This submission of the Monthly Report (Contract Data Requirements List; CDRL A001 encompasses implementation of Academic Engagement Partnership (AEP) program activities in accordance with Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) contract HDTRA1-14-C-0104 for 08/01/2015-08/31/2015.

Technical Directives

AFRICOM

TD 001 Viral Hemorrhagic Fever (VHF) & Personal Protective Equipment (PPE) Donning and Doffing- Cameroon

Objectives
Increase the capacity for Cameroonian responders to mitigate the hazards posed by emerging outbreak and other biosafety threats through biosafety training in the appropriate techniques for donning and doffing personal protective ensembles.

Period of Performance: 05/15/2015 - 12/31/2015
Total Estimated Budget: $125,975.00
Estimated Expenditure: $70,159.00
Technical Direction Status: Approved

Completed Activities

- Continued project coordination activities, including ongoing communications and outreach to the Cameroon Ministry of Defense (MoD);
- Established subcontracting agreements with Mosaic and Global Viral. Initiated independent subcontracts with remaining SME trainers;
- Completed Phase 2 Training Landscape Development, including a comprehensive review of existing VHF and PPE training materials and stakeholder capabilities and needs assessments;
- Conducted a stakeholder coordination meeting with the Cameroon MoD. Training dates were finalized and training material adaptation discussed. The training will take place Nov 17-19, 2015.

Upcoming Activities

- Training materials adaptation will be complete and finalized with the MoD, and the materials will be sent to DTRA CBEP for review, approval, and translation;
- Independent subcontractor agreements will be finalized with the remaining SME trainers.

Challenges
The delay in scheduling a stakeholder meeting with the Cameroon MoD has been difficult, especially with the recent Boko Haram-related violence in the north. Metabiota and the subcontractors will maintain communication with the MoD and other stakeholders, and will obtain the remaining needed information through less formal routes (email/phone). To reduce the risk of participant loss due to such incidents and their related duties, Metabiota will establish and

communicate a minimum threshold number of participants available to attend to ensure suitable attendance.

TD 008 Clinician Training - Uganda

Objectives
Identify gaps in current country-specific training systems and develop clinical training materials to address those gaps and sustainably increase the capacity of medical practitioners at the sub-national level of healthcare systems to identify, diagnose & report disease outbreaks.

Period of Performance: 05/16/2015-08/18/2015
Total Estimated Budget: $1,152,721.00
Estimated Expenditure: $1,045,468.23
Technical Direction Status: Cancelled

Completed Activities
- Submission of TEP for October trainings in Lira Region of Uganda;
- Continuation of bi-weekly calls with DTRA CBEP representation;
- Continuation of extensive communication with subcontractor and in country performer IMAI IMCI Alliance;
- Receipt of TD cancellation notice, and immediate delivery of termination notice to subcontractor IMAI IMCI Alliance;
- Delivery of final invoicing instructions to IMAI IMCI Alliance.

Upcoming Activities
- Receive final invoice and narrative from IMAI IMCI Alliance;
- Deliver final Metabiota invoice and narrative to DTRA.

Challenges
Before receipt of cancellation of this technical direction we were having some difficulties with gaining information on approval status for several of the trainings. Upon cancelation for the TD and delivery of the termination letter to IMAI IMCI Alliance, we asked them to invoice us for all costs incurred. This process has taken longer than expected and we are currently in the process of auditing their invoice to us.

TD 009 NHLS BS&S Training - South Africa

Objectives
Reduce the risk of laboratory exposures of potentially dangerous pathogens through increased BS&S capabilities of South Africa's National Health Laboratory Service (NHLS) to, ultimately, mitigate risk associated with handling potential hazards and protect individuals operating in potentially hazardous environments.

Period of Performance: 05/16/2015- 05/15/2016
Total Estimated Budget: $335,607.00
Estimated Expenditure: $44,374.00

Technical Direction Status: Approved

Completed Activities

- T&M subcontractor agreement with NHLS was finalized to include efforts and associated deliverables for Objectives 2&3;
- Initiated equipment procurement processes;
- Objective 1 BS&S training video scripts were finalized and submitted for review and approval; relevant NHLS approval has been completed.

Upcoming Activities

- Objective 1 BS&S training videography will be completed;
- Objective 3 Fit test Scale-up and Master-level training plan and cohort selections will be completed;
- NHLS monthly reporting and invoicing will be initiated.

Challenges

Metabiota additionally continues to experience challenges with NHLS labor and materials invoicing process, particularly in regards to meeting all FAR regulations and expectations. Metabiota will continue to maintain regular communication with NHLS and provide support where possible to resolve these issues. NHLS corporate structure appears to not provide sufficient delegation of responsibility downward with a bottleneck for approval of basic business processes at high levels in the corporate structure; this has caused delays in project implementation.

TD 010 One Health Epi Training - South Africa

Objectives

Increase the operational biosafety and bio-surveillance capacity through training events and the development of standard operating procedures for emergent disease outbreak response, supporting interagency cooperation and a unified training approach.

Period of Performance: 05/16/2015- 12/31/2015
Total Estimated Budget: $134,551.93
Estimated Expenditure: $25,278.00
Technical Direction Status: Approved

Completed Activities

- Resubmission of budget and technical proposal with updates and revisions respective of DTRA CBEP inquiries;
- Continued bi-weekly communication with DTRA CBEP representation;
- Adaptation of a new communication and coordination plan for implementation upon approval of technical direction.

Upcoming Activities

- Comprehensive review of existing training materials;
- Establishment of bi-weekly calls with in country stakeholders;

- Development of thorough coordination and communication plans;
- Development of materials review report in concert with South African stakeholders.

Challenges
Reportedly, representation from USDA in South Africa is limited in its capacity as a recent personnel departure occurred. This may offer some difficulty in comprehensive communication going forward.

TD 013 One Health Epi Training - Uganda

Objectives
Increase the operational biosafety and bio-surveillance capacity of Ugandan and Nigerian National and Regional Response Teams through training events and the development of standard operating procedures for emergent disease outbreak response, supporting interagency cooperation and a unified training approach.

Period of Performance: 05/16/2015- -2/29/2016
Total Estimated Budget: $381,705.27
Estimated Expenditure: $64,477.00
Technical Direction Status: Approved

Completed Activities
- Resubmission of technical proposal and budget with revisions respective of DTRA CBEP inquiries;
- Submission and receipt of approval for TEP for Module 1 of Cohort 9 to take place October 19th-23rd, 2015;
- Submission and receipt of approval for CCR and TAF forms for travel taking place between October 16th-25th, 2015;
- Submission of CLS forms for Module 1 Cohort 9 trainings;
- Continued communication through bi-weekly calls with DTRA CBEP representation;
- Continued communication through bi-weekly calls with in country stakeholders, CDC Uganda;
- Establishment of final Independent Consultant (IC) trainers list of non Government of Uganda Employees.

Upcoming Activities
- Submission of TEP for Cohort 9 module 2 training;
- Submission of TEP for Cohort 10 module 1 training;
- Development of independent consultant agreements for IC trainers;
- Final selection of training venue in Jinja district.

Challenges
The ambassador's memo, declaring that all Government of Uganda employees are not to be paid honorariums for work outside of their normal duties, continues to provide some level of confusion for our in country partners. Very extensive communication was necessary to ensure that the IC trainers for the project were identified accurately.

TD 014 Grant Writing Mentorship and Workshop - Kenya

Objectives
The objective is to conduct a 6-day workshop and provide continuing mentorship on the skills required to successfully write scientific publications to a cohort of 20 scientists to be selected from the attendees of the Regional Conference on Zoonotic Diseases in Eastern Africa held in Kenya in March 2015.

Period of Performance: 7/21/15- 5/15/16
Total Estimated Budget: $620,692.00
Estimated Expenditure: $10,020.00
Technical Direction Status: Pending

Completed Activities
- Submission of Technical and Cost Proposal to DTRA CBEP in response to Technical Direction;
- Initial outreach to in-country stakeholders.

Upcoming Activities
- Coordination and communication plan development with in-country stakeholders.

Challenges
Metabiota has received no response or inquiries regarding the proposal. Continued delay in approval will affect the ability for deliverables and planning to remain on schedule, scope, and within budget.

CENTCOM

TD 002 Sample Collection and Diagnostics Training on Middle East Respiratory Syndrome (MERS-Coronavirus) in Camels and Bats – Kazakhstan

Objectives
To advance scientific study and experimentation and increase worldwide knowledge of safe sample collection and laboratory diagnostics through detailed training sessions both in labs and in the field. The training will focus on safe sample collection and laboratory diagnostics for Middle East Respiratory Syndrome (MERS-CoV) in camels and bats supporting enhanced biosafety and biosurveillance efforts in the region.

Period of Performance: 06/01/2015- 09/30/2016
Total Estimated Budget: $391,056.00
Estimated Expenditure: $218,940.00
Technical Direction Status: Approved

Completed Activities
- In-country PIs from IMV completed pre-training trip on 2 August in order to secure

regional authorization and participation of up-coming September training event;
- Presented translated Memorandum of Understanding (MoU) to the Institute of Microbiology and Virology (IMV) and incorporated recommended edits into the document;
- Continued communication and collaboration with key CBEP personnel, in-country partners, Duke-NUS Qualified Trainers (QTs) and CLS to finalize logistical requirements of the training event, such as procurement, shipment, venue selection, air and ground transportation, interpretation, translation, printing, etc.;
- Submission of CLS required forms for logistical needs and ongoing monitoring of shipment and procurement;
- Submission of training materials for CBEP/PAO approval to include incorporation of recommendations into materials;
- Decision to postpone training event due to 70-day customs clearance, which would delay the reception of shipped materials needed for a successful implementation of the event. New training dates are TBD; decision pending on availability of CBEP, IMV, Duke, and Metabiota parties. Possible revised training dates available from November 2015 – April 2016;
- Finalizing modified subcontract agreements with partner Duke-NUS and in-country procurement company TMC.

Upcoming Activities
- Both Metabiota and IMV will sign the final MoU;
- Modify subcontract agreements with trainer partner Duke-NUS and in-country procurement company TMC;
- Continue to work with key CBEP personnel, in-country partners, and CLS to monitor shipment through KZ customs clearance, finalize procurement of required materials for the event, and secure all ground transportation, lodging, catering, and other logistical, as appropriate once revised training dates are set;
- Revised training presentations will be forwarded for translation services following PAO approval;
- Finalize timeframe for the second sample and diagnostics training event Confirmation of the new training dates is pending on availability of CBEP, IMV, Duke, and Metabiota parties. Once new training date is confirmed, the TEP, TAF, CCR, and any other necessary forms will be resubmitted for approval;
- A travel logistics request will be submitted to CLS for in-country travel support for IMV POC's to conduct a second pre-training preparations trip, scheduled to be conducted 09/22/2015-10/06/2015. Discussions are underway with CBEP Regional Leadership to address the request for travel within the 45-day authorization period. Metabiota will submit the CLS travel request, if regional leadership requires it within the expedited timeframe. Otherwise, travel will be delayed to support CDRL requirements.

Challenges
Metabiota faced several logistical challenges due to short suspense and turnaround times to complete this project, as well as obstacles regarding unanticipated venue costs and extended customs clearance time frames that have delayed the shipment of necessary materials. These challenges have delayed the submission of the required documents for logistics, travel, material

review, item procurement, shipping, printing, etc. Due to these events, there is a possibility that the materials and supplies needed to implement this event would not pass through customs clearance in time for the training, jeopardizing the successful implementation of the event. Metabiota therefore collaborated with CBEP personnel, in-country partners, and trainers to find alternate solutions to these logistical challenges. Possible solutions investigated included: reaching out to in-country partners to use materials already available at their laboratory facilities; readjusting the training syllabus within current dates; or moving back the event to a later date. It was ultimately decided by all parties that in order to ensure a successful training event that the dates would be postponed. New training dates are yet to be confirmed, and are subject to CBEP, IMV, Duke, and Metabiota availability.

TD003 Bat Borne Virus from Annual Bat Cull India

Objectives

This TD was canceled by CBEP on 08/11/15. Following conversations with CBEP programmatic and contract personnel, it was agreed that Metabiota would not invoice for any costs associated with this TD. Activities during this period concluded upon receiving notice that the TD was canceled, and included notifying partners that the research activity would not move forward, closing out contract requests, and ceased communication regarding implementation or coordination for this project.

TD004 MESA Epigenetics and Genomics of Infectious Disease Workshop

Objectives

Further CBEP Cooperative Biological Research (CBR) objectives through topic focused, poster and training sessions thereby identifying potential partners for future research cooperation, increasing knowledge of specific areas of research educating on best practices in international scientific collaboration.

Period of Performance: 06/01/2015 to 05/15/16
Total Estimated Budget: $488,040.00
Estimated Expenditure: $34,390.00
Technical Direction Status: Approved

Completed Activities

- Prepared and submitted a CCR and travel authorization form for the parties responsible for implementing the workshop event (Metabiota, and Gryphon) to conduct a pre-coordination visit in Amman, Jordan on 10/10-13/2015. Travel documents were approved on 13 August. Possible CBEP attendance is pending, dependent on conflicting engagements;
- Prepared and submitted a revised project proposal with an extended period of performance (POP) until May 2016 and revised budget to account for the extended POP. The purpose of this extension is to guarantee a successful implementation of the project. Extended project proposal has been accepted;
- Prepared modified subcontract with partner Gryphon Scientific to account for extended POP. Completion of modified subcontract is in progress;
- Prepared and submitted a CLS request to support the logistics of an embassy reception/

outreach event to be held in Washington, DC on 09/21/2015. Dates of the event are subject to change to 02/29/2015 based off of Papal visit;
- Ongoing communication and collaboration with CBEP personnel, in-country partner, and US partner;
- The Second Scientific Advisory Board meeting with in-country partners, collaborators, CBEP personnel, and regional scientific team was held on 31 August.

Upcoming Activities
- Metabiota will collaborate with partners Gryphon, RSS, and CBEP to finalize the agenda for pre-coordination visit in Amman, Jordan on 10/10-13/2015.Proposed agenda includes visiting the in-country partner organization and the proposed venue for the event, meeting with in-country stakeholders, and discussing required logistical needs in-person on the ground;
- Work with Gryphon and CLS to finalize logistical preparations for the September embassy reception/ outreach event and make necessary changes to adjust the date of the event due to the Pope's visit;
- The modified subcontract agreement with partner Gryphon Scientific will be signed and implemented with the extended POP.

Challenges
Metabiota presented a revised project proposal with an extended period of performance and revised budget to reflect the additional POP due to logistical challenges that arose because of the short suspense and turnaround times to complete this project. With the previous PoP, the submission of required documents for travel, material review, item procurement, shipping and printing were at risk of not being completed in the required timeframes specified by our current contract's CDRLs. Additionally, the participants would not have adequate time to prepare materials to be presented during the event.

The approval of the extended project proposal, therefore, was greatly appreciated and will facilitate a successful event. A second challenge that was encountered this month arose with the September Embassy Reception, seeing as the papal visit will occur the proposed week of the embassy event and would negatively affect attendance. A revised CLS logistics request will need to be submitted.

EUCOM

TD 011 Ukraine TADR Activity Project 4 (TAP-4)

Objectives
The overarching focus of TAP-4 is to establish and standardize a regional alliance between several CBEP partner countries within Eastern Europe to raise awareness to and provide education on ASF.

Period of Performance: 05/16/2015-01/31/2016
Total Estimated Budget: $131,069.00
Estimated Expenditure: $52,544.00

Technical Direction Status: Approved

Completed Activities

- Ukrainians continued independent outreach activities;
- Planning and draft agenda completed for the final regional workshop in Tbilisi, Georgia 11/03-04/2015;
- Travel authorization was approved;
- CCR data submitted.

Upcoming Activities

- Continued outreach activities of Ukrainian vets;
- Attendance at the final regional workshop in Tbilisi, Georgia 11/03-04/2015.

Challenges

There is an active ASF outbreak in Ukraine and many of the vets that were to be involved in the outreach efforts are dealing with the outbreak. This has slowed the distribution of outreach materials.

TD 012 Ukraine Project 2 (UP-2)

Objectives

The overarching objectives of this project are to develop both explanatory and predictive, spatially-explicit models to explore the geography and ecology of EDPs, specifically Francisella tularensis, the causative agent of tularemia, and Bacillus anthracis, the causative agent of anthrax, across Ukraine at multiple spatial scales.

Period of Performance: 05/16/2015-05/15/2016
Total Estimated Budget: $797,013.15
Estimated Expenditure: $174,863.00
Technical Direction Status: Pending

Completed Activities

- (b)(4); (b)(6) (University of Florida) conducted GIS mapping activities at IVM late July/early August;
- UF IACUC approval documentation submitted to DTRA for routing to USAMRMC ACURO for secondary review;
- Procurements for laboratory supplies at VOLC, IVM, UCDCM initiated;
- BSC re-certification at VOLC, IVM, UCDCM completed;
- Nearing finalized subcontract agreement with KSU.

Upcoming Activities

- Establishment of subcontract with UF;
- Identification of alternative mechanisms to engage Ukrainians on data analysis in lieu of additional sampling trip.

Challenges
IACUC documentation was delivered from UF with a short timeframe for receiving secondary approval from USAMRMC ACURO. As such, secondary approval prevented the planned small mammal sampling to take place in August with KSU and UF. Metabiota will continue to coordinate with all stakeholders to find alternative solutions to alleviate any impacts this cancelation may have on subsequent data analysis. WRAIR failed to file all required travel documentation on time, and thus the September laboratory trip has been cancelled.

TD 016 Georgia GIS Support

Objectives
Provide GIS subject matter expertise to project teams responsible for DTRA CBEP research projects GG-19, GG-20, and GG-27. Subject matter expertise will be responsible for providing mentoring to Georgian scientists both via remote communication and in person.

Period of Performance: 09/01/2015 – 05/15/2016
Total Estimated Budget: $150,000
Estimated Expenditure: N/A
Technical Direction Status: Pending

Completed Activities
- Proposal development complete.

Upcoming Activities
- NSTR

Challenges
Metabiota was unable to make contact with any of the technical POCs listed on the TD.

PACOM

TD 006 Nipah Research Activity Project

Objectives
Original Objectives: Further CBEP Cooperative Biological Research (CBR) objectives through; identification of reservoir and host range for Nipah or related viruses; examination of the seroprevalance of Nipah in bats, peridomestic animals and humans, and understanding the risk factors for cross species transmission in the Philippines. Revised Objectives: Support RITM in developing a grant package that supports the identified Nipah research activity to increase biosurveillance within the region and encourage sustainability and scientific engagement among host country organizations.

Period of Performance: 06/01/2015 – 09/30/2015
Total Estimated Budget: $874,846.00
Estimated Expenditure: $6,914.29
Technical Direction Status: Cancelled

Completed Activities

- Revised technical and cost proposal in response to revised technical directive;
- Coordinated with partners to receive information for revised technical directive in support of project initiation;
- Revised and completed proposed contract packages, to include sole-source justifications, for RITM and Duke NUS in support of this activity;
- Coordinated with CBEP regional and program leadership to discuss and plan for TD in response to revised technical directive;
- Informed partners, and closed out activities in response to cancellation of technical directive;
- Reviewed costs and invoicing in support of the activity to ensure only hours for proposal development were billed to the government. Removed all costs for this activity from invoicing and made administrative revisions accordingly for project cancelation.

Upcoming Activities
N/A

Challenges
N/A

TD 007 Regional Baseline Assessment

Objectives
Characterize the region based on the disease landscape, organic regional capabilities, and external factors that impact CBEP objectives, identify needs and areas of overlap with other stakeholders, and provide overarching strategic guidance & goals to CBEP PACOM Country Managers in the development of country engagement strategies.

Period of Performance: 05/16/2015 – 10/31/2015
Total Estimated Budget: $850,489.00
Estimated Expenditure: $507,348.00
Technical Direction Status: Approved

Completed Activities

- Submitted completed draft analysis on 9/2/2015. Met with regional leadership and A&AS support staff to review the draft and discuss review process for follow on meeting scheduled 9/14/2015;
- Continued ongoing revisions and research after the restructuring of the landscape analysis framework based on a revised and targeted approach;
- Submitted revisions to TD on 07/25/2015. Received approval on 08/04/2015 August;
- Engaged additional SMEs in support of graphic development, pathogen profiles, and stakeholder assessments to continue building out the analysis. Completed a draft of the gap analysis section identifying regional gaps, and developed and began to implement metrics for confidence rating of data;
- Met with Editors to review analysis and identify individuals to support finalization of the report;

- Continued routine communications with project team, CBEP leadership, and SMEs to finalize the analysis;
- Drafted the Executive Summary to ensure that CBEP's critical objectives are addressed to the fullest extent.

Upcoming Activities

- The team will submit electronic copies of all sections of the document to CBEP Regional Leads the week of 09/08/2015;
- The team will meet with CBEP Regional Leads on 09/14/2015 for feedback on the first analysis draft, and discuss the way forward to complete the project;
- Continued QA/QC and information validation process;
- Review and revision of the Gap and Approach Analyses, and finalization of all sections of the document;
- Additional graphics development and review to support the analysis;
- Identify graphic services to print final version of the analysis for submission 10/01/2015.

Challenges

The landscape analysis is a large and critical undertaking that must be completed under a rigorous and accelerated timeframe requiring targeted and informed communication across the program with key CBEP personnel. Metabiota will actively manage communication, especially any external communication related to CBEP engagement countries utilizing a professional and pre-approved approach. This allows for proper sensitization and assurances

TD015 Continued Health Informatics Support in Vietnam

Objectives

Improve Vietnam Ministry of Health systems (processes and software) to support public health disease reporting and response capacity and improve compliance with National and International Health regulations (e.g., IHR 2005).

Period of Performance: 05/16/15 – 06/30/15
Total Estimated Budget: $51,804.80
Estimated Expenditure: $51,804.80
Technical Direction Status: Approved, Closed

Completed Activities

- Prepared and completed budget and budget narrative in response to TD. Received TD approval on 08/19/2015;
- Submitted final project report to both CBEP Regional Leadership and CDC personnel.

Upcoming Activities

N/A

Challenges

N/A

Metrics

Table 1 – Summary of Invoicing

CLIN	Total Awarded	Total Funded	Total Invoiced	Total Remaining

TD016 Georgia GIS Mentorship

Reporting PoP: 01JUL16-31AUG16

Project PoP: 15SEP15-15NOV16

Key Points:

- Metabiota SMEs have ramped up efforts to resume work on GG-19, -20, and -27.
- The GG-19 data set has been transitioned to QGIS, and GoToMeeting calls with the Georgian GIS team on GG-19 have resumed.
- Analytical routines which had been originally built in Excel have been re-implemented in R for sustainability and workflow efficiency.

Schedule Highlights:

Ongoing mentoring	6/1/16	11/15/16
Ongoing research work	6/1/16	11/15/16
Biweekly project update calls	8/1/16	11/15/16
Project Reporting	7/1/16	1/24/17
July Monthly	8/1/16	8/1/16
August Monthly	9/1/16	9/1/16

Project Financials:

CLIN	Total Budgeted	Total Expended	Remaining
1002	$255,696.28	$160,978.16	$94,718.12
1003	$-	$-	$-
1004	$1,754.00	$421.56	$1,332.44
1005	$14,257.00	$21,566.13	-$7,309.13
TOTAL	$271,707.28	$182,965.85	$88,741.43

General Challenges:

- Questions still remain regarding future of GG-27 as sister project AJ TAP-11 is stalled due to BTRIC drawdown in Azerbaijan.

Proprietary & confidential information, please do not distribute.

TD017 Georgia Grantsmanship

Reporting PoP: 01JUL16-31AUG16 Project PoP: 15SEP15-15NOV16

Key Points:

- Mentorship with LMA scientists has resumed.
- Abstract for proposal on anthrax soil decon practices was communicated to DTRA for the pre-coordination process.
- Mentored [redacted] (b)(4); (b)(6) on preparing responses to funding agency questions.
- In-country mentorship has been planned for 2-17 September 2016. Travel documents were submitted and approved.
- Travel logistics were initiated and completed.

Schedule Highlights:

Trip 3	7/18/16	9/23/16
CCR	7/18/16	7/18/16
TAF	7/18/16	7/18/16
Project Reporting	11/2/15	11/15/16
June Monthly	7/1/16	7/1/16
July Monthly	8/1/16	8/1/16
August Monthly	9/1/16	9/1/16

Project Financials:

CLIN	Total Budgeted	Total Expended	Remaining
1002	$234,604.40	$132,329.13	$102,275.27
1003	$1,842.00	$-	$1,842.00
1004	$948.00	$-	$948.00
1005	$33,843.50	$30,511.35	$3,332.15
TOTAL	$271,237.90	$162,840.48	$108,397.42

General Challenges:

- LMA staff availability has been challenging in July and may continue through August due to leave being taken and government mandated proficiency testing.

Proprietary & confidential information, please do not distribute.

TD018 Georgia Genomics Mentorship

Reporting PoP: 01JUL16-31AUG16 Project PoP: 15SEP15-15NOV16

Key Points:

- TD PoP extended to 15 Nov 2016
- Continued genomics and bioinformatics mentorship of Georgian staff.
- Worked with NCDC staff to perform quality assessments on data from the Lugar Center MiSeq machine following the recent servicing.
- Worked on F. tularensis strain comparison project.
- Worked on finalizing draft genome data for anthrax strain comparison.
- Facilitated meeting between LMA leadership and representatives from USAMRIID and WRAIR.
- Assisted LMA with preparations for developing a concept to be submitted to the DTRA BAA on ASFV genomics.

Schedule Highlights:

Task Name	Start	Finish
On-Site Operational Support	12/14/15	11/15/16
Execute Operational Work Plan	1/4/16	11/15/16
Project Reporting	11/1/15	11/15/16
July Weekly Calls	7/1/16	7/31/16
August Weekly Calls	8/1/16	8/30/16

Project Financials:

CLIN	Total Budgeted	Total Expended	Remaining
1002	$464,261.00	$376,178.78	$88,082.22
1003	$4,579.50	$-	$4,579.50
1004	$15,522.67	$4,213.90	$11,308.77
1005	$4,217.00	$-	$4,217.00
TOTAL	$488,580.17	$380,392.68	$108,187.49

General Challenges:

- No significant challenges at this time

Proprietary & confidential information, please do not distribute.

TD019 Georgia Microbiology Mentorship

Reporting PoP: 01JUL16-31AUG16 Project PoP: 15SEP15-15NOV16

Key Points:

- Prepared a draft of TAP-11 final report which was submitted to the CBR project managers.
- Oversaw GG-19 media comparison; all media appears to be equivalent.
- Assisted NCDC epidemiologists and laboratorians with preparing their final proposal versions for the CDC GHSA Operational Research call.
- Assisted an NCDC microbiologist with an application to GRDF for a fellowship to acquire skills in cryptosporidium diagnostics.
- Helped LMA staff to coordinate a visit from a technician from Ellie Labs to work through some issues with their new FPA devices.

Schedule Highlights:

Task Name	Start	Finish
On-Site Operational Support	12/14/15	11/15/16
Execute Operational Work Plan	1/4/16	11/15/16
Project Reporting	11/1/15	11/15/16
July Weekly Calls	7/1/16	7/31/16
August Weekly Calls	8/1/16	8/30/16

Project Financials:

CLIN	Total Budgeted	Total Expended	Remaining
1002	$685,156.71	$489,060.90	$196,095.81
1003	$2,473.85	$-	$2,473.85
1004	$14,179.71	$3,122.82	$11,056.89
1005	$4,217.00	$831.13	$3,385.87
TOTAL	$706,027.27	$493,014.85	$213,012.42

General Challenges:

- (b)(6) (b)(4) notes that it has become increasingly frequent that Lugar Center scientists and others are preparing and submitting abstracts or reports very near or at the deadlines making it difficult to properly assist them or assess their work.

Proprietary & confidential information, please do not distribute.

METABIOTA

AFRICOM

Proprietary & confidential information, please do not distribute.

TD001 PPE / VHF Training Cameroon

Reporting PoP: 01JUL16-31AUG16

Project PoP: 16MAY15-15NOV16

Key Points:

- The Metabiota training team traveled to Yaoundé, Cameroon Aug. 5-13 to conduct the training event.
- Twenty-six participants representing various levels of the Cameroon Ministry of Defense, Department of Military Health attended.
- Participants were highly engaged, ultimately resulting in marked improvement in the theory-based testing and practicums for all project participants.

Schedule Highlights:

Task Name	Start Date	End Date
Phase 4 Training Implementation	05/25/16	09/07/16
TAF Rescheduled 3	07/06/16	08/04/16
VHF PPE Training	08/09/16	08/11/16
Phase 5 Final Project Reports	08/12/16	09/07/16
Training Trip Report, Metabiota	08/12/16	08/16/16
Training Trip Report, Project Team	08/12/16	08/16/16
Final Project Report	08/17/16	09/07/16

Project Financials:

CLIN	Total Budgeted	Total Expended	Remaining
1002	$116,633.64	$88,474.98	$28,158.66
1003	$-	0	$0.00
1004	$1,393.57	0	$1,393.57
1005	$17,863.00	$12,326.76	$5,536.24
TOTAL	$135,890.21	$100,801.74	$35,088.47

General Challenges:

- Logistical issues beyond Metabiota's control, including acquisition and delivery of PPE, participant logistics, and venue logistics, were not finalized until the Metabiota training team was on site.
- Participant lunches and the equipment handover ceremony reception were not paid for by DTRA, which resulted in an approximately $2400 cost directly to Metabiota.

Proprietary & confidential information, please do not distribute.

TD009 BS&S Training RSA

Reporting Pop: 01JUL16-31AUG16 Project PoP: 16MAY15-15NOV16

Key Points:

- OHASIS module development completed; bug fixes from preliminary testing also completed. Deployment underway.
- Procurements of respirators and adaptors for fit-testing is complete; education of NHLS on requirements for invoicing is also complete.
- 4th revision of BS&S videos completed; feedback is being provided for final versions.

Schedule Highlights:

Task Name	Start Date	End Date
Task 3: Monitoring of Equipment Maintenance Enhancement-OHASIS	01/18/16	11/15/16
3.1 OHASIS Module Development	01/18/16	10/31/16
3.2 OHASIS E-Learning Training Development and Conduction	08/09/16	11/07/16
3.3 OHASIS Pilot and Troubleshooting	08/09/16	11/07/16
3.4 Post Action Report	11/08/16	11/15/16
Task 5: Project Reporting and Closeout	07/01/15	11/15/16
5.1 Monthly Progress Reports	07/01/15	11/15/16
5.2 Monthly Invoicing	07/01/15	11/15/16
5.3 NHLS Project Report	11/01/16	11/15/16

Project Financials:

CLIN	Total Budgeted	Total Expended	Remaining
1002	$205,037.00	$180,946.13	$24,090.87
1003	$111,454.09	$128,986.13	-$17,532.04
1004	$4,092.47	$817.20	$3,275.27
1005	$15,024.00	$799.38	$14,224.62
TOTAL	$335,607.56	$311,548.84	$24,058.72

General Challenges:

- Nothing significant to report.

Proprietary & confidential information, please do not distribute.

TD013 OHE Training Uganda

Reporting Pop: 01JUL16-31AUG16 Project PoP: 16MAY15-15NOV16

Key Points:

- Successful implementation of Cohort 11 Module 1 training in Fort Portal Uganda:
  - Training event included One Health sector professionals from Southwestern Uganda.
- All relevant forms have been approved for Module 2 training:
  - Training event will take place in Fort Portal, Uganda during 09.19.16-09.23.16.

Schedule Highlights:

Task Name	Start Date	End Date
Implementation of Cohort 11 Module 1 Training	08/01/16	08/05/16
Development and Submission of Training Reports for Module 1	08/05/16	08/15/16
Implementation of Cohort 11 Module 2 Training	08/01/16	08/05/16
Development and Submission of Training Reports for Module 2	08/05/16	08/15/16

Project Financials:

CLIN	Total Budgeted	Total Expended	Remaining
1002	$279,705.94	$257,511.95	$22,193.99
1003	$12,632.00	$528.62	$12,103.38
1004	$12,146.51	$423.68	$11,722.83
1005	$45,828.00	$46,581.84	-$753.84
TOTAL	$350,312.45	$305,046.09	$45,266.36

General Challenges:

- Overarching USG funding constraints outlined by the US ambassador to Uganda continue to hinder ease of implementation for this training event.

Proprietary & confidential information, please do not distribute.

TD022 BSV & Grantsmanship Uganda

Reporting Pop: 01JUL16-31AUG16 Project PoP: 21MAR16-15NOV16

Key Points:

- Successful implementation of the 2-week Uganda Biosurveillance training between the dates of 08.22.16 and 09.02.16:
  - Total of 16 participants trained in study design, data analysis, ELISA and PCR methods, Sample collection (birds, cattle, small ruminants), sample management, equipment usage, and general biosafety/biosecurity in both field and lab settings.
- Revision to the pilot study implementation plan.
- Delivery of procured materials to Ugandan laboratories.

Schedule Highlights:

Task Name	Start Date	End Date
Submission of finalized SOPS to DTRA ROB	06/07/16	06/07/16
Submission of finalized SOPS to UVRI Primary	06/10/16	06/10/16
Submission of Training Materials for PAO Approval	06/01/16	07/15/16
Implementation of Biosurveillance Pilot Study Training	08/15/16	08/26/16
Implementation of Biosurveillance Pilot Studies for AI, PPRV, and RVF	08/26/16	10/21/16
Development of research proposals purposed for outside funding sources	05/01/16	11/15/16
Submission of final project report	11/15/16	11/15/16

Project Financials:

CLIN	Total Budgeted	Total Expended	Remaining
1002	$111,755.00	$118,918.16	-$7,163.16
1003	$105,270.00	$35,939.81	$69,330.19
1004	$3,680.00	$2,091.84	$1,588.16
1005	$32,931.00	$5,398.72	$27,532.28
TOTAL	$253,636.00	$162,348.53	$91,287.47

General Challenges:

- General difficulties surrounding stakeholder engagement and follow through due to limited time and incentive availabilities:
  - This issue is at times compounded by the constraints outlined by the US Ambassador to Uganda's memo.
- Delays in overall procurement related to backordered items necessary for the later stages of the pilot study.
- Complicated messaging surrounding the provision of incentives to farmers that allow us to sample their animals.

TD023 OHE Curriculum RSA

Reporting Pop: 01JUL16-31AUG16 Project PoP: 21MAR15-15NOV16

Key Points:

- Received 30% review comments from DTRA CBEP:
  - Comments will be addressed and changes to materials will be submitted at the 60% review meeting
- 60% review meeting is scheduled to take place on September 15, 2016:
  - Materials will be submitted to DTRA CBEP for review by COB September 9, 2016.

Schedule Highlights:

Task Name	Start Date	End Date
Complete of 30% of total revisions	05/01/16	07/01/16
Presentation and review of materials at 30% Completion	07/07/16	07/07/16
Complete of 60% of total revisions	07/07/16	09/15/16
Presentation and review of materials at 60% Completion	09/15/16	09/15/16
Final Submission of revised training materials	09/15/16	11/15/16

Project Financials:

CLIN	Total Budgeted	Total Expended	Remaining
1002	$112,883.00	$66,092.22	$46,790.78
1003	$-	$-	$-
1004	$-	$354.43	-$354.43
1005	$-	$-	$-
TOTAL	$112,883.00	$66,446.65	$46,436.35

General Challenges:

- No challenges to report

Proprietary & confidential information, please do not distribute.

TD025 Grantsmanship Ethiopia

Reporting Pop: 01JUL16-31AUG16 Project PoP: 27APR16-15NOV16

Key Points:

- Successful and well received implementation of the Ethiopia Writing Workshop between the dates of 07.25.16-07.29.16 in Addis Ababa, Ethiopia.
- Development and approval of the thrust area 6 proposal submission schedule.
- Development and informal submission of an abstract by EPHI:
  - White paper currently in development.
- Concept and abstract development by NAHDIC.

Schedule Highlights:

Task Name	Start Date	End Date
Submission of Training Materials for PAO Approval	05/15/16	06/20/16
Implementation of Ethiopia Technical Writing and Grantsmanship Workshop	07/25/16	07/29/16
Submission of Training Survey Results	07/29/16	08/08/16
Supported Submission of White Papers	07/25/16	10/15/16
Supported Development of Full Proposals	07/29/16	11/15/16

Project Financials:

CLIN	Total Budgeted	Total Expended	Remaining
1002	$74,085.24	$53,758.98	$20,326.26
1003	$1,579.05	$1,579.05	$-
1004	$647.16	$521.99	$125.17
1005	$13,639.00	$14,458.00	-$819.00
TOTAL	$89,950.45	$70,318.02	$19,632.43

General Challenges:

- While, the EPHI team has experienced little issue regarding the development and submission of their documents in line with the deliverables schedule, The NAHDIC team is slightly behind citing a lack of time outside their normal working schedules.

TD021 BSV & Field Epi Training Iraq

Reporting Pop: 01JUL16-31AUG16 Project PoP: 22FEB16-15NOV16

Key Points:

- Secured 18 participants for Cohort I and 20 participants for Cohort II;
- 15 July submitted BS&S training materials; Revisions submitted 19 July;
- 15 July submitted revised TEP with roster and participants;
- Received PAO approval for Topic I-IV epi training materials;
- Held LMS and Zoom webinar trainings; Built out LMS site;
- 19 July received CME credit hours for course;
- Initiated HOT material procurement;
- 3 Aug revised TD approved and gap analysis initiated;
- 8 Aug kicked off Cohort I training course;
- Travel to NBMC & PP presentation approved 21 Aug & 1 Sept.

Schedule Highlights:

Task Name	Start Date	End Date
Secure project approval & engagement of Dr. Faris	02/22/16	08/15/16
Training material development / adaptation / revision (Epi, BS&S, and hands-on course)	05/27/16	09/15/16
Resubmission of updated TEP with participants and revised schedule	06/01/16	07/15/16
Prepare and send Letters of Invitation	06/06/16	07/15/16
LMS training, familiarization, and material upload	06/27/16	08/07/16
Cohort 1 Epi Training Course	08/08/16	09/15/16

Project Financials:

CLIN	Total Budgeted	Total Expended	Remaining
1002	$711,773.00	$493,726.43	$218,046.57
1003	$26,260.00	$3,318.72	$22,941.28
1004	$4,535.00	$1,005.48	$3,529.52
1005	$4,595.00	$-	$4,595.00
TOTAL	$747,163.00	$498,050.63	$249,112.37

General Challenges:

- Aggressive schedule required a heightened LOE through August to ensure completion of gap analysis in time for presentation, and relied on solid engagement of Iraqi stakeholders.
- Revisions to epidemiology training materials has been substantive and required additional efforts to finalize materials prior to delivery.

Proprietary & confidential information, please do not distribute.

TD024 MESA Film Production

Reporting PoP: 01JUL16-31AUG16

Project PoP: 01MAY16-31JUL16

Key Points:

- 01 July submitted film to CBEP for review and PAO approval; 08 July revisions submitted following review and feedback;
- 26 July PAO approval received;
- 26 July held film premiere at Crystal Gateway Marriott attended by CBEP leadership, USG and regional stakeholders;
- 31 July completed closed captioning;
- 05 August transferred DVD to CBEP completing project requirements;
- 23 August CC film posted on DTRA YouTube channel.

Schedule Highlights:

Task Name	Start Date	End Date
Film Submitted to CBEP for Review & PAO approval	07/01/16	07/01/16
PAO Review & Approval	07/01/16	07/26/16
Premiere Coordination	05/26/16	07/26/16
Film Premiere	07/26/16	07/26/16
Closed Captioning	07/26/16	07/31/16
Transfer final materials to CBEP	07/31/16	08/05/16
CC Film Posted on DTRA YouTube Channel	08/05/16	08/23/16

Project Financials:

CLIN	Total Budgeted	Total Expended	Remaining
1002	$37,411.19	$37,411.19	$-
1003	$11,780.42	$11,780.42	$-
1004	$-	$-	$-
1005	$2,685.09	$2,685.09	$-
TOTAL	$51,876.70	$51,876.70	$-

General Challenges:

- PAO approval was received on 26 July, which left 4 days for closed captioning and transfer of materials under PoP. All work was executed by 31 July and final materials transferred by 05 August.

Proprietary & confidential information, please do not distribute.

Metabiota, Inc.
Academic Engagement Partnership

Project: "Incorporating GIS, Remote Sensing, and Laboratory Diagnostics into Human and Veterinary Disease Surveillance for Tularemia and Anthrax in Ukraine"

Attachments: Technical Narrative, Form A – Original UP-2 Work Plan and Form B - Budget

Project Overview

The proposed budget is developed in support of the four specific goals to be completed within the 15 months, with individual tasks and objectives for each of the four goal categories. Of note, Goal 1 of the original UP-2 work plan was completed during the first two years of project implementation.

Goal 2: Active surveillance for tick-borne diseases, specifically tularemia caused by *Francisella tularensis*;
Task 2.1: Survey methods for mammals
Task 2.2: Survey methods for ticks
Task 2.3: PCR and culture diagnostic efforts for *F. tularensis*

Goal 3: Surveillance and environmental sampling for *Bacillus anthracis*
Task 3.1: Investigating recent and ongoing anthrax outbreaks
Task 3.2: Laboratory analyses for *B. anthracis* for UP-2

Goal 4: GIS, remote sensing, and micro/molecular diagnostics (category 3).
Task 4.1: Space-time Analyses for historical and field data
Task 4.2: Ecological Niche Modeling experiments
Task 4.3: Remote Sensing

Direct Labor

For the efficient and effective project implementation it is requested to engage the following experts.

Vendor Service Agreement

CRDF Global is an independent nonprofit organization that promotes international science collaborations and full-service grant administration. Metabiota will engage CRDF Global for disbursement of funds to Ukrainian project recipients as well as grant payments to institutions participating in the UP-2 project. CRDF will provide Metabiota with transparent monitoring and detailed reporting of the grant payments.

Key Personnel

Biologist - (b)(4); (b)(6)

In order to facilitate field collection efforts and conduct epizootological survey, (b)(4); (b)(6) will participate as an independent consultant. (b)(4); (b)(6) is a biologist, ecologist with extensive epizootological, ornithological, theriological, fieldwork, academic, and public administration experiences. He has taken part in a number of international projects focused on plague, tularemia, avian influenza and arbovirology. Importantly (b)(4); (b)(6) was an integral part of the team when conducting field activities during the first two years of the original UP-2 effort under the BTRIC. For 11 years (2003-2014) he was Chief of the Department of Natural foci and Quarantine Infections of the Ukrainian Research Anti-Plague Institute and participated in tularemia projects during 2012-2014.

Institutional Financial Support (IFS)

IFS of the Ukrainian Centers for Disease Control (UCDC) staff

In order to achieve the project's goals (Goals 2, and 4) and corresponding objectives (Tasks 2.1, 2.2, 2.3, 4.1, 4.2, 4.3), it is anticipated that the following UCDC staff will be required to support the project in the estimated amounts set forth below (14 individuals):

- **Project Manager (PM)** (b)(4); (b)(6)

  (b)(4); (b)(6) is the Head of the Laboratory of Especially Dangerous Infections (EDI) at the UCDC. She holds a specialty in "Bacteriology". (b)(4); (b)(6) took part in various international projects and is an author and the co-author of approximately 30 scientific papers and methods. She was involved in the original UP-2 project as the Project Manager from the earliest stages of the Project Development Grant (PDG). In the framework of this project she will carry out the general management of the project (all tularemia related tasks), coordinate work between the Ministry of Health (MOH) Institutions, coordinate the theoretical and practical aspects of the epidemiological surveillance of tularemia; oversee the laboratory analysis for tularemia, data analysis, the development of a GIS database, a literature review, preparation of quarterly progress and technical reports, preparation of project-related information for US Collaborators review, development of abstracts, posters, and presentations on the project. Ukrainian PM will ensure that deliverables and milestones are achieved as outlined in the work plan.

- **Consultant:** (b)(4); (b)(6)

  (b)(4); (b)(6) Chief Doctor, has a Ph.D. in epidemiology and holds a specialty in"Epidemiology". (b)(4); (b)(6) will participate in the project as a consultant. Being a Chief Doctor and Director of UCDC, she provides organizational-methodical management of activities for the State Sanitary Epidemiological Services (SSES) of Ukraine. She is the author and the co-author of approximately 120 scientific articles and instructive-methodological papers. She works on issues pertaining to SSES in the MOH of Ukraine and takes part in the development of legislative documents, as well as, introduces new directions of SSES structure and function. In the framework of the project she will work on theoretical and applied aspects of epidemiology and will

provide administrative support.

- **Consultant:** [redacted] is the Deputy Chief Doctor at UCDC. He holds a specialty in "Epidemiology" and will take part in the project as a Consultant in the field of epidemiology, hygiene of an environment and public health hygiene and will provide administrative support for the organization of the work at UCDC. [redacted] is the author of approximately 40 scientific papers on the surveillance of EDIs. Within the framework of the project he will work on the theoretical and practical aspects of epidemiological surveillance of especially dangerous infections, forecasting of potential outbreaks and prevention measures. Together with [redacted] he will work on the development of recommendations on the improvement of the tularemia survey system in Ukraine and will be responsible for reporting to the MOH on the activities to be conducted within the framework of the project, as well as coordination of US collaborators access to the lab sites.

- **Epidemiologist:** [redacted] is the Head of the EDI Department at the UCDC. He will be responsible for the organization of the tularemia field and clinical study; epidemiological analyses of historical and new collected statistical data on tularemia and anthrax (study of natural foci activity, analysis of morbidity among people), as well as quality control of data, and development of the GIS database.

- **Biosafety Officer (BSO):** [redacted] Chief of Viral Laboratory at UCDC, and holds a specialty in "Virology". She participated in various international projects and is the author of approximately 30 scientific papers. [redacted] is a member of the Regime Commission that provides certification of laboratories at medical and veterinary organizations. She provides organizational and methodical management, analytical and practical activity on issues of laboratory control. Within the framework of this project she will be responsible for bio-risk management of activities conducted within the framework of the project. This work will include review of the project's standard operating procedures (SOPs)/procedures and identification of SOPs that are relevant to the work for which they are developed; ensure SOPs are followed by project participants within the scope of work for which they are responsible; evaluate the risks, determine necessary precautions, identify information gaps related to BS&S, and, based on collected information, complete the risk assessment within the category for which they are responsible; oversee modifications to existing or development of new SOPs and subsequent modification of the Risk Assessment Form throughout project implementation within the scope of work for which they are responsible; formally report modifications to/development of SOPs and modifications of the Risk Assessment Form to PM. BSO will conduct accident and incident investigation(s) as necessary.

- **Bacteriologist:** [redacted] is the Bacteriologist of the EDI Laboratory at UCDC. She was

involved in the project from the PDG stage. Within the framework of this project she will conduct bacteriological analysis of collected samples and be responsible for the observance of BS&S standard at the EDI lab.

- **Bacteriologist** (b)(4); (b)(6) (b)(4); (b)(6) is the Bacteriologist of the EDI Laboratory at UCDC. She will Lead efforts on laboratory testing (PCR) of the collected samples, work with the GIS group on database development (data entry), and will participate in project related events/trainings.

- **Other Personnel:** Additional personnel budgeted (7 individuals) include staff (bacteriologists, specialists, nurses, and laboratory assistants) that will be engaged in various aspects of project activities. They will conduct various tasks.
-

The workload identified for the UCDC staff is based on their previous engagement in the UP-2 Project Development Grant (PDG) and nearly two years of work on the project under the BTRIC. The reimbursement rates are consistent with local norms, prevailing market rates paid under similar projects.

IFS of Volyn Oblast Lab Center (VOLC) staff

In order to achieve the project's Goal 2 and corresponding objectives (Tasks 2.1 and 2.2), it is anticipated that staffing of VOLC (up to 8 individuals) will be needed. The VOLC team will be comprised of the following individuals:

- **Chief Doctor/Director:** (b)(4); (b)(6)
  He will be responsible for the administrative support, organization of work, and access to the site.

- **Head of the EDP Laboratory** (b)(4); (b)(6)
  She will be responsible for the arrangement of work at the laboratory, adjustment of SOPs, sample processing, their preparation for transportation to UCDC for analysis, documentation, BS&S issues, etc.
-
- **Doctor-bacteriologis** (b)(4); (b)(6)
  She will perform work on sample processing and preparation of all necessary paperwork for the delivery of samples to UCDC.
-
- **Biologist** (b)(4); (b)(6)
  He will be responsible for the field collection efforts.

- **Three laboratory assistants** who will work on sample processing.

- **Driver** (b)(4); (b)(6)
- He will provide transportation service for the project and delivery of the collected samples from the field sites to the VOLC on a daily basis during the field trips and their further transportation to the UCDC for the laboratory analysis.

The workload identified for the VOCL staff is based on their previous engagement in UP-2 Project Development Grant (PDG) and nearly two years of work on the project under the BTRIC. The reimbursement rates are consistent with local norms, prevailing market rates paid under similar projects.

IFS of Ukrainian Research Anti-Plague Institute (URAPI) staff

In order to achieve project Goal 2 and corresponding objectives (Tasks 2.1, 2.2), it is anticipated that staffing of URAPI (up to 4 individuals) will be needed. The URAPI team will work on epizootological survey, analysis of the field data, and preparation of project related documentation. The workload identified for the URAPI staff is based on their previous engagement in UP-2 PDG and nearly two years of work on the project under the BTRIC. The reimbursement rates are consistent with local norms, prevailing market rates paid under similar projects.

IFS of the Institute of Veterinary Medicine (IVM) staff

For achieving project Goals 3, and 4, and corresponding objectives (Tasks 3.1, 3.2, 4.1, 4.2, 4.3) assigned to the vet team, it is anticipated that staffing of IVM will include up to 15 people. The IVM team will be comprised of the following participants who will support the project in the estimated amounts set forth below:

- **Participating Institution Manager (PIM** (b)(4); (b)(6) Ph.D., Director. (b)(4); (b)(6) has a Ph.D. in veterinary medicine. (b)(4); (b)(6) has been the IVM Director since 2012 and takes an active part in various EU and USA international programs focusing on upgrading the scientific capabilities of his institute. As the PIM of this project, he will focus on directing the overall operation of the project, overseeing the implementation of project activities, managing the vet team, providing administrative support, monitoring progress towards meeting goals, tasks and deliverables. The PIM will also coordinate work with the State Veterinary and Phytosanitary Service of Ukraine (SVPSU), as well as with other agencies if needed.

- **GIS Group Leader:** (b)(4); (b)(6) (b)(4); (b)(6) is a veterinary doctor and has been actively working with US collaborators on GIS research since 2010. He is the Head of the GIS Sector at IVM. Within the framework of the project he will lead efforts on spatial analysis and modeling for targeted pathogens, as well as assist UCDC on GIS efforts.

- **GIS Specialist** (b)(4); (b)(6) (b)(4); (b)(6) has a Ph.D. in veterinary medicine. She is a Senior Researcher at IVM and will be involved in the project as a member of the GIS team.

- **Group Leader (epizootology)** (b)(4); (b)(6) (b)(4); (b)(6) will be the Group Leader for the epizootological survey of anthrax and investigation of new cases. He will assist with sample collection and, laboratory analysis and will participate in field efforts.

- **Group Leader on PCR:** (b)(4); (b)(6) is a veterinary doctor, an expert in animal viral and bacterial diseases, author of 15 publications, and 1 patent. Currently she is the Head of the Virology Department of the "Research Training Center on Animal Disease Diagnostics" laboratory at IVM. Within the framework of this project (b)(4); (b)(6) will be responsible for testing collected samples by PCR.

- **Group Leader (bacteriology):** (b)(4); (b)(6) has a Ph.D. in veterinary medicine. After graduation from the Ukrainian Agrarian University in 1996 he started his work as a veterinary doctor in the laboratory of Biotechnology of Bacterial Preparations at IVM. Within three years, he became a Senior Researcher and then a Leading Researcher of this laboratory. In 2011, he took a position as the Head of the laboratory of Biotechnology of Bacterial Preparations, and in 2012 became a Head of the sector of Biotechnology of Bacterial Preparations and Control. Currently, (b)(4); (b)(6) s the Head of the Anthrax Laboratory at IVM. Within the framework of this project, he will coordinate activities to be carried out by the IVM staff and be a Group Leader for bacteriological study.

- **Bacteriologist:** (b)(4); (b)(6) is an engineer of the Laboratory of Anthrax at IVM and a postgraduate student in the Institute of Animal Biology of the National Academy of Agrarian Sciences (NAAS) of Ukraine. Her dissertation deals with finding novel compounds, which possess antibacterial activity (b)(4); (b)(6) is an expert in animal bacterial and infectious diseases, author of 4 publications. Within the framework of this project she will participate in the bacteriological efforts.

- **Group Leader (serology** (b)(4); (b)(6) has a Ph.D. in veterinary medicine. He is an author of 35 publications, 7 patents and 4 vaccines, as well as an author of the ELISA test-kits for necrobacillosis and clostridiosis diagnostics. Since 2013 (b)(4); (b)(6) is the Head of the "Research Training Center on Animal Disease Diagnostics" laboratory at IVM. Within the framework of this proje (b)(4); (b)(6) will be responsible for the serology of the boar sera.

- **Group Leader (field efforts)** (b)(4); (b)(6) has a Ph.D. in veterinary medicine. He is an expert in viral diseases of domestic and wild pigs, author of 42 publications, 8 patents and 1 vaccine. During 2004-2010, he worked as a Researcher at the laboratory of epizootology at IVM. In 2011 (b)(4); (b)(6) became the Head of the Laboratory of viral diseases of pigs at IVM. Within the framework of this project (b)(4); (b)(6) will be responsible for field efforts and bio-risk management of activities conducted within the project.

- **Other Personnel:** Additional personnel budgeted (6 individuals) will include staff scientists/researchers, laboratory assistants and technicians that will be engaged in various aspects of the project and will conduct multiple tasks.

The reimbursement rates are consistent with local norms, prevailing market rates paid under similar projects.

Equipment

The IVM has requested an autoclave (Fisher Scientific SterilElite™ Tabletop Autoclave) to improve laboratory safety and waste management processes when performing tasks associated with specific objectives. This autoclave is small an efficient with regards to energy use. It will be used for the sterilization of culture media, special protective clothing and for inactivating the biological materials including materials suspected for anthrax contamination (ground samples).

Additionally, IVM requested equipment and licensed software in order to proceed with GIS and remote sensing efforts. Recently, the GIS sector was established at the institute. The project equipment and software obtained within the project will provide a sustainable GIS and remote sensing research group at IVM that will lead this effort in the National Academy of Agrarian Sciences (NAAS) of Ukraine, as well as will provide an in-country skill set of spatial epidemiology for future research.

The total cost of this equipment is increased by 10% to account for shipment costs and future price increases.

Materials & Supplies

The detailed list of materials and supplies that are needed to carry out proposed research, their quantity, unit cost and corresponding catalog number are indicated in the project budget. The unit cost is estimated on the basis of the price that the manufacture or vendor provided at their websites. If the specific item's price is unavailable in open sources, the cost is budgeted as an average quote from local vendors. The total cost of materials and supplies is increased by 10% to account for shipment cost and future price increases. All materials and supplies are defined by the following categories at the corresponding organization.

Materials & Supplies for Laboratories at UCDC. Within the framework of the project it is expected to obtain up to 3000 samples (both tick pools and rodent's organs) for testing by PCR and bacteriology. Provided costs are required to support research materials, supplies and consumables needed to carry out laboratory analysis at UCDC. Such supplies include, Personal Protection Equipment (PPE) needed to provide biosafety standards (relates to tasks 2.1, 2.2, and 2.3), reagents and supplies for DNA extraction and PCR (relates to task 2.3), reagents and supplies for bacteriological culture (task 2.3), general laboratory and office supplies ((i.e., copier paper, writing tools, binding supplies, copier supplies, postage, toners cartridge, other miscellaneous supplies, etc.) that will be used by staff to carry out daily activities on the project and relates to all tasks.

Materials & Supplies for Laboratory at VOLC. Provided costs are required for research materials, supplies and consumables needed to carry out sample processing at VOLC (Tasks 2.1, 2.2). Such supplies include items like PPE, dissection tools, disinfectants, vials and tubes,

general laboratory supplies that are needed for sample processing, storage, and disposal of used materials.

Materials & Supplies for Tularemia field efforts. Provided costs are required for research materials, supplies and consumables needed to carry out field collection efforts. Such supplies include items for setting up field activity, collecting samples, clean up, and miscellaneous (drinking water, first aid kits, Insect repellent, etc.).

Materials & Supplies for IVM Laboratories. 1000 boar serum and 300 field samples will be provided for testing. Provided costs are required for research materials, supplies and consumables needed to carry out anthrax efforts in the proposed research (tasks 3.1 and 3.2). These supplies will include PPE, needed to provide biosafety standards; sample handling, storage, and dispensing; reagents and supplies for PCR, ELISA, and bacteriology; and other laboratory supplies that that will be used by staff to carry out daily activities.

Materials & Supplies for anthrax field efforts. Provided costs are required for research materials, supplies and consumables needed to carry out the proposed research and include item for safety sample collection, transportation, and storage, as well provide BS&S standards.

Travel

Travel support will be managed by Metabiota where possible, and by CLS if necessary (participants not paid by Metabiota or any other DTRA CBEP mechanism). The following travel is identified as being necessary in support of project implementation.

In-country travel of project participants from Participating Institutions

- One in-country two-week trips (14 days) during summer/autumn 2015 to conduct field collection for anthrax analysis (6 Ukrainians per trip).

Metabiota Travel
It is expected that Metabiota personnel will require the following trips during project implementation:

- 2 one week trips of 2 US citizens to Ukraine
- 1 local trip of US citizens within the US
- 1 one week trip to the US of 3 Ukrainian citizens

Other Direct Costs

This category contains items not included in the previous categories. Description of these items is provided below.

Transportation service: Transportation service for field trips will be managed by Metabiota when possible. The cost of this service is based on the historical pricing (cost provided by B&V under BTRIC in March 2013 field via contract with local transportation company SIXT). It is expected that 3 off-road vehicles will be required for each trip to support tularemia field

efforts (up to 14 Ukrainian and US collaborators and one interpreter) and 2 off-road vehicles for each trip to support anthrax field efforts (up to 6-7 Ukrainians).

Translation service: It is planned that translation service will be provided during the joint meetings with US collaborators. Translation service will be supported by CLS. The cost of this service is based on the historical pricing that B&V used during implementation of the Contract with the Defense Threat Reduction Agency in Ukraine in 2008-2014

Shipment of samples to Georgia for training: About 500 samples are currently stored at UCDC and that should be tested by PCR. The US collaborators will arrange a training session for project participants at the Georgian laboratory and plan to use these samples for training and joint work with Ukrainians. Ukrainian Aviation Service
Center (http://www.dgoods.com.ua/en) estimated the cost of shipment to Georgia is approximately $400. This cost includes box, dry ice (up to 10 kg), broker service and all custom procedures in Ukraine. If needed, it is anticipated that shipping would be facilitated through the CLS contract.

Fees

Overhead to Ukrainian Participating Organizations

Ukrainian Participating Organizations will need institutional cost to provide smooth project implementation on the daily base at their organizations. This cost will include communication cost (Internet, phone, fax, e-mail, etc.), electricity, equipment maintenance and repair and other miscellaneous expenses. This cost is consistent with local norms, and based on the procedures that are followed by similar projects in Ukraine. Fees for Ukrainian organizations have been captured as part of the CRDF vendor service agreement.

CRDF Fee

This cost is required to administer grant payment to Ukrainians and is 12% of total grant payments.

Kansas State University Subcontract

Direct Labor

Labor rates have been designed to capture KSU overhead costs including indirects and fees.

Principal Investigator - (b)(4); (b)(6)

Senior personnel salary is requested for the KSU project Principal Investigator (b)(4); (b)(6) (b)(4); (b)(6) contribution to the project will be; 1) supervision of the completion of the land cover mapping component of the project, 2) lead field excursion to Volyn Oblast, Ukraine to complete validation of land cover mapping component, 3) supervise and contribute to creation of biophysical data layers to support pathogen distribution mapping.

Graduate Studen (b)(4); (b)(6)

Graduate student salary is requested to support one research assistant throughout the project. The research assistant will have a 9-month appointment. Duties of the research assistant will include; 1) assist with production of final product and archiving of land cover maps, 2) acquire remote sensing data and assist (b)(4); (b)(6) in creating biophysical layers, and 3) other tasks as directed by the project PI.

Travel

Travel costs will be handled by Metabiota on a cost-reimbursable basis. At this time, no international travel is expected for (b)(4); (b)(6) Domestic travel to Gainesville, Florida may occur.

Materials

Supplies funds will be used to cover annual license costs for the ENVI and Arc-GIS software packages, both of which will be used extensively in this research. The license fee is determined based on estimates of computing needed using each of the two software packages, as a percentage of the total cost of departmental and university site\seat licenses for each package.

University of Florida-Gainesville Subcontract

Direct Labor

Labor rates have been designed to capture UF overhead costs including indirects and fees.

Co-Principal Investigator - (b)(4); (b)(6)

(b)(4); (b)(6) is leading the spatial epidemiology portion of this project, including the GIS mapping and ecological niche modeling related tasks. He also works closely with the collaborators at WRAIR that are focusing on the biological analysis of small mammal and tick samples for tularemia and boar sera and soil samples for anthrax in order to ensure that the data entered into the spatial epidemiology portion of the project is of the highest quality. He is expected to travel to Kyiv to work closely with collaborators at both UCDCM and IVM.

Co-Principal Investigator - (b)(4); (b)(6)

(b)(4); (b)(6) contribution to the project includes leading small mammal trapping and his involvement in the subsequent data analyses in spatial epidemiology with (b)(4); (b)(6) He interacts closely with (b)(4); (b)(6) from KSU in order to ensure that the biotope mapping in the land use/land cover portion of the project proceeds as projected.

Graduate Student (b)(4); (b)(6)

UF is requesting two graduate students at 25% effort (20 hours per student per pay period) during the 2015-2016 academic year to assist with data analysis, GIS mapping, and

manuscript development related to the UP-2 project. These students will operate under the guidance o[(b)(4); (b)(6)]

Travel

Travel costs will be handled by Metabiota on a cost-reimbursable basis. At this time, we are projecting the possibility of up to two (2) one-week trips by [(b)(4); (b)(6)] nd one graduate student to Kyiv to work with Ukrainian institutions on sample analysis, data analysis, and integration into spatial epidemiology models.

Materials

Supplies funds will be used to cover annual license costs for the ENVI and Arc-GIS software packages, both of which will be used extensively in this research. The license fee is determined based on estimates of computing needed using each of the two software packages, as a percentage of the total cost of departmental and university site\seat licenses for each package.

Academic Engagement Partnership (AEP)

Cooperative Biological Engagement Program (CBEP)

HDTRA1-14-C-0104

Monthly Meeting Report
CDRL A0017

9 June 2016

Prepared for:

Prepared by:

METABIOTA

1.0. Executive Summary and Highlights

This submission of the Defense Threat Reduction Agency (DTRA) monthly meeting agenda covers significant activities through 26 May 2016, for the Academic Engagement Partnership (AEP) Program in accordance with DTRA contract HDTRA1-14-C-0104.

2.0. Key Points

a. The AEP contract has been extended through November 15, 2016 and all ongoing projects have received revised technical directions.
b. PAO/ROB approval is necessary for successful implementation of 3 current Technical Directions.
c. Metabiota has successfully completed two additional projects (TD 004, TD 010 and TD 014) since the previous reporting period.
d. TD 021 is at risk until approval is received from the Iraq Ministry of Health is received.

3.0. Summary of Topics

3.1. Administration

a) Budget Realignment for TDs
   a. Metabiota will provide adjusted project budgets including MOD 24, recently closed project actuals and adjusted budgets for TD 17-19.
   b. DTRA and Metabiota will schedule a separate meeting to review the budget adjustments.

b) Action Items Status Review
   a. All actions from the previous monthly meeting were completed.

3.2. Regional Activities

a) EUCOM

a. TD016 Geographic Information Systems (GIS) (Georgia)
   i. Metabiota performet (b)(4); (b)(6) and (b)(4); (b)(6) completed hands on mentorship on open source software in Tbilisi.
   ii. The project team completed a draft assembly in SaT Scan using data from CG-19.
   iii. Metabiota received Revision A for this Technical Direction and has submitted a proposal to extend the project through the November 15 program end date.

b. TD017 Grants Subject Matter Expertise (SME) (Georgia)
   i. Metabiota subcontractor Avila provided mentorship to LMA in development of White Papers.
   ii. Avila facilitated calls with project stakeholders and and potential collaborators to develop a sustainable plan for submitting the White Papers for funding and implementing research projects.

c. TD018 Onsite Expertise Genomics Research Activities (Georgia)
   i. (b)(4); (b)(6) ontinues to mentor students of NCDC on basics of bioinformatics.
   ii. Farlow is facilitating collaborative work between LMA and NCDC in order to provide LMA access to a next generation sequencer.

d. TD019 Onsite Expertise Microbiology Research Activities (Georgia)

i. Metabiota received a revised Technical Direction and has submitted a proposal to extend the project through the [redacted]ember 15 program end date.
ii. Visiting Scientist (b)(4); (b)(6) is providing mentorship and assistance to NCDC on a proposal developed for submission to the Gates Foundation.
iii. NCDC has expressed a desire for continued mentorship on additional proposals.
iv. Arner provided support to the Principal Investigator of WRAIR to determine how to best utilize samples taking to extract the most effective data.

b) AFRICOM

a. TD001 PPE/VHF Training (C[redacted]roon)

i. (b)(4); (b)(6) is currently still working with the US Embassy to identify new training dates.
ii. DTRA will have representatives in Cameroon in June and will follow up on this item.

b. TD009 NHLS (South Africa)

i. The OHASIS module deliverable is in an intensive development stage.
ii. The videography company selected is providing edits to the rough cuts of the biosafety video deliverable.

c. TD013 One Health Epidemiology (Uganda)

i. Metabiota has begun working with CDC Uganda to finalize the schedule for the OHE Cohort 11 training.

d. TD014 Kenya Writing Workshop (Kenya)

i. Metabiota has submitted the final report for this technical direction.
ii. Metabiota edited 19 of the 20 original manuscripts and 10 were selected for supplemental submission to PLOS ONE.
iii. Metabiota will maintain contact with the participants to determine the results of the submissions.

e. TD022 Biosurveillance and Grantsmanship Training (Uganda)

i. Metabiota is finalizing the SOPs for IACUC and ACURO submission and hopes to receive a wavier for the ACURO approval.
ii. The project team is finalizing the required CLS forms for submission.
iii. Metabiota is finalizing training materials to submit for PAO Approval.

f. TD023 One Health Epidemiology Short Course Curriculum (South Africa)

i. Metabiota is continuing to develop the modules for the short course.
ii. Metabiota has sent the work plan to the in country partners for this effort and awaits feedback.

g. TD025 Technical writing and Grantsmanship Workshop (Ethiopia)

i. Metabiota is finalizing all training materials to submit for PAO approval in early June.
ii. Metabiota has submitted the Training Event Plan and received DTRA approval.

c) CENTCOM

a. TD004 MESA Regional Conference and Workshop (Jordan)

i. This project has completed.
ii. Metabiota submitted the proceedings book and it was distributed to all required parties.

iii. Metabiota will need a budget adjustment to complete the close out of this project.

b. TD021 Field Epidemiology Training Program (Iraq)

i. Metabiota is waiting on final notice of approval for (b)(4); (b)(6) to participate in this program.

ii. Metabiota project team is continuing material development at the intermediate level and will adjust once the project is approved by the Iraq Ministry of Health and participants are identified.

iii. Metabiota identified text books and additional materials for procurement to successfully execute the project.

iv. Metabiota has drafted Transfer of Material and Bill of Material documents for submission.

c. TD024 MESA Short Video (Jordan)

i. Metabiota held a meeting with the stakeholders to develop a draft version of the film narrative.

ii. During the meeting the team highlighted specific clips for inclusion in the final video and developed the intended story line.

iii. Metabiota expects a draft of the video to be completed mid June.

iv. Metabiota and DTRA discussed the need for a modified technical direction to extend the timeline and add funds in order to add closed captioning to the final video.

d) PACOM

a. TD007 Regional Baseline Assessment (South East Asia)

i. Metabiota has completed this project.

b. TD015 Health Information Systems (Vietnam)

i. The edits requested to the final deliverable were submitted.

4.0. Action Items

TD	Action Item	Date Identified	Responsible	Status
TD022	Metabiota to submit SOPs to DTRA for review	05/26/16	(b)(4); (b)(6)	Complete
TD022	Metabiota to submit training materials to DTRA for PAO approval	05/26/16		Ongoing
TD025	Metabiota to submit training materials to DTRA for PAO approval in early June	05/26/16		Ongoing
TD024	DTRA to inform Metabiota if MESA video preview event could be arranged at Crystal City Marriott to lock down dates for LOIs and embassy guest lists and speakers	05/26/16		Ongoing
TD021	Metabiota to send DTRA a draft BOM form and TOM form for materials purchase pre-approval	05/26/16		Ongoing
Admin	Metabiota to provide DTRA with an updated document on CLIN funding adjustment with updated Delta	05/26/16		Complete
Admin	Metabiota to schedule a side meeting with LTC Richardson to discuss	05/26/16		Ongoing

	suggested approach for CLIN funding adjustments			
Admin	Metabiota to send DTRA the April invoice	05/26/16	(b)(4); (b)(6)	Complete
New Business & other items	DTRA to identify date for the next face-to-face meeting	05/26/16		Complete

Defense Threat Reduction Agency

July 21, 2015

Metabiota
(b)(4); (b)(6)
Director
1 Sutter STE 600
San Francisco, CA 94104-4923

Subject: HDTRA1-14-C-0104 Technical Direction for the development of a writing workshop to mentor selected participants of the One Health Zoonotic Diseases Workshop held in Kenya on March 2015.

Dea (b)(4); (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to work with Kenyan collaborators to develop a writing workshop as a follow up event to the One Health Zoonotic Diseases in Eastern Africa workshop in Kenya in accordance with SOW section 4.0, Task 5. Metabiota will perform the following activities during the period of performance:

1. Identify organizers of the Regional Conference on Zoonotic Diseases in Eastern Africa and collaborate with them to hold a 6-day writing workshop (not including venue, food, and travel logistics as this will be coordinated via CLS) for 20 participants. Each day will consist of no more than 8 working hours of actual workshop time. Metabiota will work with Kenyan collaborators to identify the participants based on their performance in the CBEP-funded One Health Zoonotic workshop held on 09-12 March 2015.

2. Coordinate with Kenyan collaborators to jointly identify no more than 5 technical writing coaches for the 6-day writing workshop. The writing coaches will provide mentorship to the participants and will help them convert their scientific data into a complete draft manuscript for a research paper to be submitted to a peer-review science journal. One manuscript will be developed per workshop participant. Metabiota will assist in the development of up to 20 papers/manuscripts. The coaches or mentors will be experts in the following subject matter areas: statistics, epidemiology, microbiology, and diagnostics. Where possible, SMEs serving as experts in their field as well as writing coaches is preferred, as are SMEs able to provide mentorship in multiple areas of expertise.

3. Maintain communication with the participants post-workshop for a period of up to 60 days for continued refinement of the manuscripts and preparation for submission. Provide mentorship to participants to engage with an open-source journal (PLoS-NTD or PLoS One preferred) to begin the publication process for manuscripts developed during the workshops. The final task will include providing guidance on submission of the

Defense Threat Reduction Agency
8725 John J. Kingman Drive MSC 6201
Fort Belvoir, VA 22060-6201

manuscripts; i.e. development of supplemental documentation, application, cover letter, other correspondence with editors. Authors will be responsible for actually submitting and paying for submission of their manuscripts to the journal(s) as CBEP has not funded any of the research to be published and will not have reviewed the scope and content to ensure alignment with the biological threat reduction mission.

A proposal and estimated budget for implementing this requirement is requested within two weeks of receipt of this letter. Proposed labor hours should be provided based on clearly defined individuals, quantity of hours per individual per task/subtask (i.e. preparation and coordination for workshop, implementation of workshop, follow up with participants/authors). Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with the DTRA CBEP Points of Contact listed below.

Metabiota
(b)(4); (b)(6)
Director
1 Sutter STE 600
San Francisco, CA 94104-4923

Subject: HDTRA1-14-C-0104 Technical Direction for Continued Health Informatics support in Vietnam.

Dear (b)(4); (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to complete deployment activities of a health informatics subject matter expert (SME) in Hanoi, Vietnam through May 2015, in accordance with SOW section 4.3, Task 2. Metabiota was previously issued a Technical Direction Memo to proceed with the fulfillment of a Global Health Security Information Systems and Surveillance contract position to be stationed in Vietnam; authorizing disclosure of position requirements and soliciting candidates for the position. In support of this effort, the SME assessed, designed and implemented activities to assist the Vietnam Ministry of Health, including the General Department of Preventive Medicine, four regional institutes, provincial and district laboratories and others involved in disease surveillance, report and response.

The deliverable of a final report prepared by the SME will be provided to the CBEP POCs identified below upon completion of contract.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with the DTRA CBEP Points of Contact listed below.

Appendix A Supplemental Information

1 Human Resources Management

The Metabiota PM and PC will work closely with Metabiota's scientific bench and regional networks to identify and integrate appropriate internal SMEs to this project in order to further build out the project team. The PM will oversee and coordinate their efforts on the project in support of: adapting existing materials available and, if found necessary, developing any new training materials; mentoring participants through grantsmanship processes, including the development of SOPs; execution of pilot BSV efforts; and providing monitoring and evaluation techniques to ensure information learned is retained and applied at home organizations. The PM will ensure that SMEs are coordinating directly with project team members and performing required duties, and will track overall LOE according to budget and project requirements for all team personnel.

2 Communications Management

2.1.1 Customers Management

The Metabiota PM will lead communication efforts with DTRA CBEP for this activity, guaranteeing that all aspects of the project are being managed in direct coordination and communication with key team members and to ensure an understanding of project requirements and identify project risk at the forefront in order to implement mitigation strategies throughout the project lifecycle thereby ensuring overall success. In doing so, the Metabiota PM and PC will establish bi-weekly project calls or in-person meetings with the DTRA CBEP POCs and technical support as identified. The Metabiota PM will also maintain communication with CBEP regional leadership via email to ensure they have full visibility on the status and process of project execution. Metabiota will be available and respond promptly to any questions or concerns arising during planning and implementation of the project.

2.1.2 Stakeholder Management

Through close coordination with DTRA CBEP, the Metabiota PM and PC will identify key stakeholders, subcontractors, in-country FLNs, SMEs, and others identified as critical to support this training during key phases identified in the project proposal to support routine communication on the project critical to successful execution of the project, with whom the Project team will establish bi-weekly project calls. The Metabiota PC will regularly communicate the project status with the PM. The PC will manage the SMEs and FLNs and lead coordination with the Ugandan Stakeholders, to include leading regular coordination calls with the project team and assist in participant coordination.

Metabiota will maintain timely communication with other performing contractors should the need arise. Metabiota project personnel will be proactive in their communications to these contractors to coordinate necessary activities and will respond promptly to any questions or concerns.

3 Risk Management

Level of Effort allocated to Metabiota management and coordination staff unknown	During project phases 1 and 2, Metabiota is tasked to coordinate with 8 different research collaborators in the respective development of a work plan and a final research proposal. They are additionally tasked to coordinate with these same 8 research collaborators and as many as 20* independent consultants throughout phase 3. The management of this workload with the proposed LOE could lead to budget overrun, schedule overrun, and or reduced quality of deliverables	4	4	**Med-High**	Upon approval of this TD, and upon receipt of research concept notes mentioned in box 8, Metabiota program management and coordination staff will endeavor to gain a comprehensive understanding of all research concepts. Metabiota will coordinate with DTRA CBEP representation to understand stakeholder motivation and gain historical context of this project. Metabiota will additionally streamline any and all independent consulting onboarding processes as they pertain to this effort.	**Med**
Misalignment of FLN rates	Rates established for Metabiota-engaged Ugandan FLNs may not be appropriate for the education and experience of those to be engaged. This may result in difficulty obtaining buy in from Ugandan FLNs	2	4	Med	Metabiota will make every effort to manage costs associated with supporting FLNs as trainers, study leads, and study technicians	**Low-Medium**
Feasibility of Laboratory Component	Obtaining roughly 3000 samples for the pilot studies for AI, RVF, and PPRV after choosing sites relevant for all three diseases being studied may not be feasible by November 2016.	5	5	(b)(4); (b)(6)	Combine samples for multiple uses to save on preparation time, for example, using same ruminant samples for both RVF and PPRV, or consider reducing the pilot study sample size	(b)(4); (b)(6)
Ethical Approvals	Metabiota recognizes that DTRA ROB approvals are outside of our control, however, without which implementation of pilot studies will be delayed	5	5		The Metabiota Project Team will conduct regular communication with DTRA CBEP POCs on this topic and will provide back stop support for documentation if necessary	
	Schedule / Performance / Quality					
Outstanding need for Proposal Development and supplemental materials support	Metabiota has not yet seen the concept notes in support of this technical direction. As such the level of concept and proposal and supplemental materials development that may be necessary could exceed that allocated to our SMEs. This issue could lead to schedule delay and may affect the overall quality of the final research proposal	3	3	Med	Upon approval of this TD, and upon receipt of research concept notes mentioned in box 8, Metabiota program management and in country stakeholders will endeavor to gain a comprehensive understanding of all research concepts as well as learn where each proposals stands in terms of development. Metabiota will then take effort as needed to manage the LOE of its SMEs to ensure the development of a high quality product	**Low-Medium**
Potential need to develop all training material in support of Phase 3 Part 2	Metabiota has not yet seen the concept notes in support of this technical direction. As such the existence and completeness of training material remains unknown. The extent to which training materials must be developed may exceed the LOE allocated to our SMEs. This issue could lead to schedule delay and may affect the overall quality of the final research proposal	4	4	(b)(4); (b)(6)	Upon approval of this TD, and upon receipt of research concept notes mentioned in box 8, Metabiota program management and in country stakeholders will endeavor to gain a comprehensive understanding of the availability of existing training materials. Metabiota will then take effort as needed to manage the LOE of its SMEs to ensure the development of a high quality product.	**Med-High**
PAO approval and BS&S review of SOPs and training materials	PAO approval requires a 60-day time frame from receipt of training materials. Depending on the level of development of SOPs, this could result in schedule delays.	2	3	Med	Metabiota will coordinate with DTRA CBEP to understand the needs and ensure materials and SOPs are finalized and if necessary are submitted to PAO at least 60 days prior to training initiation.	**Low-Medium**
Potential difficulty in engaging research collaborators comprehensively.	This technical direction tasks Metabiota to engage 8 different research collaborators who are based in Uganda. Metabiota has not yet had an opportunity to understand stakeholder motivation and historical involvement in this project.	3	4	**Med-High**	Upon approval of this TD, and upon receipt of research concept notes mentioned in box 8, Metabiota program management will initiate communications with research collaborators and endeavor to gain an understanding of existing relationships and motivations.	**Low-Medium**
	Performance / Operations					

Project participants are government employees	Relevant expertise in the region is limited and largely concentrated in ministry institutions. Government employees are ineligible to receive per diem based on the Ambassador's memo.	4	3	**Med-High**	Metabiota will work with regional partners and DTRA CBEP to ensure that the identified participants are compensated in accordance with the Ambassador's guidelines. If necessary, Metabiota will communicate with identified participants regarding compensation.	**Med**
Location and venue for in country activities unclear	The location and venue for phase 3, parts 2 and 3 is not specified. As such, the logistic requirements including those relevant for the CLS contract for this phase are not well defined.	3	4	Med	Upon approval of this TD, and upon receipt of research concept notes mentioned in box 8, Metabiota program management and coordination staff will determine if a venue for this phase has already been selected and will proceed through the CLS mechanism accordingly.	**Low-Medium**

4 Schedule Management

Task Name	Start Date	End Date	Duration
Phase 0 - Proposal Development	**06/07/16**	**06/09/16**	3d
0.1 Proposal Development	06/07/16	06/09/16	3d
0.2 Proposal Submission	06/09/16	06/09/16	1d
Phase 1 - Work Plan Development	**03/21/16**	**04/22/16**	**25d**
1.1 Stakeholder Identification and Initiation	03/21/16	03/25/16	1w
1.1 Concept Note SME Review	03/28/16	04/01/16	1w
1.2 Ugandan Stakeholder-SME Coordination	04/04/16	04/22/16	3w
1.3 Work Plan Development (3)	04/04/16	04/22/16	3w
1.4 Work Plan Submission	04/22/16	04/22/16	1d
Phase 2 - Research Plan and Proposal Development	**04/25/16**	**06/24/16**	**45d**
2.0 Work Plan Execution	04/25/16	06/24/16	45d
2.1 Research Plan & SOP Development	04/25/16	06/03/16	6w
2.2 Research Proposal Development	06/06/16	06/24/16	3w
2.3 Project Proposal Submission	06/24/16	06/24/16	1d
Phase 3 - SOP Training and Pilot Studies	**03/28/16**	**11/09/16**	**163d**
3.1 Phase 3 Part 1 SOP Training Preparation	03/28/16	08/11/16	99d
3.1.1 Training Travel Prep: TEP (CDRL 0014)	06/13/16	08/11/16	44d
3.1.2 Training Travel Prep: CCR	06/27/16	08/10/16	33d
3.1.3 Training Travel Prep: TAF	06/27/16	08/10/16	33d
3.1.4 Training Prep: CLS (CDRL 0016)	06/27/16	08/10/16	33d
3.1.5 Training Prep: Participant Coordination	06/27/16	08/05/16	6w
3.1.6 Training Prep: Training Materials	03/28/16	06/03/16	50d
3.1.6 a Training Materials Development	03/28/16	06/03/16	10w
3.1.7 Pilot Study Materials Procurement	06/06/16	08/03/16	43d
3.1.6 b PAO and BS&S approval and review	06/06/16	08/03/16	43d
3.2 Phase 3 Part 2 In-country Pilot Study Training	08/04/16	08/24/16	15d
3.2.1 Conduct Training on SOPs, overarching skills, knowledge and guidance	08/04/16	08/17/16	10d
3.2.4 Post- Travel Deliverables: TTR (CDRL A006)	08/18/16	08/24/16	5d
3.3 Phase 3 Part 3 Pilot Studies	08/18/16	10/26/16	50d
3.3.1 Study 1 (RVF) Pilot	08/18/16	10/26/16	50d
3.3.1 a Study 1 Implementation	08/18/16	10/12/16	8w
3.3.1 b Study 1 Reporting	10/13/16	10/26/16	2w
3.3.2 Study 2 (AIV) Pilot	08/18/16	10/26/16	50d
3.3.2 a Study 2 Implementation	08/18/16	10/12/16	8w
3.3.2 b Study 2 Reporting	10/13/16	10/26/16	2w
3.3.3 Study 3 (PPRV) Pilot	08/18/16	10/26/16	50d
3.3.3 a Study 3 Implementation	08/18/16	10/12/16	8w
3.3.3 b Study 3 Reporting	10/13/16	10/26/16	2w
3.3.4 Final Project Reporting	10/27/16	11/09/16	2w

5 Cost Management

5.1.1 Cost Management

The Metabiota PM and PC will ensure time and cost management through the routine receipt and analysis of project reports, invoices, and other needs to support project efforts while ensuring accurate and responsive financial reporting and facilitation of cost savings to the government wherever possible. The PM and PC will also ensure that all project deliverables are submitted on time and to the quality required for this engagement. This will include coordination, development and submission of the following contract CDRLs associated with this project: CDRL A001 Monthly Report, A006 Training Trip Report, A011 Transfer of Materials (if warranted), A014 Training Event Plan, A015 Post Training Assessment, and A016 CTR logistics form. All CDRLs will be developed and submitted according to the contract requirements, and associated timelines.

5.1.2 Logistics Management

The need for CLS on this effort is currently unclear. As part of the project objectives, a two-week training event will take place in-country. However, at this time the location of where the training(s) will occur, if a training venue is required, and if in-country participants would require logistics support is not well defined. Metabiota is operating under the assumption that all FLN's will be contracted to Metabiota and, as a result, any necessary travel would be supported by Metabiota. If found necessary in the initial project coordination discussions with DTRA CBEP and the Ugandan POC's, the Metabiota PM and PC will coordinate with CLS for all travel, logistics, translation, and training requirements in country. Utilizing CDRL A016 the CTR logistics form, the PM will submit all requirements directly to CBEP and, once approved and joint (CLS-Metabiota) communication established by DTRA CBEP, the PC will coordinate directly with CLS team members to ensure all shipping and logistics requirements are met according to the timeline, project scope, and requirements. The PC will work jointly with CLS personnel to develop and submit required BOMs, and move supplies through the customs clearance process in conjunction with the DTRO.

