be coordinated through CLS, Metabiota expects to submit a CLS form detailing all necessary accommodations for all training participants no later than 45 days prior to workshop implementation. Metabiota additionally expects to send two U.S. based project SMEs to Ethiopia to lead the Technical Writing and Grantsmanship Workshop and will submit a Cable Clearance Request (CCR) and Travel Authorization Request to DTRA CBEP representation no later than 45 days prior to scheduled travel for workshop implementation. Metabiota will also develop a pre-travel risk report and gain internal approval from AEP leadership prior to sending any members of its project team to Ethiopia. Additionally, Metabiota SMEs will coordinate with (b)(6) and (b)(6) to familiarize themselves with the participants' existing work and to assign them preparatory tasks leading up to the workshop such as brainstorming possible research ideas.

Phase 2 – Technical Writing and Grantsmanship Workshop Implementation (August 15-19, 2016) Metabiota will conduct a five-day workshop on specific aspects of technical writing and grantsmanship in order to train and mentor selected representation from EPHI and NAHDIC. The workshop will help participants improve their general technical writing and grantsmanship skills and provide specific focus on the grants.gov submission system used for the DTRA Fundamental Research for Combating Weapons of Mass Destruction Broad Agency Announcement (FRCWMD-BAA).

Metabiota will accomplish this by sending 2 technical writing and grantsmanship SMEs to the identified training location within Ethiopia to lead the the 5-day Technical Writing and Grantsmanship Workshop. This workshop will include five days of lectures and team specific working group sessions to cover topics including but not limited to: hypothesis development; research proposal development (including the development of an abstract, white paper, and full proposal); literature reviews; identifying appropriate technical methodologies; biosafety and biosecurity requirements; human subjects and animal care and use approval process and requirements; collaboration development; analysis and discussion of expected results; project budgeting; and the grant submission process relevant to Thrust Area 6 of the FRCWMD-BAA through grants.gov. The workshop will include no more than 15 participants (no more than 10 from EPHI, and no more than 5 from NAHDIC) and each participant will have access to, and be able to work directly with the SMEs. The PM will be on-site provide logistical and programmatic support to the SMEs throughout the workshop and will ensure effective integration and overall congruency with CLS representation tasked with supporting the workshop. The PM will be responsible for ensuring the administration of the workshop survey and for collecting and aggregating all survey information. The PM will also provide daily training reports to DTRA CBEP representation and will coordinate with the PC, AEP leadership, and DTRA CBEP representation on a daily basis to ensure that any implementation risks are identified and mitigated appropriately. The PC will support the PM in the development and submission of a Training Trip Report (TTR) no later than 5 days after completion of the workshop.

Deliverables:

- Deliverable 1: Submission of participant survey results to DTRA CBEP representation no later than 10 days' post completion of workshop implementation activities.

Phase 3 – BAA Materials Development (Abstract, White Paper and Full Proposal) (August 22-October 14,2016)

Metabiota expects that the project teams will develop and revise their abstracts as part of the the Grantsmanship workshop, and also expects the project teams to begin

white paper development during the workshop. Immediately following the workshop the EPHI-led and NAHDIC-led teams will each submit their abstract to DTRA. The teams will then immediately resume white paper development, regardless of whether or not a white paper has been invited. Each team will designate a lead point-of-contact who will submit the white paper to the SMEs. The SMEs will review the submitted materials and provide specific recommendations for improvement to each POC via phone, email, or Skype. The POCs will be responsible for relaying this information to their team and coordinating the revisions process. Each team will make revisions to the material and the POC will resubmit it to the SMEs for a second review. This process will continue until one of the following occurs: the SMEs deem the white papers are sufficiently well-developed for submission; the end of the project period of performance, or, assuming a white paper has been invited, the white paper submission deadline. Similarly, upon completion of the white papers, the teams will begin full proposal development with review of the technical volumes and budgets by the SMEs.

The project teams will submit the white papers to DTRA independent of SME assistance. Following submission, the project teams will initiate development of full proposals. SMEs will provide guidance and direction to the project POCs and review any draft materials submitted to them. The SMEs will continue to support the project teams in proposal development until the proposal is deemed ready for submission or the end of the Period of Performance is reached.

Deliverables:

- Deliverable 1: Abstract submitted by EPHI-led and NAHDIC-led teams, appropriate to Thrust Area 6 of the DTRA FRCWMD-BAA.
- Deliverable 2: White paper (including any requested clarifications and/or revisions) submitted by EPHI-led and NAHDIC-led teams appropriate for submission to grants.gov and Thrust Area 6 of the DTRA FRCWMD-BAA, if requested following successful review of the submitted abstract.
- Deliverable 3: If time permits, full proposals developed by EPHI-led and NAHDIC-led teams appropriate for submission to Thrust Area 6 of the DTRA BAA

Phase 4 – Project Closeout and White Paper Response Assistance (October 17- November 15, 2016)

Subphase 4.1 White Paper Response Assistance (October 17- November 15, 2016)
Following submission of respective white papers, provide final review and post-workshop support to participants as needed. the EPHI-led and NAHDIC-led teams may receive comments or requests for clarification from DTRA. If the teams receive this feedback within the project PoP they will submit requests for assistance to the SMEs. After reviewing the feedback, the SMEs will provide the POCs with specific recommendations for addressing the comments. The POCs will coordinate the revisions to the white papers to address the comments and requests for clarification and submit a new draft to the SMEs. Following review, the SMEs will provide final comments or direction as necessary to the POCs.

Subphase 4.2 Final Report Submission (October 17- November 15, 2016)
Concurrently, and as part of closeout procedures, the Metabiota project team will write a final report detailing all actions taken throughout project implementation, lessons learned, and recommended next steps for submission to DTRA CBEP.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
				Cost		
Subject Matter Expert Subcontracting	Due to limited insight into participant profiles and research activities, additional costs and time-delays may occur to identify and coordinate the most appropriate SME coordination, which may impact the ability to conduct this activity in full.	3	3	Medium	Metabiota has preselected SMEs for this effort, and contingent understanding of the participants' work, Metabiota will evaluate the selected SMEs for inclusion. As needed, Metabiota will attempt to reach a basic agreement with SMEs as soon as possible and issue authorization to proceed while subcontracts are being put into place	(b)(4); (b)(6)
Participant Identification and Coordination	Due to Metabiota's limited insight regarding the participants of the Writing and Grantsmanship Workshop, and their respective academic and logistical capacities (i.e. possession of laptops, research tools, previously cited materials, quality of data sources, etc.) it is possible that the quality of improvement for their manuscripts may be hindered	4	3	Medium-High	Metabiota will ensure that effective coordination and communication with Ethiopian Stakeholders is employed to ensure that a maximal amount of information about the participants, their research, and their respective capacities' is garnered before the workshop. This will allow for the controlling of mentioned confounders, and a managed increase in efficiency with regard to review and operation.	
Programmatic labor hours	Following guidance from CBEP POC's, the current budget for Metabiota Program Management and Project Coordination hours are extremely low. As a result, and based on previous experience implementing overseas activities, there is significant risk for budget overrun.	5	5	(b)(4); (b)(6)	Metabiota recommends an increase in overall labor hours based on the described tasks and previous performance on similar AEP programmatic work	Low
Technical labor hours	Technical labor hours may be insufficient for the continued mentorship of Ethiopian stakeholders and for the development of workshop materials if they do not exist.	4	5	Medium-High	Metabiota recommends an increase in overall labor hours based on the described tasks and previous performance on similar AEP programmatic work	Low
				Schedule		
Project Coordination	Technical Writing and Grantsmanship Workshop, Ethiopia involves a significant number of stakeholders and participants representing various organizations, putting implementation activities at risk of delay or cancellation.	5	2	Medium	Establish and hold regular calls with all stakeholders and identify multiple possible implementation dates. Identify critical components as early as possible and redirect efforts when it becomes clear that targeted implementation dates will not be achievable.	(b)(4); (b)(6)
				Performance		

Political Instability	Sporadic violence near borders and occasionally in the capital may lead to risks of being unable to safely complete in-country work.	2	5	Medium	Coordinate closely with DTRA and AFRICOM to be aware of any potential risks to performers, and target a location for the workshop well away from risky areas.	(b)(4); (b)(6)

TOTAL		$89,240.22

9c. TD SOLUTION BASIS OF ESTIMATE DESCRIPTION (NOT TO EXCEED 2 PAGES)

Period of Performance

The period of performance for this effort is May 2, 2016 – May 15 2016

Labor

Costs for direct labor to support this activity is required for the following personnel

All phases

Metabiota Program Manage (b)(6) will provide oversight of the planning and execution of all program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity

As some of our Subject Matter Experts will be independent consultants, the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including independent consu tants throughout the span of the project.

The Metabiota PM will oversee the coordination between the Ethiopian stakeholders and the workshop planning team and will ensure the project team captures and keeps in account stakeholder input regarding key information relevant to the planning of the workshop. The PM will manage any logistic concerns that may arise during the course of the workshop, allowing the SMEs to maintain focus the workshop without interruption. The PM will restrict his time expenditure in country to an operational minimum while ensuring congruency in programmatic support.

Metabiota requests that a total 110 hours be allotted to the Metabiota PM For the activities described above. General programmatic oversight will require at minimum a 5% level of effort over the course of the 15 weeks to support phase 1 activities. During this time, the PM will be required to lead all weekly communicaitons and provide general oversight to the PC and project SMEs, an effort that is estimated to require at least 2 hours per week for a total of 30 during the phase 1. Phase 2 will include workshop implementation activities and will require the PM to commit at least a 50% level of effort during a 1 week period to ensure successful workshop implementation and for the provision of programmatic and logistical support to Project SMEs tasked with leading the workshop for a total of 20 hours . Phase 3 will task the PM to continue leading all stakeholder communications and to provide support and oversight to the PC and SMEs throughout post workshop activities. The PM will need to commit to at least a 10% level of effort over 10 weeks for a total of 40 hours. Phase 4 will task the PM to continue leading all stakeholder communications and to provide support and oversight to the PC and SMEs throughout submission response activites and final report development. The PM will need to commit to at least a 10% level of effort over 4 weeks for a total of 12 hours.

Metabiota Project Coordinator (b)(6) will act as Project Coordinator throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. (expand)

Metabiota requests that a total 124 hours be allotted to the Metabiota PC For the act vities described above. General programmatic coordination will require at minimum a 10% level of effort over the course of the 15 weeks to support phase 1 activities. Dur ng this time, the PC will be required to participate in and record all weekly communicaitons and provide general support the PM and project SMEs, an effort that is estimated to require at least 4 hours per week for a total of 60 during the phase 1. Phase 2 will include workshop implementation activities and will require the PC to remotely support workshop implementation at a 10% level of effort during a 1 week period to ensure successful workshop implementation and transparent reporting to DTRA CBEP representation. Phase 3 will task the PC to continue participating in and recording all stakeholder communications and to provide support PM and SMEs throughout post workshop activities. The PC will need to commit to at least a 10% level of effort over 10 weeks for a total of 40 hours. Phase 4 will task the PC to continue participating in and recording all stakeholder communications and to provide support to the PM and SMEs throughout submission response activites and final report development. The PC will need to commit to at least a 10% level of effort over 4 weeks for a total of 12 hours.

Subject Matter Expert I (2 total). The SME is will be tasked with providing workshop materials, workshop participation and mentoring of workshop participants following workshop conclusion. During phase 1 the SMEs will review the workshop materials to make any necessary updates and ensure the materials' relevance to the Ethiopian scientists. It is estimated that the SMEs will need to develop up to 25% original workshop material to supplement existing workshop materials. The hours necessary for this development were estimated using a ratio of 4 hours of development for each hour of contact time.

During phase 2 the SMEs will deliver lectures on topics relevant to grant writing and submission, and facilitate small group work based on this content. Phase 3 will commence following workshop completion. During this phase the SMEs will provide remote support to the POCs for the EPHI and NAHDIC teams in their development of an abstract and white paper suitable for submission to DTRA BAA Thrust Area 6. Upon receipt from the POCs, the SMEs will review the drafts of these documents and provide feedback via telephone, email or skype. During phase 4, following submission of white papers by the EPHI-led and NAHDIC-led teams, the SMEs will provide further assistance to the POCs in responding to any comments or revisions requested by DTRA CBEP.

Metabiota requests a total of 384 hours be allotted to the Metabiota SMEs for the activites described above. Project coordination and materials development activites during this phase are estimated to require 46 hours per SME over the course of 15 weeks for a total of 92 hours. The SMEs will be required to participate in regular communicaitons with and provide general support to the PM during phase 1 activities. Phase 2 will include workshop implementation activities and will require the SMEs to be available in country at a 100% level of effort during a 1 week period to ensure successful workshop implementation and transparent reporting to the PM. The SMEs will be required to travel to Ethiopia from the United States for this phase and will spend a 7 full days at a 100% level of effort each. Thus a total of 56 hours per SME will be required for Phase 2. Phase 3 will task the SMEs to continue participating in relevant stakeholder communications and to provide SME support throughout post workshop activities. The SMEs will need to commit no less than 70 hours total over 10 weeks each for a total of 140 hours. Phase 4 will task the SMEs to continue participating in relevant stakeholder communications and to provide support throughout submission response activites The SMEs will need to commit to at least 5 hours per week over 4 weeks for a total of 20 hours each.

Materials

We have budgeted for an effort based international communications capacity for our project team while they are in country implementing the workshop. The costs budgeted here reflect activating a moderate calling plan to support the efforts of the program manager and subject matter experts.

Other Direct Costs
Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Independent Consulting Agreements
Consulting agreements will be issued to SMEs and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Support is requested for two SMEs to travel to Addis Ababa to implement the writing workshop. The travel budget represents the estimated amount required; travel on the AEP contract is cost reimbursable. Metabiota expects to leverage other requirements for travel in order to have the PM in-country for the grantsmanship workshop at no additional cost.

Our travel budget assumes the workshop will be held on 5 consecutive days. If, through discussion with the Ethiopian stakeholders and alternative schedule is created or an alternative location is desired, travel costs may be impacted accordingly.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engager rogram (CBEP) grants technical direction to Metabiota to develop a writing workshop for Ethiopian collaborators from the Ethiopian Public Health Institute (EPHI) and National Animal Health Diagnostic and Investigation Center (NAHDIC) in accordance with SOW, Section 4.1, 4.2, 4.3, 4.4. This technical direct vides guidance to assist Metabiota in establishing a proposed implementation approach and budget for the period of performance from April 2016 to May 2016. the PoP. Metabiota shall provide the following

a. Metabiota shall reach out directly t (b)(6) the main POC from EPHI and (b)(6) (b)(6) the main [illegible], to discuss the participant list, as the collaborators have already identified the workshop participants and will provide the names to Metabiota. Metabiota shall provide a PM and a SME1 for the pre-coordination of the workshop. The hours required for the pre-coordination should not exceed 10 hours/week for three weeks each for the PM and the SME1. Communication with (b)(6) should also include the discussion of the venue and logistic details regarding the imp ementation of the workshop.
b. Metabiota shall use already developed training material for the workshop when possible, including PowerPoint presentations and hands-on exercises aimed at developing grantsmanship skills. For the curriculum planning and the development of new material, if needed, Metabiota shall not exceed a total of 20 hours of one SME1 effort.
c. The in-country writing workshop provided by Metabiota shall cover all aspects and skills within the grant writing process, especially those specific to grants.gov submission system used for the DTRA Fundamental Research for Combating Weapons of Mass Destruction Broad Agency Announcement (FRCWMD-BAA). Specific technical subjects that shall be included in the workshop are: hypothesis development; research proposal development (including the development of an abstract, white paper, and full proposal); literature reviews identifying appropriate technical methodologies; biosafety and biosecurity requirements; human subjects and animal care and use approval process and requirements; collaboration development; analysis and discussion of expected results; project budgeting; and the grant submission process relevant to Thrust Area 6 of the FRCWMD-BAA through grants.gov. The workshop shall include hands-on assignments which focus on scientific writing and distinguishes the unique styles associated with abstracts, white papers, and full proposals ensuring the participants are fully prepared for future grant proposal development. The writing workshop shall be no more than five (5) days with a maximum number of 15 partner participants, with up to ten (10) participants identified as part o (b)(6) esearch team and up to five (5) participants identified by (b)(6) Metabiota shall provide up to two (2) SME1s (preferably the same pers e involved in the pre-coordination activities) for in-country presentations and hands-on training of the workshop participants. Both SME1s will be expected to arrive one (1) day prior to the workshop and leave no later than one (1) day after the workshop is completed. It is anticipated that approximately 50 hours/SME will be required for successful in-country preparation and execution of the workshop.
d. Metabiota shall include a final survey incorporating the participants' thoughts on how the workshop helped develop their writing skills as a deliverable to DTRA/CBEP.
e. Following the completion of the workshop, Metabiota shall guide one **EPHI-led and one NAHDIC-led** team to apply their new skills to develop materials for submission to the BAA (abstract, white paper, full proposal). The EPHI-led team shall draft proposal material for the project that has been in pre-coordination with CBEP: "Prevalence and associated risk factors of Rift Valley and Cr mean-Congo hemorrhagic fever viruses in humans and livestock in pastoral areas in Ethiopia" or a research project of their preference. The **NAHDIC-led team** shall also draft proposal material for submission to the BAA in alignment with CBEP's research interests and mission scope. Metabiota shall provide remote technical assistance to both teams to apply the lessons learned to develop an abstract, white paper, and full proposal materials for submission to Thrust Area 6 of the FRCWMD-BAA. Metabiota shall provide up to two (2) SME1 (preferably the same personnel who participated in the in-country writing workshop) to receive and review the materials from the Ethiopian partners and to provide comments. The Ethiopian partners and the SMEs shall discuss feedback, via email, telephone or skype, regarding the abstract, white paper, and full proposal on a weekly basis for approximately 10 weeks for a maximum average of 5 hours/week, 50 hours total, per each team (the total hours may be divided unevenly during the 10 week period as the development of the full proposal will take the bulk of the discussion/feedback time). The reviews of the materials shall include not only feedback on the technical aspects of the documents but all aspects of the writing process. Program Management support for activities described in c.-e. Metabiota shall provide a PM the hours required for the PM should not exceed 2 hours/week for eleven weeks
f. If a white paper is requested by DTRA/CBEP, it is expected that **EPHI-led and NAHDIC-le**t teams will submit it in a timely manner without Metabiota's assistance. However, upon receipt of comments or requested revisions of the white paper, Metabiota shall assist the Ethiopian partners in the development of a response to reviewers' comments. It is anticipated that this support may require up to 20 hours total per team to assist in the development of a response to reviewers

Deliverables:
1. Survey of participants incorporating participants' thoughts on the workshop and how it assisted them as scientific writers.
2. Deliverables expected (described in section e. and f.):
   Deliverable #1: Abstract submitted by **EPHI-led and NAHDIC-led** teams, appropriate to Thrust Area 6 of the DTRA FRCWMD-BAA.
   Deliverable #2: White paper (including any requested clarifications and/or revisions) submitted by **EPHI-led and NAHDIC-led** teams appropriate for submission to grants.gov and Thrust Area 6 of the DTRA FRCWMD-BAA, if requested following successful review of the submitted abstract.
   Deliverable #3: Full proposals developed by **EPHI-led and NAHDIC-led** teams appropriate for submission to Thrust Area 6 of the DTRA BAA.

The period of performance for this effort will be from **2 May 2016 to 15 May 2016**. technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $61,000 is requested by 29 April 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Phase 0: Proposal Development & Initiation (April 27-April 29, 2016)

Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-025 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as a Research and Data Analyst I RDA)) time to identify the optimal strategy, including required deliverables and other programmatic requirements, which may be a part of project implementation.

The Metabiota PM and PC coordinated wit(b)(6) Metabiota's Executive Vice President (EVP) in charge of Science Integration and communication with our regional scientific networks to identify the appropriate SMEs in technical writing and grantsmanship, to develop and augment project work plans and training materials. Ultimately, this measure was taken to ensure our technical and cost solutions were of the highest quality and sustainable, respectively.

Key Assumptions:

1. Metabiota received unofficial communication supporting an extension of its AEP contract from May 15, 2016 to November 15, 2016, this technical response has been developed with the key assumption that this additional time will be allotted to this project.
2. Metabiota assumes the need to acquire PAO approvals for any and all training materials developed in support of the Technical Writing and Grantsmanship Workshop.
3. The Metabiota project team will receive all necessary or relevant concept notes or supporting documentation associated with this project immediately upon technical approach approval.
4. Metabiota assumes that workshop participants representing **EPHI and NAHDIC** as Technical Writing and Grantsmanship Workshop participants have already been identified and notified of their potential for inclusion in a 5-day training event.
5. Metabiota assumes that no more than 25% of all training materials developed in support of the Technical Writing and Grantsmanship Workshop will be novel, and that existing developed training materials will be identified and utilized
6. Metabiota will provide SME support to **EPHI-led and NAHDIC-led** teams for concept development and submission to the BAA, but does not expect to support concept identification.
7. Metabiota assumes that engagement with **EPHI and NAHDIC** throughout this project will involve a single lead point of contact from each respective organization, and that direct communication with individual team members from these organizations will not be necessary.
8. Metabiota assumes all workshop participants are proficient in English and no translation of materials or interpretation of lectures will be necessary.
9. Metabiota assumes all workshop participants are in possession of a functional Wi-Fi enabled laptop with a standard business productivity software suite (Microsoft Office, Apple iWork, Google Docs).

Phase 1 – Project Coordination and Workshop Preparation (May 9-November 15, 2016)

Sub-Phase 1.1: Stakeholder Coordination (May 9-November 15, 2016)

Upon approval of the TD, Metabiota will engage DTRA CBEP for a project kick-off call to ensure that a mutual understanding of project goals and objectives are realized, ensure that any historical documentation relevant to project implementation is received, and establish a bi-weekly reporting and communication protocol. Metabiota will additionally engage identified Ethiopian points of contact representing **EPHI and NAHDIC** to establish consensus on project goals and the intended path forward. Metabiota will also establish regular bi-weekly communications with Ethiopian stakeholders and identify an associated communication protocol. In an effort to reduce personnel coordination risk and ensure that effective communication is maintained. Metabiota will clearly identify the expected roles and responsibilities of **EPHI and NAHDIC** team leaders as the primary and sole contact points for their organizations.

Sub-Phase 1.2: Workshop Materials Development (May 9-June 10, 2016)

Upon approval of the TD, Metabiota will seek existing workshop materials that cover subjects relevant to proposal writing. Metabiota may utilize materials available internally, from open-access sources, or from subcontractors engaged as SMEs. Once selected, Metabiota will review these materials and identify any additions that need to be made. While the workshop will cover proposal writing in general, Metabiota expects to provide some direction on writing to DTRA BAA Thrust Area 6 specifically. In light of this, Metabiota will develop any supplements to the existing workshop material that are necessary to convey this information. Metabiota assumes these supplements will constitute up to 25% new material. The final materials will include PowerPoint presentations and hands-on learning exercises covering hypothesis development, research proposal development, literature reviews, methods selection, biosafety and biosecurity requirements, human and animal subject use requirements, development of collaborations, analysis and discussion of expected results, budget development, and the grant submission process specific to BAA Thrust Area 6. Metabiota will also develop a post-workshop survey to solicit feedback from participants on the relevance and utility of the workshop. Once all materials have been internally reviewed and finalized Metabiota will submit them to DTRA for PAO approval

Deliverables:

- Deliverable 1: Submission of developed post workshop survey to DTRA CBEP representation
- Deliverable 2: Submission of Technical Writing and Grantsmanship Workshop Materials to DTRA CBEP for PAO approval

Sub-Phase 1.3: Workshop Implementation Preparation (May 9-July 22, 2016)

Metabiota expects a total of no more than (15) previously identified participants will be invited to the Technical Writing and Grantsmanship Workshop including no more than (10) representing(b)(6) team from **EPHI** and no more than (5) representing(b)(6) eam from **NAHDIC**. Immediately upon engagement with identified Ethiopian stakeholders, Metabiota will work collaboratively with team leads representing **EPHI and NAHDIC** to clearly identify workshop participants, dates and a location for the event. Metabiota will inform all workshop participants to come prepared with relevant resources including their own personal Wi-Fi-enabled laptop computer with standard business productivity software. Metabiota will develop and submit a Training Event Plan (TEP) detailing this information to DTRA CBEP no later than 60 days prior to workshop implementation. As all in-country logistical support services relevant to this workshop will be coordinated through CLS, Metabiota expects to submit a CLS form detailing all necessary accommodations for all training participants no later than 45 days prior to workshop implementation. Metabiota additionally expects to send two U.S. based project SMEs to Ethiopia to lead the Technical Writing and Grantsmanship Workshop and will submit a Cable Clearance Request (CCR) and Travel Authorization Request to DTRA CBEP representation no later than 45 days prior to scheduled travel for workshop implementation. Metabiota will also develop a pre-travel risk report and gain internal approval from AEP leadership prior to sending any members of its project team to Ethiopia. Additionally, Metabiota SMEs will coordinate with(b)(6) to familiarize themselves with the participants' existing work and to assign them preparatory tasks leading up to the workshop such as brainstorming possible research ideas.

Phase 2 – Technical Writing and Grantsmanship Workshop Implementation (July 25-29, 2016)

Metabiota will conduct a five-day workshop on specific aspects of technical writing and grantsmanship in order to train and mentor selected representation from **EPHI and NAHDIC**. The workshop will help participants improve their general technical writing and grantsmanship skills and provide specific focus on the grants.gov submission system used for the DTRA Fundamental Research for Combating Weapons of Mass Destruction Broad Agency Announcement (FRCWMD-BAA).

Metabiota will accomplish this by sending 2 technical writing and grantsmanship SMEs to the identified training location within Ethiopia to lead the the 5-day Technical Writing and Grantsmanship Workshop. This workshop will include five days of lectures and team specific working group sessions to cover topics including but not limited to: hypothesis development; research proposal development (including the development of an abstract, white paper, and full proposal); literature reviews; identifying appropriate technical methodologies; biosafety and biosecurity requirements; human subjects and animal care and use approval process and requirements; collaboration development; analysis and discussion of expected results, project budgeting, and the grant submission process relevant to Thrust Area 6 of the FRCWMD-BAA through grants.gov. The workshop will include no more than 15 participants (no more than 10 from **EPHI**, and no more than 5 from **NAHDIC**) and each participant will have access to, and be able to work directly with the SMEs. The PM will be on-site providing logistical and programmatic support to the SMEs throughout the workshop and will ensure effective integration and overall congruency with CLS representation tasked with supporting the workshop. The PM will be responsible for ensuring the administration of the workshop survey and for collecting and aggregating all survey information. The PM will also provide daily training reports to DTRA CBEP representation and will coordinate with the PC, AEP leadership, and DTRA CBEP representation on a daily basis to ensure that any implementation risks are identified and mitigated appropriately. The PC will support the PM in the development and submission of a Training Trip Report (TTR) no later than 5 days after completion of the workshop.

Deliverables:

- Deliverable 1: Submission of participant survey results to DTRA CBEP representation no later than 10 days' post completion of workshop implementation activities.

Phase 3 – BAA Materials Development (Abstract, White Paper and Full Proposal) (August 1- October 14,2016)

Metabiota expects that the project team leaders representing **EPHI and NAHDIC** wi work to develop and revise their abstracts as part of the the Grantsmanship workshop, and also expects workshop to begin collaborating with relevant members of their team towards white paper development during the workshop the the best extent possible. Following the workshop, the **EPHI-led and NAHDIC**-led teams will each submit their abstract to DTRA. The teams will then immediately resume white paper development, regardless of whether or not a white paper has been invited. Each team will designate a lead point-of-contact who will submit the white paper to the SMEs. The SMEs will review the submitted materials and provide specific recommendations for improvement to each POC via phone, email, or Skype. The POCs will be responsible for relaying this information to their team and coordinating the revisions process. Each team will make revisions to the material and the POC will resubmit it to the SMEs for a second review. This process will continue until one of the following occurs: the SMEs deem the white papers are sufficiently well-developed for submission; the end of the project period of performance; or, assuming a white paper has been invited, the white paper submission deadline. Similarly, upon completion of the white papers, the teams will begin full proposal development with review of the technical volumes and budgets by the SMEs.

The project teams will submit the white papers to DTRA independent of SME assistance. Following submission, the project teams will initiate development of full proposals. SMEs will provide guidance and direction to the project POCs and review any draft materials submitted to them. The SMEs will continue to support the project teams in proposal development until the proposal is deemed ready for submission or the end of the Period of Performance is reached.

Deliverables:

- Deliverable 1: Abstract submitted by **EPHI-led and NAHDIC-led** teams, appropriate to Thrust Area 6 of the DTRA FRCWMD-BAA.
- Deliverable 2: White paper (including any requested clarifications and/or revisions) submitted by **EPHI-led and NAHDIC-led** teams appropriate for submission to grants.gov and Thrust Area 6 of the DTRA FRCWMD-BAA, if requested following successful review of the submitted abstract.
- Deliverable 3: Two full proposals (total) developed by **EPHI-led and NAHDIC-led** teams, respectively, appropriate for submission to Thrust Area 6 of the **DTRA** BAA.

Phase 4 – Project Closeout and White Paper Response Assistance (October 17- November 15, 2016)

Subphase 4.1 White Paper Response Assistance (October 17- November 15, 2016)
Following submission of respective white papers, provide final review and post-workshop support to participants as needed. The **EPHI-led and NAHDIC-led** teams may receive comments or requests for clarification from DTRA. If the teams receive this feedback within the project PoP, they will submit requests for assistance to the SMEs. After reviewing the feedback, the SMEs will provide the POCs with specific recommendations for addressing the comments. The POCs will coordinate the revisions to the white papers to address the comments and requests for clarification and submit a new draft to the SMEs. Following review, the SMEs will provide final comments or direction as necessary to the POCs.

Subphase 4.2 Final Report Submission (October 17- November 15, 2016)
Concurrently, and as part of closeout procedures, the Metabiota project team will write a final report detailing all actions taken throughout project implementation, lessons learned, and recommended next steps for submission to DTRA CBEP.