5.1.3 Procurement Management

Metabiota will follow U.S. government procurement regulations and best practices to ensure the best value is obtained under the time constraints using all means available. In doing so, Metabiota will implement its pre-established procurement protocol for commodities, services, consultants, and subcontracts. This protocol includes a formal Request for Quote/Request for Information (RFQ/RFI) process followed by a bid analysis, which analyzes cost, suitability, and feasibility to determine best value followed by vendor selection. In situations requiring sole sourcing due to contingent factors, such as timeline, rare expertise, and compatibility, Metabiota will follow the pre-established protocol for sole-sourcing.

6 Quality Management

The Metabiota Project team will work closely with Metabiota SMEs to ensure all training materials and deliverables submitted and used on the project meet DTRA CBEP's requirements and standards and ensure a high quality is maintained. To do so, the project team will perform routine risk assessments to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms. Through this mechanism, the SMEs will be specifically responsible for QA/QC of training materials and for coordinating with engaged Ugandan stakeholders (e.g., POC's and FLNs) to ensure grant proposals and trainings are executed based on international standards and best practices.

Routine oversight and coordination will be performed to ensure all relevant parties are performing in-country logistical requirements to ensure successful execution of the project. Monitoring will include both administrative and fiscal oversight. Routine communications will be maintained with CBEP regional leadership to ensure the project remains on track and is implemented according to standard.

Furthermore, to enhance long-lasting sustainability in the development of local capacities, Metabiota will leverage existing local or regional partnerships when possible. Through this method, Metabiota will provide subject matter expert guidance, benchmark project development, and will qualitatively and quantitatively measure participant capacity development and improvement while additionally improving local and regional capacity and leadership. Metabiota has used such a model to successfully build and enhance human capacity with local organizations in Africa, South East Asia and Eastern Europe. We use an adaptive implementation style to assess individual's progress, and we set capacity-building and implementation milestone priorities on a regular basis so that the most up-to-date information can be used in response to key project opportunities and challenges. Instruction and training activities will be individually tailored to participant needs, individual competencies, and operating environment.

CURRICULUM VITAE

TRAINING

1990-94 Doctor of Philosophy, **The Pennsylvania State University**, State College, Pennsylvania

1994-99 Postdoctoral Fellowship, **Mayo Clinic and Foundation**, Rochester, Minnesota
July, 2012 – Training on **Good Clinical Laboratory Practices**. Conducted by Family Health International

PROFESSIONAL EXPERIENCE

November 2010 – Present: Head, Integrated Human-Animal Health (One Health) Program, Global Disease Detection program, Centers for Disease Control and Prevention, Kenya.

Major achievements:

(i) Establishment of the Zoonosis Disease Unit (ZDU) in Kenya. Worked with US/DOD's Disease Threat reduction Agency (DTRA) and US/DOS' Biosecurity Engagement Program (BEP) to secure funding for construction of ZDU Offices that were completed on August 2012, hiring of office administrator and data manager and funding field activities for the Unit for 3 years. The Kenya ZDU is serving as a model for other countries in the region.

(ii) Working with Government of Kenya to complete a 5-year (2012-2017) strategic plan for the implementation of One Health in Kenya.

(iii) Sourced funding to support training of veterinarians in the Field Epidemiology and Laboratory Training Program (FELTP). Also worked with the Program's resident adviser to revise the curriculum to incorporate One Health competencies.

November 2004 – 2010: **Laboratory Director**, Global Disease Detection/International Emerging infections Program-Kenya, Centers for Disease Control and Prevention.

Responsibilities:

(i) **Establishment and equipping of TWO BL-3 laboratories**, one in Nairobi for testing human specimens. The second in Kisumu specific for testing avian specimens for avian influenza.

(ii) **Staffing and training Kenyan scientist** in start-of-the art testing of specimens using serology and real-time PCR technologies. Establishing and training Kenya staff in pathogen genome sequencing using the ABI 3100 DNA Sequencer.

(vi) **Laboratory support in diagnostics** – IEIP population-based surveillance in rural and urban Kenya population. Diagnostic support in Avian influenza surveillance.

June 2005 – Present: **Lead Scientist** –GDD/IEIP Rift valley fever virus surveillance project in humans, livestock and wildlife in Kenya. Development of the research protocol and studies.

ANIMAL-HUMAN (ONE-HEALTH) RESEARCH EXPERIENCE

August 2006 – Present: Research on non-epidemic activities of Rift Valley Fever (RVF) fever virus in Kenya. Research includes sentinel herd of sheep and goats at Ijara district and serosurvey on Kenya wildlife for RVF virus antibodies.

December 2009-Present: Surveillance of influenza at the human-animal interface in Kenya ecosystem (in collaboration with NIH and University of Minnesota). The study includes sampling avians, dogs, pigs, cats in the Kibera urban informal settlement and Lwak rural community. In addition, pigs at a slaughterhouse serving the Nairobi region are being sampled to determine the presence of pHIN1.

CURRICULUM VITAE

(b)(4); (b)(6)

Telephone Contac (b)(4); (b)(6)

(b)(4); (b)(6)

E-Mail: (b)(4); (b)(6)

EDUCATION

1995-1999: University of Pretoria, South Africa - PhD in Veterinary Surgery 1986-1990: University of Nairobi - Master of Science (MSc.) in Clinical Studies. 1981-1986:

University of Nairobi - Bachelor of Veterinary Medicine (BVM.)

CURRENT POSITION AND RESPONSIBILITIES

A Senior Lecturer in the Department of Clinical Studies, teaching both undergraduate and postgraduate students enrolled in Veterinary and Wildlife courses, and participating in clinical duties and outreach programmes in and outside the University Veterinary Teaching Hospital.

EXPERIENCE

2009/2010

A consultant with Kesarine and Associates on: "Review of Current Disease Surveillance and Livestock Marketing Systems in Kenya" An FAO Kenya / European Commission Project.

2014

A Consultant for International Livestock Research Institute (ILRI)in the Development of Animal Care, Use and Safe Work Practices Manuals ("IACUCs") for Kenya Wildlife Service (KWS) and Kenya Veterinary Vaccines Production Institute (KEVEVAPI). Exercise successfully completed and the Manuals handed over to the client.

2013-2015

Local Consultant working with International Consultants from the Elizabeth R Griffin Foundation of the U.S.A. on Biorisk Reduction in Low-Resource Environments - Kenya Study Phases I, II and III. I was involved in logistics and assessment of biosafety in all Regional Veterinary Investigation Laboratories and the Central Veterinary Investigation Laboratory at Kabete (Department of Veterinary Services) and the Laboratories at the Faculty of Veterinary Medicine, University of Nairobi. Following the initial evaluations, I was involved in follow-ups on recommendations made and training of laboratory staff from the project pilot laboratories of Nakuru RVIL (Veterinary)), Bungoma Referral Hospital (Public Health) and Keroka District Hospital (Public Health) on Biorisk Management, in Phase III of the project..

2015 to date

Head of Section - Wildlife programmes, Department of Clinical studies, University of Nairobi.

Appendix A Supplemental Information 

1. Human Resources Management

The Metabiota PM and PC will work closely with Metabiota's scientific bench and regional networks to identify and integrate appropriate internal SMEs to this project in order to further build out the project team. The PM will oversee and coordinate their efforts on the project in support of: updating and adapting existing One Health Epidemiology (OHE) training materials, originally developed for use in Kenya and Uganda, into both a dual module basic level curriculum and a dual module advanced level curriculum; and the development of a Training of Trainers (ToT) module in support of the adapted curriculum. The PM and PC will ensure that SMEs coordinate directly with project team members and perform required duties, and will track overall level of effort (LOE) according to budget and project requirements for all team personnel.

2.Communications Management

2.1 Customers Management

To support routine communication on the project critical to successful execution of the project, the PM and PC will establish bi-weekly project calls with all key stakeholders, to include the CBEP POC, subcontractors, SMEs, and others identified as critical to support this training during key phases identified in the project proposal. This will serve to ensure understanding of project requirements and to identify project risk at the forefront, in order to implement mitigation strategies throughout the project lifecycle, ensuring overall success. The PM will also lead communication efforts with DTRA CBEP for this activity, guaranteeing that all aspects of the project are being managed in direct coordination and communication with key team members. The PC will provide support to the PM by coordinating day-to-day activities and maintaining and scheduling routine communications, ensuring that stakeholders are provided routine visibility on the project through in-person and virtual meetings, calls, weekly reports, and updates.

2.2 Stakeholder Management

Through close coordination with DTRA CBEP, the Metabiota PM and PC will identify key stakeholders, subcontractors, SMEs, and others identified as critical to support this mentorship effort during key phases identified in the project proposal to support routine communication on the project critical to successful execution of the project, with whom the Project team will establish bi-weekly project calls. The Metabiota PC will regularly communicate the project status with the PM. The PC will manage the SMEs and and lead coordination with stakeholders, to include leading regular coordination calls with the project team and assist in participant coordination.

Metabiota will maintain timely communication with other performing contractors should the need arise. Metabiota project personnel will be proactive in their communications to these contractors to coordinate necessary activities and will respond promptly to any questions or concerns.

3. Risk Management

In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with

conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Limited Period of Performance (PoP)	The updating of OHE short course curriculum materials, development of basic and advanced tracks, and development of a Training of Trainers modules will require time beyond that allocated by the current PoP	5	4	(b)(4); (b)(6)	Metabiota, based on prior communication with DTRA CBEP, anticipates that the PoP for this TD will be extended upon approval of the planned contract extension for AEP.	Low
Limited budget for project coordination	The labor budget remaining after the requested allocation of time to technical personnel limits the involvement of Metabiota Project Management and Coordination staff, potentially leading to budget overrun or minimization of SME contact hours.	4	3	**Med-High**	Metabiota project coordination staff will work efficiently and with a detailed project plan while ensure that contact time with SME staff is efficient and that duplication of effort is avoided.	Med
Potentially limited LOE for new material development	The development of new course material, particularly for the advanced level and the ToT modules, will require additional research. Hours allocated to SME II and Trainer I may be insufficient to accomplish this task.	4	3	**Med-High**	Project SMEs will utilize their past experience and knowledge to make improvements to the materials and conduct targeted research as needed. Metabiota project management and coordination staff will ensure consistent and fluent communication between SMEs to ensure the avoidance of duplication of efforts.	Med-Low

Major direction change following in-person reviews	If Metabiota receives substantial feedback regarding the direction of the materials updates following in-person reviews, it may not be possible to accommodate the requested changes and adhere to schedule.	2	4	Med	Metabiota will base materials updates on the Landscape Analysis developed during TD-10 and coordinate with the DTRA CBEP South Africa country manager on a regular basis to ensure the updates are proceeding as anticipated.	Low

3. Risk Management

Task Name	Start Date	End Date	Duration (Days)
1. Proposal Development	**03/11/16**	**03/15/16**	**4d**

3.4 Short Course Curriculum Adaptation Stage 2	06/01/16	08/11/16	10w1d
3.5 ToT Module Development Stage 2	06/01/16	08/11/16	10w1d
3.6 60% In-person review	08/11/16	08/11/16	10w1d
3.7 Short Course Curriculum Adaptation Stage 3	08/12/16	11/15/16	13w4d
3.8 ToT Module Development Stage 3	08/12/16	11/15/16	13w4d
4. Project Closeout	**11/15/16**	**11/15/16**	**1d**
4.1 Submission of Materials	11/15/16	11/15/16	1d
4.2 Submission of Final Report	11/15/16	11/15/16	1d

5. Cost Management

The Metabiota PM and PC will ensure time and cost management through the routine receipt and analysis of project reports, and other needs to support project efforts while ensuring accurate and responsive financial reporting and facilitation of cost savings to the government wherever possible. The PM and PC will also ensure that all project deliverables are submitted on time and to the quality required for this engagement. This will include coordination,

development and submission of the following contract CDRLs associated with this project: CDRL A001 Monthly Report, All CDRLs will be developed and submitted according to the contract requirements, and associated timelines.

6. Quality Management

The Metabiota PM and PC will work closely with Metabiota SMEs to ensure all curriculum materials submitted meet or exceed those expectations set by DTRA CBEP's requirements and standards and ensure a high quality is maintained. To do so, the project team will perform routine risk assessments to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms. Through this mechanism, the SMEs will be specifically responsible for QA/QC of curriculum adaptation and training module development.

Routine communications will be maintained with DTRA CBEP regional leadership to ensure the project remains on track and is implemented according to standard.

8 DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to continue implementation of the One Health Epidemiology training program in Uganda in accordance with SOW section 4.3, Task 3. In support of ongoing efforts, Metabiota should implement all activities as scheduled:

- Cohort 9 Module 1- 19-23 October 2015, Jinja District, Uganda
- Cohort 9 Module 2- 7-11, December 2015, Jinja District, Uganda
- Cohort 10, Module 1- 14-18 December 2015, Hoima District, Uganda
- Cohort 10, Module 2- 1-5 February 2016, Hoima District, Uganda

The contractor shall be responsible for coordination of activities with CBEP and the Inter Agency Health Team at the U.S. Embassy, Kampala prior to implementation. A proposal, training schedule and detailed budget, not to exceed $750K, for implementing this requirement is requested by 6 July, 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs in Block 15 below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Technical Approach: Metabiota will use the following technical approach to manage all tasks required for successful implementation of the project components and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following components will be executed concurrently and are required for this project:

Phase 1: Program Management and Coordination
Phase 2: Training Administration
Phase 3: Training Implementation

Objective: Coordinate with key in-country stakeholders to ensure trainers are properly oriented with the OHE training materials and training plan, participants meet criteria and have committed to fulfilling all requirements, and ensure responsible parities for contingent steps (logistics planning, participant coordination, trainer coordination, etc.) are identified and able to fulfill responsibilities within time, budget, and scope.

Process: Metabiota, in coordination with DTRA CBEP and key in-country stakeholders, will establish a communication plan and responsibility matrix for the conduction of the four OHE trainings, covering Module 1 and 2 for Cohorts 9 and 10. The project team will coordinate to finalize the trainer and participant lists for each cohort and training (4 trainings total, 4 Uganda based independent consultant trainers per training, 3 Metabiota personnel working in a management and oversight capacity per training, 25-30 participants per cohort) and ensure all parties involved are able to participate in full and fulfill all training requirements.

Metabiota will coordinate with local partners to disseminate timely and accurate correspondences and Letters of Invitation (LOIs) to all participants and trainers. Metabiota will coordinate with CLS for all participant and event logistics, as well as for the procurement of any necessary materials and training supplies.

Deliverables (Program Management) – All deliverables associated with Component 1 are associated with overall program management to ensure effective implementation of the all project objectives:

- Deliverable #1: Effective communications between all stakeholders to ensure all project activities are efficiently executed in accordance with Client and Host Country expectations and guidelines; including delivery of meeting minutes during stakeholder calls
- Deliverable #2: Maintain project schedules to ensure implementation of high-quality trainings within proposed project budget and in accordance with the technical approach (above);
- Deliverable #3: Maintain client, stakeholder, and contractor relationships;

Training Administration (July 1, 2015 – February 29, 2015) Objective: Develop quantitative and qualitative evaluations of all training Module 1 and Module 2 events. Provide lessons learned and recommendations in After Action Reports (AARs).

Process: Metabiota, in coordination with in-country stakeholders and Ugandan OHE trainers, will conduct both daily evaluations and pre- and post-training testing in order to develop a comprehensive evaluation of the training implementation. After the completion of all four trainings and data analysis, Metabiota will develop a comprehensive qualitative and quantitative evaluation of the training implementation.

Deliverables:

- Deliverable #1: Develop all pre training related documentation and CDRLs - Responsibility Matrix, Training Event Plans (TEPs), CLS forms, and Finalized Trainer and Participant Lists;
- Deliverable #2: Development of After Action Report;

-After Action Reports will contain in-depth recommendations, detailed lessons –learned, and further insight for the DTRA COR.

Training Implementation (July 1, 2015 - February 29, 2015) Objective: Facilitate the conduction of Module 1 and 2 OHE trainings (5 days each) for Cohorts 9 and 10 in the Jinja and Hoima Districts, respectively, and provice technical and programmatic support for the trainers and participants to complete of interim training requirements between Modules 1 and 2. Additionally, Metabiota will support and encourage collaboration and communication establishment amongst participants, with a focus on neighboring Districts, throughout the training sessions and the interim activities.

Process: Metabiota, in coordination with DTRA CBEP and key in-country stakeholders, will facilitate the four OHE trainings. In order to provide the Ugandan stakeholders with both technical and programmatic support and ensure project goals and objectives are being met, Metabiota trainers and, potentially, a scientific mentor will travel to each of the four trainings. Metabiota will conduct pre- and post- training testing as well as hold daily feedback sessions with the Ugandan trainers to identify gaps, reorient (if necessary) training approaches, and discuss lessons learned.

Deliverables:
- Deliverable #1: Submission of daily training evaluations and participant feedback;
- Deliverable #2: Submission of four Training Trip Reports (TTR)

-providing high level overview of the trainings and highlighting next step recommendations and cohort and module-specific lessons learned.
-Contractually required through CDRL 15

The following table (Timeline) describes the anticipated timeline of each phase.

Training	May – 15	Jun – 15	Jul – 15	Aug – 15	Sep – 15	Oct – 15	Nov - 15
Mod 1						Cohort 9	
Mod 2							

Training	Dec – 15	Jan - 16	Feb – 16	Mar – 16	Apr – 16	May - 16
Mod 1	Cohort 10					
Mod 2	Cohort 9		Cohort 10			

Risk Management:
In order to maintain our course of action and guarantee trainings that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation Plan	Residual Risk
Cost						
Communication and cultural boundaries disrupting training preparation and execution	Participants, and presenters do not have a clear understanding of logistical support	4	5	(b)(6)	Before the training Metabiota will support CDC-Uganda and MoH to ensure communication is provided to participants and presenters clearly outlines support for the training	Med
Schedule						
Submission of CCRs and TEPs	CCRs must be submitted at least 45 days prior to each event, and TEPs 65 days prior, and are dependent upon receipt of Letters of Technical Direction	5	5		Upon receipt of the Letter of Technical Direction, Metabiota shall immediately submit all DTRA required travel documents	Med-High
Performance						
Ability to collaborate with MoH Uganda	Trainers from MoH Uganda are required for effective implementation	3	3	Med	Metabiota will directly engage MoH trainers to ensure buy-in and support	(b)(6)
Logistics coordination	Russian based logistics company that is locally staffed, which can lead to misinterpretation of vital information	3	3	Med	Metabiota will directly engage both Russian and local based offices of TTI/CLS	

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$302,677
1003	MATERIALS	$21,054
1004	ODCs	$12,147
1005	TRAVEL	$45,828
TOTAL		**$381,705.27**

9c. TD SOLUTION BASIS OF ESTIMATE DESCRIPTION (NOT TO EXCEED 2 PAGES)

Period of Performance:

The Period of Performance for this effort is May 16, 2015 to February 29, 2015.

One Health Epidemiology Uganda is a legacy project that allows Metabiota to incur costs immediately as the proposed period of performance begins, and regardless of a DTRA CBEP decision to move forward. In kind, our team accrued a total of 215 hours during this period to design and develop the proposal. This effort involved a total of 93 program management hours, 84 research and data analyst hours, 16 SME III hours, 16 SME I hours, and 6 Trainer I hours.

The original period of performance was altered from May 16, 2015 through December 31, 2016 to May, 2015 through February to allow for the planned execution of both module 1 and module 2 of cohort 10. The postponement of Cohort 9 from its original schedule dictated a need to shift the trainings accordingly.

Labor:

Costs for direct labor to support this activity is required for the following personnel:

- Metabiota Program Manager (b)(4); (b)(6) will oversee the execution of program objectives towards the completion of DTRA CBEP goals at the regional level, and will lead communication with DTRA CBEP for this activity. (b)(4); (b)(6) will do so by maintaining oversight of stakeholder coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. (b)(4); (b)(6) will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables erstwhile ensuring the program remains within scope, budget, and timeline. Additionally, prior to (b)(4); (b)(6) arrival and as part of his onboarding process, program management responsibilities were shared by Metabiota Program Manager (b)(4); (b)(6) As of July 7th 2015 and throughout the remaining period of performance (b)(4); (b)(6) will be the sole Program Manager for this effort.
- Metabiota Project Coordinator (Research and Data Analyst; RDA) (b)(4); (b)(6) will ensure the execution of project objectives towards the completion of DTRA CBEP goals at the project level. (b)(4); (b)(6) will do so by supporting stakeholder coordination and project execution, with a focus on project milestone achievement and stakeholder buy-in development and maintenance. (b)(4); (b)(6) will regularly communicate project status with (b)(4); and will assist (b)(4); in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. (b)(4); will also assist (b)(4); in ensuring all project requirements and deliverables are fulfilled while concurrently ensuring the project remains within scope, budget, and timeline.
- Metabiota Technical Manager (Trainer III) (b)(4); (b)(6) will oversee all aspects of the execution of the training events. Dr. (b)(4); (b)(6) will submit and track all Training Event Plans (TEPs), Training Trip Reports (TTRs), and After Action Reports (AARs). (b)(4); (b)(6) will also direct and manage the local trainers, ensuring optimal execution of a l training objectives. (b)(4); (b)(6) will manage in-country stakeholders and project execution, with a focus on buy-in maintenance. (b)(4); (b)(6) will direct feedback sessions with the local trainers daily, along with the Scientific Mentor, to discuss training material, lessons-learned, and review survey results from the participants. In addition, (b)(4); (b)(6) will support (b)(4); in ensuring the program remains within scope, budget, and timeline. (b)(4); (b)(6) contribution to this effort will have discontinued from 08/01/2015.
- Metabiota Training Administrator (Trainer I) (b)(4); (b)(6) , MPH will play a vital role in implementation, coordination, and reporting. He will travel to the field for trainings and lead reporting efforts. He will additionally support (b)(4); by attending meetings and communicating with relevant stakeholders. From a technical perspective he will use his expertise to support the dissemination efforts of (b)(4); (b)(6) and (b)(4); during field trainings and in the development of After Action Reports (AARs) and Training Trip Reports (TTRs).
- Metabiota Subject Matter Expert (SME III)- (b)(4); (b)(6) is an internationally known expert in epidemiology, virus ecology, viral hemorrhagic fevers, fundamentals and domains of disease emergence. Since the 1970s, he has been leading international teams with partner institutions of developing countries (Dakar, Senegal; Bangui, Central African Republic). He largely contributed to developing tools and implementing strategies for the control and prevention of transmitted disease, and has been published in more than two hundred scientific papers in peer-reviewed journa (b)(4); (b)(6) will support the OHE training programs by mentoring the local trainers and District participants in outbreak investigation and response best practices. In addition (b)(4); (b)(6) will facilitate the scientific collaborations and support daily training implementation discussions.
- Metabiota Project Support Staff (SME I)- Ms. Rachel Campbell was involved in supporting the development of the Technical proposal and budget for OHE Uganda. Her involvement in this project will have discontinued from 08/01/2015.
- Metabiota Regional Trainer and Mentor (Trainer I) (b)(4); (b)(6) based in Sierra Leone, is a recognized epidemiologist focusing in VHF contact tracing and rapid response systems. (b)(4); (b)(6) has lead on-the-ground teams of health workers investigating VHF outbreaks and clusters. (b)(4); (b)(6) will serve as a regional scientific mentor to both the participants and the local trainers. In addition (b)(4); (b)(6) will facilitate and support scientific collaborations and provide lessons-learned from his field experience while operating in the recent/ongoing Ebola outbreak in West Africa.
- Metabiota Local Trainers (Research and Data Analyst)- (b)(4); (b)(6) to be determined, will serve as lead trainers of the OHE modules 1 and 2 material. Each trainer is a Ministry-recognized and selected expert in the areas of outbreak investigation, surveillance, and response. They will execute the pre- and post-tests, as well as the daily surveys from the participants. The Trainers will lead small group sessions in a 1:6 ratio, and support and guide the participants' working projects that occur between modules. Working closely with (b)(4); (b)(6) the Trainers will implement a l OHE training materials including lectures, computer enrichment sessions, and exercises.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials:

Minor materials and supplies are required to support project activities including stakeholder outreach and coordination, training material production, and host country approval facilitation. Materials will include:

International Communication-Semi-monthly stakeholder meetings will occur to coordinate all upcoming trainings in-county. Internet systems and international calls will be utilized for this effort. Routine updates will take place via e-mail.

Printing Services- One set of OHE Modules 1 and 2 books, for 25 participants, and one set of Instructor Manuals, for 2 trainers, will be required. It is assumed that CLS will manage printing of all necessary materials. Metabiota will prepare the necessary documentation (e.g., CLS request forms) when seeking support for this activity.

Other Direct Costs:

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all project participants in accordance with DBA guidelines.

Subcontracts:

Local trainers may be utilized for execution of the training and will be subject to an Independent Consultant agreement.

Travel:
Funds are requested for three Metabiota personnel (two CONUS, one OCONUS) to travel to Uganda to facilitate each training event, four in total. Specifically, funding has been budgeted to support travel for two Metabiota personnel from CONUS for training implementation and oversight purposes. Additionally, in an effort to promote regional networking and capacity development, Metabiota has also budgeted travel funds for a Sierra Leonean field epidemiologist (e.g, James Bangura) to air in training implementation. Metabiota staff will support project implementation, coordinate stakeholders, and provide technical support for Ugandan OHE trainers. Metabiota staff will hold daily feedback sessions with the trainers prior to beginning coursework for the day, and support computer enrichment activities that follow each evening. Prior to execution of travel, a cost estimate will be provided to the AEP COR for review and approval. Metabiota will submit CLS forms requesting travel logistics support for participants (e.g., Trainees).

Date: Tuesday, September 01, 2015 2:24:53 PM

H(b)(6)

Metabiota's proposal submitted on 31 August 2015 in support of Technical Directive 010 is hereby approved for implementation with a ceiling price of $134,551.

The Contractor should use its best efforts to perform the work specified in the Technical Directive within the estimated ceiling price. The Contractor should notify the Contracting Officer in writing whenever it has reason to believe that that costs for this Technical Directive are expected to go over the established ceiling price.

Cheers,

TECHNICAL DIRECTIVE (TD)

1. CONTRACT NUMBER	2. CONTRACTOR	3a.TD NUMBER	3b.REV
HDTRA1-14-C-0104	METABIOTA	20	

4. TD TITLE	5. TOTAL TD ESTIMATE:
Gabon Initial Engagement SME Support	HOURS: (b)(6) DOLLARS: $ (b)(6)

6. CONTRACING OFFICER REPRESENTATIVE	7. CONTRACTOR POC
NAME: (b)(6)	NAME (b)(6)
PHONE (b)(6) EMAIL (b)(6)	PHONE EMAIL (b)(6)

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide a Subject Matter Expert (SME) support on Gabon health systems and laboratory capabilities in accordance with SOW, Section 4.4, Task 2. This SME will provide technical support to the CBEP Gabon Country Manager for initial engagement activities with Gabonese ministerial officials, provide historical context and technical advice on gap analyses, and recommend CBEP engagement approaches with the Government of Gabon.

It is expected that implementation of this requirement will be approximately 100 hours of work consisting of (a) 1 x 7 day trip with CBEP representatives to Gabon in late Jan 2016, (b) bi-weekly (every other week) coordination meetings (est. 1 hour/each) before the trip, (c) weekly coordination meetings (est. 1 hours/each) for approximately 2 months after the trip, (d) written report conveying personal knowledge and expertise as well as engagement recommendations following the trip. (e) review of country engagement strategy documents (est. 5 hours).

The period of performance for this effort will be from 14 December 2015 to 31 March 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $50,000 is requested by 9 December 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation:
Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. Given the short suspense, it was not possible to have extensive conversations with the technical POCs listed prior to the development of this response. It is anticipated that the plan for TD-020 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Research and Data Analyst (RDA)) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:
In order to effectively ensure that an appropriate subject matter expert is available to provide the requested support, the Metabiota PM and PC will, upon approval of the TD, engage relevant DTRA CBEP stakeholders to clarify the type and extent of support required. Upon approval and receipt of additional information, the Metabiota PM and PC will identify appropriate SMEs.

From the information provided in Box 8, Metabiota's key assumption is that the purpose of this trip is to make introductions and build relationships with Gabonese personnel and institutions, and thus selecting SMEs with ***positive existing relationships is critical***. Metabiota has preliminarily identified a Francophone SME with extensive history working in Gabon: he has positive relationships with most (but not all) institutions and government ministries in Gabon relevant to the DTRA CBEP mission.

While our SME can provide extensive historical knowledge of the institution known as CIRMF (Centre International de Recherches Medicales de Franceville) in support of this technical direction, Metabiota believes that there is an unacceptable level of corporate risk to the company and operational risk to DTRA for him to attend meetings at CIRMF, and as such, if this SME is acceptable to DTRA, Metabiota recommends truncating the in-country support trip for our SME.

Together, the Metabiota team will actively participate in project communications in order to prepare for the in-country SME support and project closeout phases. As these project communications occur, the Metabiota SME will leverage his existing relationships with Gabonese personnel to assist DTRA CBEP stakeholders in developing an agenda and setting up meetings to occur during the week of travel.

The Metabiota PM and PC will work with the SME to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure that any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS.

In-country SME support
Based on our understanding of the requirements, the Metabiota SME will attend meetings with DTRA CBEP personnel. During these meetings, the Metabiota SME will facilitate introductions between DTRA CBEP and Gabonese personnel, and participate in discussions about CBEP objectives, lending technical expertise and advice where needed. Metabiota anticipates holding debriefs and strategy sessions with DTRA CBEP personnel each evening to recap each day's meetings and discuss the next day's meetings.

Project closeout
Upon return from Gabon, the Metabiota SME will participate in regular meetings with DTRA CBEP personnel to fully capture information gained during the in-country trip. The SME will also generate a report detailing that information, along with capturing as much information as is practicable from the SME's personal experiences. The SME, with the Metabiota PM and PC's guidance, will work with the DTRA CBEP personnel to understand

DTRA CBEP goals in Gabon and the region and create a list of suggested engagements (high-level only; Metabiota cannot provide suggestions on detailed work to be done as this may be construed as a conflict of interest;. The Metabiota team will also review strategy documents provided by DTRA CBEP and provide feedback. Lastly, upon request, the Metabiota team will generate a final project report summarizing all activities conducted in this effort.

Risk Management
Metabiota has identified potential risks which may be obstacles to accomplishing DTRA CBEP goals for this technical direction. They are listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost, Schedule, Performance, Quality						
Short proposal turnaround time	The short turnaround did not allow for extensive discussion with Technical POCs regarding clarification of requirements and background materials. Thus our proposed labor solution may be inadequate, impacting cost. It may also impact schedule, performance, and quality, as we may proceed to identify a SME who is incapable of meeting project requirements in a timely fashion or to the satisfaction of project stakeholders.	5	4	(b)(4); (b)(6)	Upon approval of the TD, Metabiota will work with DTRA to continue elucidating the requirements of this task. If Metabiota perceives there to be a significant possibility of the proposed solution not meeting cost, schedule, performance, or quality metrics, Metabiota will flag this immediately for DTRA and propose a new solution.	(b)(4); (b)(6)
Schedule / Performance						
Limited or non-existent window for the submission of CDRLs to support in international travel for SMEs	The effective execution of this technical direction is contingent on the delivery of SME support to Gabon for a 7-day trip. In order to this fulfill this need, Metabiota Project Management and Coordination staff will be tasked to submit necessary travel related CDRLs for DTRAs approval well ahead of time. Per the contract and this technical direction, Metabiota will need to submit a Cable Clearance Request in addition to a Travel Authorization 45 days prior to international and in-country travel respectively. As travel is slated to take place in late January 2016, it will be difficult to submit these documents in time.	5	5	(b)(4); (b)(6)	Metabiota will take every effort possible to ensure that all travel related CDRLs are submitted to DTRA CBEP as expediently as possible and ask for an exemption to the 45-day window for CDR submission. However, given that there is only a small window allowing Metabiota to accomplish this, the risk of cancellation due to CDRL lateness remains high.	(b)(4); (b)(6)
Limited or non-existent window for the submission of CDRLs to support in-country logistics via the CLS mechanism	It is not yet determined if Metabiota will need to engage logistics support services for the execution of the technical direction. However, upon this need becoming specified by our in-country partners, Metabiota will be tasked to develop and submit a CLS form at least 45 days before the in-country event. Given that the travel event is slated for late January 2016, our submission window is small or non-existent.	5	4		Metabiota will coordinate with DTRA stakeholders and our in-country partners immediately upon the approval of this technical direction to determine the extent and need for in-country logistics. Upon determination of this need, Metabiota will develop and submit the CLS form to DTRA CBEP expediently; however, it is anticipated that submitting it within the effective 45-day window will not be possible.	
Performance / Quality						
Subject matter expert identification and availability	The subject matter expertise required for in-country performance by this technical direction appears to be of a high and specific caliber. Although several current Metabiota staff meet or exceed these criteria, their individual availability with short notice may not be guaranteed.	2	1	Low-Medium	Metabiota will prioritize the requests of this technical direction and ensure that relevant personnel are available to and committed. In the unlikely event that any Metabiota staff SME is not available to function as an in-county performer, Metabiota project management staff will insure that an appropriate independent contractor is brought in to support that role.	
Performance / Operations						
Subject matter expert relationship with CIRMF	Our potential SME has a long and complicated personal history with the director of CIRMF, which may bring an unacceptable level of corporate and operational risk to the mission if asked to attend meetings at CIRMF in person.	4	4	Med-High	Metabiota SME will accompany the DTRA team in country except to meetings at CIRMF. He will provide as much background information as possible on CIRMF to the DTRA team in advance of their meeting, and provide feedback during debriefing.	Med

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$27,095.86
1003	MATERIALS	$0.00
1004	ODCs	$539.28
1005	TRAVEL	$4,320.00
TOTAL		**$31,955.14**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by leading proposal development and maintaining oversight of stakeholder and SME coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and any subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

The Metabiota PM will additionally provide management oversight of the SMEs throughout the duration of this project, assuring integration and harmonization with other Metabiota-led, DTRA CBEP-funded efforts in the greater West Africa region. The PM will also ensure that all project personnel (Metabiota and any subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include the acquisition of Defense Base Act insurance, overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism for subcontractors if any are utilized, and any other requirements which may be applicable to the work.

Metabiota Research and Data Analyst: The Metabiota RDA will act as a Project Coordinator (PC) throughout the planning and execution of project objectives. The Metabiota PC will assist the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will provide operational management of the SMEs by participating in regular communications between the DTRA CBEP stakeholders and the SMEs, acting to ensure all project requirements and deliverables are met, and that the program remains within scope, budget, and timeline. The PC will regularly communicate the project status with the PM. The PC will aid the PM and SMEs in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. The Metabiota PC will assist the SMEs with adhering to DoD contracting requirements, to include developing appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements, which may be applicable to the work.

Project Coordination, SME Support, and Closeout phases only:
Subject Matter Expert 3: The SME will participate in regular project coordination communications (teleconferences, emails) to ensure that he understands the context of the project, and the needs and expectations of the DTRA CBEP stakeholders (hours as estimated in box 8). The SME will complete any and all required trainings and documentation prior to and immediately following travel (estimated at 3 hours).

The SME will provide technical and programmatic support as directed by the project leads. This may include engaging in phone and email communications with personnel within government ministries or other organizations in Gabon in order to facilitate introductions and meetings leading up to the scheduled travel period (estimated at 8 hours). The SME will also provide any biological and historical expertise needed while facilitating meetings and discussions in country (estimated at 46 hours – 8 hours per day for 5 days, plus 1 hour each evening to plan for and discuss the next day's meetings, and 1 hour each evening to recap that day's meetings).

The SME will generate reports and recommendations (estimated at 5 hours) and review documents provided by DTRA (estimated at 5 hours).

Materials
No material costs are expected to be incurred.

Other Direct Costs
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts
Metabiota does not expect to issue a subcontract in support of this technical direction. However, if necessary, independent consulting agreements or subcontracts will be issued to the SMEs and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel of the SME to Libreville, Gabon is requested for the purposes of executing the scope of this technical direction. Metabiota assumes that in-country travel arrangements if any, will be handled by DTRA CBEP. No additional travel is projected based on the requirements provided. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

This revision to TD-14 provides additional guidance & clarification of the requirement to assist Metabiota in establishing a proposed implementation approach and budget for the period of performance. During the PoP, Metabiota is expected to:

a. Identify organizers of the Regional Conference on Zoonotic Diseases in Eastern Africa and collaborate with them to hold a 6-day writing workshop (not including venue, food, and travel logistics as this will be coordinated via CLS) for 20 participants. Metabiota should provide a PM and a SME1 for Project Coordination and Landscape Analysis. The hours required for this phase should not exceed 6 hours/week for two weeks each for the PM and SME1. Metabiota should reach out directly to (b)(6) the main POC of the One Health Workshop, to discuss what the vision for the implementation of the workshop is and to discuss SME support needed. Communication w(b)(6) should also include the discussion of the participants list, as the conference organizers have already identified them and will provide the names and draft manuscripts to Metabiota.

b. Coordinate with Kenyan collaborators to jointly identify no more than 2 Kenyan SMEs to participate in the writing workshop as well as pre- and post-workshop activities. For the first phase of Project Coordination and Landscape Analysis, the two Kenyan SMEs should also each not exceed 6 hours/week for two weeks. The writing coaches will provide mentorship to the participants and will help them convert their scientific data into a complete draft manuscript for a research paper to be submitted to a peer-review science journal. One manuscript will be developed per workshop participant. Metabiota will assist in the development of up to 20 papers/manuscripts. Additional communications regarding the SME assignments should occur during the activities described in a. and should be part of the not to exceed 6 hours/week.

c. Hypothesis Development and Article Framing- CBEP's expectation is that this workshop will provide the participants with the right skills and guidance to take their manuscripts to the next level, with the goal that that next level will be good enough for acceptance to a peer-reviewed journal. The SMEs will not need to contact the participants before the workshop due to the coordination through the Kenyan POCs and SMEs. Metabiota's SMEs (one from Metabiota and two Kenyans to be identified) will review the participants' manuscripts prior to the workshop. Each SME should not spend more than 20 hours total to complete the review and assessment of the manuscripts prior to the workshop as well as conduct any additional coordination among the SMEs. The SMEs will work together to determine if/how the manuscripts will be divided up as each SME may not need to conduct a detailed review of each manuscript. There may be additional SMEs identified for participation in all workshop activities (including pre- and post- workshop activities) by the Kenyan stakeholders but their time will not be funded by Metabiota. This should be discussed with the Kenyan POC noted above. PM oversight of the SME's review and coordination activities should not exceed 5 hours total.

d. Writing Workshop Implementation- The workshop outline should be as follows: 1) the main workshop will consist of 5 days (Monday-Friday) where the SME's will work together with the participants, 2) 1 day after the workshop for the SME's to finalize the review of the manuscripts, and 3) the travel days needed to travel between the U.S. and Kenya. PM participation during the workshop is acceptable. However, oversight should not necessitate as many hours as the SMEs efforts during the workshop, therefore Metabiota should propose PM hours planned to be spent only on this project, or provide sufficient clarification regarding PM tasks during the 6 working days to justify a full-time workload. The labor hours for each SME should not exceed 72 hours. PM hours are estimated at no more than 4 hours per day.

e. Paper Finalization and Publication Submission- CBEP and Metabiota will not be supporting or overseeing the submission of these manuscripts; for that reason, activities related to this should not be included in the proposed approach.

f. Post-workshop efforts- Post-workshop efforts will include the three SMEs (2 Kenyans and 1 Metabiota SME that participated in the workshop) spending no more than 20 hours each over 2-4 weeks to continue coordination with each other and potentially other SMEs (not funded via Metabiota) as well as finalize any needed review or revision of the manuscripts with the workshop participants. This may need to be divided between SMEs to stay within the 20 hour maximum. PM oversight of the SME's final review and coordination activities should not exceed 5 hours total.

g. For Materials and Supplies: CBEP expects participants to have relevant papers they have used in the past (to develop draft manuscripts papers and the presentations given at the One Health Conference). However, limited access to journals should be provided by Metabiota. The access per participant should be no more than 10 articles per person. This is an average and downloads should be managed by the PM and/or SMEs. A total number of 200 papers is authorized however this is the maximum which does not need to be met and should be used as needed per participant, not necessarily divided evenly if some participants do not require additional resources.

The period of performance for this effort will be from 18 September 2015 to 15 February 2016; however, CBEP anticipates the total time required to implement the requirement to be 20 weeks, including 2 weeks for Phase 1 (planning and SME identification), 3 weeks for Phase 2 (manuscript review and SME coordination), 1 week for Phase 3 (executing the workshop), and 4 weeks for Phase 4 (post-workshop coordination and manuscript review). Your technical approach, proposed budget, and basis of estimate for implementing this requirement is requested by 16 Sep 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Technical Approach
Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following phases are required for this project:

Phase 1: Programmatic Coordination and Training Landscape Review
Phase 2: SME Review and Coordination
Phase 3: Writing Workshop Implementation
Phase 4: Post-workshop review and Summary Report Development

Phase 1 – Programmatic Coordination and Landscape Analysis (16 Sep - 24-Sep. 30, 2015)

Objective: Establish a communication and coordination plan with the Kenyan Zoonotic Disease Unit (ZDU), Global Implementation Solutions (GIS), and Conference to initiate collaboration and conduct a landscape review of technical writing capacities and needs in the One Health sector in Kenya.

Process: Metabiota, with direction from DTRA CBEP, will engage (b)(4); (b)(6) the main POC from the Regional Conference on Zoonotic Diseases in Eastern Africa, an event that took place in Naivasha, Kenya, March 2015. Through this collaboration, Metabiota will develop an understanding of Kenya's technical writing capacities and needs in the One Health sector. Metabiota will receive the list of selected writing workshop participants from (b)(4); (b)(6) Metabiota will also receive recommendation from (b)(4); (b)(6) for two mutually agreed upon Kenya based SME 3 technical writing experts to be brought on as independent contractors for this effort.

Deliverables:

- Deliverable 1: Submission of contacts list to include Writing Workshop participants and Kenyan SME III technical writing experts

Phase 2 – Pre-Workshop Participant Manuscript Review (Nov. 2, 2015-Jan. 29, 2016)

Objective: Selected participants set to attend the Writing Workshop will provide draft manuscripts for review by subject matter experts prior to their attendance. Technical writing SMEs will be able to gain a specific and in-depth understanding of the content they can expect during the writing workshop before attending.

Process: Metabiota, in coordination with DTRA-CBEP and (b)(6) will request that the selected participants produce draft manuscripts for review by the identified technical writing SMEs. Each SME will spend a defined number of hours reviewing the materials, and gaining a more defined understanding of the participants' approach. The SMEs will not be in contact with the participants during this phase, but will communicate among themselves with the assistance of the program manager to ensure that manuscripts to be reviewed are divided up appropriately among the team.

Deliverables:

- Deliverable 1: Submission of participants' draft manuscripts to include hypotheses, writing concepts and an approach plan, along with statements of accessible, supporting data.

Phase 3– Writing Workshop Implementation (Feb. 8-13, 2016)

Objective: Conduct a six-day workshop on various aspects of technical writing in order to train and mentor twenty participants representing the Kenyan One Health research sector.

Process: Metabiota will coordinate with the SME mentors and participants to conduct the six-day training in Kenya. This training will include a five days of lecture and working group sessions to cover topics including but not limited to scientific paper formatting, styling, and general requirements; the ethics of journal publication and authorship; the inclusion of background research and citing references, and understanding the impact factor and journal submission organizational techniques. Each participant will have access to the coaches, and be able to work directly with the SMEs on their material. The sixth and final day will allow for collaboration between the SMEs to finalize the review of manuscripts before departing.

Deliverables:

- Deliverable 1: Submission of the Training Trip Report and After-Action Report detailing the overall training processes and lessons learned and the results of knowledge gained assessments.

Phase 4 – Post-Workshop Review and Summary Report Development (Feb. 14-29, 2016)

Objective: Develop final report and provide final manuscript review and post-workshop support to participants as needed.

Process: Metabiota will work jointly with the SME mentors and participants to provide technical and programmatic support during the post-workshop phase. SMEs will coordinate with each other to ensure that no effort goes wasted and that manuscript reviews are comprehensive and supportive of the intended skill enhancement of the writers. SMEs will be able to communicate with participants during this period. Once complete, Metabiota will develop a final report detailing the overall processes and lessons learned.

Deliverables:

- Deliverable 1: Final report detailing overall processes and lessons learned

Risk Management:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost						

						(b)(4); (b)(6)
Subject Matter Expert Subcontracting	Due to limited insight into participant profiles and research activities, additional costs and time-delays may occur to identify and coordinate the most appropriate SME coordination, which may impact the ability to conduct this activity in full.	3	3	Medium	As soon as Metabiota has a basic understanding of the participants' work, Metabiota will begin contacting necessary SMEs, refining the list as better understanding develops. Metabiota will attempt to reach basic agreement with SMEs as soon as possible and issue authorization to proceed while subcontracts are being put into place.	
Programmatic labor hours	Following guidance from CBEP POC's, the current budget for Metabiota Program Management and Project Coordination hours are extremely low. As a result, and based on previous experience implementing overseas activities, there is significant risk for budget overrun.	5	5	(b)(4); (b)(6)	Maximize efficiency regarding approved labor hours through best practice, and notification to DTRA CBEP contracting officer of expectations to run over budget.	
				Schedule		
Project Coordination	Kenya One Health Technical Writing Workshop involves a significant number of stakeholders and participants representing various organizations, putting implementation activities at risk of delay or cancellation.	5	2	Medium	Establish and hold regular calls with all stakeholders and identify multiple possible implementation dates. Identify critical components as early as possible and redirect efforts when it becomes clear that targeted implementation dates will not be achievable.	
				Performance		
Political Instability	Sporadic violence in northeastern Kenya may lead to risks of being unable to safely complete in-country work	2	5	Medium	Coordinate closely with DTRA and AFRICOM to be aware of any potential risks to performers, and target a location for the workshop well away from risky areas.	

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$85,141
1003	MATERIALS	$7,880
1004	ODCs	$3,542
1005	TRAVEL	$17,420
TOTAL		**$113,983**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Period of Performance

The Period of Performance for this effort is July 21, 2015 to February 29, 2016.

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:
Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As some of our Subject Matter Experts will be independent consultants the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including independent consultants throughout the span of the project.

The Metabiota PM will oversee the coordination between the Kenyan stakeholders and the workshop planning team, and will ensure the project team captures and keeps in account stakeholder input regarding key information relevant to the planning of the workshop. The PM will travel to Kenya to

ensure the execution of the workshop proceeds smoothly and will provide oversight over all independent consultants. Lastly, the PM will provide oversight to ensure all required project closeout activities occur in a timely fashion.

Proposal Development - Phase 1:

Metabiota Subject Matter Expert I: The Metabiota SME I will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipat ng, managing. and communicating projects risks and recommended mitigation strategies to the funder.

Phase 2-4:

Subject Matter Expert III (2 total): We expect to identify two Kenya based SME III personnel with the support in large part from (b)(4); (b)(6) These SMEs will be fully qualified scientific experts with experience publishing in peer-reviewed journals. These SMEs will not require international travel, but will be compensated for domestic travel, and will be brought on as independent contractors to Metabiota.

The SMEs IIIs will each be assigned to work on reviewing manuscripts of the Writing workshop participants during phase 2. They will be tasked with workshop participation during phase 3. and final review during phase 4. These SMEs will be required to review relevant participant manuscripts closely during phase 2. This will require fully understanding the research that has been done, including a significant dive into the data collection and analysis that may have already been done to ensure that they utilize their time effectively during phase 3. During the workshop. SMEs will provide a mix of lectures discussing topics relevant to the authoring, editing. and publishing of scientific research. small group work reflecting those lectures, and one-on-one time with each of their assigned participants. Following the workshop, SMEs will provide follow-on mentoring to participants as they incorporate the lessons learned into the final drafts of their manuscript reviews and relevant reports during phase 4

Subject Matter Expert I (1 total): We expect to identify one US based Metabiota representative to serve as an SME I technical writer. This SME will be a fully qualified scientific expert with experience publishing in peer-reviewed journals.

The SME I will each be assigned to work on reviewing manuscripts of the Writing Workshop participants during phase 2 in concert with the SME 3s to avoid duplication of efforts. They will be tasked with workshop participation during phase 3, and final review during phase 4. This SME will be required to review relevant participant manuscripts closely during phase 2. This will require fully understanding the research that has been done, including a significant dive into the data collection and analysis that may have already been done to ensure that they utilize their time effectively during phase 3. During the workshop, SMEs will provide a mix of lectures discussing topics relevant to the authoring, editing, and publishing of scientific research, small group work reflecting those lectures, and one-on-one time with each of their assigned participants. Following the workshop, This SME will provide follow-on mentoring to participants as they incorporate the lessons learned into the final drafts of their manuscript reviews and relevant reports during phase 4.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials
We have budgeted for the possibility that we may need to provide access to scientific journal articles to the workshop participants while they are working on their manuscripts. Our estimate provides an average of 10 articles per participant at an estimated access price of $35 per article. It may well be the case that some of the Writing Workshop participants do not require the use of this many articles on average; in which case costs will not be incurred. Participants must have expressed support from an involved SME to facilitate the purchase of any scientific article. The budget for journal access may only be partially utilized.

We have also budgeted for a small quantity of office supplies to accommodate the printing of agendas, training materials, or workshop materials needed to successfully execute and support in-country project activities.

Lastly, we have budgeted for international communications ability for our project team while they are in country implementing the workshop. The costs budgeted here reflect activating a moderate calling plan for each traveler's cell phones. These charges also reflect the provision of USB modems and associated moderate data plans to both the travelers and in country SME IIIs. These items will only be purchased if the situation dictates the need (i.e. inability to access online communications outright), otherwise, these modems will not be procured.

Other Direct Costs
Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts
Subcontracts will be issued to SMEs, RDAs, and/or their home organizations as needed for the labor necessary for this effort. as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel is requested to support the program manager 1 subject matter expert to Nairobi, Kenya to implement the writing workshop. The travel budget represents the estimated amount required; travel on the AEP contract is cost reimbursable.

Our travel budget assumes the workshop will be held on 6 consecutive days, with an additional day budgeted for set-up and coordination activities. If, through discussion with the Kenyan stakeholders, an alternative schedule is created or an alterative location is desired, travel costs may be impacted accordingly.

Kenyan SME III contractors will be provided with hotel, and per diem respective of their length of participation on this effort. Their cost for arriving to the venue will be covered independently; however, daily transport costs will be shared among the workshop team as a whole.

Comments (use this space for additional information)

1. CLS contract team is requested to identify, secure and provide the training venue in Jinja district of Ugnada for the event during 7-11 December 2015 – this is the most urgent request as the venue needs to go on the Letter of invitation to be sent out to the training participants.
2. CLS contract team is requested to provide per diem meal allowances to trainees and trainers per DTRA approval before 12:00 noon of each training date.
3. CLS contract team is requested to provide trainees and listed trainers with ground transportation reimbursement for costs going to and from the venue per DTRA approval (CDC Uganda identified amount is $40 each-way)..
4. CLS contract team is requested to provide or ensure that the venue will offer flip charts, markers, notebooks and pens provided as complimentary
5. CLS contract team is requested to provide or ensure that the venue possesses a backup generator, air conditioner, and clock in the meeting room.
6. CLS contract team is requested to ensure that the venue possess the number of power outlets and extension courds in training room adequate to support the listed participants.
7. CLS contract team is requested to secure and provide a meeting room for ~8 persons for early morning meetings (8:00am – 8:45am)
8. CLS contract team is requested to provide space to store 5 cargo trunks and boxes that hold the training manuals (in case the main training area is not big enough).
9. Printing of manuals. Student Version = 35 copies and instructor version = 10 copies
10. CLS contract team is requested to communicate on all arrangements with the following CDC Uganda POCs:
    - (b)(6)

Justification for Travel

Each traveler on the team must provide justification for why they need to travel. The justification must highlight how the trip will be impacted if the traveler is not physically present. Use additional space as necessary.

Each of these participants' respective positions in their districts requires that they attend the training in order to improve early detection and preparedness activities including timely outbreak investigation and response in their districts. This will assist Uganda MoH to meet the IHR requirements and improve the country's capacity for disease surveillance and outbreak response

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision extends the Period of Performance (PoP) for TD-013 from 26 Feb 2016 to 15 November 2016 at no additional cost. This PoP extension is to provide enough time to continue implementation of the One Health Epidemiology training program in Uganda with the addition of a Cohort 11. Metabota should coordinate directly with the Technical POCs identified below. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below. No further changes to the previously approved proposal are required at this time.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision extends the Period of Performance (PoP) for TD-016 from 15 May 2016 to 15 November 2016. This PoP extension is to continue providing expertise in geographic information systems (GIS) modeling and regional Single Nucleotide Polymorphisms (SNPs) at the Richard G Lugar Center for Public Health Research in Georgia. Metabiota should coordinate directly with the Technical POCs identified below Your technical approach as outlined in TD-016 Rev A with the exception of the 3 x 1 week of trips stipulated to support GG-27 (identified in box 8 paragraph 5 and box 9c under travel), proposed budget, and basis of estimate for continuing this requirement, not to exceed $147,000 is requested by 17 May 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below. No further changes to the previously approved proposal are required at this time

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation
Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8 and leverages information gleaned from discussions with A&AS contractors. Originally, a key assumption for this effort was that the Georgian scientists are generally capable of conducting GIS analyses on their own. After discussions with some individuals familiar with the level of expertise in Georgia and the scientific goals sought to be accomplished in the stated projects, Metabiota believes that the Georgian scientists will require an increased level of support when conducting GIS analyses. It is anticipated that the plan for TD-016 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as SME I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:
From the information provided in Box 8, Metabiota assumes that these projects are ongoing affairs led by a third party. The Metabiota PM, PC, and GIS SME(s) will participate in communications with the CBR teams to understand what the mentoring and research needs are for each project. The Metabiota PM and PC will work with the GIS SME(s) to ensure that mentoring and research needs are met as best as possible using remote technologies. The Metabiota PM and PC will also work with the project teams to ensure that the GIS SME(s) provide inputs to project deliverables in a timely manner.

Mentoring:
Mentoring will consist of ~~both in-country and~~ remote mentoring. After assessing the need for in-person GIS mentoring, the PM, PC, and primary GIS SME will work with the project teams to elucidate the specific goals, and requirements of each mentoring request to ensure that the mentoring visit is conducted efficiently and effectively. The primary GIS SME will work with the PM. PC, and appropriate stakeholders in each respective project to create a list of tasks to be accomplished by the Georgian scientists leading up to the mentoring visit, to create a list of topics for the primary GIS SME to be prepared to assist with during the mentoring visit, and to facilitate the communication and exchange of any necessary data or concepts both prior to and following each mentoring visit.

Reach-back support and Research collaboration.
Based on our updated understanding of the requirements and the proposed scope of the projects, Metabiota now expects to be required to provide significant GIS analysis support to the three projects, but does expect to place a significant focus on transitioning this expertise to the Georgians. Through regular communications with the respective project teams, Metabiota will be made aware of any additional subject matter expertise requests. The GIS SME will address these needs as they arise

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

Table 1: Incremental funding requested for 16 May 2016 – 15 November 2016, per CLIN. Please note that labor rates have changed.

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$132,202
1003	MATERIALS	$0
1004	ODCs	$0
1005	TRAVEL	$0
TOTAL		**$132,202.28**

Table 2: Estimated total budget from 15 September 2015 through 15 November 2016, as of 17 May 2016, per CLIN:

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$253,341.58
1003	MATERIALS	$-
1004	ODCs	$1,753.69

1005	TRAVEL	$22,335.71
TOTAL		**$277,430.98**

9c. TD SOLUTION BASIS OF ESTIMATE DESCRIPTION (NOT TO EXCEED 2 PAGES::

Labor

Costs for direct labor to support this activity is required for the following personnel:

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As some of our Subject Matter Experts and Research and Data Analysts may be independent consultants or subcontractors, the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including subcontractors and independent consultants throughout the span of the project.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM and will manage the GIS SME, including all subcontractors, to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline.

The PC will coordinate with the project stakeholders to identify travel dates. The PC will participate in regular communications between the project stakeholders and the GIS SME. The PC will drive the coordination required to sufficiently gather the answers to the logistical questions that will arise in the planning and execution of requested travel for mentoring activities.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the GIS SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Subject Matter Expert 2: The SME 2 will serve as the primary GIS SME and research collaborator. The SME 2 will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each project and the GIS subject matter expertise needed. The SME 2 will provide remote mentoring and research collaborator support as directed by the respective project leads.

Research and Data Analysts (RDAs). It is anticipated that the SME 2 will employ multiple RDAs with GIS expertise to assist him in mentoring the Georgian scientists in the advanced GIS techniques proposed in the three research projects and to assist in performing data analysis, technical writing, and other research duties as needed.

Materials

No materials are expected to be procured for this effort.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on work conducted overseas. As no work will be physically conducted overseas, no additional funds are being requested.

Subcontracts

Subcontracts will be issued to SMEs, RDAs, and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget. Metabiota anticipates issuing a firm-fixed price level of effort (FFPLOE) contract to the GIS SME team as a mechanism for controlling costs, as Metabiota expects that the cost for the total number of hours worked by the SME2 and RDAs to far exceed the previously budgeted amount.

Travel

No travel is anticipated during the extended period of performance and thus no additional funds are being requested.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE).

This revision extends the Period of Performance (PoP) for TD-016 from 15 May 2016 to 15 November 2016. This PoP extension is to continue providing expertise in geographic information systems (GIS) modeling and regional Single Nucleotide Polymorphisms (SNPs) at the Richard G. Lugar Center for Public Health Research in Georgia Metabiota should coordinate directly with the Technical POCs identified below Your technical approach as outlined in TD-016 Rev A with the exception of the 3 x 1 week of trips stipulated to support GG-27 (identified in box 8 paragraph 5 and box 9c under travel), proposed budget, and basis of estimate for continuing this requirement, not to exceed $147,000 is requested by 17 May 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below. No further changes to the previously approved proposal are required at this time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation
Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8 and leverages information gleaned from discussions with A&AS contractors. Originally, a key assumption for this effort was that the Georgian scientists are generally capable of conducting GIS analyses on their own. After discussions with some individuals familiar with the level of expertise in Georgia and the scientific goals sought to be accomplished in the stated projects, Metabiota believes that the Georgian scientists will require an increased level of support when conducting GIS analyses. It is anticipated that the plan for TD-016 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as SME I) time to identify the best path forward, required deliverables, anc any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:
From the information provided in Box 8, Metabiota assumes that these projects are ongoing affairs led by a third party. The Metabiota PM, PC, and GIS SME(s) will participate in communications with the CBR teams to understand what the mentoring and research needs are for each project. The Metabiota PM and PC will work with the GIS SME(s) to ensure that mentoring and research needs are met as best as possible using remote technologies. The Metabiota PM and PC will also work with the project teams to ensure that the GIS SME(s) provide inputs to project deliverables in a timely manner.

Mentoring:
Mentoring will consist of remote mentoring. After assessing the need for in-person GIS mentoring, the PM, PC, and primary GIS SME will work with the project teams to elucidate the specific goals, and requirements of each mentoring request to ensure that the mentoring visit is conducted efficiently and effectively. The primary GIS SME will work with the PM, PC, and appropriate stakeholders in each respective project to create a list of tasks to be accomplished by the Georgian scientists leading up to the mentoring visit, to create a list of topics for the primary GIS SME to be prepared to assist with during the mentoring visit, and to facilitate the communication and exchange of any necessary data or concepts both prior to and following each mentoring visit.

Reach-back support and Research collaboration:
Based on our updated understanding of the requirements and the proposed scope of the projects, Metabiota now expects to be required to provide significant GIS analysis support to the three projects, but does expect to place a significant focus on transitioning this expertise to the Georgians. Through regular communications with the respective project teams, Metabiota will be made aware of any additional subject matter expertise requests. The GIS SME will address these needs as they arise.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):
Table 1: Incremental funding requested for 16 May 2016 – 15 November 2016, per CLIN. Please note that labor rates have changed.

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$132,202.28
1003	MATERIALS	$0
1004	ODCs	$0
1005	TRAVEL	$0
TOTAL		**$132,202.28**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:
Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal

development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As some of our Subject Matter Experts and Research and Data Analysts may be independent consultants or subcontractors, the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including subcontractors and independent consultants throughout the span of the project.

Metabiota Subject Matter Expert 1. The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM and will manage the GIS SME, including all subcontractors, to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline.

The PC will coordinate with the project stakeholders to identify travel dates. The PC will participate in regular communications between the project stakeholders and the GIS SME. The PC will drive the coordination required to sufficiently gather the answers to the logistical questions that will arise in the planning and execution of requested travel for mentoring activities

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the GIS SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Subject Matter Expert 2: The SME 2 will serve as the primary GIS SME and research collaborator. The SME 2 will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each project and the GIS subject matter expertise needed. The SME 2 will provide remote mentoring and research collaborator support as directed by the respective project leads.

Research and Data Analysts (RDAs): It is anticipated that the SME 2 will employ multiple RDAs with GIS expertise to assist him in mentoring the Georgian scientists in the advanced GIS techniques proposed in the three research projects and to assist in performing data analysis, technical writing, and other research duties as needed.

Materials

No materials are expected to be procured for this effort.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on work conducted overseas. As no work will be physically conducted overseas, no additional funds are being requested.

Subcontracts

Subcontracts will be issued to SMEs, RDAs, and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget. Metabiota anticipates issuing a firm-fixed price level of effort (FFPLOE) contract to the GIS SME team as a mechanism for controlling costs, as Metabiota expects that the cost for the total number of hours worked by the SME2 and RDAs to far exceed the previously budgeted amount.

Travel

No travel is anticipated during the extended period of performance and thus no additional funds are being requested.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision modifies the original technical directive and extends the end of the Period of Performance (PoP) for TD-017 from 15 May 2016 to 15 November 2016. This PoP extension is to continue providing expertise in grantsmanship at the Laboratory of the Ministry of Agriculture in Georgia only. The Metabiota team should no longer provide expertise in grantsmanship development at the Richard G. Lugar Center for Public Health Research. Metabiota should coordinate directly with the Technical POCs identified below. Your technical approach as outlined in TD-017, proposed budget, and basis of estimate for continuing this requirement, not to exceed $95,712 is requested by 17 May 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below. No further changes to the previously approved proposal are required at this time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES)

Proposal Development & Initiation:
Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. A key assumption for this effort is that the Georgian scientists have their own research ideas which can be shaped into proposals. A second key assumption is that Metabiota Subject Matter Experts providing grantsmanship support will not be the primary drafters of any white papers or full proposals, but rather will only provide assistance in drafting said white papers and proposals. A third key assumption is that the Georgian scientists will not require any assistance in analysis of any data which may be presented in the proposals as preliminary work. It is anticipated that the plan for TD-017 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:
From the information provided in Box 8, Metabiota assumes that there are several relevant POCs at ~~both NCDC and~~ LMA which will be involved in the grantsmanship efforts. The Metabiota PM and PC will, upon approval of the TD, engage relevant ~~DTRA CBEP and Lugar Center~~ LMA stakeholders to begin understanding what efforts they would like to work on. Upon approval and receipt of additional information, the Metabiota PM and PC will identify a grantsmanship subject matter expert (billed as SME 2) and work to either onboard them as a Metabiota employee, or establish a subcontract or independent consulting arrangement with the VS. The Metabiota PM PC, and SME 2 will participate in communications with stakeholders at ~~NCDC and~~ LMA in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the SME 2 to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO-Tbilisi.

In-Country Grantsmanship Mentoring
Mentoring will consist of in-country and remote mentoring. Based on our understanding of the requirements, Metabiota does not expect to be required to provide data analysis support to the NCDC or LMA scientists. In order to ensure the success of the in-country mentoring visits, the PM, PC, and SME 2 will work with the POCs at NCDC and LMA to establish a list of de iverables to be provided to Metabiota prior to any in-country mentoring. These deliverables may include budgetary data drafts of proposed plans and SOPs, drafts of white papers and full proposals, and analyses of preliminary data complete with methodology. The PM and PC will maintain regular communications with the SME 2 to ensure that the SME 2 has all required resources for mentoring. After assessing the need for in-country mentoring, the SME 2 will implement the mentoring work plans, only assisting with actual proposal writing in cases of last resort.

Metabiota is proposing a slight alteration of our plans from Revision A based on observations from our first two in-country mentoring sessions. In particular, we have seen that mentees can become distracted with their primary duties at LMA and are thus proposing to run two cohorts of mentees simultaneously but for two weeks of half-day sessions. This would allow each cohort to dedicate part of their day directly to their normal duties which we believe will reduce distraction during the portion of their day focused on grantsmanship mentoring. One cohort would run in the mornings, and the other cohort would run in the afternoons. We are proposing to run two (2) two-week sessions (July and September), with remote mentoring in between, and to cap the effort with one (1) one-week session (November). The July session would focus on cohorts 1 & 3 – cohort 1 would be working on full proposal, cohort 3 would receive their first session on white papers. The September session would focus on cohorts 2 & 4 – cohort 2 would be working on full proposals, and cohort 4 would receive their first session on white papers. The November session would involve cohorts 3 & 4 and focus on full proposals, hopefully with cohort 1 working on the train-the-trainer approach.

Reach-back Support / Remote Mentoring:
Based on our understanding of the requirements, Metabiota does not expect to be required to provide primary authorship support to any proposals, but does expect the SME 2 to be available to ~~occasionally~~ provide remote editorial guidance and limited assistance with drafting of select passages. Through regular communications with the respective project teams, Metabiota will be made aware of any additional subject matter expertise requests. The SME 2 will address these needs as they arise.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):
Table 1: Incremental funding requested for 16 May 2016 – 15 November 2016, per CLIN. Please note that labor rates have changed.

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$116,462
1003	MATERIALS	$0
1004	ODCs	$0
1005	TRAVEL	$31,357
TOTAL		**$147,819.10**

Table 2: Estimated total budget from 23 September 2015 through 15 November 2016, as of 17 May 2016, per CLIN:

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$229,646.73
1003	MATERIALS	$1,842.23
1004	ODCs	$947.95
1005	TRAVEL	$44,238.94
TOTAL		**$276,675.85**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Labor

Costs for direct labor to support this activity is required for the following personnel:

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As our Subject Matter Expert may be an independent consultants or subcontractor, the Metabiota PM will additionally provide management oversight of the project subcontractors (microbiology SME) and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM. The PC will manage the SME 2, to include leading regular coordination calls with the SME 2, participating in regular communications between the proposal stakeholders and the grantsmanship SME, and coordinating with the SME 2 to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline. The PC will aid the PM and SME 2 in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the grantsmanship SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Subject Matter Expert 2: The SME 2 will serve as the grantsmanship SME. The SME 2 will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each proposal, the needs and expectations of the Georgian scientists, and the grantsmanship assistance needed. The SME 2 will provide mentoring as directed by the respective project leads. We are expecting a higher level of effort required in the extension period as mentees move into developing full proposals which would require more time to review.

Materials

No additional material costs are projected for the extension of the period of performance.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel performing work overseas on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement. No additional funds for DBA insurance are requested for the extension of the period of performance.

Subcontracts

Subcontracts will be issued to the SME 2 and/or their home organization as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested to support the deployment of the SME 2 to Tbilisi, Georgia for two (2) two-week deployments and one (1) one-week deployment.

No additional travel is projected based on the requirements provided. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision modifies the original technical directive and extends the end of the Period of Performance (PoP) for TD-017 from 15 May 2016 to 15 November 2016. This PoP extension is to continue providing expertise in grantsmanship at the Laboratory of the Ministry of Agriculture in Georgia only. The Metabiota team should no longer provide expertise in grantsmanship development at the Richard G. Lugar Center for Public Health Research. Metabiota should coordinate directly with the Technical POCs identified below. Your technical approach as outlined in TD-017, proposed budget, and basis of estimate for continuing this requirement, not to exceed $95,712 is requested by 17 May 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below. No further changes to the previously approved proposal are required at this time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES)

Proposal Development & Initiation:
Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. A key assumption for this effort is that the Georgian scientists have their own research ideas which can be shaped into proposals. A second key assumption is that Metabiota Subject Matter Experts providing grantsmanship support will not be the primary drafters of any white papers or full proposals, but rather will only provide assistance in drafting said white papers and proposals. A third key assumption is that the Georgian scientists will not require any assistance in analysis of any data which may be presented in the proposals as preliminary work. It is anticipated that the plan for TD-017 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:
From the information provided in Box 8, Metabiota assumes that there are several relevant POCs at ~~both NCDC and~~ LMA which will be involved in the grantsmanship efforts. The Metabiota PM and PC will, upon approval of the TD, engage relevant ~~DTRA CBEP and Lugar Center~~ LMA stakeholders to begin understanding what efforts they would like to work on. Upon approval and receipt of additional information, the Metabiota PM and PC will identify a grantsmanship subject matter expert (billed as SME 2) and work to either onboard them as a Metabiota employee, or establish a subcontract or independent consulting arrangement with the VS. The Metabiota PM, PC, and SME 2 will participate in communications with stakeholders at ~~NCDC and~~ LMA in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the SME 2 to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO-Tbilisi.

In-Country Grantsmanship Mentoring
Mentoring will consist of in-country and remote mentoring. Based on our understanding of the requirements, Metabiota does not expect to be required to provide data analysis support to the NCDC or LMA scientists. In order to ensure the success of the in-country mentoring visits, the PM, PC, and SME 2 will work with the POCs at NCDC and LMA to establish a list of deliverables to be provided to Metabiota prior to any in-country mentoring. These deliverables may include budgetary data, drafts of proposed plans and SOPs, drafts of white papers and full proposals, and analyses of preliminary data complete with methodology. The PM and PC will maintain regular communications with the SME 2 to ensure that the SME 2 has all required resources for mentoring. After assessing the need for in-country mentoring, the SME 2 will implement the mentoring work plans, only assisting with actual proposal writing in cases of last resort.

Metabiota is proposing a slight alteration of our plans from Revision A based on observations from our first two in-country mentoring sessions. In particular, we have seen that mentees can become distracted with their primary duties at LMA and are thus proposing to run two cohorts of mentees simultaneously but for two weeks of half-day sessions. This would allow each cohort to dedicate part of their day directly to their normal duties which we believe will reduce distraction during the portion of their day focused on grantsmanship mentoring. One cohort would run in the mornings, and the other cohort would run in the afternoons. We are proposing to run two (2) two-week sessions (July and September), with remote mentoring in between. In the July session, cohort 1 would be working on full proposal and cohort 2 would receive their second session on white papers. In the September session, cohort 1 would be finishing full proposals and participating in a train-the-trainer approach to assist cohort 2 with their first efforts on full proposals.

Reach-back Support / Remote Mentoring:
Based on our understanding of the requirements, Metabiota does not expect to be required to provide primary authorship support to any proposals, but does expect the SME 2 to be available to ~~occasionally~~ provide remote editorial guidance and limited assistance with drafting of select passages. Through regular communications with the respective project teams, Metabiota will be made aware of any additional subject matter expertise requests. The SME 2 will address these needs as they arise.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):
Table 1: Incremental funding requested for 16 May 2016 – 15 November 2016, per CLIN. Please note that labor rates have changed.

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$108,935.40
1003	MATERIALS	$0.00
1004	ODCs	$0.00
1005	TRAVEL	$25,570.50
TOTAL		**$134,505.90**

Table 2: Estimated total budget from 23 September 2015 through 15 November 2016, as of 17 May 2016, per CLIN:

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$221,182.37
1003	MATERIALS	$1,842.23
1004	ODCs	$947.95
1005	TRAVEL	$38,452.44
TOTAL		**$262,424.99**

9c. TD SOLUTION BASIS OF ESTIMATE DESCRIPTION (NOT TO EXCEED 2 PAGES::

Labor

Costs for direct labor to support this activity is required for the following personnel:

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As our Subject Matter Expert may be an independent consultants or subcontractor, the Metabiota PM will additionally provide management oversight of the project subcontractors (microbiology SME) and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance. and any other requirements which may be applicable to the work.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating. managing. and communicating project risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM. The PC will manage the SME 2, to include leading regular coordination calls with the SME 2, participating in regular communications between the proposal stakeholders and the grantsmanship SME, and coordinating with the SME 2 to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline. The PC will aid the PM and SME 2 in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the grantsmanship SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance. and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Subject Matter Expert 2: The SME 2(s) will serve as the grantsmanship SME(s) The SME 2(s) will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each proposal, the needs and expectations of the Georgian scientists, and the grantsmanship assistance needed. The SME 2(s) will provide mentoring as directed by the respective project leads. We are expecting a higher level of effort required in the extension period as mentees move into developing full proposals which would require more time to review. During the base period we leveraged other CBEP work travel to Tbilisi to be able to supply additional fractional support in country, and expect to do the same during the extension period.

Materials

No additional material costs are projected for the extension of the period of performance.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel performing work overseas on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement. No additional funds for DBA insurance are requested for the extension of the period of performance.

Subcontracts

Subcontracts will be issued to the SME 2 and/or their home organization as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested to support the deployment of the SME(s) to Tbilisi, Georgia for two (2) two-week deployments. During the base period we leveraged other CBEP work travel to Tbilisi to be able to supply additional fractional support in country, and expect to do the same during the extension period. No additional travel is projected based on the requirements provided. Projected airfares are based off of actual quotes, but may be subject to changes based on timing of purchase. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE).

This revision modifies the original technical directive and extends the end of the Period of Performance (PoP) for TD-017 from 15 May 2016 to 15 November 2016. This PoP extension is to continue providing expertise in grantsmanship at the Laboratory of the Ministry of Agriculture in Georgia only. The Metabiota team should no longer provide expertise in grantsmanship development at the Richard G. Lugar Center for Public Health Research. Metabiota should coordinate directly with the Technical POCs identified below. Your technical approach as outlined in TD-017, proposed budget, and basis of estimate for continuing this requirement, not to exceed $95,712 is requested by 17 May 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below. No further changes to the previously approved proposal are required at this time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation:
Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. A key assumption for this effort is that the Georgian scientists have their own research ideas which can be shaped into proposals. A second key assumption is that Metabiota Subject Matter Experts providing grantsmanship support will **not** be the primary drafters of any white papers or full proposals, but rather will only provide assistance in drafting said white papers and proposals. A third key assumption is that the Georgian scientists will not require any assistance in analysis of any data which may be presented in the proposals as preliminary work. It is anticipated that the plan for TD-017 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:
From the information provided in Box 8, Metabiota assumes that there are several relevant POCs at LMA which will be involved in the grantsmanship efforts. The Metabiota PM and PC will, upon approval of the TD, engage relevant LMA stakeholders to begin understanding what efforts they would like to work on. Upon approval and receipt of additional information, the Metabiota PM and PC will identify a grantsmanship subject matter expert (billed as SME 2) and work to either onboard them as a Metabiota employee, or establish a subcontract or independent consulting arrangement with the VS. The Metabiota PM, PC, and SME 2 will participate in communicat ons with stakeholders at LMA in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the SME 2 to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO-Tbilisi.

In-Country Grantsmanship Mentoring
Mentoring will consist of in-country and remote mentoring. Based on our understanding of the requirements, Metabiota does not expect to be required to provide data analysis support to the LMA scientists. In order to ensure the success of the in-country mentoring visits, the PM, PC, and SME 2 will work with the POCs at LMA to establish a list of deliverables to be provided to Metabiota prior to any in-country mentoring. These deliverables may include budgetary data, drafts of proposed plans and SOPs, drafts of white papers and full proposals, and analyses of preliminary data complete with methodology. The PM and PC will maintain regular communications with the SME 2 to ensure that the SME 2 has all required resources for mentoring. After assessing the need for in-country mentoring, the SME 2 will implement the mentoring work plans, only assisting with actual proposal writing in cases of last resort.

Metabiota is proposing a slight alteration of our plans from Revision A based on observations from our first two in-country mentoring sessions. In particular, we have seen that mentees can become distracted with their primary duties at LMA and are thus proposing to run two cohorts of mentees simultaneously but for two weeks of half-day sessions. This would allow each cohort to dedicate part of their day directly to their normal duties which we believe will reduce distraction during the portion of their day focused on grantsmanship mentoring. One cohort would run in the mornings, and the other cohort would run in the afternoons. We are proposing to run two (2) two-week sessions (July and September), with remote mentoring in between. In the July session, cohort 1 would be working on full proposal and cohort 2 would receive their second session on white papers. In the September session, cohort 1 would be finishing full proposals and participating in a train-the-trainer approach to assist cohort 2 with their first efforts on full proposals.

Reach-back Support / Remote Mentoring:
Based on our understanding of the requirements, Metabiota does not expect to be required to provide primary authorship support to any proposals, but does expect the SME 2 to be available to provide remote editorial guidance and limited assistance with drafting of select passages. Through regular communications with the respective project teams, Metabiota will be made aware of any additional subject matter expertise requests. The SME 2 will address these needs as they arise.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN).
Table 1: Incremental funding requested for 16 May 2016 – 15 November 2016, per CLIN. Please note that labor rates have changed.

TOTAL		**$134,505.90**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES .

Labor

Costs for direct labor to support this activity is required for the following personnel.

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity

As our Subject Matter Expert may be an independent consultants or subcontractor, the Metabiota PM will additionally provide management oversight of the project subcontractors (microbiology SME) and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM. The PC will manage the SME 2, to include leading regular coordination calls with the SME 2, participating in regular communications between the proposal stakeholders and the grantsmanship SME, and coordinating with the SME 2 to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline. The PC will aid the PM and SME 2 in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the grantsmanship SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements. to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Subject Matter Expert 2: The SME 2(s) will serve as the grantsmanship SME(s). The SME 2(s) will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each proposal, the needs and expectations of the Georgian scientists, and the grantsmanship assistance needed The SME 2(s) will provide mentoring as directed by the respective project leads. We are expecting a higher level of effort required in the extension period as mentees move into developing full proposals which would require more time to review. During the base period we leveraged other CBEP work travel to Tbilisi to be able to supply additional fractional support in country, and expect to do the same during the extension period.

Materials

No additional material costs are projected for the extension of the period of performance.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel performing work overseas on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement. No additional funds for DBA insurance are requested for the extension of the period of performance.

Subcontracts

Subcontracts will be issued to the SME 2 and/or their home organization as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested to support the deployment of the SME(s) to Tbilisi, Georgia for two (2) two-week deployments. During the base period we leveraged other CBEP work travel to Tbilisi to be able to supply additional fractional support in country, and expect to do the same during the extension period. No additional travel is projected based on the requirements provided. Projected airfares are based off of actual quotes, but may be subject to changes based on timing of purchase. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

The purpose of this revision is to increase the TD ceiling by $0.09 and adjust funding on the CLINs detailed in Block 10 below.

Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below

No further changes to the previously approved proposal are required at this time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

8 DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE).

This revision extends the Period of Performance (PoP) for TD-018 from 15 August 2016 to 15 November 2016. This PoP extension is to provide enough time to continue providing on-site expertise in genomic research activities at the Richard G. Lugar Center for Public Health Research in Georgia. Metabiota should coordinate directly with the Technical POCs identified below. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below. No further changes to the previously approved proposal are required at this time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES)

Proposal Development & Initiation:
Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. A key assumption for this effort is that the Georgian scientists are generally capable of conducting genomics and bicinformatics analyses on their own but that the requested support personnel will occasionally be asked to directly perform genomic and bioinformatics analyses. A second key assumption for this effort is that it is expected to be a full-time expat position. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) I) time to identify the best path forward, requ red deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:
Upon approval and receipt of additional information, the Metabiota PM and PC will work with the identified VS to modify their existing subcontract. The Metabiota PM, PC, and VS will participate in project communications in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the VS to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota PM and PC will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work w th the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO-Tbilisi.

Mentoring and Performance of both Genomics and Bioinformatics Analyses and Operational Oversight of the Genomics Center:
Mentoring will consist of in-country mentoring supporting various genomics and bioinformatics projects being conducted in Georgia by NCDC and LMA. The PM and PC will maintain regular communications with the VS tc ensure that the VS has all required resources for mentoring. After assessing the need for genomics mentoring, the VS will work with the PM, PC, and other appropriate stakeholders to develop mentoring work plans. The VS will then implement the mentoring work plans, assisting with actual analyses and scientific writing when necessary. Additionally, the VS will provide oversight over the operations of the genomics center. The VS will work with Lugar Center POCs to identify candidates for mentorship in operating the genomics center, and work with the PM, PC, and Lugar Center stakeholders to develop and execute a strategy for developing these candidates' abilities to operate the genomic center without guidance.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN)

Budget requested in the table below is incremental funding per CLIN requ red for the extension period and does not include original funding amounts.

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$102,801
1003	MATERIALS	$0
1004	ODCs	$1,344
1005	TRAVEL	$0
TOTAL		**$104,144.96**

9c. TD SOLUTION BASIS OF ESTIMATE DESCRIPTION (NOT TO EXCEED 2 PAGES

Labor
Costs for direct labor to support this activity is required for the following personnel

All phases:
Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensur ng the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As our Subject Matter Expert will be a subcontractor, the Metabiota PM wi l additionally provide management oversight of the genomics SME and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and

subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM. The PC will manage the genomics SME, to include leading regular coordination calls with the genomics SME, participating in regular communications between the project stakeholders and the genomics SME, and coordinating with the genomics SME to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline. The PC will aid the PM and VS in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. The Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Project Coordination & Mentorship phases only:
Visiting Scientist: The VS will serve as the genomics SME. The VS will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each project, the needs and expectations of the Georgian scientists, and the genomics subject matter expertise needed. The VS will provide mentoring as directed by the respective project leads. The VS will also provide oversight and management of the Genomics Center at the Lugar Center. Labor has been calculated at approximately 0.7 FTE.

Other Direct Costs
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts
A subcontract extension will be issued to the VS and/or their home organization as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel is requested to support the deployment of the VS to Tbilisi, Georgia for the initial deployment travel and final return. No additional travel is projected based on the requirements provided. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable. Also of note, lodging at GSA rates for Tbilisi, Georgia have included to this budget. It is assumed that the TBD VS will require some time to identify long term lodging (length of assignment), which would be covered by his expat uplift.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision extends the Period of Performance (PoP) for TD-018 from 15 May 2016 to 15 November 2016. This PoP extension is to continue providing on-site expertise in microbiology research activities at the Richard G. Lugar Center for Public Health Research in Georgia. Metabota should coordinate directly with the Technical POCs identified below. Your technical approach as outlined in TD-019, proposed budget, and basis of estimate for continuing this requirement, not to exceed $342,000 is requested by 17 May 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below. No further changes to the previously approved proposal are required at this time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation:
Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8 of the original version of the TD. A key assumption for this effort is that the Georgian scientists are generally capable of conducting microbiological analyses on their own but that the requested support personnel will occasionally be asked to directly perform microbiological analyses. A second key assumption for this effort is that it is expected to be a full-time expat position. It is anticipated that the plan for TD-019 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:
From the information provided in Box 8, Metabiota assumes that the unspecified CBEP-funded research projects are ongoing affairs led by third parties. In order to effectively ensure that an appropriate microbiology subject matter expert (microbiology SME, billed as a Visiting Scientist/VS) is available to provide the requested mentoring, the Metabiota PM and PC will, upon approval of the TD, continue to engage relevant DTRA CBEP and Lugar Center stakeholders to identify how, where, and when project status updates are communicated (for example, monthly teleconference, weekly email exchanges, etc.) and what the onboarding and daily requirements are for working at the Lugar Center. Upon approval and receipt of additional information, the Metabiota PM and PC will identify a VS and work to either onboard them as a Metabiota employee, or establish a subcontract or independent consulting arrangement with the VS. The Metabiota PM, PC, and VS will participate in project communications in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the VS to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO-Tbilisi.

Mentoring and Performance of Microbiological Research.
Mentoring will consist of in-country mentoring. Based on our understanding of the requirements, Metabiota does not expect to be required to provide primary microbiological analysis support to the various projects being conducted at the Lugar Center. The PM and PC will maintain regular communications with the VS to ensure that the VS has all required resources for mentoring. After assessing the need for microbiology mentoring, the VS will work with the PM, PC, and other appropriate stakeholders to develop mentoring work plans. The VS will then implement the mentoring work plans, only assisting with actual analyses and scientific writing when necessary

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN)
Table 1: Incremental funding requested for 16 May 2016 – 15 November 2016, per CLIN. Please note that labor rates have changed.

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$323,696.71
1003	MATERIALS	$0
1004	ODCs	$0
1005	TRAVEL	$0
TOTAL		**$323,696.71**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES

Labor

Costs for direct labor to support this activity is required for the following personnel:

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

The Metabiota PM will additionally provide management oversight of the microbiology SME and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and any subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM. The PC will manage the microbiology SME, to include leading regular coordination calls with the microbiology SME, participating in regular communications between the project stakeholders and the microbiology SME, and coordinating with the microbiology SME to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline. The PC will aid the PM and VS in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the microbiology SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Visiting Scientist: The VS will serve as the microbiology SME. The VS will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each project, the needs and expectations of the Georgian scientists, and the microbiological subject matter expertise needed. The VS will provide mentoring as directed by the respective project leads. The VS will be working full time on this effort.