Risk Management.
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
				Cost		
Subject Matter Expert Subcontracting	Due to limited insight into participant profiles and research activities, additional costs and time-delays may occur to identify and coordinate the most appropriate SME coordination, which may impact the ability to conduct this activity in full.	3	3	Medium	Metabiota has preselected SMEs for this effort, and contingent understanding of the participants' work, Metabiota will evaluate the selected SMEs for inclusion. As needed, Metabiota will attempt to reach a basic agreement with SMEs as soon as possible and issue authorization to proceed while subcontracts are being put into place	(b)(4); (b)(6)
Participant Identification and Coordination	Due to Metabiota's limited insight regarding the participants of the Writing and Grantsmanship Workshop, and their respective academic and logistical capacities (i.e. possession of laptops, research tools, previously cited materials, quality of data sources, etc.), it is possible that the quality of improvement for their manuscripts may be hindered.	4	3	Medium-High	Metabiota will ensure that effective coordination and communication with Ethiopian Stakeholders is employed to ensure that a maximal amount of information about the participants, their research, and their respective capacities is garnered before the workshop. This will allow for the controlling of mentioned confounders and a managed increase in efficiency with regard to review and operation.	
Programmatic labor hours	Following guidance from CBEP POC's, the current budget for Metabiota Program Management and Project Coordination hours are extremely low. As a result, and based on previous experience implementing overseas activities, there is significant risk for budget overrun.	5	5	(b)(4); (b)(6)	Metabiota recommends an increase in overall labor hours based on the described tasks and previous performance on similar AEP programmatic work	Low
Technical labor hours	Technical labor hours may be insufficient for the continued mentorship of Ethiopian stakeholders and for the development of workshop materials if they do not exist.	4	5	Medium-High	Metabiota recommends an increase in overall labor hours based on the described tasks and previous performance on similar AEP programmatic work	Low
				Schedule		
Project Coordination	Technical Writing and Grantsmanship Workshop, Ethiopia involves a significant number of stakeholders and participants representing various organizations, putting implementation activities at risk of delay or cancellation.	5	2	Medium	Establish and hold regular calls with all stakeholders and identify multiple possible implementation dates. Identify critical components as early as possible and redirect efforts when it becomes clear that targeted implementation dates will not be achievable.	(b)(4); (b)(6)

(b)(4); (b)(6)

Project Timeline	The current project timeline suggests workshop implementation between the dates of July 25-29. Implementation on this date will require near immediate concensus among project stakeholders to support the submission of a training event plan 60 days prior to implementation.	3	4	Medium-High	Metabiota will seek out and establish communciaiton with Ethiopian stakeholders immediately upon approval of the technical direction, and ensure that consensus on workshop implementation dates are established as expediently as possible.
			Performance/Quality		
Political Instability	Sporadic violence near borders and occasionally in the capital may lead to risks of being unable to safely complete in-country work.	2	5	Medium	Coordinate closely with DTRA and AFRICOM to be aware of any potential risks to performers, and target a location for the workshop well away from risky areas.
Proposal Development	Direction has been given to facilitate the submission of two full proposals developed by EPHI-led and NAHDIC-led teams appropriate for submission to Thrust Area 6 of the DTRA BAA; however, a lack of clarity exists regarding proposed concepts and contributors they may pose a risk to overall submission quality.	3	4	Medium-High	Metabiota will request for all relevant documentation and information from DTRA CBEP immediately upon approval of this technical direction and will work to ensure that concepts and all proposal components are developed to the highest quality possible prior to submission so far as it can.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
0002	LABOR	$[illegible]
0003	MATERIALS	$[illegible]
0004	ODCs	$[illegible]
0005	TRAVEL	$[illegible]
TOTAL		$[illegible]

9c. TD SOLUTION BASIS OF ESTIMATE DESCRIPTION (NOT TO EXCEED [illegible] PAGES)

Period of Performance

The period of performance for this effort is **May 2, 2016 – May 15, 2016**.

Labor

Costs for direct labor to support this activity is required for the following personnel

All phases

Metabiota Program Manager (b)(6) will provide oversight of the planning and execution of all program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As some of our Subject Matter Experts will be independent consultants, the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including independent consultants throughout the span of the project.

The Metabiota PM will oversee the coordination between the Ethiopian stakeholders and the workshop planning team and will ensure the project team captures and keeps in account stakeholder input regarding key information relevant to the planning of the workshop. The PM will manage any logistic concerns that may arise during the course of the workshop, allowing the SMEs to maintain focus the workshop without interruption. The PM will restrict his time expenditure in country to an operational minimum while ensuring congruency in programmatic support.

Metabiota has budgeted a total 98 hours to the Metabiota PM For the activities described above. General programmatic oversight will require at minimum a 5% level of effort over the course of the 11 weeks to support phase 1 activities. During this time, the PM will be required to lead all weekly communications. The PM will also provide oversight to the PC and project SMEs, in an effort that is estimated to require at least 2 hours per week for a total of 22 during the phase 1. Phase 2 will include workshop implementation activities and will require the PM to commit at least a 50% level of effort during a 1 week period to ensure successful workshop implementation and for the provision of programmatic and logistical support to Project SMEs tasked with leading the workshop for a total of 20 hours . Phase 3 will task the PM to continue leading all stakeholder communications and to provide high level support and oversight to the PC and SMEs throughout post workshop activities. The PM will need to commit to a ~ 7.5% level of effort over 13 weeks for a total of 36 hours. Phase 4 will task the PM to continue leading all stakeholder communications and to provide support and oversight to the PC and SMEs throughout submission of response activities and final report development. The PM will lead the development of the final report with support from the PC and SMEs and will need to commit to at least a 10% level of effort over 4 weeks for a total of 12 hours.

Metabiota Project Coordinator (b)(6) will act as Project Coordinator (billed as Research and Data Analyst) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will provide coordination support towards the planning and execution of DTRA CBEP objectives towards the completion of all project goals. The PC will do so by participating in proposal development coordination and by leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The Metabiota PC will be responsible for setting meetings with team members, periodic reporting outreach to all Ethiopian stakeholders, and for recording meeting minutes during all communications. The PC will be responsible for developing all project CDRLs and for working with the PM to ensure their timely submission within the proposed project timeline. The PC will also be responsible for developing and maintaining all living contract documents including schedules, charters, work plans following stakeholder and client meetings.

Metabiota has budgeted a total 116 hours to the Metabiota PC For the activities described above. General programmatic coordination will require at minimum a 10% level of effort over the course of the 11 weeks to support phase 1 activities. During this time, the PC will be required to participate in and record all weekly communications and provide general support to the PM and project SMEs, an effort that is estimated to require at least 4 hours per week for a total of 44 during phase 1. Phase 2 will include workshop implementation activities and will require the PC to remotely support workshop implementation at a 10% level of effort during a 1-week period to ensure successful workshop implementation and transparent reporting to DTRA CBEP representation. Phase 3 will task the PC to continue participating in and recording all stakeholder communications and to provide support PM and SMEs throughout post workshop activities. The PC will need to commit to a ~10% level of effort over 13 weeks for a total of 48 hours. Phase 4 will task the PC to continue participating in and recording all stakeholder communications and to provide support to the PM and SMEs throughout submission response activities and final report development. The PC will need to commit to at least a 10% level of effort over 4 weeks for a total of 12 hours.

Subject Matter Expert I (2 total): The SME Is will be tasked with providing workshop materials, workshop participation, and mentoring of workshop participants following

workshop conclusion. During phase 1 the SMEs will review the workshop materials to make any necessary updates and ensure the materials' relevance to the Ethiopian scientists. It is estimated that the SMEs will need to develop up to 25% original workshop material to supplement existing workshop materials. The hours necessary for this development were estimated using a ratio of 4 hours of development for each hour of contact time

During phase 2 the SMEs will deliver lectures on topics relevant to grant writing and submission, and facilitate small group work based on this content. Phase 3 will commence following workshop completion. During this phase, the SMEs will provide remote support to the POCs for the EPHI and NAHDIC teams in their development of an abstract and white paper suitable for submission to DTRA BAA Thrust Area 6. Upon receipt from the POCs, the SMEs will review the drafts of these documents and provide feedback via telephone, email or skype. During phase 4, following submission of white papers by the EPHI-led and NAHDIC-led teams, the SMEs will provide further assistance to the POCs in responding to any comments or revisions requested by DTRA CBEP.

Metabiota has budgeted a total of 384 hours to the Metabiota SMEs for the activities described above. Project coordination and materials development activities during this phase are estimated to require 46 hours per SME over the course of 15 weeks for a total of 92 hours. The SMEs will be required to participate in regular communication with and provide general support to the PM during phase 1 activities. Phase 2 will include workshop implementation activities and will require the SMEs to be available in country at a 100% level of effort during a 1-week period to ensure successful workshop implementation and transparent reporting to the PM. The SMEs will be required to travel to Ethiopia from the United States for this phase and will spend a 7 full days at a 100% level of effort each. Thus a total of 56 hours per SME will be required for Phase 2. Phase 3 will task the SMEs to continue participating in relevant stakeholder communications and to provide SME support throughout post workshop activities. The SMEs will need to commit no less than 70 hours total over 10 weeks each for a total of 140 hours. Phase 4 will task the SMEs to continue participating in relevant stakeholder communications and to provide support throughout submission response activities. The SMEs will need to commit to at least 5 hours per week over 4 weeks for a total of 20 hours each.

Materials
We have budgeted for an effort based international communications capacity for our project team while they are in country implementing the workshop. The costs budgeted here reflect activating a moderate calling plan to support the efforts of the program manager and subject matter experts.

Other Direct Costs
Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Independent Consulting Agreements
Consulting agreements will be issued to SMEs and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Support is requested for two SMEs to travel to Addis Ababa to implement the writing workshop. The travel budget represents the estimated amount required; travel on the AEP contract is cost reimbursable. Metabiota expects to leverage other requirements for travel in order to have the PM in-country for the grantsmanship workshop at no additional cost.

Our travel budget assumes the workshop will be held on 5 consecutive days. If, through discussion with the Ethiopian stakeholders, and alternative schedule is created or an alternative location is desired, travel costs may be impacted accordingly.

10. FUNDING AUTHORIZED THIS TD REV:

CLIN	COST CODE	COST	POP START	POP END
1002	LABOR	$ 71,092.60		
1003	MATERIALS	$ 1,579.05		
1004	ODCs	$ 647.16

On 5/4/16, 3:13 PM (b)(6)
< Caution-mailto

(b)(6)

There are some comments/clarifications regarding project coordination, material development and labor.

Block 9a:

(1) Under Key Assumption #9 - We agree with the assumption. Recommend explicitly telling the participants to bring their laptop computers to the workshop.

* Understood and appreciated, language has been added and highlighted in yellow within section 9a., under Phase1, Subphase 1.3 of the technical response specifying our approach to informing participants of the need to bring laptop computers to the workshop.

(2) Under Phase 1 - Project Coordination and Workshop Preparation; sub-phase 2.2 - Workshop Materials Development: Please plan accordingly to accommodate DTRA PAO approval process, which takes about 3 weeks. This phase is scheduled for one month and PAO approval might take most of the allotted time. Recommend allowing 3 weeks for PAO approval.

* Metabiota has specified within the technical response that adaptation of training materials will occur during Phase 1, Sub-phase 1.2. This phase is now set to take place between the dates of May 9 – June 10, 2016. Metabiota will internally review all adapted materials before submitting them for PAO approval at the end of this phase to ensure ample time for this process before the scheduled start of the writing workshop now set for implementation between July 25-29 2016. Changes to schedule have been made and highlighted in yellow within section 9a. for phases 1 through 3, and for sub-phases 1.1 through 1.3.

(3) Under Phase 1 - Project Coordination and Workshop Preparation; sub-phase 2.3 - Workshop Implementation Preparation: Recommend reducing the time for this phase. Starting the workshop on August 15, puts development of full proposals at risk. While recognizing that preparation takes time, we believe the timeline can be compressed.

* Our original approach to this phase was constrained by both the Training Event Plan (TEP) CDRL due 60 days prior to training implementation, and the need for PAO approval post materials development (which we estimated to take 60 days at the time of original submission).
* By reducing the time expected for PAO approval (though we have budgeted 6 weeks against the recommended 3 to control for stakeholder coordination (respective to TEP development) and potential materials development challenges) we have been changed workshop implementation (phase 2) within the technical response to the week of July 25-29. This change will give us additional time post workshop to focus effort more consistently on proposal development. All changes to schedule have been highlighted in yellow within the technical response.
* This change does however increase risk to schedule as it requires near immediate consensus by stakeholders

on a training date/location. This risk has been amended and highlighted within the risk matrix.

**Please note: The sub-phases 2.1, 2.2 and 2.3 under Phase 1 labeling could be confusing. Recommend re-labeling to reflect 1.1, 1.2 and 1.3 for completeness and to reduce confusion.

* This has been rectified. All changes highlighted. Apologies for any confusion.

(4) Under Phase 3 - BAA Materials Development (Abstract, White Paper and Full Proposal) - An assumption is made that all workshop participants on EPHI-led and NAHDIC-led teams will be involved in proposal development. For the NAHDIC-led team, the whole team may not be involved in proposal development. We have stipulated to the NAHDIC POC that the leader of the proposal development team must be someone who participated in the workshop, but we understand that not all of the workshop attendees may be available for proposal development. There will be one lead/PI from each organization that will be a main POC on developing grant materials (1 abstract, 1 white paper and 1 full proposal per team).

* This clarification is noted and appreciated. We have updated and highlighted the narrative within phase 3 of the technical response. This change should not cause any increase in project risk. Metabiota understand this team may not be composed solely of workshop participants.

(5) Under Deliverable 3 - The proposal states that they will develop full proposals "if time permits". Two full proposals shall be produced, as listed under deliverables in TD. Recommend, to meet this obligation, try to move workshop closer and/or start developing Full Proposals right after developing White Papers.

* The technical direction has been updated to reflect this deliverable and Metabiota's obligation to develop full proposals. Deliverable 3 under phase 3 has been changed to reflect removal of the phase "if time permits" and is highlighted in yellow
* We have detailed associated risk within the matrix, and as a mitigation strategy, will need to begin proposal development immediately following white paper submission and before receiving feedback from DTRA as a schedule risk mitigation strategy. Metabiota will ensure two full proposals are completed in the period of performance, however based on factors not necessarily within our control, a risk to proposal quality remains and has been amended to the risk matrix.

Block 9c:

(6) Under Labor - In addition to Project Manager (PM), a Project Coordinator (PC) has been proposed to coordinate execution of the TD. Please clarify your approach on ensuring there is no duplication of efforts between PM and PC. It's somewhat unclear on distinguishing between the two roles. The proposed solution calls for 110 hours for PM and 124 hours for PC. Most of these hours are planned for a longer that desired pre-coordination phase (15 weeks).

* In general, Metabiota sees this project as having defined need for contributions from both a Manager and Coordinator. The inclusion of a project coordinator and an increase to the suggested level of effort for the PM will significantly reduce project risks and foster a higher quality of project output, and will provide DRTA CBEP with greater transparency. This delineation of responsibilities has been more clearly outlined and highlighted in yellow within the basis of estimate for both the PM and PC, and the hours within the 'labor breakout' tab have been adjusted accordingly. The overall number of hours has changed with respect to schedule and process, and PM hours will now be limited to 98 (reflective of a planned decrease in length during phase 1, and a planned increase in length, but decrease in LOE for phase 3), while PC hours will now be limited to 116 (reflective of a planned decrease in time during phase 1, and a planned increase in time, for phase 3. PC LOE is requested to remain at 10% throughout all phases).

Please advise if these changes impact your approach and/or hours proposed.

Thanks,

(b)(6)

Team Metabiota Overview

Metabiota, Inc. is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in (b)(countries and offices in San Francisco, Washington, D.C., China, Canada, and Sierra Leone.

Metabiota currently supports a number of Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. Metabiota's mission aligns well with CBEP and the entire Metabiota team is focused on supporting our U.S. Government (USG) Partners in reducing the risk of biological threats worldwide, and employs a collaborative and agile approach to biological risk reduction.

Metabiota has built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGOs) whose respective aims could impact CBEP objectives.

Project Overview

Introduction

Through AEP Technical Direction 006, DTRA CBEP Regional Leadership tasked Metabiota with assisting scientists from the Research Institute of Tropical Medicine (RITM) in the Philippines in executing a preliminary study on paramyxoviruses in support of biosurveillance activities across the Pacific Region. The study will take place over a 16.5-month period and will involve researchers and Subject Matter Experts (SMEs) from Metabiota, as well as key partners from Duke NUS and RITM to identify henipaviruses and potentially related strains circulating in Province Sultan Kudarat to accomplish the following objectives:

1. Determine the natural reservoir and host range for Nipah virus, other paramyxoviruses, and filoviruses in the Philippines
2. Enhance RITM capacity in next generation sequencing and analysis
3. Develop strain specific assays for the viruses detected during screening

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

4. Generate full length genomes in part by using next generation sequencing platforms
5. Phylogenetic analysis of paramyxovirus and filovirus-positive samples
6. Develop long term surveillance capabilities and research engagements involving bats, human, and peridomestic species in the Philippines

Background

Bats are the only flying mammal (of the order Chiroptera), and are one of the most abundant, diverse vertebrates dispersed across all continents except Antarctica. They consist of more than 1100 species across 17 families (Nowak, 1994). Bats face the same threats as other mammals: habitat loss and hunting pressure. Bats host many noteworthy viral pathogens including filoviruses, coronaviruses, and paramyxoviruses, and are implicated as the sources of transferring these viruses to both humans and livestock. Understanding the ecology of reservoir-borne viruses is critical to the prevention of zoonotic epidemics and the global community's ability to implement preventative measures through biosurveillance initiatives that mitigate the threat of these viruses causing disease outbreaks on a pandemic scale.

The diversity of pathogens of potential public health importance discovered in or associated with bats has increased markedly. Yet the significance of these pathogens remains largely unknown. This lack of information on the basic biology of bat diseases in SE Asia is of great concern. The emergence of Ebola Reston virus in the Philippines demonstrates how; Emerging Infectious Diseases (EIDs) have no geographic borders, anthropogenic landscape changes can influence emergence, increased interactions between humans and bats lead to opportunities for transmission, and virus in reservoirs displaying no apparent illness can infect incidental hosts such as livestock and humans.

In addition, the discovery of the Nipah virus in the Philippines leads to many questions pertinent to public health. Nipah virus, a bat borne paramyxovirus that causes high morbidity and mortality to humans and livestock, was detected in 2014 in two villages in the southern islands of the Philippines (Province Sultan Kudarat). Human and horse deaths, in addition to neurologic disease in humans, prompted an investigation. Of the 17 patients studied, 41% had prepared or eaten horsemeat, the most likely transmission route. Surveillance detected neutralizing antibodies to henipaviruses in three patients. Deep sequencing detected a 71bp fragment that was closely related to Nipah virus sequences. Unfortunately, very little is known concerning the involvement of bats in the Philippines in henipavirus maintenance and transmission and requires further investigation. The unique aspects of the Philippines, being an archipelago with over 7,000 islands with exceptional bat biodiversity, severe habitat loss, human encroachment, and continued hunting and consumption of fruit bats, make it an optimal location to perform research into henipavirus and related strains that are circulating in this region.

Understanding

The Metabiota team understands that the U.S. Department of Defense (DoD) initiated CBEP through DTRA in order to: secure and consolidate select agents; enhance Biosafety and Biosecurity (BS&S) standards; and strengthen the USPACOM region's ability to detect,

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

diagnose, survey, and report emerging and re-emerging diseases of international security concern and that CBEP accomplishes these objectives in accordance with the World Health Organization (WHO) International Health Regulations (IHR) and World Organization for Animal Health (OIE). The team further recognizes that to achieve its mission, CBEP works collaboratively with partner nations, USG agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health; promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. Through the AEP Program, and implementation of this project, Metabiota aims to support the CBEP mission of reducing the potential impact of biological threats through enhanced biological surveillance, awareness of biological risks, and knowledge related to biological pathogens.

In support of achieving the CBEP mission, Metabiota intends to administer a high-value study that will support strategic CBEP objectives by increasing regional collaboration on topics critical to biological threat reduction, and enhancing the regional capacity to perform biosurveillance activities that reduce the threat of infectious disease events. The team's on-the-ground experience and expertise make us well positioned to support the implementation of this study in the USPACOM's area of responsibility.

Purpose

The purpose of this study is to provide scientific expertise and research support in conducting preliminary surveillance activities in Sultan Kudarat Province to determine the seroprevalance of henipavirus, and other related strains, in bats, as well as determining what animals may be exposed and the resulting potential threat of cross species transmission and human infection. The study will involve intensively sampling bats, specifically fruit bats, in the villages of Sultan Kudarat Province, where the 2014 Nipah virus outbreak occurred, and analysis of the collected samples and data to understand circulating genotypes and the potential for cross-species transmission. This study will support building host country capacity to detect, prevent and respond to infectious disease threats, as well as building biosurveillance networks and scientific collaborations across the region, further mitigating infectious disease threats and the potential for outbreaks.

To achieve this purpose, CBEP has identified the need for a study to determine the virus community of bat colonies in the Philippines, and if there is a risk of human infection due to cross species transmission and the animal-human interface existing in this region. Identifying the virus community in the colonies of bats is critical to understanding the risk posed in cultural practices involving the hunting and consumption of bats, as well as the treat created through cross species transmission, and the preventive measures that can be implemented to support the reduction of infectious disease threats circulating in this region.

This research will promote global health security and threat reduction by supporting fundamental research to decrease the threat of infectious diseases at the animal-human interface, as well as enhancing regional capability for pathogen research and surveillance. The study

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

provides opportunities for research cooperation between U.S., regional, and host country scientists, contributing to a greater understanding of pathogen infection in humans and infectious disease surveillance. This will serve to enhance the host nation's capacity in disease surveillance and response, while adhering to international codes of security and safety to ultimately provide a mechanism for sustained engagement through ongoing surveillance and research activities.

To accomplish this purpose. DTRA CBEP, through AEP has engaged the Metabiota team and its cadre of Subject Matter Experts (SMEs) to support the study performed by the Research Institute for Tropical Medicine (RITM) in the Philippines in conjunction with Research Collaborators at Duke National University Singapore (NUS.)

Objectives

Through the implementation of the study on bat-borne virus transmission, facilitated by Metabiota, DTRA CBEP will be able to:

- Identify the reservoir and putative host range for Nipah or related viruses in the Philippines;
- Examine the seroprevalance of Nipah or related viruses in bats in the Philippines;
- Understand the risk factors for cross-species transmission, including which animals may be amplifying reservoirs;
- Improve molecular virus diagnostics and epidemiology study systems, to include enhancing RITM capacity in next generation sequencing and analysis;
- Generate full length genomes in part by using next generation sequencing platforms;
- Phylogenetic analysis of paramyxovirus and filovirus-positive samples;
- Develop strain specific assays for the viruses detected during screening;
- Support long-term surveillance in both wildlife and humans surrounding the use of bush meat in the Philippines;
- Support the development and implementation of biosafety and security measures to include best handling and laboratory practices supporting threat reduction;
- Support the development of disease reporting, surveillance and response systems regionally, thereby reducing global threat;
- Support regional scientists through capacity building efforts and scientific collaboration.

Threat Reduction Outcomes

The study will provide a measurable and achievable result in building scientific capacity in the region while promoting a global network of biosurveillance, detection and response, including the early detection of emergent threats.

Advancing research knowledge through the completion of relevant scientific studies is critical to capacity building efforts in host countries and supporting the early detection and response to emerging threats, as well as biosafety and security measures, thus safeguarding the world from infectious disease threats. Without completion of this study, the region is subject to the following identified risks:

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

- Reduced regional biosurveillance capability and characterization of novel infectious disease outbreaks;
- Increased security threats due to practices potentially leading to disease transmission;
- Increased security threats due to improper handling, storage, and transport of pathogens of security concern;
- Decreased communication and scientific engagement among host-country scientists and the global scientific community, which can provide reach back support and capacity building to strengthen the host country's ability to detect and respond to disease threats;
- Reduced risk management capacity.

The completion of the study will mitigate the identified risk factors by:

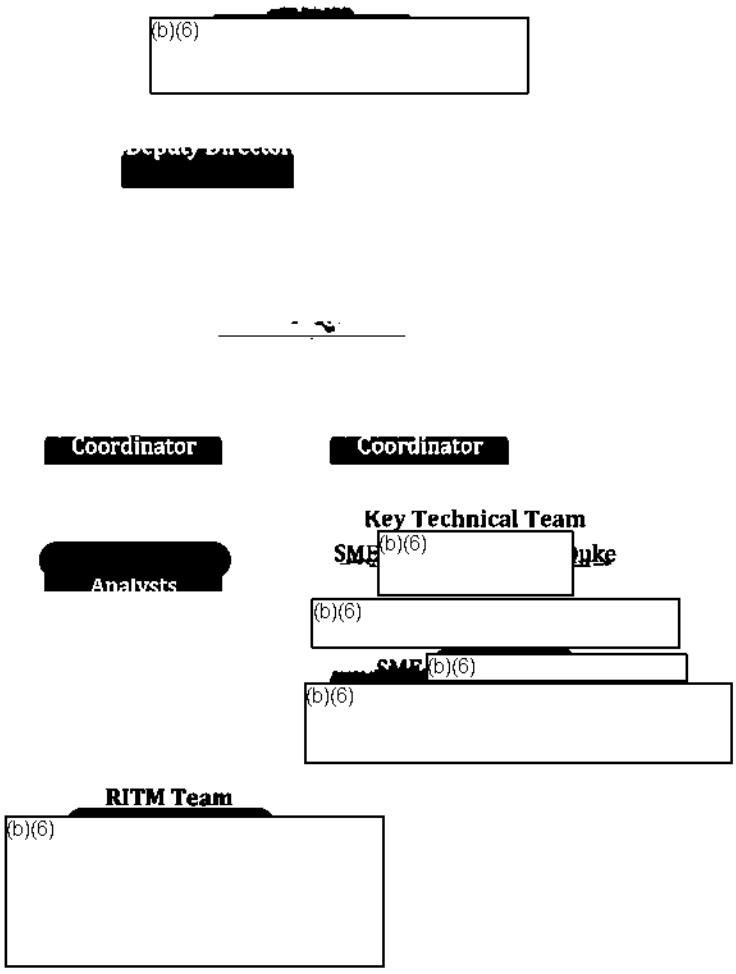
- Improving and enhancing disease detection, reporting and response systems across the region;
- Decreasing security threats due to practices potentially leading to disease transmission;
- Implementing and improving biorisk management best practices and principles based on internationally acceptable guidelines and standards (enhancing the capacity to account for, safeguard, and secure pathogens of concern);
- Increasing biosafety measures in regional biosurveillance activities;
- Increasing scientific capabilities through research collaboration and fostering an environment of scientific partnership.

Risk Management

Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Logistical						
Costs to Exceed NTE	Realistic costs for implementing the study currently exceed NTE price.	4	4	**Med-High**	Metabiota will work to mitigate costs by choosing low-cost travel and procurement options.	Med
Materials Unavailable In Country	Materials and supplies that cannot be procured in country must be bought abroad and shipped through CLS, incurring extra cost, requiring extra lead time, and presenting further logistical challenges.	3	4	**Med-High**	Metabiota will work to purchase all materials/supplies possible in country, and will procure the rest from cost-effective sources to be shipped through CLS, or will have CLS procure and ship items according to approval.	(b)(4); (b)(6)
Team Coordination	Coordinating multiple teams from the US, Singapore, and Philippines presents logistical and cost challenges.	3	3	**Med-High**	Metabiota will work with in-country and international partners to handle logistical challenges as they arise.	

Extension of PoP	Research analysis timeframe will be extended to account for additional review requirements and adjusted timeframe to complete activities.	3	3	**Med-High**	Metabiota will work with collaborators to ensure deliverables are met in the allowable PoP and will coordinate with SMEs to maximize results on the project.	(b)(4); (b)(6)
Engagement of Local PI	The Lead Investigator at RITM is out of country for training activities through July. The RITM research team is concerned with beginning this engagement without him.	4	2	Med	Metabiota will work with DUKE NUS collaborators and scientists at RITM to set up agreements, logistical requirements and pre-coordination to support this activity in July, with a kickoff in August once he returns to the Philippines and can lead this effort.	
Location of Surveillance Sites	Sultan Kudarat Province is located in Southwestern Mindanao, a militarized, conflict zone. This may impede access to identified research sites in the region, as well as may require site relocation or additional training and security measures increasing costs and changing the scope.	4	5	(b)(4); (b)(6)	Local investigators will be used to conduct all sampling activities, as US personnel will not be granted access to sites. Additional training and security measures will be implemented, if necessary to ensure safety is maintained. Alternative sites and access to samples have been identified by the team and will be used, if necessary.	Med
Rainy Season	Manila's rainy season occurs from May - Nov with August being the wettest month often causing flooding and posing additional challenges to logistical implementation of sampling activities.	4	4	**Med-High**	Metabiota will work with RITM to shift sampling activities to drier months if needed and will look at targeting colonies in locations that will be most easily reached and less susceptible to severe rains and flooding.	Med
Field Sampling Logistical Requirements	Necessary shifts in sampling sites, due to weather or security concerns may result in unforeseen needs not identified in the project budget and technical requirements increasing costs.	4	3	**Med-High**	Metabiota will work with regional partners to identify needs up front and will implement best practices to ensure project is managed within scope and budget.	(b)(4); (b)(6)
Travel						
Program Startup Travel	The Philippines is a new area of operation, so travel to the region will be critical for oversight in the new program.	3	3	**Med-High**	Metabiota will work with in-country partners to secure the best rates for travel and logistics.	Med
Short Suspense Travel	Travel will need to begin in a relatively short period of time and several trips will be necessary to ensure study implementation, so this increases cost.	3	3	**Med-High**	Metabiota will start the travel logistics as soon as possible and will seek out the lowest feasible travel costs.	(b)(4); (b)(6)

Management Approach



Introduction

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager and Country Manager as needed to direct the operational and administrative support required, ensuring implementation of the Nipah Research Activity Project. Our Program Manager, [redacted], will oversee study implementation with the support of a project coordinator, travel coordinator, research and data analysts, SMEs and research collaborators, to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the Program Manager, project coordinator, travel coordinator, research and data analyst, and a team of SMEs that will be tasked with specific assignments to support the development and implementation of the study based on their administrative and scientific expertise. Specifically, Metabiota will engage Duke NUS SMEs and RCs to oversee the technical implementation of this effort, and in direct support of the RITM researchers. RITM leadership will provide overall on-the-ground supervision, and will oversee their in-country team of field and laboratory research assistants that will conduct the day-to-day duties of the project. This team of experts will ensure the overall project management and tasks associated with the workshop are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

This material shall not be disclosed outside the U.S Government and shall not be duplicated, used or disclosed in a whole or in part for any purpose other than to evaluate this material. If, however, a contract is awarded to this offer or as a result of- or in connection with- the submission of this material, the U.S Government shall have the right to duplicate, use or disclose the data to the extent provided in the resulting contract. This restriction does not limit the U.S Government's right to use information contained in this material if it is obtained from another source without restriction.

Initiation

Following guidance from CBEP USPACOM leadership, and working collaboratively with SMEs and RCs from Duke NUS, as well as local collaborators from RITM, Metabiota will initiate a project kickoff meeting held at Duke NUS in Singapore with all key collaborators. The kickoff meeting will involve discussions surrounding the objectives, ethical clearance, timeline, deliverables, staff coordination, sample storage, cold chain, field collection, sample screening, and data analysis required to implement this study. Duke NUS researchers will demonstrate their team's standard operating procedures and will provide study specific training for RITM collaborators on sample collection, to include collection of bat excreta, trapping and sampling of bats, and bat necropsy, as well as PCR-sequencing, study methodologies and data analysis. This kickoff meeting and the associated short training will ensure that study protocols are

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

understood and can be implemented along with project review and logistical management of conducting the sampling and analysis throughout the remainder of the project. In addition, Metabiota will complete additional technical documents required by CBEP for study design, BS&S review ensuring biorisks associated with this research are mitigated through identification and implementation of enhanced safety and security measures. Prior to initiating any action, Metabiota's team and CBEP will secure a clear understanding of the objectives and mission of this undertaking, and ensure buy-in from all stakeholders. Following initiation of the study, to include implementation of all contractual requirements, ethical clearance, and appropriate agreements, Metabiota will move into the planning and execution phases of the study.

Planning and design

Completion of this task requires a 16.5-month study, to accommodate the contract PoP, and to maximize research time allowed for this effort, involving routine surveillance of identified bat colonies, and associated sample and data analysis conducted by RITM and Duke NUS. To facilitate this engagement Duke NUS and RITM and MoU will be signed between Duke NUS and RITM to support research collaboration and sample transfer. The surveillance will occur routinely in the Sultan Kudarat Province, of Mindanao, unless safety concerns and weather restrictions prohibit sampling in the area. If that is the case, colonies will be identified and sampled around Manila. RITM has previous experience working on bats and their related viruses and are very familiar with roosting sites where sampling can be conducted, with minimal disturbance to the colonies. In addition, aliquots of previously collected samples from in-country research collaborators working with RITM may be used to support this effort and provide additional data for testing, if field sampling events cannot be implemented as planned. All ethical clearance requirements to include, proper research agreements such as a MoU and MTA, will be implemented prior to any sampling or analysis-taking place.

The study-specific training provided to RITM researchers by Duke-NUS SMEs at the kickoff meeting in Singapore will facilitate the successful execution of the sampling events to include implementation of safe and secure sample collection, sample transport, and sample storage to ensure the highest likelihood of detecting viral RNA following study specific guidelines and protocol requirements. This will build on the CBEP sponsored training events hosted at Duke NUS in May 2015 and AAHL in April 2015, which included sample processing and training in both BSL2+ and BSL4 high containment facilities. Following sample collection over the intended sampling period, samples will be transported, stored and processed at RITM following safe handling practices and maintaining cold chain requirements. All samples will be stored in a virus inactivation buffer (RNALater, RNA Shield, or isogunadine), and extracted nucleic acids will be sent from RITM to Duke NUS for NGS library preparation and screening, following international regulations regarding sample shipments, and transfer of select agents following BS&S procedures. Remaining samples will be stored at RITM future research and enhanced virus characterization.

To accomplish the research goals of the study and due to the duration required to complete all activities, Metabiota intends to hold the kickoff meeting in August, following engagement of

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Duke NUS and RITM to secure study approval and implement the research. This will ensure strong coordination, oversight and implementation of the study in a collaborative framework. Following the kickoff meeting, Metabiota and Duke NUS project personnel will travel to Manila in support of BS&S activities, surveillance initiation, and research integration, ensuring strong regional ties and securing the project management efforts and logistical coordination required on the ground. For procurement and shipping of materials that cannot be purchased in country or by Duke NUS locally to support their efforts, Metabiota will utilize the services of CLS for logistical needs. In addition, CLS will be engaged for all travel requirements both in-country and internationally for those participating in the research activities, to include in-country surveillance as appropriate, and international travel for research collaborators that will be supporting this effort, but not charging time to the project.

Execution

The core project management team will maintain oversight and implementation of the study at all times and will ensure successful execution of the research, tracking implementation to ensure the study stays on schedule to meet the deliverable requirements within the study timeframe. The study will be managed according to the steps required to implement the research and will be course corrected as needed to ensure target end goals are reached. The following tools will be used to guarantee that the project schedule will be maintained:

Project Administration:

1. Weekly team meetings and conference calls will be held to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Team and will include the PM, Project Coordinator, RDA, SMEs and AEP leadership as needed based on the requirements and stage of implementation.
2. Routine calls and communication via email will be held with CBEP regional leadership, in-country collaborators, external SMEs and RCs, and Metabiota to provide routine status updates and ensure study implementation.

Project Reporting:

1. Weekly status reports will be provided by the PM to senior MB leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction as needed, to ensure that project goals are met.

Monitoring and Controlling

1. Routine risk assessment will be performed internally among the MB project management team to guarantee that the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with CBEP regional leadership to ensure that the project remains on track and is implemented according to existing standards.
3. Routine communication, to include monthly Skype meetings with the project teams and monthly reporting requirements implemented with teams in Singapore and the Philippines, will be maintained to ensure that the study is progressing and to

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

troubleshoot any challenges faced in the field. Metabiota will maintain oversight and coordination of the study to ensure Duke NUS and RITM are maintaining technical, administrative and fiscal requirements to ensure successful execution of the research project.

Completion

Maintaining a focused project schedule with routine meetings and communication with CBEP regional leadership and partners, and allowing for continued coordination while maintaining targeted objectives, Metabiota will complete the research activity within the 16.5-month requirement. Dedicating experienced technical personnel to this project, as well as maintaining programmatic oversight will ensure that we meet the project objectives by May 2016. Metabiota believes that the experience and management it will bring to this project, in collaboration with regional SMEs, RCs, and CBEP, will guarantee success.

Technical Approach

Introduction

Metabiota will take every action possible to ensure the study can be completed in the assigned timeframe. We intend to implement the proposed research activities according to all necessary CBEP requirements by developing a detailed technical proposal (in historical CBEP terminology, the "Form A" plus associated documents like the Protocol Risk Assessment Tool, or PRAT) for review by the DTRA CBEP Science team prior to initiation of field activities. As this research does not propose procedures on animal subjects that inflict harm, Metabiota and partners will pursue an IACUC exemption status in accordance with US, Philippine and Singaporean regulations to ensure compliance protocols are met prior to implementation of research.

The content of the following technical proposal outlines the proposed activities which will be documented more fully in the finalized Form A. Metabiota welcomes all comments, questions, and requests for clarifications from DTRA CBEP and associated reviewers In addition, Metabiota will implement the proposed research activities according to CBEP requirements, to include development of a Form A research and work plan, to address additional research requirements, and ensuring the study can be implemented in the assigned timeframe, supporting solid scientific engagement within the region and resulting in risk mitigation and scientific collaboration to further develop and enhancement of biosafety and biosurveillance efforts on an international plane as we work to finalize project documentation.

This will be facilitated through the study implementation as follows: The identified colonies, specifically those of fruit bats, at either roosting or foraging sites, will be intensively sampled for the presence of known select agents that are naturally harbored in bats and that have caused mortality in humans. Previous studies monitoring bat colonies for virus shedding in their urine found there were distinct fluctuations of virus shedding. These viruses are of public health importance and our goal is to identify the natural reservoirs for these viruses, their distribution

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

and understand the genetic diversity. Urine and fecal samples will be collected from underneath bat roosts using the required catchment supplies, and PPE for safe handling. Samples will be placed into lysis buffer/inactivation buffer, and processed in certified BSC II safety cabinets. Samples will be screened with PCR family-specific primers using next generation sequencing approaches to capture the maximum divergent virus lineages. This will promote knowledge on which viruses are circulating in the bats and when the peak shedding period is.

Field:
Colonies of fruit bats in the genus Pteropus or related pteropodids will be identified and urine and feces will be collected from them either bi-weekly or monthly. Plastic sheets will be placed underneath these colonies in the morning and individual urine samples and a pooled urine sample will be collected. Feces will also be collected. All samples will be stored in virus inactivation buffer (RNA Later, RNA Shield, Qiagen lysis buffer) and placed into a cold chain until brought back to RITM for storage at -80C and processing in BSC II safety cabinets. A maximum of fifty individual urine and fecal samples will be collected each trip, in addition to a pooled urine sample. Collectors will wear personal protective equipment, including N-95 masks, Tyvek suits, eye protection and gloves. Samples will be labeled with a unique identifier including the date and site of collection.

Laboratory:
Samples will be given a unique identification number and this will be tagged to the sample type and organism type so that there will be shared identification markers between data categories. This will enable researchers to maintain sample fidelity and ensure a known location for each original sample, extracted nucleic acid, and PCR product. All original samples will be kept in a secured, locked freezer, and sample information will only be made available to the project team members following appropriate in-country and ethical guidelines for sample storage and analysis. Biosafety and biosecurity will be maintained through the rigorous PPE used during collection, the disposal of the PPE, the placement of samples into lysis buffer/inactivation buffer, the processing of samples in certified BSC II cabinets, and the storage in locked freezers with access and location given only to certified staff.

RNA and DNA will be extracted from collected material (urine or feces) or from tissues (spleen, liver, lungs, and intestines) collected opportunistically from dead bats. Nucleic acid will be extracted using a QIAamp Viral RNA, QIAamp DNA Mini Kit, or an AllPrep DNA/RNA Mini Kit (Qiagen). These extractions will be enriched with either pathogen-specific biotinylated probes, sera, or by differential centrifugal spins. RNA will be chemically fractionated and double-stranded DNA will be synthesized. DNA will be pulled down by AMPure Agencourt beads and the DNA libraries will be constructed using a Clontech library construction kit or an Illumina Nextera or TruSeq sample preparation kit. Adaptors will be added to the libraries so samples can be multiplexed on a single run. Libraries will be analyzed for quality control purposes and these will be run on an Illumina MiSeq or Hiseq at the Duke-NUS Genome Science Center. Sequence contigs will be aligned to host genomes or the closest related

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

vertebrate full genome and the matched sequences will be removed. Duke NUS researchers will de novo assemble the remaining sequences and use the BLAST or DIAMOND or KRAKEN algorithm to identify any virus elements. This NGS approach will aid in developing new specific primers for identified and newly discovered pathogens and improve the screening of samples using PCR and/or real time PCR as indicated above. In addition, to investigate the evolutionary genomics of selected pathogens of interest, as identified from the qPCR and serological surveys, the Duke NUS team will amplify multiple genes by Sanger sequencing using standard protocols.

Evolutionary dynamics analysis of pathogens:
Duke NUS will use a variety of analyses to determine the evolutionary dynamics of selected pathogens. Large-scale phylogenetic analyses will be conducted using maximum likelihood as implemented in RaxML, PhyML, or other programs as deemed appropriate. Phylogenetic reconstructions of genetic data will also be conducted with time-stamped sequence data using a relaxed-clock Bayesian Markov-chain Monte Carlo method as implemented in BEAST. This method allows for variable nucleotide substitution rates among lineages and also incorporates phylogenetic uncertainty by sampling phylogenies and parameter estimates in proportion to their posterior probability. For all analyses, an uncorrelated lognormal relaxed molecular clock will be used to accommodate variation in molecular evolutionary rate among lineages, the SRD06 codon position model, with a different rate of nucleotide substitution for the first plus second versus the third codon position, and the HKY85 substitution model then applied to these codon divisions. These particular parameters have proven generally robust in analysis of viral sequence data; however, their suitability will be assessed throughout the course of the project. The analyses will be conducted with a time-aware linear Bayesian skyride coalescent tree prior over the unknown tree space, with relatively uninformative priors on all model parameters. At least three independent analyses of 50-million generations will be performed and these analyses combined after the removal of an appropriate burn-in (10–20% of the samples in most cases), with 5,000 generations sampled from each run for a total of 15,000 trees and parameter estimates from which mean substitution rates, mean TMRCAs, Maximum Clade Credibility phylogenetic trees, and relative genetic diversity over time will be derived.

In addition, co-estimation of the temporal phylogeny (described above) will be conducted and ancestral state reconstruction of tip associated phenotypic traits, such as habitat, host species, and the age and sex of the animal will be completed. These traits are mapped to the phylogeny during the Bayesian tree search that allows for a statistical comparison of phenotype and genotype. This will allow Duke NUS researchers to test, for example, hypotheses about the distribution of of pathogens in different host species and habitats. If these analyses demonstrate significant asscoiation between observed penotypic trait and inferred evolutionary history, such as pathogens that were isolated from different subsets of the animal populations, such as a species restriction, teams may be able to identify potential molecular markers distinguishing these groups.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Selection analysis will also be performed using DataMonkey and HYPHY. As an example, the single likelihood ancestor counting (SLAC) method, a codon-based approach as implemented in HYPHY will be used with a critical *p*-value of 0.05. Based on the most appropriate model of nucleotide substitution and a given tree topology, the SLAC method calculates a global dN/dS rate ratio (with 95% confidence intervals) and tests selection of variable codon sites based on the inference of the ancestral sequence. To determine if species selection was acting differentially on pathogens, dN/dS ratio estimates (with confidence intervals) will be calculated independently for each lineage.

This approach is geared towards achieving the following objectives:

- Determination of the natural reservoir and host range for Nipah virus in the Philippines;
- Serology of Nipah virus in bats;
- Description of the risk factors for cross species transmission and which animals may act as amplifying reservoirs to infect humans;

Implementation of this approach will result in:

- The determination of the specific criteria for molecular study for paramyxoviruses, specifically Nipah and Hendra virus utilizing isolates identification with CSIRO-validated methods and protocols for PCR;
- Phylogenetic analysis of paramyxoviruses (Nipah virus) and prevalent genotypes and relatedness to pathogenic variants will be determined;
- Control measures and biorisk assessment determination for the human activities regarding bat hunting and consumption of livestock that died from aberrant causes;
- Sample collection maintained at the RITM in Manila for future research and enhanced virus characterization supporting long-term research engagement and enhanced capacity building;
- Findings from the study will be used to produce policies that will minimize the exposure of bat borne viruses to livestock and how to minimize human exposure to bat excreta and urine;
- Enhanced biosurveillance capabilities to include training of researchers in the screening of bat diagnostic samples for virus surveillance, prevention and response;
- Regional collaboration and research engagement to include shipment of collected samples to Duke NUS for sequencing and analysis.

Communications Protocols

Metabiota will maintain open communications with international collaborators necessary for implementing the study, to include monthly project calls and routine email communication with the teams implementing and coordinating research activities. In addition, Metabiota will maintain routine communication with CBEP regional leadership to ensure they have full visibility on the project, status and process of execution.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Phases of Technical Approach

Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project and to provide overall feedback and reporting on the project route to success. Metabiota will ensure that all CBEP requirements are met in implementing the research project, to include additional BS&S safety review and implemented measures, and a site assessment of partner laboratories, as required. The following phases are required for this project:

Phase 1*: Refine the Technical Proposal to include development of a Form A, as required by CBEP and developing a work plan to address BS&S requirements.

Objective and Process: Meet with all project stakeholders to develop a Form A, as required, which will expand upon objectives and overarching technical approach described above. The technical work plan will also outline all necessary BS&S, as well as biorisk safeguards related to project implementation.

Deliverable: Project Form A, SOP Manual, finalized PRAT

*Phase 1 will be implemented following guidelines received from CBEP based on review and submission of this proposal and PRAT.

Phase 2: Hold a project kickoff meeting in Singapore with research and administrative teams.

Objective and Process: Metabiota will coordinate with Duke NUS and RITM to schedule and facilitate a project kickoff meeting outlining the objectives of the study, logistical coordination required toward implementation, review of protocols and on-site training for RITM researchers in preparation for sampling and implementation following study specific guidelines and to further mitigate risk posed during sampling and analysis.

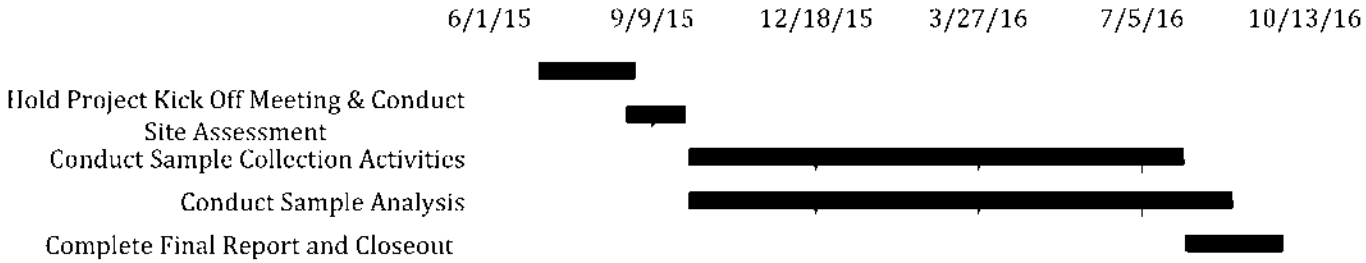
Deliverable: Initiation of research activities, study-specific training on protocols and safe handling, and sampling techniques required for project execution.

Phase 3: Implement sampling of bat colonies at identified sites.

Objective and Process: Metabiota will work with Duke NUS and RITM to identify appropriate sites, and collect bat samples following study-specific and safety protocols. Samples will be collected by a team of 4 local ecologists and will be overseen by Duke NUS-trained researchers at RITM. All samples will be transported back to RITM for sample processing and analysis following safe handling and proper cold chain methods of transport.

Deliverable: Collected samples from bats will be transported back to RITM for further processing.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.



Phase 4: Sample screening and analysis.

Objective and Process: Screen samples using family-specific PCR primers at RITM, and ship aliquots to Duke NUS for deep sequencing approaches to capture the maximum divergent virus lineages to identify the virus strains circulating in the bats and possibilities for cross species and human infection.

Deliverable: Final report showing findings from the study that can be used to produce policies that will minimize the exposure of bat-borne viruses to livestock, as well as, during the collection and processing of bat catches as a food source, further reducing infectious disease threats.

To accomplish the above phases, Metabiota will work with Duke NUS and RITM to initiate and implement the 16.5-month research activity resulting in increased biosurveillance and security measures and a greater scientific understanding of the ecology of reservoir-borne viruses and their transmission to prevent zoonotic epidemics. This effort will support the global community's ability to implement preventative measures through biosurveillance, detection and response initiatives that mitigate the threat of these viruses causing disease outbreaks on a pandemic scale.

Timeline

Metabiota Key Personnel

(b)(6) Deputy Director

Mr (b)(6) is the Deputy Director of the Academic Engagement Partnership (AEP) Program and an Internationally Certified Emergency Manager (CEM®) with 14 years of experience leading, managing, and consulting on the full spectrum of Counter Weapons of Mass Destruction (CWMD) operations and Chemical/Biological Defense programs, as well as research and development in support of joint task forces, special operations forces, other government agencies, and the Department of Defense on the strategic, operations, and tactical level. (b)(6) is a driven leader with a proven track record of building value with partners through the identification of capability gaps, and the development and validation of effective solutions to the unique challenges faced when dealing with Chemical, Biological, Radiological, Nuclear, and Explosive (CBRNE) threats. In addition, he is well versed at risk analysis and management, strategic planning, policy analysis and political engagement.

(b)(6) rogram Manager

Ms. (b)(6) is the Southeast Asia and Middle East Regional Program Manager of the Academic Engagement Partnership (AEP) Program with over eight years experience as a global health project/program manager, with a focus in SE Asia regional activities, having lived and worked in Cambodia for four years supporting DoD efforts in the region. Since joining Metabiota in 2010, she has managed DTRA CBEP engagements in West and Central Africa, to include Ebola response efforts, as well as spending three years as the Program Manager on projects funded by USAID, AFHSC GEIS, BEP, NIH, USAMRIID, and HJF spanning all regions of Metabiota engagement.

(b)(6) Research and Data Analyst

(b)(6) joined Metabiota in May after completing her MPA in International Management. She has five years experience working in international development, ranging in scope from a macro-level international development bank to micro-level grass roots development work. She worked for two and a half years in rural Mozambique doing public health project management with the US Peace Corps, local community health clinics, and international donors.

(b)(6) Subject Matter Expert

Ms. (b)(6) joined Metabiota in March, and will be engaged as a Subject Matter Expert for this effort supporting programmatic and logistical requirements. She joins the team following completion of an MBA with experience in project controls, coordination, strong writing and editing skills and will bring a business approach to the project, keeping track of all deliverables, scheduling, and facilitating coordination with both internal and external stakeholders. In addition to her business expertise, (b)(6) worked as a Data Technician and Interviewer for NIH/CDC sponsored studies, while completing her undergraduate work at Duke.

(b)(6) DVM, MPH - Subject Matter Expert

(b)(6) will join the project as a technical lead for BS&S and protocol review. He recently joined Metabiota from the CDC where he was assigned to the Outbreak Response and Prevention Branch (ORPB) as an Epidemic Intelligence Service Officer. He was the lead epidemiologist responsible for investigating multi-state foodborne, waterborne, and zoonotic enteric disease. He was also the Science Lead for the CDC Emergency Operations Center (EOC) team responsible for developing Ebola surveillance, preparedness and response protocols and training programs for unaffected African countries. (b)(6) previously worked for the Central Intelligence Agency as an Operations Officer in the National Clandestine Service.

(b)(6), Ph.D. – Subject Matter Expert

(b)(6) received his BS in Entomology and Zoology from the University of Wisconsin at Madison and his PhD in Parasitology with a focus on vector borne infectious diseases from Department of Tropical Medicine at Tulane University. He was the laboratory manager for a large mosquito control company and his doctoral research focused on the transmission cycles of arboviruses between birds and mosquitoes, especially regarding the relative contribution of these individuals towards viral amplification and dampening. As a Senior Research Fellow at Duke-NUS, his current work focuses on the ecology and evolution of novel and reemerging infectious diseases in different animal populations in Singapore. His aim is to understand how ecological and climatological variables impact the presence or absence of host, ectoparasites, and parasites in different habitats and if there is exchange or isolation of genes. His primary interest is on the viral ecology in the bats of Singapore. He also is the insectary manager and works on arbovirus dynamics in mosquitoes.

(b)(6) Ph.D. – Research Collaborator

(b)(6) s primary training was in ecology and evolution at The University of Melbourne. He obtained his PhD at The University of Hong Kong in 2003, where he also undertook his post-doctoral training in the Department of Microbiology (b)(6) is an authority on the evolutionary aspects of influenza virus biology, especially at the human-animal interface; he has provided seminal studies on H5N1 viruses as well as the pandemic viruses of 1918, 1957, 1968 and 2009. In 2007 (b)(6) was awarded a 7-year Career Development Award to continue his work on influenza as part of the NIAID/NIH Centers of Excellence for Influenza Research and Surveillance. His research in the Laboratory of Virus Evolution integrates ideas from a number of different fields including evolutionary genetics, virology, ecology, and infectious disease epidemiology. His research is directed at efforts to better understand viral disease ecosystems in Asia, specifically the animal-human interface, and to support rational implementation of disease control and intervention strategies. He conducts human and animal disease surveillance, isolates and characterizes pathogens (genetic and phenotypic), and generates hypotheses that to test in the lab. He is primarily interested in the roles played by mutation, natural selection, recombination/reassortment and host immune response on virus diversity within an individual, during transmission within a population and during inter-species transmission between hosts.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Cost Management

The Metabiota team and all partners will maintain an acute focus on cost management to ensure that the study is delivered at a reasonable cost to the Government. Our team will provide full oversight of Duke NUS and RITM to ensure accurate and responsive financial reporting and will facilitate cost savings to the Government wherever possible. Metabiota will follow all procurement and travel regulations, ensuring the best price is secured while maintaining product integrity.

Budget Narrative

Period of Performance

The Period of Performance for this effort is June 1, 2015 to September 30, 2016.

Labor

Costs for direct labor to support this activity is required for the following personnel:

Metabiota Program Manager (b)(6), to oversee and execute the project to include management of deliverables, logistics, management of project personnel, tracking of project requirements, and implementation.

Metabiota Subject Matter Expert (SME), (b)(6), to provide overall expertise in project coordination in direct support of the program manager, to include tracking of deliverables, project schedules, sub-contracted SMEs, and local collaborators facilitating execution of the research project. She will assist in coordination of the research project until an identified SME can be hired to support coordination of this effort through the duration of the project at .5 FTE. (b)(6) will provide the necessary support to ensure project kickoff and execution and a smooth transition with the new hire to facilitate this engagement. Once they are onboard she will maintain visibility across the program and provide support at a lower LOE.

Metabiota Subject Matter Expert (SME (b)(6) will be engaged to provide expertise in BS&S review, protocol review, and scientific collaboration in support of technical execution of the project providing general oversight and engagement with collaborating research partners building local capacity and ensuring scientific integrity across the project.

Metabiota Research and Data Analysts, (b)(6) will be engaged to provide administrative, scientific and technical support to the project, integrating with both Duke NUS and RITM researchers to ensure scientific rigor and project support to facilitate this engagement is maintained throughout the duration of the study.

Duke NUS Research and Data Analyst will be engaged to support the laboratory testing and bat trapping in conjunction with the RITM team in supporting this research. This individual will

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

assist in training RITM field teams, trapping bats, field collection and processing of samples and setting up diagnostic assays. They will perform basic laboratory techniques to include nucleic acid extraction, PCR, and basic sequence analysis.

RITM Supervisor, (b)(6) will maintain oversight of all implemented activities performed by RITM as the most senior researcher for this engagement. He will participate in project management and scientific implementation requirements and activities in conjunction with Metabiota personnel and Duke NUS RCs, to include facilitating in-country agreements and ethical approvals.

RITM Researchers, will provide project oversight and will participate in the collection of bat samples in conjunction with a team of local ecologists, transport the samples to RITM, and process and screen the samples for evidence of paramyxoviruses. In addition, they will prepare the laboratory and field reports and will process all data and analysis with support from senior researchers working on this project.

Additional costs for direct labor supporting the Deputy Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

In addition, labor costs are not being requested for RCs from Duke NUS, who will be providing research collaboration to support implementation of the research project including oversight of sampling, analysis, and data management.

Materials

Materials and supplies are required to support the implementation of research activities for this project. Materials include bat trapping equipment, field supplies for sample dissection and collection, and laboratory materials to include extraction kits, PCR reagents, Elisa plates, and sequencing costs required for technical implementation. CLS will procure and ship all identified supplies that will not be purchased in country, directly by Metabiota, or Duke NUS to support laboratory and field training operations at the laboratory in Singapore.

Publication costs are requested to support the submission of abstracts and other publications generated from this research activity. All documents will be pre-approved by the PAO.

Communication costs and video conferencing are requested to support routine communication with project personnel based internationally, as well as during international travel to India and Singapore in support of project implementation.

Internet and cloud-based document management costs are requested to support routine communications and management of project files in support of this engagement.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

RITM will provide research services to implement this study. Research services will include trapping, sample collection, transport and analysis at RITM, Manila.

RITM will provide ecology services to support bat trapping, handling and sampling. Services will be provided for a six-month period during which sample collection will be ongoing.

Other Direct Costs

Per contract guidelines Defense Base Act (DBA) insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for Duke NUS and RITM personnel for the period of performance for this engagement. In addition, DBA insurance will be secured for Metabiota personnel traveling to Singapore and the Philippines in support of this activity.

SOS Insurance is required for Metabiota personnel traveling to Singapore and Philippines to support this research activity, ensuring they are covered for emergency and evacuation services if necessary.

Subcontracts

A Subcontract will be issued to Duke NUS and RITM to support their labor requirements on this engagement, as well as in-country materials, required for support of this project. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested for Metabiota and RITM personnel to travel to Singapore to conduct the project kickoff meeting with Duke NUS at the start of this engagement to support protocol review, logistical requirements, contract implementation, project-specific training, ensuring the study is outlined and established with all teams prior to initiation of sampling and research activities.

Travel is also requested to support Metabiota and Duke NUS personnel to travel to Manila to support project implementation with RITM researchers to include laboratory and field oversight during the first events, with follow on by the Duke NUS researcher to ensure the study is moving forward smoothly and according to protocol. Travel support for Duke NUS personnel not requesting labor costs, will be covered by CLS. In addition, travel is required for RITM researchers to travel in country to implement sampling activities at the surveillance sites. This travel will be covered by CLS.

Travel is requested for (b)(6) to travel from California to DC in support of overall program management and meetings with AEP and CBEP regional leadership to effectively manage the research activity through in-person meetings and coordinated efforts.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Conclusion

The diversity of pathogens of potential public health importance discovered in or associated with bats has increased markedly. Yet the significance of these pathogens remains largely unknown. This lack of information on the basic biology of bat diseases in SE Asia is of great concern. The emergence of Ebola Reston virus in the Philippines demonstrates how; EIDs have no geographic borders, anthropogenic landscape changes can influence emergence, increased interactions between humans and bats lead to opportunities for transmission, and virus in reservoirs displaying no apparent illness can infect incidental hosts such as livestock and humans. The detection of Nipah virus, during the 2014 outbreak, shows the need for increased biosurveillance, detection and response activities to support, address and prevent this potential emerging disease threat. and how critical this research is to building local capacity and regional scientific engagement to support risk mitigation through greater understanding of the disease landscape of the region.

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP PACOM in the implementation of the study. Metabiota will ensure, through strong project management and risk mitigation, that the research will be executed in an efficient and timely manner. delivering a top quality study designed to support enhanced biosurveillance and biosafety efforts in the region.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government. as per the statement found on the cover page.

METABIOTA

June 19, 2015,

Dr. (b)(6) Contracting Officers Representative J3CTB
Defense Threat Reduction Agency (DTRA)
8725 John J Kingman Road, #6201

RE: HDTRA1-14-C-0104 Technical Direction for Nipah Research Activity Project (RAP)

Dear Dr (b)(6)

Metabiota, Inc. (Metabiota) is pleased to present the attached proposal in response to the above referenced Letter of Technical sent by DTRA on June 3, 2015.

Metabiota intends to engage Duke NUS and The Regional Institute of Tropical Medicine as subcontractors to implement this effort.

For the effort described, Metabiota estimates the Rou Order of Magnitude (ROM) to be **$874,846** for a Period of Performance of June 01, 2015 to September 30, 2016. The detailed budget is included. This proposal remains valid until September 30, 2015.

Please feel free to contact (b)(6) with questions or concerns at (b)(6)

Sincerely,

(b)(6)

Contracts Manager

Metabiota's Technical and Cost Proposal

"DTRA/CBEP Implementation of Sample Collection and Diagnostics on Middle East Respiratory Syndrome (MERS-CoV) in Camels and Bats in Kazakhstan"

Executive Summary

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) team responsible for the United States Central Command (USCENTCOM) is tasked with a mission of scientific study and experimentation directed toward advancing or increasing knowledge and understanding of worldwide basic research standards to enhance capabilities and mitigate threats. In support of this effort, the CBEP USCENTCOM team has identified the requirement for a two-phased training event supporting the safe collection and analysis of Middle East Respiratory Syndrome (MERS-CoV) in Camels and Bats in Kazakhstan. This engagement will support the development and enhancement of surveillance programs throughout Kazakhstan, aimed at promoting biosafety and security.