Materials

No additional material procurements are anticipated on this effort, and thus no additional funds are being requested on this CLIN through the extended period of performance.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be applied for labor costs incurred overseas. Metabiota maintains a blanket DBA policy for all personnel and will add the VS and any other performers meeting DBA requirements to this policy as they are engaged. A reconciliation of the total DBA will be performed prior to final invoicing to ensure accuracy of the charges, in accordance with total hours worked. If necessary, final invoicing will be adjusted to reflect the final DBA allocation numbers. At this time, no additional funds are being requested for DBA, as the previously requested amount for CLIN 1004 should be sufficient to cover further DBA costs.

Travel

Travel is requested to support the deployment of the VS to Batumi, Georgia or other locations within Georgia as needs arise. At this time, no additional funds are being requested for travel, as the previously requested amount for CLIN 1005 should be sufficient to cover one additional trip. Travel on the AEP contract is cost reimbursable.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):
The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota in accordance with SOW, Section 4.1 Task 1, 4.3 Task 3, and 4.4 Task 4.

CBEP CENTCOM requests the implementation of the following projects in support of the Iraqi Field Epidemiology Training Program (FETP):

1. Integrated Biosafety and Security and Epidemiology Enhancement
This activity will enhance existing Iraqi capacities for the conduction of field epidemiology, standardization and implementation of biosafety and biosecurity practices, interdisciplinary biological incidence response, and improvement of high level stakeholder buy-in for continued interagency collaboration on topics related to natural or suspect biological incidences. This activity will be conducted through a 4-phase approach consisting of the following: Metabiota will coordinate with Iraqi FETP management (Dr. Farris) to identify up to 15 candidate "core" participants. These candidates will be shared with the CBEP Technical POC for review and approval. Phase 1 will include identifying "core" participants and conducting a 12 week remote/online mentorship and in-depth training program. Phase 1 Training program will include topics such as general security awareness, developing and maintaining a culture of safety and security, laboratory biosafety and biosecurity practices, biorisk management standard operating procedure (SOP) and plan development, personal protective equipment, one health and field epidemiology, passive and active disease surveillance, personnel qualification, suitability and reliability, area decon and biological emergency response, and effective communication and risk management. Phase 2 will consist of a 1 week in-country hands-on training course. Phase 3 will consist of an online 1 week introduction, training, and familiarization and review of the Iraq National Biological Emergency Response Plan (NBERP) with the core team plus 10-15 members of the emergency response, law enforcement, and security agencies. Phase 4 will include the development of a gap analysis report conducted by the top core and interagency team performers to communicate findings and establish buy-in from high-level stakeholders to ensure their continued support of interagency network development and cooperation. Additionally, this task will not require any travel by the contractor. The estimated labor categories that are needed to support this effort are: Program Manager (PM), Subject Matter Expert (SME) Level I, SME Level II, and Foreign Local National (FLN) support. The total estimated labor hours for this effort are 4,550 and the estimated cost for this effort is $580,154.00.

2. Epidemiology Training
This activity will enhance existing Iraqi capacities for the execution of field epidemiology. This activity will identify up to 15 participants from various Iraqi agencies to complete a 6 week remote/online mentorship and training program. Metabiota will coordinate with Iraqi FETP management (Dr. Farris) to identify candidate "core" participants. These candidates will be shared with the CBEP Technical POC for review and approval. Training program will include topics such as developing and maintaining a field epidemiology cohort, effective communication and interagency coordination, and risk management. Additionally, this task will not require any travel by the contractor. The estimated labor categories that are needed to support this effort are: PM, SME Level I, SME Level II, and FLN support. The total estimated labor hours for this effort are 1,200 and the estimated cost for this effort is $180,872.00.

CLS will provide logistics support as needed, and will be closely coordinated with the CBEP Technical Point of Contact.

The period of performance for this effort will be from 22 February 2016 to 15 May 2016. Your technical approach, proposed budget and basis of estimate for implementing this requirement is not to exceed $761,026 and is requested by 19 February 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation (Task 1):
Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-022 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as a Subject Matter Expert 1)) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.
Key assumptions:

1. DTRA CBEP can and will assist in coordination and socialization with Iraq ministries and US Embassy, and will participate in the identification of appropriate Iraqi participants for all phases.
2. Metabiota assumes that the learning management system (LMS) does not need to meet DoD information security standards.
3. DTRA CBEP, through CLS or another party, can facilitate transport of Iraqi participants to a single, secure location for hands on training. (and gap analysis workshop?)
4. Metabiota-engaged FLNs will be able to access said location(s) during the appropriate times necessary to implement work.
5. Metabiota personnel providing guidance and support will **not** be the primary drafters of the gap analysis document.
6. Iraqi participants will have reliable access to the internet, with enough bandwidth to support videoconferencing.

Project Coordination (Task 1)
The Metabiota PM and PC will coordinate with th(b)(6) EVP Science Integration and the functional group leads for Biorisk Management, Epidemiology, and Veterinary Science to identify the appropriate SMEs in epidemiology and biosafety and biosecurity (BS&S) to develop and augment materials, and deliver a high quality and sustainable engagement in coordination with CBEP CENTCOM.

From the information provided in Box 8, Metabiota assumes that some type of field epidemiology training is already in existence in Iraq. In order to effectively ensure that our training materials align with existing efforts, the Metabiota PM and PC will, upon approval of the TD, enga(b)(6) and other relevant stakeholders, including DTRA CBEP, for additional information including existing training materials in both epidemiology and BS&S. The Metabiota PM, PC, and SMEs will participate in regular project communications with all stakeholders to ensure mutual understanding of goals, actions, and status. The Metabiota PM, PC, and SMEs will also participate in separate discussions with Dr. Farris to identify core participants.

The Metabiota PM and PC will work with the SMEs to ensure that all necessary documentation required prior to initiating tasks such as training is completed correctly and submitted on time, including Training Event Plan (CDRL A014) and CTR CLS Form (CDRL A016). Additionally, that all associated reports, including Monthly Reports (CDRL A001), Training Trip Report (CDRL A006), Post-Training Assessment (CDRL A015) are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured for FLNs if needed. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS via the CBEP Technical Point of Contact.

Training Material Development and Adaptation (Task 4)
Metabiota will ~~reuse~~ existing training materials from EIS, FETP, and other widely recognized training programs as much as possible. However, based on inputs fro(b)(6) nd given the need to conduct this training remotely, Metabiota expects to use SMEs to adapt training materials and case studies for effective remote delivery and to specifically address the environment in Iraq. Metabiota SMEs will develop new materials including slide presentations, videos, interactive quizzes, etc. to effectively leverage the online learning environment. Metabiota will also develop, as appropriate, pre-tests and post-tests for monitoring and evaluation purposes. Training materials, after development and adaptation, will be delivered to DTRA CBEP for technical review and Public Affairs approval. Several of Metabiota's personnel are EIS graduates and we expect to leverage their efforts for the epidemiology-related work. Metabiota personnel and those of our partners also have extensive BS&S and biorisk management experience, and we will leverage those personnel for the BS&S-related work.

Coordination for Training Material Translation (Task 1)
Translation of training materials, if determined to be necessary, will be handled via CLS per contractual direction. Metabiota PM and PC will deliver training materials and CLS form(s) to the CBEP Technical Point of Contact for appropriate routing.

Learning Management System Implementation
Metabiota will utilize a learning management system for the delivery of course materials. Metabiota FLNs will familiarize themselves with the LMS in order to be able to provide adequate locally-based support to the training participants. Metabiota SMEs, aided by the PC and FLNs, will create courses and upload training materials.

Remote Epidemiology and BS&S Training (Task 3)
Metabiota SMEs will execute 6-week training modules on epidemiology and BS&S. Metabiota expects each week to consist of 1-2 lecture sessions conducted via internet videoconferencing which will be recorded for those participants unable to participate live. These will be augmented by the online materials. Metabiota SMEs will be available for virtual "office hours" and to answer written communications from participants. Metabiota SMEs will also grade any assignments and provide feedback to the participants on their performance. FLNs will be used to facilitate any minor logistical needs during this period.

Hands-on Course (Task 3)
Metabiota SMEs and FLNs will execute a one-week hands-on course for the core participant group. This hands-on course will be designed to emphasize the key points of the remote epidemiology and BS&S trainings especially those which would benefit from practical exercises such as PPE donning and doffing. Metabiota expects to leverage CLS to provide the venue, simultaneous interpretation, and any other logistical needs.

NBERP Familiarization and Review (Task 4)
Metabiota SMEs will coordinate with in-country stakeholders including Iraqi institutions such as the National Biorisk Management Committee (NBMC), the Ministry of the Interior, and the Ministry of Health to conduct an initial review of the National Biological Emergency Response Plan (NBERP). Metabiota SMEs and in-country facilitators will then conduct a virtual introduction to the NBERP to familiarize key participants, consisting of the selected core team and 10-15 members of the emergency response, law enforcement, and security agencies of Iraq, with the NBERP process and more specifically, their role within that process over a span of one week. To do so, Metabiota SMEs will coordinate with the in-country stakeholders to identify key roles and responsibilities within the NBERP and overarching structure prior to participant outreach.

NBERP Gap Analysis and Virtual Workshop (Task 4)
The Metabiota team will coordinate with and provide guidance to the key participants familiarized above in conducting a gap assessment of the suitability and feasibility of the National Biological Emergency Response Plan (NBERP). Participants will be engaged throughout a three-week span and arranged into virtual working groups appropriate to their roles and responsibilities. Metabiota SMEs will monitor the Iraqi participants in the process, leading working groups and keeping the overall gap assessment on task and on schedule. At the end of the time period, Metabiota will facilitate a 5-day workshop for the participants to finalize the gap assessment, facilitated by an in-country implementing partner and CLS. The gap assessment will be a baseline for future work developing injects and other materials needed for a tabletop training exercise (TTX) testing the NBERP. As a result of the gap assessment, Metabiota will provide technical support and guidance in coordination with key Iraqi stakeholders to recommend changes and enhancements to the existing policies.

Epidemiology Training #2 (Task 1, Task 3, Task 4)
The Metabiota PM, PC, and SMEs will participate in discussions wit(b)(6) to identify a second cohort of participants for the epidemiology module of the remote training. The Metabiota SMEs will further modify epidemiology training materials taking into consideration that the second cohort of participants will not be afforded the chance to participate in a hands-on course to reinforce their knowledge and skills. After the materials have been modified and uploaded to the LMS and the participants identified, the Metabiota SMEs will execute the 6-week training module.

Project Closeout (Task 1)
Metabiota PM, PC, and SMEs will all contribute inputs to a final report documenting the projects. The report will include lessons learned and an after-action report detailing enhancements that could be made should this type of project be repeated, either in Iraq or in other CBEP-engaged countries. Training records will also be provided to DTRA CBEP. Additionally, at the end of the period of performance, the LMS will be transitioned to DTRA CBEP for their use and maintenance.

Monitoring and Evaluation
As part of the remote trainings and the hands-on course, Metabiota intends to administer tests to evaluate knowledge and skill levels both prior to and immediately following trainings. However, Metabiota recognizes that post-tests occurring during the period of performance will only measure short term retention. As an additional value to the client, Metabiota intends to develop and provide to CBEP post-tests which can be conducted at six month, 1 year, and 2 year intervals after training completion. Metabiota will administer the evaluations if requested by CBEP.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the attached Risk Management Matrix. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the attached Risk Management Matrix. (Risk Management Matrix: Attachment A)

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:
Task 1 - Project Coordination: Metabiota will provide consistent and cohesive technical and administrative leadership, direction, program management, implementation oversight, and coordination of all project activities.

Metabiota Program Manager (PM): The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of DTRA CBEP goals at the country and regional level in direct support of this activity and the CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the SME I to ensure all day-to-day activities for the project are completed on time, and to the quality required by CBEP.

Metabiota Project Coordinator A SME I will act as a Project Coordinator (PC) throughout the planning and execution of project objectives. The PC will lead the planning and execution of CBEP objectives towards the completion of project goals by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will manage the SMEs, to include leading regular coordination calls with the SMEs and participating in regular communications between the trainees.

To ensure the project in managed according to CBEP standards, the PM and PC will be responsible for the following:
Initiation and Program Integration: The PM, with PC support, will assist in the development of the project proposal to include the project timeline, and identification and integration of project requirements, deliverables, subcontractors, SMEs, and trainers to ensure project success. Upon acceptance of the proposal, the PM will hold a kick-off meeting with team members and partners to review the project plan and schedule, establish routine communication to support project implementation, initiate education on the contract requirements, and begin project implementation. Routine communication with all stakeholders will ensure that all deliverables, including required CDRLs, are met and submitted according to the project schedule and contract requirements.

The PM and PC will work closely with Dr. Farris to identify and select appropriate participants for the training course, ensuring they meet standards for inclusion, and are vetted according to CBEP protocols. In addition, the PM and PC will coordinate all aspects of training implementation, to include identification and appropriate engagement of FLNs, to include a Training Coordinator, to support in-country training, act as the day-to-day manager of identified FLNs, and interface regularly with project personnel to ensure that in-country training requirements are met. The PM will ensure that FLNs are contracted with, engaged according to contract and project requirements, and have the background and skills necessary to support training implementation. FLNs are being billed at the CENTCOM FLN III rate due to the difficulty of finding personnel and hazard of working in Iraq.

The PM will ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.
Communications Management: To support routine communication on the project critical to successful execution of the project, the PM and PC will establish bi-weekly project calls with all key stakeholders, to include the CBEP POC, subcontractors, in-country FLNs, SMEs, and others identified as critical to support this training during key phases identified in the project proposal. This will serve to ensure understanding of project requirements and to identify project risk at the forefront, in order to implement mitigation strategies throughout the project lifecycle, ensuring overall success. The PM will also lead communication efforts with DTRA CBEP for this activity, guaranteeing that all aspects of the project are being managed in direct coordination and communication with key team members. The PC will provide support to the PM by coordinating day-to-day activities and maintaining and scheduling routine communications, ensuring that stakeholders are provided routine visibility on the project through in-person and virtual meetings, calls, weekly reports, and updates.
Time and Cost Management: The PM and PC will ensure time and cost management and routine receipt of project reports, invoices, and other needs to support project efforts. The PM and PC will also ensure that all project deliverables are submitted on time and to the quality required for this engagement. This will include coordination, development and submission of the following contract CDRLs associated with this project: CDRL A001 Monthly Report, A006 Training Trip Report, A011 Transfer of Materials, A014 Training Event Plan, A015 Post Training Assessment, A016 CTR logistics form, and A017 Meeting Agenda and Report. All CDRLs will be developed and submitted according to the contract requirements, and assigned timelines.

Stakeholder Management: The PM will oversee the identification, development and execution of subcontracting requirements for this project. This will include identifying the necessary subcontractors, developing the subcontractor package jointly with the Metabiota contracts office, educating identified subcontractors on T&M contract requirements, and ensuring invoicing and deliverables meet contract standards. The PM will oversee all work performed by the subcontractor throughout the project and will close out the subcontract following completion of work performed in support of this effort. The PM will participate in identifying necessary subcontractors/independent consultants, and initiate their engagement through contract development and execution.

Procurement and Logistics Management: The PM and PC will coordinate with CLS for all travel, logistics, translation, and training requirements in country. Utilizing CDRL A016 the CTR logistics form, PM will submit all requirements directly to CBEP and once approved, PC will coordinate directly with CLS team members to ensure all shipping and logistics requirements are met according to timeline. PC will work jointly with CLS personnel to develop and submit required BOMs, and move supplies through the customs clearance process in conjunction with the DTRO. PM/PC will coordinate all logistics requirements with CLS and, once approved by CBEP, will remain in direct communication with CLS team members to ensure on-the-ground logistics are executed according to project scope and requirements

Quality Management: The Project Coordination team will work closely with Metabiota SMEs to ensure that all training materials and deliverables submitted and utilized on the project meet CBEP's requirements. In addition, SMEs will be responsible for QA/QCing training materials and working directly with engaged FLNs to ensure the training is performed at FETP international standards. All work of internal SMEs, FLNs, and partners will undergo peer review by Metabiota functional group leaders to ensure high quality is maintained.

Human Resources Management: To further build out the project team, the PM and PC will work closely with Metabiota's scientific bench to identify and integrate internal SMEs to this project. The PM will oversee and coordinate their efforts on the project in support of adapting and developing training materials, remotely executing the training course, and providing M&E to ensure information learned is retained and applied at home organizations. The PM will ensure that SMEs are coordinating directly with other project team members, performing required duties, and PM will track overall LOE according to budget and project requirements for all team personnel.

Close out: The PM and PC will oversee project closeout, to include wrap-up of training, finalization of deliverables, final reports, and transfer of materials. The PM will also ensure the conclusion of subcontracts and other employment agreements.

Task 4 - Subject Matter Experts (SMEs): Metabiota will provide ongoing technical support and expertise through the use of SMEs, to include the development and evaluation of training methods and materials, and to support the implementation of trainings. Metabiota SMEs engaged for this effort will provide expertise and input on the development and revision of existing training materials. They will take part in identifying and engaging trainees in conjunction with the project coordination team (b)(6) and the CBEP CM, and ensuring that the cohort selected includes a cross-section of agencies critical to this engagement with the basic skills necessary to successfully complete and implement training components at home institutions. SMEs will implement the training courses and will work in partnership with FLN trainers to administer the courses, provide QA/QC of all materials, engage trainees in capacity building and scientific discussions supporting training concepts and implementation, and assist in the development of a gap analysis report. SMEs on this effort will be performing the functions of both SMEs and Qualified Trainers (QTs). In line with government guidance, the SMEs will be billing at the SME I or SME II labor rate, which is the equivalent cost of QT I and IIs. Metabiota has identified internal SMEs that will be a part of this effort. Metabiota will subcontract Watermark Risk Management International, LLC for additional SME support on this effort. Additionally, Research and Data Analyst (RDA) hours have been allotted to assist SMEs in development and adaptation of training materials and course delivery.

Reachback programmatic support to include finance, accounting, and contracts, will be provided as part of CLIN 1001 (FFP) and will not be separately invoiced.

Materials

Training Materials: Epidemiology textbooks will be procured and distributed to trainers and participants to support the Field Epidemiology Training Program (FETP). This will include supporting the 6-week field epidemiology training course, as well as epidemiology components of the Integrated BS&S and Epidemiology Enhancement course. Risk Management Texts and other published training materials identified by SMEs will be procured and distributed to trainers and participants to support required components of the training courses. All textbooks and published materials will be in English, and will be procured by Metabiota and shipped via CLS or a third-country shipper per contract requirements. If materials can be secured and provided to the trainers/trainees online, shipping will not be required. Metabiota will endeavor to use the LMS for all course materials, ensuring cost savings to the government where possible. SMEs will be engaged to determine the appropriate textbooks, and training materials required to meet course needs.

Personal protective equipment such as Tyvek suits, gloves, goggles, booties, and N95 respirators will be procured for training purposes. Additionally, consumables and other paraphernalia such as chlorine, plastic wash basins, buckets, disinfectant sprayers, and anti-fog spray will also be procured.

USB internet devices and internet access cards will be procured and provided to trainers/trainees in-country to ensure they have access to a stable internet connection during all remote training sessions. USB internet devices will be procured and tested in-country to avoid shipping charges and to ensure they are operational on the ground. USB internet devices and access cards will be monitored by the FLNs to ensure they are used for training purposes only, and are maintained according to equipment/material guidelines for the duration of the course.

General office supplies will be procured to support in-country training activities and routine project needs for the execution of the training courses. Office supplies will be procured locally and will include, but may not be limited to, pens, paper, thumb drives, binders, etc.

Metabiota will conduct market research and ensure the best price is secured, maintaining quality and technical requirements for all procurement of goods. Metabiota will coordinate directly with CLS and third-country vendors for all shipping requirements, and will work closely with CLS and DTRO to ensure customs clearance requirements are met and goods delivered according to project timelines and CDRL requirements. Metabiota will ensure cost management for all procured supplies and will coordinate directly with CBEP and CLS to support additional requirements for the hands-on training events to include such items as printing of the developed and adapted training materials, training certificates for participants, and translation services, if needed.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project working abroad. DBA insurance will be applied for labor costs incurred overseas. As no travel is authorized for this project, DBA will only be applied to FLNs, or other contractors, engaged on this effort, for the duration of the program. Metabiota maintains a blanket DBA policy for all personnel and will add the FLNs, and other performers meeting DBA requirements, to this policy as they are engaged. A (b)(6) of their total compensation will be billed to the project on a monthly

basis. A reconciliation of the total DBA will be performed prior to final invoicing to ensure accuracy of the charges, in accordance with total hours worked. Final invoicing will be adjusted, if necessary, to reflect the final DBA allocation numbers.

Subcontracts

Subcontracts will be issued to SMEs, FLNs, and/or their home organization(s) as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the labor or materials budgets.

Travel

Travel is not requested to support this effort according to the project scope, as all requirements will be executed remotely, and will rely on FLNs for in-person training needs. Metabiota assumes that we will be able to identify a FLN in all locations in Iraq where trainees are identified.

10. FUNDING AUTHORIZED THIS TD REV:

CLIN	COST CODE	COST	POP START	POP END
1002	LABOR	$709,821	2/24/2016	5/15/2016
1003	MATERIALS	$29,089	2/24/2016	5/15/2016

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota in accordance with SOW, Section 4.1 Task 1, 4.3 Task 3, and 4.4 Task 4.

CBEP CENTCOM requests the implementation of the following projects in support of the Iraqi Field Epidemiology Training Program (FETP):

1. Integrated Biosafety and Security and Epidemiology Enhancement

This activity will enhance existing Iraqi capacities for the conduction of field epidemiology, standardization and implementation of biosafety and biosecurity practices, interdisciplinary biological incidence response, and improvement of high level stakeholder buy-in for continued interagency collaboration on topics related to natural or suspect biological incidences. This activity will be conducted through a 4-phase approach consisting of the following: Metabiota will coordinate with Iraqi FETP management (b)(6) to identify up to 15 candidate "core" participants. These candidates will be shared with the CBEP Technical POC for review and approval. Phase 1 will include identifying "core" participants and conducting a 12 week remote/online mentorship and in-depth training program. Phase 1 Training program will include topics such as general security awareness, developing and maintaining a culture of safety and security, laboratory biosafety and biosecurity practices, biorisk management standard operating procedure (SOP) and plan development, personal protective equipment, one health and field epidemiology, passive and active disease surveillance, personnel qualification, suitability and reliability, area decon and biological emergency response, and effective communication and risk management. Phase 2 will consist of a 1 week in-country hands-on training course. Phase 3 will consist of an online 1 week introduction, training, and familiarization and review of the Iraq National Biological Emergency Response Plan (NBERP) with the core team plus 10-15 members of the emergency response, law enforcement, and security agencies. Phase 4 will include the development of a gap analysis report conducted by the top core and interagency team performers to communicate findings and establish buy-in from high-level stakeholders to ensure their continued support of interagency network development and cooperation. Additionally, this task will not require any travel by the contractor. The estimated labor categories that are needed to support this effort are: Program Manager (PM), Subject Matter Expert (SME) Level I, SME Level II, and Foreign Local National (FLN) support. The total estimated labor hours for this effort are 4,550 and the estimated cost for this effort is $580,154.00.

2. Epidemiology Training

This activity will enhance existing Iraqi capacities for the execution of field epidemiology. This activity will identify up to 15 participants from various Iraqi agencies to complete a 6 week remote/online mentorship and training program. Metabiota will coordinate with Iraqi FETP management (b)(6) to identify candidate "core" participants. These candidates will be shared with the CBEP Technical POC for review and approval. Training program will include topics such as developing and maintaining a field epidemiology cohort, effective communication and interagency coordination, and risk management. Additionally, this task will not require any travel by the contractor. The estimated labor categories that are needed to support this effort are: PM, SME Level I, SME Level II, and FLN support. The total estimated labor hours for this effort are 1,200 and the estimated cost for this effort is $180,872.00.

CLS will provide logistics support as needed, and will be closely coordinated with the CBEP Technical Point of Contact.

The period of performance for this effort will be from 22 February 2016 to 15 May 2016. Your technical approach, proposed budget and basis of estimate for implementing this requirement is not to exceed $761,026 and is requested by 19 February 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation (Task 1):

Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-022 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as a Subject Matter Expert 1)) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Key assumptions:

1. DTRA CBEP can and will assist in coordination and socialization with Iraq ministries and US Embassy, and will participate in the identification of appropriate Iraqi participants for all phases.
2. Metabiota assumes that the learning management system (LMS) does not need to meet DoD information security standards.
3. DTRA CBEP, through CLS or another party, can facilitate transport of Iraqi participants to a single, secure location for hands on training. (and gap analysis workshop?)
4. Metabiota-engaged FLNs will be able to access said location(s) during the appropriate times necessary to implement work.
5. Metabiota personnel providing guidance and support will **not** be the primary drafters of the gap analysis document.
6. Iraqi participants will have reliable access to the internet, with enough bandwidth to support videoconferencing.

Project Coordination (Task 1)
The Metabiota PM and PC will coordinate with th(b)(6) EVP Science Integration and the functional group leads for Biorisk Management, Epidemiology, and Veterinary Science to identify the appropriate SMEs in epidemiology and biosafety and biosecurity (BS&S) to develop and augment materials, and deliver a high quality and sustainable engagement in coordination with CBEP CENTCOM.

From the information provided in Box 8, Metabiota assumes that some type of field epidemiology training is already in existence in Iraq. In order to effectively ensure that our training materials align with existing efforts, the Metabiota PM and PC will, upon approval of the TD, engag(b)(6) and other relevant stakeholders, including DTRA CBEP, for additional information including existing training materials in both epidemiology and BS&S. The Metabiota PM, PC, and SMEs will participate in regular project communications with all stakeholders to ensure mutual understanding of goals, actions, and status. The Metabiota PM, PC, and SMEs will also participate in separate discussions with(b)(6) o identify core participants.

The Metabiota PM and PC will work with the SMEs to ensure that all necessary documentation required prior to initiating tasks such as training is completed correctly and submitted on time, including Training Event Plan (CDRL A014) and CTR CLS Form (CDRL A016). Additionally, that all associated reports, including Monthly Reports (CDRL A001), Training Trip Report (CDRL A006), Post-Training Assessment (CDRL A015) are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured for FLNs if needed. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS via the CBEP Technical Point of Contact.

Training Material Development and Adaptation (Task 4)
Metabiota will reuse existing training materials from EIS, FETP, and other widely recognized training programs as much as possible. However, based on inputs fro(b)(6) nd given the need to conduct this training remotely, Metabiota expects to use SMEs to adapt training materials and case studies for effective remote delivery and to specifically address the environment in Iraq. Metabiota SMEs will develop new materials including slide presentations, videos, interactive quizzes, etc. to effectively leverage the online learning environment. Metabiota will also develop, as appropriate, pre-tests and post-tests for monitoring and evaluation purposes. Training materials, after development and adaptation, will be delivered to DTRA CBEP for technical review and Public Affairs approval. Several of Metabiota's personnel are EIS graduates and we expect to leverage their efforts for the epidemiology-related work. Metabiota personnel and those of our partners also have extensive BS&S and biorisk management experience, and we will leverage those personnel for the BS&S-related work.

Coordination for Training Material Translation (Task 1)
Translation of training materials, if determined to be necessary, will be handled via CLS per contractual direction. Metabiota PM and PC will deliver training materials and CLS form(s) to the CBEP Technical Point of Contact for appropriate routing.

Learning Management System Implementation
Metabiota will utilize a learning management system for the delivery of course materials. Metabiota FLNs will familiarize themselves with the LMS in order to be able to provide adequate locally-based support to the training participants. Metabiota SMEs, aided by the PC and FLNs, will create courses and upload training materials.

Remote Epidemiology and BS&S Training (Task 3)
Metabiota SMEs will execute 6-week training modules on epidemiology and BS&S. Metabiota expects each week to consist of 1-2 lecture sessions conducted via internet videoconferencing which will be recorded for those participants unable to participate live. These will be augmented by the online materials. Metabiota SMEs will be available for virtual "office hours" and to answer written communications from participants. Metabiota SMEs will also grade any assignments and provide feedback to the participants on their performance. FLNs will be used to facilitate any minor logistical needs during this period.

Hands-on Course (Task 3)
Metabiota SMEs and FLNs will execute a one-week hands-on course for the core participant group. This hands-on course will be designed to emphasize the key points of the remote epidemiology and BS&S trainings especially those which would benefit from practical exercises such as PPE donning and doffing. Metabiota expects to leverage CLS to provide the venue, simultaneous interpretation, and any other logistical needs.

NBERP Familiarization and Review (Task 4)
Metabiota SMEs will coordinate with in-country stakeholders including Iraqi institutions such as the National Biorisk Management Committee (NBMC), the Ministry of the Interior, and the Ministry of Health to conduct an initial review of the National Biological Emergency Response Plan (NBERP). Metabiota SMEs and in-country facilitators will then conduct a virtual introduction to the NBERP to familiarize key participants, consisting of the selected core team and 10-15 members of the emergency response, law enforcement, and security agencies of Iraq, with the NBERP process and more specifically, their role within that process over a span of one week. To do so, Metabiota SMEs will coordinate with the in-country stakeholders to identify key roles and responsibilities within the NBERP and overarching structure prior to participant outreach.

NBERP Gap Analysis and Virtual Workshop (Task 4)
The Metabiota team will coordinate with and provide guidance to the key participants familiarized above in conducting a gap assessment of the suitability and feasibility of the National Biological Emergency Response Plan (NBERP). Participants will be engaged throughout a three-week span and arranged into virtual working groups appropriate to their roles and responsibilities. Metabiota SMEs will monitor the Iraqi participants in the process, leading working groups and keeping the overall gap assessment on task and on schedule. At the end of the time period, Metabiota will facilitate a 5-day workshop for the participants to finalize the gap assessment, facilitated by an in-country implementing partner and CLS. The gap assessment will be a baseline for future work developing injects and other materials needed for a tabletop training exercise (TTX) testing the NBERP. As a result of the gap assessment, Metabiota will provide technical support and guidance in coordination with key Iraqi stakeholders to recommend changes and enhancements to the existing policies.

Epidemiology Training #2 (Task 1, Task 3, Task 4)
The Metabiota PM, PC, and SMEs will participate in discussions wit(b)(6) to identify a second cohort of participants for the epidemiology module of the remote training. The Metabiota SMEs will further modify epidemiology training materials taking into consideration that the second cohort of participants will not be afforded the chance to participate in a hands-on course to reinforce their knowledge and skills. After the materials have been modified and uploaded to the LMS and the participants identified, the Metabiota SMEs will execute the 6-week training module.

Project Closeout (Task 1)
Metabiota PM, PC, and SMEs will all contribute inputs to a final report documenting the projects. The report will include lessons learned and an after-action report detailing enhancements that could be made should this type of project be repeated, either in Iraq or in other CBEP-engaged countries. Training records will also be provided to DTRA CBEP. Additionally, at the end of the period of performance, the LMS will be transitioned to DTRA CBEP for their use and maintenance.

Monitoring and Evaluation
As part of the remote trainings and the hands-on course, Metabiota intends to administer tests to evaluate knowledge and skill levels both prior to and immediately following trainings. However, Metabiota recognizes that post-tests occurring during the period of performance will only measure short term retention. As an additional value to the client, Metabiota intends to develop and provide to CBEP post-tests which can be conducted at six month, 1 year, and 2 year intervals after training completion. Metabiota will administer the evaluations if requested by CBEP.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the attached Risk Management Matrix. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the attached Risk Management Matrix. (Risk Management Matrix: Attachment A)

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$709,821
1003	MATERIALS	$29,089
1004	ODCs	$2,593
1005	TRAVEL	$0
TOTAL		**$741,503.09**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES .

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:
Task 1 - Project Coordination: Metabiota will provide consistent and cohesive technical and administrative leadership, direction, program management, implementation oversight, and coordination of all project activities.

Metabiota Program Manager (PM): The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of DTRA CBEP goals at the country and regional level in direct support of this activity and the CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the SME I to ensure all day-to-day activities for the project are completed on time, and to the quality required by CBEP.

Metabiota Project Coordinator: A SME I will act as a Project Coordinator (PC) throughout the planning and execution of project objectives. The PC will lead the planning and execution of CBEP objectives towards the completion of project goals by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will manage the SMEs, to include leading regular coordination calls with the SMEs and participating in regular communications between the trainees.

To ensure the project in managed according to CBEP standards, the PM and PC will be responsible for the following:
Initiation and Program Integration: The PM, with PC support, will assist in the development of the project proposal to include the project timeline, and identification and integration of project requirements, deliverables, subcontractors, SMEs, and trainers to ensure project success. Upon acceptance of the proposal, the PM will hold a kick-off meeting with team members and partners to review the project plan and schedule, establish routine communication to support project implementation, initiate education on the contract requirements, and begin project implementation. Routine communication with all stakeholders will ensure that all deliverables, including required CDRLs, are met and submitted according to the project schedule and contract requirements.

The PM and PC will work closely with (b)(6) to identify and select appropriate participants for the training course, ensuring they meet standards for inclusion, and are vetted according to CBEP protocols. In addition, the PM and PC will coordinate all aspects of training implementation, to include identification and appropriate engagement of FLNs, to include a Training Coordinator, to support in-country training, act as the day-to-day manager of identified FLNs, and interface regularly with project personnel to ensure that in-country training requirements are met. The PM will ensure that FLNs are contracted with, engaged according to contract and project requirements, and have the background and skills necessary to support training implementation. FLNs are being billed at the CENTCOM FLN III rate due to the difficulty of finding personnel and hazard of working in Iraq.

The PM will ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.
Communications Management: To support routine communication on the project critical to successful execution of the project, the PM and PC will establish bi-weekly project calls with all key stakeholders, to include the CBEP POC, subcontractors, in-country FLNs, SMEs, and others identified as critical to support this training during key phases identified in the project proposal. This will serve to ensure understanding of project requirements and to identify project risk at the forefront, in order to implement mitigation strategies throughout the project lifecycle, ensuring overall success. The PM will also lead communication efforts with DTRA CBEP for this activity, guaranteeing that all aspects of the project are being managed in direct coordination and communication with key team members. The PC will provide support to the PM by coordinating day-to-day activities and maintaining and scheduling routine communications, ensuring that stakeholders are provided routine visibility on the project through in-person and virtual meetings, calls, weekly reports, and updates.
Time and Cost Management: The PM and PC will ensure time and cost management and routine receipt of project reports, invoices, and other needs to support project efforts. The PM and PC will also ensure that all project deliverables are submitted on time and to the quality required for this engagement. This will include coordination, development and submission of the following contract CDRLs associated with this project: CDRL A001 Monthly Report, A006 Training Trip Report, A011 Transfer of Materials, A014 Training Event Plan, A015 Post Training Assessment, A016 CTR logistics form, and A017 Meeting Agenda and Report. All CDRLs will be developed and submitted according to the contract requirements, and assigned timelines.

Stakeholder Management: The PM will oversee the identification, development and execution of subcontracting requirements for this project. This will include identifying the necessary subcontractors, developing the subcontractor package jointly with the Metabiota contracts office, educating identified subcontractors on T&M contract requirements, and ensuring invoicing and deliverables meet contract standards. The PM will oversee all work performed by the subcontractor throughout the project and will close out the subcontract following completion of work performed in support of this effort. The PM will participate in identifying necessary subcontractors/ ndependent consultants, and initiate their engagement through contract development and execution.

Procurement and Logistics Management: The PM and PC will coordinate with CLS for all travel, logistics, translation, and training requirements in country. Utilizing CDRL A016 the CTR logistics form, PM will submit all requirements directly to CBEP and once approved, PC will coordinate directly with CLS team members to ensure all shipping and logistics requirements are met according to timeline. PC will work jointly with CLS personnel to develop and submit required BOMs, and move supplies through the customs clearance process in conjunction with the DTRO. PM/PC will coordinate all logistics requirements with CLS and, once approved by CBEP, will remain in direct communication with CLS team members to ensure on-the-ground logistics are executed according to project scope and requirements

Quality Management: The Project Coordination team will work closely with Metabiota SMEs to ensure that all training materials and deliverables submitted and utilized on the project meet CBEP's requirements. In addition, SMEs will be responsible for QA/QCing training materials and working directly with engaged FLNs to ensure the training is performed at FETP international standards. All work of internal SMEs, FLNs, and partners will undergo peer review by Metabiota functional group leaders to ensure high quality is maintained.

Human Resources Management: To further build out the project team, the PM and PC will work closely with Metabiota's scientific bench to identify and integrate internal SMEs to this project. The PM will oversee and coordinate their efforts on the project in support of adapting and developing training materials, remotely executing the training course, and providing M&E to ensure information learned is retained and applied at home organizations. The PM will ensure that SMEs are coordinating directly with other project team members, performing required duties, and PM will track overall LOE according to budget and project requirements for all team personnel.

Close out: The PM and PC will oversee project closeout, to include wrap-up of training, finalization of deliverables, final reports, and transfer of materials. The PM will also ensure the conclusion of subcontracts and other employment agreements.

Task 4 - Subject Matter Experts (SMEs): Metabiota will provide ongoing technical support and expertise through the use of SMEs, to include the development and evaluation of training methods and materials, and to support the implementation of trainings. Metabiota SMEs engaged for this effort will provide expertise and input on the development and revision of existing training materials. They will take part in identifying and engaging trainees in conjunction with the project coordination team, (b)(6) and the CBEP CM, and ensuring that the cohort selected includes a cross-section of agencies critical to this engagement with the basic skills necessary to successfully complete and implement training components at home institutions. SMEs will implement the training courses and will work in partnership with FLN trainers to administer the courses, provide QA/QC of all materials, engage trainees in capacity building and scientific discussions supporting training concepts and implementation, and assist in the development of a gap analysis report. SMEs on this effort will be performing the functions of both SMEs and Qualified Trainers (QTs). In line with government guidance, the SMEs will be billing at the SME I or SME II labor rate, which is the equivalent cost of QT I and IIs. Metabiota has identified internal SMEs that will be a part of this effort. Metabiota will subcontract Watermark Risk Management International, LLC for additional SME support on this effort. Additionally, Research and Data Analyst (RDA) hours have been allotted to assist SMEs in development and adaptation of training materials and course delivery.

Reachback programmatic support to include finance, accounting, and contracts, will be provided as part of CLIN 1001 (FFP) and will not be separately invoiced.

Materials

Training Materials: Epidemiology textbooks will be procured and distributed to trainers and participants to support the Field Epidemiology Training Program (FETP). This will include supporting the 6-week field epidemiology training course, as well as epidemiology components of the Integrated BS&S and Epidemiology Enhancement course. Risk Management Texts and other published training materials identified by SMEs will be procured and distributed to trainers and participants to support required components of the training courses. All textbooks and published materials will be in English, and will be procured by Metabiota and shipped via CLS or a third-country shipper per contract requirements. If materials can be secured and provided to the trainers/trainees online, shipping will not be required. Metabiota will endeavor to use the LMS for all course materials, ensuring cost savings to the government where possible. SMEs will be engaged to determine the appropriate textbooks, and training materials required to meet course needs.

Personal protective equipment such as Tyvek suits, gloves, goggles, booties, and N95 respirators will be procured for training purposes. Additionally, consumables and other paraphernalia such as chlorine, plastic wash basins, buckets, disinfectant sprayers, and anti-fog spray will also be procured.

USB internet devices and internet access cards will be procured and provided to trainers/trainees in-country to ensure they have access to a stable internet connection during all remote training sessions. USB internet devices will be procured and tested in-country to avoid shipping charges and to ensure they are operational on the ground. USB internet devices and access cards will be monitored by the FLNs to ensure they are used for training purposes only, and are maintained according to equipment/material guidelines for the duration of the course.

General office supplies will be procured to support in-country training activities and routine project needs for the execution of the training courses. Office supplies will be procured locally and will include, but may not be limited to, pens, paper, thumb drives, binders, etc.

Metabiota will conduct market research and ensure the best price is secured, maintaining quality and technical requirements for all procurement of goods. Metabiota will coordinate directly with CLS and third-country vendors for all shipping requirements, and will work closely with CLS and DTRO to ensure customs clearance requirements are met and goods delivered according to project timelines and CDRL requirements. Metabiota will ensure cost management for all procured supplies and will coordinate directly with CBEP and CLS to support additional requirements for the hands-on training events to include such items as printing of the developed and adapted training materials, training certificates for participants, and translation services, if needed.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project working abroad. DBA insurance will be applied for labor costs incurred overseas. As no travel is authorized for this project, DBA will only be applied to FLNs, or other contractors, engaged on this effort, for the duration of the program. Metabiota maintains a blanket DBA policy for all personnel and will add the FLNs, and other performers meeting DBA requirements, to this policy as they are engaged (b)(6) of their total compensation will be billed to the project on a monthly

basis. A reconciliation of the total DBA will be performed prior to final invoicing to ensure accuracy of the charges, in accordance with total hours worked. Final invoicing will be adjusted, if necessary, to reflect the final DBA allocation numbers.

Subcontracts

Subcontracts will be issued to SMEs, FLNs, and/or their home organization(s) as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the labor or materials budgets.

Travel

Travel is not requested to support this effort according to the project scope, as all requirements will be executed remotely, and will rely on FLNs for in-person training needs. Metabiota assumes that we will be able to identify a FLN in all locations in Iraq where trainees are identified.

10. FUNDING AUTHORIZED THIS TD REV.

CLIN	COST CODE	COST	POP START	POP END
1002	LABOR	$709,821	2/24/2016	5/15/2016
1003	MATERIALS	$29,089	2/24/2016	5/15/2016

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE).

This revision modifies the original technical directive by scaling back the requirements outlined in Block 8, Phase 4 of Task 1: Integrated Biosafety and Security and Epidemiology Enhancement within the original TD-021 at no additional cost.

The revised language for Task 1, Phase 4 is as follows

Phase 4 will include the development of a gap analysis and recommendation report conducted by Metabiota subject matter experts and Iraqi technical experts nominated by the Iraqi National Monitoring Authority (INMA). Metabiota will work collaboratively with the Iraqi technical experts to understand the NBERP, identify gaps, and develop recommendations to improve the plan. Metabiota will present a summary of the gap analysis and recommendations to the National Biorisk Management Committee on September 8, 2016, via video teleconference from Sandia National Laboratories in Albuquerque, New Mexico. The presentation will be made in collaborat on with the INMA technical expert, and include a question and answer period. Should Metabiota encounter schedule delays in working with the Iraqi technical experts that preclude the possibility of finalizing, translating, and clearing a presentation in time for NBMC, then Metabiota will provide a verbal summary at NBMC, followed by a written report submitted to DTRA prior to the end of the contract. Additionally, this task will not require any international travel by the contractor. The estimated labor categories that are needed to support this effort are: Program Manager (PM), Subject Matter Expert (SME) Level I, SME Level II, and Foreign Local National (FLN) support.

Your revised technical approach, budget and basis of estimate for implementing this modification are requested by 26 July 2016.

No further changes to the previously approved proposal are required at th s time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation (Task 1):
Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-021 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as a Subject Matter Expert 1)) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.
Key assumptions:

1. The Iraqi participants identified for all phases are capable of speaking, reading, and writing English, including technical concepts.
2. DTRA CBEP can and will assist in coordination and socialization with Iraq ministries and US Embassy, and will participate in the identification of appropriate Iraqi participants for all phases.
3. Metabiota assumes that the learning management system (LMS) does not need to meet DoD information security standards.
4. DTRA CBEP, through CLS or another party, can facilitate transport of Iraqi participants to a single, secure location for hands on training.
5. DTRA CBEP or other USG entity will bear the cost of providing security for said location(s) and all participants during that time period.
6. Metabiota-engaged FLNs will be able to access said location(s) during the appropriate times necessary to implement work.
7. Metabiota personnel providing guidance and support will **not** be the primary drafters of the gap analysis document.
8. Iraqi participants will have reliable access to the internet, with enough bandwidth to support videoconferencing.

Project Coordination (Task 1)
The Metabiota PM(s) and PC will coordinate with the Dr. Mary Guttieri, EVP Science Integration and the functional group leads for Biorisk Management, Epidemiology, and Veterinary Science to identify the appropriate SMEs in epidemiology and biosafety and biosecurity (BS&S) to develop and augment materials, and deliver a high quality and sustainable engagement in coordination with CBEP CENTCOM.

From the information provided in Box 8, Metabiota assumes that some type of field epidemiology training is already in existence in Iraq. In order to effectively ensure that our training materials align with existing efforts, the Metabiota PM(s) and PC will, upon approval of the TD, engag (b)(6) and other relevant stakeholders, including DTRA CBEP, for additional information including existing training materials in both epidemiology and BS&S. The Metabiota PM(s), PC, and SMEs will participate in regular project communications with all stakeholders to ensure mutual understanding of goals, actions, and status. The Metabiota PM, PC, and SMEs will also participate in separate discussions with (b)(6) to identify core participants.

The Metabiota PM and PC will work with the SMEs to ensure that all necessary documentation required prior to initiating tasks such as training is completed correctly and submitted on time, including Training Event Plan (CDRL A014) and CTR CLS Form (CDRL A016). Additionally, that all associated reports, including Monthly Reports (CDRL A001), Training Trip Report (CDRL A006), Post-Training Assessment (CDRL A015) are filed on time. The Metabiota PM(s) and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS via the CBEP Technical Point of Contact.

Training Material Development and Adaptation (Task 4)
Metabiota will reuse existing training materials from EIS, FETP, and other widely recognized training programs as much as possible. However, based on inputs from (b)(6) and given the need to conduct this training remotely, Metabiota expects to use SMEs to adapt training materials and case studies for effective remote delivery and to specifically address the environment in Iraq. Metabiota SMEs will develop new materials including slide

presentations, videos, interactive quizzes, etc. to effectively leverage the online learning environment. Metabiota will also develop, as appropriate, pre-tests and post-tests for monitoring and evaluation purposes. Training materials, after development and adaptation, will be delivered to DTRA CBEP for technical review and Public Affairs approval. Several of Metabiota's personnel are EIS graduates and we expect to leverage their efforts for the epidemiology-related work. Metabiota personnel and those of our partners also have extensive BS&S and biorisk management experience, and we will leverage those personnel for the BS&S-related work.

Coordination for Training Material Translation (Task 1)
Translation of training materials, if determined to be necessary, will be handled via CLS per contractual direction. Metabiota PM(s) and PC will deliver training materials and CLS form(s) to the CBEP Technical Point of Contact for appropriate routing.

Learning Management System Implementation
Metabiota will utilize a learning management system for the delivery of course materials. Metabiota FLNs will familiarize themselves with the LMS in order to be able to provide adequate locally-based support to the training participants. Metabiota SMEs, aided by the PC and FLNs, will create courses and upload training materials.

Remote Epidemiology and BS&S Training (Task 3)
Metabiota SMEs will execute 6-week training modules on epidemiology and BS&S. Metabiota expects each week to consist of 1-2 lecture sessions conducted via internet videoconferencing which will be recorded for those participants unable to participate live. These will be augmented by the online materials. Metabiota SMEs will be available for virtual "office hours" and to answer written communications from participants. Metabiota SMEs will also grade any assignments and provide feedback to the participants on their performance. FLNs will be used to facilitate any minor logistical needs during this period.

Hands-on Course (Task 3)
Metabiota SMEs and FLNs will execute a one-week hands-on course for the core participant group. This hands-on course will be designed to emphasize the key points of the remote epidemiology and BS&S trainings, especially those which would benefit from practical exercises such as PPE donning and doffing. Metabiota expects to leverage CLS to provide the venue, simultaneous interpretation, and any other logistical needs.

NBEP Gap Analysis and Virtual Workshop (Task 4)
The Metabiota team will work with Iraqi stakeholders/SMEs to conduct a gap analysis of the National Biological Emergency Plan (NBEP). Metabiota expects to use a mix of effort from epidemiology, biosafety, biosecurity, biorisk management, and emergency response SMEs to conduct this gap analysis. Metabiota will work with the Iraqi stakeholders to obtain the latest version of the NBEP. Together, Metabiota and the Iraqi stakeholders (collectively, "the analysis team") will then develop an operational plan for conducting the analysis and drafting a report and presentation. Metabiota SMEs, in conjunction with the Iraqi stakeholders, will then examine the NBEP to identify gaps and critical strategic junctures in the plan, and also to identify potential modes of failure. The analysis team will further devise recommendations to potentially address and/or test any identified gaps and modes of failure. The analysis team will prepare a short presentation on their findings to be presented at the National Biorisk Management Committee meeting in Albuquerque, New Mexico.

Epidemiology Training #2 (Task 1, Task 3, Task 4)
The Metabiota PM, PC, and SMEs will participate in discussions with (b)(6) to identify a second cohort of participants for the epidemiology module of the remote training. The Metabiota SMEs will further modify epide[illegible]ining materials taking into consideration that the second cohort of participants will not be afforded the chance to participate in a hands-on course to reinforce their knowledge and skills. After the materials have been modified and uploaded to the LMS and the participants identified, the Metabiota SMEs will execute the 6-week training module.

Project Closeout (Task 1)
Metabiota PM, PC, and SMEs will all contribute inputs to a final report documenting the projects. The report will include lessons learned and an after-action report detailing enhancements that could be made should this type of project be repeated, either in Iraq or in other CBEP-engaged countries. Training records will also be provided to DTRA CBEP. Additionally, at the end of the period of performance, the LMS will be transitioned to DTRA CBEP for their use and maintenance.

Monitoring and Evaluation
As part of the remote trainings and the hands-on course, Metabiota intends to administer tests to evaluate knowledge and skill levels both prior to and immediately following trainings. However, Metabiota recognizes that post-tests occurring during the period of performance will only measure short term retention. As an additional value to the client, Metabiota intends to develop and provide to CBEP post-tests which can be conducted at six month, 1 year, and 2 year intervals after training completion. Metabiota will administer the evaluations if requested by CBEP.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the attached Risk Management Matrix.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$711,773
1003	MATERIALS	$26,260
1004	ODCs	$4,535
1005	TRAVEL	$4,595
TOTAL		**$747,163**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES)

The basis of estimate for the TD has been revised and updated to account for a realignment in costs, as well as a request for travel funding to support presentation of the NBEP gap analysis at the NBMC.

Labor

Costs for direct labor to support this activity is required for the following personnel:

All phases:

Task 1 - Project Coordination: Metabiota will provide consistent and cohesive technical and administrative leadership, direction, program management, implementation oversight, and coordination of all project activities.

Metabiota Program Manager(s) (PM): The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of DTRA CBEP goals at the country and regional level in direct support of this activity and the CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the SME I to ensure all day-to-day activities for the project are completed on time, and to the quality required by CBEP

Metabiota Project Coordinator: A SME I will act as a Project Coordinator (PC) throughout the planning and execution of project objectives. The PC will lead the planning and execution of CBEP objectives towards the completion of project goals by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will manage the SMEs, to include leading regular coordination calls with the SMEs and participating in regular communications between the trainees.

To ensure the project in managed according to CBEP standards, the PM and PC will be responsible for the following:

Initiation and Program Integration: The PM, with PC support, will assist in the development of the project proposal to include the project timeline, and identification and integration of project requirements, deliverables, subcontractors, SMEs, and trainers to ensure project success. Upon acceptance of the proposal, the PM will hold a kick-off meeting with team members and partners to review the project plan and schedule, establish routine communication to support project implementation, initiate education on the contract requirements, and begin project implementation. Routine communication with all stakeholders will ensure that all deliverables, including required CDRLs, are met and submitted according to the project schedule and contract requirements.

The PM and PC will work closely with (b)(6) to identify and select appropriate participants for the training course, ensuring they meet standards for inclusion, and are vetted according to CBEP protocols. In addition, the PM and PC will coordinate all aspects of training implementation, to include identification and appropriate engagement of FLNs, to include a Training Coordinator, to support in-country training, act as the day-to-day manager of identified FLNs, and interface regularly with project personnel to ensure that in-country training requirements are met. The PM will ensure that FLNs are contracted with, engaged according to contract and project requirements, and have the background and skills necessary to support training implementation. FLNs are being billed at the CENTCOM FLN III rate due to the difficulty of finding personnel and hazard of working in Iraq.

The PM will ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Communications Management: To support routine communication on the project critical to successful execution of the project, the PM and PC will establish bi-weekly project calls with all key stakeholders, to include the CBEP POC, subcontractors, in-country FLNs, SMEs, and others identified as critical to support this training during key phases identified in the project proposal. This will serve to ensure understanding of project requirements and to identify project risk at the forefront, in order to implement mitigation strategies throughout the project lifecycle, ensuring overall success. The PM will also lead communication efforts with DTRA CBEP for this activity, guaranteeing that all aspects of the project are being managed in direct coordination and communication with key team members. The PC will provide support to the PM by coordinating day-to-day activities and maintaining and scheduling routine communications, ensuring that stakeholders are provided routine visibility on the project through in-person and virtual meetings, calls, weekly reports, and updates.

Time and Cost Management: The PM and PC will ensure time and cost management and routine receipt of project reports, invoices, and other needs to support project efforts. The PM and PC will also ensure that all project deliverables are submitted on time and to the quality required for this engagement. This will include coordination, development and submission of the following contract CDRLs associated with this project: CDRL A001 Monthly Report, A006 Training Trip Report, A011 Transfer of Materials, A014 Training Event Plan, A015 Post Training Assessment, A016 CTR logistics form, and A017 Meeting Agenda and Report. All CDRLs will be developed and submitted according to the contract requirements, and assigned timelines.

Stakeholder Management: The PM will oversee the identification, development and execution of subcontracting requirements for this project. This will include identifying the necessary subcontractors, developing the subcontractor package jointly with the Metabiota contracts office, educating identified subcontractors on T&M contract requirements, and ensuring invoicing and deliverables meet contract standards. The PM will oversee all work performed by the subcontractor throughout the project and will close out the subcontract following completion of work performed in support of this effort. The PM will participate in identifying necessary subcontractors/ ndependent consultants, and initiate their engagement through contract development and execution.

Procurement and Logistics Management: The PM and PC will coordinate with CLS for all travel, logistics, translation, and training requirements in country. Utilizing CDRL A016 the CTR logistics form, PM will submit all requirements directly to CBEP and once approved, PC will coordinate directly with CLS team members to ensure all shipping and logistics requirements are met according to timeline. PC will work jointly with CLS personnel to develop and submit required BOMs, and move supplies through the customs clearance process in conjunction with the DTRO. PM/PC will coordinate all logistics requirements with CLS and, once approved by CBEP, will remain in direct communication with CLS team members to ensure on-the-ground logistics are executed according to project scope and requirements.

Quality Management: The Project Coordination team will work closely with Metabiota SMEs to ensure that all training materials and deliverables submitted and utilized on the project meet CBEP's requirements. In addition, SMEs will be responsible for QA/QCing training materials and working directly with engaged FLNs to ensure the training is performed at FETP international standards. All work of internal SMEs, FLNs, and partners will undergo peer review by Metabiota functional group leaders to ensure high quality is maintained.

Human Resources Management: To further build out the project team, the PM and PC will work closely with Metabiota's scientific bench to identify

and integrate internal SMEs to this project. The PM will oversee and coordinate their efforts on the project in support of adapting and developing training materials, remotely executing the training course, and providing M&E to ensure information learned is retained and applied at home organizations. The PM will ensure that SMEs are coordinating directly with other project team members, performing required duties, and PM will track overall LOE according to budget and project requirements for all team personnel.
Close out: The PM and PC will oversee project closeout, to include wrap-up of training, finalization of deliverables, final reports, and transfer of materials. The PM will also ensure the conclusion of subcontracts and other employment agreements.

Task 4 - Subject Matter Experts (SMEs): Metabiota will provide ongoing technical support and expertise through the use of SMEs, to include the development and evaluation of training methods and materials, and to support the implementation of trainings. Metabiota SMEs engaged for this effort will provide expertise and input on the development and revision of existing training materials. They will take part in identifying and engaging trainees in conjunction with the project coordination team (b)(6) and the CBEP CM, and ensuring that the cohort selected includes FETP graduates and current residents, critical to this engagement with the basic skills necessary to successfully complete and implement training components at home institutions. SMEs will implement the training courses and will work in partnership with FLN trainers to administer the courses, provide QA/QC of all materials, engage trainees in capacity building and scientific discussions supporting training concepts and implementation, and assist in the development of a gap analysis report. SMEs on this effort will be performing the functions of both SMEs and Qualified Trainers (QTs). In line with government guidance, the SMEs will be billing at the SME I or SME II labor rate, which is the equivalent cost of QT I and IIs. Metabiota has identified internal SMEs that will be a part of this effort. Metabiota will subcontract Watermark Risk Management International, LLC for additional SME support on this effort. Additionally, Research and Data Analyst (RDA) hours have been allotted to assist SMEs in development and adaptation of training materials and course delivery. In addition, RDA hours will be utilized to support delivery of the hands-on course, ensure course approvals, credit hours, and smooth facilitation of course implementation.

Reachback programmatic support to include finance, accounting, and contracts, will be provided as part of CLIN 1001 (FFP) and will not be separately invoiced. In addition, reachback support will be provided by Metabiota science team members skilled in the fields of epidemiology and BS&S, at no cost to the government, to review developed training materials and course requirements.

Labor hours have been realigned, within the total ceiling of the TD approved costs, to account for shifts in labor and costing requirements as the project has been further defined and requirements have shifted in scheduling, material development, and gap analysis change of scope.

Materials
Training Materials: Epidemiology textbooks will be procured and distributed to trainers and participants to support the Field Epidemiology Training Program (FETP). This will include supporting the 6-week field epidemiology training course, as well as epidemiology components of the Integrated BS&S and Epidemiology Enhancement course. Risk Management Texts and other published training materials identified by SMEs will be procured and distributed to trainers and participants to support required components of the training courses. All textbooks and published materials will be in English, and will be procured by Metabiota and shipped via CLS or a third-country shipper per contract requirements. If materials can be secured and provided to the trainers/trainees online, shipping will not be required. Metabiota will endeavor to use the LMS for all course materials, ensuring cost savings to the government where possible. SMEs will be engaged to determine the appropriate textbooks, and training materials required to meet course needs.

Personal protective equipment such as Tyvek suits, gloves, goggles, booties, and N95 respirators will be procured for training purposes. Additionally, consumables and other paraphernalia such as chlorine, plastic wash basins, buckets, disinfectant sprayers, and anti-fog spray will also be procured.

USB internet devices and internet access cards will be procured and provided to trainers/trainees in-country to ensure they have access to a stable internet connection during all remote training sessions. USB internet devices will be procured and tested in-country to avoid shipping charges and to ensure they are operational on the ground. USB internet devices and access cards will be monitored by the FLNs to ensure they are used for training purposes only, and are maintained according to equipment/material guidelines for the duration of the course.

General office supplies will be procured to support in-country training activities and routine project needs for the execution of the training courses. Office supplies will be procured locally and will include, but may not be limited to, pens, paper, thumb drives, binders, etc.

Metabiota will conduct market research and ensure the best price is secured, maintaining quality and technical requirements for all procurement of goods. Metabiota will coordinate directly with CLS and third-country vendors for all shipping requirements, and will work closely with CLS and DTRO to ensure customs clearance requirements are met and goods delivered according to project timelines and CDRL requirements. Metabiota will ensure cost management for all procured supplies and will coordinate directly with CBEP and CLS to support additional requirements for the hands-on training events to include such items as printing of the developed and adapted training materials, training certificates for participants, and translation services, if needed.

As identification of materials and supplies has progressed and costing proposals received from vendors supporting this effort, Metabiota has realigned costs accordingly to reflect received proposals and confirmed project needs. For example, all materials for the hands-on course will be procured in-country changing the estimated costs for materials from originally projected US-based purchasing. Materials will be procured locally to ensure project schedule is maintained, and to alleviate project delays that could occur due to extended customs clearance requirements. In addition, costs have been reduced, where possible, to reflect the procurement of text book materials through online sources versus hardback procurement. Lastly, it is anticipated that the majority of trainees will have a stable internet connection and that procurement of USB devices and internet access cards will be reduced.

Other Direct Costs
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project working abroad. DBA insurance will be applied for labor costs incurred overseas. As no travel is authorized for this project, DBA will only be applied to FLNs, or other contractors, engaged on this effort, for the duration of the program. Metabiota maintains a blanket DBA policy for all personnel and will add the FLNs, and other performers meeting DBA requirements, to this policy as they are engaged. A rate of 3.5% of their total compensation will be billed to the project on a monthly basis. A reconciliation of the total DBA will be performed prior to final invoicing to ensure accuracy of the charges, in accordance with total hours worked. Final invoicing will be adjusted, if necessary, to reflect the final DBA allocation numbers.

Due to an increased number of FLNs engaged on the project, to include (b)(6) epidemiology trainee (b)(6) and URC trainers and project personnel, DBA insurance was realigned to reflect anticipated LOE by all foreign nationals performing on this project. As stated above, DBA

reconciliation will be performed at invoice close out to ensure accuracy of billing and rates according to actual hours worked on the project.

Subcontracts

Subcontracts to support this effort were approved and issued to Watermark Risk International, LLC for support in the BS&S training component, as well as URC for the engagement of FLNs to support the hands-on training component of this course, as well as local procurement of all materials and supplies needed for the hands-on course. Labor and material costs required to facilitate the engagement are captured under the respective budgets.

Travel

Foreign travel is not requested to support this effort, as all requirements will be executed remotely via a learning management system and online training platform. The hands-on course will be executed using in-country FLNs for in-person support and will be remotely supported by Metabiota SMEs.

Domestic travel is requested to support this effort for the presentation of the NBEP gap analysis at the NBMC in Albuquerque, NM in September. Per discussions with the CBEP project team, and as mentioned in the Box 8, our SME's will travel to Sandia National Laboratories to present our findings via video teleconference to NBMC. Travel costs are requested, in accordance with USG travel regulations, for (3) BS&S trainers, as well as Metabiota Program Manager (b)(6) Travel costs include RT airfare, hotel, ground transportation, and per diem for a two-night stay to jointly deliver the presentation.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide grantsmanship training and subject matter expert (SME) assistance for the coordination of project design, research proposal development, and implementation of a pilot biosurveillance study in Uganda, in accordance with SOW section 4.4, 4.5 and 4.6. Tasks 4, 5 and 6.

Coordination of such efforts shall focus on the following topics: Ecological and bio-surveillance for Rift Valley fever (RVF) among domestic and wild animal populations in Uganda; Exploring the distribution and characteristics of avian influenza (AI) viruses in migratory waterfowl and poultry in Uganda; and Genetic and epidemiological insights into the occurrence of peste des petits ruminants virus (PPRV) among sheep, goats, cattle, and wildlife in northern Uganda.

The project design and research proposal(s) to be coordinated by Metabiota shall emphasize bio-surveillance of RVF, PPRV, and AI in Uganda and how the collection of this data would help enhance the surveillance capabilities of the country at the national level. It shall also include assistance in the development of standard operating procedures (SOPs) for the projects (e.g., biosafety/biosecurity, sample collection/handling/transport, laboratory analysis, data analysis) with the goal of enhancing local capabilities and developing the skills necessary for the early detection and prevalence determination of RVF, AI, and PPR. Metabiota will perform the following activities during the period of performance:

1. Phase One: Metabiota shall collaborate with CBEP's Ugandan research partners and coordinate with them to develop a work plan for implementation of all of the activities noted below, including project design (development of a research plan) and development of a high-quality, competitive research proposal or proposals (more details below). Metabiota should provide a PM and a SME1 to manage this coordination. The SME1 and PM should reach out directly to the POCs listed below to discuss their vision for the development of a research grant and to discuss additional SME support needed. Ugandan partners on this project are SMEs in various areas and their skills/expertise should be leveraged in accomplishing the goals of this project. The Metabiota PM and SME1 should also review the concept notes already developed by the collaborators that describe their research interests. The SME1 hours required for this should not exceed 25 hours total for maximum 3-5 weeks of coordination. PM oversight should not exceed 25 hours total for this phase.

   Ugandan collaborators should include personnel from the following institutions/organizations:
   a. The National Animal Disease Diagnostics and Epidemiology Centre (NADDEC). POC (b)(6) (b)(6)
   b. The National Livestock Resources Research Institute (NaLIRRI). POC (b)(6) (b)(6)
   c. The African Field Epidemiology Network (AFENET). POC (b)(6)
   d. The Ministry of Health, Division of Veterinary Public Health (MoH-DVPH). POC (b)(6) (b)(6)
   e. The Uganda Wildlife Authority. POC (b)(6)
   f. CDC- POC (b)(6)
   g. The Ministry of Health, Uganda Virus Research Institute (MoH-UVRI). POC (b)(6) (b)(6)
   h. Ministry of Agriculture, Animal Industry and Fisheries (MAAIF) (b)(6) (b)(6)

   Phase One deliverables: Work plan with project design and timeline with clear roles and responsibilities

2. Phase Two: Metabiota shall assist the collaborators identified in Phase 1 with the development of a detailed research plan (experimental design) and research proposal(s), including budget, for epidemiologic studies/bio-surveillance research of RVF, AI, and PPR in Uganda based on the needs and research interests of the identified collaborators. These needs are already described in three concept notes developed by the Ugandan collaborators. The determination of whether one joint proposal or separate proposals will be developed will be made in partnership with Ugandan collaborators. The research plan shall include comprehensive descriptions of the hypothesis and research questions; development of a list of materials

and supplies to accomplish the research studies; and SOPs planned for the collection of samples, including field, laboratory, and data analytics, as well as a discussion of biosafety and biosecurity risks and mitigations (e.g. infectious sample transport and handling). CBEP expectation is for Metabiota to provide the collaborators with SME support (Metabiota and Ugandan SMEs) to inform the development of the proposal(s) that the Ugandan collaborators will write. Metabiota is not expected to write the grant proposal, but to provide oversight regarding the development of hypotheses, research design, and the research proposal writing process. The concept notes are well-developed, but will need to be strengthened to provide additional detail on sample size calculations, sample analysis procedures, data analysis methods, and other specifics to make them competitive research proposals. Metabiota should support the Ugandan collaborators in exploring potential funding options, not only DTRA, and assist them in tailoring their proposal(s) to specific funding opportunities.

To complete this task, Metabiota should provide up to 3 SMEs, including 1-2 from Metabiota and one Ugandan non-governmental SME (i.e. AFENET). Each SME should spend no more than 60 hours total over a maximum of 6 weeks to provide input/feedback and grantsmanship expertise to the research plan (experimental design) and the research proposal(s) developed by the Ugandan collaborators. PM oversight of the SMEs' review and coordination of activities should not exceed 30 hours total for Phase Two.

Phase Two deliverables: Project proposal(s) with budgets and SOPs

3. Phase Three: After completion of activities described in Phase 2, Metabiota shall also provide technical expertise to train stakeholders and work with them to conduct small pilot studies in Uganda to test the SOPs developed for the larger surveillance studies in the proposal(s) to determine their effectiveness and the viability of the project design on a smaller scale. Metabiota shall provide no more than 5 medium-level trainers to assist in the pilot studies. Trainers may be a mix of Metabiota and Ugandan trainers or mostly/all Ugandan trainers, which would be viewed as a strong approach to enhance sustainability of CBEP's investment. The training should consist of one in-country activity as well as continued coordination via email, phone, webinar, or a similar lower-cost communication/coordination mechanism throughout the pilot study period.

   Phase Three, Part One: Preparation and coordination in advance of the in-country training and pilot studies should take no more than 6 weeks, and may begin during Phase Two to maximize efficiency, especially for the definition of the scope and timelines for the pilot studies and the procurement of materials needed for the pilot studies. Coordination will be between Metabiota and all the POCs listed above, as well as identified SMEs/trainers, if different from the above. Training materials should be discussed and obtained during this phase. The training materials will be developed from the project proposal and SOP documents, existing training materials owned/obtained by the Ugandan collaborators, and additional supplemental material as needed. If Metabiota and Ugandan collaborators agree that some necessary training materials do not already exist and need to be developed, the team may work together to augment existing materials. A PM, SME1, and a maximum of 5 medium-level trainers would be an appropriate mix to accomplish the efforts in this phase. Trainers should have expertise in the Ugandan public health, veterinary, and wildlife systems as well as local research methods and processes. Not all people need to participate in all tasks at all times during this planning and coordination, and resources should be conserved to include only the necessary individuals at each step. SME1 hours during Phase Three, Part One should not exceed 40 hours; 55 hours if training materials need to be developed. Hours per trainer for preparation and coordination should not exceed 10 hours; 25 hours if they need to participate in development of training materials. PM hours dedicated to oversight of this planning and preparation should not exceed 30 hours.

   Phase Three, Part Two: The in-country training shall be conducted over a period of 10 working days (5 days per week for 2 separate weeks and should include no more than 20 trainees, to be identified by the Ugandan collaborators, across the 3 pilot studies). The training may be conducted as one comprehensive event, providing overarching skills, knowledge and guidance in a way that it will benefit all three projects; or it may be divided into sections for more focused training on the individual projects; or it may be a combination, with some parts together and some break-out or working group sessions that are more specific. Metabiota should collaborate with the Ugandan POCs and trainers to determine the best approach. The PM, SME1 and trainers' time should not exceed 10 hours per day of training. One day before or after the training for in-person coordination for the pilot studies would be appropriate and should not exceed 8 hours of labor each for the PM, SME1, trainers, and pilot study project leads. It would be acceptable for the trainers and pilot study project leads to be the same people in some cases, as appropriate. PM level of effort should be less than the SME1 given oversight vs. implementation role.

   Phase Three, Part Three: Metabiota will provide management oversight and support to the Ugandan partners in implementation of three pilot field studies. The Ugandan collaborators are in the process of receiving appropriate permits and sample collection can only commence following DTRA Research Oversight Board (ROB) approvals. This activity shall include the procurement of materials and supplies required for the pilot studies, not to exceed $100,000. Metabiota shall work with the Ugandan partners to identify the most efficient, cost-effective way to

procure materials and supplies. Pilot study project leads and field technicians' level of effort should not exceed 680 hours over 8 weeks for pilot study implementation and oversight. There should be no more than 3 pilot study project leads and 11 technicians total supported by Metabiota for all three pilot studies. PM and SME1 hours dedicated to pilot study implementation guidance and oversight should not exceed 60 hours over 8 weeks. PM level of effort should be less than the SME1 given oversight vs. technical SME support role.

The following information and study objectives are provided for reference for proposal development (longer term objectives) and pilot study design/implementation (shorter term objectives). The concept notes developed by the Ugandan collaborators are attached for more detail. The pilot studies should focus on validating the SOPs developed as part of the longer-term study design and proposal development in Phase 2, and on conducting sample collection, lab analysis, and data analysis on a small subset of the various animal populations noted below.

Study 1 - The portion of the project regarding ecological and biosurveillance for Rift Valley Fever (RVF) among domestic and wild animal populations in Uganda shall address the following objectives:

a. Determine the inter-epidemic seroprevalence of RVF in a sample population of relevant domestic animals and wildlife in study areas with clearly identified serotypes. Training in this area should establish better methods for the biosurveillance of epizootic and zoonotic diseases in Uganda.
b. Create/improve contingency plans for RVF outbreaks ready for implementation at the central and local district levels through collaboration with a Ugandan government representative specializing in disease prevention and control as well as outbreak containment in Uganda.

Study 2 - The portion of the project focused on exploring the distribution and characteristics of avian influenza viruses (AIVs) in migratory waterfowl and poultry in Uganda shall include these specific objectives:

a. Establish temporal and spatial distribution and prevalence of AIVs in a sample population of waterfowl and domestic poultry in Uganda.

Study 3 - The portion of the project regarding the genetic and epidemiological insights into the occurrence of peste des petits ruminants virus (PPRV) among sheep, goats, and cattle in northern Uganda shall include these objectives:

a. Determine the prevalence of PPRV in wild animal species in the Kidepo Valley National Park and in goats, sheep, and cattle in Nakapiripirit district of Uganda.
b. Use of RT-PCR to detect the presence of PPRV and competitive ELISA to determine the presence of specific PPRV antibodies.
c. Development of a questionnaire to obtain data on existing control measures, livestock movement patterns, PPRV vaccination practices and prevalence, and other relevant epidemiological and surveillance factors.

For the pilot studies, an appropriate scope would include the following:

Study 1 - Pilot study will include no more than 1,000 serum samples collected from 768 domestic animals (cattle, sheep and goat) and 232 wild animal ruminant and porcine species. Laboratory analysis will be limited to serology (ELISA). Data analysis will include determination of RVF antibody seroprevalence. ELISA will be conducted at the CDC lab at UVRI with participation as appropriate by relevant project collaborators.

Study 2 - Pilot study will include no more than 1,000 serum samples collected from two distinct locations with measurably high levels of interface between the wild birds, domestic poultry, and humans. Samples should be collected from approximately 590 domestic poultry and 410 wild poultry, split evenly between both locations. Laboratory analysis will be limited to ELISA for Influenza A viruses and PCR-based molecular analyses, both to be conducted at NADDEC.

Study 3 - Pilot study will include no more than 1,000 serum samples collected each from two distinct locations. The samples should be from approximately 232 cattle and 768 sheep or goats split evenly between the two locations. Development and piloting a questionnaire to assess PPRV risk factors such as vaccination practices, livestock movement and PPRV control measures will be part of the study. Laboratory analysis will be limited to serological and molecular techniques and data analysis will include determination of PPRV antibody seroprevalence and risk factors for PPRV. ELISA and PPR will be conducted at NADDEC. Metabiota shall not pay for Ugandan government collaborators' time for activities completed as part of their normal job/position and role within their institution. Time shall not be paid to government collaborators for Phase One or Phase Two. Ugandan government collaborators can be compensated for time if they are included as trainers, pilot study project leads, and field technicians for Phase Three. AFENET is not a government organization. CDC will not be compensated for time related to this project. All other POCs listed above are Ugandan government collaborators.

Travel costs for Ugandan participants related to the training event and field studies should only include ground transport, lodging, and per diem costs for participants working a distance of greater than one hour travel time from their home, and any requested ground transport, lodging, or per diem payments shall be cleared with CBEP prior to making commitments to cover these costs. Local participants in the training and field work (living one hour or less from the location of their work that day) will not have travel, lodging, or per diem costs covered.

Phase Three deliverables: Pilot studies implemented: PCR and ELISA results provided to CBEP; results and analyses developed into a pilot project summary of conclusions per project and provided to CBEP; and summary of conclusions provided to the Ugandan national authorities for disease surveillance and control.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES)

Phase 0: Proposal Development & Initiation (Task 1: March 7-9, 2016)

Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-022 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as a Research and Data Analyst (RDA)) time to identify the optimal strategy, including required deliverables and other programmatic requirements, which may be a part of project implementation.

The Metabiota PM and PC coordinated with (b)(6), Metabiota's Executive Vice President (EVP) in charge of Science Integration and communication with our regional scientific networks to identify the appropriate SMEs in grantsmanship, experimental design, and biosurveillance to develop and augment project work plans and training materials. Ultimately, this measure was taken to ensure our technical and cost solutions were of the highest quality and sustainable, respectively.

Key assumptions:

1. Metabiota received unofficial communication supporting an extension of its contract from May 16, 2016 to November 15, 2016, this technical response has been developed with the key assumption that this additional time will be allotted to this project.
2. Metabiota assumes DTRA CBEP representatives will provide Metabiota with the concept notes referred to in Box 8 upon the approval of this TD.
3. Metabiota assumes that DTRA CBEP representatives involved in the development of this technical direction will be available for a kick-off meeting to discuss any associated historical engagement with the research collaborators and their respective needs and constraints.
4. Metabiota assumes changes to the budget (e.g., labor categories) will be acceptable to DTRA. An RDA was added to provide flexibility when implementing; however, this has not affected the overall project budget.
5. Metabiota assumes our response should align with narrative from Box 8, which does not align with the figures provided in Box 5.
6. Metabiota assumes that there will be a need to develop training materials during phase 3 part 1 in preparation for phase 3 part 2, and has incorporated the necessary LOE into this technical proposal.
7. Metabiota recognizes guidelines regarding compensation of Ugandan government personnel, as outlined in the Ambassador's memo (8 April 2015). Metabiota has developed a basis of estimate that plans for the highest cost scenario (e.g., no Ugandan government personnel). Upon receiving names and affiliations of all project participants, Metabiota will work with DTRA CBEP to adjust the basis of estimate accordingly.

Phase 1: Work Plan Development (Task 1: March 21-April 22, 2016)

Upon approval of the TD, Metabiota will engage DTRA CBEP to ensure a mutual understanding of project goals and objectives is realized, as well as to obtain the concept notes referred to in Box 8. Metabiota will additionally engage with the eight Ugandan collaborators provided in Box 8 as well as other key stakeholders to obtain additional information such as possible existing work plans, research plans, and training materials for grantsmanship and standard operating procedures for related biosurveillance activities. The Metabiota PM, PC, and SMEs will participate in regular project communications with stakeholders to ensure mutual understanding of project goals, actions, and status.

Metabiota SMEs will conduct a review of the concept notes referred to in Box 8 to establish a baseline for outreach to the identified Ugandan stakeholders. Metabiota will then conduct a series of data calls with these Ugandan stakeholders in order for the SMEs familiarize themselves with the current capabilities and needs of the identified stakeholders, and to identify an appropriate path forward for the work plan. This work plan will identify a timeline of implementation and key milestones and goals for both the development of a detailed research plan (from which, Pilot training and design study will be extracted), as well as development of research proposals (ex. number of proposal submissions, drafts of white papers, etc.). The work plan will include activities providing grantsmanship support, mentorship, and subject matter expertise to key Ugandan stakeholders throughout proposal development, Pilot training and study design and verification, and proposal editing and submission process. Metabiota will submit the work plan draft(s) to DTRA CBEP for review and approval.

Phase 2: Research Plan and Proposal Development (Tasks 1, 4: April 25-June 24, 2016)

Metabiota SMEs will execute the work plan as approved by DTRA CBEP in Phase 1. In doing so, Metabiota will coordinate with the identified Ugandan stakeholders to support the development of a detailed research plan as well as research proposals for epidemiologic studies/bio-surveillance research of RVF, AI, and PPR based on the needs and research interests identified in Phase 1.

Metabiota SMEs will provide support to the Ugandan stakeholders to develop a comprehensive research plan, which will include a detailed list of materials and supplies needed to accomplish the research studies. Moreover, the research plan will include detailed SOPs planned for the collection of samples, including field, laboratory, and data analytics as well as identification of biosafety and biosecurity risks and associated mitigation methods. From this overarching research plan, the Metabiota SMEs and Ugandan stakeholders will develop up to three (3) pilot study plans to test the SOPs developed in the research proposals for their effectiveness and viability of project design. In doing so, the Metabiota SMEs will provide support, mentorship, and expertise in the development, strengthening, and tailoring of these research plans through the submission proves while the Ugandan stakeholders are expected to write and finalize these plans based on the guidance they are provided. Metabiota will submit the final research plan(s), research proposals (including financials) and proposed SOPs for DTRA CBEP's review and approval.

Phase 3, Part 1: Preparation and Coordination for In-country Training and Pilot Studies (Tasks 1, 3, 4: March 28-Aug 11, 2016)

Metabiota will coordinate with the Ugandan stakeholders to identify the most appropriate participants for both training and Pilot study activities. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured for the SMEs and FLNs as needed. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS via the DTRA CBEP Technical Point of Contact.

Metabiota will coordinate with the Ugandan Stakeholders to identify training needs as discussed in Phase 1 and further identified in Phase 2 SOP development. To meet these needs, Metabiota will reuse existing training materials and SOPs for applicable biosurveillance activities as much as possible. However, due to the limited information currently available regarding the intended pilot research plans, Metabiota expects to use SMEs to adapt and develop training materials for effective delivery of training. Metabiota SMEs will develop new materials, which may including slide presentations, videos, etc. to effectively leverage the learning environment. Metabiota will also develop, as appropriate, pre-tests and post-tests for monitoring and evaluation purposes. Training materials, after development and adaptation, will be delivered to DTRA CBEP for technical review and Public Affairs Office approval.

Phase 3, Part 2: Conduction of In-country Training (Task 1, 3, 4: August 4-24, 2016)
Metabiota SMEs will execute a 10-day training activity for up to 20 participants who will be taking part in the three identified pilot studies followed by a 1-day pilot study coordination day with the pilot study leads. Metabiota anticipates a mix of lecture and hands-on training being necessary, however, Metabiota SMEs will adjust the training approach based on the Stakeholder feedback obtained in Phase 1. Metabiota SMEs will be available for virtual "office hours" and to answer written communications from participants as needed throughout the conduction of pilot studies. Metabiota SMEs will also conduct pre-/post- training testing and evaluations and provide feedback to the participants on their performance. FLNs will be used to facilitate training activities to the extent possible.

Phase 3 Part 3: Conduction of Pilot Studies (Task 1, 4, 6: August 18-Oct 26, 2016)
Metabiota SMEs will coordinate with the pilot study leads for the conduction of three pilot field studies, involving up to three pilot study leads and 11 technicians over a period of 8 weeks. Metabiota SMEs will be available for virtual "office hours" and to answer written communications from all participants as needed throughout the conduction of the pilot studies. Metabiota will provide management oversight and support for the conduction of these pilot studies, and will support the Ugandan collaborators in obtaining all required approvals for project continuation, including but not limited to ROB approvals. Metabiota will coordinate with all Stakeholders to identify the necessary materials required to conduct all pilot effort(s). Inclusive of this, Metabiota will provide any necessary support (SME or logistical) to in-country participants when navigating the procurement process. All materials will be identified and procured with sustainment in mind. Metabiota will submit pilot study summaries, including individual pilot study results, analyses, and conclusions as well as a summary of implementation conclusions to DTRA CBEP for communication to the Ugandan national authorities for disease surveillance and control

Final Project Report
Metabiota PM, PC, and SMEs will all contribute inputs to a final report relaying all actions taken for project implementation through all phases, lessons learned, and identifying next step opportunities upon completion of all deliverables. Results of pre- and post- testing and evaluations from training will also be provided to DTRA CBEP.

Monitoring and Evaluation
In order to develop a comprehensive approach to continuous monitoring and evaluation of this project throughout implementation, Metabiota has developed a comprehensive monitoring and evaluation plan which can be found in the attached Appendix A (Supplemental Information) Part 5.

Risk Management:
In order to anticipate and overcome obstacles included (but not limited to) those listed in Risk Management Matrix found in the attached Supplemental Information Part 2, Metabiota has identified and captured the risks associated with implementing this activity, including contingency planning and course correction measures which will lead to overall regional risk reduction, as outlined in the attached Risk Management Matrix.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

LABOR	$111,755.22
MATERIALS	$105,270.00
ODCs	$3,679.55
TRAVEL	$32,930.50
	$253,635.27

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES).

All phases:
Task 1 - Project Coordination: Metabiota will provide consistent and cohesive technical and administrative leadership, direction, program management, implementation oversight, and coordination of all project activities.

Metabiota Program Manager (PM) The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of DTRA CBEP goals at the country and regional level in direct support of this activity and the DTRA CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the RDA to ensure all day-to-day activities for the project are completed on time, and to the quality required by DTRA CBEP.

Metabiota Project Coordinator: The Metabiota RDA will act as a Project Coordinator (PC) throughout the planning and execution of project objectives. The PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will manage the SMEs and FLNs and lead coordination with the Ugandan Stakeholders, to include leading regular coordination calls with the project team and assist in participant coordination.

Note* - Metabiota recognizes that the RDA labor category was not included to Box 8 of this TD. Upon review of internal support (e.g., Project Coordinators) and to allow greater project implantation flexibility, Metabiota has proposed the use of an RDA instead of a SME 1 for all project coordination. Importantly, while hours have been added for project coordination, the overall cost for the Project Coordinator role remains unchanged between RDA and SME 1.

A key requirement to ensure effective program initiation, execution, and closeout is ensuring clear communication between all project stakeholders. To ensure the project in managed according to CBEP standards, the PM and PC will be responsible for the following:

Initiation and Program Integration: The PM, with PC support, developed the project proposal to include the project timeline, identification and integration of project requirements, deliverables, subcontractors, SMEs, and trainers to ensure project success. Upon acceptance of the proposal, the

PM will hold a kick-off meeting with team members and partners to review the project plan and schedule, establish routine communication to support project implementation, initiate education on the contract requirements, and begin project implementation. Routine communication with all stakeholders will ensure that all deliverables, including required CDRLs, are met and submitted according to the project schedule and contract requirements.

The PM and PC will work closely with Ugandan POC's identified in Box 8 (Phase 1) to understand their respective vision for this effort, including the development of a work plan for implementing all identified activities. In addition, the PM and PC will coordinate communication between Ugandan POC's and the identified grantsmanship/BSV SME's (e.g., project team members) to ensure alignment of project plans with DTRA CBEP goals when developing the research project design and high-quality and competitive research proposal(s) (Phase 2). Lastly, the PM and PC will coordinate all aspects of training implementation (Phase 3), to include identification and appropriate engagement of FLNs, to include a Study Leads and Study Technicians, to support in-country training and BSV pilot studies (Phase 3) by interfacing regularly (see Communication Management) with project personnel to ensure that in-country and overall project objectives and requirements are met in full. The PM will ensure that FLNs are engaged according to contract and project requirements, and have the experience, background, and skills necessary to support training implementation. FLNs are budgeted at the AFRICOM FLN I rate.

The PM will ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include; overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Project Close out: The Metabiota PM and PC will oversee project closeout, to include completion of grant proposals, wrap-up of training, and finalization and submission of all identified deliverables, including final reports. The PM will also ensure the conclusion of subcontracts and other employment agreements.

Additional communication strategies and programmatic safeguards, including 1) Human Resources Management, 2) Communications Management, 3) Risk Management, 4) Schedule Management, 5) Cost Management, 6) Quality Management, and 7) Technical Resource Management can be found in Appendix A (Supplemental Information).

Task 3 – Qualified Trainers (QT): Metabiota will provide financial support to in-country Qualified Trainers (Phase Three, Parts One and Two) via subcontracts of independent consultant agreements with the yet to be identified trainers. Metabiota recognizes the importance of identifying Ugandan nationals to fill these roles in order to foster relationships and build regional capacity. Metabiota will work with all project stakeholders to identify the appropriate trainers. Currently, it is presumed that all qualified trainers will be billed at the AFRICOM FLN 1 rate.

Task 4 - Subject Matter Experts (SMEs): Metabiota will provide ongoing technical support and expertise through the use of SMEs, to include the development of 1) a work plan for implementing all identified activities, 2) project design, and 3) development of high-quality and competitive research proposal(s). Metabiota SMEs engaged for this effort will provide expertise and input on the development and revision of existing training materials, development and revision of SOPs, as well as mentoring of study participants in grantsmanship and BSV training activities. SMEs will predominately operate remotely throughout Phases 1, 2, and most of Phase 3 and will thus provide mentorship through regular written communication and video teleconferencing with project participants, as necessary. Importantly, the SMEs for this effort are Kenyan nationals and geographically situated in Nairobi, Kenya which will ease operating delays due to time zone differences. Moreover, the identified SMEs possess excellent operational knowledge of East Africa and capabilities in technical writing, biosurveillance techniques, and one health concepts related to infectious disease research. For Phase Three, Part Two, SMEs will implement the training efforts and will work in partnership with FLN project participants to administer the courses, provide QA/QC of all materials, engage trainees in capacity building and scientific discussions supporting training concepts and implementation, and assist in the development of a gap analysis report. SMEs on this effort will be performing the functions of both SMEs and Qualified Trainers (QTs). In line with government guidance, the SMEs will be billing at the SME I labor rate, which is the equivalent cost of QT I.

Metabiota will subcontract Africa Biomedical Laboratories (ABL, Nairobi, Kenya) for SME support of this effort. The use of regionally accessible, African Nationals helps to build regional capabilities and networks, and ensures overall project success.

Task 6 – Research Activity Projects: Metabiota will provide financial support to Study Leads and Study Technicians (Phase Three, Part Three) via subcontracts of independent consultant agreements with the yet to be identified participants. Metabiota will work with all project stakeholders to identify the appropriate project participants. It is currently presumed that all project participants will be billed at the AFRICOM FLN 1 rate.

Note* - Metabiota is aware of guidance provided by the US Ambassador to Uganda regarding salary support to Government of Uganda personnel. If the Trainers, Study Leads, or Study Technicians are direct employees of the Ugandan Government (e.g., Ministry of Health, Agriculture, Wildlife, etc.), Metabiota will adjust their engagement strategy to reflect the Ambassadors guidelines. The budget for this project will be impacted accordingly.

Reach back programmatic support to include finance, accounting, and contracts, will be provided as part of CLIN 1001 (FFP) and will not be separately invoiced.

Materials

As defined in Box 8 (Phase Three, Part Three) this activity shall include the procurement of materials and supplies required for the pilot studies, not to exceed $100,000. Metabiota will work with the Ugandan partners to identify the most sustainable, efficient, cost-effective way to procure materials and supplies for executing BSV pilot studies. The identification of sustainable supplies will be critical for continuing BSV-related activities, which will be described in greater detail within newly developed grant proposals (Phase Two). Any materials procured by Metabiota will be shipped via CLS. If materials can be secured and provided to the trainers/trainees locally or online, shipping will not be required. Additionally, Metabiota will work with SMEs based in Kenya to help identify sustainable and reliable vendors of biomedical supplies.

Given the nature of this effort (e.g., BSV), Metabiota anticipates the need to procure personal protective equipment such as Tyvek suits, gloves, goggles, booties, and N95 respirators, as well as consumables and other paraphernalia such as chlorine, plastic wash basins, buckets, disinfectant sprayers, and anti-fog spray will also be procured. A final list of materials required for this effort will be identified in coordination with all project stakeholders.

Following discussions with all project stakeholders, and if warranted, USB internet devices and internet access cards will be procured and provided to project participants in-country to ensure they have access to a stable internet connection during remote coordination and training sessions, which are included to all phases of this effort. USB internet devices will be procured and tested in-country to avoid shipping charges and to ensure they are

operational on the ground. USB internet devices and access cards will be monitored by the FLNs to ensure they are used for project purposes only, and are maintained according to equipment/material guidelines for the duration of the course.

General office supplies will be procured to support in-country training activities and routine project needs for the execution of the training courses. Office supplies will be procured locally and will include, but may not be limited to, pens, paper, thumb drives, binders, etc.

Metabiota will conduct market research and ensure the best value is secured, maintaining quality and technical requirements for all procurement of goods. Metabiota will coordinate directly with CLS and third-country vendors for all necessary shipping requirements, and will work closely with CLS and DTRO to ensure customs clearance requirements are met and goods delivered according to project timelines and CDRL requirements. Metabiota will ensure cost management for all procured supplies and will coordinate directly with CBEP and CLS to support additional requirements for the hands-on training events to include such items as printing of the developed and adapted training materials, training certificates for participants, and translation services, if needed.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project working abroad. DBA insurance will be applied for labor costs incurred overseas. DBA will be applied to the PM, SMEs/Trainers, FLNs, and other contractors, engaged on this effort, for the duration of the program. Metabiota maintains a blanket DBA policy for all personnel and will add the SMEs and FLNs, and other performers meeting DBA requirements, to this policy as they are engaged. A(b)(6) of their total compensation will be billed to the project on a monthly basis. A reconciliation of the total DBA will be performed prior to final invoicing to ensure accuracy of the charges, in accordance with total hours worked. Final invoicing will be adjusted, if necessary, to reflect the final DBA allocation numbers.

Subcontracts

Subcontracts will be issued to SMEs, FLNs, and/or their home organization(s) as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the labor or materials budgets.

Travel

Travel is requested to support the Program Manager, SME, and qualified Ugandan trainers to Kampala, Uganda to implement training efforts for project participants (Phase Three, Part Two). The travel budget represents the estimated amount required. Travel on the AEP contract is cost reimbursable.

All Metabiota personnel slated to travel are current with regard to ISOPREP, SERE, and AT/FP trainings, as required by CBEP. Additionally, the SME's leveraged for this effort are Kenyan Nationals and therefore do not require the aforementioned travel trainings/documents.

Our travel budget assumes training will be held in Kampala over the course of two weeks, including one day before or after for in-person coordination, as described in Phase Three, Part Two of this proposal. If, through discussion with the Ugandan stakeholders, an alternative schedule is created or an alterative location is desired, travel costs may be impacted accordingly.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision extends the Period of Performance (PoP) for TD-022 from 15 May 2016 to 15 November 2016 at no additional cost. This PoP extension is to provide enough time to continue providing grantsmanship training and subject matter expert (SME) assistance for the coordination of project design, research proposal development, and implementation of a pilot biosurveillance study in Uganda. Metabota should coordinate directly with the Technical POCs identified below. No changes to the previously approved proposal are required at this time.

8. DESCRIPTION OF TECHNICAL DIRECTION

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to implement revisions (identified in TD-10) to the Walter Reed Army Institute of Research (WRAIR) Epidemiology Short Course curriculum as this material will be transformed into an adapted One Health Epidemiology Short Course, tailored for South Africa in accordance with SOW, Section 4.4, Task 1, 3, and 4.

In a follow-on to TD-10, where the Metabiota team identified the edits and revisions necessary to update the WRAIR Epidemiology short course, TD-23 requests Metabiota to now execute those edits and revisions and develop a comprehensive One Health Epidemiology (OHE) short course. The short course is intended for health professionals in South Africa who require knowledge of OHE, but are not able or eligible to be part of the Centers for Disease Control and Prevention's Field Epidemiology Training Program (FETP). The short course shall include a One Health introductory module with two tracks – (1) One basic level track for professionals who are completely new to the OHE concept and need comprehensive tutorials on basic skills, and (2) One advanced level track for professionals who are more knowledgeable about OHE but require more in-depth training. Each track shall have two disease case studies involving zoonotic diseases of security concern which directly affect South Africa. Both the basic level and advanced tracks shall touch upon the same two diseases, but at different levels of detail appropriate for the intended track participants. Metabiota shall propose the two most appropriate zoonotic diseases based on relevance to South African partners and the region, and alignment with the needs identified in the Landscape Analysis conducted by Metabiota under TD-10 during the February 2016 interviews of stakeholders in Pretoria and Johannesburg. Thorough justification for the two suggested diseases shall be included in the proposal in response to this TD. DTRA CBEP will ultimately determine the two diseases to be included. The updated OHE short course curriculum shall include all of the identified changes from the Landscape Analysis. Over 1305 business hours, it is assumed that it will take 0.15 FTE of an SME II and 0.1 FTE of a Trainer I to adapt the curriculum.

In addition to updating the OHE short course curriculum, Metabiota shall develop a Train the Trainer (ToT) module to be delivered to the selected South African trainers of the OHE short course. The ToT module shall be able to be conducted over a 2-3 day ToT session. This TD does not include implementation or delivery of the ToT module or either OHE short course track and is for the development of materials only. Over 1305 business hours, it is assumed that it will take 0.1 FTE of an SME II and 0.15 FTE of a Trainer I to adapt the curriculum.

The final deliverable (CDRL A003) is the complete and updated short course curriculum, which is comprised of the basic level track, the advanced level track, and the ToT module. Metabiota shall conduct an in-person review of the curriculum and the status of updates twice – once at 30% complete (CDRL A001), and again at 60% complete (CDRL A002). These in-person reviews will provide DTRA CBEP with the ability to review the status of the curriculum updates and make comments or requests to shape the direction of the updates. DTRA CBEP will give Metabiota its comments no sooner than 2 weeks (10 business days) after the in-person review.

Throughout the curriculum update process, Metabiota shall continue coordinating with DTRA CBEP's South Africa engagement Country Manager on a weekly basis. Metabiota shall continue to coordinate with CDC-South Africa, the United States Department of Agriculture, and South African stakeholders on an as-needed basis via electronic and phone communications. No travel shall be required.

The period of performance for this effort will be from 3/21/16 to 5/15/16. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $110,000 is requested by 3/15/16. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation (Task 1):

Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-023 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM), Subject Matter Expert (SME II) and Project Coordinator (PC, billed as a Research and Data Analyst (RDA)) time to identify the optimal strategy, including required deliverables and other programmatic requirements, which may be a part of project implementation.

Key Assumptions

1. Metabiota assumes changes to the budget (e.g., labor categories) will be acceptable to DTRA. An RDA was added to support coordination and provide flexibility when implementing. A second RDA was added to support technical development of project deliverables; however, neither of these changes has affected the overall project budget.
2. Metabiota assumes that the stated period of performance Period of Performance ending May 15, 2016 will be extended through Nov 15, 2016 contingent upon the approval of Metabiota's AEP contract extension.
3. The breadth of material updates will be based on, but not entirely limited to those stated within the "One Health Epidemiology Landscape Analysis" developed during TD-010 under AEP.
4. In person reviews requested by DTRA CBEP at iterations of 30% and 60% completeness will yield comments and direction reasonable for incorporation and conducive to existing project constraints.
5. Regular or incidental communication with South African Stakeholders involved in TD-010 under AEP will not need to be built into the project plan.

Work Plan Development (Task 1, 3, and 4)
The Metabiota PM and PC coordinated with (b)(6) EVP Science Integration, and our regional partner network to identify the appropriate SMEs in One Health Epidemiology to develop and augment the existing One Health Epidemiology (OHE) training materials as described in Box 8 and through coordination with DTRA CBEP AFRICOM.

Upon approval of the TD, the Metabiota PM and PC will engage DTRA CBEP to ensure a mutual understanding of project goals and objectives. The Metabiota PM, PC, and SMEs will participate in regular project communications with stakeholders to ensure mutual understanding of project goals, actions, and status. Metabiota believes we are in possession of relevant documentation, including reports and stakeholder feedback following completion of TD-010, needed to implement the requirements identified in Box 8 of this TD (e.g., TD-023). As materials are being revised, it is possible that questions requiring RSA stakeholder feedback may arise. In this unlikely scenario, Metabiota will engage DTRA CBEP POC's prior to communicating with any RSA stakeholders.

Metabiota SMEs engaged for this effort will have a comprehensive understanding of the already developed One Health Epidemiology Landscape Analysis and TD-010 SME materials review notes prior to any material adaptation and Training-of-Trainer (ToT) course development planning. The Metabiota PM and SME II, who were involved in the execution of TD-010, will serve as informational focal points for other project personnel requiring additional landscape knowledge. The Metabiota SMEs will develop a project work plan outlining the appropriate path forward for tailoring OHE training materials and ToT Module development. This work plan will identify a timeline of implementation and key milestones and goals for the adaptation of the One Health Epidemiology (OHE) short course curriculum and the development of an associated ToT module. The Metabiota PM will submit the work plan draft(s) to DTRA CBEP for review and approval no later than 20 business days after TD-023 approval.

Updating One Health Epidemiology Short Course Curriculum (Task 1, 3, and 4).
Metabiota SMEs will adapt the existing One Health Epidemiology short course curriculum to reflect improvements and updates identified SMEs and South African stakeholders as described in the South African One Health Epidemiology Landscape Analysis (AEP TD-010). SMEs engaged for this effort will incorporate relevant alterations, additions, and updates to the OHE curriculum originally developed by WRAIR for both Kenya and Uganda. Based on needs identified by the landscape analysis, the improvements will ensure both relevance and congruency of OHE training within the greater South African public health training environment. To this end, Metabiota will endeavor to modify and bolster the existing curriculum into dual track short courses described in more detail below

(1) *One Health Epidemiology Training, Republic of South Africa-Basic*
An updated OHE training short course based on the existing materials developed by WRAIR, but purposed for professionals new to the concept of One Health Epidemiology. This track will introduce professionals working within any One Health related sector to basic principles and practices of One Health and applied epidemiology. This course will offer trainees a basic understanding of select agents and, notably, provide them with a core understanding of those which are highly relevant to South Africa. Leveraging information gained in TD-010, Metabiota has tentatively decided to focus on incorporating disease example modules that include (1) Rift Valley Fever (RFV) and (2) Avian influenza.

(2) *One Health Epidemiology Training, Republic of South Africa-Advanced*
An updated OHE training short course based on the existing materials developed by WRAIR, but purposed for professionals possessing some significant knowledge base of One Health Epidemiology concepts. This track will introduce professionals working within any One Health related sector to advanced principles and practices of One Health and applied epidemiology. This course will provide trainees with a thorough understanding of select agents and an advanced understanding of those which are of relevance to South Africa. Leveraging information gained in TD-010, Metabiota has preliminarily decided to focus on the incorporation of disease example modules that include (1) RFV and (2) Avian influenza.

Developing a Training-of-Trainers Module (Task 1, 3, and 4)
Metabiota will design and develop a ToT module specifically purposed to support the onboarding of future One Health Epidemiology Republic of South Africa trainers. SMEs engaged for this effort will have extensive training program development experience and will ensure that this module has specific relevance to the both basic and advanced tracks for One Health Epidemiology training in South Africa. This course will provide OHE trainers with expert knowledge in training administration beyond what could be gleaned from completing either track. The ToT module will be designed for South African local nationals, and will be purposed to support the long term sustainability of OHE training in-country. The module will be designed to a support trainee commitment of three days or less. Importantly, and in an effort to mitigate any potential risks regarding available LOE, Metabiota will not begin development of the ToT Module until official notice to proceed is issue by the DTRA CBEP Country Manager. Once approved to do so, Metabiota will initiate the OHE curriculum adaptations and provide DTRA CBEP with regular updates during bi-weekly communications concerning cost and schedule. Based on these updates, DTRA CBEP will determine if sufficient funds exist to enact the development of the ToT module. Upon direction from DTRA CBEP, Metabiota will commence this activity in an efficient and timely manner.

In support of quality assurance towards the development of these final deliverables, Metabiota will conduct two in-person progress reviews with DTRA CBEP. These reviews will be presented to DTRA CBEP at iterations of 30% and 60% full course completion. These reviews will allow for more direct and sustained influence from DTRA CBEP over the final project deliverable. The final deliverable for this effort will comprise a OHE training short course adapted to the South African Landscape. This course will be complete with a ToT module and will have both a basic and advanced track purposed respectively for those with little or significant knowledge of One Health Epidemiology concepts

Project Closeout (Task 1, 3, and 4)
Metabiota PM, PC, and SMEs will all contribute inputs to a final report relaying all actions taken for project implementation through all phases, lessons learned, and identifying next step opportunities upon completion of all deliverables. The Metabiota PM will submit this report to the DTRA CBEP.

Risk Management (Task 1)
In order to anticipate and overcome obstacles included (but not limited to) those listed in Risk Management Matrix found in the attached Supplemental Information Section 3, Metabiota has identified and captured the risks associated with implementing this activity, including contingency planning and course correction measures which will lead to overall regional risk reduction, as outlined in the below Risk Management Matrix.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$112,883.29
1003	MATERIALS	$0
1004	ODCs	$0
1005	TRAVEL	$0
TOTAL		**$112,883.29**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES)

All Phases:
Task 1—Project Coordination: Metabiota will provide consistent and cohesive technical and administrative leadership, direction, program management, implementation oversight, and coordination of all project activities.

Metabiota Program Manager (PM): The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of DTRA CBEP goals at the country and regional level in direct support of this activity and the DTRA CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the RDA and SMEs to ensure all day-to-day activities for the project are completed on time, and to the quality required by DTRA CBEP.

Metabiota Project Coordinator: The Metabiota Research and Data Analyst (RDA) will act as a Project Coordinator (PC) throughout the proposal development, planning, and execution of project objectives. The PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to DTRA CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will manage the SMEs and lead coordination with the South African Stakeholders, to include leading regular coordination calls with the project team and assist in participant coordination.

Note* - Metabiota recognizes that the RDA labor category was not included to Box 8 of this TD. Upon review of internal support (e.g., Project Coordinators) and to allow greater project implementation flexibility, Metabiota has proposed the use of an RDA to support all project coordination. Importantly, while hours have been added for project coordination, the overall cost for the Project Coordinator role remains unchanged.

A key requirement to ensure effective program initiation, execution, and closeout is ensuring clear communication between all project stakeholders. To ensure the project in managed according to CBEP standards, the PM and PC will be responsible for the following:

Initiation and Program Integration: The PM, with PC support, developed the project proposal to include the project timeline, identification and integration of project requirements, deliverables, subcontractors, and SMEs to ensure project success. Upon acceptance of the proposal, the PM will hold a kick-off meeting with team members and partners to review the project plan and schedule, establish routine communication to support project implementation, initiate education on the contract requirements, and begin project implementation. Routine communication with all stakeholders will ensure that all deliverables, including required CDRLs, are met and submitted according to the project schedule and contract requirements.

The PM and PC will work closely with the project stakeholders to understand their respective vision for this effort, including the development of a work plan for implementing all identified activities. In addition, the PM and PC will coordinate communication between the SME's (e.g., project team members) to ensure alignment of project plans with DTRA CBEP goals. Lastly, the PM and PC will coordinate all aspects of this project by interfacing regularly (see Communication Management Appendix A Section 2.2) with project personnel to ensure that in-country and overall project objectives and requirements are met in full. The PM will ensure that SMEs are engaged according to contract and project requirements, and have the experience, background, and skills necessary to support project implementation.

The PM will ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include: overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and/or independent consultants throughout the span of the project.

Project Closeout: The Metabiota PM and PC will oversee project closeout to include wrap-up of materials development, finalization of deliverables, and final reports. The PM will also ensure the conclusion of subcontracts and other employment agreements.

Additional communication strategies and programmatic safeguards, including 1) Human Resources Management, 2) Communications Management, 3) Risk Management, 4) Schedule Management, 5) Cost Management, 6) Quality Management, and 7) Technical Resource Management can be found in Appendix A (Supplemental Information).

Task 4—Subject Matter Experts (SMEs): Metabiota SMEs will provide ongoing technical support and expertise through the use of SMEs, to include the development of 1) a work plan for implementing all identified activities 2) augmentation of OHE training materials, and 3) development of ToT module.

Metabiota Subject Matter Expert II will act as a technical lead in the updating of One Health Epidemiology Short Course Curriculum. The SME will coordinate with the Metabiota project team to develop a work plan, including detailed milestones and timelines, for updating the OHE short course curriculum. With the support of additional SMEs (billed at a Trainer I and RDA), the SME II will lead the final development of both the basic track and advanced track courses. The SME engaged for this effort will have a terminal degree in the field of epidemiology, an understanding of the One Health philosophy, extensive knowledge of the South African epidemiology training landscape, a full and in-depth knowledge of the existing OHE course curriculum, and cognizance of the exact needs for materials improvement. The SME II will assist the Metabiota PM and PC team in the preparation and delivery of an in-person review of progress with DTRA CBEP representation at iterations of 30% and 60% completeness. The SME II will be present at all relevant project stakeholder calls and will communicate regularly with the Metabiota PM providing progress reports on a weekly basis. The Metabiota SME II will support technical aspects of proposal development. In line with government guidance, the SME will be billing at the SME II labor rate.

The Metabiota SME II will additionally serve in a technical support capacity towards the development of the ToT Module. The SME II will communicate regularly with the Metabiota PM and PC regarding any progress and challenges on a weekly basis. Hours proposed for this labor category are based on a best estimate for effectively and efficiently executing the requirements. Should these hours not be required for this project, the government will not be billed for them.

The Metabiota Trainer I (SAFOSO AG) will act as a technical lead in the development of a One Health Epidemiology Short Course ToT module, upon receipt of TD approval. For this effort, Metabiota has engaged SAFOSO AG as our expert team of trainers. SAFOSO recently supported CBEP-funded African Swine fever outreach program in coordination with Metabiota, BTRIC contractors, and four teams of scientists from CBEP engaged FSU countries (e.g., Armenia, Georgia, Kazakhstan, and Ukraine). Members of SAFOSO developed and led all elements of training for this activity. The Trainer I will coordinate with the PM and PC to develop a project plan and timeline for the development of this module, and will lead the final development of this course. The Trainer I engaged for this effort will have an extensive understanding of the One Health philosophy and experience designing and implementing novel ToT training modules. The Trainer I will coordinate with the Metabiota PM and PC to prepare for and execute an in person review of progress with DTRA CBEP representation at iterations of 30% and 60% completeness. The Trainer I will be present at all relevant project stakeholder calls and will communicate regularly with the PM providing progress reports on a weekly basis.

The Metabiota Trainer I will additionally serve in a technical support capacity towards the development of the updates of the One Health Epidemiology Short Course Basic and Advanced Curriculum. The Trainer I will communicate regularly with the Metabiota PM and PC regarding any progress and challenges on a weekly basis. Hours proposed for this labor category are based on a best estimate for effectively and efficiently executing the requirements. Should these hours not be required for this project, the government will not be billed for them.

The Metabiota RDA will act as technical support in the augmentation of the One Health Epidemiology Short Course Basic and Advanced Curriculum and the development of OHE ToT module. The RDA will attend coordination meetings with all members of the project team in support of the development of project plans and timelines for the development of each deliverable. The RDA engaged for this effort will have an understanding of the One Health philosophy and epidemiology, a knowledge of the existing OHE course curriculum, and experience supporting the development of technical deliverables. The RDA will coordinate with the Metabiota Project team to assist in preparation for and execute of in person review of progress with DTRA CBEP representation at iterations of 30% and 60% completeness for both deliverables. The RDA will be present at all relevant project stakeholder calls and will communicate regularly with the PM providing progress reports on a weekly basis. Hours proposed for this labor category are based on a best estimate for effectively and efficiently executing the requirements. Should these hours not be required for this project, the government will not be billed for them.

Materials
Metabiota will not incur any material costs under this technical direction

Other Direct Costs
Metabiota will not incur any other direct costs under this technical direction

Subcontracts
Subcontracts will be issued to SAFOSO AG as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories.

Travel
Metabiota will not incur any travel costs under this technical direction

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE).

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to implement revisions (identified in TD-10) to the Walter Reed Army Institute of Research (WRAIR) Epidemiology Short Course curriculum as this material will be transformed into an adapted One Health Epidemiology Short Course, tailored for South Africa in accordance with SOW, Section 4.4, Task 1, 3, and 4.

In a follow-on to TD-10, where the Metabiota team identified the edits and revisions necessary to update the WRAIR Epidemiology short course, TD-23 requests Metabiota to now execute those edits and revisions and develop a comprehensive One Health Epidemiology (OHE) short course. The short course is intended for health professionals in South Africa who require knowledge of OHE, but are not able or eligible to be part of the Centers for Disease Control and Prevention's Field Epidemiology Training Program (FETP). The short course shall include a One Health introductory module with two tracks – (1) One basic level track for professionals who are completely new to the OHE concept and need comprehensive tutorials on basic skills, and (2) One advanced level track for professionals who are more knowledgeable about OHE but require more in-depth training. Each track shall have two disease case studies involving zoonotic diseases of security concern which directly affect South Africa. Both the basic level and advanced tracks shall touch upon the same two diseases, but at different levels of detail appropriate for the intended track participants. Metabiota shall propose the two most appropriate zoonotic diseases based on relevance to South African partners and the region, and alignment with the needs identified in the Landscape Analysis conducted by Metabiota under TD-10 during the February 2016 interviews of stakeholders in Pretoria and Johannesburg. Thorough justification for the two suggested diseases shall be included in the proposal in response to this TD. DTRA CBEP will ultimately determine the two diseases to be included. The updated OHE short course curriculum shall include all of the identified changes from the Landscape Analysis. Over 1305 business hours, it is assumed that it will take 0.15 FTE of an SME II and 0.1 FTE of a Trainer I to adapt the curriculum.

In addition to updating the OHE short course curriculum, Metabiota shall develop a Train the Trainer (ToT) module to be delivered to the selected South African trainers of the OHE short course. The ToT module shall be able to be conducted over a 2-3 day ToT session. This TD does not include implementation or delivery of the ToT module or either OHE short course track and is for the development of materials only. Over 1305 business hours, it is assumed that it will take 0.1 FTE of an SME II and 0.15 FTE of a Trainer I to adapt the curriculum.

The final deliverable (CDRL A003) is the complete and updated short course curriculum, which is comprised of the basic level track, the advanced level track, and the ToT module. Metabiota shall conduct an in-person review of the curriculum and the status of updates twice – once at 30% complete (CDRL A001), and again at 60% complete (CDRL A002). These in-person reviews will provide DTRA CBEP with the ability to review the status of the curriculum updates and make comments or requests to shape the direction of the updates. DTRA CBEP will give Metabiota its comments no sooner than 2 weeks (10 business days) after the in-person review.

Throughout the curriculum update process, Metabiota shall continue coordinating with DTRA CBEP's South Africa engagement Country Manager on a weekly basis. Metabiota shall continue to coordinate with CDC-South Africa, the United States Department of Agriculture, and South African stakeholders on an as-needed basis via electronic and phone communications. No travel shall be required.

The period of performance for this effort will be from 3/21/16 to 5/15/16. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $110,000 is requested by 3/15/16. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP PCCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation (Task 1):

Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-023 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM), Subject Matter Expert (SME II) and Project Coordinator (PC, billed as a Research and Data Analyst (RDA)) time to identify the optimal strategy, including required deliverables and other programmatic requirements, which may be a part of project implementation.

Key Assumptions

1. Metabiota assumes changes to the budget (e.g., labor categories) will be acceptable to DTRA. An RDA was added to support coordination and provide flexibility when implementing. A second RDA was added to support technical development of project deliverables; however, neither of these changes has affected the overall project budget.
2. Metabiota assumes that the stated period of performance Period of Performance ending May 15, 2016 will be extended through Nov 15, 2016 contingent upon the approval of Metabiota's AEP contract extension.
3. The breadth of material updates will be based on, but not entirely limited to those stated within the "One Health Epidemiology Landscape Analysis" developed during TD-010 under AEP
4. In person reviews requested by DTRA CBEP at iterations of 30% and 60% completeness will yield comments and direction reasonable for incorporation and conducive to existing project constraints.
5. Regular or incidental communication with South African Stakeholders involved in TD-010 under AEP will not need to be built into the project plan.

Work Plan Development (Task 1, 3, and 4)
The Metabiota PM and PC will coordinate with Dr. Mary Guttieri, EVP Science Integration, and our regional partner network to identify the appropriate SMEs in One Health Epidemiology to develop and augment the existing One Health Epidemiology (OHE) training materials as described in Box 8 and through coordination with DTRA CBEP AFRICOM.

Upon approval of the TD, the Metabiota PM and PC will engage DTRA CBEP to ensure a mutual understanding of project goals and objectives are realized, as well as to obtain the concept notes referred to in Box 8. Metabiota will additionally engage with the identified SMEs as well as other key South African stakeholders to obtain additional information for the augmentation of the training materials as needed. The Metabiota PM, PC, and SMEs will participate in regular project communications with stakeholders to ensure mutual understanding of project goals, actions, and status.

Metabiota SMEs will conduct a review of the One Health Epidemiology Landscape Analysis and TD-010 SME materials review notes to establish a baseline for materials augmentation planning. The Metabiota PM will then conduct a series of data calls with the South African stakeholders in order for the SMEs familiarize themselves with the the identified stakeholder needs and obtain feedback on anticipated milestones as needed. In doing so, the Metabiota SMEs will identify an appropriate path forward for OHE training materials augmentation work plan. This work plan will identify a timeline of implementation and key milestones and goals for the augmentation of the One Health Epidemiology (OHE) short course curriculum and the development of an associated Train the Trainer (ToT) module. The Metabiota PM will submit the work plan draft(s) to DTRA CBEP for review and approval.

Updating One Health Epidemiology Short Course Curriculum (Task 1, 3, and 4):
Metabiota SMEs will adapt the existing One Health Epidemiology short course curriculum to reflect improvements and updates identified SMEs and South African stakeholders as described in the South African One Health Epidemiology Landscape Analysis (AEP TD-010). SMEs engaged for this effort will incorporate relevant alterations, additions, and updates to the OHE curriculum originally developed by WRAIR for both Kenya and Uganda. Based on needs identified by the landscape analysis, the improvements will ensure both relevance and congruency of OHE training within the greater South African public health training environment. To this end, Metabiota will endeavor to modify and bolster the existing curriculum into dual track short courses described in more detail below:

(1) *One Health Epidemiology Training, Republic of South Africa-Basic*
An updated OHE training short course based on the existing materials developed by WRAIR, but purposed for professionals new to the concept of One Health Epidemiology. This track will introduce professionals working within any One Health related sector to basic principles and practices of One Health and applied epidemiology. This course will offer trainees a basic understanding of select agents and, notably, provide them with a core understanding of those which are highly relevant to South Africa. Metabiota has preliminarily decided, based on best estimates for feasibility and effectiveness, to focus on the incorporation of disease examples that include Crimean-Congo Hemorrhagic Fever (CCHF), and Tick-Borne Rickettsia; however, the use of these diseases in training course material should be subject to reevaluation as the project progresses

(2) *One Health Epidemiology Training, Republic of South Africa-Advanced*
An updated OHE training short course based on the existing materials developed by WRAIR, but purposed for professionals possessing some significant knowledge base of One Health Epidemiology concepts. This track will introduce professionals working within any One Health related sector to advanced principles and practices of One Health and applied epidemiology. This course will provide trainees with a thorough understanding of select agents and an advanced understanding of those which are of relevance to South Africa. Metabiota has preliminarily decided, based on best estimates for feasibility and effectiveness, to focus on the incorporation of disease examples that include CCHF, and Tick-borne Rickettsia; however, the use of these diseases in training course material should be subject to reevaluation as the project progresses.

Developing a Training-of-Trainers Module (Task 1, 3, and 4)
Metabiota will design and develop a Training-of-Trainers (ToT) module specifically purposed to support the onboarding of future One Health Epidemiology Republic of South Africa trainers. SMEs engaged for this effort will have extensive training program development experience and will ensure that this module has specific relevance to the both basic and advanced tracks for One Health Epidemiology training in South Africa. This course will provide OHE trainers with expert knowledge in training administration beyond what could be gleaned from completing either track. The ToT module will be designed for South African local nationals, and will be purposed to support the long term sustainability of OHE in-country. The module will be designed to a support trainee commitment of three days or less.

In support of quality assurance towards the development of these final deliverables, Metabiota will conduct two in-person progress reviews with DTRA CBEP. These reviews will be presented to DTRA CBEP at iterations of 30% and 60% full course completion. These reviews will allow for more direct and sustained influence from DTRA CBEP over the final project deliverable. The final deliverable for this effort will comprise a OHE training short course adapted to the South African Landscape. This course will be complete with a ToT module and will have both a basic and advanced track purposed respectively for those with little or significant knowledge of One Health Epidemiology concepts.

Project Closeout (Task 1, 3, and 4)
Metabiota PM, PC, and SMEs will all contribute inputs to a final report relaying all actions taken for project implementation through all phases, lessons learned, and identifying next step opportunities upon completion of all deliverables. The Metabiota PM will submit this report to the DTRA CBEP.

Risk Management (Task 1)
In order to anticipate and overcome obstacles included (but not limited to) those listed in Risk Management Matrix found in the attached Supplemental Information Section 3, Metabiota has identified and captured the risks associated with implementing this activity, including contingency planning and course correction measures which will lead to overall regional risk reduction, as outlined in the below Risk Management Matrix.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN).

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$112,883
1003	MATERIALS	$0
1004	ODCs	$0
1005	TRAVEL	$0
TOTAL		**$112,883.29**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

All Phases:
Task 1—Project Coordination: Metabiota will provide consistent and cohesive technical and administrative leadership, direction, program management, implementation oversight, and coordination of all project activities.

Metabiota Program Manager (PM): The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of DTRA CBEP goals at the country and regional level in direct support of this activity and the DTRA CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM wi l manage the RDA and SMEs to ensure all day-to-day activities for the project are completed on time, and to the quality required by DTRA CBEP.

Metabiota Project Coordinator: The Metabiota Research and Data Analyst (RDA) will act as a Project Coordinator (PC) throughout the proposal development, planning, and execution of project objectives. The PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals by participating in proposal development anc leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to DTRA CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will manage the SMEs and lead coordination with the South African Stakeholders, to include leading regular coordination calls with the project team and assist in participant coordination.

Note* - Metabiota recognizes that the RDA labor category was not included to Box 8 of this TD. Upon review of internal support (e.g., Project Coordinators) and to allow greater project implementation flexibility, Metabiota has proposed the use of an RDA to support all project coordination. Importantly, while hours have been added for project coordination, the overall cost for the Project Coordinator role remains unchanged.

A key requirement to ensure effective program initiation, execution, and closeout is ensuring clear communication between all project stakeholders. To ensure the project in managed according to CBEP standards, the PM and PC will be responsible for the following:

Initiation and Program Integration: The PM, with PC support, developed the project proposal to include the project timeline, identification and integration of project requirements, deliverables, subcontractors, and SMEs to ensure project success. Upon acceptance of the proposal, the PM will hold a kick-off meeting with team members and partners to review the project plan and schedule, establish routine communication to support project implementation, initiate education on the contract requirements, and begin project implementation. Routine communication with all stakeholders will ensure that all deliverables, including required CDRLs, are met and submitted according to the project schedule and contract requirements.

The PM and PC will work closely with the project stakeholders to understand their respective vision for this effort, including the development of a work plan for implementing all identified activities. In addition, the PM and PC will coordinate communication between the SME's (e g , project team members) to ensure alignment of project plans with DTRA CBEP goals. Lastly, the PM and PC will coordinate all aspects of this project by interfacing regularly (see Communication Management Appendix A Section 2.2) with project personnel to ensure that in-country and overall project objectives and requirements are met in full. The PM will ensure that SMEs are engaged according to contract and project requirements, and have the experience, background, and skills necessary to support project implementation.

The PM will ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include, overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and/or independent consultants throughout the span of the project.

Project Closeout: The Metabiota PM and PC will oversee project closeout, to include wrap-up of materials development, finalization of deliverables, and final reports. The PM will also ensure the conclusion of subcontracts and other employment agreements.

Additional communication strategies and programmatic safeguards, including 1) Human Resources Management, 2) Communications Management, 3) Risk Management, 4) Schedule Management, 5) Cost Management, 6) Quality Management, and 7) Technical Resource Management can be found in Appendix A (Supplemental Information).

Task 4—Subject Matter Experts (SMEs). Metabiota SMEs will provide ongoing technical support and expertise through the use of SMEs, to include the development of 1) a work plan for implementing all identified activities, 2) augmentation of OHE training materials, and 3) development of ToT module.

Metabiota Subject Matter Expert II will act as a technical lead in the updating of One Health Epidemiology Short Course Curriculum. The SME will coordinate with the Metabiota project team to develop a work plan, including detailed milestones and timelines, for updating the OHE short course curriculum. With the support of additional SMEs (billed at a Trainer I and RDA), the SME II will lead the final development of both the basic track and advanced track courses. The SME engaged for this effort will have a terminal degree in the field of epidemiology, an understanding of the One Health philosophy, extensive knowledge of the South African epidemiology training landscape, a full and in-depth knowledge of the existing OHE course curriculum, and cognizance of the exact needs for materials improvement. The SME II will assist the Metabiota PM and PC team in the preparation and delivery of an in-person review of progress with DTRA CBEP representation at iterations of 30% and 60% completeness. The SME II will be present at all relevant project stakeholder calls and will communicate regularly with the Metabiota PM providing progress reports on a weekly basis. The Metabiota SME II will support technical aspects of proposal development. In line with government guidance, the SME will be billing at the SME II labor rate.

The Metabiota SME II will additionally serve in a technical support capacity towards the development of the ToT Module. The SME II will communicate regularly with the Metabiota PM and PC regarding any progress and challenges on a weekly basis. Hours proposed for this labor category are based on a best estimate for effectively and efficiently executing the requirements. Should these hours not be required for this project, the government will not be billed for them.

The Metabiota Trainer I will act as a technical lead in the development of a One Health Epidemiology Short Course ToT module. The Trainer I will coordinate with the PM and PC to develop a project plan and timeline for the development of this module, and will lead the final development of this course. The Trainer I engaged for this effort will have an extensive understanding of the One Health philosophy and experience designing and implementing novel ToT training modules. The Trainer I will coordinate with the Metabiota PM and PC to prepare for and execute an in person review of progress with DTRA CBEP representation at iterations of 30% and 60% completeness. The Trainer I will be present at all relevant project stakeholder calls and will communicate regularly with the PM providing progress reports on a weekly basis.

The Metabiota Trainer I will additionally serve in a technical support capacity towards the development of the updates of the One Health Epidemiology Short Course Basic and Advanced Curriculum. The Trainer I will communicate regularly with the Metabiota PM and PC regarding any progress and challenges on a weekly basis. Hours proposed for this labor category are based on a best estimate for effectively and efficiently executing the requirements. Should these hours not be required for this project, the government will not be billed for them.

The Metabiota RDA will act as technical support in the augmentation of the One Health Epidemiology Short Course Basic and Advanced Curriculum and the development of OHE ToT module. The RDA will attend coordination meetings with all members of the project team in support of the development of project plans and timelines for the development of each deliverable. The RDA engaged for this effort will have a an understanding of the One Health philosophy and epidemiology, a knowledge of the existing OHE course curriculum, and experience supporting the development of technical deliverables. The RDA will coordinate with the Metabiota Project team to assist in preparation for and execute of in person review of progress with DTRA CBEP representation at iterations of 30% and 60% completeness for both deliverables. The RDA will be present at all relevant project stakeholder calls and will communicate regularly with the PM providing progress reports on a weekly basis. Hours proposed for this labor category are based on a best estimate for effectively and efficiently executing the requirements. Should these hours not be required for this project, the government will not be billed for them.

Materials
Metabiota will not incur any material costs under this technical direction

Other Direct Costs
Metabiota will not incur any other direct costs under this technical direction

Subcontracts
Subcontracts will be issued to the SME and/or their home organization as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories.

Travel
Metabiota will not incur any travel costs under this technical direction

8. DESCRIPTION OF TD (NOT TO EXCEED 2 PAGES):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to implement revisions (identified in TD-10) to the Walter Reed Army Institute of Research (WRAIR) Epidemiology Short Course curriculum as this material will be transformed into an adapted One Health Epidemiology Short Course, tailored for South Africa in accordance with SOW, Section 4.4, Task 1, 3, and 4.

In a follow-on to TD-10, where the Metabiota team identified the edits and revisions necessary to update the WRAIR Epidemiology short course, TD-23 requests Metabiota to now execute those edits and revisions and develop a comprehensive One Health Epidemiology (OHE) short course. The short course is intended for health professionals in South Africa who require knowledge of OHE, but are not able or eligible to be part of the Centers for Disease Control and Prevention's Field Epidemiology Training Program (FETP). The short course shall include a One Health introductory module with two tracks: (1) One basic level track for professionals who are completely new to the OHE concept and need comprehensive tutorials on basic skills, and (2) One advanced level track for professionals who are more knowledgeable about OHE but require more in-depth training. Each track shall have two disease case studies involving zoonotic diseases of security concern which directly affect South Africa. Both the basic level and advanced tracks shall touch upon the same two diseases, but at different levels of detail appropriate for the intended track participants. Metabiota shall propose the two most appropriate zoonotic diseases based on relevance to South African partners and the region, and alignment with the needs identified in the Landscape Analysis conducted by Metabiota under TD-10 during the February 2016 interviews of stakeholders in Pretoria and Johannesburg. Thorough justification for the two suggested diseases shall be included in the proposal in response to this TD. DTRA CBEP will ultimately determine the two diseases to be included. The updated OHE short course curriculum shall include all of the identified changes from the Landscape Analysis. Over 1305 business hours, it is assumed that it will take 0.15 FTE of an SME II and 0.1 FTE of a Trainer I to adapt the curriculum.

In addition to updating the OHE short course curriculum, Metabiota shall develop a Train the Trainer (ToT) module to be delivered to the selected South African trainers of the OHE short course. The ToT module shall be able to be conducted over a 2-3 day ToT session. This TD does not include implementation or delivery of the ToT module or either OHE short course track and is for the development of materials only. Over 1305 business hours, it is assumed that it will take 0.1 FTE of an SME II and 0.15 FTE of a Trainer I to adapt the curriculum.

The final deliverable (CDRL A003) is the complete and updated short course curriculum, which is comprised of the basic level track, the advanced level track, and the ToT module. Metabiota shall conduct an in-person review of the curriculum and the status of updates twice – once at 30% complete (CDRL A001), and again at 60% complete (CDRL A002). These in-person reviews will provide DTRA CBEP with the ability to review the status of the curriculum updates and make comments or requests to shape the direction of the updates. DTRA CBEP will give Metabiota its comments no sooner than 2 weeks (10 business days) after the in-person review.

Throughout the curriculum update process, Metabiota shall continue coordinating with DTRA CBEP's South Africa engagement Country Manager on a weekly basis. Metabiota shall continue to coordinate with CDC-South Africa, the United States Department of Agriculture, and South African stakeholders on an as needed basis via electronic and phone communications. No travel shall be required.

The period of performance for this effort will be from 3/21/16 to 5/15/16. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $110,000 is requested by 3/15/16. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation (Task 1)

Metabiota developed a project plan and implementation strategy that aligns with narrative from Block 8. It is anticipated that the plan for TD-023 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM), Subject Matter Expert (SME III and Project Coordinator (PC, billed as a Research and Data Analyst (RDA)) time to identify the optimal strategy, including required deliverables and other programmatic requirements, which may be a part of project implementation.

Key Assumptions

1. Metabiota assumes changes to the budget (e.g., labor categories) will be acceptable to DTRA. An RDA was added to support coordination and provide flexibility when implementing. A second RDA was added to support technical development of project deliverables; however, neither of these changes has affected the overall project budget.
2. Metabiota assumes that the stated period of performance Period of Performance ending May 15, 2016 will be extended through Nov 15 2016 contingent upon the approval of Metabiota's AEP contract extension.
3. The breadth of material updates will be based on, but not entirely limited to those stated within the "One Health Epidemiology Landscape Analysis" developed during TD-010 under AEP.
4. In person reviews requested by DTRA CBEP at iterations of 30% and 60% completeness will yield comments and direction reasonable for incorporation and conducive to existing project constraints.
5. Regular or incidental communication with South African Stakeholders involved in TD 010 under AEP will not need to be built into the project plan.

Work Plan Development (Task 1, 3, and 4)
The Metabiota PM and PC will coordinate with (b)(6) VP Science Integration, and our regional partner network to identify the appropriate SMEs in One Health Epidemiology to develop existing One Health Epidemiology (OHE) training materials as described in Box 8 and through coordination with DTRA CBEP AFRICOM

Upon approval of the TD, the Metabiota PM and PC will engage DTRA CBEP to ensure a mutual understanding of project goals and objectives are realized, as well as to obtain the concept notes referred to in Box 8. Metabiota will additionally engage with the identified SMEs as well as other key South African stakeholders to obtain additional information for the augmentation of the training materials as needed. The Metabiota PM, PC, and SMEs will participate in regular project communications with stakeholders to ensure mutual understanding of project goals, actions, and status.

Metabiota SMEs will conduct a review of the One Health Epidemiology Landscape Analysis and TD-010 SME materials review notes to establish a baseline for materials augmentation planning. The Metabiota PM will then conduct a series of data calls with the South African stakeholders in order for the SMEs familiarize themselves with the the identified stakeholder needs and obtain feedback on anticipated milestones as needed. In doing so, the Metabiota SMEs will identify an appropriate path forward for OHE training materials augmentation work plan. This work plan will identify a timeline of implementation and key milestones and goals for the augmentation of the One Health Epidemiology (OHE) short course curriculum and the development of an associated Train the Trainer (ToT) module. The Metabiota PM will submit the work plan draft(s) to DTRA CBEP for review and approval.

Updating One Health Epidemiology Short Course Curriculum (Task 1, 3, and 4)
Metabiota SMEs will adapt the existing One Health Epidemiology short course curriculum to reflect improvements and updates identified SMEs and South African stakeholders as described in the South African One Health Epidemiology Landscape Analysis (AEP TD-010). SMEs engaged for this effort will incorporate relevant alterations, additions, and updates to the OHE curriculum originally developed by WRAIR for both Kenya and Uganda. Based on needs identified by the landscape analysis, the improvements will ensure both relevance and congruency of OHE training within the greater South African public health training environment. To this end, Metabiota will endeavor to modify and bolster the existing curriculum into dual track short courses described in more detail below:

(1) *One Health Epidemiology Training, Republic of South Africa Basic*
An updated OHE training short course based on the existing materials developed by WRAIR, but purposed for professionals new to the concept of One Health Epidemiology. This track will introduce professionals working within any One Health related sector to basic principles and practices of One Health and applied epidemiology. This course will offer trainees a basic understanding of select agents and, notably, provide them with a core understanding of those which are highly relevant to South Africa. Metabiota has preliminarily decided, based on best estimates for feasibility and effectiveness, to focus on the incorporation of disease examples that include Crimean-Congo Hemorrhagic Fever (CCHF), and Tick-Borne Rickettsia; however, the use of these diseases in training course material should be subject to reevaluation as the project progresses.

(2) *One Health Epidemiology Training, Republic of South Africa Advanced*
An updated OHE training short course based on the existing materials developed by WRAIR, but purposed for professionals possessing some significant knowledge base of One Health Epidemiology concepts. This track will introduce professionals working within any One Health related sector to advanced principles and practices of One Health and applied epidemiology. This course will provide trainees with a thorough understanding of select agents and an advanced understanding of those which are of relevance to South Africa. Metabiota has preliminarily decided, based on best estimates for feasibility and effectiveness, to focus on the incorporation of disease examples that include CCHF, and Tick-borne Rickettsia; however, the use of these diseases in training course material should be subject to reevaluation as the project progresses.

Developing a Training-of-Trainers Module (Task 1, 3, and 4)
Metabiota will design and develop a Training-of-Trainers (ToT) module specifically purposed to support the onboarding of future One Health Epidemiology Republic of South Africa trainers. SMEs engaged for this effort will have extensive training program development experience and will ensure that this module has specific relevance to the both basic and advanced tracks for One Health Epidemiology training in South Africa. This course will provide OHE trainers with expert knowledge in training administration beyond what could be gleaned from completing either track. The ToT module will be designed for South African local nationals, and will be purposed to support the long term sustainability of OHE in-country. The module will be designed to a support trainee commitment of three days or less.

In support of quality assurance towards the development of these final deliverables, Metabiota will conduct two in person progress reviews with DTRA CBEP. These reviews will be presented to DTRA CBEP at iterations of 30% and 60% full course completion. These reviews will allow for more direct and sustained influence from DTRA CBEP over the final project deliverable. The final deliverable for this effort will comprise a OHE training short course adapted to the South African Landscape. This course will be complete with a ToT module and will have both a basic and advanced track purposed respectively for those with little or significant knowledge of One Health Epidemiology concepts.

Project Closeout (Task 1, 3, and 4)
Metabiota PM, PC, and SMEs will all contribute inputs to a final report relaying all actions taken for project implementation through all phases, lessons learned, and identifying next step opportunities upon completion of all deliverables. The Metabiota PM will submit this report to the DTRA CBEP.

Risk Management (Task 1)
In order to anticipate and overcome obstacles included (but not limited to) those listed in Risk Management Matrix found in the attached Supplemental Information Section 3, Metabiota has identified and captured the risks associated with implementing this activity, including contingency planning and course correction measures which will lead to overall regional risk reduction as outlined in the below Risk Management Matrix.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN)

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$112,883
1003	MATERIALS	$0
1004	ODCs	$0
1005	TRAVEL	$0
TOTAL		**$112,883.29**

Commented [esk1]: Please clarify this reference. Metabiota should have all documentation from TD-10

Commented [esk2]: Should be completed. Please clarify what additional actions are needed for this outside of what has been done in TD-10

Commented [esk3]: Please clarify. Metabiota should already have comprehensive understanding and analysis of the Landscape Analysis Report because they are the originating author. Further, please elaborate on which RSA stakeholders you plan to engage, what questions will be asked, and what are the intended objectives of those conversations that were not previously met in TD-10

Commented [esk4]: For the three comments above, please take into account how adjustments would reduce required hours.

Commented [esk5]: Please provide justification for these diseases over others (eg: Rift Valley Fever, Brucella, Avian Influenza, Q Fever, etc)

Commented [esk6]: Same question as detailed comment esk5 above.

Commented [esk7]: To mitigate Risk #3 in the attached matrix, please highlight when the development of a ToT module is expected to start and that the task will not start until CBEP has given direction and agreement to proceed. Please keep this as a topic on the regularly scheduled phone calls with CBEP CM so the team is tracking money and hours being spent. If there's enough room in the hours budget to enact the ToT module, we will do so in a timely manner. This task is to commence only upon DTRA CBEP CM direction to proceed.

9c. TD SOLUTION BAS S OF ESTIMATE DESCRIPTION (NOT TO EXCEED 2 PAGES):

All Phases:
Task 1—Project Coordination: Metabiota will provide consistent and cohesive technical and administrative leadership direction, program management, implementation oversight, and coordination of all project activities

Metabiota Program Manager (PM): The Metabiota PM will provide direct oversight of the planning and execution of the program ensuring all objectives are met in accordance with the project SOW maintaining scope, budget and timeline. The PM will ensure completion of DTRA CBEP goals at the country and regional level in direct support of this activity and the DTRA CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the RDA and SMEs to ensure all day-to-day activities for the project are completed on time, and to the quality required by DTRA CBEP.

Metabiota Project Coordinator: The Metabiota Research and Data Analyst (RDA) will act as a Project Coordinator (PC) throughout the proposal development, planning, and execution of project objectives. The PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to DTRA CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will manage the SMEs and lead coordination with the South African Stakeholders, to include leading regular coordination calls with the project team and assist in participant coordination

Note* - Metabiota recognizes that the RDA labor category was not included to Box 8 of this TO. Upon review of internal support (e.g., Project Coordinators) and to allow greater project implementation flexibility, Metabiota has proposed the use of an RDA to support all project coordination. Importantly, while hours have been added for project coordination, the overall cost for the Project Coordinator role remains unchanged.

A key requirement to ensure effective program initiation, execution and closeout is ensuring clear communication between all project stakeholders. To ensure the project in managed according to CBEP standards, the PM and PC will be responsible for the following:

Initiation and Program Integration. The PM, with PC support, developed the project proposal to include the project timeline, identification and integration of project requirements, deliverables subcontractors, and SMEs to ensure project success. Upon acceptance of the proposal, the PM will hold a kick off meeting with team members and partners to review the project plan and schedule, establish routine communication to support project implementation, initiate education on the contract requirements and begin project implementation. Routine communication with all stakeholders will ensure that all deliverables, including required CDRLs are met and submitted according to the project schedule and contract requirements.

The PM and PC will work closely with the project stakeholders to understand their respective vision for this effort, including the development of a work plan for implementing all identified activities. In addition the PM and PC will coordinate communication between the SME's (e.g., project team members) to ensure alignment of project plans with DTRA CBEP goals. Lastly, the PM and PC will coordinate all aspects of this project by interfacing regularly (see Communication Management Appendix A Section 2.2) with project personnel to ensure that in country and overall project objectives and requirements are met in full. The PM will ensure that SMEs are engaged according to contract and project requirements and have the experience, background, and skills necessary to support project implementation.

The PM will ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include: overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and/or independent consultants throughout the span of the project

Commented [esk8]: No subcontractors were identified in the labor breakdown. Is this template language or does Metabiota plan on employing subcontractors for this effort? If so, in what capacity and to what extent?

Project Closeout The Metabiota PM and PC will oversee project closeout, to include wrap up of materials development, finalization of deliverables, and final reports. The PM will also ensure the conclusion of subcontracts and other employment agreements.

Additional communication strategies and programmatic safeguards including 1) Human Resources Management, 2) Communications Management 3) Risk Management 4) Schedule Management 5) Cost Management, 6) Quality Management, and 7) Technical Resource Management can be found in Appendix A (Supplemental Information)

Task 4 – Subject Matter Experts (SMEs): Metabiota SMEs will provide ongoing technical support and expertise through the use of SMEs, to include the development of 1) a work plan for implementing all identified activities, 2) augmentation of OHE training materials, and 3) development of ToT module.

Metabiota Subject Matter Expert II will act as a technical lead in the updating of One Health Epidemiology Short Course Curriculum. The SME will coordinate with the Metabiota project team to develop a work plan including detailed milestones and timelines for updating the OHE short course curriculum. With the support of additional SMEs (billed at a Trainer I and RDA), the SME II will lead the final development of both the basic track and advanced track courses. The SME engaged for this effort will have a terminal degree in the field of epidemiology, an understanding of the One Health philosophy, extensive knowledge of the South African epidemiology training landscape, a full and in-depth knowledge of the existing OHE course curriculum, and cognizance of the exact needs for materials improvement. The SME II will assist the Metabiota PM and PC team in the preparation and delivery of an in-person review of progress with DTRA CBEP representation at iterations of 30% and 60% completeness. The SME II will be present at all relevant project stakeholder calls and will communicate regularly with the Metabiota PM providing progress reports on a weekly basis. The Metabiota SME II will support technical aspects of proposal development. In line with government guidance, the SME will be billing at the SME II labor rate.

The Metabiota SME II will additionally serve in a technical support capacity towards the development of the ToT Module. The SME II will communicate regularly with the Metabiota PM and PC regarding any progress and challenges on a weekly basis. Hours proposed for this labor category are based on a best estimate for effectively and efficiently executing the requirements. Should these hours not be required for this project, the government will not be billed for them.

The Metabiota Trainer I will act as a technical lead in the development of a One Health Epidemiology Short Course ToT module. The Trainer I will coordinate with the PM and PC to develop a project plan and timeline for the development of this module, and will lead the final development of this course. The Trainer I engaged for this effort will have an extensive understanding of the One Health philosophy and experience designing and implementing novel ToT training modules. The Trainer I will coordinate with the Metabiota PM and PC to prepare for and execute an in person review of progress with DTRA CBEP representation at iterations of 30% and 60% completeness. The Trainer I will be present at all relevant project stakeholder calls and will communicate regularly with the PM providing progress reports on a weekly basis

The Metabiota Trainer I will additionally serve in a technical support capacity towards the development of the updates of the One Health Epidemiology Short Course Basic and Advanced Curriculum. The Trainer I will communicate regularly with the Metabiota PM and PC regarding any progress and challenges on a weekly basis. Hours proposed for this labor category are based on a best estimate for effectively and efficiently executing the requirements. Should these hours not be required for this project the government will not be billed for them.

The Metabiota RDA will act as technical support in the augmentation of the One Health Epidemiology Short Course Basic and Advanced Curriculum and the development of OHE ToT module. The RDA will attend coordination meetings with all members of the project team in support of the development of project plans and timelines for the development of each deliverable. The RDA engaged for this effort will have a an understanding of the One Health philosophy and epidemiology, a knowledge of the existing OHE course curriculum, and experience supporting the development of technical deliverables. The RDA will coordinate with the Metabiota Project team to assist in preparation for and execute of in person review of progress with DTRA CBEP representation at iterations of 30% and 60% completeness for both deliverables. The RDA will be present at all relevant project stakeholder calls and will communicate regularly with the PM providing progress reports on a weekly basis. Hours proposed for this labor category are based on a best estimate for effectively and efficiently executing the requirements. Should these hours not be required for this project, the government will not be billed for them.

Materials
Metabiota will not incur any material costs under this technical direction

Other Direct Costs
Metabiota will not incur any other direct costs under this technical direction

Subcontracts
Subcontracts will be issued to the SME and/or their home organization as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories

Travel
Metabiota will not incur any travel costs under this technical direction

TECHNICAL DIRECTIVE (TD)

1. CONTRACT NUMBER	2. CONTRACTOR	3a.TD NUMBER	3b.REV
HDTRA1 -14-C-0104	METABIOTA	23	

4. TD TITLE	5. TOTAL TD ESTIMATE:
South Africa One Health Epidemiology Short Course Curriculum Updates and Edits	HOURS: **700** DOLLARS: $ **110,000**

6. CONTRACING OFFICER REPRESENTATIVE	7. CONTRACTOR POC
NAME: (b)(6)	NAME: (b)(6)
PHONE: (b)(6) EMAIL: (b)(6)	PHONE: EMAIL: (b)(6)

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to implement revisions (identified in TD-10) to the Walter Reed Army Institute of Research (WRAIR) Epidemiology Short Course curriculum as this material will be transformed into an adapted One Health Epidemiology Short Course, tailored for South Africa in accordance with SOW, Section 4.4, Task 1, 3, and 4.

In a follow-on to TD-10, where the Metabiota team identified the edits and revisions necessary to update the WRAIR Epidemiology short course, TD-23 requests Metabiota to now execute those edits and revisions and develop a comprehensive One Health Epidemiology (OHE) short course. The short course is intended for health professionals in South Africa who require knowledge of OHE, but are not able or eligible to be part of the Centers for Disease Control and Prevention's Field Epidemiology Training Program (FETP). The short course shall include a One Health introductory module with two tracks – (1) One basic level track for professionals who are completely new to the OHE concept and need comprehensive tutorials on basic skills, and (2) One advanced level track for professionals who are more knowledgeable about OHE but require more in-depth training. Each track shall have two disease case studies involving zoonotic diseases of security concern which directly affect South Africa. Both the basic level and advanced tracks shall touch upon the same two diseases, but at different levels of detail appropriate for the intended track participants. Metabiota shall propose the two most appropriate zoonotic diseases based on relevance to South African partners and the region, and alignment with the needs identified in the Landscape Analysis conducted by Metabiota under TD-10 during the February 2016 interviews of stakeholders in Pretoria and Johannesburg. Thorough justification for the two suggested diseases shall be included in the proposal in response to this TD. DTRA CBEP will ultimately determine the two diseases to be included. The updated OHE short course curriculum shall include all of the identified changes from the Landscape Analysis. Over 1305 business hours, it is assumed that it will take 0.15 FTE of an SME II and 0.1 FTE of a Trainer I to adapt the curriculum.

In addition to updating the OHE short course curriculum, Metabiota shall develop a Train the Trainer (ToT) module to be delivered to the selected South African trainers of the OHE short course. The ToT module shall be able to be conducted over a 2-3 day ToT session. This TD does not include implementation or delivery of the ToT module or either OHE short course track and is for the development of materials only. Over 1305 business hours, it is assumed that it will take 0.1 FTE of an SME II and 0.15 FTE of a Trainer I to adapt the curriculum.

The final deliverable (CDRL A003) is the complete and updated short course curriculum, which is comprised of the basic level track, the advanced level track, and the ToT module. Metabiota shall conduct an in-person review of the curriculum and the status of updates twice – once at 30% complete (CDRL A001), and again at 60% complete (CDRL A002). These in-person reviews will provide DTRA CBEP with the ability to review the status of the curriculum updates and make comments or requests to shape the direction of the updates. DTRA CBEP will give Metabiota its comments no sooner than 2 weeks (10 business days) after the in-person review.

Throughout the curriculum update process, Metabiota shall continue coordinating with DTRA CBEP's South Africa engagement Country Manager on a weekly basis. Metabiota shall continue to coordinate with CDC-South Africa, the United States Department of Agriculture, and South African stakeholders on an as-needed basis via electronic and phone communications. No travel shall be required.

The period of performance for this effort will be from 3/21/16 to 5/15/16. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $110,000 is requested by 3/15/16. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation (Task 1)

Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-023 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM), Subject Matter Expert (SME II) and Project Coordinator (PC, billed as a Research and Data Analyst (RDA)) time to identify the optimal strategy, including required deliverables and other programmatic requirements, which may be a part of project implementation.

Key Assumptions

1. Metabiota assumes changes to the budget (e.g., labor categories) will be acceptable to DTRA. An RDA was added to support coordination and provide flexibility when implementing. A second RDA was added to support technical development of project deliverables; however, neither of these changes has affected the overall project budget.
2. Metabiota assumes that the stated period of performance Period of Performance ending May 15, 2016 will be extended through Nov 15, 2016 contingent upon the approval of Metabiota's AEP contract extension.
3. The breadth of material updates will be based on, but not entirely limited to those stated within the "One Health Epidemiology Landscape Analysis" developed during TD-010 under AEP.
4. In person reviews requested by DTRA CBEP at iterations of 30% and 60% completeness will yield comments and direction reasonable for incorporation and conducive to existing project constraints.
5. Regular or incidental communication with South African Stakeholders involved in TD-010 under AEP will not need to be built into the project plan.

Work Plan Development (Task 1, 3, and 4)
The Metabiota PM and PC coordinated with (b)(6) VP Science Integration, and our regional partner network to identify the appropriate SMEs in One Health Epidemiology to develop and augment the existing One Health Epidemiology (OHE) training materials as described in Box 8 and through coordination with DTRA CBEP AFRICOM.

Upon approval of the TD, the Metabiota PM and PC will engage DTRA CBEP to ensure a mutual understanding of project goals and objectives. The Metabiota PM, PC, and SMEs will participate in regular project communications with stakeholders to ensure mutual understanding of project goals, actions, and status. Metabiota believes we are in possession of relevant documentation, including reports and stakeholder feedback following completion of TD-010, needed to implement the requirements identified in Box 8 of this TD (e.g., TD-023). As materials are being revised, it is possible that questions requiring RSA stakeholder feedback may arise. In this unlikely scenario, Metabiota will engage DTRA CBEP POC's prior to communicating with any RSA stakeholders.

Metabiota SMEs engaged for this effort will have e comprehensive understanding of the already developed One Health Epidemiology Landscape Analysis and TD-010 SME materials review notes prior to any material adaptation and Training-of-Trainer (ToT) course development planning. The Metabiota PM and SME II, who were involved in the execution of TD-010, will serve as informational focal points for other project personnel requiring additional landscape knowledge. The Metabiota SMEs will develop a project work plan outlining the appropriate path forward for tailoring OHE training materials and ToT Module development. This work plan will identify a timeline of implementation and key milestones and goals for the adaptation of the One Health Epidemiology (OHE) short course curriculum and the development of an associated ToT module. The Metabiota PM will submit the work plan draft(s) to DTRA CBEP for review and approval no later than 20 business days after TD-023 approval.

Updating One Health Epidemiology Short Course Curriculum (Task 1, 3, and 4):
Metabiota SMEs will adapt the existing One Health Epidemiology short course curriculum to reflect improvements and updates identified SMEs and South African stakeholders as described in the South African One Health Epidemiology Landscape Analysis (AEP TD-010). SMEs engaged for this effort will incorporate relevant alterations, additions, and updates to the OHE curriculum originally developed by WRAIR for both Kenya and Uganda. Based on needs identified by the landscape analysis, the improvements will ensure both relevance and congruency of OHE training within the greater South African public health training environment. To this end, Metabiota will endeavor to modify and bolster the existing curriculum into dual track short courses described in more detail below:

(1) *One Health Epidemiology Training, Republic of South Africa-Basic*
An updated OHE training short course based on the existing materials developed by WRAIR, but purposed for professionals new to the concept of One Health Epidemiology. This track will introduce professionals working within any One Health related sector to basic principles and practices of One Health and applied epidemiology. This course will offer trainees a basic understanding of select agents and, notably, provide them with a core understanding of those which are highly relevant to South Africa. Leveraging information gained in TD-010, Metabiota has tentatively decided to focus on incorporating disease example modules that include (1) Rift Valley Fever (RFV) and (2) Avian influenza.

(2) *One Health Epidemiology Training, Republic of South Africa-Advanced*
An updated OHE training short course based on the existing materials developed by WRAIR, but purposed for professionals possessing some significant knowledge base of One Health Epidemiology concepts. This track will introduce professionals working within any One Health related sector to advanced principles and practices of One Health and applied epidemiology. This course will provide trainees with a thorough understanding of select agents and an advanced understanding of those which are of relevance to South Africa. Leveraging information gained in TD-010, Metabiota has preliminarily dec ded to focus on the incorporation of disease example modules that include (1) RFV and (2) Avian influenza.

Developing a Training-of-Trainers Module (Task 1, 3, and 4)
Metabiota will design and develop a ToT module specifically purposed tc support the onboarding of future One Health Epidemiology Republic of South Africa trainers. SMEs engaged for this effort will have extensive training program development experience and will ensure that this module has specific relevance to the both basic and advanced tracks for One Health Epidemiology training in South Africa. This course will provide OHE trainers with expert knowledge in training administration beyond what could be g eaned from completing either track. The ToT module will be designed for South African local nationals, and will be purposed to support the long term sustainability of OHE training in-country. The module will be designed to a support trainee commitment of three days or less. Importantly, and in an effort to mitigate any potential risks regarding available LOE, Metabiota will not begin development of the ToT Module until official notice to proceed is issue by the DTRA CBEP Country Manager. Once approved to do so, Metabiota will initiate the OHE curriculum adaptations and provide DTRA CBEP with regular updates during bi-weekly communications concerning cost and schedule. Based on these updates, DTRA CBEP will determine if sufficient funds exist to enact the development of the ToT module. Upon direction from DTRA CBEP, Metabiota will commence this activity in an efficient and timely manner.

In support of quality assurance towards the development of these final deliverables, Metabiota will conduct two in-person progress reviews with DTRA CBEP. These reviews will be presented to DTRA CBEP at iterations of 30% and 60% full course completion. These reviews will allow for more direct and sustained influence from DTRA CBEP over the final project deliverable. The final deliverable for this effort will comprise a OHE training short course adapted to the South African Landscape. This course will be complete with a ToT module and will have both a basic and advanced track purposed respectively for those with little or significant knowledge of One Health Epidemiology concepts.

Project Closeout (Task 1, 3, and 4)
Metabiota PM, PC, and SMEs will all contribute inputs to a final report relaying all actions taken for project implementation through all phases, lessons learned, and identifying next step opportunities upon completion of all deliverables. The Metabiota PM will submit this report to the DTRA CBEP.

Risk Management (Task 1)
In order to anticipate and overcome obstacles included (but not limited to) those listed in Risk Management Matrix found in the attached Supplemental Information Section 3, Metabiota has identified and captured the risks associated with implementing this activity, including contingency planning and course correction measures which will lead to overall regional risk reduction, as outlined in the below Risk Management Matrix.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$112,883
1003	MATERIALS	$0
1004	ODCs	$0
1005	TRAVEL	$0
TOTAL		##########

9c. TD SOLUTION BASIS OF ESTIMATE DESCRIPTION (NOT TO EXCEED 2 PAGES):

All Phases:
Task 1—Project Coordination: Metabiota will provide consistent and cohesive technical and administrative leadership, direction, program management, implementation oversight, and coordination of all project activities.

Metabiota Program Manager (PM): The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of DTRA CBEP goals at the country and regional level in direct support of this activity and the DTRA CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the RDA and SMEs to ensure all day-to-day activities for the project are completed on time, and to the quality required by DTRA CBEP.

Metabiota Project Coordinator: The Metabiota Research and Data Analyst (RDA) will act as a Project Coordinator (PC) throughout the proposal development, planning, and execution of project objectives. The PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to DTRA CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will manage the SMEs and lead coordination with the South African Stakeholders, to include leading regular coordination calls with the project team and assist in participant coordination.

Note* - Metabiota recognizes that the RDA labor category was not included to Box 8 of this TD. Upon review of internal support (e.g., Project Coordinators) and to allow greater project implementation flexibility, Metabiota has proposed the use of an RDA to support all project coordination. Importantly, while hours have been added for project coordination, the overall cost for the Project Coordinator role remains unchanged.

A key requirement to ensure effective program initiation, execution, and closeout is ensuring clear communication between all project stakeholders. To ensure the project in managed according to CBEP standards, the PM and PC will be responsible for the following:

Initiation and Program Integration: The PM, with PC support, developed the project proposal to include the project timeline, identification and integration of project requirements, deliverables, subcontractors, and SMEs to ensure project success. Upon acceptance of the proposal, the PM will hold a kick-off meeting with team members and partners to review the project plan and schedule, establish routine communication to support project implementation, initiate education on the contract requirements, and begin project implementation. Routine communication with all stakeholders will ensure that all deliverables, including required CDRLs, are met and submitted according to the project schedule and contract requirements.

The PM and PC will work closely with the project stakeholders to understand their respective vision for this effort, including the development of a work plan for implementing all identified activities. In addition, the PM and PC will coordinate communication between the SME's (e.g., project team members) to ensure alignment of project plans with DTRA CBEP goals. Lastly, the PM and PC will coordinate all aspects of this project by interfacing regularly (see Communication Management Appendix A Section 2.2) with project personnel to ensure that in-country and overall project objectives and requirements are met in full. The PM will ensure that SMEs are engaged according to contract and project requirements, and have the experience, background, and skills necessary to support project implementation.

The PM will ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include; overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and/or independent consultants throughout the span of the project.

Project Closeout: The Metabiota PM and PC will oversee project closeout, to include wrap-up of materials development, finalization of deliverables, and final reports. The PM will also ensure the conclusion of subcontracts and other employment agreements.

Additional communication strategies and programmatic safeguards, including 1) Human Resources Management, 2) Communications Management, 3) Risk Management, 4) Schedule Management, 5) Cost Management, 6) Quality Management, and 7) Technical Resource Management can be found in Appendix A (Supplemental Information).

Task 4—Subject Matter Experts (SMEs): Metabiota SMEs will provide ongoing technical support and expertise through the use of SMEs, to include the development of 1) a work plan for implementing all identified activities, 2) augmentation of OHE training materials, and 3) development of ToT module.

Metabiota Subject Matter Expert II will act as a technical lead in the updating of One Health Epidemiology Short Course Curriculum. The SME will coordinate with the Metabiota project team to develop a work plan, including detailed milestones and timelines, for updating the OHE short course curriculum. With the support of additional SMEs (billed at a Trainer I and RDA), the SME II will lead the final development of both the basic track and advanced track courses. The SME engaged for this effort will have a terminal degree in the field of epidemiology, an understanding of the One Health philosophy, extensive knowledge of the South African epidemiology training landscape, a full and in-depth knowledge of the existing OHE course curriculum, and cognizance of the exact needs for materials improvement. The SME II will assist the Metabiota PM and PC team in the preparation and delivery of an in-person review of progress with DTRA CBEP representation at iterations of 30% and 60% completeness. The SME II will be present at all relevant project stakeholder calls and will communicate regularly with the Metabiota PM providing progress reports on a weekly basis. The Metabiota SME II will support technical aspects of proposal development. In line with government guidance, the SME will be billing at the SME II labor rate.

The Metabiota SME II will additionally serve in a technical support capacity towards the development of the ToT Module. The SME II will communicate regularly with the Metabiota PM and PC regarding any progress and challenges on a weekly basis. Hours proposed for this labor category are based on a best estimate for effectively and efficiently executing the requirements. Should these hours not be required for this project, the government will not be billed for them.

The Metabiota Trainer I (SAFOSO AG) will act as a technical lead in the development of a One Health Epidemiology Short Course ToT module, upon receipt of TD approval. For this effort, Metabiota has engaged SAFOSO AG as our expert team of trainers. SAFOSO recently supported CBEP-funded African Swine fever outreach program in coordination with Metabiota, BTRIC contractors, and four teams of scientists from CBEP engaged FSU countries (e.g., Armenia, Georgia, Kazakhstan, and Ukraine). Members of SAFOSO developed and led all elements of training for this activity. The Trainer I will coordinate with the PM and PC to develop a project plan and timeline for the development of this module, and will lead the final development of this course. The Trainer I engaged for this effort will have an extensive understanding of the One Health philosophy and experience designing and implementing novel ToT training modules. The Trainer I will coordinate with the Metabiota PM and PC to prepare for and execute an in person review of progress with DTRA CBEP representation at iterations of 30% and 60% completeness. The Trainer I will be present at all relevant project stakeholder calls and will communicate regularly with the PM providing progress reports on a weekly basis.

The Metabiota Trainer I will additionally serve in a technical support capacity towards the development of the updates of the One Health Epidemiology Short Course Basic and Advanced Curriculum. The Trainer I will communicate regularly with the Metabiota PM and PC regarding any progress and challenges on a weekly basis. Hours proposed for this labor category are based on a best estimate for effectively and efficiently executing the requirements. Should these hours not be required for this project, the government will not be billed for them.

The Metabiota RDA will act as technical support in the augmentation of the One Health Epidemiology Short Course Basic and Advanced Curriculum and the development of OHE ToT module. The RDA will attend coordination meetings with all members of the project team in support of the development of project plans and timelines for the development of each deliverable. The RDA engaged for this effort will have an understanding of the One Health philosophy and epidemiology, a knowledge of the existing OHE course curriculum, and experience supporting the development of technical deliverables. The RDA will coordinate with the Metabiota Project team to assist in preparation for and execute of in person review of progress with DTRA CBEP representation at iterations of 30% and 60% completeness for both deliverables. The RDA will be present at all relevant project stakeholder calls and will communicate regularly with the PM providing progress reports on a weekly basis. Hours proposed for this labor category are based on a best estimate for effectively and efficiently executing the requirements. Should these hours not be required for this project, the government will not be billed for them.

Materials
Metabiota will not incur any material costs under this technical direction

Other Direct Costs
Metabiota will not incur any other direct costs under this technical direction

Subcontracts
Subcontracts will be issued to SAFOSO AG as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories.

Travel
Metabiota will not incur any travel costs under this technical direction

This revision extends the Period of Performance (PoP) for TD-023 from 15 May 2016 to 15 November 2016 at no additional cost. This PoP extension is to provide enough time to continue implementing revisions (identified in TD-10) to the Walter Reed Army Institute of Research (WRAIR) Epidemiology Short Course curriculum as this material will be transformed into an adapted One Health Epidemiology Short Course, tailored for South Africa. Metabota should coordinate directly with the Technical POCs identified below. No changes to the previously approved proposal are required at this time.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE).

This revision extends the Period of Performance (PoP) for TD-024 from 30 June 2016 to 31 July 2016. This PoP extension is to provide enough time to continue developing a Film Narrative of Epigenetics and Genomics of Infectious Diseases in the Middle East, South Asia and CBEP collaborations in the CENTCOM Region and route through DTRA PAO office. In addition, contractor shall add closed caption features to the film narrative and all subsequent copies via various media types develop under this TD not to exceed $2,000. Metabiota should coordinate directly with the Technical POCs identified below. No additional changes to the previously approved proposal are required at this time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES)
Metabiota will continue development of the film narrative highlighting CBEP efforts in the CENTCOM region, and specifically the conference held on the Epigenetics and Genomics of Infectious Diseases in the Middle East and South Asia. To support this effort, an extended PoP through 31 July 2016 is required to ensure completion of the short film, supporting additional time to include closed captioning and voice over options, as well as secure PAO approval prior to release. In direct support of this effort and PAO requirements, Metabiota will continue to engage August II Productions, the vendor responsible for film production, to include a voice over for the f lm narrative and closed captioning.

To facilitate the voice over requirements, August II Productions will secure studio time to record the voice over, being read by (b)(6) for this effort. In addition, (b)(6), Executive Producer at August II Productions will work with Mr. Becker to coach him on professional voice over requirements and execution to ensure a professional narrative and film is achieved. Once the voice over is recorded, Ms. Garner and her editing team will overlay the voice over on the film footage, and complete final edits, as needed, for it's incorporation.

In addition, August II Productions, will provide closed captioning options on the film, per the DTRA PAO office. Production of closed captioning will include creating the transcript of the entire film, caption files, encoding, and ensuring that the final closed captioning film will be accessible on all forms of media, to include straight-play DVD, and digital files for YouTube and other media channels determined necessary and appropriate by DTRA.

To achieve these requirements, the Metabiota PM will augment the services agreement with August II Productions to include both the voice over and closed captioning services. The Metabiota PM and PC will work with August II Productions to realign the schedule in accordance with the PoP and oversee all activities to ensure completion within the assigned timeframe. The Metabiota team will remain in weekly communication with CBEP regional team leads to maintain visibility on project scope and achievements.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$0
1003	MATERIALS	$2,000
1004	ODCs	$0
1005	TRAVEL	$0
TOTAL		**$2,000**

9c. TD SOLUTION BASIS OF ESTIMATE DESCRIPTION (NOT TO EXCEED 2 PAGES

Materials

Voice Over: Voice over costs include studio time for (b)(6) record the voice over narrative. This will also include time with (b)(6) the Executive Producer for coaching, editing of the script, as needed, and mu tiple readings to ensure a professional and polished product, as well as any additional "takes" required, as the final film is developed, or at the request of the PAO office following review of the product.

Closed Captioning: Closed captioning costs include creating the film transcript, caption files, encoding, and closed captioning compatibility with multiple media options, to include straight-play DVD and digital files. Costs also include any edits or revisions required in the closed captioning transcripts should they be be required during the production of the film, or at the request of the PAO office following review of the product.

No other costs or requirements are deemed necessary at this time.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to develop a writing workshop for Ethiopian collaborators from the Ethiopian Public Health Institute (EPHI) and National Animal Health Diagnostic and Investigation Center (NAHDIC) in accordance with SOW, Section 4.1, 4.2, 4.3, 4.4. This technical directive provides guidance to assist Metabiota in establishing a proposed implementation approach and budget for the period of performance from April 2016 to May 2016. During the PoP, Metabiota shall provide the following

a. Metabiota shall reach out directly to D (b)(6) the main POC from EPHI and (b)(6) (b)(6) he main POC from NAHDIC, to discuss the participant list, as the collaborators have already identified the workshop participants and will provide the names to Metabiota. Metabiota shall provide a PM and a SME1 for the pre-coordination of the workshop. The hours required for the pre-coordination should not exceed 10 hours/week for three weeks each for the PM and the SME1. Communication wit (b)(6) should also include the discussion of the venue and logistic details regarding the imp ementation of the workshop.
b. Metabiota shall use already developed training material for the workshop when possible, including PowerPoint presentations and hands-on exercises aimed at developing grantsmanship skills. For the curriculum planning and the development of new material, if needed, Metabiota shall not exceed a total of 20 hours of one SME1 effort.
c. The in-country writing workshop provided by Metabiota shall cover all aspects and skills within the grant writing process, especially those specific to grants.gov submission system used for the DTRA Fundamental Research for Combating Weapons of Mass Destruction Broad Agency Announcement (FRCWMD-BAA). Specific technical subjects that shall be included in the workshop are: hypothesis development; research proposal development (including the development of an abstract, white paper, and full proposal); literature reviews; identifying appropriate technical methodologies; biosafety and biosecurity requirements; human subjects and animal care and use approval process and requirements; collaboration development; analysis and discussion of expected results; project budgeting; and the grant submission process relevant to Thrust Area 6 of the FRCWMD-BAA through grants.gov. The workshop shall include hands-on assignments which focus on scientific writing and distinguishes the unique styles associated with abstracts, white papers, and full proposals ensuring the participants are fully prepared for future grant proposal development. The writing workshop shall be no more than five (5) days with a maximum number of 15 partner participants, with up to ten (10) participants identified as part o (b)(6) esearch team and up to five (5) participants identified b (b)(6) Metabiota shall provide up to two (2) SME1s (preferably the same per e that were involved in the pre-coordination activities) for in-country presentations and hands-on training of the workshop participants. Both SME1s will be expected to arrive one (1) day prior to the workshop and leave no later than one (1) day after the workshop is completed. It is anticipated that approximately 50 hours/SME will be required for successful in-country preparation and execution of the workshop.
d. Metabiota shall include a final survey incorporating the participants' thoughts on how the workshop helped develop their writing skills as a deliverable to DTRA/CBEP.
e. Following the completion of the workshop, Metabiota shall guide one EPHI-led and one NAHDIC-led team to apply their new skills to develop materials for submission to the BAA (abstract, white paper, full proposal). The EPHI-led team shall draft proposal material for the project that has been in pre-coordination with CBEP: "Prevalence and associated risk factors of Rift Valley and Cr mean-Congo hemorrhagic fever viruses in humans and livestock in pastoral areas in Ethiopia" or a research project of their preference. The NAHDIC-led team shall also draft proposal material for submission to the BAA in alignment with CBEP's research interests and mission scope. Metabiota shall provide remote technical assistance to both teams to apply the lessons learned to develop an abstract, white paper, and full proposal materials for submission to Thrust Area 6 of the FRCWMD-BAA. Metabiota shall provide up to two (2) SME1 (preferably the same personnel who participated in the in-country writing workshop) to receive and review the materials from the Ethiopian partners and to provide comments. The Ethiopian partners and the SMEs shall discuss feedback, via email, telephone or skype, regarding the abstract, white paper, and full proposal on a weekly basis for approximately 10 weeks for a maximum average of 5 hours/week, 50 hours total, per each team (the total hours may be divided unevenly during the 10 week period as the development of the full proposal will take the bulk of the discussion/feedback time). The reviews of the materials shall include not only feedback on the technical aspects of the documents but all aspects of the writing process. Program Management support for activities described in c.-e. Metabiota shall provide a PM the hours required for the PM should not exceed 2 hours/week for eleven weeks
f. If a white paper is requested by DTRA/CBEP, it is expected that EPHI-led and NAHDIC-let teams will submit it in a timely manner without Metabiota's assistance. However, upon receipt of comments or requested revisions of the white paper, Metabiota shall assist the Ethiopian partners in the development of a response to reviewers' comments. It is anticipated that this support may require up to 20 hours total per team to assist in the development of a response to reviewers

Deliverables:

1. Survey of participants incorporating participants' thoughts on the workshop and how it assisted them as scientific writers.
2. Deliverables expected (described in section e. and f.):
   Deliverable #1: Abstract submitted by EPHI-led and NAHDIC-led teams, appropriate to Thrust Area 6 of the DTRA FRCWMD-BAA.
   Deliverable #2: White paper (including any requested clarifications and/or revisions) submitted by EPHI-led and NAHDIC-led teams appropriate for submission to grants.gov and Thrust Area 6 of the DTRA FRCWMD-BAA, if requested following successful review of the submitted abstract.
   Deliverable #3: Full proposals developed by EPHI-led and NAHDIC-led teams appropriate for submission to Thrust Area 6 of the DTRA BAA.