The Metabiota team brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact CBEP objectives.

Metabiota has executed scientific objectives on a number of Department of Defense contracts, and understands the Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) mission is to safeguard the United States and its allies from weapons of mass destruction (WMD) including chemical, biological, radiological, nuclear, and high-yield explosives (CBRNE) by providing capabilities to reduce, eliminate, and counter the WMD threat and mitigate its effects. The Company recognizes that DTRA's Cooperative Threat Reduction (CTR) Program is a critical component of the U.S. Government's (USG) approach to threat reduction, which promotes collaboration with international and non-governmental partners in order to advance regional engagement and multilateral cooperation while developing locally appropriate, sustainable programs. Through the Academic Engagement Partnership (AEP) Program, Metabiota aims to support CTRs CBEP mission of reducing the potential impact of biological threats through enhanced biological safety and security, awareness of biological risks, and knowledge related to biological pathogens.

Through the development of coherent training methodoogies that are driven by on-the-ground experience and decades of expertise, as well as follow on engagements and deliverables, Metabiota is well positioned to support training activities and scientific engagement in the USCENTCOM's region of responsibility.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Background

The US Department of Defense (DoD) initiated the CBEP through the DoD DTRA in order to: secure and consolidate select agents; enhance Biosafety and Biosecurity (BS&S) standards; and strengthen the USCENTCOM region's ability to detect, diagnose, surveil, and report emerging and re-emerging diseases of international security concern. CBEP accomplishes these objectives in accordance with the World Health Organization (WHO) International Health Regulations (IHR) and World Health Organization for Animal Health Guidelines (OIE). To achieve its mission, CBEP works collaboratively with partner nations, U.S. Government agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health, promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner.

Strategic CBEP Objectives

Through support for the CTR mission, as well as U.S. priorities for countering biological threats and promoting global health security, including One-Health, CBEP works with partner countries to:

- Utilize minimal facilities to store stocks of dangerous pathogens;
- Employ biorisk management best practices and principles based on internationally acceptable guidelines and standards (enhance capacity to account for, safeguard, and secure pathogens of concern);
- Engage in cooperative research with host scientists and the international science community;
- Conduct effective disease surveillance, detection, reporting, and response to rapidly diagnose bioterrorism and outbreaks; and
- Comply with WHO IHR and OIE reporting guidelines.

Purpose

The purpose of this event is to provide sample collection and diagnostics training to 34 participants from across various scientific institutes and ministrial bodies in Kazakstan, to develop and enhance disease detection, surveillance and response capacity within the country while faciliting cooperative research and scientific engagement in support of CBEP's mission.

To achieve this purpose, CBEP has identified the need for two, six-day training courses hosted in Almaty, Kazakhstan primarily following and FAO animal manual, "Investigating the role of bats in emerging zoonoses: Balancing ecology, conservation, and public health", adapted to capture other hosts, and demonstrating field surveillance and BSL-2 laboratory approaches where participants will receive hands-on experience at handling bats and camels, and taking samples. Using a train-the-trainer approach, this engagement will promote: reducing biological

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

threats, engaging scientists through cooperative pursuits, and enhancing host-nation capacity in disease surveillance and response, while adhering to international codes of security and safety to ultimately provide a mechanism for sustained engagement.

To accomplish this purpose, DTRA CBEP, through the Academic Engagement Partnership Program (AEP) will engage Metabiota Inc. and it's cadre of Qualified Trainers (QTs) and Subject Matter Experts (SMEs) to implement the sample collection and diagnostics training event in Kazakhstan.

Objectives

Through the implementation of the sample collection and diagnostics training on Middle East Respiratory Syndrome (MERS-CoV) in camels and bats in Kazakhstan facilitated by Metabiota Inc., DTRA CBEP will be able to:

- Develop and enhance disease surveillance systems targeting pathogens of security concern and building regional detection and response capabilities.
- Facilitate safe sample collection and handling practices supporting the implementation of international standards of biosafety and security.
- Support public health capacity building in the region utilizing a train-the-trainer model and fostering scientific research and collaboration through the development and implementation of basic research activities.

Outcome

The training will provide a measurable and achievable result in building pathogen surveillance programs in Kazakhstan, while promoting a global network of research collaborations, and developing a sustainable infrstructure for advancing scientifc research, including the early detection of emergent threats.

Threat Reduction

Training engagements are critical to capacity building efforts in host countries and supporting the early detection and response to emerging threats, thus safeguarding the world from infectious disease threats. Without completion of the training engagement, the region is subject to the following identified risks:

- Incomplete country and regional coverage of disease detection, reporting and response systems
- Increased security threats due to improper handling of pathogens of security concern
- Limited understanding of pathogens of concern circulating in the region

The completion of the training will mitigate the identified risk factors by:

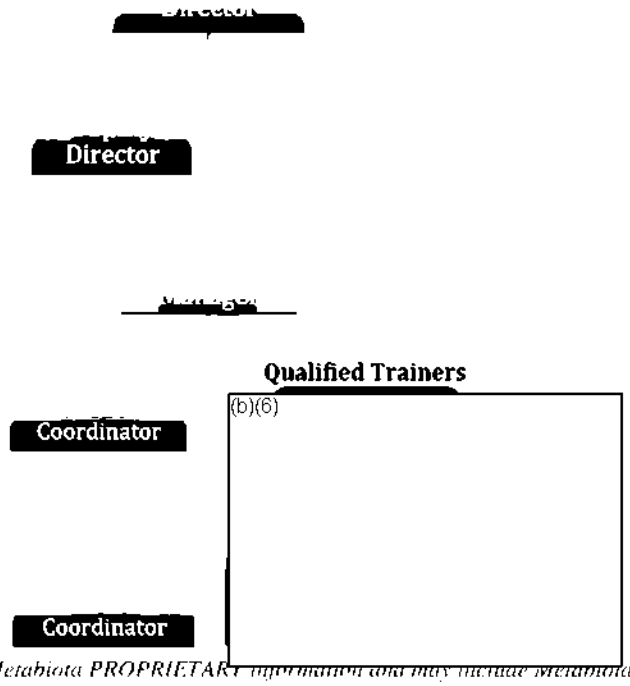
The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

- Improve and enhance disease detection, reporting and response systems across the country
- Implement and improve biorisk management best practices and principles based on internationally acceptable guidelines and standards (enhancing the capacity to account for, safeguard, and secure pathogens of concern)
- Provide safe handling techniques during collection and analysis of samples to include proper handling, transport, and storage of samples
- Increasing scientific capabilities through research collaboration and fostering an environment of scientific partnership

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Risk Management

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
				Cost		
Technical Direction NTE Ceiling	The current budget with travel management procurement and execution may exceed the ceiling for the technical direction	5	3	(b)(4); (b)(6)	Metabiota will monitor costs and work diligently to seek out the lowest cost possible for procurement and travel as well as mitigate extended labor hours during events. CLS will be used to support logistics, further limiting Metabiota costs	Med-High
Material Procurement	Short suspense for the acquisition, extended customs clearance times, and limited availability of supplies in country may increase costs	5	5		Engage a local organization to support all in country procurement needs & expediting services if authorized. CLS will be engaged for all OCONUS procurement and shipments to KZ for June and will procurement all materials for the Sept training reducing Metabiota costs	Med-High
				Schedule		
Submission of CCR	The CCR deadline is 45 days prior to travel, but the LoTD was received within that window	5	5	(b)(4); (b)(6)	Submit CBEP required deliverables for the training engagement, country clearance and travel authorization immediately upon receipt of proposal approval to ensure successful implementation	Med-High
Submission of TEP	The TEP submission deadline is 60 days but the LoTD was received within that window	5	3		Submit CBEP required deliverables for the training engagement, country clearance and travel authorization immediately upon receipt of approved proposal to ensure successful implementation	Med-High
Project Coordination	Short suspense to execute training engagement hosting 34 local participants and requiring 8 trainers to travel to Kazakhstan in support of this effort in the June-July timeframe	4	4		Hold routine calls with regional and country leadership and collaborators, as needed to understand and implement technical requirements and ensure communication across the training events. After action of first training engagement to capture improvements or course correction for implementation of follow on training event in the Fall	(b)(4); (b)(6)
Acquisition of materials	There is limited availability in country for the types of materials we require, but customs clearance for single shipment is 45 days which may impede time execution	4	5		Materials will be procured locally as available to limit international purchases and CLS and DTRO will be engaged to support shipping and clearances. If authorized a local expediter will be engaged	
				Performance		
Material Availability	It is a challenge to ensure that all of the necessary materials are in place in the allotted time, especially with country clearance requirements	4	4	(b)(4); (b)(6)	Engage a local logistics organization to provide in-country support, if authorized with rapid turn around and solid track record in supporting USG operations. Utilize CLS and DTRO support.	
Course Syllabus Development	Receipt of technical direction was within 30 days of training execution	3	5		In anticipation of the event, the team began developing the course at no cost to CBEP, in order to ensure that it was ready for the event	
Logistics Coordination	There are a lot of moving pieces to get all equipment, trainers, facilities, and trainees in position to execute training on the required timeline	4	4		Utilize CLS to provide logistics support, and a local logistics organization to provide in country support with rapid turn around and solid track record in supporting USG operations for the June event, if necessary and authorized for local transport of participants to the training event.	
Sample Availability	The training is being scheduled based on the availability and patterns of bat and camel populations, making schedule risks into performance risks	3	5		The entire team will coordinate closely with CBEP and in country partners in order to come up with effective and efficient solutions to the scheduling and implementation challenges in order to keep the event on schedule	Med



Management Approach

Introduction

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager, and Country Manager, as needed to direct the operational and administrative support required to ensure implementation of the training engagement. Our SE Asia Program Manager (b)(6) will oversee training implementation, with the support of a project coordinator, travel coordinator, and qualified trainers to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the SE Asia Program Manager. Project Coordinator, Travel Coordinator and Metabiota Qualified Trainers that will be tasked with specific assignments to support the development and implementation of training event based on their administrative and scientific expertise. This team of experts will ensure the overall project management and tasks associated with the training are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

Initiation

Following guidance from CBEP CENTCOM leadership, and working collaboratively with trainers from Duke-NUS, and local collaborators from The Republican Governmental Enterprise "Microbiology and Virology Institute" Committee of Science of the Ministry of Education and Science of the Republic of Kazakhstan (RGE MVI CS ME&S RK), Metabiota will refine training materials originally deployed and presented at a CBEP PACOM bat-borne surveillance training course held at Duke-NUS in May 2014 to be adapted for this training. Prior to initiating any action, Metabiota and CBEP will secure a clear understanding of the objectives and mission of this undertaking, and make sure all stakeholders agree to it. Following technical direction and authorization to proceed by DTRA, Metabiota will move into the planning and execution of the training.

Planning and design

Completion of this task requires two training events, and a staged approach due to the short suspense required to implement the first training course. Metabiota will immediately focus on planning, designing and implementing Phase 1 training (June-July), which will consist of a practicum and hands-on field sampling. Following successful execution of Phase 1, Metabiota will implement Phase 2 (September) of the training, which will be laboratory based, and will consist of both lectures and conducting diagnostics on samples collected during the first event. Both events will be five to six days in length and will support a total of 34 participants at each event, however only ten to fifteen of the participants will be selected to participate in the hands-on portion of the course, to ensure safety standards are maintained.

Metabiota will identify the required qualified trainers to faciliate the event from it's cadre of experts and will engage the trainers to develop a syllabus for each course, which will take into account regional sensitivities and religious requirements to ensure the course is conducted in alignment with regional practices. Following syllabi completion, Metabiota will adapt and refine training materials from a previously held 9-day CBEP funded bat-borne pathogen training course facilitated by Metabiota at the Duke-NUS campus in May 2014 for use. Training materials follow the FAO animal manual, "Investigating the role of bats in emerging zoonoses: Balancing ecology, conservation, and public health", but will demonstrate field surveillance and BSL-2 laboratory approaches where participants will get hands on experience at handling bats and camels, and taking samples. As materials are already generated and require minimal change to meet regional and training specific needs, Metabiota anticipates a quick turn-around for final documents, which will result in succesful execution of the events. In addition to refining the materials, developing a syllabus to accompany the training and accommodating regional sensitivities, Metabiota will submit the required Training Event Plan (SOW Section 4.3, Task 3, CDRL A0006) with participant details to ensure all prior approvals are received before implementation.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

In addition to designing the courses and adapting the materials, Metabiota will work with Duke-NUS and RGE MVI CS ME&S RK to determine in-country logisitical needs to facilitate the training events to include travel and transporation, procurement of materials and supplies, conference arrangements, fit-testing, and other operational requirements necessary to ensure proper execution. CLS will be engaged to support logistics, and ensure they are successfully managed. CLS will provide travel and transportation support, translation and interpretation services, conference services and other identified needs. Metabiota will also utilize a local logistics organization, TMC to provide local procurement services, and travel support for the June training if CLS cannot accommodate the short timeframe required for execution. Metabiota will maintain communciation with regional and country leads, as well as CLS personnel, during all phases of planning and implementation to ensure smooth operations and successful engagement.

Execution

The core project management team will maintain oversight and implementation of the project at all times and will ensure rapid execution of both training events, tracking objectives to ensure the project stays on schedule to complete the training exercises. The project will be managed according to the phased implementation plan and will be course corrected, as needed to ensure target end-goals are reached. The following tools will be used to guarantee the project schedule will be maintained:

Project Administration:

1. Weekly team meetings and conference calls will be held to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Coordinator and will include the PM, TC, Senior QTs and AEP leadership, as needed based on the requirements and stage of implementation.
2. Routine calls and communication via email will be held with CBEP regional leadership, CLS and Metabiota to provide routine status updates, coordination and ensure training implementation.

Project Reporting:

1. Weekly status reports will be provided by the PM to senior MB leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction, as needed to ensure training goals are met.

Monitoring and Controlling

1. Routine risk assessment will be performed internally among the MB project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with CBEP regional leadership, and CLS to ensure the project remains on track and is implemented according to standard.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

3. Routine oversight and coordination will be peformed to ensure TMC is performing in-country requirements to ensure successful execution of the training. Monitoring will include both administrative and fiscal oversight.

Completion

Maintaining a focused project schedule with routine meetings and communication with CBEP regional leadership allowing for continued coordination, while maintaining targeted objectives, Metabiota will drive the project to completion by the end of September with the delivery of two coordinated training events. Following completion of each training engagement, review, final validation, and a back-and-forth dialogue with CBEP regional leadership, Metabiota will provide required training trip report deliverables and after action reports to allow for lessons learned and continuation of solid execution and implementation of activities. Metabiota believes that the experience and management it will bring to this project, in collaboration with CBEP will guarantee success.

Technical Approach

Introduction

Emerging infectious diseases (EIDs) are a challenge for medical and public health infrastructures across the globe. Pursuant with the One Health Initiative, emergent pathogens are primarily zoonotic in origin, with interspecies zoonotic RNA viruses considered to be the primary etiological agent. Importantly, for many of these agents, wildlife often serves as the natural reservoir for known and unknown infectious zoonotic pathogens. For instance, bats are known to carry at least 11 virus families from which over 70 viruses have been isolated. Inclusive of this, bats appear to be the putative source for medically important viruses, including rabies, the Middle East respiratory syndrome (MERS)-and Severe acute respiratory syndrome (SARS)-coronaviruses, as well as Nipah and Henra viruses. In addition, camels are a known MERS reservoir. Exposure of incidental hosts, such as humans, to coronaviruses or paramyxoviruses can progress to infections with high morbidity and mortality for which the economic costs, including the associated burden of morbitiy and mortality, lost tourism, revenue can number in the billions of dollars. The SARS outbreak alone is estimated to cost over $50 billion worldwide, demonstrating the need for proactive surveillance.

After the SARS outbreak in Asia and subsequent spread to North America, coronaviruses have been an area of focus to understand the virus ecology and evolution, ascertain reservoir hosts and determine the transmission dynamics. The emergence of the MERS-coronavirus (MERS-CoV) and its associated acute respiratory illness in humans alerted scientists that of another potential pathogenic coronavirus. The virus was initially described in 2012 from a patient in Saudi Arabia and has since been recorded in 21 countries with over 700 laboratory confirmed cases. The primary means of human infection has been human-to-human transmission with associated cases of nosocomial transmission. The case fatality rate is approximately 30%,

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

though a high number of fatalities have been associated with co-morbidities. The majority of cases lack data on the level of animal contact. MERS-CoV has a suspected intermediate animal reservoir, the dromedary camel, and the putative source of these infections is suspected to come from bats. Related coronaviruses have been identified in bats in Europe and South Africa. Neutralizing antibodies have been found in camels that came from Kenya, Spain, and Egypt, as far back as 1992, indicating a long standing infection course and not a recent cross-species transmission event into camel populations. The wide geographic distribution, continual evidence of human infection, density and abundance of intermediate reservoir hosts dictate that longitudinal surveillance programs should be established to monitor prevalence.

Training

Training on MERS-CoV will insure that researchers have ample experience to undertake both field and laboratory experiments in animal and human populations following rigorous biosafety protocols. This proposed training incorporates two separate sessions. The first will focus on training for bat and camel handling and sampling, while the second will be setting up diagnostics for serology and antigenic material.

The first training course will be held from June 29 – July 3, 2015 and will primarily focus on the collection of samples from bats and camels and be five days in length. Participants will need to obtain specific prerequisites for testing, including; tetanus, hepatitis B and rabies vaccinations, N-95 respirator fit testing, and be fit enough to participate in field work. There will be one full day of lectures, followed by two half days of lectures and bat trapping. The fourth day will be a visit to sample camels. The last day will be lectures followed by another bat trapping visit. Participants will visit a site with high camel density to collect samples and also develop questionnaires for people working in high-risk areas (for example, animal handlers, abattoir workers). Three days will be used to learn about trapping bats, such as assessing field sites and setting up different types of bat traps/nets, understanding the basics of bat identification, removing bats from nets and safely handling bats, understanding different methods of marking bats, collecting different samples and maintaining an effective cold chain.

The second training session will be held from September 7-11, 2015 in Almaty, Kazakhstan at the International Science and Technology Center (ISTC), and will consist of lectures, theoretical aspects of MERS-CoV, and setting up laboratory diagnostics. It will be approximately five days with lectures covering the following thematic areas: a) Review of Coronaviridae, b) Properties of MERS-CoV, c) Cross-species transmission of coronaviruses – definitive and intermediate hosts, d) Molecular virology and cell culture assays for MERS-CoV, e) Antigenic and serological detection assays, f) Clinical symptoms in humans and camels, g) Surveillance schema for MERS-CoV. The laboratory portion of this training will focus on setting up PCR and qPCR assays with positive controls and setting up ELISAs specific for MERS in camel and bat sera. Detection of the virus family Coronaviridae will also occur. The goal will be to test all of the samples collected between the first and second training for MERS. This will frame a manuscript for MERS surveillance and provide background data for a grant application to establish a longitudinal surveillance program.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

After completion of the trainings, participants will be able to:

- Assess field sites and set up different types of bat traps/nets
- Understand the basics of bat identification
- Remove bats from nets and safely handle bats
- Safely sample camels
- Understand different methods of marking bats
- Collect different samples (oral and anal swabs, ectoparasites, blood, serum) and maintain an effective cold chain
- Establish an appropriate record keeping and labeling system for their needs
- Determine how to process and screen samples based on the detection of expected and unknown pathogens
- Safely use a BSL-2 laminar flow hood to process samples
- Dissect a bat and remove tissues for pathogen screening
- Extract nucleic acid (manual and automated homogenization), set up PCRs based on virus family-specific primers, and analyze the results with gel electrophoresis

Communications Protocols

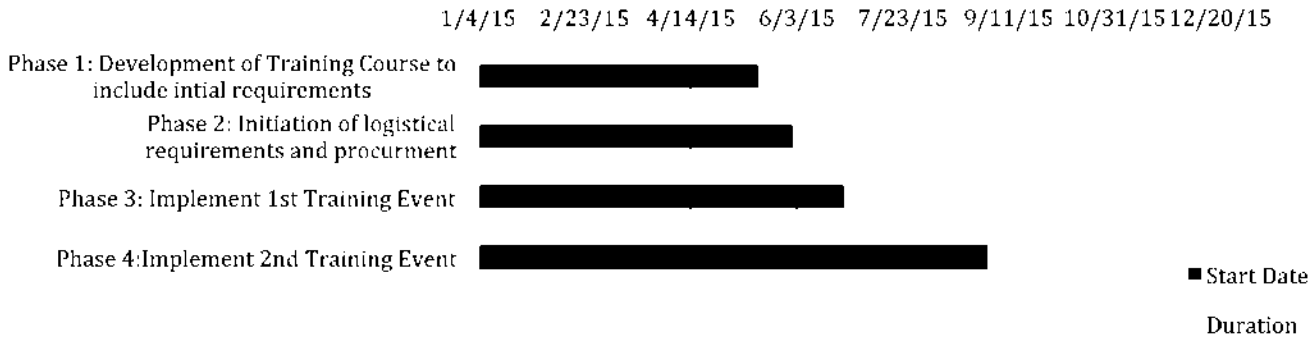
Metabiota will maintain open communications with international collaborators necessary for implementing the training, to include regional partners supporting the training engagement and logistics. In addition, Metabiota will maintain routine communication with CBEP and CLS to ensure coordination and that CBEP maintains full visibility on the training engagement, status and process of execution.

Phases of Technical Approach

Phase 1: Development of Training Course to include Syllabus and Adaptation of Materials
Phase 2: Initiation of logistical requirements and procurement of materials/supplies necessary for training in conjunction with CLS
Phase 3: Implementation of 1st training event with field sampling activities in June-July to include coordination of both local and regional travel
Phase 4: Implemetation of 2nd training event with laboratory diagnostics in September to include coordination of both local and regional travel

There will be four phases to the technical approach. Phase One will be initiated immediately following technical direction and will involve coordination with Duke NUS qualified trainers to adapt previously used training materials, design the training syllabus, and identify the necessary materials and supplies required to implement the training. In addition to designing the training, Metabiota will work with CBEP and RGE MVI CS ME&S RK to identify the participants from local institutions and ensure they are available and meet the pre-requisites for training. Once the materials necessary for the training have been identified, Metabiota will immediately engage in procurement activities to ensure supplies can be procured and received in time for both

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.



trainings. CLS will be utilized for all CONUS based procurement and shipping requirements and TMC for local procurement, and expediting services if allowable. Metabiota will directly support procurement of any supplies purchased in third countries and shipped directly to Almaty. This is the greatest risk to successful implementation of the training events, as Kazakhstan has an estimated 45 day clearance requirement for all interntional shipments, which may impede implementation of the June training. To mitigate this risk, Metabiota will engage TMC Global Professional Services to assist in procuring all supplies locally that can be obtained in country. TMC has provided support services to USG funded agencies and programs in the arena for over 20 years and has a proven track record in providing management and technical services within the region. For all items that cannot be procurement locally with TMC, Metabiota will work independently and in conjuction with CLS to secure the necessary materials and supplies. As the customs clearance process is extended in Kazakhstan and different supply lists are required for each engagement, Metabiota anticipates that procurement requirements and activities will last the duration of the period of performance.

Phase Three and Phase Four of the project will be the actual implementation of each training event, according to schedule. To support the logistical requirements of the training events, CLS will be engaged to facilitation this portion of the work to include travel and transportation services, translation and interpretation services, shipping and procurement of supplies, as well as conference arrangements. Metabiota will engage TMC to support local procurement activities in support of implementation, and expediting support if authorized for all incoming shipments.

Outside of logistical support for these phases, Metabiota's engagment with Duke NUS faculty and researchers will ensure strong technical support and implementation of the these events. Duke NUS is a world-renown institute with state of the art facilities and a long-standing repor in the research community. Trainers from Duke NUS have been responsible for two previously funded CBEP training courses, in collaboration with international experts from around the world and have built the baseline for the courses that will be conducted in Almaty. They have a proven track record that has resulted in improved biosurveillance and security practices, as well as the intiaition of cross-regional collaborations, publications and scientific engagement fostered by the training events. With regional and local logistical expertise provided by TMC coupled with the technical expertise of Duke NUS. Metabiota is confident that the trainings will be a success.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Timeline

Phase 1 – Development of training course to include syllabus, adaptation of materials, list of materials/supplies and identification of participants (16 May – 20 June)

Objective: Adapt training materials for regional requirements and translation, identify trainers and participants, develop supply list for training, and intiate travel requirements

Process: Metabiota, in coordination with CBEP, Duke NUS, and local partners will ensure development, adaptation and approval of the training and associated materials, to include generating the supply list required for the trainings. This will also include travel authorization and CCR for all international travelers. Meatabiota will complete this requirement as close to CBEP deadlines as possible, acknowledging that technical direction was received outside of the standard timelines for approval.

Deliverables: Submission of the TEP, Travel Authorization and CCR.

Phase 2 – Logistics and Procurement (1 June – 15 September)

Objective: CLS to provide logistical support for implementation of training events and procure the necessary training materials.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Process: Metabiota will engage with CLS to provide logistical support services for this project to include procurement of materials and supplies. Along with CLS, Metabiota will engage TMC to provide in-country procurement support, and expediting of international shipments if allowed. Metabiota will support travel of participants to the June event, should CLS be unable to do so based on the limited timeframe to execute the engagement. Metabiota will utilize TMC to support these efforts, if deemed necessary. In addition, Metabiota will work with trainers and local collaborators to ensure initiation and implementation of all requirements leading up to the training, to include, procurement, travel, transport and coordination of the event.

Deliverables:

- Deliverable #1: Finalize supply list, determing what can be purchased locally and what will be procured internationally. Engage CLS as needed for procurement support.
- Deliverable #2: Work with local and international vendors to procure supplies and have them shipped or delivered to training location in Almaty.
- Deliverable #3: Work with CLS, local collaborators to provide information for CLS to identify location of conference, setup facilities, arrange local travel and other logistical needs required for implementation to include translation services. Ensure all arrangements are made in advance to support training engagment.

Phase 3 and 4 – Training Implementation (29 June – 30 September)

Objective: Conduct two training courses for 34 participants

Process: Metabiota will work with CLS to provide the in-country logistical support required to implement the training engagements, as well as utilize TMC as needed. Metabiota will oversee all TMC activities to ensure administrative and fiscal management of the operations. In addition, Metabiota will engage Duke NUS trainers and local collaborators to ensure expert technical implementation of the training engagement. Metabiota personnel will oversee Duke NUS trainers on the ground to ensure all training activities are exectued.

Deliverables:

- Deliverable #1: Execute June-July training course focused on field sampling activites. Deliverable #2: Executed September training course focused on laboratory diagnostics.
- Deliverable #3: Provide training trip reports upon completion of training events according to CBEP guidelines.

Metabiota Key Personnel

(b)(6) eputy Director

Mr. (b)(6) is the Deputy Director of the Academic Engagement Partnership (AEP) Program and an Internationally Certified Emergency Manager (CEM®) with 14 years of experience leading, managing, and consulting on the full spectrum of Counter Weapons of Mass Destruction (CWMD) operations and Chemical Biological Defense programs, as well as research and development in support of joint task forces, special operations forces, other government agencies, and the Department of Defense on the strategic, operations, and tactical level. (b)(6) is a driven leader with a proven track record of building value with partners through the identification of capability gaps, and the development and validation of effective solutions to the unique challenges faced when dealing with Chemical, Biological, Radiological, Nuclear, and Explosive (CBRNE) threats. In addition, he is well versed at risk analysis and management, strategic planning, policy analysis and political engagement.

(b)(6), Southeast Asia Regional Program Manager

Ms. (b)(6) is the Southeast Asia Regional Program Manager of the Academic Engagement Partnership (AEP) Program with over eight years experience as a global health project / program manager, with a focus in SE Asia regional activities, having lived and worked in Cambodia for four years supporting DoD efforts in the region. Since joining Metabiota in 2010, she has managed DTRA CBEP engagements in West and Central Africa, to include Ebola response efforts, as well as spending three years as the Program Manager on projects funded by USAID, AFHSC GEIS, BEP, NIH, USAMRIID, and HJF spanning all regions of Metabiota engagement.

(b)(6), Training Coordinator

Ms. (b)(6) will be joining Metabiota in March, and will be engaged as the Project Coordinator for this effort. She joins the team following completion of an MBA with experience in project controls, coordination, strong writing and editing skills and will bring a business approach to the project, keeping track of all deliverables, scheduling, and facilitating coordination with both internal and external stakeholders. In addition to her business expertise, Ms. (b)(6) worked as a Data Technician and Interviewer for NIH/CDC sponsored studies, while completing her undergraduate work at Duke.

Qualified Trainers

(b)(6), Course Director

(b)(6) received his BS in Entomology and Zoology from the University of Wisconsin at Madison and his PhD in Parasitology with a focus on vector borne infectious diseases from Department of Tropical Medicine at Tulane University. He was the laboratory manager for a large mosquito control company and his doctoral research focused on the transmission cycles of arboviruses between birds and mosquitoes, especially regarding the relative contribution of these individuals

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

towards viral amplification and dampening.

As a Senior Research Fellow at Duke-NUS, his current work focuses on the ecology and evolution of novel and reemerging infectious diseases in different animal populations in Southeast Asia. He supervises and coordinates all the Duke- NUS pathogen surveillance efforts. His interest is understanding how ecology and environmental variables impact the presence or absence of hosts (bats and small mammals), ectoparasites, and parasites in different habitats and their connectivity and isolation across different landscapes. He also is the insectary manager and works on arbovirus dynamics and vector competence in mosquitoes.

(b)(6)

(b)(6) received his BSc in Zoology from the National University of Singapore and an MSc in International Wildlife Trade and Conservation from the Durrell Institute of Conservation and Ecology at the University of Kent. He has varied research and conservation interests, which include human-primate commensalism, wildlife trade, conservation of mammals and sustainable use.

He has worked in National Parks Board (Singapore) (NParks) since 2000, and maintains a collaborative long-term study on the serology and bi-directional transmission of infectious agents in wild macaques with the National Primate Research Center at the University of Washington and the University of Notre Dame. His last professional appointment was Deputy Director (Projects) in the Conservation Division (NParks) before embarking on a PhD, which examines the urban ecology of bats in Singapore with the objective of understanding what factors determine bat diversity and activity in a highly urbanized landscape.