The period of performance for this effort will be from 2 May 2016 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $61,000 is requested by 29 April 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Phase 0: Proposal Development & Initiation (April 27-April 29, 2016)

Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-025 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as a Research and Data Analyst I RDA)) time to identify the optimal strategy, including required deliverables and other programmatic requirements, which may be a part of project implementation.

The Metabiota PM and PC coordinated wi(b)(6) Metabiota's Executive Vice President (EVP) in charge of Science Integration and communication with our regional scientific networks to identify the appropriate SMEs in technical writing and grantsmanship, to develop and augment project work plans and training materials. Ultimately, this measure was taken to ensure our technical and cost solutions were of the highest quality and sustainable, respectively.

Key Assumptions:

1. Metabiota received unofficial communication supporting an extension of its AEP contract from May 15, 2016 to November 15, 2016, this technical response has been developed with the key assumption that this additional time will be allotted to this project.
2. Metabiota assumes the need to acquire PAO approvals for any and all training materials developed in support of the Technical Writing and Grantsmanship Workshop.
3. The Metabiota project team will receive all necessary or relevant concept notes or supporting documentation associated with this project immediately upon technical approach approval.
4. Metabiota assumes that workshop participants representing EPHI and NAHDIC as Technical Writing and Grantsmanship Workshop participants have already been identified and notified of their potential for inclusion in a 5-day training event.
5. Metabiota assumes that no more than 25% of all training materials developed in support of the Technical Writing and Grantsmanship Workshop will be novel, and that existing developed training materials will be identified and utilized
6. Metabiota will provide SME support to EPHI-led and NAHDIC-led teams for concept development and submission to the BAA, but does not expect to support concept identification.
7. Metabiota assumes that engagement with EPHI and NAHDIC throughout this project will involve a single lead point of contact from each respective organization, and that direct communication with individual team members from these organizations will not be necessary.
8. Metabiota assumes all workshop participants are proficient in English and no translation of materials or interpretation of lectures will be necessary.
9. Metabiota assumes all workshop participants are in possession of a functional Wi-Fi enabled laptop with a standard business productivity software suite (Microsoft Office, Apple iWork, Google Docs).

Phase 1 – Project Coordination and Workshop Preparation (May 9-November 15, 2016)

Sub-Phase 1.1: Stakeholder Coordination (May 9-November 15, 2016)

Upon approval of the TD, Metabiota will engage DTRA CBEP for a project kick-off call to ensure that a mutual understanding of project goals and objectives are realized, ensure that any historical documentation relevant to project implementation is received, and establish a bi-weekly reporting and communication protocol. Metabiota will additionally engage identified Ethiopian points of contact representing EPHI and NAHDIC to establish consensus on project goals and the intended path forward. Metabiota will also establish regular bi-weekly communications with Ethiopian stakeholders and identify an associated communication protocol. In an effort to reduce personnel coordination risk and ensure that effective communication is maintained. Metabiota will clearly identify the expected roles and responsibilities of EPHI and NAHDIC team leaders as the primary and sole contact points for their organizations.

Sub-Phase 1.2: Workshop Materials Development (May 9-June 10, 2016)

Upon approval of the TD, Metabiota will seek existing workshop materials that cover subjects relevant to proposal writing. Metabiota may utilize materials available internally, from open-access sources, or from subcontractors engaged as SMEs. Once selected, Metabiota will review these materials and identify any additions that need to be made. While the workshop will cover proposal writing in general, Metabiota expects to provide some direction on writing to DTRA BAA Thrust Area 6 specifically. In light of this, Metabiota will develop any supplements to the existing workshop material that are necessary to convey this information. Metabiota assumes these supplements will constitute up to 25% new material. The final materials will include PowerPoint presentations and hands-on learning exercises covering hypothesis development, research proposal development, literature reviews, methods selection, biosafety and biosecurity requirements, human and animal subject use requirements, development of collaborations, analysis and discussion of expected results, budget development, and the grant submission process specific to BAA Thrust Area 6. Metabiota will also develop a post-workshop survey to solicit feedback from participants on the relevance and utility of the workshop. Once all materials have been internally reviewed and finalized Metabiota will submit them to DTRA for PAO approval

Deliverables:

- Deliverable 1: Submission of developed post workshop survey to DTRA CBEP representation
- Deliverable 2: Submission of Technical Writing and Grantsmanship Workshop Materials to DTRA CBEP for PAO approval

Sub-Phase 1.3: Workshop Implementation Preparation (May 9-July 22, 2016)

Metabiota expects a total of no more than (15) previously identified participants will be invited to the Technical Writing and Grantsmanship Workshop including no more than (10) representing(b)(6) eam from EPHI and no more than (5) representing(b)(6) team from NAHDIC. Immediately upon engagement with identified Ethiopian stakeholders, Metabiota will work collaboratively with team leads representing EPHI and NAHDIC to clearly identify workshop participants, dates and a location for the event. Metabiota will inform all workshop participants to come prepared with relevant resources including their own personal Wi-Fi-enabled laptop computer with standard business productivity software. Metabiota will develop and submit a Training Event Plan (TEP) detailing this information to DTRA CBEP no later than 60 days prior to workshop implementation. As all in-country logistical support services relevant to this workshop will be coordinated through CLS, Metabiota expects to submit a CLS form detailing all necessary accommodations for all training participants no later than 45 days prior to workshop implementation. Metabiota additionally expects to send two U.S. based project SMEs to Ethiopia to lead the Technical Writing and Grantsmanship Workshop and will submit a Cable Clearance Request (CCR) and Travel Authorization Request to DTRA CBEP representation no later than 45 days prior to scheduled travel for workshop implementation. Metabiota will also develop a pre-travel risk report and gain internal approval from AEP leadership prior to sending any members of its project team to Ethiopia. Additionally, Metabiota SMEs will coordinate with(b)(6) o familiarize themselves with the participants' existing work and to assign them preparatory tasks leading up to the workshop such as brainst s.

Phase 2 – Technical Writing and Grantsmanship Workshop Implementation (July 25-29, 2016)

Metabiota will conduct a five-day workshop on specific aspects of technical writing and grantsmanship in order to train and mentor selected representation from EPHI and NAHDIC. The workshop will help participants improve their general technical writing and grantsmanship skills and provide specific focus on the grants.gov submission system used for the DTRA Fundamental Research for Combating Weapons of Mass Destruction Broad Agency Announcement (FRCWMD-BAA).

Metabiota will accomplish this by sending 2 technical writing and grantsmanship SMEs to the identified training location within Ethiopia to lead the the 5-day Technical Writing and Grantsmanship Workshop. This workshop will include five days of lectures and team specific working group sessions to cover topics including but not limited to: hypothesis development; research proposal development (including the development of an abstract, white paper, and full proposal); literature reviews; identifying appropriate technical methodologies; biosafety and biosecurity requirements; human subjects and animal care and use approval process and requirements; collaboration development; analysis and discussion of expected results, project budgeting, and the grant submission process relevant to Thrust Area 6 of the FRCWMD-BAA through grants.gov. The workshop will include no more than 15 participants (no more than 10 from EPHI, and no more than 5 from NAHDIC) and each participant will have access to, and be able to work directly with the SMEs. The PM will be on-site providing logistical and programmatic support to the SMEs throughout the workshop and will ensure effective integration and overall congruency with CLS representation tasked with supporting the workshop. The PM will be responsible for ensuring the administration of the workshop survey and for collecting and aggregating all survey information. The PM will also provide daily training reports to DTRA CBEP representation and will coordinate with the PC, AEP leadership, and DTRA CBEP representation on a daily basis to ensure that any implementation risks are identified and mitigated appropriately. The PC will support the PM in the development and submission of a Training Trip Report (TTR) no later than 5 days after completion of the workshop.

Deliverables:

- Deliverable 1: Submission of participant survey results to DTRA CBEP representation no later than 10 days' post completion of workshop implementation activities.

Phase 3 – BAA Materials Development (Abstract, White Paper and Full Proposal) (August 1- October 14,2016)

Metabiota expects that the project team leaders representing EPHI and NAHDIC wi work to develop and revise their abstracts as part of the the Grantsmanship workshop, and also expects workshop to begin collaborating with relevant members of their team towards white paper development during the workshop the the best extent possible. Following the workshop, the EPHI-led and NAHDIC-led teams will each submit their abstract to DTRA. The teams will then immediately resume white paper development, regardless of whether or not a white paper has been invited. Each team will designate a lead point-of-contact who will submit the white paper to the SMEs. The SMEs will review the submitted materials and provide specific recommendations for improvement to each POC via phone, email, or Skype. The POCs will be responsible for relaying this information to their team and coordinating the revisions process. Each team will make revisions to the material and the POC will resubmit it to the SMEs for a second review. This process will continue until one of the following occurs: the SMEs deem the white papers are sufficiently well-developed for submission; the end of the project period of performance; or, assuming a white paper has been invited, the white paper submission deadline. Similarly, upon completion of the white papers, the teams will begin full proposal development with review of the technical volumes and budgets by the SMEs.

The project teams will submit the white papers to DTRA independent of SME assistance. Following submission, the project teams will initiate development of full proposals. SMEs will provide guidance and direction to the project POCs and review any draft materials submitted to them. The SMEs will continue to support the project teams in proposal development until the proposal is deemed ready for submission or the end of the Period of Performance is reached.

Deliverables:

- Deliverable 1: Abstract submitted by EPHI-led and NAHDIC-led teams, appropriate to Thrust Area 6 of the DTRA FRCWMD-BAA.
- Deliverable 2: White paper (including any requested clarifications and/or revisions) submitted by EPHI-led and NAHDIC-led teams appropriate for submission to grants.gov and Thrust Area 6 of the DTRA FRCWMD-BAA, if requested following successful review of the submitted abstract.
- Deliverable 3: Two full proposals (total) developed by EPHI-led and NAHDIC-led teams, respectively, appropriate for submission to Thrust Area 6 of the DTRA BAA.

Phase 4 – Project Closeout and White Paper Response Assistance (October 17- November 15, 2016)

Subphase 4.1 White Paper Response Assistance (October 17- November 15, 2016)
Following submission of respective white papers, provide final review and post-workshop support to participants as needed. The EPHI-led and NAHDIC-led teams may receive comments or requests for clarification from DTRA. If the teams receive this feedback within the project PoP, they will submit requests for assistance to the SMEs. After reviewing the feedback, the SMEs will provide the POCs with specific recommendations for addressing the comments. The POCs will coordinate the revisions to the white papers to address the comments and requests for clarification and submit a new draft to the SMEs. Following review, the SMEs will provide final comments or direction as necessary to the POCs.

Subphase 4.2 Final Report Submission (October 17- November 15, 2016)
Concurrently, and as part of closeout procedures, the Metabiota project team will write a final report detailing all actions taken throughout project implementation, lessons learned, and recommended next steps for submission to DTRA CBEP.

Risk Management.
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
				Cost		
Subject Matter Expert Subcontracting	Due to limited insight into participant profiles and research activities, additional costs and time-delays may occur to identify and coordinate the most appropriate SME coordination, which may impact the ability to conduct this activity in full.	3	3	Medium	Metabiota has preselected SMEs for this effort, and contingent understanding of the participants' work, Metabiota will evaluate the selected SMEs for inclusion. As needed, Metabiota will attempt to reach a basic agreement with SMEs as soon as possible and issue authorization to proceed while subcontracts are being put into place	(b)(4); (b)(6)
Participant Identification and Coordination	Due to Metabiota's limited insight regarding the participants of the Writing and Grantsmanship Workshop, and their respective academic and logistical capacities (i.e. possession of laptops, research tools, previously cited materials, quality of data sources, etc.), it is possible that the quality of improvement for their manuscripts may be hindered.	4	3	Medium-High	Metabiota will ensure that effective coordination and communication with Ethiopian Stakeholders is employed to ensure that a maximal amount of information about the participants, their research, and their respective capacities is garnered before the workshop. This will allow for the controlling of mentioned confounders and a managed increase in efficiency with regard to review and operation.	
Programmatic labor hours	Following guidance from CBEP POC's, the current budget for Metabiota Program Management and Project Coordination hours are extremely low. As a result, and based on previous experience implementing overseas activities, there is significant risk for budget overrun.	5	5	(b)(4); (b)(6)	Metabiota recommends an increase in overall labor hours based on the described tasks and previous performance on similar AEP programmatic work	Low
Technical labor hours	Technical labor hours may be insufficient for the continued mentorship of Ethiopian stakeholders and for the development of workshop materials if they do not exist.	4	5	Medium-High	Metabiota recommends an increase in overall labor hours based on the described tasks and previous performance on similar AEP programmatic work	Low
				Schedule		
Project Coordination	Technical Writing and Grantsmanship Workshop, Ethiopia involves a significant number of stakeholders and participants representing various organizations, putting implementation activities at risk of delay or cancellation.	5	2	Medium	Establish and hold regular calls with all stakeholders and identify multiple possible implementation dates. Identify critical components as early as possible and redirect efforts when it becomes clear that targeted implementation dates will not be achievable.	(b)(4); (b)(6)

Project Timeline	The current project timeline suggests workshop implementation between the dates of July 25-29. Implementation on this date will require near immediate concensus among project stakeholders to support the submission of a training event plan 60 days prior to implementation.	3	4	Medium-High	Metabiota will seek out and establish communciaiton with Ethiopian stakeholders immediately upon approval of the technical direction, and ensure that consensus on workshop implementation dates are established as expediently as possible.	(b)(4); (b)(6)
Performance/Quality						
Political Instability	Sporadic violence near borders and occasionally in the capital may lead to risks of being unable to safely complete in-country work.	2	5	Medium	Coordinate closely with DTRA and AFRICOM to be aware of any potential risks to performers, and target a location for the workshop well away from risky areas.	
Proposal Development	Direction has been given to facilitate the submission of two full proposals developed by EPHI-led and NAHDIC-led teams appropriate for submission to Thrust Area 6 of the DTRA BAA; however, a lack of clarity exists regarding proposed concepts and contributors they may pose a risk to overall submission quality.	3	4	Medium-High	Metabiota will request for all relevant documentation and information from DTRA CBEP immediately upon approval of this technical direction and will work to ensure that concepts and all proposal components are developed to the highest quality possible prior to submission so far as it can.	

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
0002	LABOR	$[illegible]
0003	MATERIALS	$[illegible]
0004	ODCS	$[illegible]
0005	TRAVEL	$[illegible]
TOTAL		$[illegible]

9c. TD SOLUTION BASIS OF ESTIMATE DESCRIPTION (NOT TO EXCEED 2 PAGES)

Period of Performance

The period of performance for this effort is May 2, 2016 – May 15, 2016.

Labor

Costs for direct labor to support this activity is required for the following personnel

All phases

Metabiota Program Manage (b)(6) will provide oversight of the planning and execution of all program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As some of our Subject Matter Experts will be independent consultants, the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including independent consultants throughout the span of the project.

The Metabiota PM will oversee the coordination between the Ethiopian stakeholders and the workshop planning team and will ensure the project team captures and keeps in account stakeholder input regarding key information relevant to the planning of the workshop. The PM will manage any logistic concerns that may arise during the course of the workshop, allowing the SMEs to maintain focus the workshop without interruption. The PM will restrict his time expenditure in country to an operational minimum while ensuring congruency in programmatic support.

Metabiota has budgeted a total 98 hours to the Metabiota PM For the activities described above. General programmatic oversight will require at minimum a 5% level of effort over the course of the 11 weeks to support phase 1 activities. During this time, the PM will be required to lead all weekly communications. The PM will also provide oversight to the PC and project SMEs, in an effort that is estimated to require at least 2 hours per week for a total of 22 during the phase 1. Phase 2 will include workshop implementation activities and will require the PM to commit at least a 50% level of effort during a 1 week period to ensure successful workshop implementation and for the provision of programmatic and logistical support to Project SMEs tasked with leading the workshop for a total of 20 hours . Phase 3 will task the PM to continue leading all stakeholder communications and to provide high level support and oversight to the PC and SMEs throughout post workshop activities. The PM will need to commit to a ~ 7.5% level of effort over 13 weeks for a total of 36 hours. Phase 4 will task the PM to continue leading all stakeholder communications and to provide support and oversight to the PC and SMEs throughout submission of response activities and final report development. The PM will lead the development of the final report with support from the PC and SMEs and will need to commit to at least a 10% level of effort over 4 weeks for a total of 12 hours.

Metabiota Project Coordinator: Calla Martyn will act as Project Coordinator (billed as Research and Data Analyst) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will provide coordination support towards the planning and execution of DTRA CBEP objectives towards the completion of all project goals. The PC will do so by participating in proposal development coordination and by leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The Metabiota PC will be responsible for setting meetings with team members, periodic reporting outreach to all Ethiopian stakeholders, and for recording meeting minutes during all communications. The PC will be responsible for developing all project CDRLs and for working with the PM to ensure their timely submission within the proposed project timeline. The PC will also be responsible for developing and maintaining all living contract documents including schedules, charters, work plans following stakeholder and client meetings.

Metabiota has budgeted a total 116 hours to the Metabiota PC For the activities described above. General programmatic coordination will require at minimum a 10% level of effort over the course of the 11 weeks to support phase 1 activities. During this time, the PC will be required to participate in and record all weekly communications and provide general support to the PM and project SMEs, an effort that is estimated to require at least 4 hours per week for a total of 44 during phase 1. Phase 2 will include workshop implementation activities and will require the PC to remotely support workshop implementation at a 10% level of effort during a 1-week period to ensure successful workshop implementation and transparent reporting to DTRA CBEP representation. Phase 3 will task the PC to continue participating in and recording all stakeholder communications and to provide support PM and SMEs throughout post workshop activities. The PC will need to commit to a ~10% level of effort over 13 weeks for a total of 48 hours. Phase 4 will task the PC to continue participating in and recording all stakeholder communications and to provide support to the PM and SMEs throughout submission response activities and final report development. The PC will need to commit to at least a 10% level of effort over 4 weeks for a total of 12 hours.

Subject Matter Expert I (2 total): The SME Is will be tasked with providing workshop materials, workshop participation, and mentoring of workshop participants following

workshop conclusion. During phase 1 the SMEs will review the workshop materials to make any necessary updates and ensure the materials' relevance to the Ethiopian scientists. It is estimated that the SMEs will need to develop up to 25% original workshop material to supplement existing workshop materials. The hours necessary for this development were estimated using a ratio of 4 hours of development for each hour of contact time

During phase 2 the SMEs will deliver lectures on topics relevant to grant writing and submission, and facilitate small group work based on this content. Phase 3 will commence following workshop completion. During this phase, the SMEs will provide remote support to the POCs for the EPHI and NAHDIC teams in their development of an abstract and white paper suitable for submission to DTRA BAA Thrust Area 6. Upon receipt from the POCs, the SMEs will review the drafts of these documents and provide feedback via telephone, email or skype. During phase 4, following submission of white papers by the EPHI-led and NAHDIC-led teams, the SMEs will provide further assistance to the POCs in responding to any comments or revisions requested by DTRA CBEP.

Metabiota has budgeted a total of 384 hours to the Metabiota SMEs for the activities described above. Project coordination and materials development activities during this phase are estimated to require 46 hours per SME over the course of 15 weeks for a total of 92 hours. The SMEs will be required to participate in regular communication with and provide general support to the PM during phase 1 activities. Phase 2 will include workshop implementation activities and will require the SMEs to be available in country at a 100% level of effort during a 1-week period to ensure successful workshop implementation and transparent reporting to the PM. The SMEs will be required to travel to Ethiopia from the United States for this phase and will spend a 7 full days at a 100% level of effort each. Thus a total of 56 hours per SME will be required for Phase 2. Phase 3 will task the SMEs to continue participating in relevant stakeholder communications and to provide SME support throughout post workshop activities. The SMEs will need to commit no less than 70 hours total over 10 weeks each for a total of 140 hours. Phase 4 will task the SMEs to continue participating in relevant stakeholder communications and to provide support throughout submission response activities. The SMEs will need to commit to at least 5 hours per week over 4 weeks for a total of 20 hours each.

Materials
We have budgeted for an effort based international communications capacity for our project team while they are in country implementing the workshop. The costs budgeted here reflect activating a moderate calling plan to support the efforts of the program manager and subject matter experts.

Other Direct Costs
Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Independent Consulting Agreements
Consulting agreements will be issued to SMEs and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Support is requested for two SMEs to travel to Addis Ababa to implement the writing workshop. The travel budget represents the estimated amount required; travel on the AEP contract is cost reimbursable. Metabiota expects to leverage other requirements for travel in order to have the PM in-country for the grantsmanship workshop at no additional cost.

Our travel budget assumes the workshop will be held on 5 consecutive days. If, through discussion with the Ethiopian stakeholders, and alternative schedule is created or an alternative location is desired, travel costs may be impacted accordingly.

10. FUNDING AUTHORIZED THIS TD REV:

CLIN	COST CODE	COST	POP START	POP END
1002	LABOR	$ 71,092.60		
1003	MATERIALS	$ 1,579.05		
1004	ODCs	$ 647.16		
1005	TRAVEL	$ 13,639.00

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to develop a writing workshop for Ethiopian collaborators from the Ethiopian Public Health Institute (EPHI) and National Animal Health Diagnostic and Investigation Center (NAHDIC) in accordance with SOW, Section 4.1, 4.2, 4.3, 4.4. This technical directive provides guidance to assist Metabiota in establishing a proposed implementation approach and budget for the period of performance from April 2016 to May 2016. During the PoP, Metabiota shall provide the following:

a. Metabiota shall reach out directly to (b)(6) the main POC from EPHI and (b)(6) the main [illegible] as the collaborators have already [illegible] op participants and will provide the names to Metabiota. Metabiota shall provide a PM and a SME1 for the pre-coordination of the workshop. The hours required for the pre-coordination should not exceed 10 hours/week for three weeks each for the PM and the SME1. Communication with (b)(6) should also include the discussion of the venue and logistic details regarding the implementation of the workshop.
b. Metabiota shall use already developed training material for the workshop when possible, including PowerPoint presentations and hands-on exercises aimed at developing grantsmanship skills. For the curriculum planning and the development of new material if needed, Metabiota shall not exceed a total of 20 hours of one SME1 effort.
c. The in-country writing workshop provided by Metabiota shall cover all aspects and skills within the grant writing process, especially those specific to grants.gov submission system used for the DTRA Fundamental Research for Combating Weapons of Mass Destruction Broad Agency Announcement (FRCWMD-BAA). Specific technical subjects that shall be included in the workshop are: hypothesis development, research proposal development (including the development of an abstract, white paper, and full proposal); literature reviews; identifying appropriate technical methodologies; biosafety and biosecurity requirements; human subjects and animal care and use approval process and requirements; collaboration development; analysis and discussion of expected results; project budgeting; and the grant submission process relevant to Thrust Area 6 of the FRCWMD-BAA through grants.gov. The workshop shall include hands-on assignments which focus on scientific writing and distinguishes the unique styles associated with abstracts, white papers, and full proposals ensuring the participants are fully prepared for future grant proposal development. The writing workshop shall be no more than five (5) days with a maximum number of 15 partner participants, with up to ten (10) participants identified as part of (b)(6) research team and up to five (5) participants identified by (b)(6) Metabiota shall provide up to two (2) SME1s (preferably the same personnel that were involved in the pre-coordination activities) for in-country [illegible]s and hands-on training of the workshop participants. Both SME1s will be expected to arrive one (1) day prior to the workshop and leave no later than one (1) day after the workshop is completed. It is anticipated that approximately 50 hours/SME will be required for successful in-country preparation and execution of the workshop.
d. Metabiota shall include a final survey incorporating the participants' thoughts on how the workshop helped develop their writing skills as a deliverable to DTRA/CBEP.
e. Following the completion of the workshop, Metabiota shall guide one EPHI-led and one NAHDIC-led team to apply their new skills to develop materials for submission to the BAA (abstract, white paper, full proposal). The EPHI-led team shall draft proposal material for the project that has been in pre-coordination with CBEP: "Prevalence and associated risk factors of Rift Valley and Crimean-Congo hemorrhagic fever viruses in humans and livestock in pastoral areas in Ethiopia" or a research project of their preference. The NAHDIC-led team shall also draft proposal material for submission to the BAA in alignment with CBEP's research interests and mission scope. Metabiota shall provide remote technical assistance to both teams to apply the lessons learned to develop an abstract, white paper, and full proposal materials for submission to Thrust Area 6 of the FRCWMD-BAA. Metabiota shall provide up to two (2) SME1 (preferably the same personnel who participated in the in-country writing workshop) to receive and review the materials from the Ethiopian partners and to provide comments. The Ethiopian partners and the SMEs shall discuss feedback, via email, telephone or skype, regarding the abstract, white paper, and full proposal on a weekly basis for approximately 10 weeks for a maximum average of 5 hours/week, 50 hours total, per each team (the total hours may be divided unevenly during the 10 week period as the development of the full proposal will take the bulk of the discussion/feedback time). The reviews of the materials shall include not only feedback on the technical aspects of the documents but all aspects of the writing process. Program Management support for activities described in c.-e. Metabiota shall provide a PM; the hours required for the PM should not exceed 2 hours/week for eleven weeks.
f. If a white paper is requested by DTRA/CBEP, it is expected that EPHI-led and NAHDIC-let teams will submit it in a timely manner without Metabiota's assistance. However, upon receipt of comments or requested revisions of the white paper, Metabiota shall assist the Ethiopian partners in the development of a response to reviewers' comments. It is anticipated that this support may require up to 20 hours total per team to assist in the development of a response to reviewers.

Deliverables:

1. Survey of participants incorporating participants' thoughts on the workshop and how it assisted them as scientific writers.
2. Deliverables expected (described in section e. and f.):
   Deliverable #1: Abstract submitted by EPHI-led and NAHDIC-led teams, appropriate to Thrust Area 6 of the DTRA FRCWMD-BAA.
   Deliverable #2: White paper (including any requested clarifications and/or revisions) submitted by EPHI-led and NAHDIC-led teams appropriate for submission to grants.gov and Thrust Area 6 of the DTRA FRCWMD-BAA, if requested following successful review of the submitted abstract.
   Deliverable #3: Full proposals developed by EPHI-led and NAHDIC-led teams appropriate for submission to Thrust Area 6 of the DTRA BAA.

The period of performance for this effort will be from 2 May 2016 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $61,000 is requested by 29 April 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Phase 0: Proposal Development & Initiation (April 27-April 29, 2016)

Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-025 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as a Research and Data Analyst (RDA)) time to identify the optimal strategy, including required deliverables and other programmatic requirements, which may be a part of project implementation.

The Metabiota PM and PC coordinated wi(b)(6) Metabiota's Executive Vice President (EVP) in charge of Science Integration and communication with our regional scientific networks to identify the [redacted] technical writing and grantsmanship, to develop and augment project work plans and training materials. Ultimately, this measure was taken to ensure our technical and cost solutions were of the highest quality and sustainable, respectively.

Key Assumptions:

1. Metabiota received unofficial communication supporting an extension of its AEP contract from May 15, 2016 to November 15, 2016, this technical response has been developed with the key assumption that this additional time will be allotted to this project.
2. Metabiota assumes the need to acquire PAO approvals for any and all training materials developed in support of the Technical Writing and Grantsmanship Workshop
3. The Metabiota project team will receive all necessary or relevant concept notes or supporting documentation associated with this project immediately upon technical approach approval.
4. Metabiota assumes that workshop participants representing EPHI and NAHDIC as Technical Writing and Grantsmanship Workshop participants have already been identified and notified of their potential for inclusion in a 5-day training event
5. Metabiota assumes that no more than 25% of all training materials developed in support of the Technical Writing and Grantsmanship Workshop will be novel, and that existing developed training materials will be identified and utilized.
6. Metabiota will provide SME support to EPHI-led and NAHDIC-led teams for concept development and submission to the BAA, but does not expect to support concept identification.
7. Metabiota assumes that engagement with EPHI and NAHDIC throughout this project will involve a single lead point of contact from each respective organization, and that direct communication with individual team members from these organizations will not be necessary.
8. Metabiota assumes all workshop participants are proficient in English and no translation of materials or interpretation of lectures will be necessary.
9. Metabiota assumes all workshop participants are in possession of a functional Wi-Fi enabled laptop with a standard business productivity software suite (Microsoft Office, Apple iWork, Google Docs).

Phase 1 – Project Coordination and Workshop Preparation (May 9-November 15, 2016)

Sub-Phase 1.1: Stakeholder Coordination (May 9-November 15, 2016)

Upon approval of the TD, Metabiota will engage DTRA CBEP for a project kick-off call to ensure that a mutual understanding of project goals and objectives are realized, ensure that any historical documentation relevant to project implementation is received, and establish a bi-weekly reporting and communication protocol. Metabiota will additionally engage identified Ethiopian points of contact representing EPHI and NAHDIC to establish consensus on project goals and the intended path forward. Metabiota will also establish regular bi-weekly communications with Ethiopian stakeholders and identify an associated communication protocol. In an effort to reduce personnel coordination risk and ensure that effective communication is maintained Metabiota will clearly identify the expected roles and responsibilities of EPHI and NAHDIC team leaders as the primary and sole contact points for their organizations.

Sub-Phase 1.2: Workshop Materials Development (May 9-June 10, 2016)

Upon approval of the TD, Metabiota will seek existing workshop materials that cover subjects relevant to proposal writing. Metabiota may utilize materials available internally, from open-access sources, or from subcontractors engaged as SMEs Once selected, Metabiota will review these materials and identify any additions that need to be made. While the workshop will cover proposal writing in general, Metabiota expects to provide some direction on writing to DTRA BAA Thrust Area 6 specifically. In light of this, Metabiota will develop any supplements to the existing workshop material that are necessary to convey this information. Metabiota assumes these supplements will constitute up to 25% new material. The final materials will include PowerPoint presentations and hands-on learning exercises covering hypothesis development, research proposal development, literature reviews, methods selection, biosafety and biosecurity requirements, human and animal subject use requirements, development of collaborations, analysis and discussion of expected results, budget development, and the grant submission process specific to BAA Thrust Area 6. Metabiota will also develop a post-workshop survey to solicit feedback from participants on the relevance and utility of the workshop. Once all materials have been internally reviewed and finalized Metabiota will submit them to DTRA for PAO approval.

Deliverables:

- Deliverable 1: Submission of developed post workshop survey to DTRA CBEP representation
- Deliverable 2: Submission of Technical Writing and Grantsmanship Workshop Materials to DTRA CBEP for PAO approval

Sub-Phase 1.3: Workshop Implementation Preparation (May 9-July 22, 2016)

Metabiota expects a total of no more than (15) previously identified participants wil be invited to the Technical Writing and Grantsmanship Workshop including no more than (10) representing(b)(6) m from EPHI and no more than (5) representing(b)(6) team from NAHDIC. Immediately upon engagement with identified Ethiopi will work collaboratively with team leads repres NAHDIC to clearly identify workshop participants, dates and a location for the event. Metabiota will inform all workshop participants to come prepared with relevant resources including their own personal Wi-Fi-enabled laptop computer with standard business productivity software Metabiota will develop and submit a Training Event Plan (TEP) detailing this information to DTRA CBEP no later than 60 days prior to workshop implementation. As all in-country logistical support services relevant to this workshop will be coordinated through CLS, Metabiota expects to submit a CLS form detailing all necessary accommodations for all training participants no later than 45 days prior to workshop implementation. Metabiota additionally expects to send two U.S. based project SMEs to Ethiopia to lead the Technical Writing and Grantsmanship Workshop and will submit a Cable Clearance Request (CCR) and Travel Authorization Request to DTRA CBEP representation no later than 45 days prior to scheduled travel for workshop implementation. Metabiota will also develop a pre-travel risk report and gain internal approval from AEP leadership prior to sending any members of its project team to Ethiopia. Additionally, Metabiota SMEs will coordinate with(b)(6) (b)(6) familiarize themselves with the participants' existing work and to assign them preparatory tasks leading up to the workshop such as brainstorming possible research ideas

Phase 2 – Technical Writing and Grantsmanship Workshop Implementation (July 25-29, 2016)

Metabiota will conduct a five-day workshop on specific aspects of technical writing and grantsmanship in order to train and mentor selected representation from EPHI and NAHDIC. The workshop will help participants improve their general technical writing and grantsmanship skills and provide specific focus on the grants.gov submission system used for the DTRA Fundamental Research for Combating Weapons of Mass Destruction Broad Agency Announcement (FRCWMD-BAA).

Metabiota will accomplish this by sending 2 technical writing and grantsmanship SMEs to the identified training location within Ethiopia to lead the the 5-day Technical Writing and Grantsmanship Workshop. This workshop will include five days of lectures and team specific working group sessions to cover topics including but not limited to: hypothesis development, research proposal development (including the development of an abstract, white paper, and full proposal); literature reviews; identifying appropriate technical methodologies; biosafety and biosecurity requirements; human subjects and animal care and use approval process and requirements; collaboration development; analysis and discussion of expected results; project budgeting; and the grant submission process relevant to Thrust Area 6 of the FRCWMD-BAA through grants.gov. The workshop will include no more than 15 participants (no more than 10 from EPHI, and no more than 5 from NAHDIC) and each participant will have access to, and be able to work directly with the SMEs. The PM will be on-site providing logistical and programmatic support to the SMEs throughout the workshop and will ensure effective integration and overall congruency with CLS representation tasked with supporting the workshop. The PM will be responsible for ensuring the administration of the workshop survey and for collecting and aggregating all survey information. The PM will also provide daily training reports to DTRA CBEP representation and will coordinate with the PC, AEP leadership, and DTRA CBEP representation on a daily basis to ensure that any implementation risks are identified and mitigated appropriately. The PC will support the PM in the development and submission of a Training Trip Report (TTR) no later than 5 days after completion of the workshop.

Deliverables:

- Deliverable 1: Submission of participant survey results to DTRA CBEP representation no later than 10 days' post completion of workshop implementation activities.

Phase 3 – BAA Materials Development (Abstract, White Paper and Full Proposal) (August 1- October 14,2016)

Metabiota expects that the project team leaders representing EPHI and NAHDIC wil work to develop and revise their abstracts as part of the the Grantsmanship workshop, and also expects workshop to begin collaborating with relevant members of their team towards white paper development during the workshop the the best extent possible. Following the workshop, the EPHI-led and NAHDIC-led teams will each submit their abstract to DTRA. The teams will then immediately resume white paper development, regardless of whether or not a white paper has been invited. Each team will designate a lead point-of-contact who will submit the white paper to the SMEs. The SMEs will review the submitted materials and provide specific recommendations for improvement to each POC via phone, email, or Skype. The POCs will be responsible for relaying this information to their team and coordinating the revisions process. Each team will make revisions to the material and the POC will resubmit it to the SMEs for a second review. This process will continue until one of the following occurs: the SMEs deem the white papers are sufficiently well-developed for submission; the end of the project period of performance; or, assuming a white paper has been invited, the white paper submission deadline. Similarly, upon completion of the white papers, the teams will begin full proposal development with review of the technical volumes and budgets by the SMEs.

The project teams will submit the white papers to DTRA independent of SME assistance. Following submission, the project teams will initiate development of full proposals. SMEs will provide guidance and direction to the project POCs and review any draft materials submitted to them. The SMEs will continue to support the project teams in proposal development until the proposal is deemed ready for submission or the end of the Period of Performance is reached.

Deliverables:

- Deliverable 1: Abstract submitted by EPHI-led and NAHDIC-led teams, appropriate to Thrust Area 6 of the DTRA FRCWMD-BAA.
- Deliverable 2: White paper (including any requested clarifications and/or revisions) submitted by EPHI-led and NAHDIC-led teams appropriate for submission to grants.gov and Thrust Area 6 of the DTRA FRCWMD-BAA if requested following successful review of the submitted abstract.
- Deliverable 3: Two full proposals (total) developed by EPHI-led and NAHDIC-led teams, respectively, appropriate for submission to Thrust Area 6 of the DTRA BAA.

Phase 4 – Project Closeout and White Paper Response Assistance (October 17- November 15, 2016)

Subphase 4.1 White Paper Response Assistance (October 17- November 15, 2016)
Following submission of respective white papers, provide final review and post-workshop support to participants as needed. the EPHI-led and NAHDIC-led teams may receive comments or requests for clarification from DTRA. If the teams receive this feedback within the project PoP, they will submit requests for assistance to the SMEs. After reviewing the feedback, the SMEs will provide the POCs with specific recommendations for addressing the comments. The POCs will coordinate the revisions to the white papers to address the comments and requests for clarification and submit a new draft to the SMEs. Following review, the SMEs will provide final comments or direction as necessary to the POCs.

Subphase 4.2 Final Report Submission (October 17- November 15, 2016)
Concurrently, and as part of closeout procedures, the Metabiota project team will write a final report detailing all actions taken throughout project implementation, lessons learned, and recommended next steps for submission to DTRA CBEP.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
				Cost		
Subject Matter Expert Subcontracting	Due to limited insight into participant profiles and research activities, additional costs and time-delays may occur to identify and coordinate the most appropriate SME coordination, which may impact the ability to conduct this activity in full	3	3	Medium	Metabiota has preselected SMEs for this effort, and contingent understanding of the participants' work. Metabiota will evaluate the selected SMEs for inclusion. As needed, Metabiota will attempt to reach a basic agreement with SMEs as soon as possible and issue authorization to proceed while subcontracts are being put into place.	(b)(4); (b)(6)
Participant Identification and Coordination	Due to Metabiota's limited insight regarding the participants of the Writing and Grantsmanship Workshop, and their respective academic and logistical capacities (i.e. possession of laptops, research tools, previously cited materials, quality of data sources, etc.), it is possible that the quality of improvement for their manuscripts may be hindered.	4	3	Medium-High	Metabiota will ensure that effective coordination and communication with Ethiopian Stakeholders is employed to ensure that a maximal amount of information about the participants, their research, and their respective capacities' is garnered before the workshop. This will allow for the controlling of mentioned confounders, and a managed increase in efficiency with regard to review and operation.	
Programmatic labor hours	Following guidance from CBEP POC's, the current budget for Metabiota Program Management and Project Coordination hours are extremely low. As a result, and based on previous experience implementing overseas activities, there is significant risk for budget overrun.	5	5	(b)(4); (b)(6)	Metabiota recommends an increase in overall labor hours based on the described tasks and previous performance on similar AEP programmatic work	Low
Technical labor hours	Technical labor hours may be insufficient for the continued mentorship of Ethiopian stakeholders and for the development of workshop materials if they do not exist.	4	5	Medium-High	Metabiota recommends an increase in overall labor hours based on the described tasks and previous performance on similar AEP programmatic work	Low
				Schedule		
Project Coordination	Technical Writing and Grantsmanship Workshop, Ethiopia involves a significant number of stakeholders and participants representing various organizations, putting implementation activities at risk of delay or cancellation.	5	2	Medium	Establish and hold regular calls with all stakeholders and identify multiple possible implementation dates. Identify critical components as early as possible and redirect efforts when it becomes clear that targeted implementation dates will not be achievable.	(b)(4); (b)(6)

						(b)(4); (b)(6)
Project Timeline	The current project timeline suggests workshop implementation between the dates of July 25-29. Implementation on this date will require near immediate concensus among project stakeholders to support the submission of a training event plan 60 days prior to implementation.	3	4	Medium-High	Metabiota will seek out and establish communciaiton with Ethiopian stakeholders immediately upon approval of the technical direction, and ensure that consensus on workshop implementation dates are established as expediently as possible.	
			Performance/Quality			
Political Instability	Sporadic violence near borders and occasionally in the capital may lead to risks of being unable to safely complete in-country work.	2	5	Medium	Coordinate closely with DTRA and AFRICOM to be aware of any potential risks to performers, and target a location for the workshop well away from risky areas	
Proposal Development	Direction has been given to facilitate the submission of two full proposals developed by EPHI-led and NAHDIC-led teams appropriate for submission to Thrust Area 6 of the DTRA BAA; however, a lack of clarity exists regarding proposed concepts and contributors they may pose a risk to overall submission quality	3	4	Medium-High	Metabiota will request for all relevant documentation and information from DTRA CBEP immediately upon approval of this technical direction and will work to ensure that concepts and all proposal components are developed to the highest quality possible prior to submission so far as it can.	

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$71,497.00
1003	MATERIALS	$1,350.00
1004	ODCS	$2,610.00
1005	TRAVEL	$11,300.00
TOTAL		$86,957.81

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES).

Period of Performance

The period of performance for this effort is May 2, 2016 – May 15, 2016.

Labor

Costs for direct labor to support this activity is required for the following personnel

All phases

Metabiota Program Manager (b)(6) will provide oversight of the planning and execution of all program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As some of our Subject Matter Experts will be independent consultants, the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including independent consultants throughout the span of the project.

The Metabiota PM will oversee the coordination between the Ethiopian stakeholders and the workshop planning team and will ensure the project team captures and keeps in account stakeholder input regarding key information relevant to the planning of the workshop. The PM will manage any logistic concerns that may arise during the course of the workshop, allowing the SMEs to maintain focus the workshop without interruption. The PM will restrict his time expenditure in country to an operational minimum while ensuring congruency in programmatic support.

Metabiota has budgeted a total 98 hours to the Metabiota PM For the activities described above. General programmatic oversight will require at minimum a 5% level of effort over the course of the 11 weeks to support phase 1 activities. During this time, the PM will be required to lead all weekly communications. The PM will also provide oversight to the PC and project SMEs, in an effort that is estimated to require at least 2 hours per week for a total of 22 during the phase 1. Phase 2 will include workshop implementation activities and will require the PM to commit at least a 50% level of effort during a 1 week period to ensure successful workshop implementation and for the provision of programmatic and logistical support to Project SMEs tasked with leading the workshop for a total of 20 hours . Phase 3 will task the PM to continue leading all stakeholder communications and to provide high level support and oversight to the PC and SMEs throughout post workshop activities. The PM will need to commit to a ~ 7.5% level of effort over 13 weeks for a total of 36 hours. Phase 4 will task the PM to continue leading all stakeholder communications and to provide support and oversight to the PC and SMEs throughout submission of response activities and final report development. The PM will lead the development of the final report with support from the PC and SMEs and will need to commit to at least a 10% level of effort over 4 weeks for a total of 12 hours.

Metabiota Project Coordinator (b)(6) ct as Project Coordinator (billed as Research and Data Analyst) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will provide coordination support towards the planning and execution of DTRA CBEP objectives towards the completion of all project goals. The PC will do so by participating in proposal development coordination and by leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The Metabiota PC will be responsible for setting meetings w th team members, periodic reporting outreach to all Ethiopian stakeholders, and for recording meeting minutes during all communications. The PC will be responsible for developing all project CDRLs and for working with the PM to ensure their timely submission within the proposed project timeline. The PC will also be responsible for developing and maintaining all living contract documents including schedules, charters, work plans following stakeholder and client meetings.

Metabiota has budgeted a total 116 hours to the Metabiota PC For the activities described above. General programmatic coordination will require at minimum a 10% level of effort over the course of the 11 weeks to support phase 1 activities. During this time, the PC will be required to participate in and record all weekly communications and provide general support to the PM and project SMEs, an effort that is estimated to require at least 4 hours per week for a total of 44 during phase 1. Phase 2 will include workshop implementation activities and will require the PC to remotely support workshop implementation at a 10% level of effort during a 1-week period to ensure successful workshop implementation and transparent reporting to DTRA CBEP representation. Phase 3 will task the PC to continue participating in and recording all stakeholder communications and to provide support PM and SMEs throughout post workshop activities. The PC will need to commit to a ~10% level of effort over 13 weeks for a total of 48 hours. Phase 4 will task the PC to continue participating in and recording all stakeholder communications and to provide support to the PM and SMEs throughout submission response activities and final report development. The PC will need to commit to at least a 10% level of effort over 4 weeks for a total of 12 hours.

Subject Matter Expert I (2 total): The SME Is will be tasked with providing workshop materials, workshop participation, and mentoring of workshop participants following

workshop conclusion. During phase 1 the SMEs will review the workshop materials to make any necessary updates and ensure the materials' relevance to the Ethiopian scientists. It is estimated that the SMEs will need to develop up to 25% original workshop material to supplement existing workshop materials. The hours necessary for this development were estimated using a ratio of 4 hours of development for each hour of contact time

During phase 2 the SMEs will deliver lectures on topics relevant to grant writing and submission, and facilitate small group work based on this content. Phase 3 will commence following workshop completion. During this phase, the SMEs will provide remote support to the POCs for the EPHI and NAHDIC teams in their development of an abstract and white paper suitable for submission to DTRA BAA Thrust Area 6. Upon receipt from the POCs, the SMEs will review the drafts of these documents and provide feedback via telephone, email or skype. During phase 4, following submission of white papers by the EPHI-led and NAHDIC-led teams, the SMEs will provide further assistance to the POCs in responding to any comments or revisions requested by DTRA CBEP.

Metabiota has budgeted a total of 384 hours to the Metabiota SMEs for the activities described above. Project coordination and materials development activities during this phase are estimated to require 46 hours per SME over the course of 15 weeks for a total of 92 hours. The SMEs will be required to participate in regular communication with and provide general support to the PM during phase 1 activities. Phase 2 will include workshop implementation activities and will require the SMEs to be available in country at a 100% level of effort during a 1-week period to ensure successful workshop implementation and transparent reporting to the PM. The SMEs will be required to travel to Ethiopia from the United States for this phase and will spend a 7 full days at a 100% level of effort each. Thus a total of 56 hours per SME will be required for Phase 2. Phase 3 will task the SMEs to continue participating in relevant stakeholder communications and to provide SME support throughout post workshop activities. The SMEs will need to commit no less than 70 hours total over 10 weeks each for a total of 140 hours. Phase 4 will task the SMEs to continue participating in relevant stakeholder communications and to provide support throughout submission response activities. The SMEs will need to commit to at least 5 hours per week over 4 weeks for a total of 20 hours each

Materials
We have budgeted for an effort based international communications capacity for our project team while they are in country implementing the workshop. The costs budgeted here reflect activating a moderate calling plan to support the efforts of the program manager and subject matter experts

Other Direct Costs
Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Independent Consulting Agreements
Consulting agreements will be issued to SMEs and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Support is requested for two SMEs to travel to Addis Ababa to implement the writing workshop. The travel budget represents the estimated amount required; travel on the AEP contract is cost reimbursable. Metabiota expects to leverage other requirements for travel in order to have the PM in-country for the grantsmanship workshop at no additional cost.

Our travel budget assumes the workshop will be held on 5 consecutive days. If, through discussion with the Ethiopian stakeholders, and alternative schedule is created or an alternative location is desired, travel costs may be impacted accordingly.

Subject: HDTRA1-14-C-0104 Technical Direction for continued implementation of Research Project Ukraine TADR Activity Project 4 (TAP-4).

Dear (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to continue implementation of UP TAP-4 to establish and standardize a regional alliance between CBEP partner countries with Eastern Europe to raise awareness to and provide education of African Swine Fever, in accordance with SOW section 4.3, Task 6. Contract modification P0010 included the exercise option of Task 6 for Research Activity Projects, granting direction to Metabiota to provide scientific and administrative management to UP TAP-4 research project during the Base Period. Metabiota was tasked to facilitate efforts in Ukraine to identify and educate those persons who work with swine to recognize clinical and epidemiological matters of ASF; and specifically, for those workers who understand common sources and routes of exposure, preventative measures, how to recognize symptoms, and how to respond to suspected ASF cases. A proposal and estimated budget for implementing this requirement is requested by 29 June 2015.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with the DTRA CBEP Points of Contact listed below.

Subject: HDTRA1-14-C-0104 Technical Direction for continued implementation of Research Activity Project UP-2 (Ukraine Project 2).

Dear (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to continue implementation of UP-2 to provide research collaborators across Ukraine partner institutes in accordance with SOW section 4.3, Task 6. Contract modification P0010 included the exercised option of Task 6 for Research Activity Projects, granting direction to Metabiota to provide scientific and administrative management to UP-2 research project during the Base Period. A proposal and estimated budget for implementing this requirement is requested by 29 June 2015.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with the DTRA CBEP Points of Contact listed below.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE).

This revision extends to Period of Performance (PoP) end date for TD-00' from 30 November 2015 to 30 April 2016. This PoP extension is to provide enough time to accomplish required Leahy vetting of participants, and ensure that the training and any attendant administrative requirements are addressed. Metabiota should coordinate directly with the Technical POCs identified below to identify a new training date following completion of Leahy vetting. No changes to the previously approved proposal are required at this time.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision changes the end date for the period of performance for this effort to 30 September 2015 and establishes a not to exceed value of $225.000.00 for implementation activities from 16 May 2015 through 30 September 2015.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Technical Approach

Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. To achieve these purposes, Metabiota will support activities within three specific project goal categories to learn from the history of these zoonoses while also proactively managing any future threats. These goals and their corresponding tasks are organized to provide long-term, sustainable teams across UP institutes to maintain this and future efforts. Please note the Priority and Task numbers (below) track with the approved UP-2 proposal submitted 5 September 2014 (AEP base year).

Phase 1: Active surveillance for tick-borne diseases, specifically tularemia caused by *Francisella tularensis*
- Priority 1: Task 2.3: PCR and culture diagnostic efforts for *F. tularensis*

Phase 2: Surveillance and environmental sampling for *Bacillus anthracis*
- Priority 2: Task 3.1: Investigating recent and ongoing anthrax outbreaks
- Priority 2: Subtask 3.1.1: Sampling Blood from Animals without Clinical Symptoms (e.g., wild boar)
- Priority 4: Task 3.2: Laboratory analyses for *B. anthracis* for UP-2

Phase 3: GIS, remote sensing, and micro/molecular diagnostics
- Priority 1 (*F. tularensis)*: Task 4.3.1: Space-time Analyses for historical and field data
- Priority 1 (*F. tularensis)*: Task 4.3.2: Remote Sensing
- Priority 1 (*B. anthracis)*: Task 4.2: Ecological Niche Modeling experiments

Process: To achieve these goals, Metabiota provided various logistic, coordination, and performer support across all phases and all stakeholders. Specifically, Metabiota provided support for Subject Matter Expertise to conduct GIS mapping activities with the Institute of Veterinary Medicine (IVM) in July, 2015, materials and equipment support and biosafety cabinet recertification to the IVM, Volyn Oblast Laboratory Center of the State Sanitary and Epidemiological Services of Ukraine (VOLC), and the Ukrainian Center for Disease Control and monitoring of the Ministry of Health of Ukraine (UCDC), and process support and coordination for all stakeholders including identifying critical process requirements to conduct in-country travel and research activities, such as Animal Care and Use Review Office (ACURO).

Moreover, in support of achieving all objectives through Phases 1-3, Metabiota provided support for Ukrainian UP-2 collaborators to conduct research activities via a subcontract with CRDF Global.

Deliverables:
Metabiota:
- Supported the development and submission of animal care and use Review Office (ACURO) applications
- Issued sub-contractual agreements with Kansas State University in support of research activities
- Conducted procurement activities for laboratory equipment and supplies at VOLC, IVM, and UCDC
- Coordinated Biosafety Cabinet re-certification at VOLC, IVM, and UCDC
- Supported stakeholders from the University of Florida to conduct GIS mapping activities at IVM in late July 2015

Metabiota-supported Ukrainian Research Scientists:
UCDC
- Collected tick samples in Volyn oblast in May 2015, which were received and registered. In total, 1862 ticks were delivered and subsequently grouped into 140 pools
- Field material collected during previous iterations of UP-2 was tested for tularemia, including samples from 64 rodents (256 organs/tests) and 171 tick pools (171 tests). All results were negative
- Biological samples were tested using PCR (320 tests: 43 rodents (43 organs / 90 tests) and 115 tick pools (230 tests). Besides, 206 DNA samples (35 rodent spleens and 171 tick pools) were isolated. Studies will be finished in the 4th Quarter. 8 samples showed doubtful results and will be retested in the next quarter

VOLC
- Assessed supply needs for personal protective equipment, including gowns, respirators, gloves, etc., as well as laboratory materials, needed for research and needed for transportation of biological specimens
- Conducted field collection of ticks (1862), which were grouped according to their species into test tubes (25 ticks per tube), and then into

140 pools for delivery to the UCDC EDP laboratory.

IVM

- Developed ecological niche models of *B. anthracis* using GARP (Genetic algorithm for rule set production), in a resolution 16 and 8 km^2
- Developed count models of *B. anthracis* using Negative Binomial Regression in a resolution 16 km^2 and on rayon level
- Conducted soil sampling expedition preparation, including: choice of places selection, getting permissions and coordination with the local veterinary service of Ukraine
- Prepared and reviewed SOPs for soil sampling, materials decontamination and sera testing with ELISA test kit
- Designed and choose primers for PCR testing of soil samples for anthrax pathogen detection

Significant work remains to complete all UP-2 objectives, including sample collection and processing, assay validation, GIS-related analyses, and associated manuscript preparations. As of 1 October 2015, these activities will be implemented under the BTRIC TO-4 contract.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Period of Performance

The Period of Performance for this effort is May 16, 2015 to September 30, 2015.

Direct Labor

All phases:
Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As our Subject Matter Experts were independent consultants, the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including independent consultants throughout the span of the project.

Metabiota Trainer 1: The Metabiota Trainer 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

For the efficient and effective project implementation it is requested to engage the following experts.

Institutional Financial Support (IFS)

Importantly, the original CRDF subcontract was to be billed under ODCs under the FFP portion of the AEP contract. With the move to the T&M, incorporating these costs as labor even at the lowest labor category would cause the price to skyrocket, so we are only registering a fraction of the hours worked – enough to cover the costs of the Ukrainian labor and all management fees.

CRDF Global is an independent nonprofit organization that promotes international science collaborations and full-service grant administration. Metabiota will engage CRDF Global for disbursement of funds to Ukrainian project recipients as well as grant payments to institutions participating in the UP-2 project. CRDF will provide Metabiota with transparent monitoring and detailed reporting of the grant payments.

Via CRDF, Metabiota will provide grant payments to the below institutes to support salaries of participating scientists.

IFS of the Ukrainian Centers for Disease Control (UCDC) and IFS of Volyn Oblast Lab Center (VOLC) personnel – In order to achieve the project's goals and objectives related *F. tularensis* research, it is anticipated that 14 UCDC and eight VOLC personnel will require salary support.

The workload identified for the UCDC staff is based on their previous engagement in the UP-2 Project Development Grant (PDG) and nearly two years of work on the project under the BTRIC. The reimbursement rates are consistent with local norms, prevailing market rates paid under similar projects.

IFS of the Institute of Veterinary Medicine (IVM) personnel - For achieving project goals and corresponding objectives related to *B. anthracis*

research, it is anticipated that staffing of IVM will include up to 15 people.

The reimbursement rates are consistent with local norms, prevailing market rates paid under similar projects.

Materials & Supplies

The detailed list of materials and supplies that are needed to carry out proposed research, their quantity, unit cost and corresponding catalog number are indicated in the project budget. The unit cost is estimated on the basis of the price that the manufacture or vendor provided at their websites. If the specific item's price is unavailable in open sources, the cost is budgeted as an average quote from local vendors. All materials and supplies are defined by the following categories at the corresponding organization.

- ***Materials & Supplies for Laboratories at UCDC*** Within the framework of the project it is expected to obtain up to 3000 samples (both tick pools and rodent's organs) for testing by PCR and bacteriology. Provided costs are required to support research materials, supplies and consumables needed to carry out laboratory analysis at UCDC. Such supplies include, Personal Protection Equipment (PPE) needed to provide biosafety standards (relates to tasks 2.1, 2.2, and 2.3), reagents and supplies for DNA extraction and PCR (relates to task 2.3), reagents and supplies for bacteriological culture (task 2.3), general laboratory and office supplies (i.e., copier paper, writing tools, binding supplies, copier supplies, postage, toners cartridge, other miscellaneous supplies, etc.) that will be used by staff to carry out daily activities on the project and relates to all tasks.
- ***Materials & Supplies for Laboratory at VOLC.*** Provided costs are required for research materials, supplies and consumables needed to carry out sample processing at VOLC (Tasks 2.1, 2.2). Such supplies include items like PPE, dissection tools, disinfectants, vials and tubes, general laboratory supplies that are needed for sample processing, storage, and disposal of used materials.
- ***Materials & Supplies for Tularemia field efforts.*** Provided costs are required for research materials, supplies and consumables needed to carry out field collection efforts. Such supplies include items for setting up field activity, collecting samples clean up, and miscellaneous (drinking water, first aid kits, Insect repellent, etc.).
- ***Materials & Supplies for IVM Laboratories.*** 1000 boar serum and 300 field samples will be provided for testing. Provided costs are required for research materials, supplies and consumables needed to carry out anthrax efforts in the proposed research (tasks 3.1 and 3.2). These supplies will include PPE, needed to provide biosafety standards; sample handling, storage, and dispensing; reagents and supplies for PCR, ELISA, and bacteriology; and other laboratory supplies that that will be used by staff to carry out daily activities.
- ***Materials & Supplies for anthrax field efforts.*** Provided costs are required for research materials, supplies and consumables needed to carry out the proposed research and include item for safety sample collection, transportation, and storage, as well provide BS&S standards.
- ***Biosafety Cabinet (BSC) Re-certification.*** In order to safely manipulate samples collected in the field, all BSC's in all project laboratories required annual re-certification, which was supported via this project.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Kansas State University Subcontract

Direct Labor

Labor rates have been designed to capture KSU overhead costs including indirects and fees.

KSU Subject Matter Expert 3 – Senior personnel salary is requested for the KSU project Principal Investigato (b)(6) contribution to the project will be; 1) supervision of the completion of the land cover mapping component of the project, 2) lead field excursion to Volyn Oblast, Ukraine to complete validation of land cover mapping component, 3) supervise and contribute to creation of biophysical data layers to support pathogen distribution mapping.

KSU Research and Data Analyst – Graduate student salary is requested to support one research assistant throughout the project. The research assistant will have a 9-month appointment. Duties of the research assistant will include: 1) assist with production of final product and archiving of land cover maps, 2) acquire remote sensing data and assist PI Goodin in creating biophysical layers, and 3) other tasks as directed by the project PI.

Materials

Supplies funds will be used to cover annual license costs for the ENVI and Arc-GIS software packages, both of which will be used extensively in this research. The license fee is determined based on estimates of computing needed using each of the two software packages, as a percentage of the total cost of departmental and university site\seat lice

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision changes the end date for the period of performance for this effort to 30 September 2015 and establishes a not to exceed value of $225,000.00 for implementation activities from 16 May 2015 through 30 September 2015.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES)

Technical Approach

Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. To achieve these purposes, Metabiota will support activities within three specific project goal categories to learn from the history of these zoonoses while also proactively managing any future threats. These goals and their corresponding tasks are organized to provide long-term, sustainable teams across UP institutes to maintain this and future efforts. Please note the Priority and Task numbers (below) track with the approved UP-2 proposal submitted 5 September 2014 (AEP base year).

Phase 1: Active surveillance for tick-borne diseases, specifically tularemia caused by *Francisella tularensis*
- Priority 1: Task 2.3: PCR and culture diagnostic efforts for *F. tularensis*

Phase 2: Surveillance and environmental sampling for *Bacillus anthracis*
- Priority 2: Task 3.1: Investigating recent and ongoing anthrax outbreaks
- Priority 2: Subtask 3.1.1: Sampling Blood from Animals without Clinical Symptoms (e.g., wild boar)
- Priority 4: Task 3.2: Laboratory analyses for *B. anthracis* for UP-2

Phase 3: GIS, remote sensing, and micro/molecular diagnostics
- Priority 1 (*F. tularansis)*: Task 4.3.1: Space-time Analyses for historical and field data
- Priority 1 (*F. tularensis)*: Task 4.3.2: Remote Sensing
- Priority 1 (*B. anthracis)*: Task 4.2: Ecological Niche Modeling experiments

Process: To achieve these goals, Metabiota provided various logistic, coordination, and performer support across all phases and all stakeholders. Specifically, Metabiota provided support for Subject Matter Expertise to conduct GIS mapping activities with the Institute of Veterinary Medicine (IVM) in July, 2015, materials and equipment support and biosafety cabinet recertification to the IVM, Volyn Oblast Laboratory Center of the State Sanitary and Epidemiological Services of Ukraine (VOLC), and the Ukrainian Center for Disease Control and monitoring of the Ministry of Health of Ukraine (UCDC), and process support and coordination for all stakeholders including identifying critical process requirements to conduct in-country travel and research activities, such as Animal Care and Use Review Office (ACURO).

Moreover, in support of achieving all objectives through Phases 1-3, Metabiota provided support for Ukrainian UP-2 collaborators to conduct research activities via a subcontract with CRDF Global.

Deliverables:
Metabiota:
- Supported the development and submission of animal care and use Review Office (ACURO) applications
- Issued sub-contractual agreements with Kansas State University in support of research activities
- Conducted procurement activities for laboratory equipment and supplies at VOLC, IVM, and UCDC
- Coordinated Biosafety Cabinet re-certification at VOLC, IVM, and UCDC
- Supported stakeholders from the University of Florida to conduct GIS mapping activities at IVM in late July 2015

Metabiota-supported Ukrainian Research Scientists:
UCDC
- Collected tick samples in Volyn oblast in May 2015, which were received and registered. In total, 1862 ticks were delivered and subsequently grouped into 140 pools
- Field material collected during previous iterations of UP-2 was tested for tularemia, including samples from 64 rodents (256 organs/tests) and 171 tick pools (171 tests). All results were negative
- Biological samples were tested using PCR (320 tests: 43 rodents (43 organs / 90 tests) and 115 tick pools (230 tests). Besides, 206 DNA samples (35 rodent spleens and 171 tick pools) were isolated. Studies will be finished in the 4th Quarter. 8 samples showed doubtful results and will be retested in the next quarter

VOLC
- Assessed supply needs for personal protective equipment, including gowns, respirators, gloves, etc., as well as laboratory materials, needed for research and needed for transportation of biological specimens
- Conducted field collection of ticks (1862), which were grouped according to their species into test tubes (25 ticks per tube), and then into

140 pools for delivery to the UCDC EDP laboratory.

IVM

- Developed ecological niche models of *B. anthracis* using GARP (Genetic algorithm for rule set production), in a resolution 16 and 8 km^2
- Developed count models of *B. anthracis* using Negative Binomial Regression in a resolution 16 km^2 and on rayon level
- Conducted soil sampling expedition preparation, including: choice of places selection, getting permissions and coordination with the local veterinary service of Ukraine
- Prepared and reviewed SOPs for soil sampling, materials decontamination and sera testing with ELISA test kit
- Designed and choose primers for PCR testing of soil samples for anthrax pathogen detection

Significant work remains to complete all UP-2 objectives, including sample collection and processing, assay validation, GIS-related analyses, and associated manuscript preparations. As of 1 October 2015, these activities will be implemented under the BTRIC TO-4 contract.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$127,154

1004	ODCs	$2,632
1005	TRAVEL	$0
TOTAL		**$264,788.18**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Period of Performance

The Period of Performance for this effort is May 16, 2015 to September 30, 2015.

Direct Labor

All phases:
Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As our Subject Matter Experts were independent consultants, the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including independent consultants throughout the span of the project.

Metabiota Trainer 1: The Metabiota Trainer 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

For the efficient and effective project implementation it is requested to engage the following experts.

Institutional Financial Support (IFS)

Importantly, the original CRDF subcontract was to be billed under ODCs under the FFP portion of the AEP contract. With the move to the T&M, incorporating these costs as labor even at the lowest labor category would cause the price to skyrocket, so we are only registering a fraction of the hours worked – enough to cover the costs of the Ukrainian labor and all management fees.

CRDF Global is an independent nonprofit organization that promotes international science collaborations and full-service grant administration. Metabiota will engage CRDF Global for disbursement of funds to Ukrainian project recipients as well as grant payments to institutions participating in the UP-2 project. CRDF will provide Metabiota with transparent monitoring and detailed reporting of the grant payments.

Via CRDF, Metabiota will provide grant payments to the below institutes to support salaries of participating scientists.

IFS of the Ukrainian Centers for Disease Control (UCDC) and IFS of Volyn Oblast Lab Center (VOLC) personnel – In order to achieve the project's goals and objectives related *F. tularensis* research, it is anticipated that 14 UCDC and eight VOLC personnel will require salary support.

The workload identified for the UCDC staff is based on their previous engagement in the UP-2 Project Development Grant (PDG) and nearly two years of work on the project under the BTRIC. The reimbursement rates are consistent with local norms, prevailing market rates paid under similar projects.

IFS of the Institute of Veterinary Medicine (IVM) personnel - For achieving project goals and corresponding objectives related to *B. anthracis*

research, it is anticipated that staffing of IVM will include up to 15 people.

The reimbursement rates are consistent with local norms, prevailing market rates paid under similar projects.

Materials & Supplies

The detailed list of materials and supplies that are needed to carry out proposed research, their quantity, unit cost and corresponding catalog number are indicated in the project budget. The unit cost is estimated on the basis of the price that the manufacture or vendor provided at their websites. If the specific item's price is unavailable in open sources, the cost is budgeted as an average quote from local vendors. All materials and supplies are defined by the following categories at the corresponding organization.

- ***Materials & Supplies for Laboratories at UCDC***. Within the framework of the project it is expected to obtain up to 3000 samples (both tick pools and rodent's organs) for testing by PCR and bacteriology. Provided costs are required to support research materials, supplies and consumables needed to carry out laboratory analysis at UCDC. Such supplies include, Personal Protection Equipment (PPE) needed to provide biosafety standards (relates to tasks 2.1, 2.2, and 2.3), reagents and supplies for DNA extraction and PCR (relates to task 2.3), reagents and supplies for bacteriological culture (task 2.3), general laboratory and office supplies ((i.e., copier paper, writing tools, binding supplies, copier supplies, postage, toners cartridge, other miscellaneous supplies, etc.) that will be used by staff to carry out daily activities on the project and relates to all tasks.
- ***Materials & Supplies for Laboratory at VOLC.*** Provided costs are required for research materials, supplies and consumables needed to carry out sample processing at VOLC (Tasks 2.1, 2.2). Such supplies include items like PPE, dissection tools, disinfectants, vials and tubes, general laboratory supplies that are needed for sample processing, storage, and disposal of used materials.
- ***Materials & Supplies for Tularemia field efforts***. Provided costs are required for research materials, supplies and consumables needed to carry out field collection efforts. Such supplies include items for setting up field activity, collecting samples, clean up, and miscellaneous (drinking water, first aid kits, Insect repellent, etc.).
- ***Materials & Supplies for IVM Laboratories.*** 1000 boar serum and 300 field samples will be provided for testing. Provided costs are required for research materials, supplies and consumables needed to carry out anthrax efforts in the proposed research (tasks 3.1 and 3.2). These supplies will include PPE, needed to provide biosafety standards: sample handling, storage, and dispensing; reagents and supplies for PCR, ELISA, and bacteriology; and other laboratory supplies that that will be used by staff to carry out daily activities.
- ***Materials & Supplies for anthrax field efforts.*** Provided costs are required for research materials, supplies and consumables needed to carry out the proposed research and include item for safety sample collection, transportation, and storage, as well provide BS&S standards.
- ***Biosafety Cabinet (BSC) Re-certification.*** In order to safely manipulate samples collected in the field, all BSC's in all project laboratories required annual re-certification, which was supported via this project.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Kansas State University Subcontract

Direct Labor

Labor rates have been designed to capture KSU overhead costs including indirects and fees.

KSU Subject Matter Expert 3 – Senior personnel salary is requested for the KSU project Principal Investigat (b)(6) contribution to the project will be; 1) supervision of the completion of the land cover mapping component of the project, 2) lead field excursion to Volyn Oblast, Ukraine to complete validation of land cover mapping component, 3) supervise and contribute to creation of biophysical data layers to support pathogen distribution mapping.

KSU Research and Data Analyst – Graduate student salary is requested to support one research assistant throughout the project. The research assistant will have a 9-month appointment. Duties of the research assistant will include; 1) assist with production of final product and archiving of land cover maps, 2) acquire remote sensing data and assist PI Goodin in creating biophysical layers, and 3) other tasks as directed by the project PI.

Metabiota
(b)(6)
Director
1 Sutter STE 600
San Francisco, CA 94104-4923

Subject: HDTRA1-14-C-0104 Technical Direction for continued implementation of One Health Epidemiology Training in Uganda

De (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to continue implementation of the One Health Epidemiology training program in Uganda in accordance with SOW section 4.3, Task 3. In support of ongoing efforts, Metabiota should implement all activities as scheduled:

- Cohort 9 Module 1- 13-17 July, Wakiso District, Uganda
- Cohort 9 Module 2- 7-11, September, Wakiso District, Uganda
- Cohort 10, Module 1- 14-18 September, Hoima District, Uganda
- Cohort 10, Module 2- 9-13 November, Hoima District, Uganda

The contractor shall be responsible for coordination of activities with CBEP and the Inter Agency Health Team at the U.S. Embassy, Kampala prior to implementation. A proposal, training schedule and detailed budget, not to exceed $750K, for implementing this requirement is requested by 6 July, 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with the DTRA CBEP Points of Contact listed below.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision shall serve as an official request to update proposed labor costs, as appropriate, using the Foreign Local National rates established with P00020.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES).

Technical Approach: Metabiota will use the following technical approach to manage all tasks required for successful implementation of the project components and to provide overall feedback and reporting on the proceecings outlining the accomplishment of objectives. The following components will be executed concurrently and are required for this project:

Phase 1: Program Management and Coordination
Phase 2: Training Administration
Phase 3: Training Implementation

Objective: Coordinate with key in-country stakeholders to ensure trainers are properly oriented with the OHE training materials and training plan, participants meet criteria and have committed to fulfilling all requirements, and ensure responsible parities for contingent steps (logistics planning, participant coordination, trainer coordination, etc.) are identified and able to fulfill responsibilities within time, budget, and scope.

Process: Metabiota, in coordination with DTRA CBEP and key in-country stakeholders, will establish a communication plan and responsibility matrix for the conduction of the four OHE trainings, covering Module 1 and 2 for Cohorts 9 and 10. The project team will coordinate to finalize the trainer and participant lists for each cohort and training (4 trainings total, 4 Uganda based independent consultant trainers per training, 3 Metabiota personnel working in a management and oversight capacity per training, 25-30 participants per cohort) and ensure all parties involved are able to participate in full and fulfill all training requirements.

Metabiota will coordinate with local partners to disseminate timely and accurate correspondences and Letters of Invitation (LOIs) to all participants and trainers. Metabiota will coordinate with CLS for all participant and event logistics, as well as for the procurement of any necessary materials and training supplies.

Deliverables (Program Management) – All deliverables associated with Component 1 are associated with overall program management to ensure effective implementation of the all project objectives:
- Deliverable #1: Effective communications between all stakeholcers to ensure all project activities are efficiently executed in accordance with Client and Host Country expectations and guidelines; including delivery of meeting minutes during stakeholder calls.
- Deliverable #2: Maintain project schedules to ensure implementation of high-quality trainings within proposed project budget and in accordance with the technical approach (above);
- Deliverable #3: Maintain client, stakeholder, and contractor relationships;

Training Administration (July 1, 2015 – February 29, 2016) Objective: Develop quantitative and qualitative evaluations of all training Module 1 and Module 2 events. Provide lessons learned and recommendations in After Action Reports (AARs).

Process: Metabiota, in coordination with in-country stakeholders and Ugandan OHE trainers, will conduct both daily evaluations and pre- and post-training testing in order to develop a comprehensive evaluation of the training implementation. After the completion of all four trainings and data analysis, Metabiota will develop a comprehensive qualitative and quantitative evaluation of the training implementation.

Deliverables:
- Deliverable #1: Develop all pre training related documentation and CDRLs - Responsibility Matrix, Training Event Plans (TEPs), CLS forms, and Finalized Trainer and Participant Lists;
- Deliverable #2 Development of After Action Report;

-After Action Reports will contain in-depth recommendations, detailed lessons –learned, and further insight for the DTRA COR.

Training Implementation (July 1, 2015 - February 29, 2016) Objective: Facilitate the conduction of Module 1 and 2 OHE trainings (5 days each) for Cohorts 9 and 10 in the Jinja and Hoima Districts, respectively, and provice technical and programmatic support for the trainers and participants to complete of interim training requirements between Modules 1 and 2. Additionally, Metabiota will support and encourage collaboration and communication establishment amongst participants, with a focus on neighboring Districts, throughout the training sessions and the interim activities.

Process: Metabiota, in coordination with DTRA CBEP and key in-country stakeholders, will facilitate the four OHE trainings. In order to provide the Ugandan stakeholders with both technical and programmatic support and ensure project goals and objectives are being met, Metabiota trainers and, potentially, a scientific mentor will travel to each of the four trainings. Metabiota will conduct pre- and post- training testing as well as hold daily feedback sessions with the Ugandan trainers to identify gaps, reorient (if necessary) training approaches, and discuss lessons learned.

Deliverables:

- Deliverable #1: Submission of daily training evaluations and participant feedback;
- Deliverable #2: Submission of four Training Trip Reports (TTR)

-providing high level overview of the trainings and highlighting next step recommendations and cohort and module-specific lessons learned.
-Contractually required through CDRL 15

The following table (Timeline) describes the anticipated timeline of each phase.

Training	May 2015	Jun 2015	Jul 2015	Aug 2015	Sep 2015	Oct 2015	Nov 2015	Dec 2015	Jan 2016	Feb 2016	Mar 2016	Apr 2016	May 2016
Mod 1						Cohort 9		Cohort 10					
Mod 2								Cohort 9		Cohort 10			

Risk Management:
In order to maintain our course of action and guarantee trainings that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation Plan	Residual Risk
		Cost				
Communication and cultural boundaries disrupting training preparation and execution	Participants, and presenters do not have a clear understanding of logistical support	4	5	(b)(4); (b)(6)	Before the training Metabiota will support CDC-Uganda and MoH to ensure communication is provided to participants and presenters clearly outlines support for the training	Med
		Schedule				
Submission of CCRs and TEPs	CCRs must be submitted at least 45 days prior to each event, and TEPs 65 days prior, and are dependent upon receipt of Letters of Technical Direction	5	5		Upon receipt of the Letter of Technical Direction, Metabiota shall immediately submit all DTRA required travel documents	Med-High
		Performance				
Ability to collaborate with MoH Uganda	Trainers from MoH Uganda are required for effective implementation	3	3	Med	Metabiota will directly engage MoH trainers to ensure buy-in and support	(b)(4); (b)(6)
Logistics coordination	Russian based logistics company that is locally staffed, which can lead to misinterpretation of vital information	3	3	Med	Metabiota will directly engage both Russian and local based offices of TTI/CLS

1003	MATERIALS	$12,632
1004	ODCs	$12,147
1005	TRAVEL	$45,828
TOTAL		**$350,242.27**

9c. TO SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES.)

Period of Performance:
The Period of Performance for this effort is May 16, 2015 to February 29, 2015.
One Health Epidemiology Uganda is a legacy project that allows Metabiota to incur costs immediately as the proposed period of performance begins, and regardless of a DTRA CBEP decision to move forward. In kind, our team accrued a total of 215 hours during this period to design and develop the proposal. This effort involved a total of 93 program management hours, 84 research and data analyst hours, 16 SME III hours, 16 SME I hours, and 6 Trainer I hours.

The original period of performance was altered from May 16, 2015 through December 31, 2015 to May 15, 2015 through February 2016 to allow for the planned execution of both module 1 and module 2 of cohort 10. The postponement of Cohort 9 from its original schedule dictated a need to shift the trainings accordingly.

Labor:
Costs for direct labor to support this activity is required for the following personnel:

- Metabiota Program Manager (b)(6) will oversee the execution of program objectives towards the completion of DTRA CBEP goals at the regional level, and will lead communication with DTRA CBEP for this activity. (b)(6) will do so by maintaining oversight of stakeholder

coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. (b)(6) ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables erstwhile ensuring the program remains within scope, budget, and timeline. Additionally, prior to (b)(6) val and as part of his onboarding process, program management responsibilities were shared by Metabiota Program Manage (b)(6) s of July 7th 2015 and throughout the remaining period of performance (b)(6) l be the sole Program Manager for this effort. The previous period of performance was extended through February 29, 2016. To this end, additional LOE for (b)(6) required to ensure successful execution and closeout of this training program effectively enabling him to maintain management of communication between key stakeholders. This time will also be used to support in country activities directly related to the execution of training modules. The additional LOE was determined using project actuals to date.

- Metabiota Project Coordinator (Research and Data Analyst; RDA (b)(6) will ensure the execution of project objectives towards the completion of DTRA CBEP goals at the project level (b)(6) ill do so by supporting stakeholder coordination and project execution, with a focus on project milestone achievement and stakeholder buy-in development and maintenance (b)(6) ill regularly communicate project status with (b)(6) and will assist (b)(6) nticipating, managing, and communicating project risks and recommended mitigation strategies to the funder (b)(6) will also assist (b)(6) suring all project requirements and deliverables are fulfilled while concurrently ensuring the project remains within scope, budget, and timeline. With an extended period of performance, through February 29, 2016, an additional two months of LOE is required for (b)(6) to provide logistics and planning suppo (b)(6) will continue in her current capacity throughout this effort, and may be required to support in country trainings. The additional LOE was determined using project actuals to date.
- Metabiota Technical Manager (Trainer III)- Dr. Robyn Woodbury will oversee all aspects of the execution of the training events (b)(6) (b)(6) submit and track all Training Event Plans (TEPs), Training Trip Reports (TTRs), and After Action Reports (AARs). (b)(6) will also direct and manage the local trainers, ensuring optimal execution of al training objectives (b)(6) manage in-country stakeholders and project execution, with a focus on buy-in maintenance (b)(6) will direct feedback sessions with the local trainers daily, along with the Scientific Mentor, to discuss training material, lessons-learned, and review survey results from the participants. In additio (b)(6) will suppo (b)(6) in ensuring the program remains within scope, budget and timeline. (b)(6) ontribution to this effort will have discontinued from 08/01/2015.
- Metabiota Training Administrator (Trainer I (b)(6) MPH will play a vital role in implementation, coordination, and reporting. He will travel to the field for trainings and lead reporting efforts. He will additionally suppo (b)(6) by attending meetings and communicating with relevant stakeholders. From a technical perspective he will use his expertise to support the administrative efforts o (b)(6) d (b)(6) during field trainings and in the development of After Action Reports (AARs) and Training Trip Reports (TTRs).
- Metabiota Subject Matter Expert (SME III) (b)(6) an internationally known expert in epidemiology, virus ecology, viral hemorrhagic fevers, fundamentals and domains of disease emergence. Since the 1970s, he has been leading international teams with partner institutions of developing countries (Dakar, Senegal, Bangui, Central African Republic). He largely contributed to developing tools and implementing strategies for the control and prevention of transmitted disease, and has been published in more than two hundred scientific papers in peer-reviewed journals (b)(6) will support the OHE training programs by mentoring the local trainers and District participants in outbreak investigation and response best practices. In addition (b)(6) ill facilitate the scientific collaborations and support daily training implementation discussions.
- Metabiota Project Support Staff (SME I) (b)(6) was involved in supporting the development of the Technical proposal and budget for OHE Uganda. Her involvement in this project will be discontinued from 08/01/2015.
- Metabiota Regional Trainer and Mentor (Trainer (b)(6) based in Sierra Leone, is a recognized epidemiologist focusing in VHF contact tracing and rapid response systems. (b)(6) has lead on-the-ground teams of health workers investigating VHF outbreaks and clusters (b)(6) ill serve as a regional scientific mentor to both the participants and the local trainers. In additio (b)(6) ill facilitate and support scientific collaborations and provide lessons-learned from his field experience while operating in the recent/ongoing Ebola outbreak in West Africa.
- Metabiota Local Trainers (Research and Data Analyst Lead trainers (TBD) to support OHE Cohort 10 Module 2) will execute the pre- and post-tests, as well as the daily surveys from the participants. The Trainers will lead small group sessions in a 1:6 ratio, and support and guide the participants' working projects that occur between modules. Working closely wit (b)(6) he Trainers will implement all OHE training materials including lectures, computer enrichment sessions, and exercises.

(b)(6) s an independent contractor currently working to support the Ugandan Ministry of Health as an infectious disease epidemiologist. He has been brought onto this training as part of the Metabiota tean (b)(6) ime was supported by research and data analyst (RDA) hours for Cohort 9 Module 1 training. However, upon the approval of the AFRICOM Foreign Local National (FLN) rates, he will henceforth be supported by this labor category.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials:

Minor materials and supplies are required to support project activities including stakeholder outreach and coordination, training material production, and host country approval facilitation. Materials will include:

International Communication-Semi-monthly stakeholder meetings will occur to coordinate all upcoming trainings in-county. Internet systems and international calls will be utilized for this effort. Routine updates will take p ace via e-mail

Printing Services- One set of OHE Modules 1 and 2 books, for 25 participants, and one set of Instructor Manuals, for 2 trainers, will be required. It is assumed that CLS will manage printing of all necessary materials. Metabiota will prepare the necessary documentation (e.g., CLS request forms) when seeking support for this activity.

Other Direct Costs:

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all project participants in accordance with DBA guidelines.

Subcontracts:

Local trainers may be utilized for execution of the training and will be subject to an Independent Consultant agreement.

Travel:

Funds are requested for three Metabiota personnel (two CONUS, one OCONUS) to travel to Uganda to facilitate each training event, four in total. Specifically, funding has been budgeted to support travel for two Metabiota personnel from CONUS for training implementation and oversight purposes. Additionally, in an effort to promote regional networking and capacity development, Metabiota has also budgeted travel funds for a Sierra Leonean field epidemiologist (e.g. (b)(6)) to air in training implementation. Metabiota staff will support project implementation, coordinate stakeholders, and provide technical support for Ugandan OHE trainers. Metabiota staff will hold daily feedback sessions with the trainers prior to beginning coursework for the day, and support computer enrichment activ ties that follow each evening. Prior to execution of travel, a cost estimate will

be provided to the AEP COR for review and approval. Metabiota will submit CLS forms requesting travel logistics support for participants (e.g., Trainees).

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to continue implementation of the One Health Epidemiology training program in Uganda in accordance with SOW section 4.3, Task 3. In support of ongoing efforts, Metabiota should implement all activities as scheduled:

- Cohort 9 Module 1- 19-23, October, Jinja District, Uganda
- Cohort 9 Module 2- 7-11, December, Jinja District, Uganda
- Cohort 10, Module 1- 14-18 December, Hoima District, Uganda
- Cohort 10, Module 2- 1-5, February, Hoima District, Uganda

The contractor shall be responsible for coordination of activities with CBEP and the Inter Agency Health Team at the U.S. Embassy, Kampala prior to implementation. A proposal, training schedule and detailed budget, not to exceed $750K, for implementing this requirement is requested by 6 July, 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs in Block 15 below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Technical Approach: Metabiota will use the following technical approach to manage all tasks required for successful implementation of the project components and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following components will be executed concurrently and are required for this project:

Phase 1: Program Management and Coordination
Phase 2: Training Administration
Phase 3: Training Implementation

Objective: Coordinate with key in-country stakeholders to ensure trainers are properly oriented with the OHE training materials and training plan, participants meet criteria and have committed to fulfilling all requirements, and ensure responsible parities for contingent steps (logistics planning, participant coordination, trainer coordination, etc.) are identified and able to fulfill responsibilities within time, budget, and scope.

Process: Metabiota, in coordination with DTRA CBEP and key in-country stakeholders, will establish a communication plan and responsibility matrix for the conduction of the four OHE trainings, covering Module 1 and 2 for Cohorts 9 and 10. The project team will coordinate to finalize the trainer and participant lists for each cohort and training (4 trainings total, 4 Uganda based independent consultant trainers per training, 3 Metabiota personnel working in a management and oversight capacity per training, 25-30 participants per cohort) and ensure all parties involved are able to participate in full and fulfill all training requirements.

Metabiota will coordinate with local partners to disseminate timely and accurate correspondences and Letters of Invitation (LOIs) to all participants and trainers. Metabiota will coordinate with CLS for all participant and event logistics, as well as for the procurement of any necessary materials and training supplies.

Deliverables (Program Management) – All deliverables associated with Component 1 are associated with overall program management to ensure effective implementation of the all project objectives:

- Deliverable #1: Effective communications between all stakeholders to ensure all project activities are efficiently executed in accordance with Client and Host Country expectations and guidelines; including delivery of meeting minutes during stakeholder calls
- Deliverable #2: Maintain project schedules to ensure implementation of high-quality trainings within proposed project budget and in accordance with the technical approach (above).
- Deliverable #3: Maintain client, stakeholder, and contractor relationships;

Training Administration (July 1, 2015 – February 29, 2016) Objective: Develop quantitative and qualitative evaluations of all training Module 1 and Module 2 events. Provide lessons learned and recommendations in After Action Reports (AARs).

Process: Metabiota, in coordination with in-country stakeholders and Ugandan OHE trainers, will conduct both daily evaluations and pre- and post-training testing in order to develop a comprehensive evaluation of the training implementation. After the completion of all four trainings and data analysis, Metabiota will develop a comprehensive qualitative and quantitative evaluation of the training implementation.