(b)(6)

(b)(6) primary training was in ecology and evolution at The University of Melbourne and he obtained his PhD at The University of Hong Kong in 2003, where he also undertook his post-doctoral training in the Department of Microbiology. Dr (b)(6) s an authority on the evolutionary aspects of influenza virus biology; especially at the human-animal interface and he has provided seminal studies on H5N1 viruses as well as the pandemic viruses of 1918, 1957, 1968 and 2009. In 2007 Dr (b)(6) was awarded a 7-year Career Development Award as part of the NIAID/NIH Centers of Excellence for Influenza Research and

Research in the Laboratory of Virus Evolution integrates ideas from a number of different fields including evolutionary genetics, virology, ecology, and infectious disease epidemiology. His research program is directed at efforts to better understand viral disease ecosystems in Asia, specifically the animal-human interface, to support rational implementation of disease control and intervention strategies. He conducts human and animal disease surveillance, isolates and characterizes pathogens (genetic and phenotypic) and generates hypotheses that he then tests in the lab. He is primarily interested in the roles played by mutation, natural selection,

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

recombination/reassortment and host immune response on virus diversity within an individual, during transmission within a population and during inter-species transmission between hosts.

(b)(6)

(b)(6) received her BSc in Biological Science (major in Zoology) and a MSc in Ecology from the Federal University of Bahia – Brazil. Presently she is doing her PhD at the National University of Singapore. Her project uses a combination of field surveillance, ecological analysis, laboratory diagnostics, evolutionary genomics, bioinformatics, and predictive modeling and mapping to identify pathogens present in Singapore small mammals.

She has 15 years of field and laboratory experience working with different types of mammals such as rodents, shrews and bats in South America and Southeast Asia. Her background includes different fields like ecology, behavior, evolutionary genomics and infectious diseases. Erica also has practical knowledge of animal welfare, laboratory and field safety procedures and biorisk management.

(b)(6) Ph.D.

Prof (b)(6) is the Director of the Program in Emerging Infectious Diseases at Duke-NUS Graduate Medical School, Singapore. He also currently holds an appointment at the Office of Chief Executive (OCE) Science Leader at the CSIRO Australian Animal Health Laboratory (AAHL).

Having completed his Bachelor's degree in 1982 at the East China Normal University, Shanghai China, Prof (b)(6) went on to obtain his PhD at the University of California, Davis USA. His early research was at the Monash Centre for Molecular Biology and Medicine. In 1990, he joined the Commonwealth Scientific and Industrial Research Organization (CSIRO), Australian Animal Health Laboratory (AAHL) where he played a leading role in identifying bats as the natural host of the Severe Acute Respiratory Syndrome (SARS) virus. Recently, he led an international team carrying out comparative genomic analysis of two bat species and discovered an important link between adaptation to flight and bat's ability to counter DNA damage repair as a result of fast metabolism and to co-exist with a large number of viruses without developing clinical diseases.

Prof (b)(6) work has been recognized internationally through various international awards, numerous invited speeches at major international conferences and many top scientific publications including, Science, Nature Reviews in Microbiology and the Proceedings of the National Academy of Sciences (PNAS), along with five patents and many invited book chapters. He holds a number of honorary positions and memberships and has received numerous awards such as the CSIRO Award for Excellence in Partnership in 2006 for establishing a rapid-response global research partnership that was instrumental in identifying the animal reservoir of SARS. In 2010, Prof (b)(6) was elected as a Fellow of Australian Academy of Technological

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Sciences and Engineering in recognition of his expertise in new and emerging diseases.

(b)(6)

(b)(6) earned basic biology during his B.Sc. studies at the Westfälische Wilhelms University in Münster, Germany and focused on cell signaling during mammalian development. He received his training in Virology at the department of Viroscience at Erasmus Medical Center Rotterdam, the Netherlands, during a M.Sc. degree program in Molecular Medicine. He was involved in experiments on the innate immune signaling of several Paramyxoviruses. He continued to work at the same institute during his PhD studies focusing on the transmissibility of zoonotic and pandemic influenza A viruses via the air using reverse genetics techniques and several animal models. His current research interests include the molecular characterization of viruses relevant for human health and the description of viral fitness parameters that play a role in pathogen evolution.

Cost Management

The Metabiota team and all partners will maintain an acute focus on cost management to ensure that the training is delivered at a reasonable cost to the government. Our team will provide full oversight of TMC to ensure accurate and responsive finanical reporting and tracking of their services agreement, as well as facilitate cost savings to the Government whereever possible. Metabiota will follow procurement regulations ensuring the best price is received under the time constraints using all means available.

Budget Narrative

Period of Performance

The Period of Performance for this effort is May 16, 2015 to September 30, 2015.

Labor

Costs for direct labor to support this activity is required for the following personnel:

Metabiota SEA Program Manager (b)(6), to oversee and execute the training to include management of deliverables, logistics, procurement, tracking of project requirements, and implementation.

Metabiota Training Coordinator (b)(6) to assist in coordinating the training, to include assisting in management of deliverables, logistics, procurement, tracking of project requirements, deliverables and logistics.

Duke NUS Trainers 1 (b)(6), to assist senior trainers in facilitating the training event, to include adaptation of materials, syllabus input, assistance in both practicum and hands-on field sampling events ensuring an appropriate ratio of trainees to trainers reinforcing safe handling procedures.

Duke NUS Trainers 2, (b)(6), to oversee development of training materials and syllabus, implementation of the training to include delivering classroom training and conducting and overseeing field sampling activities, to include facilitation of scientific engagement.

Duke NUS Trainers 3 (b)(6) to supervise training coordination and development, review, develop and adapt training related documents and deliverables, provide coordination with select trainers, as well as general research activities and facilitation of scientific collaboration.

Additional costs for direct labor supporting the Deputy Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials

Materials and supplies are required to support training efforts, to include training materials, bat capture and acoustic equipment, safe handling and bat capture supplies, PPE, bat and camel sampling supplies, laboratory reagents and consumables. CLS will be utilized for all procurement activities originating in the US.

Fit Testing is required to fit N95 masks on all trainees participating in the field sampling portion of the event. Fit testing will be conducted and overseen by (b)(6), in addition to local support services provided by TMC.

TMC Global Professional Services will provide in-country procurement services to support the training events. Services provided will include local procurement and transfer to the training, customs clearance assistance, if authorized.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for trainers coming from Duke NUS for the period of performance for this engagement. Metabiota personnel performing on this project are already insured.

Subcontracts

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

A Subcontract will be issued to Nuke NUS for time provided by their Trainers, as well as materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

A Vendor Services agreement will be issued to TMC for local procurement services provided, as well as expediting services, if approved. Costs are captured under the materials in CLIN 1003 of the budget.

Travel

At the request of DTRA, travel is required for (b)(6), Deputy Director of the AEP program and (b)(6) Southeast Asia Program Manager to travel to Almaty to oversee the implementation of the training.

Travel is requested to support all Qualified Trainers to facilitate implementation and conduct training activities in this effort. Trainers will be traveling from Duke NUS in Singapore to Almaty to conduct this training event.

Travel is also requested for 10 local participants based outside of Almaty that require support to attend the event, should Metabiota be required to support this due to the short suspense required for engagement.

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP CENTCOM in the implementation of the Sample Collection and Diagnostics Training on Middle East Respiratory Syndrome (MERS-CoV) in Camels and Bats in Kazakhstan. Metabiota will ensure, through strong project management and risk mitigation that the training will be executed in an efficient and timely manner delivering a top quality course geared to support enhanced biosurveillance and biosafety efforts in the region.

Executive Summary

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) team responsible for the United States Central Command (USCENTCOM) is tasked with a mission of scientific study and experimentation directed toward advancing or increasing knowledge and understanding of worldwide basic research standards to enhance capabilities and mitigate threats. In support of this effort, the CBEP USCENTCOM team has identified the requirement for a two-phased training event supporting the safe collection and analysis of Middle East Respiratory Syndrome (MERS-CoV) in Camels and Bats in Kazakhstan. This engagement will support the development and enhancement of surveillance programs throughout Kazakhstan, aimed at promoting biosafety and security.

The Metabiota team brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact CBEP objectives.

Metabiota has executed scientific objectives on a number of Department of Defense contracts, and understands the Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) mission is to safeguard the United States and its allies from weapons of mass destruction (WMD) including chemical, biological, radiological, nuclear, and high-yield explosives (CBRNE) by providing capabilities to reduce, eliminate, and counter the WMD threat and mitigate its effects. The Company recognizes that DTRA's Cooperative Threat Reduction (CTR) Program is a critical component of the U.S. Government's (USG) approach to threat reduction, which promotes collaboration with international and non-governmental partners in order to advance regional engagement and multilateral cooperation while developing locally appropriate, sustainable programs. Through the Academic Engagement Partnership (AEP) Program, Metabiota aims to support CTRs CBEP mission of reducing the potential impact of biological threats through enhanced biological safety and security, awareness of biological risks, and knowledge related to biological pathogens.

Through the development of coherent training methodologies that are driven by on-the-ground experience and decades of expertise, as well as follow on engagements and deliverables, Metabiota is well positioned to support training activities and scientific engagement in the USCENTCOM's region of responsibility.

Background

The US Department of Defense (DoD) initiated the CBEP through the DoD DTRA in order to: secure and consolidate select agents; enhance Biosafety and Biosecurity (BS&S) standards; and strengthen the USCENTCOM region's ability to detect, diagnose, survey, and report emerging and re-emerging diseases of international security concern. CBEP accomplishes these

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

objectives in accordance with the World Health Organization (WHO) International Health Regulations (IHR) and World Health Organization for Animal Health Guidelines (OIE). To achieve its mission, CBEP works collaboratively with partner nations, U.S. Government agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health, promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner.

Strategic CBEP Objectives

Through support for the CTR mission, as well as U.S. priorities for countering biological threats and promoting global health security, including One-Health, CBEP works with partner countries to:

- Utilize minimal facilities to store stocks of dangerous pathogens;
- Employ Biorisk management best practices and principles based on internationally acceptable guidelines and standards (enhance capacity to account for, safeguard, and secure pathogens of concern);
- Engage in cooperative research with host scientists and the international science community;
- Conduct effective disease surveillance, detection, reporting, and response to rapidly diagnose bioterrorism and outbreaks; and
- Comply with WHO IHR and OIE reporting guidelines.

Purpose

The purpose of this event is to provide sample collection and diagnostics training to 34 participants from across various scientific institutes and ministerial bodies in Kazakhstan, to develop and enhance disease detection, surveillance and response capacity within the country while facilitating cooperative research and scientific engagement in support of CBEP's mission.

To achieve this purpose, CBEP has identified the need for two, six-day training courses hosted in Almaty, Kazakhstan primarily following and FAO animal manual. "Investigating the role of bats in emerging zoonosis': Balancing ecology, conservation, and public health", adapted to capture other hosts, and demonstrating field surveillance and BSL-2 laboratory approaches where participants will receive hands-on experience at handling bats and camels, and taking samples. Using a train-the-trainer approach, this engagement will promote: reducing biological threats, engaging scientists through cooperative pursuits, and enhancing host-nation capacity in disease surveillance and response, while adhering to international codes of security and safety to ultimately provide a mechanism for sustained engagement.

To accomplish this purpose, DTRA CBEP, through the Academic Engagement Partnership Program (AEP) will engage Metabiota Inc. and it's cadre of Qualified Trainers (QTs) and

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Subject Matter Experts (SMEs) to implement the sample collection and diagnostics training event in Kazakhstan.

Objectives

Through the implementation of the sample collection and diagnostics training on Middle East Respiratory Syndrome (MERS-CoV) in camels and bats in Kazakhstan facilitated by Metabiota Inc., DTRA CBEP will be able to:

- Develop and enhance disease surveillance systems targeting pathogens of security concern and building regional detection and response capabilities.
- Facilitate safe sample collection and handling practices supporting the implementation of international standards of biosafety and security.
- Support public health capacity building in the region utilizing a train-the-trainer model and fostering scientific research and collaboration through the development and implementation of basic research activities.

Outcome

The training will provide a measurable and achievable result in building pathogen surveillance programs in Kazakhstan, while promoting a global network of research collaborations, and developing a sustainable infrastructure for advancing scientific research, including the early detection of emergent threats.

Threat Reduction

Training engagements are critical to capacity building efforts in host countries and supporting the early detection and response to emerging threats, thus safeguarding the world from infectious disease threats. Without completion of the training engagement, the region is subject to the following identified risks:

- Incomplete country and regional coverage of disease detection, reporting and response systems
- Increased security threats due to improper handling of pathogens of security concern
- Limited understanding of pathogens of concern circulating in the region

The completion of the training will mitigate the identified risk factors by:

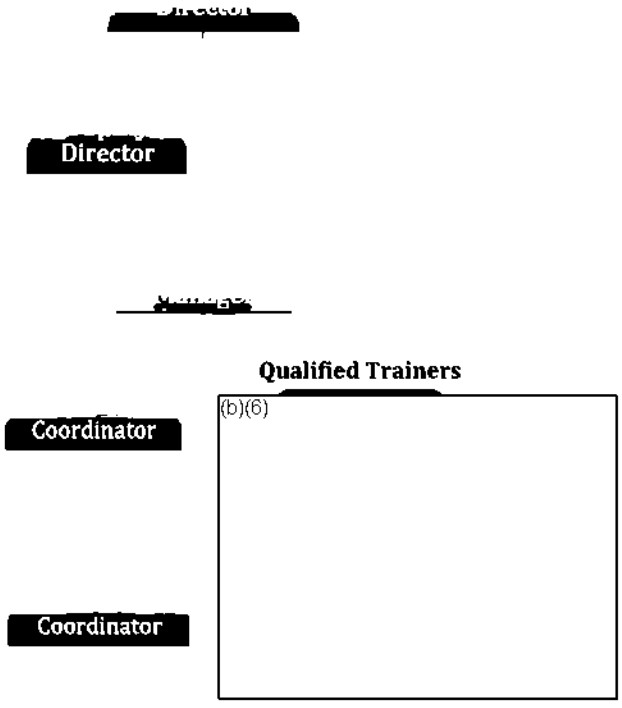
- Improve and enhance disease detection, reporting and response systems across the country
- Implement and improve Biorisk management best practices and principles based on internationally acceptable guidelines and standards (enhancing the capacity to account for, safeguard, and secure pathogens of concern)

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

- Provide safe handling techniques during collection and analysis of samples to include proper handling, transport, and storage of samples
- Increasing scientific capabilities through research collaboration and fostering an environment of scientific partnership

Risk Management

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
				Cost		
Technical Direction NTE Ceiling	The current budget with travel, management, procurement, and execution will exceed the ceiling for the technical direction	5	3	(b)(4); (b)(6)	Metabiota will monitor costs and work diligently to seek out the lowest costs possible for procurement and travel, as well as mitigate extended labor hours during events	**Med-High**
Material Procurement	Short suspense the acquisition and limited availability in country may increase costs	4	4		Engage a local logistics organization to provide in-country support with rapid turn-around and solid track record in supporting USG operations.	Med
				Schedule		
Submission of CCR	The CCR deadline is 45 days prior to travel, but the LoTD was received within that window	5	5	(b)(4); (b)(6)	Submit CBEP required deliverables for the training engagement, country clearance and travel authorization immediately upon receipt of proposal approval to ensure successful implementation.	**Med-High**
Submission of TEP	The TEP submission deadline is 60 days but the LoTD was received within that window	5	3		Submit CBEP required deliverables for the training engagement, country clearance and travel authorization immediately upon receipt of approved proposal to ensure successful implementation.	**Med-High**
Project Coordination	Short suspense to execute training engagement hosting 34 local participants and requiring 8 trainers to travel to Kazakhstan in support of this effort in the June-July timeframe.	4	4		Hold routine calls with regional and country leadership, and collaborators, as needed to understand and implement technical requirements and ensure communication across the training events. After action of first training engagement to capture improvements or course correction for implementation of follow on training event in the Fall.	(b)(4); (b)(6)
Acquisition of materials	There is limited availability in country for the types of materials we require, but customs clearance for single shipper is 45 days	4	5		Engage a local logistics organization to provide in-country support with rapid turn-around and solid track record in supporting USG operations.	Med
				Performance		
Material Availability	It is a challenge to ensure that all of the necessary materials are in place in the allotted time	4	4	(b)(4); (b)(6)	Engage a local logistics organization to provide in-country support with rapid turn-around and solid track record in supporting USG operations.	Med
Course Syllabus Development	Receipt of technical direction was within 30 days of training execution	3	5		In anticipation of the event, the team began developing the course at no cost to CBEP, in order to ensure that it was ready for the event	(b)(4); (b)(6)
Logistics Coordination	There are a lot of moving pieces to get all equipment, trainers, facilities, and trainees in position to execute training on the required timeline	4	4		Engage a local logistics organization to provide in-country support with rapid turn-around and solid track record in supporting USG operations.	
Sample Availability	The training is being scheduled based on the availability and patterns of bat and camel populations, making schedule risks into performance risks	3	5		The entire team will coordinate closely with CBEP and in country partners in order to come up with effective and efficient solutions to the scheduling and implementation challenges in order to keep the event on schedule	Med



Management Approach

Introduction

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager, and Country Manager, as needed to direct the operational and administrative support required to ensure implementation of the training engagement. Our SE Asia Program Manager (b)(6) will oversee training implementation, with the support of a project coordinator, travel coordinator, and qualified trainers to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the SE Asia Program Manager. Project Coordinator, Travel Coordinator and Metabiota Qualified Trainers that will be tasked with specific assignments to support the development and implementation of training event based on their administrative and scientific expertise. This team of experts will ensure the overall project management and tasks associated with the training are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

Initiation

Following guidance from CBEP CENTCOM leadership, and working collaboratively with trainers from Duke-NUS, and local collaborators from The Republican Governmental Enterprise "Microbiology and Virology Institute" Committee of Science of the Ministry of Education and Science of the Republic of Kazakhstan (RGE MVI CS ME&S RK), Metabiota will refine training materials originally deployed and presented at a CBEP PACOM bat-borne surveillance training course held at Duke-NUS in May 2014 to be adapted for this training. Prior to initiating any action, Metabiota and CBEP will secure a clear understanding of the objectives and mission of this undertaking, and make sure all stakeholders agree to it. Following technical direction and authorization to proceed by DTRA, Metabiota will move into the planning and execution of the training.

Planning and design

Completion of this task requires two training events, and a staged approach due to the short suspense required to implement the first training course. Metabiota will immediately focus on planning, designing and implementing Phase 1 training (June-July), which will consist of a practicum and hands-on field sampling. Following successful execution of Phase 1, Metabiota will implement Phase 2 (September) of the training, which will be laboratory based, and will consist of both lectures and conducting diagnostics on samples collected during the first event. Both events will be five to six days in length and will support a total of 34 participants at each event, however only ten of the participants will be selected to participate in the hands-on portion of the course, to ensure safety standards are maintained.

Metabiota will identify the required qualified trainers to facilitate the event from it's cadre of experts and will engage the trainers to develop a syllabus for each course, which will take into account regional sensitivities and religious requirements to ensure the course is conducted in alignment with regional practices. Following syllabi completion, Metabiota will adapt and refine training materials from a previously held 9-day CBEP funded bat-borne pathogen training course facilitated by Metabiota at the Duke-NUS campus in May 2014 for use. Training materials follow the FAO animal manual, "Investigating the role of bats in emerging zoonosis': Balancing ecology, conservation, and public health", but will demonstrate field surveillance and BSL-2 laboratory approaches where participants will get hands on experience at handling bats and camels, and taking samples. As materials are already generated and require minimal change to meet regional and training specific needs, Metabiota anticipates a quick turn-around for final documents, which will result in successful execution of the events. In addition to refining the materials, developing a syllabus to accompany the training and accommodating regional sensitivities, Metabiota will submit the required Training Event Plan (SOW Section 4.3, Task 3, CDRL A0006) with participant details to ensure all prior approvals are received before implementation.

In addition to designing the courses and adapting the materials, Metabiota will work with Duke-NUS and RGE MVI CS ME&S RK to determine in-country logistical needs to facilitate the

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

training events to include travel and transportation, procurement of materials and supplies, conference arrangements, fit-testing, and other operational requirements necessary to ensure proper execution. To ensure local logistics are successfully managed, Metabiota will engage regional expertise at the very early phases of planning to facilitate all in-country needs. Metabiota will maintain communication with regional and country leads during all phases of planning, and implementation to ensure smooth operations and successful engagement.

Execution

The core project management team will maintain oversight and implementation of the project at all times and will ensure rapid execution of both training events, tracking objectives to ensure the project stays on schedule to complete the training exercises. The project will be managed according to the phased implementation plan and will be course corrected, as needed to ensure target end-goals are reached. The following tools will be used to guarantee the project schedule will be maintained:

Project Administration:

1. Weekly team meetings and conference calls will be held to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Coordinator and will include the PM, TC, Senior QTs and AEP leadership, as needed based on the requirements and stage of implementation.
2. Routine calls and communication via email will be held with CBEP regional leadership and Metabiota to provide routine status updates and ensure training implementation.

Project Reporting:

1. Weekly status reports will be provided by the PM to senior MB leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction, as needed to ensure training goals are met.

Monitoring and Controlling

1. Routine risk assessment will be performed internally among the MB project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with CBEP regional leadership to ensure the project remains on track and is implemented according to standard.
3. Routine oversight and coordination will be performed to ensure TMC is performing in-country logistical requirements to ensure successful execution of the training. Monitoring will include both administrative and fiscal oversight.

Completion

Maintaining a focused project schedule with routine meetings and communication with CBEP regional leadership allowing for continued coordination, while maintaining targeted objectives, Metabiota will drive the project to completion by the end of September with the delivery of two coordinated training events. Following completion of each training engagement, review, final

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

validation, and a back-and-forth dialogue with CBEP regional leadership, Metabiota will provide required training trip report deliverables and after action reports to allow for lessons learned and continuation of solid execution and implementation of activities. Metabiota believes that the experience and management it will bring to this project, in collaboration with CBEP will guarantee success.

Technical Approach

Introduction

Emerging infectious diseases (EIDs) are a challenge for medical and public health infrastructures across the globe. Pursuant with the One Health Initiative, emergent pathogens are primarily zoonotic in origin, with interspecies zoonotic RNA viruses considered to be the primary etiological agent. Importantly, for many of these agents, wildlife often serves as the natural reservoir for known and unknown infectious zoonotic pathogens. For instance, bats are known to carry at least 11 virus families from which over 70 viruses have been isolated. Inclusive of this, bats appear to be the putative source for medically important viruses, including rabies, the Middle East respiratory syndrome (MERS)-and Severe acute respiratory syndrome (SARS)-coronaviruses, as well as Nipah and Henra viruses. In addition, camels are a known MERS reservoir. Exposure of incidental hosts, such as humans, to coronaviruses or paramyxoviruses can progress to infections with high morbidity and mortality for which the economic costs, including the associated burden of morbidity and mortality, lost tourism, revenue can number in the billions of dollars. The SARS outbreak alone is estimated to cost over $50 billion worldwide, demonstrating the need for proactive surveillance.

After the SARS outbreak in Asia and subsequent spread to North America, coronaviruses have been an area of focus to understand the virus ecology and evolution ascertain reservoir hosts and determine the transmission dynamics. The emergence of the MERS-coronavirus (MERS-CoV) and its associated acute respiratory illness in humans alerted scientists that of another potential pathogenic coronavirus. The virus was initially described in 2012 from a patient in Saudi Arabia and has since been recorded in 21 countries with over 700 laboratory confirmed cases. The primary means of human infection has been human-to-human transmission with associated cases of nosocomial transmission. The case fatality rate is approximately 30%, though a high number of fatalities have been associated with co-morbidities. The majority of cases lack data on the level of animal contact. MERS-CoV has a suspected intermediate animal reservoir, the dromedary camel, and the putative source of these infections is suspected to come from bats. Related coronaviruses have been identified in bats in Europe and South Africa. Neutralizing antibodies have been found in camels that came from Kenya, Spain, and Egypt, as far back as 1992, indicating a long standing infection course and not a recent cross-species transmission event into camel populations. The wide geographic distribution, continual evidence of human infection, density and abundance of intermediate reservoir hosts dictate that longitudinal surveillance programs should be established to monitor prevalence.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Training

Training on MERS-CoV will insure that researchers have ample experience to undertake both field and laboratory experiments in animal and human populations following rigorous biosafety protocols. This proposed training incorporates two separate sessions. The first will focus on training for bat and camel handling and sampling, while the second will be setting up diagnostics for serology and antigenic material.

The first training course will be held from June 29 – July 3, 2015 and will primarily focus on the collection of samples from bats and camels and be five days in length. Participants will need to obtain specific prerequisites for testing, including; tetanus, hepatitis B and rabies vaccinations, N-95 respirator fit testing, and be fit enough to participate in field work. There will be one full day of lectures, followed by two half days of lectures and bat trapping. The fourth day will be a visit to sample camels. The last day will be lectures followed by another bat trapping visit. Participants will visit a site with high camel density to collect samples and also develop questionnaires for people working in high-risk areas (for example, animal handlers, abattoir workers). Three days will be used to learn about trapping bats, such as assessing field sites and setting up different types of bat traps/nets, understanding the basics of bat identification, removing bats from nets and safely handling bats, understanding different methods of marking bats, collecting different samples and maintaining an effective cold chain.

The second training session will be held from September 7-11, 2015 in Almaty, Kazakhstan at the International Science and Technology Center (ISTC), and will consist of lectures, theoretical aspects of MERS-CoV, and setting up laboratory diagnostics. It will be approximately five days with lectures covering the following thematic areas: a) Review of Coronaviridae, b) Properties of MERS-CoV, c) Cross-species transmission of coronaviruses definitive and intermediate hosts, d) Molecular virology and cell culture assays for MERS-CoV, e) Antigenic and serological detection assays, f) Clinical symptoms in humans and camels, g) Surveillance schema for MERS-CoV. The laboratory portion of this training will focus on setting up PCR and qPCR assays with positive controls and setting up ELISAs specific for MERS in camel and bat sera. Detection of the virus family Coronaviridae will also occur. The goal will be to test all of the samples collected between the first and second training for MERS. This will frame a manuscript for MERS surveillance and provide background data for a grant application to establish a longitudinal surveillance program.

After completion of the trainings, participants will be able to:

- Assess field sites and set up different types of bat traps/nets
- Understand the basics of bat identification
- Remove bats from nets and safely handle bats
- Safely sample camels
- Understand different methods of marking bats
- Collect different samples (oral and anal swabs, ectoparasites, blood, serum) and maintain an effective cold chain
- Establish an appropriate record keeping and labeling system for their needs

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

- Determine how to process and screen samples based on the detection of expected and unknown pathogens
- Safely use a BSL-2 laminar flow hood to process samples
- Dissect a bat and remove tissues for pathogen screening
- Extract nucleic acid (manual and automated homogenization), set up PCRs based on virus family-specific primers, and analyze the results with gel electrophoresis

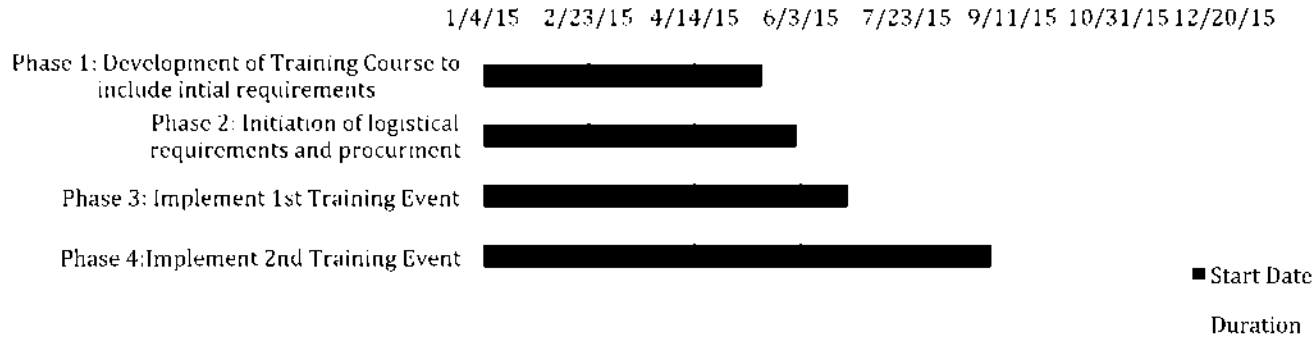
Communications Protocols

Metabiota will maintain open communications with international collaborators necessary for implementing the training, to include regional partners facilitating the training engagement and logistics. In addition, Metabiota will maintain routine communication with CBEP to ensure they have full visibility on the training engagement, status and process of execution.

Phases of Technical Approach

Phase 1: Development of Training Course to include Syllabus and Adaptation of Materials
Phase 2: Initiation of logistical requirements and procurement of materials/supplies necessary for training
Phase 3: Implementation of 1st training event with field sampling activities in June-July to include coordination of both local and regional travel
Phase 4: Implementation of 2nd training event with laboratory diagnostics in September to include coordination of both local and regional travel

There will be four phases to the technical approach. Phase One will be initiated immediately following technical direction and will involve coordination with Duke NUS qualified trainers to adapt previously used training materials, design the training syllabus, and identify the necessary materials and supplies required to implement the training. In addition to designing the training, Metabiota will work with CBEP and RGE MVI CS ME&S RK to identify the participants from local institutions and ensure they are available and meet the pre-requisites for training. Once the materials necessary for the training have been identified, Metabiota will immediately engage in procurement activities to ensure supplies can be procured and received in time for both trainings. This is the greatest risk to successful implementation of the training events, as Kazakhstan has an estimated 45-day clearance requirement for all international shipments. To mitigate this risk, Metabiota will engage TMC Global Professional Services to assist in procuring all supplies locally that can be obtained in country. TMC has provided support services to USG funded agencies and programs in the arena for over 20 years and has a proven track record in providing management and technical services within the region. For all items that cannot be procurement locally with TMC, Metabiota will work independently and in conjunction with CLS to secure the necessary materials and supplies. As the customs clearance process is extended in Kazakhstan and different supply lists are required for each engagement, Metabiota anticipates that procurement requirements and activities will last the duration of the period of performance.



Phase Three and Phase Four of the project will be the actual implementation of each training event, according to schedule. To ensure facilitation of each event, Metabiota will again enlist

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

the services of TMC to provide logistical and operational management in support of the training. Metabiota will work jointly with TMC providing fiscal and administrative oversight to ensure they provide in-country transportation for all participants, per diem according to USG rates, conference and venue services, translation and interpretation services, as well as stipend support to participants in support of their curriculum development and research activities anticipated to occur following successful completion of the training. TMC's in-country expertise, understanding of local laws and customs, and regulations will ensure smooth management of the logistical requirements of this event.

Outside of logistical support for these phases, Metabiota`s engagement with Duke NUS faculty and researchers will ensure strong technical support and implementation of the these events. Duke NUS is a world-renown institute with state of the art facilities and a long-standing report in the research community. Trainers from Duke NUS have been responsible for two previously funded CBEP training courses, in collaboration with international experts from around the world and have built the baseline for the courses that will be conducted in Almaty. They have a proven track record that has resulted in improved biosurveillance and security practices, as well as the initiation of cross-regional collaborations, publications and scientific engagement fostered by the training events. With regional and local logistical expertise provided by TMC coupled with the technical expertise of Duke NUS, Metabiota is confident that the trainings will be a success.