Deliverables:

- Deliverable #1: Develop all pre training related documentation and CDRLs - Responsibility Matrix, Training Event Plans (TEPs), CLS forms, and Finalized Trainer and Participant Lists;
- Deliverable #2: Development of After Action Report;

-After Action Reports will contain in-depth recommendations, detailed lessons –learned, and further insight for the DTRA COR.

Training Implementation (July 1, 2015 - February 29, 2016) Objective: Facilitate the conduction of Module 1 and 2 OHE trainings (5 days each) for Cohorts 9 and 10 in the Jinja and Hoima Districts, respectively, and provice technical and programmatic support for the trainers and participants to complete of interim training requirements between Modules 1 and 2. Additionally, Metabiota will support and encourage collaboration and communication establishment amongst participants, with a focus on neighboring Districts, throughout the training sessions and the interim activities.

Process: Metabiota, in coordination with DTRA CBEP and key in-country stakeholders, will facilitate the four OHE trainings. In order to provide the Ugandan stakeholders with both technical and programmatic support and ensure project goals and objectives are being met, Metabiota trainers and, potentially, a scientific mentor will travel to each of the four trainings. Metabiota will conduct pre- and post- training testing as well as hold daily feedback sessions with the Ugandan trainers to identify gaps, reorient (if necessary) training approaches, and discuss lessons learned.

Deliverables:
- Deliverable #1: Submission of daily training evaluations and participant feedback;
- Deliverable #2: Submission of four Training Trip Reports (TTR)

-providing high level overview of the trainings and highlighting next step recommendations and cohort and module-specific lessons learned.
-Contractually required through CDRL 15

The following table (Timeline) describes the anticipated timeline of each phase.

Training	May 2015	Jun 2015	Jul 2015	Aug 2015	Sep 2015	Oct 2015	Nov 2015	Dec 2015	Jan 2016	Feb 2016	Mar 2016	Apr 2016	May 2016

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES).

Period of Performance:
The Period of Performance for this effort is May 16, 2015 to February 29, 2015.
One Health Epidemiology Uganda is a legacy project that allows Metabiota to incur costs immediately as the proposed period of performance begins, and regardless of a DTRA CBEP decision to move forward. In kind, our team accrued a total of 215 hours during this period to design and develop the proposal. This effort involved a total of 93 program management hours, 84 research and data analyst hours, 16 SME III hours, 16 SME I hours, and 6 Trainer I hours.

The original period of performance was altered from May 16, 2015 through December 31, 2015 to May 15, 2015 through February 2016 to allow for the planned execution of both module 1 and module 2 of cohort 10. The postponement of Cohort 9 from its original schedule dictated a need to shift the trainings accordingly.

Labor:
Costs for direct labor to support this activity is required for the following personnel:

- Metabiota Program Manager (b)(6) will oversee the execution of program objectives towards the completion of DTRA CBEP goals at the regional level, and will lead communication with DTRA CBEP for this activity. (b)(6) will do so by maintaining oversight of stakeholder coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. (b)(6) will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables erstwhile ensuring the program remains within scope, budget, and timeline. Additionally, prior to (b)(6) arrival and as part of his onboarding process, program management responsibilities were shared by Metabiota Program Manager (b)(6) and (b)(6) July 7th 2015 and throughout the remaining period of performance (b)(6) will be the sole Program Manager for this effort. The previous period of performance was extended through February 29, 2016. To this end, additional LOE for (b)(6) required to ensure successful execution and closeout of this training program effectively enabling him to maintain management of communication between key stakeholders. This time will also be used to support in country activities directly related to the execution of training modules. The additional LOE was determined using project actuals to date.
- Metabiota Project Coordinator (Research and Data Analyst: RDA) (b)(6) will ensure the execution of project objectives towards the completion of DTRA CBEP goals at the project level. (b)(6) will do so by supporting stakeholder coordination and project execution, with a focus on project milestone achievement and stakeholder buy-in development and maintenance. (b)(6) will regularly communicate project status with (b)(6) and will assist (b)(6) anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. (b)(6) will also assist (b)(6) in ensuring all project requirements and deliverables are fulfilled while concurrently ensuring the project remains within scope, budget, and timeline. With an extended period of performance, through February 29, 2016, an additional two months of LOE is required for M (b)(6) provide logistics and planning support. (b)(6) will continue in her current capacity throughout this effort, and may be required to support in country trainings. The additional LOE was determined using project actuals to date.
- Metabiota Technical Manager (Trainer III) (b)(6) will oversee all aspects of the execution of the training events. (b)(6) will submit and track all Training Event Plans (TEPs), Training Trip Reports (TTRs), and After Action Reports (AARs). (b)(6) will also direct and manage the local trainers, ensuring optimal execution of all training objectives. (b)(6) will manage in-country trainers and project execution, with a focus on buy-in maintenance. (b)(6) will direct feedback sessions with the local trainers daily, along with the Scientific Mentor, to discuss training material, lessons-learned, and review survey results from the participants. In addition, (b)(6) will support (b)(6) in ensuring the program remains within scope, budget and timeline. (b)(6) contribution to this effort will have discontinued from 08/01/2015.
- Metabiota Training Administrator (Trainer I) (b)(6) MPH will play a vital role in implementation, coordination, and reporting. He will travel to the field for trainings and lead reporting efforts. He will additionally support (b)(6) by attending meetings and communicating with relevant stakeholders. From a technical perspective he will use his expertise to support the administrative efforts of (b)(6) and (b)(6) during field trainings and in the development of After Action Reports (AARs) and Training Trip Reports (TTRs).
- Metabiota Subject Matter Expert (SME III) (b)(6) is an internationally known expert in epidemiology, virus ecology, viral hemorrhagic fevers, fundamentals and domains of disease emergence. Since the 1970s, he has been leading international teams with partner institutions of developing countries (Dakar, Senegal; Bangui, Central African Republic). He largely contributed to developing tools and implementing strategies for the control and prevention of transmitted disease, and has been published in more than two hundred scientific papers in peer-reviewed journal (b)(6) will support the OHE training programs by mentoring the local trainers and District participants in outbreak investigation and response best practices. In addition (b)(6) will facilitate the scientific collaborations and support daily training implementation discussions.
- Metabiota Project Support Staff (SME I)- (b)(6) was involved in supporting the development of the Technical proposal and budget for OHE Uganda. Her involvement in this project will have discontinued from 08/01/2015.
- Metabiota Regional Trainer and Mentor (Trainer II) (b)(6) based in Sierra Leone, is a recognized epidemiologist focusing in VHF contact tracing and rapid response systems. (b)(6) will lead on-the-ground teams of health workers investigating VHF outbreaks and clusters. (b)(6) will serve as a regional scientific mentor to both the participants and the local trainers. In addition (b)(6) will facilitate and support scientific collaborations and provide lessons-learned from his field experience while operating in the recent/ongoing Ebola outbreak in West Africa.
- Metabiota Local Trainers (Research and Data Analyst Lead trainers (TBD) to support OHE Cohort 10 Module 2) will execute the pre- and post-tests, as well as the daily surveys from the participants. The Trainers will lead small group sessions in a 1:6 ratio, and support and guide the participants' working projects that occur between modules. Working closely with (b)(6) the Trainers will implement all OHE training materials including lectures, computer enrichment sessions, and exercises.

(b)(6) is an independent contractor currently working to support the Ugandan Ministry of Health as an infectious disease epidemiologist. He has been brought onto this training as part of the Metabiota team. (b)(6) time was supported by research and data analyst (RDA) hours for Cohort 9 Module 1 training. However, upon the approval of the AFRICOM Foreign Local National (FLN) rates, he will henceforth be supported by this labor category.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials:
Minor materials and supplies are required to support project activities including stakeholder outreach and coordination, training material production, and host country approval facilitation. Materials will include:
International Communication-Semi-monthly stakeholder meetings will occur to coordinate all upcoming trainings in-county. Internet systems and international calls will be utilized for this effort. Routine updates will take place via e-mail.
Printing Services- One set of OHE Modules 1 and 2 books, for 25 participants, and one set of Instructor Manuals, for 2 trainers, will be required. It is assumed that CLS will manage printing of all necessary materials. Metabiota will prepare the necessary documentation (e.g., CLS request forms) when seeking support for this activity.

Other Direct Costs:
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all project participants in accordance with DBA guidelines.

Subcontracts:

Local trainers may be utilized for execution of the training and will be subject to an Independent Consultant agreement.

Travel:

Funds are requested for three Metabiota personnel (two CONUS, one OCONUS) to travel to Uganda to facilitate each training event, four in total. Specifically, funding has been budgeted to support travel for two Metabiota personnel from CONUS for training implementation and oversight purposes. Additionally, in an effort to promote regional networking and capacity development, Metabiota has also budgeted travel funds for a Sierra Leonean field epidemiologist (e(b)(6) o air in training implementation. Metabiota staff will support project implementation, coordinate stakeholders, and provide tech dan OHE trainers. Metabiota staff will hold daily feedback sessions with the trainers prior to beginning coursework for the day, and support computer enrichment activities that follow each evening. Prior to execution of travel, a cost estimate will be provided to the AEP COR for review and approval. Metabiota will submit CLS forms requesting travel logistics support for participants (e.g., Trainees).

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision to TD-14 provides additional guidance & clarification of the requirement to assist Metabiota in establishing a proposed implementation approach and budget for the period of performance. During the PoP, Metabiota is expected to:

a. Identify organizers of the Regional Conference on Zoonotic Diseases in Eastern Africa and collaborate with them to hold a 6-day writing workshop (not including venue, food, and travel logistics as this will be coordinated via CLS) for 20 participants. Metabiota should provide a PM and a SME1 for Project Coordination and Landscape Analysis. The hours required for this phase should not exceed 6 hours/week for two weeks each for the PM and SME1. Metabiota should reach out directly to (b)(6) the main POC of the One Health Workshop, to discuss [illegible] ed. Communication with (b)(6) hould also include the discussion of the participants list, as the conference organizers have already identified them and will provide the names and draft manuscripts to Metabiota.

b. Coordinate with Kenyan collaborators to jointly identify no more than 2 Kenyan SMEs to participate in the writing workshop as well as pre- and post-workshop activities. For the first phase of Project Coordination and Landscape Analysis, the two Kenyan SMEs should also each not exceed 6 hours/week for two weeks. The writing coaches will provide mentorship to the participants and will help them convert their scientific data into a complete draft manuscript for a research paper to be submitted to a peer-review science journal. One manuscript will be developed per workshop participant. Metabiota will assist in the development of up to 20 papers/manuscripts. Additional communications regarding the SME assignments should occur during the activities described in a. and should be part of the not to exceed 6 hours/week.

c. Hypothesis Development and Article Framing- CBEP's expectation is that this workshop will provide the participants with the right skills and guidance to take their manuscripts to the next level, with the goal that that next level will be good enough for acceptance to a peer-reviewed journal. The SMEs will not need to contact the participants before the workshop due to the coordination through the Kenyan POCs and SMEs. Metabiota's SMEs (one from Metabiota and two Kenyans to be identified) will review the participants' manuscripts prior to the workshop. Each SME should not spend more than 20 hours total to complete the review and assessment of the manuscripts prior to the workshop as well as conduct any additional coordination among the SMEs. The SMEs will work together to determine if/how the manuscripts will be divided up as each SME may not need to conduct a detailed review of each manuscript. There may be additional SMEs identified for participation in all workshop activities (including pre- and post- workshop activities) by the Kenyan stakeholders but their time will not be funded by Metabiota. This should be discussed with the Kenyan POC noted above. PM oversight of the SME's review and coordination activities should not exceed 5 hours total.

d. Writing Workshop Implementation- The workshop outline should be as follows: 1) the main workshop will consist of 5 days (Monday-Friday) where the SME's will work together with the participants, 2) 1 day after the workshop for the SME's to finalize the review of the manuscripts, and 3) the travel days needed to travel between the U.S. and Kenya. PM participation during the workshop is acceptable. However, oversight should not necessitate as many hours as the SMEs efforts during the workshop, therefore Metabiota should propose PM hours planned to be spent only on this project, or provide sufficient clarification regarding PM tasks during the 6 working days to justify a full-time workload. The labor hours for each SME should not exceed 72 hours. PM hours are estimated at no more than 4 hours per day.

e. Paper Finalization and Publication Submission- CBEP and Metabiota will not be supporting or overseeing the submission of these manuscripts; for that reason, activities related to this should not be included in the proposed approach.

f. Post-workshop efforts- Post-workshop efforts will include the three SMEs (2 Kenyans and 1 Metabiota SME that participated in the workshop) spending no more than 20 hours each over 2-4 weeks to continue coordination with each other and potentially other SMEs (not funded via Metabiota) as well as finalize any needed review or revision of the manuscripts with the workshop participants. This may need to be divided between SMEs to stay within the 20 hour maximum. PM oversight of the SME's final review and coordination activities should not exceed 5 hours total.

g. For Materials and Supplies: CBEP expects participants to have relevant papers they have used in the past (to develop draft manuscripts papers and the presentations given at the One Health Conference). However, limited access to journals should be provided by Metabiota. The access per participant should be no more than 10 articles per person. This is an average and downloads should be managed by the PM and/or SMEs. A total number of 200 papers is authorized however this is the maximum, which does not need to be met, and should be used as needed per participant, not necessarily divided evenly if some participants do not require additional resources.

The period of performance for this effort will be from 18 September 2015 to 15 February 2016; however, CBEP anticipates the total time required to implement the requirement to be 20 weeks, including 2 weeks for Phase 1 (planning and SME identification), 3 weeks for Phase 2 (manuscript review and SME coordination), 1 week for Phase 3 (executing the workshop), and 4 weeks for Phase 4 (post-workshop coordination and manuscript review). Your technical approach, proposed budget, and basis of estimate for implementing this requirement is requested by 16 Sep 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision to TD-14 provides additional guidance & clarification of the requirement to assist Metabiota in establishing a proposed implementation approach and budget for the period of performance. During the PoP, Metabiota is expected to:

a. Identify organizers of the Regional Conference on Zoonotic Diseases in Eastern Africa and collaborate with them to hold a 6-day writing workshop (not including venue, food, and travel logistics as this will be coordinated via CLS) for 20 participants. Metabiota should provide a PM and a SME1 for Project Coordination and Landscape Analysis. The hours required for this phase should not exceed 6 hours/week for two weeks each for the PM and SME1. Metabiota should reach out directly to (b)(6) (b)(6) e main POC of the One Health Workshop, to discuss what the vision for the implementation of the workshop is and to discuss SME support needed. Communication with (b)(6) should also include the discussion of the participants list, as the conference organizers have already identified them and will provide the names and draft manuscripts to Metabiota.

b. Coordinate with Kenyan collaborators to jointly identify no more than 2 Kenyan SMEs to participate in the writing workshop as well as pre- and post-workshop activities. For the first phase of Project Coordination and Landscape Analysis, the two Kenyan SMEs should also each not exceed 6 hours/week for two weeks. The writing coaches will provide mentorship to the participants and will help them convert their scientific data into a complete draft manuscript for a research paper to be submitted to a peer-review science journal. One manuscript will be developed per workshop participant. Metabiota will assist in the development of up to 20 papers/manuscripts. Additional communications regarding the SME assignments should occur during the activities described in a. and should be part of the not to exceed 6 hours/week.

c. Hypothesis Development and Article Framing- CBEP's expectation is that this workshop will provide the participants with the right skills and guidance to take their manuscripts to the next level, with the goal that that next level will be good enough for acceptance to a peer-reviewed journal. The SMEs will not need to contact the participants before the workshop due to the coordination through the Kenyan POCs and SMEs. Metabiota's SMEs (one from Metabiota and two Kenyans to be identified) will review the participants' manuscripts prior to the workshop. Each SME should not spend more than 20 hours total to complete the review and assessment of the manuscripts prior to the workshop as well as conduct any additional coordination among the SMEs. The SMEs will work together to determine if/how the manuscripts will be divided up as each SME may not need to conduct a detailed review of each manuscript. There may be additional SMEs identified for participation in all workshop activities (including pre- and post- workshop activities) by the Kenyan stakeholders but their time will not be funded by Metabiota. This should be discussed with the Kenyan POC noted above. PM oversight of the SME's review and coordination activities should not exceed 5 hours total.

d. Writing Workshop Implementation- The workshop outline should be as follows: 1) the main workshop will consist of 5 days (Monday-Friday) where the SME's will work together with the participants, 2) 1 day after the workshop for the SME's to finalize the review of the manuscripts, and 3) the travel days needed to travel between the U.S. and Kenya. PM participation during the workshop is acceptable. However, oversight should not necessitate as many hours as the SMEs efforts during the workshop, therefore Metabiota should propose PM hours planned to be spent only on this project, or provide sufficient clarification regarding PM tasks during the 6 working days to justify a full-time workload. The labor hours for each SME should not exceed 72 hours. PM hours are estimated at no more than 4 hours per day

e. Paper Finalization and Publication Submission- CBEP and Metabiota will not be supporting or overseeing the submission of these manuscripts; for that reason, activities related to this should not be included in the proposed approach.

f. Post-workshop efforts- Post-workshop efforts will include the three SMEs (2 Kenyans and 1 Metabiota SME that participated in the workshop) spending no more than 20 hours each over 2-4 weeks to continue coordination with each other and potentially other SMEs (not funded via Metabiota) as well as finalize any needed review or revision of the manuscripts with the workshop participants. This may need to be divided between SMEs to stay within the 20 hour maximum. PM oversight of the SME's final review and coordination activities should not exceed 5 hours total.

g. For Materials and Supplies: CBEP expects participants to have relevant papers they have used in the past (to develop draft manuscripts papers and the presentations given at the One Health Conference). However, limited access to journals should be provided by Metabiota. The access per participant should be no more than 10 articles per person. This is an average and downloads should be managed by the PM and/or SMEs. A total number of 200 papers is authorized however this is the maximum, which does not need to be met, and should be used as needed per participant, not necessarily divided evenly if some participants do not require additional resources.

The period of performance for this effort will be from 18 September 2015 to 15 February 2016; however, CBEP anticipates the total time required to implement the requirement to be 20 weeks, including 2 weeks for Phase 1 (planning and SME identification), 3 weeks for Phase 2 (manuscript review and SME coordination), 1 week for Phase 3 (executing the workshop), and 4 weeks for Phase 4 (post-workshop coordination and manuscript review). Your technical approach, proposed budget, and basis of estimate for implementing this requirement is requested by 16 Sep 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Technical Approach
Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following phases are required for this project:

Phase 1: Programmatic Coordination and Training Landscape Review
Phase 2: SME Review and Coordination
Phase 3: Writing Workshop Implementation
Phase 4: Post-workshop review and Summary Report Development

Phase 1 – Programmatic Coordination and Landscape Analysis (16 Sep - 24-Sep. 30, 2015)

Objective: Establish a communication and coordination plan with the Kenyan Zoonotic Disease Unit (ZDU), Global Implementation Solutions (GIS), and Conference to initiate collaboration and conduct a landscape review of technical writing capacities and needs in the One Health sector in Kenya.

Process: Metabiota, with direction from DTRA CBEP, will engag (b)(6) the main POC from the Regional Conference on Zoonotic Diseases in Eastern Africa, an event that took place in Naivasha, Kenya, March 2015. Through this collaboration, Metabiota will develop an understanding of Kenya's technical writing capacities and needs in the One Health sector. Metabiota will receive the list of selected writing workshop participants from (b)(6) etabiota will also receive recommendation from (b)(6) for two mutually agreed upon Kenya based SME 3 technical writing experts to be brought on as independent contractors for this effort.

Deliverables:

- Deliverable 1: Submission of contacts list to include Writing Workshop participants and Kenyan SME III technical writing experts

Phase 2 – Pre-Workshop Participant Manuscript Review (Nov. 2, 2015-Jan. 29, 2016)

Objective: Selected participants set to attend the Writing Workshop will provide draft manuscripts for review by subject matter experts prior to their attendance. Technical writing SMEs will be able to gain a specific and in-depth understanding of the content they can expect during the writing workshop before attending.

Process: Metabiota, in coordination with DTRA-CBEP ar (b)(6) will request that the selected participants produce draft manuscripts for review by the identified technical writing SMEs. Each SME will spend a defined number of hours reviewing the materials, and gaining a more defined understanding of the participants' approach. The SMEs will not be in contact with the participants during this phase, but will communicate among themselves with the assistance of the program manager to ensure that manuscripts to be reviewed are divided up appropriately among the team.

Deliverables:

- Deliverable 1: Submission of participants' draft manuscripts to include hypotheses, writing concepts and an approach plan, along with statements of accessible, supporting data.

Phase 3– Writing Workshop Implementation (Feb. 8-13, 2016)

Objective: Conduct a six-day workshop on various aspects of technical writing in order to train and mentor twenty participants representing the Kenyan One Health research sector.

Process: Metabiota will coordinate with the SME mentors and participants to conduct the six-day training in Kenya. This training will include a five days of lecture and working group sessions to cover topics including but not limited to scientific paper formatting, styling, and general requirements; the ethics of journal publication and authorship; the inclusion of background research and citing references, and understanding the impact factor and journal submission organizational techniques. Each participant will have access to the coaches, and be able to work directly with the SMEs on their material. The sixth and final day will allow for collaboration between the SMEs to finalize the review of manuscripts before departing.

Deliverables:

- Deliverable 1: Submission of the Training Trip Report and After-Action Report detailing the overall training processes and lessons learned and the results of knowledge gained assessments.

Phase 4 – Post-Workshop Review and Summary Report Development (Feb. 14-29, 2016)

Objective: Develop final report and provide final manuscript review and post-workshop support to participants as needed.

Process: Metabiota will work jointly with the SME mentors and participants to provide technical and programmatic support during the post-workshop phase. SMEs will coordinate with each other to ensure that no effort goes wasted and that manuscript reviews are comprehensive and supportive of the intended skill enhancement of the writers. SMEs will be able to communicate with participants during this period. Once complete, Metabiota will develop a final report detailing the overall processes and lessons learned.

Deliverables:

- Deliverable 1: Final report detailing overall processes and lessons learned

Risk Management:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost						

Subject Matter Expert Subcontracting	Due to limited insight into participant profiles and research activities, additional costs and time-delays may occur to identify and coordinate the most appropriate SME coordination, which may impact the ability to conduct this activity in full.	3	3	Medium	As soon as Metabiota has a basic understanding of the participants' work, Metabiota will begin contacting necessary SMEs, refining the list as better understanding develops. Metabiota will attempt to reach basic agreement with SMEs as soon as possible and issue authorization to proceed while subcontracts are being put into place.
Programmatic labor hours	Following guidance from CBEP POC's, the current budget for Metabiota Program Management and Project Coordination hours are extremely low. As a result, and based on previous experience implementing overseas activities, there is significant risk for budget overrun.	5	5	(b)(4); (b)(6)	Maximize efficiency regarding approved labor hours through best practice, and notification to DTRA CBEP contracting officer of expectations to run over budget.
				Schedule	
Project Coordination	Kenya One Health Technical Writing Workshop involves a significant number of stakeholders and participants representing various organizations, putting implementation activities at risk of delay or cancellation	5	2	Medium	Establish and hold regular calls with al stakeholders and identify multiple possible implementation dates. Identify critical components as early as possible and redirect efforts when it becomes clear that targeted implementation dates will not be achievable.
				Performance	
Political Instability	Sporadic violence in northeastern Kenya may lead to risks of being unable to safely complete in-country work.	2	5	Medium	Coordinate closely with DTRA and AFRICOM to be aware of any potentia risks to performers, and target a location for the workshop well away from risky areas.

(b)(4); (b)(6)

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	OTAL
1002	LABOR	$85,141
1003	MATERIALS	$7,880
1004	ODCs	$3,542
1005	TRAVEL	$17,420
TOTAL		**$113,982.82**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Period of Performance

The Period of Performance for this effort is July 21, 2015 to February 29, 2016.

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:
Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensur ng the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As some of our Subject Matter Experts will be independent consultants the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including independent consultants throughout the span of the project.

The Metabiota PM will oversee the coordination between the Kenyan stakeholders and the workshop planning team, and will ensure the project team captures and keeps in account stakeholder input regarding key information relevant to the planning of the workshop. The PM will travel to Kenya to

ensure the execution of the workshop proceeds smoothly and will provide oversight over all independent consultants. Lastly, the PM will provide oversight to ensure all required project closeout activities occur in a timely fashion.

Proposal Development - Phase 1:

Metabiota Subject Matter Expert I: The Metabiota SME I will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder.

Phase 2-4:

Subject Matter Expert III (2 total): We expect to identify two Kenya based SME III personnel with the support in large part from (b)(6) These SMEs will be fully qualified scientific experts with experience publishing in peer-reviewed journals. These SMEs will not require international travel, but will be compensated for domestic travel, and will be brought on as independent contractors to Metabiota.

The SMEs IIIs will each be assigned to work on reviewing manuscripts of the Writing workshop participants during phase 2. They will be tasked with workshop participation during phase 3, and final review during phase 4. These SMEs will be required to review relevant participant manuscripts closely during phase 2. This will require fully understanding the research that has been done, including a significant dive into the data collection and analysis that may have already been done to ensure that they utilize their time effectively during phase 3. During the workshop, SMEs will provide a mix of lectures discussing topics relevant to the authoring, editing, and publishing of scientific research, small group work reflecting those lectures, and one-on-one time with each of their assigned participants. Following the workshop, SMEs will provide follow-on mentoring to participants as they incorporate the lessons learned into the final drafts of their manuscript rev ews and relevant reports during phase 4.

Subject Matter Expert I (1 total): We expect to identify one US based Metabiota representative to serve as an SME I technical writer. This SME will be a fully qualified scientific expert with experience publishing in peer-reviewed journals.

The SME I will each be assigned to work on reviewing manuscripts of the Writing Workshop participants during phase 2 in concert with the SME 3s to avoid duplication of efforts. They will be tasked with workshop participation during phase 3, and final review during phase 4. This SME will be required to review relevant participant manuscripts closely during phase 2. This wil require fully understanding the research that has been done, including a significant dive into the data collection and analysis that may have already been done to ensure that they utilize their time effectively during phase 3. During the workshop, SMEs will provide a mix of lectures discussing topics relevant to the authoring, editing, and publishing of scientific research, small group work reflecting those lectures, and one-on-one time with each of their assigned participants. Following the workshop, This SME will provide follow-on mentoring to participants as they incorporate the lessons learned into the final drafts of their manuscript reviews and relevant reports during phase 4.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials
We have budgeted for the possibility that we may need to provide access to scientific journal articles to the workshop participants while they are working on their manuscripts. Our estimate provides an average of 10 articles per participant at an estimated access price of $35 per article. It may well be the case that some of the Writing Workshop participants do not require the use of this many articles on average; in which case costs will not be incurred. Participants must have expressed support from an involved SME to facilitate the purchase of any scientific article. The budget for journal access may only be partially utilized.

We have also budgeted for a small quantity of office supplies to accommodate the printing of agendas, training materials, or workshop materials needed to successfully execute and support in-country project activities.

Lastly, we have budgeted for international communications ability for our project team while they are in country implementing the workshop. The costs budgeted here reflect activating a moderate calling plan for each traveler's cell phones. These charges also reflect the provision of USB modems and associated moderate data plans to both the travelers and in country SME IIIs. These items will only be purchased if the situation dictates the need (i.e. inability to access online communications outright); otherwise, these modems will not be procured.

Other Direct Costs
Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts
Subcontracts will be issued to SMEs, RDAs, and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel is requested to support the program manager 1 subject matter expert to Nairobi, Kenya to implement the writing workshop. The travel budget represents the estimated amount required; travel on the AEP contract is cost reimbursable.

Our travel budget assumes the workshop will be held on 6 consecutive days, with an additional day budgeted for set-up and coordination activities. If, through discussion with the Kenyan stakeholders, an alternative schedule is created or an alterative location is desired, travel costs may be impacted accordingly.

Kenyan SME III contractors will be provided with hotel, and per diem respective of their length of participation on this effort. Their cost for arriving to the venue will be covered independently; however, daily transport costs w ll be shared among the workshop team as a whole.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

This revision to TD-14 provides additional guidance & clarification of the requirement to assist Metabiota in establishing a proposed implementation approach and budget for the period of performance. During the PoP, Metabiota is expected to:

a. Identify organizers of the Regional Conference on Zoonotic Diseases in Eastern Africa and collaborate with them to hold a 6-day writing workshop (not including venue, food, and travel logistics as this will be coordinated via CLS) for 20 participants. Metabiota should provide a PM and a SME1 for Project Coordination and Landscape Analysis. The hours required for this phase should not exceed 6 hours/week for two weeks each for the PM and SME1. Metabiota should reach out directly to (b)(6) the main POC of the One Health Workshop, to discuss what the vision for the implementation of the workshop is and to discuss SME support needed. Communication with (b)(6) should also include the discussion of the participants list, as the conference organizers have already identified them and will provide the names and draft manuscripts to Metabiota.

b. Coordinate with Kenyan collaborators to jointly identify no more than 2 Kenyan SMEs to participate in the writing workshop as well as pre- and post-workshop activities. For the first phase of Project Coordination and Landscape Analysis, the two Kenyan SMEs should also each not exceed 6 hours/week for two weeks. The writing coaches will provide mentorship to the participants and will help them convert their scientific data into a complete draft manuscript for a research paper to be submitted to a peer-review science journal. One manuscript will be developed per workshop participant. Metabiota will assist in the development of up to 20 papers/manuscripts. Additional communications regarding the SME assignments should occur during the activities described in a. and should be part of the not to exceed 6 hours/week.

c. Hypothesis Development and Article Framing- CBEP's expectation is that this workshop will provide the participants with the right skills and guidance to take their manuscripts to the next level, with the goal that that next level will be good enough for acceptance to a peer-reviewed journal. The SMEs will not need to contact the participants before the workshop due to the coordination through the Kenyan POCs and SMEs. Metabiota's SMEs (one from Metabiota and two Kenyans to be identified) will review the participants' manuscripts prior to the workshop. Each SME should not spend more than 20 hours total to complete the review and assessment of the manuscripts prior to the workshop as well as conduct any additional coordination among the SMEs. The SMEs will work together to determine if/how the manuscripts will be divided up as each SME may not need to conduct a detailed review of each manuscript. There may be additional SMEs identified for participation in all workshop activities (including pre- and post- workshop activities) by the Kenyan stakeholders but their time will not be funded by Metabiota. This should be discussed with the Kenyan POC noted above. PM oversight of the SME's review and coordination activities should not exceed 5 hours total.

d. Writing Workshop Implementation- The workshop outline should be as follows: 1) the main workshop will consist of 5 days (Monday-Friday) where the SME's will work together with the participants. 2) 1 day after the workshop for the SME's to finalize the review of the manuscripts, and 3) the travel days needed to travel between the U.S. and Kenya. PM participation during the workshop is acceptable. However, oversight should not necessitate as many hours as the SMEs efforts during the workshop, therefore Metabiota should propose PM hours planned to be spent only on this project, or provide sufficient clarification regarding PM tasks during the 6 working days to justify a full-time workload. The labor hours for each SME should not exceed 72 hours. PM hours are estimated at no more than 4 hours per day.

e. Paper Finalization and Publication Submission- CBEP and Metabiota will not be supporting or overseeing the submission of these manuscripts; for that reason, activities related to this should not be included in the proposed approach.

f. Post-workshop efforts- Post-workshop efforts will include the three SMEs (2 Kenyans and 1 Metabiota SME that participated in the workshop) spending no more than 20 hours each over 2-4 weeks to continue coordination with each other and potentially other SMEs (not funded via Metabiota) as well as finalize any needed review or revision of the manuscripts with the workshop participants. This may need to be divided between SMEs to stay within the 20 hour maximum. PM oversight of the SME's final review and coordination activities should not exceed 5 hours total.

g. For Materials and Supplies: CBEP expects participants to have relevant papers they have used in the past (to develop draft manuscripts papers and the presentations given at the One Health Conference). However, limited access to journals should be provided by Metabiota. The access per participant should be no more than 10 articles per person. This is an average and downloads should be managed by the PM and/or SMEs. A total number of 200 papers is authorized however this is the maximum, which does not need to be met, and should be used as needed per participant, not necessarily divided evenly if some participants do not require additional resources.

The period of performance for this effort will be from 18 September 2015 to 15 February 2016; however, CBEP anticipates the total time required to implement the requirement to be 20 weeks, including 2 weeks for Phase 1 (planning and SME identification), 3 weeks for Phase 2 (manuscript review and SME coordination), 1 week for Phase 3 (executing the workshop), and 4 weeks for Phase 4 (post-workshop coordination and manuscript review). Your technical approach, proposed budget, and basis of estimate for implementing this requirement is requested by 16 Sep 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Technical Approach
Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following phases are required for this project:

Phase 1: Programmatic Coordination and Training Landscape Review
Phase 2: SME Review and Coordination
Phase 3: Writing Workshop Implementation
Phase 4: Post-workshop review and Summary Report Development

Phase 1 – Programmatic Coordination and Landscape Analysis (16 Sep - 24-Sep. 30, 2015)

Objective: Establish a communication and coordination plan with the Kenyan Zoonotic Disease Unit (ZDU), Global Implementation Solutions (GIS), and Conference to initiate collaboration and conduct a landscape review of technical writing capacities and needs in the One Health sector in Kenya.

Process: Metabiota, with direction from DTRA CBEP, will engage Dr. Njenga Kariuki, the main POC from the Regional Conference on Zoonotic Diseases in Eastern Africa, an event that took place in Naivasha, Kenya, March 2015. Through this collaboration, Metabiota will develop an understanding of Kenya's technical writing capacities and needs in the One Health sector. Metabiota will receive the list of selected writing workshop participants from Dr. Njenga Kariuki. Metabiota will also receive recommendation from Dr. Njenga Kariuki for two mutually agreed upon Kenya based SME 3 technical writing experts to be brought on as independent contractors for this effort.

Deliverables:
- Deliverable 1: Submission of contacts list to include Writing Workshop participants and Kenyan SME III technical writing experts

Phase 2 – Pre-Workshop Participant Manuscript Review (Nov. 2, 2015-Jan. 29, 2016)

Objective: Selected participants set to attend the Writing Workshop will provide draft manuscripts for review by subject matter experts prior to their attendance. Technical writing SMEs will be able to gain a specific and in-depth understanding of the content they can expect during the writing workshop before attending.

Process: Metabiota, in coordination with DTRA-CBEP and Dr. Njenga Kariuki, will request that the selected participants produce draft manuscripts for review by the identified technical writing SMEs. Each SME will spend a defined number of hours reviewing the materials, and gaining a more defined understanding of the participants' approach. The SMEs will not be in contact with the participants during this phase, but will communicate among themselves with the assistance of the program manager to ensure that manuscripts to be reviewed are divided up appropriately among the team.

Deliverables:
- Deliverable 1: Submission of participants' draft manuscripts to DTRA CBEP representation to serve as a baseline for comparison to improved writings. Draft manuscripts to include hypotheses, writing concepts and an approach plan, along with statements of accessible, supporting data.

Phase 3– Writing Workshop Implementation (Feb. 8-13, 2016)

Objective: Conduct a six-day workshop on various aspects of technical writing in order to train and mentor twenty participants representing the Kenyan One Health research sector.

Process: Metabiota will coordinate with the SME mentors and participants to conduct the six-day training in Kenya. This training will include a five days of lecture and working group sessions to cover topics including but not limited to scientific paper formatting, styling, and general requirements; the ethics of journal publication and authorship; the inclusion of background research and citing references, and understanding the impact factor and journal submission organizational techniques. Each participant will have access to the coaches, and be able to work directly with the SMEs on their material. The sixth and final day will allow for collaboration between the SMEs to finalize the review of manuscripts before departing.

Deliverables:
- Deliverable 1: Submission of the Training Trip Report and After-Action Report detailing the overall training processes and lessons learned and the results of knowledge gained assessments.

Phase 4 – Post-Workshop Review and Summary Report Development (Feb. 14-29, 2016)

Objective: Develop final report and provide final manuscript review and post-workshop support to participants as needed.

Process: Metabiota will work jointly with the SME mentors and participants to provide technical and programmatic support during the post-workshop phase. SMEs will coordinate with each other to ensure that no effort goes wasted and that manuscript reviews are comprehensive and supportive of the intended skill enhancement of the writers. SMEs will be able to communicate with participants during this period. Once complete, Metabiota will develop a final report detailing the overall processes and lessons learned.

Deliverables:
- Deliverable 1: Final report detailing overall processes and lessons learned
- Deliverable 2: Submission of updated, edited, and improved post-workshop participant draft manuscripts, developed in concert with identified subject matter experts, to DTRA CBEP representation to serve as comparison points to the baseline for improvement evaluation.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix:

Risk Management:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
				Cost		
Subject Matter Expert Independent Contracting	Stated limitations on Subject Matter Expert selection and labor hours allocated, coupled with limited operational contact with workshop participants and their materials, may affect the quality of final phase deliverables for this effort.	4	3	**Medium-High**	As soon as this effort begins, Metabiota will identify an ideal SME I, and coordinate with Kenyan stakeholders to select ideal local national SME 3s for this workshop. Metabiota will also carefully manage and coordinate communication between all SMEs to ensure efficiency and the prevention of effort duplication wherever possible.	Medium
Participant Identification and Coordination	Due to Metabiota's limited insight regarding the participants of the Writing Workshop, and their respective academic and logistical capacities (i.e. possession of laptops, research tools, previously cited materials, quality of data sources, etc.), it is possible that the quality of improvement for their manuscripts may be hindered.	4	3	**Medium-High**	Metabiota will ensure that effective coordination and communication with Kenyan Stakeholders is employed to ensure that a maximal amount of information about the participants, their research, and their respective capacities' is garnered before the workshop. This will allow for the controlling of mentioned confounders, and a managed increase in efficiency with regard to review and operation.	Medium
Programmatic labor hours	Following guidance from CBEP POC's, the current budget for Metabiota Program Management and Project Coordination hours are extremely low. As a result, and based on previous experience implementing overseas activities, there is significant risk for budget overrun.	5	5	(b)(4); (b)(6)	Maximize efficiency regarding approved labor hours through best practice, and notification to DTRA CBEP contracting officer of expectations to run over budget.	(b)(4); (b)(6)
				Schedule		
Project Coordination	Kenya One Health Technical Writing Workshop involves a significant number of stakeholders and participants representing various organizations, putting implementation activities at risk of delay or cancellation.	5	2	Medium	Establish and hold regular calls with all stakeholders and identify multiple possible implementation dates. Identify critical components as early as possible and redirect efforts when it becomes clear that targeted implementation dates will not be achievable.	
				Performance		
Political Instability	Sporadic violence in northeastern Kenya may lead to risks of being unable to safely complete in-country work.	2	5	Medium	Coordinate closely with DTRA and AFRICOM to be aware of any potential risks to performers, and target a location for the workshop well away from risky areas.	

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$85,141
1003	MATERIALS	$7,880
1004	ODCs	$3,542
1005	TRAVEL	$17,420
TOTAL		**$113,982.82**

9c. TD SOLUTION BASIS OF ESTIMATE DESCRIPTION (NOT TO EXCEED 2 PAGES)

Period of Performance

The Period of Performance for this effort is July 21, 2015 to February 29, 2016.

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:
Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As some of our Subject Matter Experts will be independent consultants the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including independent consultants throughout the span of the project.

The Metabiota PM will oversee the coordination between the Kenyan stakeholders and the workshop planning team, and will ensure the project team captures and keeps in account stakeholder input regarding key information relevant to the planning of the workshop. The PM will travel to Kenya to ensure the execution of the workshop proceeds smoothly and will provide oversight over all independent consultants. Lastly, the PM will provide oversight to ensure all required project closeout activities occur in a timely fashion.

Proposal Development - Phase 1:

Metabiota Subject Matter Expert I: The Metabiota SME I will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipat ng, managing, and communicating projects risks and recommended mitigation strategies to the funder.

Phase 2-4:

Subject Matter Expert III (2 total): We expect to identify two Kenya based SME III personnel with the support in large part from (b)(6) These SMEs will be fully qualified scientific experts with experience publishing in peer-reviewed journals. These SMEs will not require international travel, but will be compensated for domestic travel, and will be brought on as independent contractors to Metabiota.

The SMEs IIIs will each be assigned to work on reviewing manuscripts of the Writing workshop participants during phase 2. They will be tasked with workshop participation during phase 3, and final review during phase 4. These SMEs will be required to review relevant participant manuscripts closely during phase 2. This will require fully understanding the research that has been done, including a significant dive into the data collection and analysis that may have already been done to ensure that they utilize their time effectively during phase 3. During the workshop, SMEs will provide a mix of lectures discussing topics relevant to the authoring, editing, and publishing of scientific research, small group work reflecting those lectures, and one-on-one time with each of their assigned participants. Following the workshop, SMEs will provide follow-on mentoring to participants as they incorporate the lessons learned into the final drafts of their manuscript reviews and relevant reports during phase 4.

Subject Matter Expert I (1 total): We expect to identify one US based Metabiota representative to serve as an SME I technical writer. This SME will be a fully qualified scientific expert with experience publishing in peer-reviewed journals.

The SME I will each be assigned to work on reviewing manuscripts of the Writing Workshop participants during phase 2 in concert with the SME 3s to avoid duplication of efforts. They will be tasked with workshop participation during phase 3, and final review during phase 4. This SME will be required to review relevant participant manuscripts closely during phase 2. This will require fully understanding the research that has been done, including a significant dive into the data collection and analysis that may have already been done to ensure that they utilize their time effectively during phase 3. During the workshop, SMEs will provide a mix of lectures discussing topics relevant to the authoring, editing, and publishing of scientific research, small group work reflecting those lectures, and one-on-one time with each of their assigned participants. Following the workshop, This SME will provide follow-on mentoring to participants as they incorporate the lessons learned into the final drafts of their manuscript reviews and relevant reports during phase 4.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials
We have budgeted for the possibility that we may need to provide access to scientific journal articles to the workshop participants while they are working on their manuscripts. Our estimate provides an average of 10 articles per participant at an estimated access price of $35 per article. It may well be the case that some of the Writing Workshop participants do not require the use of this many articles on average; in which case costs will not be incurred. Participants must have expressed support from an involved SME to facilitate the purchase of any scientific article. The budget for journal access may only be partially utilized.

We have also budgeted for a small quantity of office supplies to accommodate the printing of agendas, training materials, or workshop materials needed to successfully execute and support in-country project activities.

We have budgeted for an effort based international communications capacity for our project team while they are in country implementing the workshop. The costs budgeted here reflect activating a moderate calling plan to support the efforts of the program manager and subject matter experts. To control for costs, calling time will be purchased in the form of 1,000 Kenyan Schilling scratch cards (roughly 10.00 USD - dependent on active exchange rate). Each of the four functional team members will be allocated a maximum of 5 scratch cards during this effort, and will be expected to use the resource wisely and efficiently with respect to the project. Scratch cards will be purchased on an as needed basis.

Lastly, these charges also reflect the provision of USB modems and associated moderate data plans to both the travelers and in country SME IIIs. These items will only be purchased if the situation dictates the need (i.e. inability to access online communications outright); otherwise, these modems will not be procured.

Other Direct Costs
Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts
Subcontracts will be issued to SMEs, RDAs, and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel is requested to support the program manager 1 subject matter expert to Nairobi, Kenya to implement the writing workshop. The travel budget represents the estimated amount required; travel on the AEP contract is cost reimbursable.

Our travel budget assumes the workshop will be held on 6 consecutive days, with an additional day budgeted for set-up and coordination activities. If, through discussion with the Kenyan stakeholders, an alternative schedule is created or an alterative location is desired, travel costs may be impacted accordingly.

Kenyan SME III contractors will be provided with hotel, and per diem respective of their length of participation on this effort. Their cost for arriving to the venue will be covered independently; however, daily transport costs will be shared among the workshop team as a whole.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision to TD-14 provides additional guidance & clarification of the requirement to assist Metabiota in establishing a proposed implementation approach. This revision also extends the PoP end date from 15 February to 30 April 2016. During the PoP, Metabiota is expected to:

a. Identify organizers of the Regional Conference on Zoonotic Diseases in Eastern Africa and collaborate with them to hold a 6-day writing workshop (not including venue, food, and travel logistics as this will be coordinated via CLS) for 20 participants. Metabiota should provide a PM and PC (billing as SME1) for Project Coordination and Landscape Analysis. Metabiota should reach out directly to (b)(6) (b)(6) the main POC of the One Health Workshop to discuss what the vision for the implementation of the workshop is and to discuss SME support needed. Communication with (b)(6) should also include the discussion of the participants list, as the conference organizers have already identified them and will provide the names and draft manuscripts to Metabiota.

b. Coordinate with Kenyan collaborators to jointly identify no more than 3 Kenyan SMEs to participate in the writing workshop as well as pre- and post-workshop activities. An appropriate level for Kenyan SMEs would be SME1. For the first phase of Project Coordination and Landscape Analysis, the three Kenyan SMEs should also each not exceed 6 hours/week for two weeks. The writing coaches will provide mentorship to the participants and will help them convert their scientific data into a complete draft manuscript for a research paper to be submitted to a peer-review science journal. One manuscript will be developed per workshop participant. Metabiota wil assist in the development of up to 20 papers/manuscripts. Additional communications regarding the SME assignments should occur during the activities described in a.

c. Hypothesis Development and Article Framing- CBEP's expectation is that this workshop will provide the participants with the right skills and guidance to take their manuscripts to the next level, with the goal that that next level will be good enough for acceptance to a peer-reviewed journal. The SMEs will not need to contact the participants before the workshop due to the coordination through the Kenyan POCs and SMEs. Metabiota's technical SMEs (one from Metabiota and three Kenyans to be identified) will review the participants' manuscripts prior to the workshop. Each SME should not spend more than 20 hours total to complete the review and assessment of the manuscripts prior to the workshop as well as conduct any additional coordination among the SMEs. The SMEs will work together to determine if/how the manuscripts will be divided up as each SME may not need to conduct a detailed review of each manuscript. There may be additional SMEs identified for participation in all workshop activities (including pre- and post- workshop activities) by the Kenyan stakeholders but their time will not be funded by Metabiota. This should be discussed with the Kenyan POC noted above.

d. Writing Workshop Implementation- The workshop outline should be as follows: 1) the main workshop will consist of 5 days (Monday-Friday) where the SME's will work together with the participants, 2) 1 day after the workshop for the SME's to finalize the review of the manuscripts, and 3) the travel days needed to travel between the U.S. and Kenya. PC participation during the workshop is acceptable. However, oversight should not necessitate as many hours as the SMEs efforts during the workshop therefore Metabiota should propose PC hours planned to be spent only on this project, or provide sufficient clarification regarding PC tasks during the 6 working days to justify a full-time workload. The labor hours for each SME should not exceed 72 hours. PC hours are estimated at no more than 4 hours per day.

e. Paper Finalization and Publication Submission- CBEP and Metabiota will not be supporting or overseeing the submission of these manuscripts; for that reason, activities related to this should not be included in the proposed approach.

f. Post-workshop efforts- Post-workshop efforts will include the four technical SMEs (3 Kenyans and 1 Metabiota SME) over the course of 10 weeks to provide continued mentorship to all trainees until all manuscripts have been improved to publication quality. Additionally, Metabiota PM and PC (SME1) will continue to provide additional oversight and coordination between technical SME's and trainees to ensure all programmatic objectives and associated deliverables are met.

g. For Materials and Supplies: CBEP expects participants to have relevant papers they have used in the past (to develop draft manuscripts papers and the presentations given at the One Health Conference). However, limited access to journals should be provided by Metabiota. The access per participant should be no more than 10 articles per person. This is an average and downloads should be managed by the PM and/or SMEs. A total number of 200 papers is authorized however this is the maximum, which does not need to be met, and should be used as needed per participant, not necessarily divided evenly if some participants do not require additional resources.

PM and SME labor hours noted above should be the target level of effort, however CBEP grants some flexibility in the total number of hours per person per phase. Across all phases during the period of performance: PM hours shall not exceed 121 hours. Metabiota SME1 hours shall not exceed 165 hours, and Kenyan SME hours shall not exceed 125 hours each. Metabiota is expected to track all hours closely during each phase so that adjustments to the approach can be made as needed, and in coordination with CBEP, in order to keep within the allowed number of hours per person before it's too late to successfully complete the project within these allowed hours.

The period of performance for this effort will be from 18 September 2015 to 30 April 2016. CBEP anticipates the total time required to implement the requirement to be 32 weeks. Your technical approach, proposed budget, and basis of estimate for implementing this requirement is requested by 16 Sep 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Technical Approach
Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following phases are required for this project:

Phase 1: Programmatic Coordination and Training Landscape Review
Phase 2: SME Review and Coordination
Phase 3: Writing Workshop Implementation
Phase 4: Post-workshop review and Summary Report Development

Phase 1 – Programmatic Coordination and Landscape Analysis (16 Sep - 24-Sep. 30, 2015)

Objective: Establish a communication and coordination plan with the Kenyan Zoonotic Disease Unit (ZDU), Global Implementation Solutions (GIS), and Conference to initiate collaboration and conduct a landscape review of technical writing capacities and needs in the One Health sector in Kenya.

Process: Metabiota, with direction from DTRA CBEP, will engage (b)(6) e main POC from the Regional Conference on Zoonotic Diseases in Eastern Africa, an event that took place in Naivasha, Kenya, March 2015. Through this collaboration Metabiota will develop an understanding of Kenya's technical writing capacities and needs in the One Health sector. Metabiota will receive the list of selected writing workshop participants from (b)(6) ki. Metabiota will also receive recommendation from (b)(6) for two mutually agreed upon Kenya based SME 3 technical writing experts to be brought on as independent contractors for this effort.

Deliverables:

- Deliverable 1: Submission of contacts list to include Writing Workshop participants and Kenyan SME III technical writing experts

Phase 2 – Pre-Workshop Participant Manuscript Review (Nov. 2, 2015-Jan. 29, 2016)

Objective: Selected participants set to attend the Writing Workshop will provide draft manuscripts for review by subject matter experts prior to their attendance. Technical writing SMEs will be able to gain a specific and in-depth understanding of the content they can expect during the writing workshop before attending.

Process: Metabiota, in coordination with DTRA-CBEP and (b)(6) , will request that the selected participants produce draft manuscripts for review by the identified technical writing SMEs. Each SME will spend a defined number of hours reviewing the materials, and gaining a more defined understanding of the participants' approach. The SMEs will not be in contact with the participants during this phase, but will communicate among themselves with the assistance of the program manager to ensure that manuscripts to be reviewed are divided up appropriately among the team.

Deliverables:

- Deliverable 1: Submission of participants' draft manuscripts to include hypotheses, writing concepts and an approach plan, along with statements of accessible, supporting data.

Phase 3– Writing Workshop Implementation (Feb. 8-13, 2016)

Objective: Conduct a six-day workshop on various aspects of technical writing in order to train and mentor twenty participants representing the Kenyan One Health research sector.

Process: Metabiota will coordinate with the SME mentors and participants to conduct the six-day training in Kenya. This training will include a five days of lecture and working group sessions to cover topics including but not limited to scientific paper formatting, styling, and general requirements; the ethics of journal publication and authorship, the inclusion of background research and citing references, and understanding the impact factor and journal submission organizational techniques. Each participant will have access to the coaches, and be able to work directly with the SMEs on their material. The sixth and final day will allow for collaboration between the SMEs to finalize the review of manuscripts before departing.

Deliverables:

- Deliverable 1: Submission of the Training Trip Report and After-Action Report detailing the overall training processes and lessons learned and the results of knowledge gained assessments.

Phase 4 – Post-Workshop Review and Summary Report Development (Feb. 14-29, 2016)

Objective: Develop final report and provide final manuscript review and post-workshop support to participants as needed.

Process: Metabiota will work jointly with the SME mentors and participants to provide technical and programmatic support during the post-workshop phase. SMEs will coordinate with each other to ensure that no effort goes wasted and that manuscript reviews are comprehensive and supportive of the intended skill enhancement of the writers. SMEs will be able to communicate with participants during this period. Once complete, Metabiota will develop a final report detailing the overall processes and lessons learned.

Deliverables:

- Deliverable 1: Final report detailing overall processes and lessons learned

Risk Management:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
				Cost		
Subject Matter Expert Subcontracting	Due to limited insight into participant profiles and research activities, additional costs and time-delays may occur to identify and coordinate the most appropriate SME coordination, which may impact the ability to conduct this activity in full.	3	3	Medium	As soon as Metabiota has a basic understanding of the participants' work, Metabiota will begin contacting necessary SMEs, refining the list as better understanding develops. Metabiota will attempt to reach basic agreement with SMEs as soon as possible and issue authorization to proceed while subcontracts are being put into place.	(b)(4); (b)(6)
Programmatic labor hours	Following guidance from CBEP POC's, the current budget for Metabiota Program Management and Project Coordination hours are extremely low. As a result, and based on previous experience implementing overseas activities there is significant risk for budget overrun.	5	5	(b)(4); (b)(6)	Maximize efficiency regarding approved labor hours through best practice, and notification to DTRA CBEP contracting officer of expectations to run over budget.	
				Schedule		
Project Coordination	Kenya One Health Technical Writing Workshop involves a significant number of stakeholders and participants representing various organizations, putting implementation activities at risk of delay or cancellation.	5	2	Medium	Establish and hold regular calls with all stakeholders and identify multiple possible implementation dates. Identify critical components as early as possible and redirect efforts when it becomes clear that targeted implementation dates will not be achievable.	
				Performance		
Political Instability	Sporadic violence in northeastern Kenya may lead to risks of being unable to safely complete in-country work.	2	5	Medium	Coordinate closely with DTRA and AFRICOM to be aware of any potential risks to performers, and target a location for the workshop well away from risky areas.	

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$85,14[illegible]
1003	MATERIALS	$7,880
1004	ODCs	$3,542
1005	TRAVEL	$17,420
TOTAL		**$113,983**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Period of Performance

The Period of Performance for this effort is July 21, 2015 to February 29, 2016.

Labor

Costs for direct labor to support this activity is required for the following personnel:

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As some of our Subject Matter Experts will be independent consultants the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including independent consultants throughout the span of the project.

The Metabiota PM will oversee the coordination between the Kenyan stakeholders and the workshop planning team, and will ensure the project team captures and keeps in account stakeholder input regarding key information relevant to the planning of the workshop. The PM will travel to Kenya to ensure the execution of the workshop proceeds smoothly and will provide oversight over all independent consultants. Lastly, the PM will provide oversight to ensure all required project closeout activities occur in a timely fashion.

Proposal Development - Phase 1:

Metabiota Subject Matter Expert I: The Metabiota SME I will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder.

Phase 2-4:

Subject Matter Expert III (2 total): We expect to identify two Kenya based SME III personnel with the support in large part from (b)(6) These SMEs will be fully qualified scientific experts with experience publishing in peer-reviewed journals. These SMEs will not require international travel, but will be compensated for domestic travel, and will be brought on as independent contractors to Metabiota.

The SMEs IIIs will each be assigned to work on reviewing manuscripts of the Writing workshop participants during phase 2. They will be tasked with workshop participation during phase 3, and final review during phase 4. These SMEs will be required to review relevant participant manuscripts closely during phase 2. This will require fully understanding the research that has been done, including a significant dive into the data collection and analysis that may have already been done to ensure that they utilize their time effectively during phase 3. During the workshop, SMEs will provide a mix of lectures discussing topics relevant to the authoring, editing, and publishing of scientific research, small group work reflecting those lectures, and one-on-one time with each of their assigned participants. Following the workshop, SMEs will provide follow-on mentoring to participants as they incorporate the lessons learned into the final drafts of their manuscript rev ews and relevant reports during phase 4.

Subject Matter Expert I (1 total): We expect to identify one US based Metabiota representative to serve as an SME I technical writer. This SME will be a fully qualified scientific expert with experience publishing in peer-reviewed journals.

The SME I will each be assigned to work on reviewing manuscripts of the Writing Workshop participants during phase 2 in concert with the SME 3s to avoid duplication of efforts. They will be tasked with workshop participation during phase 3, and final review during phase 4. This SME will be required to review relevant participant manuscripts closely during phase 2. This will require fully understanding the research that has been done, including a significant dive into the data collection and analysis that may have already been done to ensure that they utilize their time effectively during phase 3. During the workshop, SMEs will provide a mix of lectures discussing topics relevant to the authoring, editing, and publishing of scientific research, small group work reflecting those lectures, and one-on-one time with each of their assigned participants. Following the workshop, This SME will provide follow-on mentoring to participants as they incorporate the lessons learned into the final drafts of their manuscript reviews and relevant reports during phase 4.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials
We have budgeted for the possibility that we may need to provide access to scientific journal articles to the workshop participants while they are working on their manuscripts. Our estimate provides an average of 10 articles per participant at an estimated access price of $35 per article. It may well be the case that some of the Writing Workshop participants do not require the use of this many articles on average; in which case costs will not be incurred. Participants must have expressed support from an involved SME to facilitate the purchase of any scientific article. The budget for journal access may only be partially utilized.

We have also budgeted for a small quantity of office supplies to accommodate the printing of agendas, training materials, or workshop materials needed to successfully execute and support in-country project activities.

Lastly, we have budgeted for international communications ability for our project team while they are in country implementing the workshop. The costs budgeted here reflect activating a moderate calling plan for each traveler's cell phones. These charges also reflect the provision of USB modems and associated moderate data plans to both the travelers and in country SME IIIs. These items will only be purchased if the situation dictates the need (i.e. inability to access online communications outright); otherwise, these modems will not be procured.

Other Direct Costs
Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts
Subcontracts will be issued to SMEs, RDAs, and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel is requested to support the program manager 1 subject matter expert to Nairobi, Kenya to implement the writing workshop. The travel budget represents the estimated amount required; travel on the AEP contract is cost reimbursable.

Our travel budget assumes the workshop will be held on 6 consecutive days, with an additional day budgeted for set-up and coordination activities. If, through discussion with the Kenyan stakeholders, an alternative schedule is created or an alterative location is desired, travel costs may be impacted

accordingly.

Kenyan SME III contractors will be provided with hotel, and per diem respective of their length of participation on this effort. Their cost for arriving to the venue will be covered independently; however, daily transport costs w ll be shared among the workshop team as a whole.

10. FUNDING AUTHORIZED THIS TD REV:

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

This revision to TD-14 provides additional guidance & clarification of the requirement to assist Metabiota in establishing a proposed implementation approach. This revision also extends the PoP end date from 15 February to 30 April 2016. During the PoP, Metabiota is expected to:

a. Identify organizers of the Regional Conference on Zoonotic Diseases in Eastern Africa and collaborate with them to hold a 6-day writing workshop (not including venue, food, and travel logistics as this will be coordinated via CLS) for 20 participants. Metabiota should provide a PM and PC (billing as SME1) for Project Coordination and Landscape Analysis. Metabiota should reach out directly to (b)(6) (b)(6) the main POC of the One Health Workshop, to discuss what the vision for the implementation of the workshop is and to discuss SME support needed. Communication with (b)(6) should also include the discussion of the participants list, as the conference organizers have already identified them and will provide the names and draft manuscripts to Metabiota.

b. Coordinate with Kenyan collaborators to jointly identify no more than 3 Kenyan SMEs to participate in the writing workshop as well as pre- and post-workshop activities. An appropriate level for Kenyan SMEs would be SME1. For the first phase of Project Coordination and Landscape Analysis, the three Kenyan SMEs should also each not exceed 6 hours/week for two weeks. The writing coaches will provide mentorship to the participants and will help them convert their scientific data into a complete draft manuscript for a research paper to be submitted to a peer-review science journal. One manuscript will be developed per workshop participant. Metabiota wil assist in the development of up to 20 papers/manuscripts. Additional communications regarding the SME assignments should occur during the activities described in a.

c. Hypothesis Development and Article Framing- CBEP's expectation is that this workshop will provide the participants with the right skills and guidance to take their manuscripts to the next level, with the goal that that next level will be good enough for acceptance to a peer-reviewed journal. The SMEs will not need to contact the participants before the workshop due to the coordination through the Kenyan POCs and SMEs. Metabiota's technical SMEs (one from Metabiota and three Kenyans to be identified) will review the participants' manuscripts prior to the workshop. Each SME should not spend more than 20 hours total to complete the review and assessment of the manuscripts prior to the workshop as well as conduct any additional coordination among the SMEs. The SMEs will work together to determine if/how the manuscripts will be divided up as each SME may not need to conduct a detailed review of each manuscript. There may be additional SMEs identified for participation in all workshop activities (including pre- and post- workshop activities) by the Kenyan stakeholders but their time will not be funded by Metabiota. This should be discussed with the Kenyan POC noted above.

d. Writing Workshop Implementation- The workshop outline should be as follows: 1) the main workshop will consist of 5 days (Monday-Friday) where the SME's will work together with the participants, 2) 1 day after the workshop for the SME's to finalize the review of the manuscripts, and 3) the travel days needed to travel between the U.S. and Kenya. PC participation during the workshop is acceptable. However, oversight should not necessitate as many hours as the SMEs efforts during the workshop, therefore Metabiota should propose PC hours planned to be spent only on this project, or provide sufficient clarification regarding PC tasks during the 6 working days to justify a full-time workload. The labor hours for each SME should not exceed 72 hours. PC hours are estimated at no more than 4 hours per day.

e. Paper Finalization and Publication Submission- CBEP and Metabiota will not be supporting or overseeing the submission of these manuscripts; for that reason, activities related to this should not be included in the proposed approach.

f. Post-workshop efforts- Post-workshop efforts will include the four technical SMEs (3 Kenyans and 1 Metabiota SME) over the course of 10 weeks to provide continued mentorship to all trainees until all manuscripts have been improved to publication quality. Additionally, Metabiota PM and PC (SME1) will continue to provide additional oversight and coordination between technical SME's and trainees to ensure all programmatic objectives and associated deliverables are met.

g. For Materials and Supplies CBEP expects participants to have relevant papers they have used in the past (to develop draft manuscripts papers and the presentations given at the One Health Conference). However, limited access to journals should be provided by Metabiota The access per participant should be no more than 10 articles per person. This is an average and downloads should be managed by the PM and/or SMEs. A total number of 200 papers is authorized however this is the maximum, which does not need to be met, and should be used as needed per participant, not necessarily divided evenly if some participants do not require additional resources.

PM and SME labor hours noted above should be the target level of effort, however CBEP grants some flexibility in the total number of hours per person per phase. Across all phases during the period of performance: PM hours shall not exceed 121 hours. Metabiota SME1 hours shall not exceed 165 hours, and Kenyan SME hours shall not exceed 125 hours each. Metabiota is expected to track all hours closely during each phase so that adjustments to the approach can be made as needed, and in coordination with CBEP, in order to keep within the allowed number of hours per person before it's too late to successfully complete the project within these allowed hours.

The period of performance for this effort will be from 18 September 2015 to 30 April 2016. CBEP anticipates the total time required to implement the requirement to be 32 weeks. Your technical approach, proposed budget, and basis of estimate for implementing this requirement is requested by 16 Sep 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Technical Approach
Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following phases are required for this project:

Phase 1: Programmatic Coordination and Training Landscape Review
Phase 2: SME Review and Coordination
Phase 3: Writing Workshop Implementation
Phase 4: Post-workshop review and Summary Report Development

Phase 1 – Programmatic Coordination and Landscape Analysis (16 Sep - 24-Sep. 2015)

Objective: Establish a communication and coordination plan with the Kenyan Zoonotic Disease Unit (ZDU), Global Implementation Solutions (GIS), and Conference to initiate collaboration and conduct a landscape review of technical writing capacities and needs in the One Health sector in Kenya.

Process: Metabiota, with direction from DTRA CBEP, will engage Dr. Kariuki Njenga, the main POC from the Regional Conference on Zoonotic Diseases in Eastern Africa, an event that took place in Naivasha, Kenya, March 2015. Through this collaboration, Metabiota will develop an understanding of Kenya's technical writing capacities and needs in the One Health sector. Metabiota will receive the list of selected writing workshop participants from (b)(6) Metabiota will also receive recommendation from (b)(6) for three mutually agreed upon Kenya based SME / technical writing experts to be brought on as independent contractors for this effort.

Deliverables:
- Deliverable 1: Submission of contacts list to include Writing Workshop participants and Kenyan SME technical writing experts

Phase 2 – Pre-Workshop Participant Manuscript Review (2 Nov. 2015 – 5 Feb. 2016)

Objective: Selected participants set to attend the Writing Workshop will provide draft manuscripts for review by subject matter experts prior to their attendance. Technical writing SMEs will be able to gain a specific and in-depth understanding of the content they can expect during the writing workshop before attending.

Process: Metabiota, in coordination with DTRA-CBEP and (b)(6) will request that the selected participants produce draft manuscripts for review by the identified technical writing SMEs. Each SME will be assigned a specific set of participant manuscripts and spend a defined number of hours reviewing the materials, thus allowing them to gain a more defined understanding of the participants' approach. The SMEs will not be in contact with the participants during this phase, but will communicate among themselves with the assistance of the program manager to ensure that manuscripts to be reviewed are divided up appropriately among the team.

Deliverables:
- Deliverable 1: Submission of participants' draft manuscripts to DTRA CBEP representation to serve as a baseline for comparison to improved writings. Draft manuscripts to include hypotheses, writing concepts and an approach plan, along with statements of accessible, supporting data.

Phase 3– Writing Workshop Implementation (8 – 13 Feb. 2016)

Objective: Conduct a six-day workshop on various aspects of technical writing in order to train and mentor twenty participants representing the Kenyan One Health research sector.

Process: Metabiota will coordinate with the SME mentors and participants to conduct the six-day training in Kenya. This training will include a five days of lecture and working group sessions to cover topics including but not limited to scientific paper formatting, styling, and general requirements; the ethics of journal publication and authorship; the inclusion of background research and citing references, and understanding the impact factor and journal submission organizational techniques. Each participant will have access to the coaches, and be able to work directly with the SMEs on their material. The sixth and final day will allow for collaboration between the SMEs to finalize the review of manuscripts before departing. Metabiota in country support will include Project Coordinator (SME 1) (b)(6) and AEP Deputy Director (b)(6) Metabiota will additionally provide remote technical support from SME 1 (b)(6)

Deliverables:
- Deliverable 1: Submission of the Training Trip Report and After-Action Report detailing the overall training processes and lessons learned and the results of knowledge gained assessments.

Phase 4 – Post-Workshop Review and Summary Report Development (14 Feb. – 30 Apr. 2016)

Objective: Develop final report and provide final manuscript review and post-workshop support to participants as needed.

Process: Metabiota will work jointly with the SME mentors and participants to provide technical and programmatic support during the post-workshop phase. SMEs will coordinate with each other to ensure that no effort goes wasted and that manuscript reviews are comprehensive and supportive of the intended skill enhancement of the writers. SMEs will be able to communicate with participants during this period. Once complete, Metabiota will develop a final report detailing the overall processes and lessons learned.

Deliverables:
- Deliverable 1: Final report detailing (i) overall processes; (ii) SME assessment comparing original and final manuscripts against a variety of relevant quality factors (factors and format TBD collaboratively between Metabiota and CBEP); (iii) list of journal submissions (or planned journal submissions) for each manuscript; and (iv) lessons learned.

- Deliverable 2: Submission of updated, edited, and improved post-workshop participant draft manuscripts, developed in concert with identified subject matter experts, to DTRA CBEP representation to serve as comparison points to the baseline for improvement evaluation.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
			Cost			(b)(4); (b)(6)
Subject Matter Expert Subcontracting	Due to limited insight into participant profiles and research activities, additional costs and time-delays may occur to identify and coordinate the most appropriate SME coordination, which may impact the ability to conduct this activity in full.	3	3	Medium	As soon as Metabiota has a basic understanding of the participants' work, Metabiota will begin contacting necessary SMEs, refining the list as better understanding develops. Metabiota will attempt to reach basic agreement with SMEs as soon as possible and issue authorization to proceed while subcontracts are being put into place.	
Participant Identification and Coordination	Due to Metabiota's limited insight regarding the participants of the Writing Workshop, and their respective academic and logistical capacities (i.e. possession of laptops, research tools, previously cited materials, quality of data sources, etc.), it is possible that the quality of improvement for their manuscripts may be hindered	4	3	Medium-High	Metabiota will ensure that effective coordination and communication with Kenyan Stakeholders is employed to ensure that a maximal amount of information about the participants, their research, and their respective capacities' is garnered before the workshop. This will allow for the controlling of mentioned confounders, and a managed increase in efficiency with regard to review and operation.	
Programmatic labor hours	Following guidance from CBEP POC's, the current budget for Metabiota Program Management and Project Coordination hours are extremely low. As a result, and based on previous experience implementing overseas activities, there is significant risk for budget overrun	5	5	(b)(4); (b)(6)	Maximize efficiency regarding approved labor hours through best practice, and notification to DTRA CBEP contracting officer of expectations to run over budget.	
			Schedule			
Project Coordination	Kenya One Health Technical Writing Workshop involves a significant number of stakeholders and participants representing various organizations, putting implementation activities at risk of delay or cancellation.	5	2	Medium	Establish and hold regular calls with all stakeholders and identify multiple possible implementation dates. Identify critical components as early as possible and redirect efforts when it becomes clear that targeted implementation dates will not be achievable.	
			Performance			
Political Instability	Sporadic violence in northeastern Kenya may lead to risks of being unable to safely complete in-country work.	2	5	Medium	Coordinate closely with DTRA and AFRICOM to be aware of any potential risks to performers, and target a location for the workshop well away from risky areas.	

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$85,083.94
1003	MATERIALS	$7,879.63
1004	ODCs	$3,541.85
1005	TRAVEL	$17,420.00
TOTAL		**$113,925.42**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES .

Period of Performance

The Period of Performance for this effort is July 21, 2015 through 30 April 2016

Labor
Costs for direct labor to support this activity is required for the following personnel.

All phases:
Metabiota Program Manager: The Metabiota PM (b)(6) will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As some of our Subject Matter Experts will be independent consultants the Metabiota PM will additionally oversee and ensure that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PM will provide management oversight of the project team, including independent consultants throughout the span of the project.

The Metabiota PM will oversee the coordination between the Kenyan stakeholders and the workshop planning team, and will ensure the project team captures and keeps in account stakeholder input regarding key information relevant to the planning of the workshop. The PM will provide remote backstop support during the execution of the writing workshop to ensure the effort proceeds smoothly. The PM will provide oversight and support to all staff and independent consultants during this phase. Lastly, the PM wil provide oversight to ensure all required project closeout activities occur in a timely fashion.

Phases 1, 3, and 4:

Metabiota Subject Matter Expert I: Metabiota SME I (b)(6), will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder.

(b)(6) ll serve as an SME I Coordinator during phases 3 and 4 of this projec (b)(6) will travel to Kenya to provide coordination support during the implementation of the Writing Workshop. She will assis the PM to ensure that the effort proceeds smoothly and that all project personnel adhere to DoD and DTRA CBEP standard operating procedures and operational requirements. (b)(6) will restrict her time expenditure in country to an operational minimum while ensuring consistency in coordination support (b)(6) will also provide assistance and support to the PM during phase 4 final deliverable development and project closeout activities.

Phase 3:

Metabiota AEP Deputy Director (b)(6) will travel to Kenya to support writing workshop implementation activities. (b)(6) will provide overall technical support to the Kenyan SMEs tasked with providing a mix of lectures discussing topics relevant to the authoring, editing, and publishing of scientific research, small group work reflecting those lectures, and one-on-one time with each of their assigned participants (b)(6) will additionally provide direct one-on-one support to all writing workshop participants. Of note (b)(6) is part of the AEP Program Management Office (PMO) and will not directly charge time to this project.

Phase 2-4

Subject Matter Expert I (3 total). We plan to engage three Kenya based SME I personnel to include (b)(6) (b)(6) ese SMEs will be fully qualified scientific experts with experience publishing in peer-reviewed journals. These SMEs will not require international travel, but will be compensated for domestic travel, and will be brought on as independent contractors to Metabiota.

The Kenyan SMEs Is will each be assigned to work on reviewing manuscripts of the Writing workshop participants during phase 2. They will be tasked with workshop participation during phase 3, and final review during phase 4. These SMEs will be required to review relevant participant manuscripts closely during phase 2. This will require fully understanding the research that has been done, including a significant dive into the data collection and analysis that may have already been done to ensure that they utilize their time effectively during phase 3. During the workshop, SMEs will provide a mix of lectures discussing topics relevant to the authoring. editing, and publishing of scientific research, small group work reflecting those lectures, and one-on-one time with each of their assigned participants. Following the workshop, SMEs will provide follow-on mentoring to participants as they incorporate the lessons learned into the final drafts of their manuscript reviews and relevant reports during phase 4.

US-Based SME I – Technical (1 total [(b)(6)] will serve as an SME I technical writer. This SME will be a fully qualified scientific expert with experience publishing in peer-reviewed journals. Dr. Parekh is an epidemiologist with a focus on microbiology and is well-suited to manage technical revisions for this effort.

The SME I will each be assigned to work on reviewing manuscripts of the Writing Workshop participants during phase 2 in concert with the Kenyan SME Is to avoid duplication of efforts. They will be tasked with workshop participation during phase 3, and final review during phase 4. This SME will be required to review relevant participant manuscripts closely during phase 2. This will require fully understanding the research that has been done, including a significant dive into the data collection and analysis that may have already been done to ensure that they utilize their time effectively during phase 3. During the workshop, t[(b)(6)] SME I) will provide remote support to their assigned participants, and will coordinate with Metabiota Staff in country to ensure effective communication and participant engagement. Following the workshop, This SME will provide follow-on mentoring to participants as they incorporate the lessons learned into the final drafts of their manuscript reviews and relevant reports during phase 4.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials
We have budgeted for the possibility that we may need to provide access to scientific journal articles to the workshop participants while they are working on their manuscripts. Our estimate provides an average of 10 articles per participant at an estimated access price of $35 per article. It may well be the case that some of the Writing Workshop participants do not require the use of this many articles on average, in which case costs will not be incurred. Participants must have expressed support from an involved SME to facilitate the purchase of any scientific article. The budget for journal access may only be partially utilized.

We have also budgeted for a small quantity of office supplies to accommodate the printing of agendas, training materials, or workshop materials needed to successfully execute and support in-country project activities.

We have budgeted for an effort based international communications capacity for our project team while they are in country implementing the workshop. The costs budgeted here reflect activating a moderate calling plan to support the efforts of the program manager and subject matter experts. To control for costs, calling time will be purchased in the form of 1,000 Kenyan Schilling scratch cards (roughly 10.00 USD - dependent on active exchange rate). Each of the four functional team members will be allocated a maximum of 5 scratch cards during this effort, and will be expected to use the resource wisely and efficiently with respect to the project. Scratch cards will be purchased on an as needed basis.

Lastly, these charges also reflect the provision of USB modems and associated moderate data plans to both the travelers and in country SMEs. These items will only be purchased if the situation dictates the need (i.e. inability to access online communications outright); otherwise, these modems will not be procured.

Other Direct Costs
Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Independent Consulting Agreements
Consulting agreements will be issued to SMEs and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel is requested to support the project coordinator (SME I) and deputy director to Nairobi, Kenya to implement the writing workshop. The travel budget represents the estimated amount required; travel on the AEP contract is cost reimbursable.

Our travel budget assumes the workshop will be held on 6 consecutive days, with an additional day budgeted for set-up and coordination activities. If, through discussion with the Kenyan stakeholders, an alternative schedule is created or an alterative location is desired, travel costs may be impacted accordingly.

Kenyan SME I contractors will be provided with hotel, and per diem respective of their length of participation on this effort. Their cost for arriving to the venue will be covered independently; however, daily transport costs will be shared among the workshop team as a whole.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide expertise in geographic information systems (GIS) modeling and regional Single Nucleotide Polymorphisms (SNPs) at the Richard G. Lugar Center for Public Health Research in Georgia in accordance with SOW, Section 4.4. Task 2 and Task 4. This expertise should be provided by a scientist (SME I or SME II) with experience of working with Former Soviet Union (FSU) researchers and should focus on providing subject matter expertise in GIS modeling and regional SNPs for CBEP-funded research projects GG-19, GG-20 and GG-27.

For GG-19, this expertise should include guidance and mentorship of National Center for Disease Control (NCDC) staff on using GIS to determine a risk assessment for exposure to environmental and animal sources of *Francisella tularensis*. and should focus on producing risk assessment maps.

For GG-20, the expert should provide mentorship to Laboratory of Ministry of Agriculture (LMA) and National Food Agency (NFA) personnel on using GIS techniques to manage and visualize (map) the ecological niche and d stribution models of *Coxiella burnetii* and conduct advanced spatial and temporal modeling and statistical analysis of datasets.

For GG-27, the expert should aid in the identification and selection of regional foci of *Bacillus anthracis* and the corresponding environmental sampling sites, conduct spatial genetic pattern analysis and risk factor mapping of *B. anthracis* using GIS, aid in the production of GIS models of the geographic distribution of *B. anthracis* across the south Caucasus, and serve as a subject matter expert on regional Single Nucleotide Polymorphisms (SNPs), including a well-established Georgian SNP typing panel. Mentorship activities should focus on providing guidance in stringent metrics and international standards in GIS and SNP data interpretation and analysis to NCDC, LMA and NFA scientists.

It is expected that implementation of this requirement will be approximately 13 weeks worth of effort consisting of (a) 3 x 1 week trips (detailed below), (b) up to 1 week before each trip for preparation activities, (c) up to 1 week after each trip for reporting and follow-up actions, and (d) up to 4 additional weeks of effort for coordination and remote reach-back support. The expert is expected to conduct two trips to Tbilisi, Georgia, to provide on-site mentorship to Georgian colleagues for GG-19, GG-20 and GG-27 research projects. Timing for these trips should be determined based on project needs. The expert is also expected to conduct a third trip to attend the regional GG-27/AJ TAP-11 kick-off meeting in Baku, Azerbaijan in October 2015.

The period of performance for this effort will be from 15 September 2015 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $150.000 is requested by 4 September 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide expertise in grantsmanship at the Richard G. Lugar Center for Public Health Research and at the Laboratory of the Ministry of Agriculture in Georgia in accordance with SOW, Section 4.3, Task 3 and Section 4.5, Task 5. This expertise should be provided by a scientist (SME I or SME II) with experience in proposal development mentoring and should provide guidance in preparing and submitting grant proposals to the DTRA Broad Agency Announcement (BAA) or other competitive research solicitations. More specifically, the mentor should focus on providing mentorship in the following areas: (a) assist National Center for Disease Control (NCDC) researchers with accurate development of direct and indirect costs as part of the proposal preparation, (b) assist Laboratory of Ministry of Agriculture (LMA) personnel with proposal development and submission processes to include development of scientific hypotheses, analysis of research data, drafting of white papers and full proposals, and reviewing proposal evaluations and recommendations.

It is expected that implementation of this requirement will require approximately 13 weeks of effort consisting of 2 x 1 week trips to Tbilisi, Georgia, with additional time allotted for pre- and post-trip activities and follow-up actions, in order to provide on-site mentorship to Georgian colleagues. Timing for these trips should be determined based on project needs. An additional 7 weeks of effort is anticipated for coordination, document reviews, and remote reach-back support.

The period of performance for this effort will be from 21 September 2015 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $150,000 is requested by 17 September 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation:

Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. A key assumption for this effort is that the Georgian scientists have their own research ideas which can be shaped into proposals. A second key assumption is that Metabiota Subject Matter Experts providing grantsmanship support will **not** be the primary drafters of any white papers or full proposals, but rather will only provide assistance in drafting said white papers and proposals. A third key assumption is that the Georgian scientists will not require any assistance in analysis of any data which may be presented in the proposals as preliminary work. It is anticipated that the plan for TD-017 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) 1) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:

From the information provided in Box 8, Metabiota assumes that there are several relevant POCs at both NCDC and LMA which will be involved in the grantsmanship efforts. The Metabiota PM and PC will, upon approval of the TD, engage relevant DTRA CBEP and Lugar Center stakeholders to begin understanding what efforts they would like to work on. Upon approval and receipt of additional information, the Metabiota PM and PC will identify a grantsmanship subject matter expert (billed as SME 2) and work to either onboard them as a Metabiota employee, or establish a subcontract or independent consulting arrangement with the VS. The Metabiota PM, PC, and SME 2 will participate in communications with stakeholders at NCDC and LMA in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the SME 2 to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO-Tbilisi.

In-Country Grantsmanship Mentoring

Mentoring will consist of in-country and remote mentoring. Based on our understanding of the requirements, Metabiota does not expect to be required to provide data analysis support to the NCDC or LMA scientists. In order to ensure the success of the in-country mentoring visits, the PM, PC, and SME 2 will work with the POCs at NCDC and LMA to establish a list of deliverables to be provided to Metabiota prior to any in-country mentoring. These deliverables may include budgetary data, drafts of proposed plans and SOPs, drafts of white papers and full proposals, and analyses of preliminary data complete with methodology. The PM and PC will maintain regular communications with the SME 2 to ensure that the SME 2 has all required resources for mentoring. After assessing the need for in-country mentoring, the SME 2 will implement the mentoring work plans, only assisting with actual proposal writing in cases of last resort.

Reach-back Support / Remote Mentoring:

Based on our understanding of the requirements, Metabiota does not expect to be required to provide primary authorship support to any proposals, but does expect the SME 2 to be available to occasionally provide remote editorial guidance and limited assistance with drafting of select passages. Through regular communications with the respective project teams, Metabiota will be made aware of any additional subject matter expertise requests. The SME 2 will address these needs as they arise.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost (b)(4); (b)(6)						
Non-response of DTRA CBEP technical POCs	The short turnaround led to only a brief communication with A&AS regarding clarification of requirements. Thus our proposed labor solution may be inadequate, impacting cost.	5	4		Upon approval, continue efforts to contact DTRA Technical POCs and all other relevant stakeholders.	**Med-High**
Performance						
Scientific research topics	We have no knowledge of what the breadth of scientific research topics is that NCDC and LMA are interested in pursuing. Funding probabilities are already low at most organizations, and while much of grantsmanship can be generalized, domain-specific knowledge can be key in some instances. Without knowing in advance what topics will be proposed, it seems highly likely that grantsmanship mentoring will not operate at maximum effectiveness.	5	3	**Med-High**	Identify grantsmanship SME with broad experiences in the biological sciences.	**Med-High**

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN)

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$125,669
1003	MATERIALS	$1,842
1004	ODCs	$948
1005	TRAVEL	$8,273
TOTAL		**$136,732.08**

9c. TD SOLUTION BASIS OF ESTIMATE DESCRIPTION (NOT TO EXCEED 2 PAGES):

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:
Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As our Subject Matter Expert may be an independent consultants or subcontractor, the Metabiota PM will additionally provide management oversight of the project subcontractors (microbiology SME) and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipat ng, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM. The PC will manage the SME 2, to include leading regular coordination calls with the SME 2, participating in regular communications between the proposal stakeholders and the grantsmanship SME, and coordinating with the SME 2 to ensure all project requirements and deliverables are met and the program remains within scope, budget,

and timeline. The PC will aid the PM and SME 2 in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the microbiology SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Subject Matter Expert 2: The SME 2 will serve as the grantsmanship SME. The SME 2 will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each proposal, the needs and expectations of the Georgian scientists, and the grantsmanship assistance needed. The SME 2 will provide mentoring as directed by the respective project leads.

Materials

We have budgeted for the purchase of up to 50 scientific journal articles for use in supporting the proposal writing efforts at a projected average cost of $35 per journal article.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts

Subcontracts will be issued to the SME 2 and/or their home organization as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested to support the deployment of the SME 2 to Tbilisi, Georgia for two (2) one-week deployments. No additional travel is projected based on the requirements provided. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide expertise in grantsmanship at the Richard G. Lugar Center for Public Health Research and at the Laboratory of the Ministry of Agriculture in Georgia in accordance with SOW, Section 4.3, Task 3 and Section 4.5, Task 5. This expertise should be provided by a scientist (SME I or SME II) with experience in proposal development mentoring and should provide guidance in preparing and submitting grant proposals to the DTRA Broad Agency Announcement (BAA) or other competitive research solicitations. More specifically, the mentor should focus on providing mentorship in the following areas: (a) assist National Center for Disease Control (NCDC) researchers with accurate development of direct and indirect costs as part of the proposal preparation, (b) assist Laboratory of Ministry of Agriculture (LMA) personnel with proposal development and submission processes to include development of scientific hypotheses, analysis of research data, drafting of white papers and full proposals, and reviewing proposal evaluations and recommendations.

It is expected that implementation of this requirement will require approximately 13 weeks of effort consisting of 2 x 1 week trips to Tbilisi, Georgia, with additional time allotted for pre- and post-trip activities and follow-up actions, in order to provide on-site mentorship to Georgian colleagues. Timing for these trips should be determined based on project needs. An additional 7 weeks of effort is anticipated for coordination, document reviews, and remote reach-back support.

The period of performance for this effort will be from 21 September 2015 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $150,000 is requested by 17 September 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation:

Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. A key assumption for this effort is that the Georgian scientists have their own research ideas which can be shaped into proposals. A second key assumption is that Metabiota Subject Matter Experts providing grantsmanship support will not be the primary drafters of any white papers or full proposals, but rather will only provide assistance in drafting said white papers and proposals. A third key assumption is that the Georgian scientists will not require any assistance in analysis of any data which may be presented in the proposals as preliminary work. It is anticipated that the plan for TD-017 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) 1) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:

From the information provided in Box 8, Metabiota assumes that there are several relevant POCs at both NCDC and LMA which will be involved in the grantsmanship efforts. The Metabiota PM and PC will, upon approval of the TD, engage relevant DTRA CBEP and Lugar Center stakeholders to begin understanding what efforts they would like to work on. Upon approval and receipt of additional information, the Metabiota PM and PC will identify a grantsmanship subject matter expert (billed as SME 2) and work to either onboard them as a Metabiota employee, or establish a subcontract or independent consulting arrangement with the VS. The Metabiota PM, PC, and SME 2 will participate in communications with stakeholders at NCDC and LMA in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the SME 2 to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO Tbilisi.

In-Country Grantsmanship Mentoring

Mentoring will consist of in-country and remote mentoring. Based on our understanding of the requirements, Metabiota does not expect to be required to provide data analysis support to the NCDC or LMA scientists. In order to ensure the success of the in-country mentoring visits, the PM, PC, and SME 2 will work with the POCs at NCDC and LMA to establish a list of deliverables to be provided to Metabiota prior to any in-country mentoring. These deliverables may include budgetary data, drafts of proposed plans and SOPs, drafts of white papers and full proposals, and analyses of preliminary data complete with methodology. The PM and PC will maintain regular communications with the SME 2 to ensure that the SME 2 has all required resources for mentoring. After assessing the need for in-country mentoring, the SME 2 will implement the mentoring work plans, only assisting with actual proposal writing in cases of last resort.

Reach-back Support / Remote Mentoring:

Based on our understanding of the requirements, Metabiota does not expect to be required to provide primary authorship support to any proposals, but does expect the SME 2 to be available to occasionally provide remote editorial guidance and limited assistance with drafting of select passages. Through regular communications with the respective project teams, Metabiota will be made aware of any additional subject matter expertise requests. The SME 2 will address these needs as they arise.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
			Cost			
Non-response of DTRA CBEP technical POCs	The short turnaround led to only a brief communication with A&AS regarding clarification of requirements. Thus our proposed labor solution may be inadequate, impacting cost.	5	4	(b)(4); (b)(6)	Upon approval, continue efforts to contact DTRA Technical POCs and all other relevant stakeholders.	**Med-High**
			Performance			
Scientific research topics	We have no knowledge of what the breadth of scientific research topics is that NCDC and LMA are interested in pursuing. Funding probabilities are already low at most organizations, and while much of grantsmanship can be generalized, domain-specific knowledge can be key in some instances. Without knowing in advance what topics will be proposed, it seems highly likely that grantsmanship mentoring will not operate at maximum effectiveness.	5	3	**Med-High**	Identify grantsmanship SME with broad experiences in the biological sciences.	**Med-High**

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$125,669
1003	MATERIALS	$1,842
1004	ODCs	$948
1005	TRAVEL	$8,273
TOTAL		**$136,732**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES)

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:
Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity

As our Subject Matter Expert may be an independent consultants or subcontractor. the Metabiota PM will additionally provide management oversight of the project subcontractors (microbiology SME) and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipat ng, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM. The PC will manage the SME 2, to include leading regular coordination calls with the SME 2, participating in regular communications between the proposal stakeholders and the grantsmanship SME, and coordinating with the SME 2 to ensure all project requirements and deliverables are met and the program remains within scope, budget,

and timeline. The PC will aid the PM and SME 2 in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the microbiology SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Subject Matter Expert 2: The SME 2 will serve as the grantsmanship SME. The SME 2 will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each proposal the needs and expectations of the Georgian scientists, and the grantsmanship assistance needed. The SME 2 will provide mentoring as directed by the respective project leads.

Materials

We have budgeted for the purchase of up to 50 scientific journal articles for use in supporting the proposal writing efforts at a projected average cost of $35 per journal article.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts

Subcontracts will be issued to the SME 2 and/or their home organization as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested to support the deployment of the SME 2 to Tbilisi, Georgia for two (2) one-week deployments. No additional travel is projected based on the requirements provided. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE).

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide on-site expertise in genomic research activities at the Richard G. Lugar Center for Public Health Research in Georgia in accordance with SOW Section 4.2, Task 2, Section 4.4, Task 4, Section 4.5, Task 5, and Section 4.6, Task 6. This expertise can be provided by a visiting scientist and/or scientific mentor and should focus on providing subject matter expertise in genomic research for CBEP-funded research projects or related follow-on work conducted at the Lugar Center. This expertise should include guidance and mentorship on designing and implementing experimental procedures, troubleshooting methodology and data analysis methods for on-going research projects at the Lugar Center. Additionally, the expert should assist by providing guidance and mentorship in operations of the Genomics Center at the Lugar Center.

Mentorship activities should focus on providing guidance in stringent metrics and international standards in genomic data collection, analysis and interpretation. Additionally, on-site personnel should provide mentorship to Georgian colleagues in comprehending and applying core concepts and methodologies in comparative genomics for use in building applied biosurveillance research proposals. The research mentor should assist Georgian researchers with manuscript preparation of CBEP-funded research in genomics for submission to peer-reviewed scientific journals. This on-site interaction should facilitate motivation towards independent knowledge-building inquiry and critical thinking skills needed for future sustainable research.

The period of performance for this effort will be from 21 September 2015 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $380,000 is requested by 17 September 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation:

Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. A key assumption for this effort is that the Georgian scientists are generally capable of conducting genomics and bioinformatics analyses on their own but that the requested support personnel will occasionally be asked to directly perform genomic and bioinformatics analyses. A second key assumption for this effort is that it is expected to be a full-time expat position. It is anticipated that the plan for TD-018 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project

Project Coordination:

From the information provided in Box 8, Metabiota assumes that the unspecified CBEP-funded research projects are ongoing affairs led by third parties. In order to effectively ensure that an appropriate genomics subject matter expert (genomics SME, billed as a Visiting Scientist/VS) is available to provide the requested mentoring, the Metabiota PM and PC will, upon approval of the TD, continue to engage relevant DTRA CBEP and Lugar Center stakeholders to identify how, where, and when project status updates are communicated (for example, monthly teleconferences, weekly email exchanges, etc.) and what the onboarding and daily requirements are for working at the Lugar Center. Upon approval and receipt of additional information, the Metabiota PM and PC will identify a VS and work to either onboard them as a Metabiota employee, or establish a subcontract or independent consulting arrangement with the VS. The Metabiota PM, PC, and VS will participate in project communications in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the VS to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO-Tbilisi.

Mentoring and Performance of both Genomics and Bioinformatics Analyses and Operational Oversight of the Genomics Center:

Mentoring will consist of in-country mentoring. Based on our understanding of the requirements, Metabiota does not expect to be required to provide primary genomics analysis support to the various projects being conducted at the Lugar Center. The PM and PC will maintain regular communications with the VS to ensure that the VS has all required resources for mentoring. After assessing the need for genomics mentoring, the VS will work with the PM, PC, and other appropriate stakeholders to develop mentoring work plans. The VS will then implement the mentoring work plans, only assisting with actual analyses and scientific writing when necessary. Additionally, the VS will provide oversight over the operations of the genomics center. The VS will work with Lugar Center POCs to identify candidates for mentorship in operating the genomics center, and work with the PM, PC, and Lugar Center stakeholders to develop and execute a strategy for developing these candidates' abilities to operate the genomic center without guidance.

Risk Management:

In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to

include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
			Cost, Schedule, Performance, Quality			
Non-response of DTRA CBEP technical POCs	The short turnaround led to only a brief communication with A&AS regarding clarification of requirements and background materials. Thus our proposed labor solution may be inadequate, impacting cost. It may also impact schedule, performance, and quality, as we may proceed to identify a SME who is incapable of meeting project requirements in a timely fashion or to the satisfaction of project stakeholders.	5	4	(b)(4); (b)(6)	Upon approval, continue efforts to contact DTRA Technical POCs and all other relevant stakeholders (for example, A&AS). During proposal development Metabiota has researched multiple possible SMEs who could potentially address project requirements.	**Med-High**
			Cost			
SME identification	We assume that an appropriate VS/SM cannot be located who already lives in Georgia (or is a Georgian living elsewhere) and have thus built in time to get the VS/SM onboarded and over to Georgia. Should a VS/SM be identified who does not require the onboarding process (travel trainings, submission of documents), mentorship may begin sooner, and drive up total labor costs beyond those projected.	3	5	**Med-High**	Notify DTRA as soon as possible as to what the projected date will be for hitting 75% and exhaustion of funds on CLIN1001 for this effort.	**Med-High**
			Schedule / Performance			
Travel requirements	We assume that an appropriate VS/SM cannot be located who already lives in Georgia (or is a Georgian living elsewhere) and have thus built in time to get the VS/SM onboarded and over to Georgia. If mentorship needs are required prior to late November, it may be difficult to meet those needs unless a VS/SM is identified who is already resident to Georgia.	3	5	**Med-High**	Clarify travel requirements for extended TDY postings with DTRA, and ask for an exemption to 45-day window if it still holds.	**Med-High**

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES).

Labor

Costs for direct labor to support this activity is required for the following personnel:

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of

DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As our Subject Matter Expert may be an independent consultant or subcontractor, the Metabiota PM will additionally provide management oversight of the genomics SME and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM. The PC will manage the genomics SME, to include leading regular coordination calls with the genomics SME, participating in regular communications between the project stakeholders and the genomics SME, and coordinating with the genomics SME to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline. The PC will aid the PM and VS in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the genomics SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Project Coordination & Mentorship phases only:
Visiting Scientist: The VS will serve as the genomics SME. The VS will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each project, the needs and expectations of the Georgian scientists, and the genomics subject matter expertise needed. The VS will provide mentoring as directed by the respective project leads. The VS will also provide oversight and management of the Genomics Center at the Lugar Center.

Materials
We expect to procure a modern laptop capable of running the same genomics and bioinformatics software being used at the Lugar Center. We also will need to procure the appropriate bioinformatics software and standard productivity software as well. As we have not received information detailing the TD-specific items, we have inserted placeholder numbers here.

Other Direct Costs
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts
Subcontracts will be issued to the VS and/or their home organization as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel is requested to support the deployment of the VS to Tbilisi, Georgia for the initial deployment travel and final return. No additional travel is projected based on the requirements provided. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable. Also of note, lodging at GSA rates for Tbilisi, Georgia have included to this budget. It is assumed that the TBD VS will require some time to identify long term lodging (length of assignment), which would by covered by his expat uplift.

NAME: (b)(6)	NAME: (b)(6)
PHONE: (b)(6) EMAIL: (b)(6)	PHONE: EMAIL: (b)(6)

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide on-site expertise in genomic research activities at the Richard G. Lugar Center for Public Health Research in Georgia in accordance with SOW Section 4.2, Task 2, Section 4.4, Task 4, Section 4.5. Task 5, and Section 4.6. Task 6. This expertise can be provided by a visiting scientist and/or scientific mentor and should focus on providing subject matter expertise in genomic research for CBEP-funded research projects or related follow-on work conducted at the Lugar Center. This expertise should include guidance and mentorship on designing and implementing experimental procedures, troubleshooting methodology and data analysis methods for on-going research projects at the Lugar Center. Additionally, the expert should assist by providing guidance and mentorship in operations of the Genomics Center at the Lugar Center.

Mentorship activities should focus on providing guidance in stringent metrics and international standards in genomic data collection, analysis and interpretation. Additionally, on-site personnel should provide mentorship to Georgian colleagues in comprehending and applying core concepts and methodologies in comparative genomics for use in building applied biosurveillance research proposals. The research mentor should assist Georgian researchers with manuscript preparation of CBEP-funded research in genomics for submission to peer-reviewed scientific journals. This on-site interaction should facilitate motivation towards independent knowledge-building inquiry and critical thinking skills needed for future sustainable research.

The period of performance for this effort will be from 21 September 2015 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $380,000 is requested by 17 September 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation:

Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. A key assumption for this effort is that the Georgian scientists are generally capable of conducting genomics and bicinformatics analyses on their own but that the requested support personnel will occasionally be asked to directly perform genomic and bioinformatics analyses. A second key assumption for this effort is that it is expected to be a full-time expat position. It is anticipated that the plan for TD-018 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:

From the information provided in Box 8. Metabiota assumes that the unspecified CBEP-funded research projects are ongoing affairs led by third parties. In order to effectively ensure that an appropriate genomics subject matter expert (genomics SME, billed as a Visiting Scientist/VS) is available to provide the requested mentoring, the Metabiota PM and PC will, upon approval of the TD, continue to engage relevant DTRA CBEP and Lugar Center stakeholders to identify how, where, and when project status updates are communicated (for example, monthly teleconferences, weekly email exchanges, etc.) and what the onboarding and daily requirements are for working at the Lugar Center. Upon approval and receipt of additional information, the Metabiota PM and PC will identify a VS and work to either onboard them as a Metabiota employee, or establish a subcontract or independent consulting arrangement with the VS. The Metabiota PM, PC, and VS will participate in project communications in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the VS to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO-Tbilisi.

Mentoring and Performance of both Genomics and Bioinformatics Analyses and Operational Oversight of the Genomics Center:

Mentoring will consist of in-country mentoring. Based on our understanding of the requirements, Metabiota does not expect to be required to provide primary genomics analysis support to the various projects being conducted at the Lugar Center. The PM and PC will maintain regular communications with the VS to ensure that the VS has all required resources for mentoring. After assessing the need for genomics mentoring, the VS will work with the PM, PC, and other appropriate stakeholders to develop mentoring work plans. The VS will then implement the mentoring work plans, only assisting with actual analyses and scientific writing when necessary. Additionally, the VS will provide oversight over the operations of the genomics center. The VS will work with Lugar Center POCs to identify candidates for mentorship in operating the genomics center, and work with the PM, PC, and Lugar Center stakeholders to develop and execute a strategy for developing these candidates' abilities to operate the genomic center without guidance.

Risk Management:

In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to

include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
			Cost, Schedule, Performance, Quality	(b)(4); (b)(6)		
Non-response of DTRA CBEP technical POCs	The short turnaround led to only a brief communication with A&AS regarding clarification of requirements and background materials. Thus our proposed labor solution may be inadequate, impacting cost. It may also impact schedule, performance, and quality, as we may proceed to identify a SME who is incapable of meeting project requirements in a timely fashion or to the satisfaction of project stakeholders.	5	4		Upon approval, continue efforts to contact DTRA Technical POCs and all other relevant stakeholders (for example A&AS). During proposal development Metabiota has researched multiple possible SMEs who could potentially address project requirements.	**Med-High**
			Cost			
SME identification	We assume that an appropriate VS/SM cannot be located who already lives in Georgia (or is a Georgian living elsewhere) and have thus built in time to get the VS/SM onboarded and over to Georgia. Should a VS/SM be identified who does not require the onboarding process (travel trainings, submission of documents) mentorship may begin sooner, and drive up total labor costs beyond those projected.	3	5	**Med-High**	Notify DTRA as soon as possible as to what the projected date will be for hitting 75% and exhaustion of funds on CLIN1001 for this effort.	**Med-High**
			Schedule / Performance			
Travel requirements	We assume that an appropriate VS/SM cannot be located who already lives in Georgia (or is a Georgian living elsewhere) and have thus built in time to get the VS/SM onboarded and over to Georgia. If mentorship needs are required prior to late November, it may be difficult to meet those needs unless a VS/SM is identified who is already resident to Georgia.	3	5	**Med-High**	Clarify travel requirements for extended TDY postings with DTRA, and ask for an exemption to 45-day window if it still holds.	**Med-High**

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$361,460
1003	MATERIALS	$4,579
1004	ODCs	$14,180
1005	TRAVEL	$4,217
TOTAL		**$384,436**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES)

Labor

Costs for direct labor to support this activity is required for the following personnel:

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of

DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As our Subject Matter Expert may be an independent consultant or subcontractor, the Metabiota PM will additionally provide management oversight of the genomics SME and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipat ng, managing and communicating project risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM. The PC will manage the genomics SME, to include leading regular coordination calls with the genomics SME, participating in regular communications between the project stakeholders and the genomics SME, and coordinating with the genomics SME to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline. The PC will aid the PM and VS in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the genomics SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Project Coordination & Mentorship phases only:
Visiting Scientist: The VS will serve as the genomics SME. The VS will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each project, the needs and expectations of the Georgian scientists, and the genomics subject matter expertise needed. The VS will provide mentoring as directed by the respective project leads. The VS will also provide oversight and management of the Genomics Center at the Lugar Center.

Materials
We expect to procure a modern laptop capable of running the same genomics and bioinformatics software being used at the Lugar Center. We also will need to procure the appropriate bioinformatics software and standard productivity software as well. As we have not received information detailing the TD-specific items, we have inserted placeholder numbers here.

Other Direct Costs
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts
Subcontracts will be issued to the VS and/or their home organization as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel is requested to support the deployment of the VS to Tbilisi, Georgia for the initial deployment travel and final return. No additional travel is projected based on the requirements provided The travel budget represents the estimated amount required: precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable. Also of note, lodging at GSA rates for Tbilisi, Georgia have included to this budget. It is assumed that the TBD VS will require some time to identify long term lodging (length of assignment), which would by covered by his expat uplift.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE).

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide on-site expertise in microbiology research activities at the Richard G Lugar Center for Public Health Research in Georgia in accordance with SOW Section 4.2, Task 2, Section 4.4, Task 4, Section 4.5, Task 5, and Section 4.6, Task 6. This expertise can be provided by a visiting scientist and/or scientific mentor and should focus on providing subject matter expertise in microbial research for CBEP-funded research projects conducted at the Lugar Center. The expertise should include guidance and mentorsh p on designing and implementing experimental procedures, troubleshooting methodology, and analyzing data for on-going research projects at the Lugar Center. The expert should provide technical and scientific assistance in the conduct of research projects and implementation of new diagnostics, new technology and sustainability initiatives. Additionally, the expert should assist to improve communications and integration between Georgian institutes and with international agencies collaborating on Lugar Center research efforts.

Mentorship activities should focus on providing guidance in stringent metrics and international standards in data collection, analysis and data interpretation. Additionally, the research mentor should assist Georgian researchers with manuscript preparation of CBEP-funded research for submission to peer-reviewed scientific journals. This on-site interaction should facilitate motivation towards independent knowledge-building inquiry and critical thinking skills needed for future sustainable research.

The period of performance for this effort will be from 21 September 2015 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $380,000 is requested by 17 September 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation:

Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. A key assumption for this effort is that the Georgian scientists are generally capable of conducting microbiological analyses on their own but that the requested support personnel will occasionally be asked to directly perform microbiological analyses. A second key assumption for this effort is that it is expected to be a full-time expat position. It is anticipated that the plan for TD-019 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:

From the information provided in Box 8, Metabiota assumes that the unspecified CBEP-funded research projects are ongoing affairs led by third parties. In order to effectively ensure that an appropriate microbiology subject matter expert (microbiology SME, billed as a Visiting Scientist/VS) is available to provide the requested mentoring, the Metabiota PM and PC will, upon approval of the TD, continue to engage relevant DTRA CBEP and Lugar Center stakeholders to identify how, where, and when project status updates are communicated (for example, monthly teleconference, weekly email exchanges, etc.) and what the onboarding and daily requirements are for working at the Lugar Center. Upon approval and receipt of additional information, the Metabiota PM and PC will identify a VS and work to either onboard them as a Metabiota employee, or establish a subcontract or independent consulting arrangement with the VS. The Metabiota PM, PC, and VS will participate in project communications in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the VS to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO-Tbilisi.

Mentoring and Performance of Microbiological Research:

Mentoring will be conducted in-country based on our understanding of the requirements. Metabiota does not expect to be required to provide primary microbiological analysis support to the various projects being conducted at the Lugar Center. The PM and PC will maintain regular communications with the VS to ensure that the VS has all required resources for mentoring. After assessing the need for microbiology mentoring, the VS will work with the PM, PC, and other appropriate stakeholders to develop mentoring work plans. The VS will then implement the mentoring work plans, only assisting with actual analyses and scientific writing when necessary. Additionally, the VS will provide oversight over the operations of the genomics center. The VS will work with Lugar Center POCs to identify candidates for mentorship in operating the genomics center, and work with the PM and PC to develop a strategy for developing these candidates' abilities to operate the genomic center without guidance.

Risk Management:

In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to

include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
			Cost, Schedule, Performance, Quality			
Non-response of DTRA CBEP technical POCs	The short turnaround led to only a brief communication with A&AS regarding clarification of requirements and background materials. Thus our proposed labor solution may be inadequate, impacting cost. It may also impact schedule, performance, and quality, as we may proceed to identify a SME who is incapable of meeting project requirements in a timely fashion or to the satisfaction of project stakeholders.	5	4	(b)(4); (b)(6)	Upon approval, continue efforts to contact DTRA Technical POCs and all other relevant stakeholders (for example, A&AS). During proposal development Metabiota has researched multiple possible SMEs who could potentially address project requirements.	**Med-High**
			Cost			
SME identification	We assume that an appropriate VS/SM cannot be located who already lives in Georgia (or is a Georgian living elsewhere) and have thus built in time to get the VS/SM on boarded and over to Georgia. Should a VS/SM be identified who does not require the onboarding process (travel trainings, submission of documents), mentorship may begin sooner, and drive up total labor costs beyond those projected.	3	5	**Med-High**	Notify DTRA as soon as possible as to what the projected date will be for hitting 75% and exhaustion of funds on CLIN1001 for this effort.	**Med-High**
			Schedule / Performance			
Travel requirements	We assume that an appropriate VS/SM cannot be located who already lives in Georgia (or is a Georgian living elsewhere) and have thus built in time to get the VS/SM on boarded and over to Georgia. If mentorship needs are required prior to late November, it may be difficult to meet those needs unless a VS/SM is identified who is already resident to Georgia.	3	5	**Med-High**	Clarify travel requirements for extended TDY postings with DTRA, and ask for an exemption to 45-day window if it still holds.	**Med-High**

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$361,460
1003	MATERIALS	$2,474
1004	ODCs	$14,180
1005	TRAVEL	$4,217
TOTAL		**$382,330.30**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Labor

Costs for direct labor to support this activity is required for the following personnel:

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As our Subject Matter Expert may be an independent consultants or subcontractor, the Metabiota PM will additionally provide management oversight of the project subcontractors (microbiology SME) and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM. The PC will manage the microbiology SME, to include leading regular coordination calls with the microbiology SME, participating in regular communications between the project stakeholders and the microbiology SME, and coordinating with the microbiology SME to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline. The PC will aid the PM and VS in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the microbiology SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Visiting Scientist: The VS will serve as the microbiology SME. The VS will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each project, the needs and expectations of the Georgian scientists, and the microbiological subject matter expertise needed. The VS will provide mentoring as directed by the respective project leads.

Materials

We expect to procure a modern laptop complete with standard productivity software for use by the VS. The cost number provided here represents an estimate of the costs, and may vary depending on factors beyond Metabiota control.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts

Subcontracts will be issued to the VS and/or their home organization as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested to support the deployment of the VS to Tbilisi, Georgia for the initial deployment travel and final return, including a period of up to 1 week (7 days) for securing permanent lodging arrangements. No additional travel is projected based on the requirements provided. The travel budget represents the estimated amount required based on USG lodging and per diem rates; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable. As noted, lodging at GSA rates for Tbilisi, Georgia have included to this budget. It is assumed that the TBD VS will require some time to identify long term lodging (length of assignment), which would by covered by his expat uplift.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide on-site expertise in microbiology research activities at the Richard G. Lugar Center for Public Health Research in Georgia in accordance with SOW Section 4.2. Task 2, Section 4.4. Task 4, Section 4.5, Task 5, and Section 4.6. Task 6. This expertise can be provided by a visiting scientist and/or scientific mentor and should focus on providing subject matter expertise in microbial research for CBEP-funded research projects conducted at the Lugar Center. The expertise should include guidance and mentorship on designing and implementing experimental procedures, troubleshooting methodology, and analyzing data for on-going research projects at the Lugar Center. The expert should provide technical and scientific assistance in the conduct of research projects and implementation of new diagnostics, new technology and sustainability initiatives. Additionally, the expert should assist to improve communications and integration between Georgian institutes and with international agencies collaborating on Lugar Center research efforts.

Mentorship activities should focus on providing guidance in stringent metrics and international standards in data collection, analysis and data interpretation. Additionally, the research mentor should assist Georgian researchers with manuscript preparation of CBEP-funded research for submission to peer-reviewed scientific journals. This on-site interaction should facilitate motivation towards independent knowledge-building inquiry and critical thinking skills needed for future sustainable research.

The period of performance for this effort will be from 21 September 2015 to 15 May 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $380,000 is requested by 17 September 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation:

Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. A key assumption for this effort is that the Georgian scientists are generally capable of conducting microbiological analyses on their own but that the requested support personnel will occasionally be asked to directly perform microbiological analyses. A second key assumption for this effort is that it is expected to be a full-time expat position. It is anticipated that the plan for TD-019 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:

From the information provided in Box 8, Metabiota assumes that the unspecified CBEP-funded research projects are ongoing affairs led by third parties. In order to effectively ensure that an appropriate microbiology subject matter expert (microbiology SME, billed as a Visiting Scientist/VS) is available to provide the requested mentoring, the Metabiota PM and PC will, upon approval of the TD, continue to engage relevant DTRA CBEP and Lugar Center stakeholders to identify how, where, and when project status updates are communicated (for example, monthly teleconference, weekly email exchanges, etc.) and what the onboarding and daily requirements are for working at the Lugar Center. Upon approval and receipt of additional information, the Metabiota PM and PC will identify a VS and work to either onboard them as a Metabiota employee, or establish a subcontract or independent consulting arrangement with the VS. The Metabiota PM, PC, and VS will participate in project communications in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the VS to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO-Tbilisi.

Mentoring and Performance of Microbiological Research:

Mentoring will be conducted in-country based on our understanding of the requirements. Metabiota does not expect to be required to provide primary microbiological analysis support to the various projects being conducted at the Lugar Center. The PM and PC will maintain regular communications with the VS to ensure that the VS has all required resources for mentoring. After assessing the need for microbiology mentoring, the VS will work with the PM, PC, and other appropriate stakeholders to develop mentoring work plans. The VS will then implement the mentoring work plans, only assisting with actual analyses and scientific writing when necessary. Additionally, the VS will provide oversight over the operations of the genomics center. The VS will work with Lugar Center POCs to identify candidates for mentorship in operating the genomics center, and work with the PM and PC to develop a strategy for developing these candidates' abilities to operate the genomic center without guidance.

Risk Management:

In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to

include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
			Cost, Schedule, Performance, Quality			
Non-response of DTRA CBEP technical POCs	The short turnaround led to only a brief communication with A&AS regarding clarification of requirements and background materials. Thus our proposed labor solution may be inadequate, impacting cost. It may also impact schedule, performance, and quality, as we may proceed to identify a SME who is incapable of meeting project requirements in a timely fashion or to the satisfaction of project stakeholders.	5	4	(b)(4); (b)(6)	Upon approval, continue efforts to contact DTRA Technical POCs and all other relevant stakeholders (for example A&AS). 1. CONTRACT NUMBER	2. CONTRACTOR	3a.TD NUMBER	3b.REV
HDTRA1-14-C-0104	METABIOTA	20	

4. TD TITLE	5. TOTAL TD ESTIMATE:
Gabon Initial Engagement SME Support	HOURS. ____60_____ DOLLARS: $ ____**$50,000**_____

6. CONTRACING OFFICER REPRESENTATIVE	7. CONTRACTOR POC
NAME: (b)(6)	NAME: (b)(6)
PHONE: (b)(6) EMAIL: (b)(6)	PHONE: (b)(6) EMAIL: (b)(6)

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide a Subject Matter Expert (SME) support on Gabon health systems and laboratory capabilities in accordance with SOW, Section 4.4, Task 2. This SME will provide technical support to the CBEP Gabon Country Manager for initial engagement activities with Gabonese ministerial officials, provide historical context and technical advice on gap analyses, and recommend CBEP engagement approaches with the Government of Gabon.

It is expected that implementation of this requirement will be approximately 100 hours of work consisting of (a) 1 x 7 day trip with CBEP representatives to Gabon in late Jan 2016, (b) bi-weekly (every other week) coordination meetings (est. 1 hour/each) before the trip, (c) weekly coordination meetings (est. 1 hours/each) for approximately 2 months after the trip, (d) written report conveying personal knowledge and expertise as well as engagement recommendations following the trip, (e) review of country engagement strategy documents (est. 5 hours).

The period of performance for this effort will be from 14 December 2015 to 31 March 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $50,000 is requested by 9 December 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation:

Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. Given the short suspense, it was not possible to have conversations with the technical POCs listed prior to the development of this response. It is anticipated that the plan for TD-020 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Research and Data Analyst (RDA)) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:

In order to effectively ensure that an appropriate subject matter expert is available to provide the requested support, the Metabiota PM and PC will, upon approval of the TD, engage relevant DTRA CBEP stakeholders to clarify the type and extent of support required. Upon approval and receipt of additional information, the Metabiota PM and PC will identify appropriate SMEs.

From the information provided in Box 8, Metabiota's key assumption is that the purpose of this trip is to make introductions and build relationships with Gabonese personnel and institutions, and thus selecting SMEs with ***positive existing relationships is critical***. Metabiota has preliminarily identified a Francophone SME with extensive history working in Gabon; he has positive relationships with most (but not all) institutions and government ministries in Gabon relevant to the DTRA CBEP mission.

While our SME can provide extensive historical knowledge of the institution known as CIRMF (Centre International de Recherches Medicales de Franceville) in support of this technical direction, Metabiota believes that there is an unacceptable level of corporate risk to the company and operational risk to DTRA for him to attend meetings at CIRMF, and as such, recommends the additional travel of the AEP Deputy Director to mitigate corporate and operational risk

Together, the Metabiota team will actively participate in project communications in order to prepare for the in-country SME support and project closeout phases. As these project communications occur, the Metabiota SME will leverage his existing relationships with Gabonese personnel to assist DTRA CBEP stakeholders in developing an agenda and setting up meetings to occur during the week of travel.

The Metabiota PM and PC will work with the SME to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure that any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS.

In-country SME support

Based on our understanding of the requirements, the Metabiota SME will attend meetings with DTRA CBEP personnel. During these meetings, the Metabiota SME will facilitate introductions between DTRA CBEP and Gabonese personnel, and participate in discussions about CBEP objectives, lending technical expertise and advice where needed. Metabiota anticipates holding debriefs and strategy sessions with DTRA CBEP personnel each evening to recap each day's meetings and discuss the next day's meetings.

Project closeout

Upon return from Gabon, the Metabiota SME will participate in regular meetings with DTRA CBEP personnel to fully capture information gained during the in-country trip. The SME will also generate a report detailing that information, along with capturing as much information as is practicable from the SME's personal experiences. The SME, with the Metabiota PM and PC's guidance, will work with the DTRA CBEP personnel to understand

DTRA CBEP goals in Gabon and the region and create a list of suggested engagements (high-level only; Metabiota cannot provide suggestions on detailed work to be done as this may be construed as a conflict of interest). The Metabiota team will also review strategy documents provided by DTRA CBEP and provide feedback. Lastly, upon request, the Metabiota team will generate a final project report summarizing all activities conducted in this effort.

Risk Management

Metabiota has identified potential risks which may be obstacles to accomplishing DTRA CBEP goals for this technical direction. They are listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost, Schedule, Performance, Quality						
Short proposal turnaround time	The short turnaround did not allow for extensive discussion with Technical POCs regarding clarification of requirements and background materials. Thus our proposed labor solution may be inadequate, impacting cost. It may also impact schedule, performance, and quality, as we may proceed to identify a SME who is incapable of meeting project requirements in a timely fashion or to the satisfaction of project stakeholders.	5	4	(b)(4); (b)(6)	Upon approval of the TD, Metabiota will work with DTRA to continue elucidating the requirements of this task. If Metabiota perceives there to be a significant possibility of the proposed solution not meeting cost, schedule, performance, or quality metrics, Metabiota will flag this immediately for DTRA and propose a new solution	**Med-High**
Schedule / Performance						
Limited or non-existent window for the submission of CDRLs to support in international travel for SMEs	The effective execution of this technical direction is contingent on the delivery of SME support to Gabon for a 7-day trip. In order to this fulfill this need, Metabiota Project Management and Coordination staff will be tasked to submit necessary travel related CDRLs for DTRAs approval well ahead of time. Per the contract and this technical direction Metabiota will need to submit a Cable Clearance Request in addition to a Travel Authorization 45 days prior to international and in-country travel respectively. As travel is slated to take place in late January 2016. It will be difficult to submit these documents in time	5	5	(b)(4); (b)(6)	Metabiota will take every effort possible to ensure that all travel related CDRLs are submitted to DTRA CBEP as expediently as possible and ask for an exemption to the 45-day window for CCR submission. However given that there is only a small window allowing Metabiota to accomplish this the risk of cancellation due to CDRL lateness remains high.	(b)(4); (b)(6)
Limited or non-existent window for the submission of CDRLs to support in-country logistics via the CLS mechanism	It is not yet determined if Metabiota will need to engage logistics support services for the execution of the technical direction. However upon this need becoming specified by our in-country partners, Metabiota will be tasked to develop and submit a CLS form at least 45 days before the in-country event. Given that the travel event is slated for late January 2016. Our submission window is small or non-existent.	5	4		Metabiota will coordinate with DTRA stakeholders and our in-country partners immediately upon the approval of this technical direction to determine the extent and need for in-country logistics. Upon determination of this need, Metabiota will develop and submit the CLS form to DTRA CBEP expediently. however, it is anticipated that submitting it within the effective 45-day window will not be possible	**Med-High**
Performance / Quality						
Subject matter expert identification and availability	The subject matter expertise required for in-country performance by this technical direction appears to be of a high and specific caliber. Although several current Metabiota staff meet or exceed these criteria, their individual availability with short notice may not be guaranteed.	2	1	**Low-Medium**	Metabiota will prioritize the requests of this technical direction and ensure that relevant personnel are available to and committed. In the unlikely event that any Metabiota staff SME is not available to function as an in county performer. Metabiota project management staff will insure that an appropriate independent contractor is brought in to support that role	(b)(4); (b)(6)
Performance / Operations						
Subject matter expert relationship with CIRMF	Our potential SME has a long and complicated personal history with the director of CIRMF, which may bring an unacceptable level of corporate and operational risk to the mission if asked to attend meetings at CIRMF in person.	4	4	**Med-High**	Metabiota SME will accompany the DTRA team in country except to meetings at CIRMF. He will provide as much background information as possible on CIRMF to the DTRA team in advance of their meeting, and provide feedback during debriefing.	Med

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES,.

Labor

Costs for direct labor to support this activity is required for the following personnel:

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by leading proposal development and maintaining oversight of stakeholder and SME coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and any subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

The Metabiota PM will additionally provide management oversight of the SMEs throughout the duration of this project, assuring integration and harmonization with other Metabiota-led, DTRA CBEP-funded efforts in the greater West Africa region. The PM will also ensure that all project personnel (Metabiota and any subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include the acquisition of Defense Base Act insurance, overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism for subcontractors if any are utilized, and any other requ rements which may be applicable to the work.

Metabiota Research and Data Analyst: The Metabiota RDA will act as a Project Coordinator (PC) throughout the planning and execution of project objectives. The Metabiota PC will assist the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will provide operational management of the SMEs by participating in regular communications between the DTRA CBEP stakeholders and the SMEs, acting to ensure all project requirements and deliverables are met, and that the program remains within scope, budget, and timeline. The PC will regularly communicate the project status with the PM. The PC will aid the PM and SMEs in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. The Metabiota PC will assist the SMEs with adhering to DoD contracting requirements, to include developing appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act nsurance, and any other requirements, which may be applicable to the work.

Project Coordination, SME Support, and Closeout phases only:

Subject Matter Expert 3: The SME will participate in regular project coordination communications (teleconferences, emails) to ensure that he understands the context of the project, and the needs and expectations of the DTRA CBEP stakeholders (hours as estimated in box 8) The SME will complete any and all required trainings and documentation prior to and immediately following travel (estimated at 3 hours).

The SME will provide technical and programmatic support as directed by the project leads. This may include engaging in phone and email communications with personnel within government ministries or other organizations in Gabon in order to facilitate introductions and meetings leading up to the scheduled travel period (estimated at 8 hours) The SME will also provide any biological and historical expertise needed while facilitating meetings and discussions in country (estimated at 66 hours – 8 hours per day for 7 days, plus 1 hour each evening to plan for and discuss the next day's meetings, and 1 hour each evening to recap that day's meetings)

The SME will generate reports and recommendations (estimated at 5 hours) and review documents provided by DTRA (estimated at 5 hours).

Deputy Director: The Deputy Director will participate in travel in order to mitigate corporate and operational risk. He will attend meetings and provide technical and programmatic expertise as needed; he has extensive operational experience as a subject matter expert with the CBEP mission in multiple countries. The Deputy Director's labor is captured in CLIN 1001 and thus does not impact the cost of labor for this technical direction.

Materials

No material costs are expected to be incurred.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts

Metabiota does not expect to issue a subcontract in support of this technical direction However, if necessary, independent consulting agreements or subcontracts will be issued to the SMEs and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel of the SME and the AEP Deputy Director to Libreville, Gabon is requested for the purposes of executing the scope of this technical direction. Metabiota assumes that in-country travel arrangements if any, will be handled by DTRA CBEP. No additional travel is projected based on the requirements provided. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE).

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide a Subject Matter Expert (SME) support on Gabon health systems and laboratory capabilities in accordance with SOW, Section 4.4, Task 2. This SME will provide technical support to the CBEP Gabon Country Manager for initial engagement activities with Gabonese ministerial officials, provide historical context and technical advice on gap analyses, and recommend CBEP engagement approaches with the Government of Gabon.

It is expected that implementation of this requirement will be approximately 100 hours of work consisting of (a) 1 x 7 day trip with CBEP representatives to Gabon in late Jan 2016, (b) bi-weekly (every other week) coordination meetings (est. 1 hour/each) before the trip, (c) weekly coordination meetings (est. 1 hours/each) for approximately 2 months after the trip, (d) written report conveying personal knowledge and expertise as well as engagement recommendations following the trip, (e) review of country engagement strategy documents (est. 5 hours).

The period of performance for this effort will be from 14 December 2015 to 31 March 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $50,000 is requested by 9 December 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation:

Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. Given the short suspense, it was not possible to have extensive conversations with the technical POCs listed prior to the development of this response. It is anticipated that the plan for TD-020 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Research and Data Analyst (RDA)) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:

In order to effectively ensure that an appropriate subject matter expert is available to provide the requested support, the Metabiota PM and PC will, upon approval of the TD, engage relevant DTRA CBEP stakeholders to clarify the type and extent of support required. Upon approval and receipt of additional information, the Metabiota PM and PC will identify appropriate SMEs.

From the information provided in Box 8, Metabiota's key assumption is that the purpose of this trip is to make introductions and build relationships with Gabonese personnel and institutions, and thus selecting SMEs with ***positive existing relationships is critical***. Metabiota has preliminarily identified a Francophone SME with extensive history working in Gabon; he has positive relationships with most (but not all) institutions and government ministries in Gabon relevant to the DTRA CBEP mission.

While our SME can provide extensive historical knowledge of the institution known as CIRMF (Centre International de Recherches Medicales de Franceville) in support of this technical direction, Metabiota believes that there is an unacceptable level of corporate risk to the company and operational risk to DTRA for him to attend meetings at CIRMF, and as such, if this SME is acceptable to DTRA, Metabiota recommends truncating the in-country support trip for our SME.

Together, the Metabiota team will actively participate in project communications in order to prepare for the in-country SME support and project closeout phases. As these project communications occur, the Metabiota SME will leverage his existing relationships with Gabonese personnel to assist DTRA CBEP stakeholders in developing an agenda and setting up meetings to occur during the week of travel.

The Metabiota PM and PC will work with the SME to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure that any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS.

In-country SME support

Based on our understanding of the requirements, the Metabiota SME will attend meetings with DTRA CBEP personnel. During these meetings, the Metabiota SME will facilitate introductions between DTRA CBEP and Gabonese personnel, and participate in discussions about CBEP objectives, lending technical expertise and advice where needed. Metabiota anticipates holding debriefs and strategy sessions with DTRA CBEP personnel each evening to recap each day's meetings and discuss the next day's meetings.

Project closeout

Upon return from Gabon, the Metabiota SME will participate in regular meetings with DTRA CBEP personnel to fully capture information gained during the in-country trip. The SME will also generate a report detailing that information, along with capturing as much information as is practicable from the SME's personal experiences. The SME, with the Metabiota PM and PC's guidance, will work with the DTRA CBEP personnel to understand

DTRA CBEP goals in Gabon and the region and create a list of suggested engagements (high-level only; Metabiota cannot provide suggestions on detailed work to be done as this may be construed as a conflict of interest). The Metabiota team will also review strategy documents provided by DTRA CBEP and provide feedback. Lastly, upon request, the Metabiota team will generate a final project report summarizing all activities conducted in this effort.

Risk Management
Metabiota has identified potential risks which may be obstacles to accomplishing DTRA CBEP goals for this technical direction. They are listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost, Schedule, Performance, Quality						
Short proposal turnaround time	The short turnaround did not allow for extensive discussion with Technical POCs regarding clarification of requirements and background materials. Thus our proposed labor solution may be inadequate, impacting cost. It may also impact schedule, performance, and quality, as we may proceed to identify a SME who is incapable of meeting project requirements in a timely fashion or to the satisfaction of project stakeholders.	5	4	(b)(4); (b)(6)	Upon approval of the TD, Metabiota will work with DTRA to continue elucidating the requirements of this task. If Metabiota perceives there to be a significant possibility of the proposed solution not meeting cost, schedule, performance, or quality metrics, Metabiota will flag this immediately for DTRA and propose a new solution.	(b)(4); (b)(6)
Schedule / Performance						
Limited or non-existent window for the submission of CDRLs to support in international travel for SMEs	The effective execution of this technical direction is contingent on the delivery of SME support to Gabon for a 7-day trip. In order to this fulfill this need, Metabiota Project Management and Coordination staff will be tasked to submit necessary travel related CDRLs for DTRAs approval well ahead of time. Per the contract and this technical direction, Metabiota will need to submit a Cable Clearance Request in addition to a Travel Authorization 45 days prior to international and in-country travel respectively. As travel is slated to take place in late January 2016, it will be difficult to submit these documents in time.	5	5	(b)(4); (b)(6)	Metabiota will take every effort possible to ensure that all travel related CDRLs are submitted to DTRA CBEP as expediently as possible and ask for an exemption to the 45-day window for CDR submission. Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by leading proposal development and maintaining oversight of stakeholder and SME coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and any subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

The Metabiota PM will additionally provide management oversight of the SMEs throughout the duration of this project, assuring integration and harmonization with other Metabiota-led, DTRA CBEP-funded efforts in the greater West Africa region. The PM will also ensure that all project personnel (Metabiota and any subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include the acquisition of Defense Base Act insurance, overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism for subcontractors if any are utilized, and any other requirements which may be applicable to the work.

Metabiota Research and Data Analyst: The Metabiota RDA will act as a Project Coordinator (PC) throughout the planning and execution of project objectives. The Metabiota PC will assist the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will provide operational management of the SMEs by participating in regular communications between the DTRA CBEP stakeholders and the SMEs, acting to ensure all project requirements and deliverables are met, and that the program remains within scope, budget, and timeline. The PC will regularly communicate the project status with the PM. The PC will aid the PM and SMEs in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. The Metabiota PC will assist the SMEs with adhering to DoD contracting requirements, to include developing appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements, which may be applicable to the work.

Project Coordination, SME Support, and Closeout phases only:
Subject Matter Expert 3: The SME will participate in regular project coordination communications (teleconferences, emails) to ensure that he understands the context of the project, and the needs and expectations of the DTRA CBEP stakeholders (hours as estimated in box 8). The SME will complete any and all required trainings and documentation prior to and immediately following travel (estimated at 3 hours).

The SME will provide technical and programmatic support as directed by the project leads. This may include engaging in phone and email communications with personnel within government ministries or other organizations in Gabon in order to facilitate introductions and meetings leading up to the scheduled travel period (estimated at 8 hours). The SME will also provide any biological and historical expertise needed while facilitating meetings and discussions in country (estimated at 46 hours – 8 hours per day for 5 days, plus 1 hour each evening to plan for and discuss the next day's meetings, and 1 hour each evening to recap that day's meetings).

The SME will generate reports and recommendations (estimated at 5 hours) and review documents provided by DTRA (estimated at 5 hours).

Materials
No material costs are expected to be incurred.

Other Direct Costs
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement

Subcontracts
Metabiota does not expect to issue a subcontract in support of this technical direction. However, if necessary, independent consulting agreements or subcontracts will be issued to the SMEs and/or their home organizations as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel of the SME to Libreville, Gabon is requested for the purposes of executing the scope of this technical direction. Metabiota assumes that in-country travel arrangements if any, will be handled by DTRA CBEP. No additional travel is projected based on the requirements provided. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide a Subject Matter Expert (SME) support on Gabon health systems and laboratory capabilities in accordance with SOW, Section 4.4, Task 2. This SME will provide technical support to the CBEP Gabon Country Manager for initial engagement activities with Gabonese ministerial officials, provide historical context and technical advice on gap analyses, and recommend CBEP engagement approaches with the Government of Gabon.

It is expected that implementation of this requirement will be approximately 100 hours of work consisting of (a) 1 x 7 day trip with CBEP representatives to Gabon in late Jan 2016, (b) bi-weekly (every other week) coordination meetings (est. 1 hour/each) before the trip, (c) weekly coordination meetings (est. 1 hours/each) for approximately 2 months after the trip, (d) written report conveying personal knowledge and expertise as well as engagement recommendations following the trip, (e) review of country engagement strategy documents (est. 5 hours).

The period of performance for this effort will be from 14 December 2015 to 31 March 2016 Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $50,000 is requested by 9 December 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

8 DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE).

The purpose of this revision is to increase the TD ceiling to account for current cost overruns and additional labor hours required to satisfy the remaining original agreed upon requirements outlined in TD-021RevB. Required in this TD revision is your proposed budget increase, basis of estimate (BOE) for the increase and the justification for each hour of increase to satisfy the remaining requirements. An update to labor hours and dollars expended to date on CLIN 1002 is also required, to include each labor category. Please note justifications need to be quantifiable to most extent possible. These items are requested NLT COB 25 Oct 2016.

Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CJS and the in-country DTRO (as appropriate) by the CBEP POCs below.

No further changes to the previously approved proposal are required at this time

9c. TD SOLUTION BASIS OF ESTIMATE DESCRIPTION (NOT TO EXCEED 2 PAGES

Program Manager
Rev B Hours: 845
Rev C Hours: 938

An additional 93 hours are being required for Program Managers (b)(6) o support the implementation and completion of TD-21. Hours estimated fo(b)(6) nder Rev B totaled 845 and for (b)(6) 80. However, due to unanticipated costs in August, September, and October for the completion of the gap analysis (b)(6) hours increased to 413, creating a variance of 48 hours of additional labor to complete the analysis. The increase in (b)(6) urs are for conducting the initial gap analysis required for presentation at the NBMC on 7-8 September utilizing an older version of the NBERP received from the State Department. Due to the timeframe required to complete the analysi(b)(6) d team utilized the older version of the NBERP to execute the draft analysis, as well as a Google translated version of the new version received by the Iraqi stakeholders. Utilization of the Google translated version of the NBERP resulted in increased efforts due to the challenges faced with the program's translation capabilities and ensuring the accuracy of the document. In addition, once the professionally translated version was received on 30 September, Dr. Lee and team cross walked the documents to ensure accuracy in the overall analysis. The final analysis is on schedule to be delivered to CBEP in November.

Additional hours required fo(b)(6) total 45 hours. The increase in hours is required for unanticipated efforts for program implementation in the last 3 ½ months of the program. The major factor contributing t(b)(6) ncrease in level of effort (LOE) is the management of the subcontractor URC in execution of in-country requirements for procurement, and preparation for the Hands-On- Training (HOT). In addition, US-based procurement requirements to support the HOT, as well as procuring reference materials for the ongoing remote training, required additional labor over what was originally anticipated. Since the materials required for the HOT were purchased in country and the materials required for the trainer demonstrations were procured in the US, it took(b)(6) and team additional labor hours to ensure that (1) the materials were equivalent based on market availability in country, and (2) that what was procured by the URC team was technically sufficient to support the training. Where materials were unavailable, or were not identical to materials secured in the US, the team made adjustments to both delivery of the training, as well as materials purchased. This required additional coordination efforts with URC, US-based vendors, and the trainers to ensure successful execution of the HOT.

Subject Matter Expert (SME) 1
Rev B Hours: 2119
Rev C Hours: 2344

An additional 222 hours are being required for SME 1's to support implementation and completion of the TD-21. The additional hours required are for (b)(6) e hours required support project coordination b (b)(6) execution of the gap analysis by (b)(6) execution of the epidemiology training by (b)(6) and (b)(6)

Under Rev B, hours required for (b)(6) were 218 to support material development and review for the BS&S. However, due to her inclusion in conduction of the gap analysis and participation in the HOT during the August – November timeframe, an additional 111 hours are required for (b)(6) hours increased in the months of August and September in direct support of conducting the gap analysis. Originally, it was not intended for her participation, however, due to her background and unanticipated efforts required to complete the analysis, (b)(6) was brought in by the team to assist in conducting the gap analysis, presenting at the NBMC, and cross walking the analysis once the professional version was received. In addition (b)(6) continued to provide assistance in finalizing the analysis, which includes building out tables and graphs to support findings in the narrative.

Under Rev B, hours required for (b)(6) ere 700 to support overall project coordination. However, due to her efforts in supporting the revision of epidemiology training materials, procurement, and coordination of the HOT (b)(6) hours have increased to 779, requiring an additional 79 hours on the project. (b)(6) additional efforts focused on supporting formatting changes for the epidemiology materials, ensuring completion of comments trackers, and coordinating with the teams for on-time submission and follow up of receipt of approved PAO materials. In addition, efforts required to assist in procurement and coordination of the HOT, as well as completion of all activities supporting this effort were in excess of what was originally anticipated.

Under Rev B, hours required for (b)(6) were anticipated at 405.5 each. However, due to unforeseen efforts required for training material development and adaptation, execution of the gap analysis, and efforts in execution of the remote and HOT trainings an additional 209 hours are required. Efforts for both SMEs increased due to the development of all training materials presented in this course, and the multiple rounds of comments trackers and iterations of the materials to ensure formatting met DTRA standards. At the onset of the project it was not clear as to the requirements for formatting of the developed materials, and as the internal process at DTRA was finalized and communicated to the team, it took additional efforts to complete all materials and ensure PAO approval. In addition, hours increased for both team members in order to support the remote training for Cohort I, due to a family emergency that required (b)(6) E II) to travel to Yemen for personal needs. The SME I and RDA trainers stepped in to conduct training modules on behalf o (b)(6) ng this timeframe. In addition, (b)(6) n supporting the routine updates of loading video recordings and materials to the LMS site, which increased her labor over what was anticipated. Original projections for management of the site did not account for the intensity of management of materials required on the LMS platform. As wel (b)(6) was pulled into the gap analysis in mid-August to provide input from an epidemiology perspective. Originally, we did not anticipate this need, as we believed efforts to conduct the analysis would be required from the BS&S personnel, only. However, this changed once we initiated review and execution of the gap analysis and realized that our team did not include this expertise, which was required for input and completion of the final product.

*Please note in Rev B (b)(6) ere included as SME 1s, however, due to a rate reduction received by URC in October 2016 for these personnel, they have been transitioned to RDAs to provide a cost savings to the Government.

Subject Matter Expert (SME) 2
Rev B Hours: 1449
Rev C Hours: 1434
Additional labor hours are not being requested for SME 2's at this time. Overall, efforts for SME 2's has decreased, which is a direct result of (b)(6) (b)(6) eave during the month of August.

Foreign Local National (FLN) 3
Rev B Hours: 540
Rev C Hours: 604
Under Rev B, hours required for the FLN team were 540 total hours. However, due to unanticipated efforts in the field to support project implementation and procurement of materials and supplies, efforts have increased to 604 total hours, requiring an additional 64 hours of effort provided by (b)(6) Additional hours for (b)(6) re required to support the in-country procurement of supplies. (b)(6) hours in Rev B totaled 80, however, due to difficulties in procuring local materials, an additional 64 hours are required, bringing his total LOE to 144. The duration of time required to identify and secure the necessary training materials for the HOT was greater than the team had anticipated, requiring additional efforts of (b)(6) rt to ensure all materials were procured and transferred to CPHL on time for the training. Additional hours are not required for the remaining FLN trainers supporting this effort.

Research and Data Analyst (RDA)
Rev B Hours: 906
Rev C Hours: 1643
Under Rev B, hours required for the RDA's totaled 906, however due to unforeseen labor requirements, an additional 737 hours are being requested to support RDA efforts performed by (b)(6) (b)(6)

Ms. (b)(6) ours increased from 110 originally intended to provide administrative support to the BS&S project team, to 589 to support concurrent activities on the project resulting in an increase in 479 hours. Once the gap analysis was underway in August, it became clear that the BS&S team did not have sufficient bandwidth to complete the remote BS&S training beginning on 18 September, prepare for the HOT, and conduct the gap analysis concurrently. As (b)(6) prior knowledge and experience working with the LMS Moodle platform, her efforts increased to support the build out and daily maintenance of the BS&S LMS site, participation in the BS&S remote training through the online hosting of the classes, administrative tracking of homework and attendance, as well as the formatting of developed materials to meet the PAO

standards for approval. The efforts of (b)(6) owed the BS&S trainers to focus on the gap analysis, conduct online courses, and develop materials required for the HOT.

(b)(6) rs increased from 361.5 in Rev B to 395 in Rev C, requiring an additional 33.5 hours of effort. This additional effort was required to support the revisions required for the PAO approval of epidemiology training materials due to the multiple iterations of changes required, above what was originally anticipated on the project, as well as remote training coverage for (b)(6) ring her absence.

(b)(6) ours increased from 150 in Rev B to 200 in Rev C, requiring an additional 50 hours of effort to support increased support in the months of August and September to secure the CPHL venue for the HOT, as well as holding routine communications with the participants to ensure training standards were met and maximum CME credits received by the MoH for participation in the training. It was not originally anticipated by the team, that (b)(6) ould be necessary for communications to this level of effort with participants prior to the implementation of the BS&S training, or that it would require an increased level of effort to secure the site for the training in October at the CPHL.

The additional hours required for efforts provided by (b)(6) URC are required to support in-country and US-based operations on the project that were not anticipated until actual implementation of their activities began in August. Originally (b)(6) had an estimated 30 hours on the project and (b)(6) n estimated 20. However, it became clear following onboarding of URC as a subcontractor in August that additional hours were required for overall in-country coordination to include procurement efforts, facilitation of communications with the trainers, and preparation for the HOT, as well as intensive oversight b (b)(6) as URC's manager for this effort. In order to complete all activities, (b)(6) quires a total of 136 hours and (b)(6) a total o additional efforts directly support the procurement of all in-country materials with (b)(6) which required efforts outside of what was originally planned due to the changing in-country conditions and market availability of sup addition (b)(6) rked with US-based trainers to cross walk materials and ensure they lined up, to the best of his abilities, for implementation of the HOT according to what was available in the local market and acceptable for the technical requirements of course implementation. The difficulties faced in securing the necessary materials exceeded the team's expectations when it was originally confirmed that all materials could be procured in country back in July. As well (b)(6) attend all 5 days of the HOT to ensure coordination with CLS, trainers, and the project team for the duration of the event. Originally, his attendance was not anticipated for all 5 days, due to in-country support provided by CLS, and well as the local trainers, however, it was determined necessary by the project team to provide support to the trainers during the event to ensure all materials were available for the practicum modules, as well as to communicate directly with the project team, should there be any issues that arise during the even (b)(6) crease in hours are required to support routine project coordination necessitating additional efforts due to the challenges faced on the ground with procurement, and additional communications with her team to secure materials and execute the remote courses being held from August – October, and the HOT course scheduled in October – November.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to develop a Film Narrative of Epigenetics and Genomics of Infectious Diseases in the Middle East, South Asia and CBEP collaborations in the CENTOM Region in accordance with SOW section 4.3, Task 3.

Metabiota shall develop a 2-5-minute film narrative of the Middle East and South Asia Conference on Epigenetics and Genomics of Infectious Diseases, which was held at the Royal Scientific Society (RSS) on March 7-8, 2016 in Amman, Jordan. The visual narrative (2-5 minutes) objectives are to document the Jordan conference and describe other science initiatives and the outcomes of CBEP's engagements in the Middle East and South Asia. Metabiota shall develop the specific script in coordination with CBEP CENTCOM regional managers. The footage and interviews that Metabiota has from the conference can be utilized for the visual narrative. The visual narrative should be completed by June 30 2016. Total costs for the narrative shall not exceed $60,000.

Deliverables:

- A short film narrative of 2-5 minutes on 3 DVDs. Final film must go through Public Affairs Office (PAO) approval at DTRA.

The period of performance for this effort will be from May 1 to June 30 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $60,000.00 is requested by 19 April. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Phase 1: Proposal Development & Initiation (Task 1)

Metabiota developed a project plan and implementation strategy that aligns with the narrative from Box 8. It is anticipated that the plan for TD-24 is considered a living document, and it is expected that revisions to the plan may be necessary following stakeholder meetings. During proposal development, Metabiota will use Program Manager (PM) and Project Coordinator (PC, billed as a Subject Matter Expert 1) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Metabiota assumes the following:

1. The PoP assigned to this project will allow enough time for PAO approval of the final video. However, if PAO approval extends beyond the project timeframe, Metabiota will work with AEP regional leadership and the COR to adjust the PoP or allow for final approval of the video outside of the project timeframe, as appropriate and within contractual compliance;
2. Production services required for this project will be complete within 3 weeks allowing enough time for PAO approval of the final video. Should services required extend past this timeframe, Metabiota will work with the CBEP CENTCOM regional leads (and COR, if necessary) to adjust the schedule accordingly;
3. Box 8 of TD-24 states that this project will be completed in accordance with section 4.3, Task 3, which refers to Qualified Trainers (QTs). Based on the requirements, Metabiota has replaced Qualified Trainers with Task 4- Subject Matter Experts. Metabiota assumes this will be acceptable in the execution of the project and engagement of SMEs for this effort.

Project Coordination (Task 1)

The Project team will be led by an experienced Program Manager (PM (b)(6) and supported by a highly effective Project Coordinator (PC), (b)(6) PA, to cover Task 1 – Project Coordination. The PM and PC were selected for this project, because they implemented TD-07 the Middle East South Asia Epigenetics and Genomics of Infectious Disease Conference and have the historical knowledge to effectively and efficiently manage the requirements identified for TD-24. In addition, Metabiota will engag (b)(6) PhD. from Gryphon Scientific LLC to assist in narrative development as a SME under Task 4. Dr. Berger was the PI and senior technical implementer on TD-07, working closely with (b)(6) (b)(6)

Note: The Metabiota PM confirms subcontractor knowledge of the contractual requirements prior to TD approval

Phase 2: Preparation (Task 1)

Upon TD approval, the PM will establish routine communications with project team members and CBEP to initiate project implementation. The PM will hold a kick-off meeting within 5 days of approval, with participation from the AEP PMO, project team members and key CBEP stakeholders to review project requirements and ensure a mutual understanding of project goals and objectives is realized. The PM, with assistance from the PC, will identify and engage the videography firm required to execute production of the video. The PM will lead coordination and integration of the project team with CBEP stakeholders to develop the narrative and complete the film.

The project team will ensure that all necessary documentation required prior to initiating tasks is completed correctly and submitted on time, including CTR CLS Form (CDRL A016) and the Monthly Reports (CDRL A001). The project team will work closely with CBEP regional leads, A&AS support staff, and CLS to ensure that all logistics requirements are coordinated and implemented according to the project schedule and contractual

requirements. The Metabiota Travel Coordinator will coordinate with the project team to assist in the request of travel requirements supporting this effort and will ensure that travel arrangements are secured, immediately following approval by the COR, and in line with the project schedule and execution requirements.

Sub-Phase 2.1: Film Narrative Development and Adaptation (Tasks 1,4)

Metabiota will select and engage a videography firm to produce the film, following sourcing of an appropriate vendor for this engagement. The project team will engage the CBEP regional leads to ensure the technical requirements are clearly determined and will select a service provider at best cost to the government, meeting the requirements identified. Upon engagement of the videography firm, Metabiota will transfer the existing, unedited video footage and interviews collected during the Middle East and South Asia Conference on Epigenetics and Genomics of Infectious Diseases, held at the Royal Scientific Society (RSS) from 7-8 March 2016 to the firm in order to produce the film. The unedited video footage, interviews, and photographs captured during this event will provide the raw material to effectively and relevantly document the Jordan conference and describe other science initiatives and the outcomes of CBEP's engagements in the Middle East and South Asia. The Metabiota team will work directly with CBEP regional leads and the videography firm to determine the narrative and produce the film.

Sub-Phase 2.2: Coordination for Material Shipment (Task 1)

Shipment of materials and final edited film, if deemed necessary, will be handled via CLS. The project team will deliver the final edited and PAO approved film utilizing the appropriate CLS forms (CDRL A0016 and associated forms) to the CBEP team for appropriate routing, adhering to contract timelines and deliverable schedule. The Metabiota team will work closely with CBEP, A&AS, and CLS staff members to coordinate and execute any logistical requirements, as needed

Phase 3: Implementation (Tasks 1,4)

The Metabiota Project Team will develop and create a 2-5 minute film narrative of the Middle East and South Asia Conference on Epigenetics and Genomics of Infectious Diseases, held at the Royal Scientific Society (RSS) on March 7-8, 2016 in Amman, Jordan. The film will be produced in the English language and may include visual frames of speakers on stage, panning of audience, and snapshots of the discussion panels, poster session, and participants asking questions and engaging with speakers. The film may also include short interviews with conference organizers, Scientific Advisory Board members, speakers, presenters, and attendees concerning the importance, relevancy, and benefits of the conference, among other topics. The film will be produced utilizing the technical expertise of the film editors, Metabiota team, and CBEP regional leads to showcase the conference and highlight the scientific initiatives and engagements stemming from this event and CBEP efforts in the region. Suitable background music will be included, as well as sub-titles, if deemed necessary. Metabiota will ensure that the film is adjusted/edited according to guidelines received from CBEP, and other key stakeholders. CLS will be engaged to provide logistical support (CDRL A0016), should it be required for this effort. In addition, Metabiota will ensure PAO approval of the film, and will coordinate with the technical team to address any necessary changes prior to completion and final delivery of the product.

To support implementation efforts, the Metabiota PM will travel to Washington DC for meetings with CBEP regional leads and the project team to develop the narrative and review the video footage. The PM will participate in working sessions, brainstorming, and technical development of the film narrative during scheduled in person meetings to ensure execution of the narrative and completion of the project. In addition, the PM will meet with the videography firm to review performance and completion of tasks associated with this project.

Phase 4: Project Closeout (Task 1)

The project team will close out all activities associated with this project, to include final reporting, invoicing, and submission of all relevant CDRLs according to the outlined schedule. In addition, the project team will contribute to lessons learned conversations with CBEP detailing enhancements that could be made should this type of project be repeated, as necessary and requested by CBEP regional leads. Finally, unedited and edited film, and other relevant materials will be provided to CBEP.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$36,810.04
1003	MATERIALS	$10,695.43
1004	ODCs	$0
1005	TRAVEL	$2,372.50
TOTAL		**$49,877.97**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Labor

Costs for direct labor to support this activity is required for the following personnel:

Metabiota Program Manager (PM). The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of CBEP goals in direct support of this activity and the CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the SME 1 to ensure day-to-day activities for the project are completed on time, and to the quality required by CBEP. The PM will participate in routine conference calls and other forms of communication with CBEP regional leads and SMEs to ensure project execution. The PM will oversee the subcontractors on this effort, to include the services provided by the videography company in execution of the film. The PM will ensure all contract CDRLs are met and delivered according to the project timeline, and contract requirements.
LOE: 72 hours

Metabiota Project Coordinator: A SME 1 will act as a Project Coordinator (PC) throughout the planning, execution and close out of project objectives and activities. The PC will support the planning and execution of CBEP objectives towards the completion of project goals by participating in proposal development, stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will participate in routine project communications, to include leading regular coordination calls with the project team, CBEP, the videography company, and other key stakeholders.
LOE: 52 hours

SME 3: [(b)(6)] from Gryphon Scientific will be engaged to support technical development of the film narrative for this project. Having coordinated the MESA Epigenetics and Genomics of Infectious Diseases Conference with the Metabiota team, [(b)(6)] critical in ensuring the conference message is received and communicated through the film. [(b)(6)] will work directly with Metabiota and CBEP to develop the narrative, review the footage, and provide subject matter expertise to the team and the production services in development and execution of the film. Should edits or revisions be required following CBEP and PAO guidelines, [(b)(6)] will participate in editing and refining the narrative to be delivered in the

final product (b)(6) will be responsible for all monthly reporting and deliverables assigned to the Gryphon subcontract by Metabiota in execution of this project.
LOE: 80 hours

Reachback programmatic support to include finance, accounting, and contracts, will be provided as part of CLIN 1001 (FFP) and will not be separately invoiced.

Materials
Training Materials: Two (2) external hard drives will be procured to store the photos, raw video footage, and the final edited video.

Production Services: Metabiota will engage a videography firm to produce the short video for this effort. This will include identification of sound bites, completion of film transcripts, editing, and production of the video.

Metabiota will conduct market research and ensure the best price is secured, maintaining quality and technical requirements for all procurement of goods. Metabiota will coordinate directly with CLS for all shipping requirements, and will ensure cost management for all procured supplies, as necessary to complete the scope of this effort.

Subcontracts
The subcontract with Gryphon Scientific will be modified to include labor hours and materials required for implementation of this project. Costs are captured under the labor and materials budgets.

Travel
Travel costs will be cost reimbursable and provide best cost to the government following JTR regulations. Travel is requested for the PM to meet with the project team, Gryphon SME, CBEP, the videography company, and other key stakeholders to support the execution of Phase 3, and ensure development of the film narrative and completion of the project. The PM will travel to Washington DC to take part in in person meetings, brainstorming activities, narrative development and review of film footage and sound bites developed by the videography company supporting this project.

Subject: HDTRA1-14-C-0104 Technical Direction for grant development assistance to the Nipah project development grant (PDG)

Dear (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide technical assistance to scientists from the Research Institute of Tropical Medicine (RITM) in the Philippines in developing and preparing documentation necessary to submit a research proposal to the BAA Thrust Area 6 for a study on paramyxoviruses, in accordance with SOW Tasks 5 & 6. Metabiota will act as a technical resource, assisting RITM in preparation of required information, including completion of the Protocol Risk Assessment Tool, process of collecting IACUC and/or IRB protocols, and completion of necessary registration for submitting necessary documentation for successful proposals to grants.gov, to include a research plan, technical approach and budget.

This requirement is derived from discussions held during the bat-borne surveillance training event conducted in Singapore in May 2014. Metabiota will work with RITM to develop documentation described above for preliminary surveillance studies of bats in province Sultan Kudarat. A proposal and estimated budget for implementing these requirements is requested by 5 August 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with the DTRA CBEP Points of Contact listed below.

Subject: HDTRA1-14-C-0104 Technical Direction for the Implementation of Personal Protective Equipment (PPE) Donning and Doffing Biosafety Training in Cameroon.

Dear (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide Personal Protective Equipment (PPE) Donning and Doffing Biosafety Training and Viral Hemorrhagic Fever (VHF) Clinical Recognition Training in Yaoundé, Cameroon in accordance with SOW section 4.3, Task 3 not to exceed $100,000. We anticipate representatives from the Cameroon Ministry of Defense in the following fields of expertise will attend the training: Clinical practitioners (4), Emergency doctors (4), Intensive care (4), Laboratory (6), Surgery (2), and Stretcher-Bearers (6). It is expected that these individuals will go back and train others in their respective fields. Metabiota shall utilize existing DTRA Donning and Doffing of PPE (Attachment A) and VHF Clinical Recognition training presentations (Attachment B). Metabiota shall modify the training materials including the Partner Country Titles, Country Specific Titles, and remove any unneeded materials. If Metabiota provides additional language or materials to DTRA's preapproved Donning and Doffing of PPE or VHF Clinical Recognition training presentations, the modified materials are subject to a 30 day review period by DTRA's Training Team. DTRA is providing PPE to various Military Hospitals in Cameroon. The shipment for the Military Hospital in Yaoundé will contain the training materials for the course (Attachment C). These materials will be available for training with the exception of the Tyvek 198 suit, the chlorine granduals, and anti-fog spray which are on backorder. The Tyvek 122 suit will be available for training. Metabiota shall propose a date for this training that is no earlier than July 2015. A proposal and estimate budget for implementing this requirement is requested NLT 08 June 15.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with DTRA CBEP Points of Contact noted below.

Subject: HDTRA1-14-C-0104 Technical Direction for the Implementation of Sample Collection and Diagnostics Training on Middle East Respiratory Syndrome (MERS-CoV) in Camels and Bats in Kazakhstan.

Dea (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide Sample Collection and Diagnostics Training on Middle East Respiratory Syndrome (MERS-CoV) in Camels and Bats in Kazakhstan in accordance with SOW Section 4.3, Task 3. Metabiota shall perform two training sessions. The first, to be held in late-June 2015, will focus on safe sample collection to include blood, nasal and rectal swabs for both camels and bats. The second, to be held in September 2015, will train laboratory diagnostics for MERS-CoV alongside a panel of related Coronaviruses. Metabiota shall adapt training materials presented during the recent bat-borne surveillance training that occurred in Singapore in May 2014. Additional deliverables would be a curriculum for future trainings and a research proposal suitable for the BAA developed by the Kazakh partners. A proposal and estimated budget not to exceed $445,000 for implementing this requirement is requested NLT 04 June 15. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Subject: HDTRA1-14-C-0104 Technical Direction for the Study of the Risk of Bat-borne Virus Transmission from the Annual Bat Cull in Nagaland, India.

Dea(b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to administer a study of the Risk of Bat-borne Virus Transmission from the Annual Bat Cull in Nagaland in accordance with SOW Section 4.3, Task 3. This study will determine the virus community of three species of bats in a cave in Nagaland, India and if there is a risk of human infection. This particular site is very important because there is an annual bat harvest in October where numerous individuals from surrounding villages visit. This study will sample this cave for the presence of known select agents that are naturally harbored by bats and that have caused mortality in humans. Metabiota shall visit this site three times to collect bat excreta, urine, oral swabs, anal swabs, blood, sera, and tissues (kidney, spleen, lung, intestine) from harvested bats. The first visit will be 4-6 weeks before the bat harvest to ascertain the base line level of prevalence, the second trip will be during the harvest, and the third trip will be 4-6 weeks after the harvest. A proposal and estimated budget not to exceed $150,000 for implementing this requirement is requested by 10 June 2015.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with DTRA CBEP Points of Contacts listed below.

Subject: HDTRA1-14-C-0104 Technical Direction for the Implementation of an Epigenetics and Genomics of Infectious Diseases Workshop in the Middle East South Asia Region.

Dear (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to administer a two-day workshop in the Fall of 2015 on Epigenetics and Genomics of Infectious Diseases in the Middle East South Asia Region in accordance with SOW Section 4.3, Task 5. The workshop will include plenary talks, topic-focused sessions, poster sessions, and training sessions. The plenary talks will highlight recent advances in epigenetics, genetics, and the technologies and skills needed to study epigenetics. The topic-focused sessions will provide opportunities for participants to learn about specific areas of research, such as epigenetic regulation of host immune system genes by bacterial toxins. The poster sessions will allow scientists to identify prospective partners for research cooperation. Finally, the training sessions will describe processes of initiating and maintaining international scientific collaboration, grant writing, and risk analysis. A proposal and estimated budget not to exceed $500,000 for implementing this requirement is requested by 02 June 15.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Subject: HDTRA1-14-C-0104 Technical Direction for the Implementation of Distance Learning on the Basics of Passive Surveillance for Animal Diseases in Iraq, with a Special Emphasis on Recognition of High Consequence Pathogens.

Dea (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to administer an eighteen-month distance learning course covering the Basics of Passive Surveillance for Animal Diseases in Iraq, with a Special Emphasis on Recognition of High Consequence Pathogens in accordance with SOW Section 4.3, Task 3. The course will build disease diagnosis expertise among a core group of veterinarians, from the field, from public health, and from the laboratory, using a combination of in-person trainings and weekly web-based modules. The program will entail didactic, interactive, and case-based materials to work through the basic concepts of disease pathogenesis, the development of lessons, the significance of lessons in terms of disease, and how these lessons relate to the clinical disease in an animal. Both endemic and high consequence pathogens will be covered to help participants distinguish key aspects that differentiate them, and to help participants appreciate the most appropriate samples to ensure accurate diagnosis. A proposal and estimated budget not to exceed $400,000 for implementing this requirement is requested by June 10, 2015.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Director
1 Sutter STE 600
San Francisco, CA 94104-4923

Subject: HDTRA1-14-C-0104 Technical Direction for Nipah Research Activity Project (RAP)

Dea (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide a research collaborator or collaborators to assist scientists from the Research Institute of Tropical Medicine (RITM) in the Philippines in executing a preliminary study on paramyxoviruses in accordance with SOW section 4.3, Tasks 5 & 6.

This requirement is derived from discussions held during the bat-borne surveillance training event conducted in Singapore in May 2014. Specifically, henipaviruses and potentially related strains in Province Sultan Kudarat are to be the focus of the study. Research collaborators will, in conjunction with scientists at RITM, develop a detailed research plan (including budget) for preliminary surveillance studies of bats in province Sultan Kudarat. The research plan and budget must be submitted for review by DTRA CBEP prior to the initiation of any experimental work. The technical proposal should include comprehensive descriptions of the procedures planned, including field, laboratory, and data analytics, as well as a discussion of biosafety and biosecurity risks and mitigations. Additionally, the Protocol Risk Assessment Tool should be completed and submitted simultaneously. The project should address the following objectives:

1. Identify the reservoir and putative host range for Nipah or related viruses in the Philippines
2. Examine the seroprevalence of Nipah or related viruses in bats, peridomestic animals and humans in the Philippines
3. Understand the risk factors for cross species transmission, including which animals may be amplifying reservoirs

The project should also adhere to CBEP engagement parameters including the but not limited to the requirement for MOUs and/or MTAs with partner country institutions/ministries, and the desire to enhance partner country capabilities in a sustainable manner.

Research collaborators should be accomplished scientists with significant experience in safe and ethical capture of bats for the molecular biosurveillance of bat-borne parasites to include Nipah and Hendra. Research collaborators should have access to and use validated methods and

Defense Threat Reduction Agency
8725 John J. Kingman Drive MSC 6201
Fort Belvoir, VA 22060-6201

protocols for PCR testing of samples suspected to contain henipaviruses. Research collaborators should have access to and relationships with well-regarded facilities known to have safely and successfully conducted research on Nipah and Hendra and that are capable of safely and securely storing strains of those and related viruses.

The research work proposed should not exceed 12 months and $200,000. A proposal and estimated budget for implementing these requirements is requested by June 19, 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with the DTRA CBEP Points of Contact listed below.

Subject: HDTRA1-14-C-0104 Technical Direction for the PACOM Regional Landscape Analysis

Dear (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to conduct a risk-based landscape analysis and engagement strategy framework in PACOM in accordance with SOW section 4.3, Task 4.

The objectives of the analysis are to 1) Characterize the region based on the disease landscape, organic regional capabilities, and external factors that impact CBEP objectives, 2) Identify needs and areas of overlap with other stakeholders, and 3) Inform overarching, strategic guidance and goals for CBEP development of individual country engagement strategies. The Not-To-Exceed (NTE) amount for this effort is $450,000.00. A proposal and estimated budget for implementing this requirement is requested by 19 June, 2015.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with the DTRA/CBEP Point of Contact listed below.

Subject: HDTRA1-14-C-0104 Technical Direction for continued implementation of Clinician Training in Uganda

Dear (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to continue (initiated in the Year 1 of the AEP contract) implementation of clinician training for medical practitioners in Uganda at the sub-national level of healthcare system in accordance with SOW section 4.3, Task 3. Metabiota is to continue providing support of scheduled training events as follows:

- 08-12 June Arua, Uganda- Arua Regional Referral Hospital
- 6-10 July, Kabarole, Rwenzori, Uganda-Fort-Portal Regional Referral Hospital
- 23-31 July, Kabale, Uganda-Kabale Regional Referral Hospital
- 06-14 August, Mbarra, Uganda-Mbarra Regional Referral Hospital

The contractor shall be responsible for coordination of activities with CBEP and the Inter-Agency Health Team at the U.S. Embassy, Kampala prior to implementation. A proposal, training schedule and detailed budget, not to exceed $750K, for implementing this requirement is requested by 10 June, 2015.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with the DTRA CBEP Points of Contact listed below.

Subject: HDTRA1-14-C-0104 Technical Direction for continued implementation of Biosafety and Biosecurity Training in South Africa

Dear (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to continue biosafety and biosecurity training implementation in South Africa in accordance with SOW section 4.3, Task 3. Metabiota was previously directed under modification P0004 to deliver tailored support to improve biological safety in the National Health Laboratory Services (NHLS) network of laboratories and mitigate risk of accidental or intentional release of Emerging Infectious Diseases (EID) causative agents. Metabiota shall continue to finalize the videography component of the BS&S training video materials, and expanding the BS&S capability of the in-country online health information system, Occupational Health And Safety Information System (OHASIS). Metabiota shall develop a fit testing respiratory protection training program to be disseminated via Safety, Health, and Education (SHE) officers. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

A proposal and estimated budget not to exceed (NTE) $49,305 for implementing this requirement is requested by 1 July, 2015.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with the DTRA CBEP Points of Contact listed below.

Subject: HDTRA1-14-C-0104 Technical Direction for One Health Epidemiology training in the Republic of South Africa.

Dear (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to tailor One Health Epidemiology training in the Republic of South Africa in accordance with SOW section 4.3, Task 3. Metabiota, in coordination with Center for Disease Control (CDC)-South Africa (SA) and United States Department of Agriculture (USDA-SA), shall proceed with all coordination necessary to gain host country approval on the One Health Epidemiology training. Metabiota shall communicate as needed with CBEP, CDC-SA, USDA-SA, the Department of Agriculture, Forestry, and Fisheries (DAFF), National Department of Health (NDOH), the National Institute for Communicable Diseases (NICD), and any additional stakeholders deemed necessary by CBEP, CDC-SA, or USDA-SA. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

A proposal and estimated budget not to exceed (NTE) $54,922 for implementing this requirement is requested by 1 July, 2015.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with the DTRA CBEP Points of Contact listed below.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision modifies the original technical directive and extends the end of the Period of Performance (PoP) for TD-017 from 15 May 2016 to 15 November 2016. This PoP extension is to continue providing expertise in grantsmanship at the Laboratory of the Ministry of Agriculture in Georgia only. The Metabiota team should no longer provide expertise in grantsmanship development at the Richard G. Lugar Center for Public Health Research. Metabiota should coordinate directly with the Technical POCs identified below. Your technical approach as outlined in TD-017, proposed budget, and basis of estimate for continuing this requirement, not to exceed $95,712 is requested by 17 May 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below. No further changes to the previously approved proposal are required at this time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES)

Proposal Development & Initiation:
Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. A key assumption for this effort is that the Georgian scientists have their own research ideas which can be shaped into proposals. A second key assumption is that Metabiota Subject Matter Experts providing grantsmanship support will not be the primary drafters of any white papers or full proposals, but rather will only provide assistance in drafting said white papers and proposals. A third key assumption is that the Georgian scientists will not require any assistance in analysis of any data which may be presented in the proposals as preliminary work. It is anticipated that the plan for TD-017 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:
From the information provided in Box 8, Metabiota assumes that there are several relevant POCs at LMA which will be involved in the grantsmanship efforts. The Metabiota PM and PC will, upon approval of the TD, engage relevant LMA stakeholders to begin understanding what efforts they would like to work on. Upon approval and receipt of additional information, the Metabiota PM and PC will identify a grantsmanship subject matter expert (billed as SME 2) and work to either onboard them as a Metabiota employee, or establish a subcontract or independent consulting arrangement with the VS. The Metabiota PM, PC, and SME 2 will participate in communicat ons with stakeholders at LMA in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the SME 2 to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO-Tbilisi.

In-Country Grantsmanship Mentoring
Mentoring will consist of in-country and remote mentoring. Based on our understanding of the requirements, Metabiota does not expect to be required to provide data analysis support to the LMA scientists. In order to ensure the success of the in-country mentoring visits, the PM, PC, and SME 2 will work with the POCs at LMA to establish a list of deliverables to be provided to Metabiota prior to any in-country mentoring. These deliverables may include budgetary data, drafts of proposed plans and SOPs, drafts of white papers and full proposals, and analyses of preliminary data complete with methodology. The PM and PC will maintain regular communications with the SME 2 to ensure that the SME 2 has all required resources for mentoring. After assessing the need for in-country mentoring, the SME 2 will implement the mentoring work plans, only assisting with actual proposal writing in cases of last resort.

Metabiota is proposing a slight alteration of our plans from Revision A based on observations from our first two in-country mentoring sessions. In particular, we have seen that mentees can become distracted with their primary duties at LMA and are thus proposing to run two cohorts of mentees simultaneously but for two weeks of half-day sessions. This would allow each cohort to dedicate part of their day directly to their normal duties which we believe will reduce distraction during the portion of their day focused on grantsmanship mentoring. One cohort would run in the mornings, and the other cohort would run in the afternoons. We are proposing to run two (2) two-week sessions (July and September), with remote mentoring in between. In the July session, cohort 1 would be working on full proposal and cohort 2 would receive their second session on white papers. In the September session, cohort 1 would be finishing full proposals and participating in a train-the-trainer approach to assist cohort 2 with their first efforts on full proposals.

Reach-back Support / Remote Mentoring:
Based on our understanding of the requirements, Metabiota does not expect to be required to provide primary authorship support to any proposals, but does expect the SME 2 to be available to provide remote editorial guidance and limited assistance with drafting of select passages. Through regular communications with the respective project teams, Metabiota will be made aware of any additional subject matter expertise requests. The SME 2 will address these needs as they arise.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):
Table 1: Incremental funding requested for 16 May 2016 – 15 November 2016, per CLIN. Please note that labor rates have changed.

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$108,935.40
1003	MATERIALS	$0.00
1004	ODCs	$0.00
1005	TRAVEL	$25,570.50
TOTAL		**$134,505.90**

9c. TD SOLUTION BASIS OF ESTIMATE DESCRIPTION (NOT TO EXCEED 2 PAGES::

Labor

Costs for direct labor to support this activity is required for the following personnel:

All phases:

Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensur ng the program remains within scope budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As our Subject Matter Expert may be an independent consultants or subcontractor, the Metabiota PM will additionally provide management oversight of the project subcontractors (microbiology SME) and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance. and any other requirements which may be applicable to the work.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Pro ect Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipat ng, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM. The PC will manage the SME 2, to include leading regular coordination calls with the SME 2, participating in regular communications between the proposal stakeholders and the grantsmanship SME, and coordinating with the SME 2 to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline The PC will aid the PM and SME 2 in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As the grantsmanship SME may be unfamiliar with DoD contracting, the Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance. and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Subject Matter Expert 2: The SME 2(s) will serve as the grantsmanship SME(s). The SME 2(s) will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each proposal, the needs and expectations of the Georgian scientists, and the grantsmanship assistance needed. The SME 2(s) will provide mentoring as directed by the respective project leads. We are expecting a higher level of effort required in the extension period as mentees move into developing full proposals which would require more time to review. During the base period we leveraged other CBEP work travel to Tbilisi to be able to supply additional fractional support in country, and expect to do the same during the extension period.

Materials

No additional material costs are projected for the extension of the period of performance.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel performing work overseas on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement. No additional funds for DBA insurance are requested for the extension of the period of performance.