Timeline

Phase 1 – Development of training course to include syllabus, adaptation of materials, list of materials/supplies and identification of participants (16 May – 20 June)

Objective: Adapt training materials for regional requirements and translation, identify trainers and participants, develop supply list for training, and initiate travel requirements

Process: Metabiota, in coordination with CBEP, Duke NUS, and local partners will ensure development, adaptation and approval of the training and associated materials, to include generating the supply list required for the trainings. This will also include travel authorization and CCR for all international travelers. Meatabiota will complete this requirement as close to CBEP deadlines as possible, acknowledging that technical direction was received outside of the standard timelines for approval.

Deliverables: Submission of the TEP, Travel Authorization and CCR.

Phase 2 – Logistics and Procurement (1 June – 15 September)

Objective: Engage TMC to provide logistical support for implementation of training events and procure the necessary training materials.

Process: Metabiota will engage TMC to provide the in-country expertise and local knowledge required to facilitate the training engagement to standard. Metabiota will oversee all TMC activities to ensure administrative and fiscal management of the operations. In addition, Metabiota will work with trainers and local collaborators to ensure initiation and implementation of all requirements leading up to the training, to include, procurement, travel, transport and coordination of the event.

Deliverables:

- Deliverable #1: Finalize supply list, determining what can be purchased locally and what will be procured internationally. Engage CLS as needed for procurement support.
- Deliverable #2: Work with local and international vendors to procure supplies and have them shipped or delivered to training location in Almaty.
- Deliverable #3: Work with TMC to identify location of conference, setup facilities, arrange local travel and other logistical needs required for implementation to include translation services. Ensure all arrangements are made in advance to support training engagement.

Phase 3 and 4 – Training Implementation (29 June – 30 September)

Objective: Conduct two training courses for 34 participants

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Process: Metabiota will engage TMC to provide the in-country expertise and local knowledge required to facilitate the training engagement to standard. Metabiota will oversee all TMC activities to ensure administrative and fiscal management of the operations. In addition, Metabiota will engage Duke NUS trainers and local collaborators to ensure expert technical implementation of the training engagement. Metabiota personnel will oversee Duke NUS trainers on the ground to ensure all training activities are executed.

Deliverables:

- Deliverable #1: Execute June-July training course focused on field sampling activities. Deliverable #2: Executed September training course focused on laboratory diagnostics.
- Deliverable #3: Provide training trip reports upon completion of training events according to CBEP guidelines.

Metabiota Key Personnel

(b)(6) Deputy Director

Mr (b)(6) is the Deputy Director of the Academic Engagement Partnership (AEP) Program and an Internationally Certified Emergency Manager (CEM®) with 14 years of experience leading, managing, and consulting on the full spectrum of Counter Weapons of Mass Destruction (CWMD) operations and Chemical Biological Defense programs, as well as research and development in support of joint task forces, special operations forces, other government agencies, and the Department of Defense on the strategic, operations, and tactical level. (b)(6) is a driven leader with a proven track record of building value with partners through the identification of capability gaps, and the development and validation of effective solutions to the unique challenges faced when dealing with Chemical, Biological, Radiological, Nuclear, and Explosive (CBRNE) threats. In addition, he is well versed at risk analysis and management, strategic planning, policy analysis and political engagement.

(b)(6) Southeast Asia Regional Program Manager

Ms. (b)(6) is the Southeast Asia Regional Program Manager of the Academic Engagement Partnership (AEP) Program with over eight years experience as a global health project / program manager, with a focus in SE Asia regional activities, having lived and worked in Cambodia for four years supporting DoD efforts in the region. Since joining Metabiota in 2010, she has managed DTRA CBEP engagements in West and Central Africa, to include Ebola response efforts, as well as spending three years as the Program Manager on projects funded by USAID, AFHSC GEIS, BEP, NIH, USAMRIID, and HJF spanning all regions of Metabiota engagement.

(b)(6) Training Coordinator

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Ms. (b)(6) will be engaged as the Project Coordinator for this effort. She joins the team following completion of an MBA with experience in project controls, coordination, strong writing and editing skills and will bring a business approach to the project, keeping track of all deliverables, scheduling, and facilitating coordination with both internal and external stakeholders. In addition to her business expertise, Ms (b)(6) worked as a Data Technician and Interviewer for NIH/CDC sponsored studies, while completing her undergraduate work at Duke.

Qualified Trainers

(b)(6) - Course Director

(b)(6) received his BS in Entomology and Zoology from the University of Wisconsin at Madison and his PhD in Parasitology with a focus on vector borne infectious diseases from Department of Tropical Medicine at Tulane University. He was the laboratory manager for a large mosquito control company and his doctoral research focused on the transmission cycles of arboviruses between birds and mosquitoes, especially regarding the relative contribution of these individuals towards viral amplification and dampening.

As a Senior Research Fellow at Duke-NUS, his current work focuses on the ecology and evolution of novel and reemerging infectious diseases in different animal populations in Southeast Asia. He supervises and coordinates all the Duke- NUS pathogen surveillance efforts. His interest is in understanding how ecology and environmental variables impact the presence or absence of hosts (bats and small mammals), ectoparasites, and parasites in different habitats and their connectivity and isolation across different landscapes. He also is the insectary manager and works on arbovirus dynamics and vector competence in mosquitoes.

(b)(6)

(b)(6) received his BSc in Zoology from the National University of Singapore and an MSc in International Wildlife Trade and Conservation from the Durrell Institute of Conservation and Ecology at the University of Kent. He has varied research and conservation interests, which include human-primate commensalism, wildlife trade, conservation of mammals and sustainable use.

He has worked in National Parks Board (Singapore) (NParks) since 2000, and maintains a collaborative long-term study on the serology and bi-directional transmission of infectious agents in wild macaques with the National Primate Research Center at the University of Washington and the University of Notre Dame. His last professional appointment was Deputy Director (Projects) in the Conservation Division (NParks) before embarking on a PhD, which examines the urban ecology of bats in Singapore with the objective of understanding what factors determine bat diversity and activity in a highly urbanized landscape.

(b)(6)

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Dr (b)(6) primary training was in ecology and evolution at The University of Melbourne and he obtained his PhD at The University of Hong Kong in 2003, where he also undertook his post-doctoral training in the Department of Microbiology. Dr (b)(6) s an authority on the evolutionary aspects of influenza virus biology; especially at the human-animal interface and he has provided seminal studies on H5N1 viruses as well as the pandemic viruses of 1918, 1957, 1968 and 2009. In 2007 Dr. Smith was awarded a 7-year Career Development Award as part of the NIAID/NIH Centers of Excellence for Influenza Research and

Research in the Laboratory of Virus Evolution integrates ideas from a number of different fields including evolutionary genetics, virology, ecology, and infectious disease epidemiology. His research program is directed at efforts to better understand viral disease ecosystems in Asia, specifically the animal-human interface, to support rational implementation of disease control and intervention strategies. He conducts human and animal disease surveillance isolates and characterizes pathogens (genetic and phenotypic) and generates hypotheses that he then tests in the lab. He is primarily interested in the roles played by mutation, natural selection, recombination/reassortment and host immune response on virus diversity within an individual, during transmission within a population and during inter-species transmission between hosts.

(b)(6)

(b)(6) eceived her BSc in Biological Science (major in Zoology) and a MSc in Ecology from the Federal University of Bahia – Brazil. Presently she is doing her PhD at the National University of Singapore. Her project uses a combination of field surveillance, ecological analysis, laboratory diagnostics, evolutionary genomics, bioinformatics, and predictive modeling and mapping to identify pathogens present in Singapore small mammals.

She has 15 years of field and laboratory experience working with different types of mammals such as rodents, shrews and bats in South America and Southeast Asia. Her background includes different fields like ecology, behavior, evolutionary genomics and infectious diseases. Erica also has practical knowledge of animal welfare, laboratory and field safety procedures and Biorisk management.

(b)(6)

Prof (b)(6) s the Director of the Program in Emerging Infectious Diseases at Duke-NUS Graduate Medical School, Singapore. He also currently holds an appointment at the Office of Chief Executive (OCE) Science Leader at the CSIRO Australian Animal Health Laboratory (AAHL).

Having completed his Bachelor's degree in 1982 at the East China Normal University, Shanghai China, Prof (b)(6) went on to obtain his PhD at the University of California, Davis USA. His early research was at the Monash Centre for Molecular Biology and Medicine. In 1990, he joined the Commonwealth Scientific and Industrial Research Organization (CSIRO), Australian

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Animal Health Laboratory (AAHL) where he played a leading role in identifying bats as the natural host of the Severe Acute Respiratory Syndrome (SARS) virus. Recently, he led an

international team carrying out comparative genomic analysis of two bat species and discovered an important link between adaptation to flight and bat's ability to counter DNA damage repair as a result of fast metabolism and to co-exist with a large number of viruses without developing clinical diseases.

Prof (b)(6)'s work has been recognized internationally through various international awards, numerous invited speeches at major international conferences and many top scientific publications including, Science, Nature Reviews in Microbiology and the Proceedings of the National Academy of Sciences (PNAS), along with five patents and many invited book chapters. He holds a number of honorary positions and memberships and has received numerous awards such as the CSIRO Award for Excellence in Partnership in 2006 for establishing a rapid-response global research partnership that was instrumental in identifying the animal reservoir of SARS. In 2010, Prof (b)(6) was elected as a Fellow of Australian Academy of Technological Sciences and Engineering in recognition of his expertise in new and emerging diseases.

(b)(6)

(b)(6) earned basic biology during his B.Sc. studies at the Westfälische Wilhelms University in Münster, Germany and focused on cell signaling during mammalian development. He received his training in Virology at the department of Viroscience at Erasmus Medical Center Rotterdam, the Netherlands, during a M.Sc. degree program in Molecular Medicine. He was involved in experiments on the innate immune signaling of several Paramyxoviruses. He continued to work at the same institute during his PhD studies focusing on the transmissibility of zoonotic and pandemic influenza A viruses via the air using reverse genetics techniques and several animal models. His current research interests include the molecular characterization of viruses relevant for human health and the description of viral fitness parameters that play a role in pathogen evolution.

Cost Management

The Metabiota team and all partners will maintain an acute focus on cost management to ensure that the training is delivered at a reasonable cost to the government. Our team will provide full oversight of TMC to ensure accurate and responsive financial reporting and will facilitate cost savings to the Government wherever possible. Metabiota will follow procurement regulations ensuring the best price is received under the time constraints using all means available.

Budget Narrative

Period of Performance

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

The Period of Performance for this effort is May 16, 2015 to September 30, 2015.

Labor

Costs for direct labor to support this activity is required for the following personnel:

Metabiota SEA Program Manager, (b)(6), to oversee and execute the training to include management of deliverables, logistics, procurement, tracking of project requirements, and implementation.

Metabiota Training Coordinato (b)(6) to assist in coordinating the training, to include assisting in management of deliverables, logistics, procurement, tracking of project requirements, deliverables and logistics.

Duke NUS Trainers 1, (b)(6), to assist senior trainers in facilitating the training event, to include adaptation of materials, syllabus input, assistance in both practicum and hands-on field sampling events ensuring an appropriate ratio of trainees to trainers reinforcing safe handling procedures.

Duke NUS Trainers 2 (b)(6), to oversee development of training materials and syllabus, implementation of the training to include delivering classroom training and conducting and overseeing field sampling activities, to include facilitation of scientific engagement.

Duke NUS Trainers 3 (b)(6) to supervise training coordination and development, review, develop and adapt training related documents and deliverables, provide coordination with select trainers, as well as general research activities and facilitation of scientific collaboration.

Additional costs for direct labor supporting the Deputy Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials

Materials and supplies are required to support training efforts, to include training materials, bat capture and acoustic equipment, safe handling and bat capture supplies, PPE, bat and camel sampling supplies, laboratory reagents and consumables. Costs include shipping and customs clearance fees.

Translation Services are required to translate developed materials and provide interpretation services during the training events.

Conference Services are required, as a venue is needed for practicum section of the training events to house a total of 34 participants, 6 trainers, and additional Metabiota and CBEP

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

personnel attending the event. Conference services will include on-site catering to facilitate completion of the training within an efficient timeframe. As some meals will be provided, the per diem rates for all attending will be reduced accordingly.

Fit Testing is required to fit N95 masks on all trainees participating in the field-sampling portion of the event. Fit testing will be conducted and overseen by (b)(6) in addition to local support services provided.

TMC Global Professional Services will provide in-country logistical support services to support the training events. Services provided will include transportation, translation, payroll services, conference facilitation and catering, procurement and customs clearance.

Participant stipends will be provided for a 3-month period to cover the time spent on building a training curriculum and developing research activities as a result of this training. Deliverables for this activity will be provided to and coordinated directly with CBEP.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for trainers coming from Duke NUS for the period of performance for this engagement. Metabiota personnel performing on this project are already insured.

Subcontracts

A Subcontract will be issued to Duke NUS for time provided by their Trainers, as well as materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

At the request of DTRA, travel is required for (b)(6) Deputy Director of the AEP program and (b)(6) Southeast Asia Program Manager to travel to Almaty to oversee the implementation of the training.

Travel is requested to support all Qualified Trainers to facilitate implementation and conduct training activities in this effort. Trainers will be traveling from Duke NUS in Singapore to Almaty to conduct this training event.

Travel is also requested for 10 local participants based outside of Almaty that require support to attend the event.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP CENTCOM in the implementation of the Sample Collection and Diagnostics Training on Middle East Respiratory Syndrome (MERS-CoV) in Camels and Bats in Kazakhstan. Metabiota will ensure, through strong project management and risk mitigation that the training will be executed in an efficient and timely manner delivering a top quality course geared to support enhanced biosurveillance and biosafety efforts in the region.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Training Reinforcement: Mentoring and Physical Improvement to Improve Care and Notification Process

Assessments Before and After Training

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Executive Summary

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) has tasked Metabiota, Inc. through the Academic Engagement Partnership (AEP) contract vehicle with developing and delivering clinician training in Uganda. These events support accurate and rapid identification of infectious disease agents, which is an integral component of the disease reporting process and paramount for mitigation of epidemics. This initiative will support the preparedness and capabilities of clinical professionals operating in Uganda to reduce the threat of spreading causative agents of potentially dangerous diseases.

Detailed herein, the Metabiota team endeavors to fulfill this requirement through execution of continued training implementation of health practicioners in Uganda. Through the implementation of coherent training methodologies that are driven by on-the-ground experience and decades of expertise, as well as follow on engagements and deliverables, Metabiota is well positioned to support training activities and scientific engagement in the USAFRICOM's region of responsibility.

Project Overview

Introduction

Through AEP Technical Direction TD 008, DTRA CBEP tasked the Metabiota team to execute Clinician Training in Uganda. The overarching goal of the work outlined in this proposal is to bolster existing public health capacity in the region. The trainings outlined below will serve to improve the host countries abilities to detect, diagnose and report events with the potential to cause public health emergencies of international concern (PHEIC), especially those associated with U.S. Select Agents and Toxins, in accordance with World Health Organization (WHO) International Health Regulations 2005 (IHR 2005) and WHO African Regional Office (AFRO) / U.S. Centers for Disease Control (CDC) Integrated Disease Surveillance and Response (IDSR) systems.

District-level hospital workers require training in infectious disease detection and diagnosis in order to provide early notification of a potential PHEIC. District hospitals provide a substantial proportion of the initial emergency care and ongoing inpatient management of patients with infectious diseases. Strengthening the capacity of district clinicians to perform a differential diagnosis, and to use appropriate and available laboratory tests, will improve early reporting of diseases and, potentially, mitigate the risk of an epidemic.

Background

The Metabiota team understands that the US Department of Defense (DoD) initiated CBEP through DTRA in order to reduce the threat of biological outbreaks. The team further recognizes that to achieve its mission, CBEP works collaboratively with partner nations, U.S. Government agencies, and the international community to enhance disease surveillance capabilities; develop

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

human resource expertise in public and animal health, promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. Through the Academic Engagement Partnership (AEP) Program, Metabiota aims to support the CBEP mission of reducing the potential impact of biological threats through enhanced biological safety and security, awareness of biological risks, and knowledge related to biological pathogens.

In support of this approach, the Metabiota team, along with its partners, intends to administer high-value trainings that will support strategic CBEP objectives by strengthening the region's capacity to diagnose and detect diseases; thereby enhancing local management and mitigation of infectious disease events. The team's on-the-ground experience and decades of expertise makes us well positioned to support the implementation of these trainings and all of the associated activities, as well as scientific engagement in the AFRICOM's area of responsibility.

Purpose

The purpose of the Clinician Training requirement is to enhance the ability of Ugandan clinician's and healthworkers to recognize key diseases early, report them according to district and national protocols, and rapidly use laboratory support, as available, to confirm possible diagnoses. It is expected that this will help improve the timeliness of identification of unusual diseases and, ultimately, enable more rapid and better responses to disease outbreaks. Targeted training materials supported by on-site clinical mentoring, will assist in disease identification and reporting.

To accomplish this purpose, DTRA CBEP, through the AEP contract, will engage Metabiota and it's cadre of Subject Matter Experts (SMEs), Qualified Trainers (QTs), as well as project partners the IMAT/IMCI Alliance and Walimu, to implement the clinician training events in Uganda.

Objective

Metabiota will implement training activities in Uganda to bolster clinical capabilities for responding to and providing care for patients exposed to especially dangerous pathogens (EDP). Ensuring proper protocols are employed to manage potentially infected patients will ultimately mitigate the threat of further disease transmission. Investing in preventative clinical care capabilities will, ultimately, save lives and prevent potentially catastrophic economic outcomes, which can be associated with epidemics.

The project, initially approved in February 2015, included several objectives that have been completed (e.g., Objectives 1-3). This included adaptation of generic training materials and conducting gap analyses. All training materials previously provided to DTRA have been PAO approved, and have served as the foundation for implementation of training activities in Uganda (Objective 4).

Generic training materials provided via **Objective 1** serve as the foundation for training in all countries to be trained. However, it is recognized that each country may have unique needs related to endemic threats and their respective health care systems. **Objective 2** requires a gap

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

analysis be performed, which will characterize the existing health care infrastructure and identify endemic threats, including pathogens on the U.S. Select Agent list and those of concern to overall public health. Leveraging this information, a country-specific adaptation (**Objective 3**) of the WHO AFRO/CDC IDSR, which fulfills IHR requirements for disease reporting, will be developed and, ultimately, implemented (**Objective 4**).

Threat Reduction Outcomes

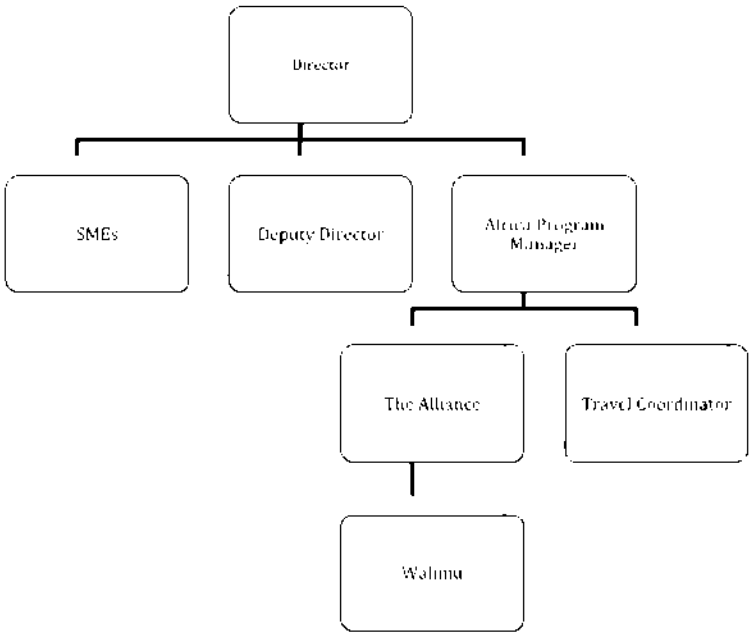
The proposed project seeks to improve health care infrastructure within Uganda. Specifically, the clinician training program will train in-country health workers to recognize, respond to, and report pathogens, which could cause epidemics and result in significant financial burden. Early identification and response will mitigate potential loss of human life and economic burden.

In addition to improving response to general diseases of concern to the host country, these trainings will provide information relevant to preparedness and response to potential VHF (Viral Hemhorraghic Fever) exposure, including Ebola, Lassa fever, and Marburg viruses, all of which are EDPs (Especially Dangerous Pathogens).

Increased biosafety acumen when working with pathogens, particularly EDPs such as VHFs, is a cornerstone of CBEP engagement. As part of the VHF training, health workers will be trained to properly implement biosafety protocols, including dawning and doffing personal protective equipment (PPE), as required by the agent in question. All engaged countries will be trained to follow internationally recognized reporting measures. In addition, as part of the materials adaptation process, gap analyses of the host countries health care system, including previously implemented trainings, will be performed. The gap analyses will be presented as reports, and information presented within them will help all stakeholders (e.g., USG and host country ministries) understand potential areas of future engagement to further bolster the host countries capabilities.

Management Approach

Introduction



Metabiota will continue to employ its existing organizational leadership to interface with the Regional Science Manager, and Country Manager, as needed to direct the operational and administrative support required to ensure successful and timely execution of all Clinician Training events in Africa. Our Program Manager will maintain oversight of training execution, with the support of a travel coordinator, Research Collaborators and Subject Matter Experts to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the Program Manager, Project Coordinator, Travel Coordinator and the Teams Research Collaborators and Subject Matter Experts that will be tasked with specific assignments to support the development and implementation of training events based on their

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

administrative and scientific expertise. This team includes experts from the Alliance and in-country implementer, Walimu. The Alliance and Walimu will utilize their in-country expertise and engagement with local stakeholders to ensure successful training events. Our team of experts will maintain the overall project management and tasks associated with the training are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

Execution

The project management team will continue to maintain oversight and implementation of the project at all times and will ensure rapid execution of all training events, tracking objectives to ensure the project stays on schedule to complete the training exercises. The project will be managed according to the continual implementation plan and will be course corrected, as needed, to ensure target end-goals are reached. The following tools will be used to guarantee the project schedule will be maintained:

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Project Administration:

1. Weekly team meetings and conference calls will continue to be held to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Coordinator and will include the PM, SME, Scientific Mentor and AEP leadership, as needed based on the requirements and stage of implementation.
2. Routine calls and communication via email will continue with CBEP regional leadership and Metabiota to provide routine status updates and ensure training implementation.

Project Reporting:

1. Weekly status reports will continue to be provided by the PM to senior Metabiota leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction, as needed to ensure training goals are met.

Monitoring and Controlling

1. Routine risk assessment will continue to be performed internally among the Metabiota project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with CBEP regional leadership to ensure the project remains on track and is implemented according to standard.
3. Routine oversight and coordination will be maintained to ensure CLS is performing in-country logistical requirements, when necessary, to ensure successful execution of the training.

Completion

Maintaining a focused project schedule with routine meetings and communication with CBEP regional leadership allowing for continued coordination, while maintaining targeted objectives. Metabiota will drive the project to completion through the determined project end-date. Metabiota will provide the required deliverables of clinician training trip reports. Metabiota believes that the experience and management it will bring to this project, in collaboration with CBEP will guarantee success.

Technical Approach

Introduction

To facilitate effective training of health workers in Metabiota, and its partners the Alliance and Walimu, will employ the IMAI training materials, which are comprised of the following: 1) WHO IMAI District Clinician Manual (DCM), 2) pocket guidebook, and 3) Quick Check wall charts. The intended purpose of these materials is three-fold: to improve district hospital clinical management and surveillance of key notifiable diseases by the involvement and preparation of clinical teams for disease recognition; implement sustainable practices for case management of

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

severely ill patients; and to ensure that proper reporting procedures are in place, which align with international standards (IHR).

Of particular importance, the training materials include the new WHO IMAI DCM, which outlines and provides reference for 1) triage training, 2) emergency treatments, 3) management of severely ill patients of any etiology, and 4) the clinician's role in surveillance of diseases with epidemic potential (called the Quick Check+ training curriculum). On-site clinical mentoring and quality improvement activities, as well as ongoing monitoring and on-site evaluations will further support training.

In addition to providing a simplified algorithm for emergency triage, assessment and treatment, and the ongoing management of severely ill adolescent and adult patients, the evidence-based WHO manual integrates the identification of notifiable, epidemic-prone diseases within a case management approach based on support for clinical reasoning using differential diagnosis. The manual's differential diagnosis tables include the important notifiable diseases with case definitions and a chapter on disease reporting, which lists all IDSR notifiable diseases and indicates the section of the IMAI DCM where they can be found. The disease-specific sections focus primarily on case definition, diagnosis based on clinical and laboratory features, guidance for specific empirical treatment(s) and supportive care, assessment of response to treatment, and instructions on when to report. Importantly, the IMAI septic shock guidelines have been incorporated into the viral haemorrhagic fever (VHF) pocket guides, which will be used in VHF epidemic-prone areas of East and West Africa.

Derived from the IMAI DCM product is a participatory training course, Quick Check+, which addresses emergency triage and treatments for adults. This course trains the clinical teams to support the triage, emergency management, and infection prevention and control of severely ill adolescent and adult patients, who present with severe acute respiratory infections, VHFs, or other communicable diseases. The short disease surveillance course and reporting training module, used within the clinical training course, has the advantage of effectively engaging busy clinicians and hospital managers for disease reporting and has been very well received in this context. Training all relevant cadres (nurses, managers, and auxiliary staff, in addition to district clinicians such as medical doctors, general practitioners or other senior clinical cadres) within the district hospital helps ensure implementation after training utilizing the following:

- Engaging hospital managers who are key in planning and supporting the budget and organization requirements for improved care and reporting
- Recognizing the important role of senior clinical nurses in providing care during most hours of the day
- Supporting the role of auxiliaries in their contacts with patients, triage, and community linkages

The interventions will be implemented through the following mechanisms:

- Provision of country-adapted guidelines (country-adapted versions of the WHO IMAI DCM and Hospital Care for Children) to participating healthcare workers;

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

- In-service training;
- Mentoring/quality improvement interventions on a regular basis after training, with mentors able to address both pediatric and adult care, infection control, and disease surveillance issues.

The approach encompasses a combination of two training activities for the participatory Quick Check+ training for clinical teams: a four-hospital clinical team training and in-hospital training for the entire clinical staff in a single hospital. Importantly, integration of these trainings will be done in a manner that will not overwhelm recipients and in a way that will be sustainable by health care systems within respective countries. In addition to implementation of trainings a follow-up mentoring schedule will be determined based on the needs of a given country.

Training Implementation

Since the initiation of this effort in early 2015, eleven training events and mentoring visits have occurred that include regional trainings of up to 4 hospital teams, and Train-the-Trainer activities. The average training has encompassed 33 participants and has been comprised of clinicians, nurses, and hospital administrators. Regions within Uganda that have hosted these trainings include Hoima Regional Referral Hospital, Mubende Regional Referral Hospital, and Kiboga General Hospital.

An additional 25 training events utilizing the IMAI Quick Check+ materials have been scheduled throughout Phase 1 (11 events) and Phase 2 (14 events) periods of performance (Table 1), encompassing Regional, In-hospital, and Train the Trainer (TOT) activities. Many of the Regional trainings run concurrently encompassing a pre-defined Region One and Region Two cohort of participants.

The Regional and In-Hospital courses will be conducted in several classrooms for managers, district clinicians, nurses and auxiliaries, with the clinical team from each hospital. Practical sessions will include putting on personal protection equipment, case scenarios with expert patient-trainers, and facilitation skills. During the initial training event, potential future trainers will be identified based upon their test scores and competency in the practical sessions. These participants will receive Train the Trainer instruction during a unique training event. The overall goal of the the TOT training is to increase the pool of competent hospital and regional facilitators in which the Quick Check+ course may be independently provided, thus improving the region's capacity for disease detection and treatment.

The schedule and cost proposal include training events for May, June, and July, which have been previously scheduled and approved. At the time of proposal development and submission (10 June 2015), the May training events (2) had been completed and implementation of the first June training event had begun (8 June 2015). To this end, of the 11 scheduled training sessions for Phase 1, three were completed or underway, leaving eight remaining events. At this time, Training Event Plans have been submitted and approved for all remaining scheduled trainings shown in Table 1.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Table 1. Updated Training Schedule

Phase	Start Date	End Date	Activity (ToT, Regional, or In-Hospital)	Region	Number of Hospitals to assess/train	Location	Facilities
1	20-May-15	23-May-15	ToT	Arua	NA	Arua RRH	NA
1	25-May-15	29-May-15	Regional	Arua	5 hospitals	Arua RRH	Arua; Koluvo Church of Uganda; Holy Family Hospital Nyapea; Angal St. Luke's; Nebbi
1	8-Jun-15	12-Jun-15	Regional	Arua	4 hospitals	Arua RRH	St Joseph's Maracha, Yumbe; Moyo; Adjumani
1	6-Jul-15	10-Jul-15	In-hospital	Rwenzori	1 hospital	Fort Portal RRH	Fort Portal RRH
1	23-Jul-15	25-Jul-15	ToT	Kabale	NA	Kabale RRH	NA
1	27-Jul-15	31-Jul-15	Regional	Kabale	4 hospitals	Kabale RRH	Kabale RRH; Rugarama, Kambuga; Bwindi
1	27-Jul-15	31-Jul-15	Regional	Kabale	4 hospitals	Kabale RRH	Kisoro; Mutolere; Kisiizi; Nyakibale
1	6-Aug-15	8-Aug-15	ToT	Mbarara	NA	Mbarara RRH	NA
1	10-Aug-15	14-Aug-15	Regional	Mbarara	5 hospitals	Mbarara RRH	Mbarara RRH; Ibanda; Itojo; Ishaka Adventist; Mayanja Memorial
1	10-Aug-15	14-Aug-15	Regional	Mbarara	4 hospitals	Mbarara RRH	Comboni; Kitagata, Kuharo Mission; Rushere Community
1	27-Aug-15	29-Aug-15	ToT	Gulu	NA	Gulu RRH	NA
2	31-Aug-15	4-Sep-15	Regional	Gulu	4 hospitals	Gulu RRH	Gulu RRH; Kalongo; Lacor; Gulu Military
2	31-Aug-15	4-Sep-15	Regional	Gulu	3 hospitals, 1 HC IVs	Gulu RRH	Kitgum, St. Joseph's, Anaka
2	24-Sep-15	26-Sep-15	ToT	Masaka	NA	Masaka RRH	NA
2	28-Sep-15	2-Oct-15	Regional	Masaka	4 hospitals	Masaka RRH	Masaka RRH; Villa Maria; Lyantonde, Kitovu
2	28-Sep-15	2-Oct-15	Regional	Masaka	2 hospitals, 2 HC IVs	Masaka RRH	Rakai, Kalizo, Kalangala HC IV; Ntuusi HC IV
2	22-Oct-15	24-Oct-15	ToT	Lira	NA	Lira RRH	NA

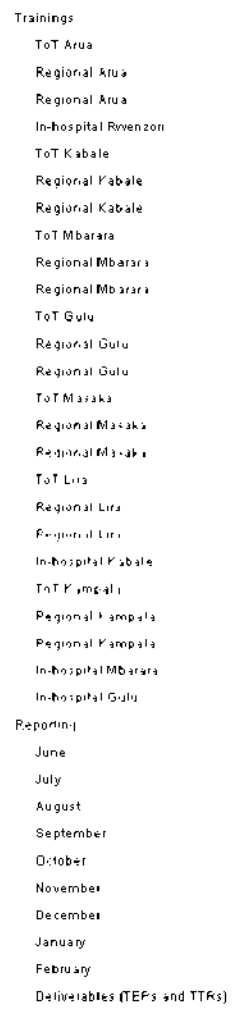
2	30-Nov	4-Dec	Regional	Kampala	5 hospitals	Naguru RRH	Naggalama; Nakaseke, Nakasongola; Entebbe
2	11-Jan	15-Jan	In-hospital	Mbarara	1 hospital	Mbarara RRH	Mbarara RRH
2	1-Feb	5-Feb	In-hospital	Gulu	1 hospital	Gulu RRH	Gulu RRH



The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Communications Protocols

Metabiota will maintain open communications with international collaborators necessary for implementing the training, to include regional partners facilitating the training engagement and logistics. In addition, Metabiota will maintain routine communication with CBEP to ensure they have full visibility on the training engagement, status and process of execution.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Timeline

Deliverables

- Submission of the TEP, Travel Authorization and CCRs for each training event.
- Submission of TTRs (Travel Trip Reports) five days after training completion.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Risk Management

In order to maintain course action and guarantee trainings that will reduce regional risk and forward CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed below:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost						
Technical Direction NTE Ceiling	The current budget with events, travel, management, procurement, and execution will exceed the ceiling for the technical direction	5	4	(b)(4); (b)(6)	Metabiota will monitor costs and work diligently to seek out the lowest costs possible for procurement and travel, as well as mitigate extended labor hours during events	**Med-High**
Inadequate funds to meet end-state program objectives	Per the LOTD, Metabiota is only to propose activities through August. The Alliance has developed a comprehensive training schedule to ensure information is effectively dissiminated and institutionalized	4	4		A subsequent budget has been proposed, allowing the Alliance to continue trainings through February. Approval of this budget would allow for additional trainings and post training mentoring/evaluations to occur.	Med
Schedule						
Submission of CCRs and TEPs	The CCR deadline is 45 days prior to travel and the TEP deadline is 60 days prior	2	5	**Med-High**	Team shall adhere to all State Department travel safety guidelines for each region.	(b)(4); (b)(6)
Project Coordination	Team dispersed over several timezones engaged in execution of training and mentoring events. Many events occuring per month	3	4	**Med-High**	Hold routine calls with regional and country leadership, and collaborators, as needed to understand and implement technical requirements and ensure communication across the training events. Continually capture lessons learned to build upon effective communications.	
Performance						

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Safety and Security	Regions of Africa are considered a high threat for terrorism. Crime is a consistent threat.	3	5	**Med-High**	Team shall adhere to all State Department travel safety guidelines for each region.	Med
Logistics Coordination	There are a lot of moving pieces to get all equipment, trainers, facilities, and trainees in position to execute training on the required timeline	3	4	**Med-High**	Communicate with CLS frequently to ensure in-country support is achieved, with local vendors.	(b)(4); (b)(6)
Unified Goals	Ministries of Health and Regional CDC and other NGOs differ in independent objectives and scope.	4	3	Med	Metabiota will engage all local Ministries and Organizations as groups and individually, to ensure communication and unification of objectives	
Participant Engagement	Several cultural differences exist in Africa that impact their ability to engage. These differences include. expected renumerations. levels of accomodations, and gender disparities.	3	3	Med	Metabiota will research each country and region that activities will occur to determine presence of cultural uniquenesses, and strategies to overcome potential obstacles to participant attendance.	

Identifying and acknowledging the risks associated with not implementing this training, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix (above).

Cost Management

The Metabiota team and all partners will maintain an intense focus on cost management to ensure that the training is delivered at a reasonable cost to the government. Our team will ensure accurate and responsive financial reporting and will facilitate cost savings to the Government wherever possible. Metabiota will follow procurement regulations ensuring the best price is received under the time constraints using all means available.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Budget Narrative

Period of Performance

The technical narrative captures activities required to effectively bolster capabilities of clinical personnel working in hospitals throughout Uganda. A period of performance has been proposed, which exceeds guidelines presented in AEP Letter of Technical Direction 008 (TD-008). To this end, Metabiota has provided two budgets: 1) Captures activities defined by TD-008 (ending 31 August 2015) and 2) Optimal period of performance to accomplish end-state objectives (ending 28 February 2016)

Labor

The labor budget is focused on overall program management, material enhancements, training, mentoring and monitoring after training in an effort to expand improvements in case recognition, reporting, clinical care and infection control to more hospitals.

The Alliance brings a wealth of clinician training experience, which is specialized for working in the developing world. Given the relative newness of this organization and considering their origins were based out of non-governmental organizations, the Alliance will require assistance navigating aspects of coordination with the Prime contractor (Metabiota) and the Client (DTRA), including program management, scheduling of training activities, and Contract Data Requirements Lists (CDRL; Training Event Plans, Training Activity Reports, Monthly Progress Reports, etc). To this end, Metabiota is proposing a program management team, consisting of Program and Training Managers, to continue supporting the Alliance with implementation of objectives in Uganda, as outlined within this scope of work.

Costs for direct labor to support this activity is required for the following personnel:

Program Manager(s): All aspects of program operations and administration, material adaptation, management of training, and implementation will be overseen by the Program Managers (PM) for Metabiota and the Alliance. The PM's will manage cost, schedule and performance of the program, including all required DTRA CBEP deliverables.

(b)(6) (Metabiota Program Manager): Of the 740 PM hours proposed, 148 hours were proposed for Mr.(b)(6) This estimate is based actual hours charged for Clinician Training through the AEP base period. Mr.(b)(6) is responsible for ensuring that all performers are compliant to the Department of Defense regulations (e.g. FAR). Additionally, Mr.(b)(6) is responsible for the managing submission of all programmatic deliverables (e.g. CDRLs), and is also tasked with monitoring the performance of the subcontractors (e.g., Alliance and Walimu), ensuring that the CLS requests are submitted for trainings, communication and approval of all

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page

travel requests from the subcontractor.

(b)(6) (Alliance Program Manager): Of the 740 PM hours proposed, 592 hours were proposed for Ms. (b)(6) This estimate is based actual hours charged for Clinician Training through the AEP base period. Moreover, the proposed hours will support the Alliance's management of in-country training and coordination with their local partner Walimu, as well as other Ugandan stakeholders. Additionally, Ms. (b)(6) serves as the interface between Alliance and Metabiota as well as the interface between Alliance and Walimu. She is tasked with ensuring that the trainings stay within budget, on schedule, and within scope. She will also be responsible for the management of documentation and provision of deliverables – including monthly reporting and invoicing.

SME III, II and I: In preparation for training delivery and implementation in Africa, Metabiota Program staff will work closely with Dr. (b)(6) and her team, which include a cache of physicians with decades of experience operating within Africa, on collaborations and engagements with the MoH of Uganda. Dr. (b)(6) 's team of SME's will engage with the in-country subcontractors, "Walimu", for further competency building. Using their in-depth scientific and medical expertise, our SME's will review and provide input to training reports and materials.

SME 3 (3 individuals): Drs. (b)(6) hours are based upon a calculation of the technical requirements for assistance at each step of the introduction and implementation process for regional training events in Uganda.

In addition to their implementation responsibilities, SME 3s are tasked with the ongoing adaptation and re-development of training materials. These individuals bring a significant depth of clinical expertise and experience in clinical instruction, training, and mentoring. Their estimated labor breakdown is as follows:

Dr. (b)(6) 332 hrs
Dr. 22 hrs
Dr. 222 hrs

Dr. (b)(6) has spent the majority of his time, since 2006, working as a researcher, instructor, and clinician in Uganda. His primary research focus is on the management and pathogenesis of patients hospitalized with sepsis syndromes, primarily at two Ugandan government hospitals – Mulago National Referral Hospital and Masaka Regional Referral Hospital. In addition, he has been a consultant for WHO working and writing groups, which focus on improving the management of critically ill patients in austere settings. Dr. (b)(6) will bring hands-on regional experience and mentor local clinicians, in addition to serving as a core trainer, to the program.

Dr. (b)(6) is an emergency medicine doctor and is affiliated with Maimonides Medical Center. She received her medical degree from University of Michigan Medical School and has been in

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page

practice for 15 years. In addition to serving as a core trainer and mentor, Dr (b)(6) will be involved in the continuing adaptation of the Quick Check+ training program by incorporation of regional knowledge from participants

Dr. (b)(6) serves as the Director of Research and Global Emergency Medicine at Carolinas Medical Center. Since 2009, D (b)(6) has provided leadership and support for the development of emergency medicine in Sub-Saharan Africa. This effort included training and bedside teaching of dozens of local physicians and nurses at Muhimbili National Hospital in Tanzania. Dr (b)(6) will provide clinical quality control expertise, planning, and training evaluation to the training program.

SME 2 (2 individuals): Drs (b)(6) 's hours are based upon the calculation of the instructional requirements for the training events. Their estimated labor breakdown is as follows:

Dr. (b)(6) 444 hrs (75%)
Dr. 148 hrs (25%)

Dr. s an assistant professor of clinical tropical medicine in Tulane's Department of Tropical Medicine, but is based in Lima, Peru. She has been working with the World Health Organization and spent part of September 2014 traveling to Sierra Leone to provide technical assistance in Ebola case management and training. In addition to functioning as a core trainer, she will continue to develop clinical training materials to improve the training and safety of health workers in Uganda in this program.

Dr (b)(6) s a pediatrician and is affiliated with multiple hospitals including Northridge Hospital Medical Center and Providence Holy Cross Medical Center. She received her medical degree from Allegheny University of the Health Sciences and has been in practice for 17 years. She has worked with the Alliance team since 2004, initially in the development, field-testing and scale up of the learning program in Uganda. Dr (b)(6) involvement also will include training doctors, nurses, managers and auxiliary staff working at the district hospitals.

SME 1 (3 individuals/Local Nationals): Drs. (b)(6) and (b)(6) s hours are based upon the number of proposed training event days, as they will serve as lead local trainers for the implementing Alliance partner in country "Walimu".

Commented [TREC2]: Recommended redactions:

Exemption 3 (10USC130c)
Foreign partner names and titles

Dr (b)(6) is a pediatrician and a public health specialist. He served as the Director of Health Services for the Ministry of Health Uganda. He has worked as a Lecturer in the Dept. of Pediatrics and child Health, Makerere University Uganda, and is the President of Uganda Medical Association. Dr. (b)(6) serves as a lead instructor for train the trainer (ToT) events and evaluates student's performances on clinical exercises.

Drs (b)(6) are both local physicians and health specialist

in Uganda. They will serve as lead trainers for regional trainings.

Scientific Mentor: Assistance with overseeing the training events, mentoring local nationals, and providing recommendations for additional material content will be guided by the Scientific Mentor. As a leader in their field, the Scientific Mentor will support collaborations between groups both regionally and internationally. On mentoring visits, the Scientific Mentor will work with hospital staff and administrators to identify barriers to reporting notifiable conditions and to improve triage of severely ill patients and their effective case management.

Research and Data Analyst: Support of the programs' research, data entry and analysis will be provided by the Reseach and Data Analyst (RDA). The RDA will also support material and deliverable production and submissions. Organization of program documents, and archiving of materials will be an important responsibility of the RDA. The RDA will also assist in the management of internal and stakeholder meetings and execution.

(b)(6) Research and Data Analyst; RDA): Ms. (b)(6) will be instrumental in supporting project coordination and objective completion for Metabiota. Ms. (b)(6) will serve as a point of contact to facilitate daily communications with performance subcontractors, as has been required atsupporting the project's logistics, communications, and deliverable production. These hours are required for supporting the production, submission, and archiving of all program documents. In addition to these responsibilities, Ms. (b)(6) will regularly brief and coordinate with the program manager to ensure schedule adherence. Lastly, Ms. (b)(6) will liaise with Metabiota's Travel Coordinator to provide information garnered through communication with the Alliance and Walimu to support project implementation. Execution of all travel logistics (e.g., booking flights, ground transportation, lodging, securing visa's, etc.) falls within the scope of Metabiota's Travel Coordinator.

Additional costs for direct labor supporting the Deputy Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 Program Management Office.

Collectively, the aforementioned personnel will coordinate efforts to support the following activities:

Training and Mentoring After Training

A substantial number of training courses will be carried out using several approaches to training – a training for clinical teams from district hospitals (usually at the regional hospital), in-hospital training for larger hospitals. Several facilitator ToT short courses would be conducted for 3 days prior to clinical team training.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page

Training Reinforcement: Mentoring and Physical Improvement to Improve Care and Notification Process

Facilitators on mentoring visits will work with hospital staff and administrators to identify barriers to reporting notifiable conditions and to improve triage of severely ill patients and their effective case management. Examples of physical improvement which fit within a modest budget include adding signs and trolleys to improve patient flow in the emergency area, physical modifications to isolate infectious patients and locate severely ill patients near the nursing station, adding secured blood pressure cuffs and thermometers to identify severely ill patients, and tools such as clipboards and notice boards to ensure records are retained and organized for accurate reporting. Clinical training facilitators and Alliance staff will deliver the package of hospital improvements and ensure staff are capable of conducting case notification through the Uganda DHIS 2 health management information system.

Assessments Before and After Training

Facility assessments use a standardized questionnaire and surveyor observations, which complement the WHO/USAID SARA-H hospital assessment (which lacks questions on adult emergency triage and management of adult severely ill patients). In addition, an on-site clinical observer with data entry capacity will conduct case observation and observe success in reporting notifiable diseases and improving case management at the hospital before and after the training. Data will be collected on low-end smartphones and reported through Commcare, a tool used by the WHO, Brac, PATH and Partners in Health among others and supported by USAID and the UN and Gates Foundations, among others. The data is analyzed using the DHIS 2 software, a health management information system used by the MoH in Uganda.

The Alliance is committed to capacitating national staff and supporting their substantial role during in-country project management, as well as, utilizing them as a source of subject matter expertise and clinical facilitation and mentoring.

Materials

Communications

Cost for international cell phone services and data plans, airtime for project staff, laptop modems for country team laptops required to establish a reliable and stable Internet connection for reporting and other online needs, to include maintaining communication in remote areas.

Printing

Printing of all necessary training materials will be managed by Walimu and the Alliance.

Office and Medical Training Materials

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

These materials, supplies, and minor equipment will be used for implementing training, as well as programmatic coordination between management in the US and Kampala, Uganda. Minor office supplies include computer equipment such as laptops, docking stations, large screens, printers, scanner, photocopier, and software.

Each trained clinical team is provided with a pulse oximeter for individual clinical use/further training of other clinicians in hospital and a hospital-grade pulse oximeter with replaceable probes. No single piece of equipment exceeds $5,000.

The aforementioned items were used during training sessions that have been previously implemented. However, additional Tablets are procured for each new training site. As discussed in the Training Event Logistics (below) and depicted in the Project Timeline (above), training for three regions (rows 2-8 Project Timeline) have been or will be completed. Additional equipment will be required for implementing trainings in new regions (rows 9-12 – Project Timeline) of Phase 1. Additional equipment will be required if/when approved to implement activities beyond August (e.g., Phase 2).

The provided tablets contain an eBook version of all training materials, including the VHF pocket guide, as well as applicable photos and charts, which were employed for the training event at each hospital. The tethering is required to discourage theft and illegal resale, as Uganda has a significant amount of criminal activity. The intended disposition of the property is that it remains with each designated hospital to support the technical collaboration needed for ongoing learning and back up, in addition to mentoring visits.

Training Event Logistics

Conference Services are required, as a venue is needed for practicum section of the training events to house participants, trainers, and additional Metabiota and CBEP personnel attending the event. Conference services will include on-site catering to facilitate completion of the training within an efficient timeframe.

To date, the Alliance managed all training costs, including venue, food, per diem, transportation (for facilitators and participants), training supplies, projectors, communication costs, and all printing needs as well as their shipment and clearance into country and delivery to the training venues, as allowed in the originally approved proposal. Metabiota will transition the training logistics costs to CLS for scheduled August trainings, as well as all Phase 2 trainings, if approved/awarded. However, June and July training events have been scheduled and approved, making the involvement of CLS challenging due to an extremely short suspense.

Phase 1 (16 May – 31 August) includes 11 unique training events occurring in 5 regions of Uganda (rows 2-12 – Project Timeline). All trainings within the regions of Arua, Rwenzori, and Kabale (rows 2-8 – Project Timeline) have been or will be completed without the utilization of CLS, as was approved in the original proposal. Metabiota submitted their response to the

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Letter of Technical Direction 008 (Clinician Training in Uganda) on 10 June 2015. Due to the compressed timeframe associated with proposal development and submission, and to ensure continued implementation of training events prior to August, Metabiota budgeted for support of five training events (e.g., all June events). The aforementioned costs would cover logistical support services due to the compressed schedule of execution. Transitioning in-country logistical support to CLS in August allowed for compliance with regard to development and submission of the necessary CLS forms. CLS will be utilized for logistical support services of Mbarara and Gulu trainings, encompassing 4 trainings in two locations (rows 9-12 - Project Timeline). Implementation of any/all Phase 2 training events would leverage CLS for in-country logistics support.

Shipping costs

All materials procured within the US will be shipped to Uganda via CLS' Single Shipper mechanism. Shipping costs for movement of training materials and supplies generated or procured in Uganda have been budgeted and will be managed by Metabiota, the Alliance, and Walimu.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA costs were based o(b)(6) f the total compensation for all personnel when operating in Uganda.

Subcontracts

A Subcontract will be issued to the Alliance for time provided by their Trainers, as well as materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget. A detailed description of labor hours associated with the Alliance subcontract, as they relate to Program Management, Material Development and Adaptation, and Training Implementation can be found below:

Program Management (Alliance)

Of the 5,180 hours proposed under Training Material Development, Adaptation, and Implementation, 1,036 hours were budgeted for Alliance Program Management, which will include management and oversight of all Alliance programmatic responsibilities. The remaining 4,144 hours were budgeted specifically for Development and Adaptation, and Implementation, as described below.

Development and Adaption (Alliance)

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page

Training materials have been developed; however, as real-time feedback is received from ongoing trainings, the Alliance and Walimu are identifying potential gaps in information, which require some level of further development (or adaptation).

Of the hours proposed, ~444 hours were budgeted for further adaptation of training materials (see SME 3 narrative below). They will utilize course surveys and interview sessions with participants to adjust for regional relevance regarding the training materials. These activities will take place throughout the PoP and will be executed in real time.

Implementation (Alliance and Walimu)

Of the hours proposed, ~3700 hours were budgeted for implementation of training activities. Briefly, the (2) SME 2s and the (3) SME 1s will focus 100% of their labor on the implementation of the training materials; to include lecture session, workgroup exercises, pre and post testing of participants, and collection of the surveys. Of note, Dr. (b)(6)'s hours (1,332 SME 3 hours) were budgeted to support both adaptation and implementation activities, but included to the 3,700 hours for training implementation.

A breakdown of hours allocated between the Alliance and Walimu can be found below:

Phase 1 (PoP 16 May - 31 August)

Alliance: 2073 hours
- 1036 hrs Alliance Program Management
- 1037 hrs SME Hours budgeted for continued implementation / adaptation, as needed, of training materials

Walimu: 3108 hours
- Estimated hours required for implementing all scheduled trainings through August.

Phase 2 (PoP – 1 September 2015 - 28 February 2016)

Alliance: 2733 hours
- 1560 hrs – Alliance Program Management
- 1173 hrs – SME – Hours budgeted for continued implementation / adaptation, as needed, of training materials

Walimu: 4255 hours
- Estimated hours required for implementing all scheduled trainings through February.

Overall, Metabiota will be responsible for the contracting component of this effort – ensuring DTRA compliance of our in-country performers.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page

Travel

Travel is requested for Metabiota and Alliance personnel to travel to and within Uganda to continue implementation of clinician training activities. Personnel will be providing programmatic, administrative, operational, and technical ovesite (as described in the Labor Section of this narrative) to ensure trainings are implemented efficiently. Updated budgets for Phase I and Phase II have been submitted with this proposal to reflect anticpated travel needs associated with project implementation. Prior to execution of travel, a cost estimate will be provided to the AEP COR for review and approval.

The eight trips proposed for Metabiota align with training events that occur in every location (two locations will be used as training grounds twice – Gulu and Mbarara). Metabiota will be visiting each training sight once to ensure the maintenance of compliance to DOD regulations at each site.

For each event, two travelers from Metabiota will attend, with one traveler from the Alliance. The specific purpose of attendance by Metabiota is to ensure programmatic oversight and execution. One program manager and one SME/Trainer will attend and provide daily reports on the training, which will be consolidated into each Training Trip Report (TTR). The Alliance will send a program manager to oversee the trainers and the coordination of each event.

The trips differ in length due to the trainings that will occur at each region. For example, many events include two regional sessions, and also a Train the Trainer session, and will be longer than an event that is only in-hospital training.

Metabiota will submit CLS forms requesting travel logistics support when, and if, it is required for project participants (e.g., Trainees).

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP AFRICOM in the implementation of the Africa Clinician Training. Metabiota will ensure, through strong project management and risk mitigation that the training will be executed in an efficient and timely manner delivering a top quality course geared to support enhanced biosurveillance and biosafety efforts in the region.

Team Metabiota Overview

Metabiota is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota currently supports a number of Cooperative Biological Engagement Program (CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. Metabiota's mission aligns well with CBEP and the entire Metabiota team is focused on supporting our USG Partners in reducing the risk of biological threats worldwide, and employs a collaborative and agile approach to biological risk reduction.

To ensure a successful event, Metabiota, in coordination with CBEP regional leadership and in country partners have built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact CBEP objectives.

Metabiota will continue to engage the Alliance for implementation of the aforementioned objectives. TheAlliance is a US based non-profit non-governmental organization (NGO), which includes institutions and individuals involved in the development, country adaptation, and implementation of the IMAI training materials, which aim to improve disease recognition, case management of severely ill patients, and reporting of notifiable diseases in coordination with WHO standards and regulations. The Alliance works closely with WHO headquarters, AFRO and theWHO in country offices, allowing for quick in roads and rapid implementation to most developing nations, including countries in East and West Africa. The Alliance already has an established footprint in Uganda and has support from the clinical services staff in the Ugandan Ministry of Health (MoH).

The Alliance includes Walimu, a US and Ugandan based NGO, which is currently supporting the implementation of training in Uganda. Walimu is a non-profit organization made up of physicians from Uganda and the US, working to improve medical are in Uganda. Their vision to empower Ugandan health officers to address local problems in innovative ways, which will lead to the transformation of medical training and patient care to meet international stnadards of excellence. As a collaborator with the Alliance, Walimu serves as a bridge to Alliance-related activities and their execution in clinical services.

Team Metabiota Overview

Metabiota is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota currently supports a number of Cooperative Biological Engagement Program (CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. Metabiota's mission aligns well with CBEP and the entire Metabiota team is focused on supporting our USG Partners in reducing the risk of biological threats worldwide, and employs a collaborative and agile approach to biological risk reduction.

To ensure a successful event, Metabiota, in coordination with CBEP regional leadership and in country partners have built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact CBEP objectives.

Metabiota will engage Gryphon Scientific in direct support of this event to provide technical support in development and implementation of the workshop. Founded in 2005, Gryphon Scientific is a specialized small business consulting practice comprised of life scientists and health researchers who apply rigorous scientific analysis to problems of global health and homeland security. Their projects drive policy changes in security, preparedness, and science policy at the highest levels of US government. Abroad, they advise governments in the developing world on how to cope with daunting public health challenges. In the commercial sector, they contribute to business strategy for firms focusing on human health and wellness. Their aim is to improve the health and safety of populations world-wide.

In addition to working with Gryphon Scientific, Metabiota will coordinate directly with in-country partner The Royal Scientific Society (RSS). The RSS is the largest applied research institution, consultancy, and technical support service provider in Jordan and is a regional leader

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

in the fields of science & technology. RSS provides expert testing services via 25 specialised locally & internationally accredited laboratories and prides itself on offering both the public and private sectors a unique scientific resource and a wide range of project expertise. Supported by

more than 500 science specialists, researchers, technical support staff, highly skilled management, and faculty, the RSS has truly become recognized as a local, regional and international research and development hub. Born out of the great heart and spirit of His Majesty the Late King Hussein and HRH Prince Hassan in 1970, the RSS has, since day one, aimed high to be the local and regional reference point of knowledge for science and technology using modern engineering research as a base to power economic development and social progress. With the vast expertise accumulated by the Society over the years, it has established itself as a pioneer within the broader international scientific community. RSS laboratories enjoy close personal co-operative ties with local, regional, and international scientific organizations. At RSS being customer–centric simply means having an unwavering commitment to the people of Jordan. The RSS continuously strives to improve its standing as a point of reference for scientific knowledge and technical awareness, where quality standards and public health become equal and totally uncompromised.

Project Overview

Introduction

Through AEP Technical Direction 004, DTRA CBEP USCENTCOM Regional leadership tasked the Metabiota team with administering a workshop on Epigenetics and Genomics of Infectious Diseases to enhance cooperation and collaboration within the Middle East South Asia (MESA) region. The desired event is multi-faceted and will include plenary talks, topic-focused sessions, poster sessions, and training sessions. The plenary talks will highlight recent advances in epigenetics, genomics, and the technologies and skills needed to study epigenetics. The topic focused sessions will provide opportunities for participants to learn about specific areas of research, such as epigenetics regulation of host immune system genes by bacterial toxins. The poster sessions will allow scientists to identify prospective partners for research cooperation. Finally, the training sessions will describe processes of initiating and maintaining international scientific collaboration, grant writing, and risk analysis.

Background

For more than two decades, researchers in the U.S. and other countries have studied the causes of pathogen infection, the human immunological response to pathogens, and ways in which pathogens control their hosts to maximize infection and transmission. Although early studies were carried out using standard microbiological techniques, the burgeoning fields of genomics and epigenetics have contributed to more thorough, investigative studies on host response to infection by different types of pathogens, including those in the especially dangerous pathogen category.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Genomics refers to the study of structure, function, and mapping of all genetic information. With the sequencing of the human genome (along with the sequencing of genomes of several organisms), scientists have been studying the purpose and function of elements in noncoding and coding sections of the genome within a healthy system and a diseased or infected system. Numerous studies have been published describing pathogen co-option of the host cellular machinery and regulation of the host genome and proteome to facilitate replication and pathogenesis of infectious agents. These studies were significantly enhanced as scientific tools and software were developed to analyze large genomic (and proteomic) changes caused by pathogen infection.

Over the past few years, a growing body of literature has described regulation of histones and chromatin structure as a primary way in which pathogens control host transcription of critical immune response genes.[1] This type of regulation to alter transcription of specific DNA messages is part of a larger set of regulatory mechanisms that change when and how DNA is made without changing the nucleotide sequence. Together, these mechanisms comprise the field of epigenetics.

Epigenetics refers to the modification of DNA that does not involve changes to the DNA sequence, but could be passed on to future generations. Examples of epigenetic (or, outside the DNA) changes include methylation of DNA or RNA, regulation of histones, microRNAs, and small RNAs. Although not sequence based, these changes affect if a gene is made or how the resultant protein functions. Various microbes use epigenetic regulation to change cellular functions of the host. For example, certain bacterial toxins from *Listeria monocytogenes*, *Clostridium perfringens*, and *Streptococcus pneumonia* induce dephosphorylation of histone H3 and deacetylation of histone H4 resulting in reduced transcription of a key set of host immunity genes.[2] Pathogens can also cause aberrant methylation of histones changing the pattern of DNA expression of genes for "cell cycle progression, senescence, survival, inflammation, and immunity".[3]

While genomic studies often require newer sequencing technologies, epigenetic studies draw on fundamental genetic techniques, such as DNA methylation assays, chromatin immunoprecipitation assays, and mass spectrometry. Specialized equipment, technologies, and analytic tools are not necessarily needed to carry out these experimental procedures. However, if high-throughput and rapid tests are needed to examine epigenetic changes, technologies, equipment, and software might be needed to conduct the procedures and analyze the datasets.

Several MESA countries possess the necessary infrastucture to conduct both genomic and epigenetic studies, and several scientists across the region are conducting such studies.

[2] Hamon MA, Batsché E, Régnault B, Tham TN, Seveau S, Muchardt C, Cossart P (2007) Histone modifications induced by a family of bacterial toxins. PNAS (b)(6)

[3] Paschos K and Allday MJ. (2010) Epigenetic reprogramming of host genes in viral and microbial pathogenesis. Ce (b)(6) (b)(6)

Although epigenetics and pathogen infection is a relatively new avenue of research, a brief literature review suggests that scientists form the U.S., Europe, and some MESA countries are engaging in research aimed at studying pathogen regulation of the host immune response via epigenetic changes.[4] For example, with assistance from AAAS, Los Alamos National Laboratory, and U.S. government, the Jordan University of Science and Technology is becoming a genomic center for the region.

The proposed project will build on the MESA region's capacity to conduct genetic and epigenetic studies, research on epigenetics and infectious disease studies, and U.S. interest in such studies.

Understanding

The Metabiota team understands that the US Department of Defense (DoD) initiated CBEP through DTRA in order to: secure and consolidate select agents; enhance Biosafety and Biosecurity (BS&S) standards; and strengthen the USCENTCOM region's ability to detect, diagnose, survey, and report emerging and re-emerging diseases of international security concern and that CBEP accomplishes these objectives in accordance with the World Health Organization (WHO) International Health Regulations (IHR) and World Health Organization for Animal Health Guidelines (OIE). The team further recognizes that to achieve its mission, CBEP works collaboratively with partner nations, U.S. Government agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health, promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. Through the Academic Engagement Partnership (AEP) Program, Metabiota aims to support the CBEP mission of reducing the potential impact of biological threats through enhanced biological safety and security, awareness of biological risks, and knowledge related to biological pathogens.

In support of this approach, the Metabiota team intends to administer a high-value workshop that will support strategic CBEP objectives by increasing regional collaboration on topics critical to biological threat reduction, and enhancing the regional capacity to perform biorisk management and mitigate the threat of infectious disease events. The team's on-the-ground experience and decades of expertise make us well positioned to support the implementation of this workshop and all of the associated activities, as well as scientific engagement in the USCENTCOM's area of responsibility.

Purpose

The purpose of this project is to encourage research in the fields of epigenetics and genomics in MESA countries and identify ways in which the MESA region can apply current epigenetic and genomics research addressing national and regional infectious disease threats, including for infectious disease surveillance and pathogen infection of endemic agents.

---

[4] For example, a researcher from the Kingdom of Saudi Arabia published a review article on epigenetics and bacterial pathogenesis. See, Akeel RA. Role of epigenetic reprogramming of host genes in bacterial pathogenesis. (2013) Saudi J Bio Sci 20(4): 305-309.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

To achieve this purpose, CBEP has identified the need for a two-day workshop, which will provide a forum in which scientists from the U.S. and MESA countries will share information about current research in genetics and epigenetics of infectious diseases; identify possible scientific partners; participate in training sessions on international collaboration, grant writing, and risk management; and identify approaches for applying epigenetics and genomics to regional biosurveillance and characterization efforts. This will include plenary talks, topic-focused sessions, poster sessions, and training sessions. The plenary talks will highlight recent advances in epigenetics, genomics, and the technologies and skills needed to study epigenetics. The topic-focused sessions will provide opportunities for participants to learn about specific areas of research, such as epigenetics regulation of host immune system genes by bacterial toxins. The poster sessions will allow scientists to identify prospective partners for research cooperation. Finally, the training sessions will describe processes of initiating and maintaining international scientific collaboration, grant writing, and risk analysis.

Using a workshop approach, this engagement will promote global health security and threat reduction by supporting fundamental research to decrease the threat of WMD, and enhance regional capability building for pathogen research and surveillance. The workshop will provide opportunities for research cooperation between U.S. and MESA scientists on genetics, epigenetics, and infection, contributing to a greater understanding of pathogen infection in humans and infectious disease surveillance. This will serve to enhance the host-nation's capacity in disease surveillance and response, while adhering to international codes of security and safety to ultimately provide a mechanism for sustained engagement.

To accomplish this purpose, DTRA CBEP, through the Academic Engagement Partnership Program (AEP) has engaged the Metabiota team and its cadre of Research Collaborators (RCs) and Subject Matter Experts (SMEs) to administer the Epigenetics and Genomics workshop event in Amman, Jordan in collaboration with Gryphon Scientic and RSS.

Objectives

Through the implementation of the workshop on Epigenetics and genomics of infections disease, facilitated by Metabiota Inc., DTRA CBEP will be able to:

- Highlight recent advances in epigenetics, genetics, and the technologies and build skills needed to study epigenetics
- Provide opportunities for participants to learn about specific areas of research, such as epigenetics regulation of host immune system genes by bacterial toxins
- Allow scientists to identify prospective partners for research cooperation
- Build sustainable capacity through fostering international scientific collaboration and building grant writing, and risk analysis skills
- Support the development of disease reporting, surveillance and response systems regionally, thereby reducing the global threat
- Train regional scientists on risk management and international collaboration

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Threat Reduction Outcomes

The workshop will provide a measurable and achievable result in building scientific capacity in the MESA region while promoting a global network of research collaborations, and developing a sustainable infrastructure for advancing scientific research, including the early detection of emergent threats.

Workshops, poster sessions, plenary talks, and training engagements are critical to capacity building efforts in host countries and supporting the early detection and response to emerging threats, thus safeguarding the world from infectious disease threats. Without completion of the workshop engagement, the region is subject to the following identified risks:

- Reduced regional biosurveillance capability and characterization of novel infectious disease outbreaks
- Increased security threats due to improper handling, storage, and transport of pathogens of security concern
- Decreased communication between external scientists and MESA scientists
- Reduced risk management capacity

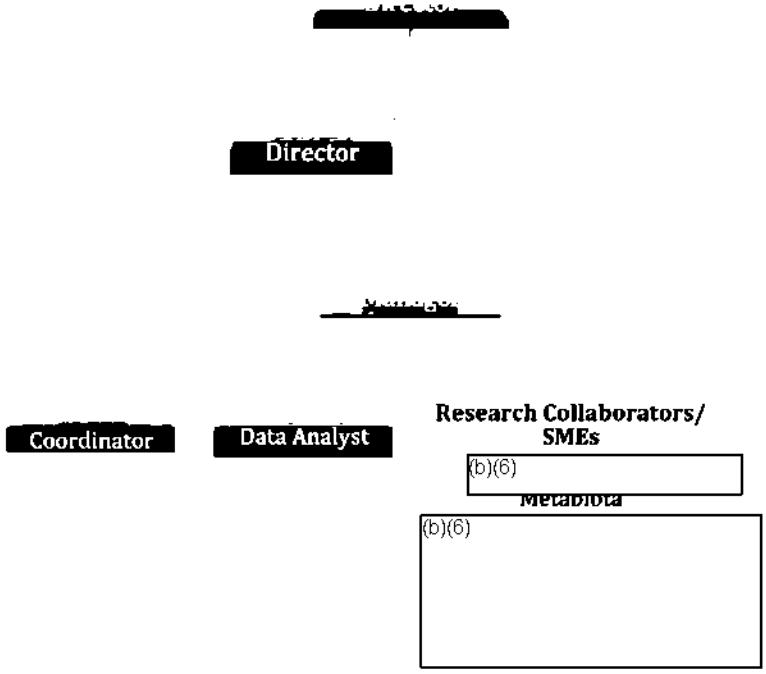
The completion of the training will mitigate the identified risk factors by:

- Improving and enhancing disease detection, reporting and response systems across the region
- Implementing and improving biorisk management best practices and principles based on internationally acceptable guidelines and standards (enhancing the capacity to account for, safeguard, and secure pathogens of concern)
- Increasing biosafety measures in regional biosurveillance activities
- Increasing scientific capabilities through research collaboration and fostering an environment of scientific partnership

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Risk Management

Factor		Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
				Cost		
T&M Labor cost	It is not currently clear when the event will occur, which incurs cost	5	3	(b)(4); (b)(6)	Metabiota will collaborate with key partners to confirm event dates as soon as possible; monitor costs and work diligently to seek out the lowest costs possible; mitigate extended labor hours during events.	Med
Material Procurement	It is unclear what material may be required for implementation and execution of the workshop	4	4		Collaborate with key partners to identify which materials will be required; engage local collaborators to provide in-country support with rapid turnaround and solid track record in supporting USG operations.	Med
ODCs	Phone, internet costs, etc…	4	4		Engage local collaborators to provide in-country support on ODC costs and seek out the lowest costs possible.	Med
Travel	There are many participants from diverse locations, etc. Potential for additional visits being required	4	4		Review applications for workshop presenters and participants to select applicants based on scientific relevance and merit. Seek out the lowest costs possible for procurement and travel.	Med
				Schedule		
Scoping Visit	Travel for US nationals requires embassy clearance, including SERE, ISOPREP, ATFP, etc.	5	5	(b)(4); (b)(6)	Submit CBEP required deliverables for the training engagement, country clearance and travel authorization immediately upon receipt of proposal approval to ensure successful implementation.	**Med-High**
Workshop Agenda	Agenda is not yet developed	3	3	Med	Will collaborate with key partners and scientific advisory board to develop workshop agenda	(b)(4); (b)(6)
Training course syllabi	Training course syllabus is in preliminary stage	4	4	(b)(4); (b)(6)	Will collaborate with key partners and scientific advisory board to develop workshop syllabus	
Event execution	Schedule is not yet developed	4	5		Will develop schedule based on previous events to ensure that schedule does not have to be built from scratch	
				Performance		
Training presentation submission	Training presentation is not yet developed	3	3	Med	Will collaborate with key partners to develop training presentation	
Poster & abstract submission	Posters and abstracts have not yet been submitted	3	3	Med	Will review applications for posters and abstracts to select applicants based on scientific relevance and merit.	
Plenary talk submission	Plenary talks have not yet been submitted	3	3	Med	Review applications for workshop presenters and participants to select applicants based on scientific relevance and merit.	
Topic focused discussion	Topics for discussion have not yet been developed	3	3	Med	Will collaborate with key partners to work to develop focus topics for discussion	
Event execution	As the event is not yet scheduled, scheduling or coordination challenges could prevent the event from happening	3	3	Med	Will work with key partners and in-country collaborators to complete scheduling and coordination requirements and anticipate and mitigate any expected challenges	
Post event report	Report will require continued collaboration post event	3	3	Med	Metabiota will complete a post event report with input from key partners	



Management Approach

Introduction

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager, and Regional Program Manager, as needed to direct the operational and administrative support required to ensure implementation of the Epigenetics and Genomics Workshop. Our Program Manager, (b)(6) will oversee workshop adminstration, with the support of a research and data analyst, travel coordinator, research collaborators and subject matter experts to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the Program Manager, Research and Data Analyst, Travel Coordinator and a team of Research Collaborators and Subject Matter Experts that will be tasked with specific assignments to support the development and implementation of the workshop based on their administrative and scientific expertise. This team of experts will ensure the overall project management and tasks associated with the workshop are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

Initiation

Following guidance from CBEP USCENTCOM leadership, and working collaboratively with SMEs from Gryphon Scientific, and local collaborators from RSS, Metabiota will 1) identify and secure workshop facilities, 2) establish a scientific advisory board, 3) invite speakers and presenters, 4) develop the workshop agenda, 5) develop the submission, review and selection process for abstracts 6) initiate travel to conduct a scoping visit, and 7) initiate travel for SMEs to attend the workshop. The identified actions above will ensure that the project initiation and kickoff is geared to a successful implementation date of October 2015, and is critical to understanding the technical needs, coordination and facilitation of this event. Prior to initiating any action, Metabiota and CBEP will secure a clear understanding of the objectives and mission of this undertaking, and make sure all stakeholders agree to it. Following authorization to proceed by DTRA, Metabiota will move into the planning and execution of the workshop.

Planning and design

Completion of this task requires a two day workshop focused on achieving the following scientific goals: 1) share information about current genetic and epigenetic research examining pathogen infection; 2) catalyze scientific collaboration between U.S. and MESA scientists on genetic or epigenetic studies of mutual interest; and 3) promote regional capability-building for pathogen research and surveillance through training. To accomplish the research goals of this event and due to the size and scope of this endeavor, Metabiota will immediately focus on planning, designing and implementing the workshop in early June, due to the coordination and development required for the engagement. To accomplish this, Metabiota will engage experts from Gryphon Scientific and RSS to plan and design the workshop, develop a scientific advisory board, and a process for review and submission of abstracts to include a selection process for attendees, and a website providing event information and submission requirements focused to attract a cadre of young and emerging regional scientists. To ensure strong regional collaboration and success of the workshop, Metabiota will conduct a scoping visit in August to meet with RSS and identify the appropriate workshop location, facilitiate scientific collaboration, and ensure in-country logistics are moving forward and are operationally on track.

Execution

The core project management team will maintain oversight and implementation of the workshop at all times and will ensure successful execution of the event, tracking objectives to ensure all components of the event stay on schedule to meet the deliverable requirements. The project will be managed according to the steps required to implement the event and will be course corrected, as needed to ensure target end-goals are reached. The following tools will be used to guarantee the project schedule will be maintained:

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Project Administration:

1. Weekly team meetings and conference calls will be held to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Team and will include the PM, Research and Data Analyst, SMEs and AEP leadership, as needed based on the requirements and stage of implementation.
2. Routine calls and communication via email will be held with CBEP regional leadership, in-country collaborators, external SMEs, CLS, and Metabiota to provide routine status updates and ensure workshop implementation.

Project Reporting:

1. Weekly status reports will be provided by the PM to senior MB leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction, as needed to ensure workshop goals are met.

Monitoring and Controlling

1. Routine risk assessment will be performed internally among the MB project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with CBEP regional leadership to ensure the project remains on track and is implemented according to standard.
3. Routine oversight and coordination will be performed to ensure Gryphon Scientific is performing technical requirements to ensure successful execution of the workshop. Monitoring will include technical, administrative and fiscal oversight.

Completion

Maintaining a focused project schedule with routine meetings and communication with CBEP regional leadership allowing for continued coordination while maintaining targeted objectives, Metabiota will drive the project to completion with the implementation of the workshop in October. Following completion of the engagement, review, final validation, and a back-and-forth dialogue with CBEP regional leadership, Metabiota will provide required deliverables and an after action report to allow for lessons learned and continuation of solid execution and implementation of activities. Metabiota believes that the experience and management it will bring to this project, in collaboration regional SMEs and CBEP, will guarantee success.

Technical Approach

Introduction

To accomplish event implementation Metabiota will maintain open lines of communication and will used a phased approach of engagement maintaining project tracking and scheduled deliverables. This phased approach will be coordinated directly with Gryphon Scientific SMEs

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

and RSS collaborators to ensure the event is implemented according to DTRA CBEP requirements, in the assigned timeframes, and supports solid scientific engagement within the region providing risk mitigation and facilitating global health security and scientific collaboration to further develop and enhance biosafety and surveillance efforts on an international plane.

Communications Protocols

Metabiota will maintain open communications with international collaborators necessary for implementing the training, to include regional partners facilitating the training engagement and logistics. In addition, Metabiota will maintain routine communication with CBEP to ensure they have full visibility on the training engagement, status and process of execution.

Phases of Technical Approach

Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the workshop and to provide overall feedback and reporting on the proceedings outlining the accomplishment of workshop objectives. The following phases are required for this project:

Phase 1: Appoint a 10-person scientific advisory group whose membership includes scientific leaders from the U.S. and MESA countries.

Objective and Process: Metabiota will work with Gryphon and RSS to identify and develop a scientific advisory board to govern the workshop and assist in technical development of workshop requirements, selection of participants and review of submitted abstracts.

Deliverable: A governing scientific body ensuring scientific rigor and technical expertise, facilitating critical scientific collaboration and event success.

Phase 2: Develop an application, review, and selection process for receiving scientific abstracts, reviewing the abstracts, and selecting attendees, including those who will be invited to give talks or present posters.

Objective and Process: Metabiota will work with Gryphon and RSS, and the scientific advisory board to develop a selection process for determining workshop attendees and ensure that they are selected based on expertise, and subject matter relevance to the workshop.

Deliverable: Framework facilitating attendee selection that will drive scientific integrity, and collaboration based on regional relevance and key expertise.

Phase 3: In collaboration with the scientific advisory board, develop a workshop agenda.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Objective and Process: Develop a workshop agenda in collaboration with all partners to ensure successful implementation of the event while providing a regionally relevant scientific forum for scientific collaboration, training, and presentation.

Deliverable: Two-day workshop agenda to include plenary sessions, poster sessions, training and grants writing workshops.

Phase 4: Create a workshop website and carry out workshop logistics.

Objective and Process: A website will be built to ensure all information is available and marketable to the scientific community supporting participant selection and providing clear information for attendance. The website will be developed by Gryphon with oversight provided by Metabiota and regional information and requirements information provided by RSS.

Deliverable: Website to support the two-day workshop, providing workshop information, to include, but not limited to, the venue, speakers, schedule, application and selection process, travel requirements, and training events.

Phase 5: Compile the abstracts into the workshop program.

Objective and Process: Gryphon Scientific SMEs will compile the workshop abstracts following acceptance by the scientific advisory board and publish them in a workshop program made availalable to all attendees. The abstracts will be used as a tool for collaboration and scientific engagement.

Deliverable: Workshop Program

Phase 6: Hold the workshop and associated training sessions.

Objective and Process: Implementation of the workshop is the critical phase in accomplishing the project and meeting the overall goal of this endeavor. Utilizing the management and technical approach outlined, Metabiota will work collaboratively with Gryphon Scientific SMEs and RSS to complete Phases 1-5 building up to final implementation. Metabiota will utilize Gryphon's expertise in planning this event and providing the technical requirements for facilitation in coordination with RSS and their superior regional leadership and knowledge to successfully complete a two-day workshop. RSS experts will provide all in-country requirements and facilitation with technical input for speakers and attendees coordinated directly with Gryphon and oversee by Metabiota project personnel. The scientific advisory board will govern the technical process for selection ensuring scientific integrity and integration at this event. In addition, Metabiota will coordinate directly with CLS to support travel of participants and speakers attending this event to include translation services, poster production, workshop facilitation, and travel requirements.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Deliverable: A two-day Epigenetics and Genomics of Infectious Diseases Workshop facilitating research addressing national and regional infectious disease threats, including for infectious disease surveillance and pathogen infection of endemic agents attended by an estimated 65 regional participants, and hosted by an estimated 35 speakers providing scientific engagement.

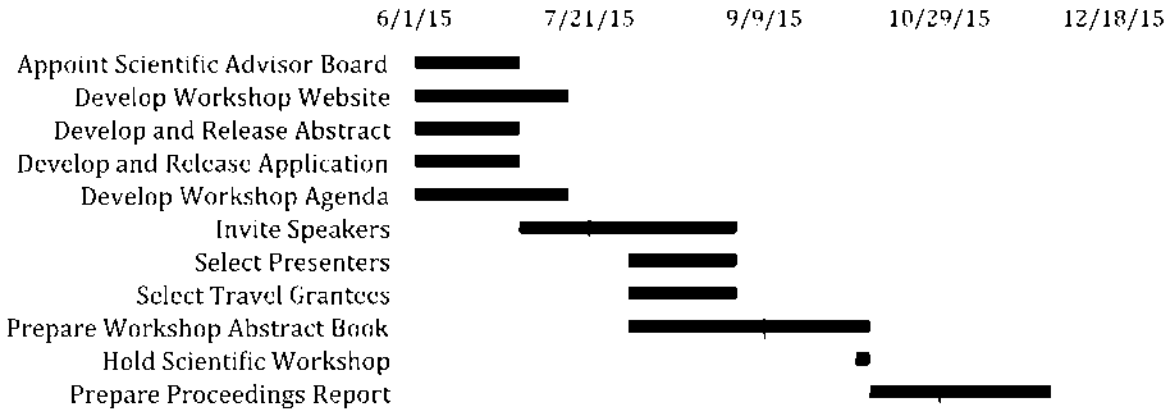
Phase 7: Prepare a final report documenting the workshop.

Objectives and Process: Metabiota and Gryphon Scientific will prepare an after action report sharing the proceedings of the workshop and identifying the accomplishment of goals leading to sustained engagement and scientific collaboration.

Deliverable: Completed workshop report provided to CBEP outlining the conference proceedings and key information showing support of CBEP objectives and the accomplishment of workshop goals directly supporting these goals.

To accomplish the above phases, Metabiota will work with Gryphon Scientific and RSS to identify and appoint a 10-person scientific advisory board to govern this event. With guidance from the selected scientific advisory group, Metabiota and Gryphon Scientific will determine the exact timing of the event in October, and will determine the facilities, and initial logistics necessary to facilitate the event. Attendees will be scientists who are working in epigenetics and genomics of infectious diseases, human and animal health experts, and decision makers from the Middle East and South Asian region.

The scientific workshop will last two days and have plenary sessions, science sessions, and training sessions. A brief depiction of the workshop program and session topics is included below, however it will be further refined in development with the board and SMEs.



Metabiota, Gryphon Scientific, RSS, and the scientific advisory board will select speakers for each session, review applications for workshop presentation (either to give scientific talks or present posters), and review applications for attendance by participants across the region.

Scientists who wish to present their research will submit an abstract of their presentation, a brief description of their interest/objectives in attending the workshop, and any supporting information (such as approval by a supervisor). This will be reviewed and discussed with the committee and applications will be selected based on scientific relevance and merit.

Young scientists who require travel support – regardless of whether they are presenting – will be asked to provide a brief description of their objectives in attending the workshop, their research or scientific activities, and any supporting information. Applicants will be selected based on the stated objectives and scientific relevance.

Gryphon Scientific SMEs will develop the workshop website and prepare the application form for presenters, application form for workshop attendance, workshop program, and workshop proceedings report, with oversight provided by Metabiota and input received from RSS. The workshop will be marketed through the workshop website, as well as using Metabiota's existing network of scientists in the Middle East and South Asia, and through U.S. and regional scientific organizations.

Timeline

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Metabiota Key Personnel

(b)(6) Deputy Director

Mr. (b)(6) is the Deputy Director of the Academic Engagement Partnership (AEP) Program and an Internationally Certified Emergency Manager (CEM®) with 14 years of experience leading, managing, and consulting on the full spectrum of Counter Weapons of Mass Destruction (CWMD) operations and Chemical Biological Defense programs, as well as research and development in support of joint task forces, special operations forces, other government agencies, and the Department of Defense on the strategic, operations, and tactical leve(b)(6) a driven leader with a proven track record of building value with partners through the identification of capability gaps, and the development and validation of effective solutions

to the unique challenges faced when dealing with Chemical, Biological, Radiological, Nuclear, and Explosive (CBRNE) threats. In addition, he is well versed at risk analysis and management, strategic planning, policy analysis and political engagement.

(b)(6) rogram Manager

Ms. (b)(6) is the Southeast Asia and Middle East Regional Program Manager of the Academic Engagement Partnership (AEP) Program with over eight years experience as a global health project/program manager, with a focus in SE Asia regional activities, having lived and worked in Cambodia for four years supporting DoD efforts in the region. Since joining Metabiota in 2010, she has managed DTRA CBEP engagements in West and Central Africa, to include Ebola response efforts, as well as spending three years as the Program Manager on projects funded by USAID, AFHSC GEIS. BEP, NIH, USAMRIID, and HJF spanning all regions of Metabiota engagement.

(b)(6) Research and Data Analyst

(b)(6) oined Metabiota in May after completing her MPA in International Management. She has five years experience working in international development, ranging in scope from a macro-level international development bank to micro-level grass roots development work. She worked for two and a half years in rural Mozambique doing public health project management with the US Peace Corps, local community health clinics, and international donors.

(b)(6) - Subject Matter Expert

ecently joined Metabiota from CRDF Global where she managed a large portfolio of US Biosecurity Engagement Program (BEP) funded activities in the Middle East North Africa, and Southeast Asia, as well as supporting their nonproliferation programs in

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

support of biological threat reduction. She holds a Masters in Science from Georgetown University with a focus on Biohazardous Threat Agents and Emerging Infectious Diseases and a Bachelor of Science in Microbiology, and is currently studying Arabic.

Dr. (b)(6) Research Collaborator

(b)(6) joined Gryphon Scientific in 2015. Her focus areas are biotechnology, security, health security, and science policy. (b)(6) work addresses biological and chemical defense issues through active involvement of the scientific and security communities, international science engagement, and evaluation of multidisciplinary science and technologies. She has experience in: evaluating policy initiatives and produced policy and program option papers; developing educational case studies through which scientists can learn about how to analyze risk in their own research; designing and administering table top exercises to promote greater knowledge of how risks and threats are addressed in the scientific and law enforcement communities and to identify potential gaps in the system; and conducting technology evaluations in which she developed risk and benefit scenarios and risk assessment frameworks. She has developed innovative programs to promote trust and communication between the FBI and the academic science community in the United States, and to encourage cooperation between U.S. and Middle Eastern and North African scientists. In 2012, (b)(6) worked with the Presidential Commission for the Study of Bioethical Issues for seven months. There, she was the staff lead on the Commission's evaluation of the ethical issues associated with pediatric medical countermeasures research. Immediately prior to joining Gryphon Scientific, (b)(6) spent nine years at the American Association for the Advancement of Science Center for Science, Technology and Security Policy. (b)(6) conducted her post-doctoral research at the Emory Vaccine Center where she conducted pre-clinical research and development of HIV and smallpox vaccines. (b)(6) received her Ph.D. in genetics and molecular biology at Emory University and B.S. in molecular genetics at The Ohio State University.

Cost Management

The Metabiota team and all partners will maintain an acute focus on cost management to ensure that the workshop is delivered at a reasonable cost to the government. Our team will provide full oversight of Gryphon Scientific to ensure accurate and responsive financial reporting and will facilitate cost savings to the Government wherever possible. Metabiota will follow all procurement and travel regulations ensuring the best price is secured while maintaining product integrity.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Budget Narrative

Period of Performance

The Period of Performance for this effort is June 1, 2015 to November 30, 2015.

Labor

Costs for direct labor to support this activity is required for the following personnel:

Metabiota Program Manager (b)(6) to oversee and execute the workshop to include management of deliverables, logistics, management of project personnel, tracking of project requirements, and implementation.

Metabiota Research and Data Analyst (b)(6) to assist in coordinating of the workshop, to include assisting in management of deliverables, logistics, tracking of project requirements, deliverables and review of conference materials.

Metabiota Subject Matter Expert (SME), (b)(6) to coordinate with Gryphon and RSS SMEs and Research Collaborator (RC) in development of workshop materials, oversight of participant selection process, and workshop coordination.

Metabiota Grants Manager, to develop grants management session for the workshop and coordinate with SMEs and RC in supporting the development of plenary sessions, and coordination of the technical engagement to facilitate scientific sessions and additional training requirements of the workshop.

Metabiota Research Collaborator, to facilitate scientific engagement and support the development of plenary and scientific sessions in coordination with Gryphon and RSS personnel ensuring scientific oversight and integrity of the workshop.

Gryphon Research Collaborator and Subject Matter Experts will coordinate with Metabiota and RSS to develop the 2-day workshop agenda, plenary talks, scientific and training sessions to facilitate this event. They will also assist in scientific board selection, participant selection, development of the conference website, completion of conference materials to include the abstract booklet and after action report.

Additional costs for direct labor supporting the Deputy Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Materials

Materials and supplies are required to support the workshop proceedings, to include printing and publication of the abstract booklet and after action report. Shipping costs are also included to support the delivery of conference materials produced in the US to Jordan for the workshop event.

A workshop website will be developed and maintained to provide information on and facilitate requirements in support of the workshop. The website will provide a forum for conference information, to include the agenda, schedule, abstract and poster submission requirements, selection process, and other key information necessary to effectively communicate conference information to the scientific community.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for Gryphon personnel for the period of performance for this engagement. In addition, DBA insurance will be secured for Metabiota personnel traveling to Amman, Jordan in support of workshop coordination.

SOS Insurance is required for Metabiota personnel traveling to Amman, Jordan to support workshop coordination to ensure they are covered for emergency and evacuation services while in country.

Subcontracts

A Subcontract will be issued to Gryphon Scientific to support their labor requirments on this engagement, as well as materials they will produce in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested for (b)(6) Deputy Director of the AEP program and (b)(6) Program Manager to travel to Amman, Jordan to conduct a scoping visit prior to conducting the workshop. The scoping visit is critical for meeting with RSS key personnel supporting this engagement to include members of the scientific board, and to ensure in-country logistical support services being provided by RSS in support of this event is monitored by Metabiota senior personnel and is well in place to facilitate this event.

Travel is requested to support Metabiota and Gryphon project personnel to Amman, Jordan to facilitate implementation of the workshop to include, hosting the event, overseeing engagement with the participants, and conducting of the training, plenary and scientific sessions. In addition,

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

this time is required to oversee and support all logistical needs supporting the workshop in conjunction with RSS.

It is estimated that a total of 65 regional participants from throughout the Middle East will be selected to attend this event, as well as up to 35 speakers required for implementation of the plenary, scientific, and training sessions required for this event. With the volume of travel required on this enagement, and in accordance with the contract, Metabiota did not request travel funding in support of this, as it is planned that all this travel would be routed to CLS. Additional conference support requirements to facilitate participant attendance to include abstract and poster submission requirements, and translation services may be required by CLS to facilitate the overall engagement and implementation of the workshop.

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP CENTCOM in the implementation of the DTRA/CBEP Implementation of an Epigenetics and Genomics of Infectious Diseases Workshop in the Middle East South Asia Region. Metabiota will ensure, through strong project management and risk mitigation that the training will be executed in an efficient and timely manner delivering a top quality course geared to support enhanced biosurveillance and biosafety efforts in the region.

RE: HDTRA1-14-C-0104 Revised Technical Direction for the Implementation of Sample Collection and Diagnostics Training on Middle East Respiratory Syndrome in Camels and Bats in Kazakhstan Cooperative Threat Reduction (CTR) Academic Engagement Partners (AEP)
Metabiota Revised Proposal R1

Dear Dr. (b)(6)

Metabiota, Inc. (Metabiota) is pleased to present the attached proposal in response to the above referenced Revised Letter of Technical sent by DTRA on June 03, 2015.

Metabiota intends to engage Duke NUS as a Subcontractor for the training and TMC Global Professional Services to provide in-country logistics support and procurement services.

For the effort described, Metabiota estimates the Rough Order of Magnitude (ROM) to be **$391,056** for a Period of Performance of May 16, 2015 to September 30, 2015. The detail budget is included. This proposal remains valid until August 30, 2015.

Please feel free to cont (b)(6) with questions or concerns at (b)(6)

Sincerely,

(b)(6)
Contracts Manager

Travel Authorization Form

TRIP #	
Project/Phase #	AEP, TD-017
Purpose:	Travel to Tbilisi, Georgia
SOW / Task	Project Summary: Metabiota will support the Richard G. Lugar Center for Public Health Research of the Ministry of Agriculture in Georgia by providing subject matter expertise for grant proposal development to the National Center for Disease Control (NCDC) and Laboratory of Ministry of Agriculture (LMA). The project team, including subject matter experts provided by Attimo Group LLC, will collaborate to conduct this activity through from October 8, 2015-May 15, 2016. This activity will provide expertise in the following knowledge areas required for proposal submission to DTRA CBEP Broad Agency Announcement (BAA) or other competitive research solicitations: development of white papers; proposal preparation, editing, and submission; the development of accurate direct and indirect cost projections; the identification and articulation of scientific hypotheses; research data framing, and reviewing and responding to proposal evaluations and recommendations Attimo will provide remote and on-site grantsmanship mentoring, editorial guidance, implementation of mentoring work plans, and identification of future mentorship stakeholder needs. This collaboration will build a long-term partnership between key research and technical centers in Georgia and will nourish hypothesis-driven and translational research programs that result in sustainable funding and academic publications. In order to conduct this activity Attimo Group LLC will act in the role of Project Team member and subject matter experts (SMEs). Schedule/Timeline: This activity will take place Oct. 8, 2015-May 15, 2016. Please note that though two persons are indicated here, only one person will travel on AEP dollars. The final decision of which SME will travel has not yet been determined as we believe we may be able to leverage other travel by Dr. Gallagher to have both SMEs there.
Desired Outcome	The majority the trip will be spent working with and mentoring project participants on developing proposals, creating complete budgets, and performing peer-reviews. It expected that the outcome of the meeting will be completed and reviewed white papers, or final drafts, that will be available for submission to the appropriate funding agencies.

Comments:	
	Assumption #1: Listed Travelers wil share one vehicle throughout workshop implementation
	Assumption #2: Workshop implementation will take place with Addis Ababa and estimates are based on USG rates for Addis Ababa
	Assumption #4: Car hire is provided without fuel; fuel to be procured on the ground by MB team
	Assumption #5: Assumed that team will require approximately 40 liters of fuel during workshop implementation.