Subcontracts

Subcontracts will be issued to the SME 2 and/or their home organization as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested to support the deployment of the SME(s) to Tbilisi, Georgia for two (2) two-week deployments. During the base period we leveraged other CBEP work travel to Tbilisi to be able to supply additional fractional support in country, and expect to do the same during the extension period. No additional travel is projected based on the requirements provided. Projected airfares are based off of actual quotes, but may be subject to changes based on timing of purchase. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision extends the Period of Performance (PoP) for TD-018 from 15 August 2016 to 15 November 2016. This PoP extension is to provide enough time to continue providing on-site expertise in genomic research activities at the Richard G. Lugar Center for Public Health Research in Georgia. Metabiota should coordinate directly with the Technical POCs identified below. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below. No further changes to the previously approved proposal are required at this time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES).

Proposal Development & Initiation:
Metabiota developed a project plan and implementation strategy, which aligns with narrative from Box 8. A key assumption for this effort is that the Georgian scientists are generally capable of conducting genomics and bioinformatics analyses on their own but that the requested support personnel will occasionally be asked to directly perform genomic and bioinformatics analyses. A second key assumption for this effort is that it is expected to be a full-time expat position. ~~It is anticipated that the plan for TD-018 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings.~~ During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as Subject Matter Expert (SME) I) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Project Coordination:
~~From the information provided in Box 8, Metabiota assumes that the unspecified CBEP-funded research projects are ongoing affairs led by third parties. In order to effectively ensure that an appropriate genomics subject matter expert (genomics SME, billed as a Visiting Scientist/VS) is available to provide the requested mentoring, the Metabiota PM and PC will, upon approval of the TD, continue to engage relevant DTRA CBEP and Lugar~~ Center stakeholders to identify how, where, and when project status updates are communicated (for example, monthly teleconferences, ~~weekly email exchanges, etc.) and what the onboarding and daily requirements are for working at the Lugar Center.~~ Upon approval and receipt of additional information, the Metabiota PM and PC will work with the identified VS to modify their existing subcontract. The Metabiota PM, PC, and VS will participate in project communications in order to understand what mentoring activities will be required. The Metabiota PM and PC will work with the VS to ensure that all necessary documentation required prior to travel is completed correctly and submitted on time, and that all trip reports are filed on time. The Metabiota PM and PC will coordinate with the project team to ensure that transportation and lodging arrangements are secured. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS and/or DTRO-Tbilisi.

Mentoring and Performance of both Genomics and Bioinformatics Analyses and Operational Oversight of the Genomics Center:
Mentoring will consist of in-country mentoring supporting various genomics and bioinformatics projects being conducted in Georgia by NCDC and LMA. The PM and PC will maintain regular communications with the VS to ensure that the VS has all required resources for mentoring. After assessing the need for genomics mentoring, the VS will work with the PM, PC, and other appropriate stakeholders to develop mentoring work plans. The VS will then implement the mentoring work plans assisting with actual analyses and scientific writing when necessary. Additionally, the VS will provide oversight over the operations of the genomics center. The VS will work with Lugar Center POCs to identify candidates for mentorship in operating the genomics center, and work with the PM, PC, and Lugar Center stakeholders to develop and execute a strategy for developing these candidates' abilities to operate the genomic center without guidance.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

Budget requested in the table below is incremental funding per CLIN required for the extension period and does not include original funding amounts.

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$102,801
1003	MATERIALS	$0
1004	ODCs	$1,344
1005	TRAVEL	$0
TOTAL		**$104,144.96**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES).

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:
Metabiota Program Manager: The Metabiota PM will provide oversight of the planning and execution of program objectives towards the completion of DTRA CBEP goals at the regional level and will lead communication with DTRA CBEP for this activity. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and

communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As our Subject Matter Expert will be a subcontractor, the Metabiota PM will additionally provide management oversight of the genomics SME and the integration with other project stakeholders throughout the duration of this project. The PM will also ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Metabiota Subject Matter Expert 1: The Metabiota SME 1 will act as a Project Coordinator (PC) throughout the planning and execution of project objectives, as well as participating in proposal development. The Metabiota PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals. The PC will do so by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will regularly communicate the project status with the PM. The PC will manage the genomics SME, to include leading regular coordination calls with the genomics SME participating in regular communications between the project stakeholders and the genomics SME, and coordinating with the genomics SME to ensure all project requirements and deliverables are met and the program remains within scope, budget, and timeline. The PC will aid the PM and VS in ensuring project startup and closeout are completed to the satisfaction of the funder.

The Metabiota PC will aid the PM in ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. The Metabiota PC will assist the SME and/or their organization with adhering to DoD contracting requirements, to include developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work. The Metabiota PC will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

Project Coordination & Mentorship phases only:
Visiting Scientist: The VS will serve as the genomics SME. The VS will participate in regular project coordination communications (teleconferences, emails) to ensure that they understand the context of each project, the needs and expectations of the Georgian scientists, and the genomics subject matter expertise needed. The VS will provide mentoring as directed by the respective project leads. The VS will also provide oversight and management of the Genomics Center at the Lugar Center. Labor has been calculated at approximately 0.7 FTE.

Other Direct Costs
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all staff for the period of performance for this engagement.

Subcontracts
A subcontract extension will be issued to the VS and/or their home organization as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel is requested to support the deployment of the VS to Tbilisi, Georgia for the initial deployment travel and final return. No additional travel is projected based on the requirements provided. The travel budget represents the estimated amount required; precise numbers may vary depending on factors beyond Metabiota control. Travel on the AEP contract is cost reimbursable. Also of note, lodging at GSA rates for Tbilisi, Georgia have included to this budget. It is assumed that the TBD VS will require some time to identify long term lodging (length of assignment), which would be covered by his expat uplift.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision extends the Period of Performance (PoP) for TD-021 from 15 May 2016 to 15 November 2016 at no additional cost. This PoP extension is to provide enough time to continue providing field epidemiology training support in Iraq. Metabota should coordinate directly with the Technical POCs identified below. No changes to the previously approved proposal are required at this time.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

This revision modifies the original technical directive by scaling back the requirements outlined in Block 8, Phase 4 of Task 1: Integrated Biosafety and Security and Epidemiology Enhancement within the original TD-021 at no additional cost.

The revised language for Task 1 Phase 4 is as follows:

Phase 4 will include the development of a gap analysis and recommendation report conducted by Metabiota subject matter experts and Iraqi technical experts nominated by the Iraqi National Monitoring Authority (INMA). Metabiota will work collaboratively with the Iraqi technical experts to understand the NBERP, identify gaps, and develop recommendations to improve the plan. Metabiota will present a summary of the gap analysis and recommendations to the National Biorisk Management Committee on September 8, 2016, via video teleconference from Sandia National Laboratories in Albuquerque, New Mexico. The presentation will be made in collaborat on with the INMA technical expert, and include a question and answer period. Should Metabiota encounter schedule delays in working with the Iraqi technical experts that preclude the possibility of finalizing, translating, and clearing a presentation in time for NBMC, then Metabiota will provide a verbal summary at NBMC, followed by a written report submitted to DTRA prior to the end of the contract. Additionally, this task will not require any international travel by the contractor. The estimated labor categories that are needed to support this effort are: Program Manager (PM), Subject Ma:ter Expert (SME) Level I, SME Level II, and Foreign Local National (FLN) support.

Your revised technical approach, budget and basis of estimate for implementing this modification are requested by 26 July 2016.

No further changes to the previously approved proposal are required at th s time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation (Task 1):
Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-021 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as a Subject Matter Expert 1)) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.
Key assumptions:

1. The Iraqi participants identified for all phases are capable of speaking, reading, and writing English, including technical concepts.
2. DTRA CBEP can and will assist in coordination and socialization with Iraq ministries and US Embassy, and will participate in the identification of appropriate Iraqi participants for all phases.
3. Metabiota assumes that the learning management system (LMS) does not need to meet DoD information security standards.
4. DTRA CBEP, through CLS or another party, can facilitate transport of Iraqi participants to a single, secure location for hands on training.
5. DTRA CBEP or other USG entity will bear the cost of providing security for said location(s) and all participants during that time period.
6. Metabiota-engaged FLNs will be able to access said location(s) during the appropriate times necessary to implement work.
7. Metabiota personnel providing guidance and support will **not** be the primary drafters of the gap analysis document.
8. Iraqi participants will have reliable access to the internet, with enough bandwidth to support videoconferencing.

Project Coordination (Task 1)
The Metabiota PM(s) and PC will coordinate with th (b)(6) EVP Science Integration and the functional group leads for Biorisk Management, Epidemiology, and Veterinary Science to identify the appropriate SMEs in epidemiology and biosafety and biosecurity (BS&S) to develop and augment materials, and deliver a high quality and sustainable engagement in coordination with CBEP CENTCOM.

From the information provided in Box 8, Metabiota assumes that some type of field epidemiology training is already in existence in Iraq. In order to effectively ensure that our training materials align with existing efforts, the Metabiota PM(s) and PC will, upon approval of the TD, engage (b)(6) and other relevant stakeholders, including DTRA CBEP, for additional information including existing training materials in both epidemiology and BS&S. The Metabiota PM(s), PC, and SMEs will participate in regular project communications with all stakeholders to ensure mutual understanding of goals, actions, and status. The Metabiota PM, PC, and SMEs will also participate in separate discussions wit (b)(6) o identify core participants.

The Metabiota PM and PC will work with the SMEs to ensure that all necessary documentation required prior to initiating tasks such as training is completed correctly and submitted on time, including Training Event Plan (CDRL A014) and CTR CLS Form (CDRL A016). Additionally, that all associated reports, including Monthly Reports (CDRL A001), Training Trip Report (CDRL A006), Post-Training Assessment (CDRL A015) are filed on time. The Metabiota PM(s) and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS via the CBEP Technical Point of Contact.

Training Material Development and Adaptation (Task 4)
Metabiota will reuse existing training materials from EIS, FETP, and other widely recognized training programs as much as possible. However, based on inputs from (b)(6) and given the need to conduct this training remotely Metabiota expects to use SMEs to adapt training materials and case studies for effective remote delivery and to specifically address the environment in Iraq. Metabiota SMEs will develop new materials including slide

presentations, videos, interactive quizzes, etc. to effectively leverage the online learning environment. Metabiota will also develop, as appropriate, pre-tests and post-tests for monitoring and evaluation purposes. Training materials, after development and adaptation, will be delivered to DTRA CBEP for technical review and Public Affairs approval. Several of Metabiota's personnel are EIS graduates and we expect to leverage their efforts for the epidemiology-related work. Metabiota personnel and those of our partners also have extensive BS&S and biorisk management experience, and we will leverage those personnel for the BS&S-related work.

Coordination for Training Material Translation (Task 1)
Translation of training materials, if determined to be necessary, will be handled via CLS per contractual direction. Metabiota PM(s) and PC will deliver training materials and CLS form(s) to the CBEP Technical Point of Contact for appropriate routing.

Learning Management System Implementation
Metabiota will utilize a learning management system for the delivery of course materials. Metabiota FLNs will familiarize themselves with the LMS in order to be able to provide adequate locally-based support to the training participants. Metabiota SMEs, aided by the PC and FLNs, will create courses and upload training materials.

Remote Epidemiology and BS&S Training (Task 3)
Metabiota SMEs will execute 6-week training modules on epidemiology and BS&S. Metabiota expects each week to consist of 1-2 lecture sessions conducted via internet videoconferencing which will be recorded for those participants unable to participate live. These will be augmented by the online materials. Metabiota SMEs will be available for virtual "office hours" and to answer written communications from participants. Metabiota SMEs will also grade any assignments and provide feedback to the participants on their performance. FLNs will be used to facilitate any minor logistical needs during this period.

Hands-on Course (Task 3)
Metabiota SMEs and FLNs will execute a one-week hands-on course for the core participant group. This hands-on course will be designed to emphasize the key points of the remote epidemiology and BS&S trainings, especially those which would benefit from practical exercises such as PPE donning and doffing. Metabiota expects to leverage CLS to provide the venue, simultaneous interpretation, and any other logistical needs.

NBEP Gap Analysis and Virtual Workshop (Task 4)
The Metabiota team will work with Iraqi stakeholders/SMEs to conduct a gap analysis of the National Biological Emergency Plan (NBEP). Metabiota expects to use a mix of effort from epidemiology, biosafety, biosecurity, biorisk management, and emergency response SMEs to conduct this gap analysis. Metabiota will work with the Iraqi stakeholders to obtain the latest version of the NBEP. Together, Metabiota and the Iraqi stakeholders (collectively, "the analysis team") will then develop an operational plan for conducting the analysis and drafting a report and presentation. Metabiota SMEs, in conjunction with the Iraqi stakeholders, will then examine the NBEP to identify gaps and critical strategic junctures in the plan, and also to identify potential modes of failure. The analysis team will further devise recommendations to potentially address and/or test any identified gaps and modes of failure. The analysis team will prepare a short presentation on their findings to be presented at the National Biorisk Management Committee meeting in Albuquerque, New Mexico.

Epidemiology Training #2 (Task 1, Task 3, Task 4)
The Metabiota PM, PC, and SMEs will participate in discussions with (b)(6) to identify a second cohort of participants for the epidemiology module of the remote training. The Metabiota SMEs will further modify epidemiology training materials taking into consideration that the second cohort of participants will not be afforded the chance to participate in a hands-on course to reinforce their knowledge and skills. After the materials have been modified and uploaded to the LMS and the participants identified, the Metabiota SMEs will execute the 6-week training module.

Project Closeout (Task 1)
Metabiota PM, PC, and SMEs will all contribute inputs to a final report documenting the projects. The report will include lessons learned and an after-action report detailing enhancements that could be made should this type of project be repeated, either in Iraq or in other CBEP-engaged countries. Training records will also be provided to DTRA CBEP. Additionally, at the end of the period of performance, the LMS will be transitioned to DTRA CBEP for their use and maintenance.

Monitoring and Evaluation
As part of the remote trainings and the hands-on course, Metabiota intends to administer tests to evaluate knowledge and skill levels both prior to and immediately following trainings. However, Metabiota recognizes that post-tests occurring during the period of performance will only measure short term retention. As an additional value to the client, Metabiota intends to develop and provide to CBEP post-tests which can be conducted at six month, 1 year, and 2 year intervals after training completion. Metabiota will administer the evaluations if requested by CBEP.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown below. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the attached Risk Management Matrix.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$711,773
1003	MATERIALS	$26,260
1004	ODCs	$4,535
1005	TRAVEL	$4,595
TOTAL		**$747,163**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES)

The basis of estimate for the TD has been revised and updated to account for a realignment in costs, as well as a request for travel funding to support presentation of the NBEP gap analysis at the NBMC.

Labor

Costs for direct labor to support this activity is required for the following personnel:

All phases:

Task 1 - Project Coordination: Metabiota will provide consistent and cohesive technical and administrative leadership, direction, program management, implementation oversight, and coordination of all project activities.

Metabiota Program Manager(s) (PM): The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of DTRA CBEP goals at the country and regional level in direct support of this activity and the CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the SME I to ensure all day-to-day activities for the project are completed on time, and to the quality required by CBEP

Metabiota Project Coordinator: A SME I will act as a Project Coordinator (PC) throughout the planning and execution of project objectives. The PC will lead the planning and execution of CBEP objectives towards the completion of project goals by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will manage the SMEs, to include leading regular coordination calls with the SMEs and participating in regular communications between the trainees.

To ensure the project in managed according to CBEP standards, the PM and PC will be responsible for the following:

Initiation and Program Integration: The PM, with PC support, will assist in the development of the project proposal to include the project timeline, and identification and integration of project requirements, deliverables, subcontractors, SMEs, and trainers to ensure project success. Upon acceptance of the proposal, the PM will hold a kick-off meeting with team members and partners to review the project plan and schedule, establish routine communication to support project implementation, initiate education on the contract requirements, and begin project implementation. Routine communication with all stakeholders will ensure that all deliverables, including required CDRLs, are met and submitted according to the project schedule and contract requirements.

The PM and PC will work closely with (b)(6) identify and select appropriate participants for the training course, ensuring they meet standards for inclusion, and are vetted according to CBEP protocols. In addition, the PM and PC will coordinate all aspects of training implementation, to include identification and appropriate engagement of FLNs, to include a Training Coordinator, to support in-country training, act as the day-to-day manager of identified FLNs, and interface regularly with project personnel to ensure that in-country training requirements are met. The PM will ensure that FLNs are contracted with, engaged according to contract and project requirements, and have the background and skills necessary to support training implementation. FLNs are being billed at the CENTCOM FLN III rate due to the difficulty of finding personnel and hazard of working in Iraq.

The PM will ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Communications Management: To support routine communication on the project critical to successful execution of the project, the PM and PC will establish bi-weekly project calls with all key stakeholders, to include the CBEP POC, subcontractors, in-country FLNs, SMEs, and others identified as critical to support this training during key phases identified in the project proposal. This will serve to ensure understanding of project requirements and to identify project risk at the forefront, in order to implement mitigation strategies throughout the project lifecycle, ensuring overall success. The PM will also lead communication efforts with DTRA CBEP for this activity, guaranteeing that all aspects of the project are being managed in direct coordination and communication with key team members. The PC will provide support to the PM by coordinating day-to-day activities and maintaining and scheduling routine communications, ensuring that stakeholders are provided routine visibility on the project through in-person and virtual meetings, calls, weekly reports, and updates.

Time and Cost Management: The PM and PC will ensure time and cost management and routine receipt of project reports, invoices, and other needs to support project efforts. The PM and PC will also ensure that all project deliverables are submitted on time and to the quality required for this engagement. This will include coordination, development and submission of the following contract CDRLs associated with this project: CDRL A001 Monthly Report A006 Training Trip Report A011 Transfer of Materials A014 Training Event Plan, A015 Post Training Assessment A016 CTR logistics form, and A017 Meeting Agenda and Report. All CDRLs will be developed and submitted according to the contract requirements, and assigned timelines.

Stakeholder Management: The PM will oversee the identification, development and execution of subcontracting requirements for this project. This will include identifying the necessary subcontractors, developing the subcontractor package jointly with the Metabiota contracts office, educating identified subcontractors on T&M contract requirements, and ensuring invoicing and deliverables meet contract standards. The PM will oversee all work performed by the subcontractor throughout the project and will close out the subcontract following completion of work performed in support of this effort. The PM will participate in identifying necessary subcontractors/ independent consultants, and initiate their engagement through contract development and execution.

Procurement and Logistics Management: The PM and PC will coordinate with CLS for all travel, logistics, translation, and training requirements in country. Utilizing CDRL A016 the CTR logistics form, PM will submit all requirements directly to CBEP and once approved, PC will coordinate directly with CLS team members to ensure all shipping and logistics requirements are met according to timeline. PC will work jointly with CLS personnel to develop and submit required BOMs, and move supplies through the customs clearance process in conjunction with the DTRO. PM/PC will coordinate all logistics requirements with CLS and, once approved by CBEP, will remain in direct communication with CLS team members to ensure on-the-ground logistics are executed according to project scope and requirements.

Quality Management: The Project Coordination team will work closely with Metabiota SMEs to ensure that all training materials and deliverables submitted and utilized on the project meet CBEP's requirements. In addition, SMEs will be responsible for QA/QCing training materials and working directly with engaged FLNs to ensure the training is performed at FETP international standards. All work of internal SMEs, FLNs, and partners will undergo peer review by Metabiota functional group leaders to ensure high quality is maintained.

Human Resources Management: To further build out the project team, the PM and PC will work closely with Metabiota's scientific bench to identify

and integrate internal SMEs to this project. The PM will oversee and coordinate their efforts on the project in support of adapting and developing training materials, remotely executing the training course, and providing M&E to ensure information learned is retained and applied at home organizations. The PM will ensure that SMEs are coordinating directly with other project team members, performing required duties, and PM will track overall LOE according to budget and project requirements for all team personnel.
Close out: The PM and PC will oversee project closeout to include wrap-up of training, finalization of deliverables, final reports, and transfer of materials. The PM will also ensure the conclusion of subcontracts and other employment agreements.

Task 4 - Subject Matter Experts (SMEs): Metabiota will provide ongoing technical support and expertise through the use of SMEs, to include the development and evaluation of training methods and materials, and to support the implementation of trainings. Metabiota SMEs engaged for this effort will provide expertise and input on the development and revision of existing training materials. They will take part in identifying and engaging trainees in conjunction with the project coordination team (b)(6) and the CBEP CM, and ensuring that the cohort selected includes FETP graduates and current residents, critical to this engagement with the basic skills necessary to successfully complete and implement training components at home institutions. SMEs will implement the training courses and will work in partnership with FLN trainers to administer the courses, provide QA/QC of all materials, engage trainees in capacity building and scientific discussions supporting training concepts and implementation, and assist in the development of a gap analysis report. SMEs on this effort will be performing the functions of both SMEs and Qualified Trainers (QTs). In line with government guidance, the SMEs will be billing at the SME I or SME II labor rate, which is the equivalent cost of QT I and IIs. Metabiota has identified internal SMEs that will be a part of this effort. Metabiota will subcontract Watermark Risk Management International, LLC for additional SME support on this effort. Additionally, Research and Data Analyst (RDA) hours have been allotted to assist SMEs in development and adaptation of training materials and course delivery. In addition, RDA hours will be utilized to support delivery of the hands-on course, ensure course approvals, credit hours, and smooth facilitation of course implementation.

Reachback programmatic support to include finance, accounting, and contracts, will be provided as part of CLIN 1001 (FFP) and will not be separately invoiced. In addition, reachback support will be provided by Metabiota science team members skilled in the fields of epidemiology and BS&S, at no cost to the government, to review developed training materials and course requirements.

Labor hours have been realigned, within the total ceiling of the TO approved costs to account for shifts in labor and costing requirements as the project has been further defined and requirements have shifted in scheduling, material development, and gap analysis change of scope.

Materials
Training Materials: Epidemiology textbooks will be procured and distributed to trainers and participants to support the Field Epidemiology Training Program (FETP). This will include supporting the 6-week field epidemiology training course, as well as epidemiology components of the Integrated BS&S and Epidemiology Enhancement course. Risk Management Texts and other published training materials identified by SMEs will be procured and distributed to trainers and participants to support required components of the training courses. All textbooks and published materials will be in English, and will be procured by Metabiota and shipped via CLS or a third-country shipper per contract requirements. If materials can be secured and provided to the trainers/trainees online, shipping will not be required. Metabiota will endeavor to use the LMS for all course materials, ensuring cost savings to the government where possible. SMEs will be engaged to determine the appropriate textbooks, and training materials required to meet course needs.

Personal protective equipment such as Tyvek suits, gloves, goggles, booties, and N95 respirators will be procured for training purposes. Additionally, consumables and other paraphernalia such as chlorine, plastic wash basins, buckets, disinfectant sprayers, and anti-fog spray will also be procured.

USB internet devices and internet access cards will be procured and provided to trainers/trainees in-country to ensure they have access to a stable internet connection during all remote training sessions. USB internet devices will be procured and tested in-country to avoid shipping charges and to ensure they are operational on the ground. USB internet devices and access cards will be monitored by the FLNs to ensure they are used for training purposes only, and are maintained according to equipment/material guidelines for the duration of the course.

General office supplies will be procured to support in-country training activities and routine project needs for the execution of the training courses. Office supplies will be procured locally and will include but may not be limited to, pens, paper, thumb drives, binders, etc.

Metabiota will conduct market research and ensure the best price is secured, maintaining quality and technical requirements for all procurement of goods. Metabiota will coordinate directly with CLS and third-country vendors for all shipping requirements, and will work closely with CLS and DTRO to ensure customs clearance requirements are met and goods delivered according to project timelines and CDRL requirements. Metabiota will ensure cost management for all procured supplies and will coordinate directly with CBEP and CLS to support additional requirements for the hands-on training events to include such items as printing of the developed and adapted training materials, training certificates for participants, and translation services, if needed.

As identification of materials and supplies has progressed and costing proposals received from vendors supporting this effort, Metabiota has realigned costs accordingly to reflect received proposals and confirmed project needs. For example, all materials for the hands-on course will be procured in-country changing the estimated costs for materials from originally projected US-based purchasing. Materials will be procured locally to ensure project schedule is maintained, and to alleviate project delays that could occur due to extended customs clearance requirements. In addition, costs have been reduced, where possible, to reflect the procurement of text book materials through online sources versus hardback procurement. Lastly, it is anticipated that the majority of trainees will have a stable internet connection and that procurement of USB devices and internet access cards will be reduced.

Other Direct Costs
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project working abroad. DBA insurance will be applied for labor costs incurred overseas. As no travel is authorized for this project, DBA will only be applied to FLNs, or other contractors, engaged on this effort, for the duration of the program. Metabiota maintains a blanket DBA policy for all personnel and will add the FLNs, and other performers meeting DBA requirements, to this policy as they are engaged. A rate of 3.5% of their total compensation will be billed to the project on a monthly basis. A reconciliation of the total DBA will be performed prior to final invoicing to ensure accuracy of the charges, in accordance with total hours worked. Final invoicing will be adjusted, if necessary, to reflect the final DBA allocation numbers.

Due to an increased number of FLNs engaged on the project, to include (b)(6) epidemiology trainer (b)(6) and URC trainers and project personnel, DBA insurance was realigned to reflect anticipated LOE by all foreign nationals performing on this project. As stated above, DBA

reconciliation will be performed at invoice close out to ensure accuracy of billing and rates according to actual hours worked on the project.

Subcontracts

Subcontracts to support this effort were approved and issued to Watermark Risk International, LLC for support in the BS&S training component, as well as URC for the engagement of FLNs to support the hands-on training component of this course, as well as local procurement of all materials and supplies needed for the hands-on course. Labor and material costs required to facilitate the engagement are captured under the respective budgets.

Travel

Foreign travel is not requested to support this effort as all requirements will be executed remotely via a learning management system and online training platform. The hands-on course will be executed using in-country FLNs for in-person support and will be remotely supported by Metabiota SMEs.

Domestic travel is requested to support this effort for the presentation of the NBEP gap analysis at the NBMC in Albuquerque, NM in September. Per discussions with the CBEP project team, and as mentioned in the Box 8, our SME's will travel to Sandia National Laboratories to present our findings via video teleconference to NBMC. Travel costs are requested, in accordance with USG travel regulations, for (3) BS&S trainers, as well as Metabiota Program Manager, Dennis Lee. Travel costs include RT airfare, hotel, ground transportation, and per diem for a two-night stay to jointly deliver the presentation.

TECHNICAL DIRECTIVE (TD)

1. CONTRACT NUMBER	2. CONTRACTOR	3. TD NUMBER
HDTRA1-14-C-0104	METABIOTA	22

4. TD TITLE	5. TOTAL TD ESTIMATE.
Uganda Biosurveillance and Grantsmanship Training	HOURS: 3,234 DOLLARS: $ 170,000.00

6. CONTRACING OFFICER REPRESENTATIVE	7. CONTRACTOR POC
NAME: (b)(6)	NAME: (b)(6)
PHONE (b)(6) EMAIL (b)(6)	PHONE: (b)(6) EMAIL: (b)(6)

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide grantsmanship training and subject matter expert (SME) assistance for the coordination of project design, research proposal development, and implementation of a pilot biosurveillance study in Uganda, in accordance with SOW section 4.4, 4.5 and 4.6, Tasks 4, 5 and 6.

Coordination of such efforts shall focus on the following topics: Ecological and bio-surveillance for Rift Valley fever (RVF) among domestic and wild animal populations in Uganda; Exploring the distribution and characteristics of avian influenza (AI) viruses in migratory waterfowl and poultry in Uganda; and Genetic and epidemiological insights into the occurrence of peste des petits ruminants virus (PPRV) among sheep, goats, cattle, and wildlife in northern Uganda.

The project design and research proposal(s) to be coordinated by Metabiota shall emphasize bio-surveillance of RVF, PPRV, and AI in Uganda and how the collection of this data would help enhance the surveillance capabilities of the country at the national level. It shall also include assistance in the development of standard operating procedures (SOPs) for the projects (e.g., biosafety/biosecurity, sample collection/handling/transport, laboratory analysis, data analysis) with the goal of enhancing local capabilities and developing the skills necessary for the early detection and prevalence determination of RVF, AI, and PPR. Metabiota will perform the following activities during the period of performance:

1. Phase One: Metabiota shall collaborate with CBEP's Ugandan research partners and coordinate with them to develop a work plan for implementation of all of the activities noted below, including project design (development of a research plan) and development of a high-quality, competitive research proposal or proposals (more details below). Metabiota should provide a PM and a SME1 to manage this coordination. The SME1 and PM should reach out directly to the POCs listed below to discuss their vision for the development of a research grant and to discuss additional SME support needed. Ugandan partners on this project are SMEs in various areas and their skills/expertise should be leveraged in accomplishing the goals of this project. The Metabiota PM and SME1 should also review the concept notes already developed by the collaborators that describe their research interests. The SME1 hours required for this should not exceed 25 hours total for maximum 3-5 weeks of coordination. PM oversight should not exceed 25 hours total for this phase.

   Ugandan collaborators should include personnel from the following institutions/organizations:
   a. The National Animal Disease Diagnostics and Epidemiology Centre (NADDEC). POC (b)(6)
   b. The National Livestock Resources Research Institute (NaLIRRI). POC (b)(6)
   c. The African Field Epidemiology Network (AFENET). POC (b)(6)
   d. The Ministry of Health, Division of Veterinary Public Health (MoH-DVPH). POC (b)(6)
   e. The Uganda Wildlife Authority. POC (b)(6)
   f. CDC- POC (b)(6)
   g. The Ministry of Health, Uganda Virus Research Institute (MoH-UVRI). POC (b)(6)
   h. Ministry of Agriculture, Animal Industry and Fisheries (MAAIF). (b)(6)

   Phase One deliverables: Work plan with project design and timeline with clear roles and responsibilities

2. Phase Two: Metabiota shall assist the collaborators identified in Phase 1 with the development of a detailed research plan (experimental design) and research proposal(s), including budget, for epidemiologic studies/bio-surveillance research of RVF, AI, and PPR in Uganda based on the needs and research interests of the identified collaborators. These needs are already described in three concept notes developed by the Ugandan collaborators. The determination of whether one joint proposal or separate proposals will be developed will be made in partnership with Ugandan collaborators. The research plan shall include comprehensive descriptions of the hypothesis and research questions; development of a list of materials

and supplies to accomplish the research studies; and SOPs planned for the collection of samples, including field, laboratory, and data analytics, as well as a discussion of biosafety and biosecurity risks and mitigations (e.g. infectious sample transport and handling). CBEP expectation is for Metabiota to provide the collaborators with SME support (Metabiota and Ugandan SMEs) to inform the development of the proposal(s) that the Ugandan collaborators will write. Metabiota is not expected to write the grant proposal, but to provide oversight regarding the development of hypotheses, research design, and the research proposal writing process. The concept notes are well-developed, but will need to be strengthened to provide additional detail on sample size calculations, sample analysis procedures, data analysis methods, and other specifics to make them competitive research proposals. Metabiota should support the Ugandan collaborators in exploring potential funding options, not only DTRA, and assist them in tailoring their proposal(s) to specific funding opportunities.

To complete this task, Metabiota should provide up to 3 SMEs, including 1-2 from Metabiota and one Ugandan non-governmental SME (i.e. AFENET). Each SME should spend no more than 60 hours total over a maximum of 6 weeks to provide input/feedback and grantsmanship expertise to the research plan (experimental design) and the research proposal(s) developed by the Ugandan collaborators. PM oversight of the SMEs' review and coordination of activities should not exceed 30 hours total for Phase Two.

Phase Two deliverables: Project proposal(s) with budgets and SOPs

3. Phase Three: After completion of activities described in Phase 2, Metabiota shall also provide technical expertise to train stakeholders and work with them to conduct small pilot studies in Uganda to test the SOPs developed for the larger surveillance studies in the proposal(s) to determine their effectiveness and the viability of the project design on a smaller scale. Metabiota shall provide no more than 5 medium-level trainers to assist in the pilot studies. Trainers may be a mix of Metabiota and Ugandan trainers or mostly/all Ugandan trainers, which would be viewed as a strong approach to enhance sustainability of CBEP's investment. The training should consist of one in-country activity as well as continued coordination via email, phone, webinar, or a similar lower-cost communication/coordination mechanism throughout the pilot study period.

   Phase Three, Part One: Preparation and coordination in advance of the in-country training and pilot studies should take no more than 6 weeks, and may begin during Phase Two to maximize efficiency, especially for the definition of the scope and timelines for the pilot studies and the procurement of materials needed for the pilot studies. Coordination will be between Metabiota and all the POCs listed above, as well as identified SMEs/trainers, if different from the above. Training materials should be discussed and obtained during this phase. The training materials will be developed from the project proposal and SOP documents, existing training materials owned/obtained by the Ugandan collaborators, and additional supplemental material as needed. If Metabiota and Ugandan collaborators agree that some necessary training materials do not already exist and need to be developed, the team may work together to augment existing materials. A PM, SME1, and a maximum of 5 medium-level trainers would be an appropriate mix to accomplish the efforts in this phase. Trainers should have expertise in the Ugandan public health, veterinary, and wildlife systems as well as local research methods and processes. Not all people need to participate in all tasks at all times during this planning and coordination, and resources should be conserved to include only the necessary individuals at each step. SME1 hours during Phase Three, Part One should not exceed 40 hours; 55 hours if training materials need to be developed. Hours per trainer for preparation and coordination should not exceed 10 hours; 25 hours if they need to participate in development of training materials. PM hours dedicated to oversight of this planning and preparation should not exceed 30 hours.

   Phase Three, Part Two: The in-country training shall be conducted over a period of 10 working days (5 days per week for 2 separate weeks and should include no more than 20 trainees, to be identified by the Ugandan collaborators, across the 3 pilot studies). The training may be conducted as one comprehensive event, providing overarching skills, knowledge and guidance in a way that it will benefit all three projects; or it may be divided into sections for more focused training on the individual projects; or it may be a combination, with some parts together and some break-out or working group sessions that are more specific. Metabiota should collaborate with the Ugandan POCs and trainers to determine the best approach. The PM, SME1 and trainers' time should not exceed 10 hours per day of training. One day before or after the training for in-person coordination for the pilot studies would be appropriate and should not exceed 8 hours of labor each for the PM, SME1, trainers, and pilot study project leads. It would be acceptable for the trainers and pilot study project leads to be the same people in some cases, as appropriate. PM level of effort should be less than the SME1 given oversight vs. implementation role.

   Phase Three, Part Three: Metabiota will provide management oversight and support to the Ugandan partners in implementation of three pilot field studies. The Ugandan collaborators are in the process of receiving appropriate permits and sample collection can only commence following DTRA Research Oversight Board (ROB) approvals. This activity shall include the procurement of materials and supplies required for the pilot studies, not to exceed $100,000. Metabiota shall work with the Ugandan partners to identify the most efficient, cost-effective way to

procure materials and supplies. Pilot study project leads and field technicians' level of effort should not exceed 680 hours over 8 weeks for pilot study implementation and oversight. There should be no more than 3 pilot study project leads and 11 technicians total supported by Metabiota for all three pilot studies. PM and SME1 hours dedicated to pilot study implementation guidance and oversight should not exceed 60 hours over 8 weeks. PM level of effort should be less than the SME1 given oversight vs. technical SME support role.

The following information and study objectives are provided for reference for proposal development (longer term objectives) and pilot study design/implementation (shorter term objectives). The concept notes developed by the Ugandan collaborators are attached for more detail. The pilot studies should focus on validating the SOPs developed as part of the longer-term study design and proposal development in Phase 2, and on conducting sample collection, lab analysis, and data analysis on a small subset of the various animal populations noted below.

Study 1 - The portion of the project regarding ecological and biosurveillance for Rift Valley Fever (RVF) among domestic and wild animal populations In Uganda shall address the following objectives:

a. Determine the inter-epidemic seroprevalence of RVF in a sample population of relevant domestic animals and wildlife in study areas with clearly identified serotypes. Training in this area should establish better methods for the biosurveillance of epizootic and zoonotic diseases in Uganda.
b. Create/improve contingency plans for RVF outbreaks ready for implementation at the central and local district levels through collaboration with a Ugandan government representative specializing in disease prevention and control as well as outbreak containment in Uganda.

Study 2 - The portion of the project focused on exploring the distribution and characteristics of avian influenza viruses (AIVs) in migratory waterfowl and poultry in Uganda shall include these specific objectives:

a. Establish temporal and spatial distribution and prevalence of AIVs in a sample population of waterfowl and domestic poultry in Uganda.

Study 3 - The portion of the project regarding the genetic and epidemiological insights into the occurrence of peste des petits ruminants virus (PPRV) among sheep, goats, and cattle in northern Uganda shall include these objectives:

a. Determine the prevalence of PPRV in wild animal species in the Kidepo Valley National Park and in goats, sheep, and cattle in Nakapiripirit district of Uganda.
b. Use of RT-PCR to detect the presence of PPRV and competitive ELISA to determine the presence of specific PPRV antibodies.
c. Development of a questionnaire to obtain data on existing control measures, livestock movement patterns, PPRV vaccination practices and prevalence, and other relevant epidemiological and surveillance factors.

For the pilot studies, an appropriate scope would include the following:

Study 1 - Pilot study will include no more than 1,000 serum samples collected from 768 domestic animals (cattle, sheep and goat) and 232 wild animal ruminant and porcine species. Laboratory analysis will be limited to serology (ELISA). Data analysis will include determination of RVF antibody seroprevalence. ELISA will be conducted at the CDC lab at UVRI with participation as appropriate by relevant project collaborators.

Study 2 - Pilot study will include no more than 1,000 serum samples collected from two distinct locations with measurably high levels of interface between the wild birds, domestic poultry, and humans. Samples should be collected from approximately 590 domestic poultry and 410 wild poultry, split evenly between both locations. Laboratory analysis will be limited to ELISA for Influenza A viruses and PCR-based molecular analyses, both to be conducted at NADDEC.

Study 3 - Pilot study will include no more than 1,000 serum samples collected each from two distinct locations. The samples should be from approximately 232 cattle and 768 sheep or goats split evenly between the two locations. Development and piloting a questionnaire to assess PPRV risk factors such as vaccination practices, livestock movement and PPRV control measures will be part of the study. Laboratory analysis will be limited to serological and molecular techniques and data analysis will include determination of PPRV antibody seroprevalence and risk factors for PPRV. ELISA and PPR will be conducted at NADDEC. Metabiota shall not pay for Ugandan government collaborators' time for activities completed as part of their normal job/position and role within their institution. Time shall not be paid to government collaborators for Phase One or Phase Two. Ugandan government collaborators can be compensated for time if they are included as trainers, pilot study project leads, and field technicians for Phase Three. AFENET is not a government organization. CDC will not be compensated for time related to this project. All other POCs listed above are Ugandan government collaborators.

Travel costs for Ugandan participants related to the training event and field studies should only include ground transport, lodging, and per diem costs for participants working a distance of greater than one hour travel time from their home, and any requested ground transport, lodging, or per diem payments shall be cleared with CBEP prior to making commitments to cover these costs. Local participants in the training and field work (living one hour or less from the location of their work that day) will not have travel, lodging, or per diem costs covered.

Phase Three deliverables: Pilot studies implemented; PCR and ELISA results provided to CBEP; results and analyses developed into a pilot project summary of conclusions per project and provided to CBEP; and summary of conclusions provided to the Ugandan national authorities for disease surveillance and control.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES).

Phase 0: Proposal Development & Initiation (Task 1: March 7-9, 2016)

Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-022 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as a Research and Data Analyst (RDA)) time to identify the optimal strategy, including required deliverables and other programmatic requirements, which may be a part of project implementation.

Key assumptions:

1. Metabiota received unofficial communication supporting an extension of its contract from May 16, 2016 to November 15, 2016, this technical response has been developed with the key assumption that this additional time will be allotted to this project
2. Metabiota assumes DTRA CBEP representatives will provide Metabiota with the concept notes referred to in Box 8 upon the approval of this TD.
3. Metabiota assumes that DTRA CBEP representatives involved in the development of this technical direction will be available for a kick-off meeting to discuss any associated historical engagement with the research collaborators and their respective needs and constraints.
4. Metabiota assumes changes to the budget (e.g., labor categories) will be acceptable to DTRA. An RDA was added to provide flexibility when implementing; however, this has not affected the overall project budget.
5. Metabiota assumes our response should align with narrative from Box 8, which does not align with the figures provided in Box 5.
6. Metabiota assumes that there will be a need to develop training materials during phase 3 part 1 in preparation for phase 3 part 2, and has incorporated the necessary LOE into this technical proposal.
7. Metabiota assumes participants to be engaged are not Ugandan government officials and therefore fall outside of the U.S. Ambassador's memo (8 April 2015) outlining compensation of Ugandan Government personnel.

Phase 1: Work Plan Development (Task 1: March 21-April 22, 2016)

The Metabiota PM and PC will coordinate with (b)(6) EVP Science Integration, including our regional partner network to identify the appropriate SMEs in grantsmanship, experimental design, and biosurveillance to develop and augment project work plans and training materials, and deliver a high quality and sustainable engagement in coordination with CBEP AFRICOM.

Upon approval of the TD, Metabiota will engage DTRA CBEP to ensure a mutual understanding of project goals and objectives is realized, as well as to obtain the concept notes referred to in Box 8. Metabiota will additionally engage with the eight Ugandan collaborators provided in Box 8 as well as other key stakeholders to obtain additional information such as possible existing work plans, research plans, and training materials for grantsmanship and standard operating procedures for related biosurveillance activities. The Metabiota PM, PC, and SMEs will participate in regular project communications with stakeholders to ensure mutual understanding of project goals, actions, and status.

Metabiota SMEs will conduct a review of the concept notes referred to in Box 8 to establish a baseline for outreach to the identified Ugandan stakeholders. Metabiota will then conduct a series of data calls with these Ugandan stakeholders in order for the SMEs familiarize themselves with the current capabilities and needs of the identified stakeholders, and to identify an appropriate path forward for the work plan. This work plan will identify a timeline of implementation and key milestones and goals for both the development of a detailed research plan (from which, Pilot training and design study will be extracted), as well as development of research proposals (ex. number of proposal submissions, drafts of white papers, etc.). The work plan will include activities providing grantsmanship support, mentorship, and subject matter expertise to key Ugandan stakeholders throughout proposal development, Pilot training and study design and verification, and proposal editing and submission process. Metabiota will submit the work plan draft(s) to DTRA CBEP for review and approval.

Phase 2: Research Plan and Proposal Development (Tasks 1, 4, April 25-June 24, 2016)

Metabiota SMEs will execute the work plan as approved by DTRA CBEP in Phase 1. In doing so, Metabiota will coordinate with the identified Ugandan stakeholders to support the development of a detailed research plan as well as research proposals for epidemiologic studies/bio-surveillance research of RVF, AI, and PPR based on the needs and research interests identified in Phase 1.

Metabiota SMEs will provide support to the Ugandan stakeholders to develop a comprehensive research plan, which will include a detailed list of materials and supplies needed to accomplish the research studies. Moreover, the research plan will include detailed SOPs planned for the collection of samples, including field, laboratory, and data analytics as well as identification of biosafety and biosecurity risks and associated mitigation methods. From this overarching research plan, the Metabiota SMEs and Ugandan stakeholders will develop up to three (3) pilot study plans to test the SOPs developed in the research proposals for their effectiveness and viability of project design. In doing so, the Metabiota SMEs will provide support, mentorship, and expertise in the development, strengthening, and tailoring of these research plans through the submission proves while the Ugandan stakeholders are expected to write and finalize these plans based on the guidance they are provided. Metabiota will submit the final research plan(s), research proposals (including financials) and proposed SOPs for DTRA CBEP's review and approval.

Phase 3, Part 1: Preparation and Coordination for In-country Training and Pilot Studies (Tasks 1, 3, 4: March 28-Aug 11, 2016)

Metabiota will coordinate with the Ugandan stakeholders to identify the most appropriate participants for both training and Pilot study activities. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured for the SMEs and FLNs as needed. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS via the DTRA CBEP Technical Point of Contact.

Metabiota will coordinate with the Ugandan Stakeholders to identify training needs as discussed in Phase 1 and further identified in Phase 2 SOP development. To meet these needs, Metabiota will reuse existing training materials and SOPs for applicable biosurveillance activities as much as possible. However, due to the limited information currently available regarding the intended pilot research plans, Metabiota expects to use SMEs to

adapt and develop training materials for effective delivery of training. Metabiota SMEs will develop new materials, which may including slide presentations, videos, etc. to effectively leverage the learning environment. Metabiota will also develop, as appropriate, pre-tests and post-tests for monitoring and evaluation purposes. Training materials, after development and adaptation, will be delivered to DTRA CBEP for technical review and Public Affairs Office approval.

Phase 3, Part 2: Conduction of In-country Training (Task 1, 3, 4: August 4-24, 2016)
Metabiota SMEs will execute a 10-day training activity for up to 20 participants who will be taking part in the three identified pilot studies followed by a 1-day pilot study coordination day with the pilot study leads. Metabiota anticipates a mix of lecture and hands-on training being necessary, however, Metabiota SMEs will adjust the training approach based on the Stakeholder feedback obtained in Phase 1. Metabiota SMEs will be available for virtual "office hours" and to answer written communications from participants as needed throughout the conduction of pilot studies. Metabiota SMEs will also conduct pre-/post- training testing and evaluations and provide feedback to the participants on their performance. FLNs will be used to facilitate training activities to the extent possible.

Phase 3 Part 3: Conduction of Pilot Studies (Task 1, 4, 6: August 18-Oct 26, 2016)
Metabiota SMEs will coordinate with the pilot study leads for the conduction of three pilot field studies, involving up to three pilot study leads and 11 technicians over a period of 8 weeks. Metabiota SMEs will be available for virtual "office hours" and to answer written communications from all participants as needed throughout the conduction of the pilot studies. Metabiota will provide management oversight and support for the conduction of these pilot studies, and will support the Ugandan collaborators in obtaining all required approvals for project continuation, including but not limited to ROB approvals. Metabiota will coordinate with all Stakeholders to identify the necessary materials required to conduct all pilot effort(s). Inclusive of this, Metabiota will provide any necessary support (SME or logistical) to in-country participants when navigating the procurement process. All materials will be identified and procured with sustainment in mind. Metabiota will submit pilot study summaries, including individual pilot study results, analyses, and conclusions as well as a summary of implementation conclusions to DTRA CBEP for communication to the Ugandan national authorities for disease surveillance and control.

Final Project Report
Metabiota PM, PC, and SMEs will all contribute inputs to a final report relaying all actions taken for project implementation through all phases, lessons learned, and identifying next step opportunities upon completion of all deliverables. Results of pre- and post- testing and evaluations from training will also be provided to DTRA CBEP.

Monitoring and Evaluation
In order to develop a comprehensive approach to continuous monitoring and evaluation of this project throughout implementation, Metabiota has developed a comprehensive monitoring and evaluation plan which can be found in the attached Appendix A (Supplemental Information) Part 5.

Risk Management.
In order to anticipate and overcome obstacles included (but not limited to) those listed in Risk Management Matrix found in the attached Supplemental Information Part 2, Metabiota has identified and captured the risks associated with implementing this activity, including contingency planning and course correction measures which will lead to overall regional risk reduction, as outlined in the attached Risk Management Matrix.

9b BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN).

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$111,755
1003	MATERIALS	$105,270
1004	ODCs	$3,680
1005	TRAVEL	$32,931

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES).

All phases:
Task 1 - Project Coordination: Metabiota will provide consistent and cohesive technical and administrative leadership, direction, program management, implementation oversight, and coordination of all project activities

Metabiota Program Manager (PM): The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of DTRA CBEP goals at the country and regional level in direct support of this activity and the DTRA CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the RDA to ensure all day-to-day activities for the project are completed on time, and to the quality required by DTRA CBEP

Metabiota Project Coordinator: The Metabiota RDA will act as a Project Coordinator (PC) throughout the planning and execution of project objectives. The PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will manage the SMEs and FLNs and lead coordination with the Ugandan Stakeholders, to include leading regular coordination calls with the project team and assist in participant coordination.

Note* - Metabiota recognizes that the RDA labor category was not included to Box 8 of this TD. Upon review of internal support (e.g., Project Coordinators) and to allow greater project implantation flexibility, Metabiota has proposed the use of an RDA instead of a SME 1 for all project coordination. Importantly, while hours have been added for project coordination, the overall cost for the Project Coordinator role remains unchanged between RDA and SME 1.

A key requirement to ensure effective program initiation, execution, and closeout is ensuring clear communication between all project stakeholders. To ensure the project in managed according to CBEP standards, the PM and PC will be responsible for the following:

Initiation and Program Integration: The PM, with PC support, developed the project proposal to include the project timeline, identification and integration of project requirements, deliverables, subcontractors, SMEs, and trainers to ensure project success. Upon acceptance of the proposal, the PM will hold a kick-off meeting with team members and partners to review the project plan and schedule, establish routine communication to support project implementation, initiate education on the contract requirements, and begin project implementation. Routine communication with all stakeholders will ensure that all deliverables, including required CDRLs, are met and submitted according to the project schedule and contract requirements.

The PM and PC will work closely with Ugandan POC's identified in Box 8 (Phase 1) to understand their respective vision for this effort, including the development of a work plan for implementing all identified activities. In addition, the PM and PC will coordinate communication between Ugandan POC's and the identified grantsmanship/BSV SME's (e.g., project team members) to ensure alignment of project plans with DTRA CBEP goals when developing the research project design and high-quality and competitive research proposal(s) (Phase 2). Lastly, the PM and PC will coordinate all aspects of training implementation (Phase 3), to include identification and appropriate engagement of FLNs, to include a Study Leads and Study Technicians, to support in-country training and BSV pilot studies (Phase 3) by interfacing regularly (see Communication Management) with project personnel to ensure that in-country and overall project objectives and requirements are met in full. The PM will ensure that FLNs are engaged according to contract and project requirements, and have the experience, background, and skills necessary to support training implementation. FLNs are budgeted at the AFRICOM FLN I rate.

The PM will ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include; overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Project Close out: The Metabiota PM and PC will oversee project closeout, to include completion of grant proposals, wrap-up of training, and finalization and submission of all identified deliverables, including final reports. The PM will also ensure the conclusion of subcontracts and other employment agreements.

Additional communication strategies and programmatic safeguards, including 1) Human Resources Management, 2) Communications Management, 3) Risk Management, 4) Schedule Management, 5) Cost Management, 6) Quality Management, and 7) Technical Resource Management can be found in Appendix A (Supplemental Information).

Task 3 – Qualified Trainers (QT): Metabiota will provide financial support to in-country Qualified Trainers (Phase Three, Parts One and Two) via subcontracts of independent consultant agreements with the yet to be identified trainers. Metabiota recognizes the importance of identifying Ugandan nationals to fill these roles in order to foster relationships and build regional capacity. Metabiota will work with all project stakeholders to identify the appropriate trainers. Currently, it is presumed that all qualified trainers will be billed at the AFRICOM FLN 1 rate.

Task 4 - Subject Matter Experts (SMEs). Metabiota will provide ongoing technical support and expertise through the use of SMEs, to include the development of 1) a work plan for implementing all identified activities, 2) project design, and 3) development of high-quality and competitive research proposal(s). Metabiota SMEs engaged for this effort will provide expertise and input on the development and revision of existing training materials, development and revision of SOPs, as well as mentoring of study participants in grantsmanship and BSV training activities. SMEs will predominately operate remotely throughout Phases 1, 2, and most of Phase 3 and will thus provide mentorship through regular written communication and video teleconferencing with project participants, as necessary. Importantly, the SMEs for this effort are Kenyan nationals and geographically situated in Nairobi, Kenya which will ease operating delays due to time zone differences. Moreover, the identified SMEs possess excellent operational knowledge of East Africa and capabilities in technical writing, biosurveillance techniques, and one health concepts related to infectious disease research. For Phase Three, Part Two, SMEs will implement the training efforts and will work in partnership with FLN project participants to administer the courses, provide QA/QC of all materials, engage trainees in capacity building and scientific discussions supporting training concepts and implementation, and assist in the development of a gap analysis report. SMEs on this effort will be performing the functions of both SMEs and Qualified Trainers (QTs). In line with government guidance, the SMEs will be billing at the SME I labor rate, which is the equivalent cost of QT I.

Metabiota will subcontract Africa Biomedical Laboratories (ABL; Nairobi, Kenya) for SME support of this effort. The use of regionally accessible, African Nationals helps to build regional capabilities and networks, and ensures overall project success.

Task 6 – Research Activity Projects: Metabiota will provide financial support to Study Leads and Study Technicians (Phase Three, Part Three) via subcontracts of independent consultant agreements with the yet to be identified participants. Metabiota will work with all project stakeholders to identify the appropriate project participants. It is currently presumed that all project participants will be billed at the AFRICOM FLN 1 rate.

Note* - Metabiota is aware of guidance provided by the US Ambassador to Uganda regarding salary support to Government of Uganda personnel. If the Trainers, Study Leads, or Study Technicians are direct employees of the Ugandan Government (e.g., Ministry of Health, Agriculture, Wildlife, etc.), Metabiota will adjust their engagement strategy to reflect the Ambassadors guidelines. The budget for this project will be impacted accordingly.

Reach back programmatic support to include finance, accounting, and contracts, will be provided as part of CLIN 1001 (FFP) and will not be separately invoiced.

Materials

As defined in Box 8 (Phase Three, Part Three) this activity shall include the procurement of materials and supplies required for the pilot studies, not to exceed $100,000. Metabiota will work with the Ugandan partners to identify the most sustainable, efficient, cost-effective way to procure materials and supplies for executing BSV pilot studies. The identification of sustainable supplies will be critical for continuing BSV-related activities, which will be described in greater detail within newly developed grant proposals (Phase Two). Any materials procured by Metabiota will be shipped via CLS. If materials can be secured and provided to the trainers/trainees locally or online, shipping will not be required. Additionally, Metabiota will work with SMEs based in Kenya to help identify sustainable and reliable vendors of biomedical supplies.

Given the nature of this effort (e.g., BSV), Metabiota anticipates the need to procure personal protective equipment such as Tyvek suits, gloves, goggles, booties, and N95 respirators, as well as consumables and other paraphernalia such as chlorine, plastic wash basins, buckets, disinfectant sprayers, and anti-fog spray will also be procured. A final list of materials required for this effort will be identified in coordination with all project stakeholders.

Following discussions with all project stakeholders, and if warranted, USB internet devices and internet access cards will be procured and provided to project participants in-country to ensure they have access to a stable internet connection during remote coordination and training sessions, which are included to all phases of this effort. USB internet devices will be procured and tested in-country to avoid shipping charges and to ensure they are operational on the ground. USB internet devices and access cards will be monitored by the FLNs to ensure they are used for project purposes only, and are maintained according to equipment/material guidelines for the duration of the course.

General office supplies will be procured to support in-country training activities and routine project needs for the execution of the training courses.

Office supplies will be procured locally and will include, but may not be limited to, pens, paper, thumb drives, binders, etc.

Metabiota will conduct market research and ensure the best value is secured, maintaining quality and technical requirements for all procurement of goods. Metabiota will coordinate directly with CLS and third-country vendors for all necessary shipping requirements, and will work closely with CLS and DTRO to ensure customs clearance requirements are met and goods delivered according to project timelines and CDRL requirements. Metabiota will ensure cost management for all procured supplies and will coordinate directly with CBEP and CLS to support additional requirements for the hands-on training events to include such items as printing of the developed and adapted training materials, training certificates for participants, and translation services, if needed.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project working abroad. DBA insurance will be applied for labor costs incurred overseas. DBA will be applied to the PM, SMEs/Trainers, FLNs, and other contractors, engaged on this effort, for the duration of the program. Metabiota maintains a blanket DBA policy for all personnel and will add the SMEs and FLNs, and other performers meeting DBA requirements, to this policy as they are engaged. A rate of 3.5% of their total compensation will be billed to the project on a monthly basis. A reconciliation of the total DBA will be performed prior to final invoicing to ensure accuracy of the charges, in accordance with total hours worked. Final invoicing will be adjusted, if necessary, to reflect the final DBA allocation numbers.

Subcontracts

Subcontracts will be issued to SMEs, FLNs, and/or their home organization(s) as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the labor or materials budgets.

Travel

Travel is requested to support the Program Manager, SME, and qualified Ugandan trainers to Kampala, Uganda to implement training efforts for project participants (Phase Three, Part Two). The travel budget represents the estimated amount required; travel on the AEP contract is cost reimbursable.

All Metabiota personnel slated to travel are current with regard to ISOPREP, SERE, and AT/FP trainings, as required by CBEP. Additionally, the SME's leveraged for this effort are Kenyan Nationals and therefore do not require the aforementioned travel trainings/documents.

Our travel budget assumes training will be held in Kampala over the course of two weeks, including one day before or after for in-person coordination, as described in Phase Three, Part Two of this proposal. If, through discussion with the Ugandan stakeholders, an alternative schedule is created or an alterative location is desired, travel costs may be impacted accordingly.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide grantsmanship training and subject matter expert (SME) assistance for the coordination of project design, research proposal development, and implementation of a pilot biosurveillance study in Uganda, in accordance with SOW section 4.4, 4.5 and 4.6, Tasks 4, 5 and 6.

Coordination of such efforts shall focus on the following topics: Ecological and bio-surveillance for Rift Valley fever (RVF) among domestic and wild animal populations in Uganda; Exploring the distribution and characteristics of avian influenza (AI) viruses in migratory waterfowl and poultry in Uganda; and Genetic and epidemiological insights into the occurrence of peste des petits ruminants virus (PPRV) among sheep, goats, cattle, and wildlife in northern Uganda.

The project design and research proposal(s) to be coordinated by Metabiota shall emphasize bio-surveillance of RVF, PPRV, and AI in Uganda and how the collection of this data would help enhance the surveillance capabilities of the country at the national level. It shall also include assistance in the development of standard operating procedures (SOPs) for the projects (e.g., biosafety/biosecurity, sample collection/handling/transport, laboratory analysis, data analysis) with the goal of enhancing local capabilities and developing the skills necessary for the early detection and prevalence determination of RVF, AI, and PPR. Metabiota will perform the following activities during the period of performance:

1. Phase One: Metabiota shall collaborate with CBEP's Ugandan research partners and coordinate with them to develop a work plan for implementation of all of the activities noted below, including project design (development of a research plan) and development of a high-quality, competitive research proposal or proposals (more details below). Metabiota should provide a PM and a SME1 to manage this coordination. The SME1 and PM should reach out directly to the POCs listed below to discuss their vision for the development of a research grant and to discuss additional SME support needed. Ugandan partners on this project are SMEs in various areas and their skills/expertise should be leveraged in accomplishing the goals of this project. The Metabiota PM and SME1 should also review the concept notes already developed by the collaborators that describe their research interests. The SME1 hours required for this should not exceed 25 hours total for maximum 3-5 weeks of coordination. PM oversight should not exceed 25 hours total for this phase.

   Ugandan collaborators should include personnel from the following institutions/organizations:
   a. The National Animal Disease Diagnostics and Epidemiology Centre (NADDEC). POC (b)(6)
   b. The National Livestock Resources Research Institute (NaLIRRI). POC (b)(6)
   c. The African Field Epidemiology Network (AFENET). POC (b)(6)
   d. The Ministry of Health, Division of Veterinary Public Health (MoH-DVPH). POC (b)(6)
   e. The Uganda Wildlife Authority. POC (b)(6)
   f. CDC- POC (b)(6)
   g. The Ministry of Health, Uganda Virus Research Institute (MoH-UVRI). (b)(6)
   h. Ministry of Agriculture, Animal Industry and Fisheries (MAAIF). (b)(6)

   Phase One deliverables: Work plan with project design and timeline with clear roles and responsibilities

2. Phase Two: Metabiota shall assist the collaborators identified in Phase 1 with the development of a detailed research plan (experimental design) and research proposal(s), including budget, for epidemiologic studies/bio-surveillance research of RVF, AI, and PPR in Uganda based on the needs and research interests of the identified collaborators. These needs are already described in three concept notes developed by the Ugandan collaborators. The determination of whether one joint proposal or separate proposals will be developed will be made in partnership with Ugandan collaborators. The research plan shall include comprehensive descriptions of the hypothesis and research questions; development of a list of materials

and supplies to accomplish the research studies; and SOPs planned for the collection of samples, including field, laboratory, and data analytics, as well as a discussion of biosafety and biosecurity risks and mitigations (e.g. infectious sample transport and handling). CBEP expectation is for Metabiota to provide the collaborators with SME support (Metabiota and Ugandan SMEs) to inform the development of the proposal(s) that the Ugandan collaborators will write. Metabiota is not expected to write the grant proposal, but to provide oversight regarding the development of hypotheses, research design, and the research proposal writing process. The concept notes are well-developed, but will need to be strengthened to provide additional detail on sample size calculations, sample analysis procedures, data analysis methods, and other specifics to make them competitive research proposals. Metabiota should support the Ugandan collaborators in exploring potential funding options, not only DTRA, and assist them in tailoring their proposal(s) to specific funding opportunities.

To complete this task, Metabiota should provide up to 3 SMEs, including 1-2 from Metabiota and one Ugandan non-governmental SME (i.e. AFENET). Each SME should spend no more than 60 hours total over a maximum of 6 weeks to provide input/feedback and grantsmanship expertise to the research plan (experimental design) and the research proposal(s) developed by the Ugandan collaborators. PM oversight of the SMEs' review and coordination of activities should not exceed 30 hours total for Phase Two.

Phase Two deliverables: Project proposal(s) with budgets and SOPs

3. Phase Three: After completion of activities described in Phase 2, Metabiota shall also provide technical expertise to train stakeholders and work with them to conduct small pilot studies in Uganda to test the SOPs developed for the larger surveillance studies in the proposal(s) to determine their effectiveness and the viability of the project design on a smaller scale. Metabiota shall provide no more than 5 medium-level trainers to assist in the pilot studies. Trainers may be a mix of Metabiota and Ugandan trainers or mostly/all Ugandan trainers, which would be viewed as a strong approach to enhance sustainability of CBEP's investment. The training should consist of one in-country activity as well as continued coordination via email, phone, webinar, or a similar lower-cost communication/coordination mechanism throughout the pilot study period.

   Phase Three, Part One: Preparation and coordination in advance of the in-country training and pilot studies should take no more than 6 weeks, and may begin during Phase Two to maximize efficiency, especially for the definition of the scope and timelines for the pilot studies and the procurement of materials needed for the pilot studies. Coordination will be between Metabiota and all the POCs listed above, as well as identified SMEs/trainers, if different from the above. Training materials should be discussed and obtained during this phase. The training materials will be developed from the project proposal and SOP documents, existing training materials owned/obtained by the Ugandan collaborators, and additional supplemental material as needed. If Metabiota and Ugandan collaborators agree that some necessary training materials do not already exist and need to be developed, the team may work together to augment existing materials. A PM, SME1, and a maximum of 5 medium-level trainers would be an appropriate mix to accomplish the efforts in this phase. Trainers should have expertise in the Ugandan public health, veterinary, and wildlife systems as well as local research methods and processes. Not all people need to participate in all tasks at all times during this planning and coordination, and resources should be conserved to include only the necessary individuals at each step. SME1 hours during Phase Three, Part One should not exceed 40 hours; 55 hours if training materials need to be developed. Hours per trainer for preparation and coordination should not exceed 10 hours; 25 hours if they need to participate in development of training materials. PM hours dedicated to oversight of this planning and preparation should not exceed 30 hours.

   Phase Three, Part Two: The in-country training shall be conducted over a period of 10 working days (5 days per week for 2 separate weeks and should include no more than 20 trainees, to be identified by the Ugandan collaborators, across the 3 pilot studies). The training may be conducted as one comprehensive event, providing overarching skills, knowledge and guidance in a way that it will benefit all three projects; or it may be divided into sections for more focused training on the individual projects; or it may be a combination, with some parts together and some break-out or working group sessions that are more specific. Metabiota should collaborate with the Ugandan POCs and trainers to determine the best approach. The PM, SME1 and trainers' time should not exceed 10 hours per day of training. One day before or after the training for in-person coordination for the pilot studies would be appropriate and should not exceed 8 hours of labor each for the PM, SME1, trainers, and pilot study project leads. It would be acceptable for the trainers and pilot study project leads to be the same people in some cases, as appropriate. PM level of effort should be less than the SME1 given oversight vs. implementation role.

   Phase Three, Part Three: Metabiota will provide management oversight and support to the Ugandan partners in implementation of three pilot field studies. The Ugandan collaborators are in the process of receiving appropriate permits and sample collection can only commence following DTRA Research Oversight Board (ROB) approvals. This activity shall include the procurement of materials and supplies required for the pilot studies, not to exceed $100,000. Metabiota shall work with the Ugandan partners to identify the most efficient, cost-effective way to

procure materials and supplies. Pilot study project leads and field technicians' level of effort should not exceed 680 hours over 8 weeks for pilot study implementation and oversight. There should be no more than 3 pilot study project leads and 11 technicians total supported by Metabiota for all three pilot studies. PM and SME1 hours dedicated to pilot study implementation guidance and oversight should not exceed 60 hours over 8 weeks. PM level of effort should be less than the SME1 given oversight vs. technical SME support role.

The following information and study objectives are provided for reference for proposal development (longer term objectives) and pilot study design/implementation (shorter term objectives). The concept notes developed by the Ugandan collaborators are attached for more detail. The pilot studies should focus on validating the SOPs developed as part of the longer-term study design and proposal development in Phase 2, and on conducting sample collection, lab analysis, and data analysis on a small subset of the various animal populations noted below.

Study 1 - The portion of the project regarding ecological and biosurveillance for Rift Valley Fever (RVF) among domestic and wild animal populations In Uganda shall address the following objectives:

a. Determine the inter-epidemic seroprevalence of RVF in a sample population of relevant domestic animals and wildlife in study areas with clearly identified serotypes. Training in this area should establish better methods for the biosurveillance of epizootic and zoonotic diseases in Uganda.
b. Create/improve contingency plans for RVF outbreaks ready for implementation at the central and local district levels through collaboration with a Ugandan government representative specializing in disease prevention and control as well as outbreak containment in Uganda.

Study 2 - The portion of the project focused on exploring the distribution and characteristics of avian influenza viruses (AIVs) in migratory waterfowl and poultry in Uganda shall include these specific objectives:

a. Establish temporal and spatial distribution and prevalence of AIVs in a sample population of waterfowl and domestic poultry in Uganda.

Study 3 - The portion of the project regarding the genetic and epidemiological insights into the occurrence of peste des petits ruminants virus (PPRV) among sheep, goats, and cattle in northern Uganda shall include these objectives:

a. Determine the prevalence of PPRV in wild animal species in the Kidepo Valley National Park and in goats, sheep, and cattle in Nakapiripirit district of Uganda.
b. Use of RT-PCR to detect the presence of PPRV and competitive ELISA to determine the presence of specific PPRV antibodies.
c. Development of a questionnaire to obtain data on existing control measures, livestock movement patterns, PPRV vaccination practices and prevalence, and other relevant epidemiological and surveillance factors.

For the pilot studies, an appropriate scope would include the following:

Study 1 - Pilot study will include no more than 1,000 serum samples collected from 768 domestic animals (cattle, sheep and goat) and 232 wild animal ruminant and porcine species. Laboratory analysis will be limited to serology (ELISA). Data analysis will include determination of RVF antibody seroprevalence. ELISA will be conducted at the CDC lab at UVRI with participation as appropriate by relevant project collaborators.

Study 2 - Pilot study will include no more than 1,000 serum samples collected from two distinct locations with measurably high levels of interface between the wild birds, domestic poultry, and humans. Samples should be collected from approximately 590 domestic poultry and 410 wild poultry, split evenly between both locations. Laboratory analysis will be limited to ELISA for Influenza A viruses and PCR-based molecular analyses, both to be conducted at NADDEC.

Study 3 - Pilot study will include no more than 1,000 serum samples collected each from two distinct locations. The samples should be from approximately 232 cattle and 768 sheep or goats split evenly between the two locations. Development and piloting a questionnaire to assess PPRV risk factors such as vaccination practices, livestock movement and PPRV control measures will be part of the study. Laboratory analysis will be limited to serological and molecular techniques and data analysis will include determination of PPRV antibody seroprevalence and risk factors for PPRV. ELISA and PPR will be conducted at NADDEC. Metabiota shall not pay for Ugandan government collaborators' time for activities completed as part of their normal job/position and role within their institution. Time shall not be paid to government collaborators for Phase One or Phase Two. Ugandan government collaborators can be compensated for time if they are included as trainers, pilot study project leads, and field technicians for Phase Three. AFENET is not a government organization. CDC will not be compensated for time related to this project. All other POCs listed above are Ugandan government collaborators.

Travel costs for Ugandan participants related to the training event and field studies should only include ground transport, lodging, and per diem costs for participants working a distance of greater than one hour travel time from their home, and any requested ground transport, lodging, or per diem payments shall be cleared with CBEP prior to making commitments to cover these costs. Local participants in the training and field work (living one hour or less from the location of their work that day) will not have travel, lodging, or per diem costs covered.

Phase Three deliverables: Pilot studies implemented; PCR and ELISA results provided to CBEP; results and analyses developed into a pilot project summary of conclusions per project and provided to CBEP; and summary of conclusions provided to the Ugandan national authorities for disease surveillance and control.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES).

Phase 0: Proposal Development & Initiation (Task 1: March 7-9, 2016)

Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-022 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as a Research and Data Analyst (RDA)) time to identify the optimal strategy, including required deliverables and other programmatic requirements, which may be a part of project implementation.

The Metabiota PM and PC coordinated with (b)(6) Metabiota's Executive Vice President (EVP) in charge of Science Integration and communication with our regional scientific networks to identify the appropriate SMEs in grantsmanship, experimental design, and biosurveillance to develop and augment project work plans and training materials. Ultimately, this measure was taken to ensure our technical and cost solutions were of the highest quality and sustainable, respectively.

Key assumptions:

1. Metabiota received unofficial communication supporting an extension of its contract from May 16, 2016 to November 15, 2016, this technical response has been developed with the key assumption that this additional time will be allotted to this project.
2. Metabiota assumes DTRA CBEP representatives will provide Metabiota with the concept notes referred to in Box 8 upon the approval of this TD.
3. Metabiota assumes that DTRA CBEP representatives involved in the development of this technical direction will be available for a kick-off meeting to discuss any associated historical engagement with the research collaborators and their respective needs and constraints.
4. Metabiota assumes changes to the budget (e.g., labor categories) will be acceptable to DTRA. An RDA was added to provide flexibility when implementing; however, this has not affected the overall project budget.
5. Metabiota assumes our response should align with narrative from Box 8, which does not align with the figures provided in Box 5.
6. Metabiota assumes that there will be a need to develop training materials during phase 3 part 1 in preparation for phase 3 part 2, and has incorporated the necessary LOE into this technical proposal.
7. Metabiota recognizes guidelines regarding compensation of Ugandan government personnel, as outlined in the Ambassador's memo (8 April 2015). Metabiota has developed a basis of estimate that plans for the highest cost scenario (e.g., no Ugandan government personnel). Upon receiving names and affiliations of all project participants, Metabiota will work with DTRA CBEP to adjust the basis of estimate accordingly.

Phase 1: Work Plan Development (Task 1: March 21-April 22, 2016)

Upon approval of the TD, Metabiota will engage DTRA CBEP to ensure a mutual understanding of project goals and objectives is realized, as well as to obtain the concept notes referred to in Box 8. Metabiota will additionally engage with the eight Ugandan collaborators provided in Box 8 as well as other key stakeholders to obtain additional information such as possible existing work plans, research plans, and training materials for grantsmanship and standard operating procedures for related biosurveillance activities. The Metabiota PM, PC, and SMEs will participate in regular project communications with stakeholders to ensure mutual understanding of project goals, actions, and status.

Metabiota SMEs will conduct a review of the concept notes referred to in Box 8 to establish a baseline for outreach to the identified Ugandan stakeholders. Metabiota will then conduct a series of data calls with these Ugandan stakeholders in order for the SMEs familiarize themselves with the current capabilities and needs of the identified stakeholders, and to identify an appropriate path forward for the work plan. This work plan will identify a timeline of implementation and key milestones and goals for both the development of a detailed research plan (from which, Pilot training and design study will be extracted), as well as development of research proposals (ex. number of proposal submissions, drafts of white papers, etc.). The work plan will include activities providing grantsmanship support, mentorship, and subject matter expertise to key Ugandan stakeholders throughout proposal development, Pilot training and study design and verification, and proposal editing and submission process. Metabiota will submit the work plan draft(s) to DTRA CBEP for review and approval.

Phase 2. Research Plan and Proposal Development (Tasks 1, 4. April 25-June 24, 2016)

Metabiota SMEs will execute the work plan as approved by DTRA CBEP in Phase 1. In doing so, Metabiota will coordinate with the identified Ugandan stakeholders to support the development of a detailed research plan as well as research proposals for epidemiologic studies/bio-surveillance research of RVF, AI, and PPR based on the needs and research interests identified in Phase 1.

Metabiota SMEs will provide support to the Ugandan stakeholders to develop a comprehensive research plan, which will include a detailed list of materials and supplies needed to accomplish the research studies. Moreover, the research plan will include detailed SOPs planned for the collection of samples, including field, laboratory, and data analytics as well as identification of biosafety and biosecurity risks and associated mitigation methods. From this overarching research plan, the Metabiota SMEs and Ugandan stakeholders will develop up to three (3) pilot study plans to test the SOPs developed in the research proposals for their effectiveness and viability of project design. In doing so, the Metabiota SMEs will provide support, mentorship, and expertise in the development, strengthening, and tailoring of these research plans through the submission proves while the Ugandan stakeholders are expected to write and finalize these plans based on the guidance they are provided. Metabiota will submit the final research plan(s), research proposals (including financials) and proposed SOPs for DTRA CBEP's review and approval.

Phase 3, Part 1: Preparation and Coordination for In-country Training and Pilot Studies (Tasks 1, 3, 4: March 28-Aug 11, 2016)

Metabiota will coordinate with the Ugandan stakeholders to identify the most appropriate participants for both training and Pilot study activities. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured for the SMEs and FLNs as needed. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS via the DTRA CBEP Technical Point of Contact.

Metabiota will coordinate with the Ugandan Stakeholders to identify training needs as discussed in Phase 1 and further identified in Phase 2 SOP development. To meet these needs, Metabiota will reuse existing training materials and SOPs for applicable biosurveillance activities as much as possible. However, due to the limited information currently available regarding the intended pilot research plans, Metabiota expects to use SMEs to adapt and develop training materials for effective delivery of training. Metabiota SMEs will develop new materials, which may including slide presentations, videos, etc. to effectively leverage the learning environment. Metabiota will also develop, as appropriate, pre-tests and post-tests for monitoring and evaluation purposes. Training materials, after development and adaptation, will be delivered to DTRA CBEP for technical review and Public Affairs Office approval.

Phase 3, Part 2: Conduction of In-country Training (Task 1, 3, 4: August 4-24, 2016)
Metabiota SMEs will execute a 10-day training activity for up to 20 participants who will be taking part in the three identified pilot studies followed by a 1-day pilot study coordination day with the pilot study leads. Metabiota anticipates a mix of lecture and hands-on training being necessary, however, Metabiota SMEs will adjust the training approach based on the Stakeholder feedback obtained in Phase 1. Metabiota SMEs will be available for virtual "office hours" and to answer written communications from participants as needed throughout the conduction of pilot studies. Metabiota SMEs will also conduct pre-/post- training testing and evaluations and provide feedback to the participants on their performance. FLNs will be used to facilitate training activities to the extent possible.

Phase 3 Part 3: Conduction of Pilot Studies (Task 1, 4, 6: August 18-Oct 26, 2016)
Metabiota SMEs will coordinate with the pilot study leads for the conduction of three pilot field studies, involving up to three pilot study leads and 11 technicians over a period of 8 weeks. Metabiota SMEs will be available for virtual "office hours" and to answer written communications from all participants as needed throughout the conduction of the pilot studies. Metabiota will provide management oversight and support for the conduction of these pilot studies, and will support the Ugandan collaborators in obtaining all required approvals for project continuation, including but not limited to ROB approvals. Metabiota will coordinate with all Stakeholders to identify the necessary materials required to conduct all pilot effort(s). Inclusive of this, Metabiota will provide any necessary support (SME or logistical) to in-country participants when navigating the procurement process. All materials will be identified and procured with sustainment in mind. Metabiota will submit pilot study summaries, including individual pilot study results, analyses, and conclusions as well as a summary of implementation conclusions to DTRA CBEP for communication to the Ugandan national authorities for disease surveillance and control.

Final Project Report
Metabiota PM, PC, and SMEs will all contribute inputs to a final report relaying all actions taken for project implementation through all phases, lessons learned, and identifying next step opportunities upon completion of all deliverables. Results of pre- and post- testing and evaluations from training will also be provided to DTRA CBEP.

Monitoring and Evaluation
In order to develop a comprehensive approach to continuous monitoring and evaluation of this project throughout implementation, Metabiota has developed a comprehensive monitoring and evaluation plan which can be found in the attached Appendix A (Supplemental Information) Part 5.

Risk Management.
In order to anticipate and overcome obstacles included (but not limited to) those listed in Risk Management Matrix found in the attached Supplemental Information Part 2, Metabiota has identified and captured the risks associated with implementing this activity, including contingency planning and course correction measures which will lead to overall regional risk reduction, as outlined in the attached Risk Management Matrix.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN).

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$111,755
1003	MATERIALS	$105,270
1004	ODCs	$3,600
1005	TRAVEL	$32,931

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES).

All phases:
Task 1 - Project Coordination: Metabiota will provide consistent and cohesive technical and administrative leadership, direction, program management, implementation oversight, and coordination of all project activities.

Metabiota Program Manager (PM): The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of DTRA CBEP goals at the country and regional level in direct support of this activity and the DTRA CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the RDA to ensure all day-to-day activities for the project are completed on time, and to the quality required by DTRA CBEP.

Metabiota Project Coordinator: The Metabiota RDA will act as a Project Coordinator (PC) throughout the planning and execution of project objectives. The PC will lead the planning and execution of DTRA CBEP objectives towards the completion of project goals by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will manage the SMEs and FLNs and lead coordination with the Ugandan Stakeholders, to include leading regular coordination calls with the project team and assist in participant coordination

Note* - Metabiota recognizes that the RDA labor category was not included to Box 8 of this TD. Upon review of internal support (e.g., Project Coordinators) and to allow greater project implantation flexibility, Metabiota has proposed the use of an RDA instead of a SME 1 for all project coordination. Importantly, while hours have been added for project coordination, the overall cost for the Project Coordinator role remains unchanged between RDA and SME 1.

A key requirement to ensure effective program initiation, execution, and closeout is ensuring clear communication between all project stakeholders. To ensure the project in managed according to CBEP standards, the PM and PC will be responsible for the following:

Initiation and Program Integration: The PM, with PC support, developed the project proposal to include the project timeline, identification and integration of project requirements, deliverables, subcontractors, SMEs, and trainers to ensure project success. Upon acceptance of the proposal, the

PM will hold a kick-off meeting with team members and partners to review the project plan and schedule, establish routine communication to support project implementation, initiate education on the contract requirements, and begin project implementation. Routine communication with all stakeholders will ensure that all deliverables, including required CDRLs, are met and submitted according to the project schedule and contract requirements.

The PM and PC will work closely with Ugandan POC's identified in Box 8 (Phase 1) to understand their respective vision for this effort, including the development of a work plan for implementing all identified activities. In addition, the PM and PC will coordinate communication between Ugandan POC's and the identified grantsmanship/BSV SME's (e.g., project team members) to ensure alignment of project plans with DTRA CBEP goals when developing the research project design and high-quality and competitive research proposal(s) (Phase 2). Lastly, the PM and PC will coordinate all aspects of training implementation (Phase 3), to include identification and appropriate engagement of FLNs, to include a Study Leads and Study Technicians, to support in-country training and BSV pilot studies (Phase 3) by interfacing regularly (see Communication Management) with project personnel to ensure that in-country and overall project objectives and requirements are met in full. The PM will ensure that FLNs are engaged according to contract and project requirements, and have the experience, background, and skills necessary to support training implementation. FLNs are budgeted at the AFRICOM FLN I rate.

The PM will ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include; overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.

Project Close out: The Metabiota PM and PC will oversee project closeout, to include completion of grant proposals, wrap-up of training, and finalization and submission of all identified deliverables, including final reports. The PM will also ensure the conclusion of subcontracts and other employment agreements.

Additional communication strategies and programmatic safeguards, including 1) Human Resources Management, 2) Communications Management, 3) Risk Management, 4) Schedule Management, 5) Cost Management, 6) Quality Management, and 7) Technical Resource Management can be found in Appendix A (Supplemental Information).

Task 3 – Qualified Trainers (QT): Metabiota will provide financial support to in-country Qualified Trainers (Phase Three, Parts One and Two) via subcontracts of independent consultant agreements with the yet to be identified trainers. Metabiota recognizes the importance of identifying Ugandan nationals to fill these roles in order to foster relationships and build regional capacity. Metabiota will work with all project stakeholders to identify the appropriate trainers. Currently, it is presumed that all qualified trainers will be billed at the AFRICOM FLN 1 rate.

Task 4 - Subject Matter Experts (SMEs). Metabiota will provide ongoing technical support and expertise through the use of SMEs, to include the development of 1) a work plan for implementing all identified activities, 2) project design, and 3) development of high-quality and competitive research proposal(s). Metabiota SMEs engaged for this effort will provide expertise and input on the development and revision of existing training materials, development and revision of SOPs, as well as mentoring of study participants in grantsmanship and BSV training activities. SMEs will predominately operate remotely throughout Phases 1, 2, and most of Phase 3 and will thus provide mentorship through regular written communication and video teleconferencing with project participants, as necessary. Importantly, the SMEs for this effort are Kenyan nationals and geographically situated in Nairobi, Kenya which will ease operating delays due to time zone differences. Moreover, the identified SMEs possess excellent operational knowledge of East Africa and capabilities in technical writing, biosurveillance techniques, and one health concepts related to infectious disease research. For Phase Three, Part Two, SMEs will implement the training efforts and will work in partnership with FLN project participants to administer the courses, provide QA/QC of all materials, engage trainees in capacity building and scientific discussions supporting training concepts and implementation, and assist in the development of a gap analysis report. SMEs on this effort will be performing the functions of both SMEs and Qualified Trainers (QTs). In line with government guidance, the SMEs will be billing at the SME I labor rate, which is the equivalent cost of QT I.

Metabiota will subcontract Africa Biomedical Laboratories (ABL; Nairobi, Kenya) for SME support of this effort. The use of regionally accessible, African Nationals helps to build regional capabilities and networks, and ensures overall project success.

Task 6 – Research Activity Projects. Metabiota will provide financial support to Study Leads and Study Technicians (Phase Three, Part Three) via subcontracts of independent consultant agreements with the yet to be identified participants. Metabiota will work with all project stakeholders to identify the appropriate project participants. It is currently presumed that all project participants will be billed at the AFRICOM FLN 1 rate.

Note* - Metabiota is aware of guidance provided by the US Ambassador to Uganda regarding salary support to Government of Uganda personnel. If the Trainers, Study Leads, or Study Technicians are direct employees of the Ugandan Government (e.g., Ministry of Health, Agriculture, Wildlife, etc.), Metabiota will adjust their engagement strategy to reflect the Ambassadors guidelines. The budget for this project will be impacted accordingly.

Reach back programmatic support to include finance, accounting, and contracts, will be provided as part of CLIN 1001 (FFP) and will not be separately invoiced.

Materials

As defined in Box 8 (Phase Three, Part Three) this activity shall include the procurement of materials and supplies required for the pilot studies, not to exceed $100,000. Metabiota will work with the Ugandan partners to identify the most sustainable, efficient, cost-effective way to procure materials and supplies for executing BSV pilot studies. The identification of sustainable supplies will be critical for continuing BSV-related activities, which will be described in greater detail within newly developed grant proposals (Phase Two). Any materials procured by Metabiota will be shipped via CLS. If materials can be secured and provided to the trainers/trainees locally or online, shipping will not be required. Additionally, Metabiota will work with SMEs based in Kenya to help identify sustainable and reliable vendors of biomedical supplies.

Given the nature of this effort (e.g., BSV), Metabiota anticipates the need to procure personal protective equipment such as Tyvek suits, gloves, goggles, booties, and N95 respirators, as well as consumables and other paraphernalia such as chlorine, plastic wash basins, buckets, disinfectant sprayers, and anti-fog spray will also be procured. A final list of materials required for this effort will be identified in coordination with all project stakeholders.

Following discussions with all project stakeholders, and if warranted, USB internet devices and internet access cards will be procured and provided to project participants in-country to ensure they have access to a stable internet connection during remote coordination and training sessions, which are included to all phases of this effort. USB internet devices will be procured and tested in-country to avoid shipping charges and to ensure they are

operational on the ground. USB internet devices and access cards will be monitored by the FLNs to ensure they are used for project purposes only, and are maintained according to equipment/material guidelines for the duration of the course.

General office supplies will be procured to support in-country training activities and routine project needs for the execution of the training courses. Office supplies will be procured locally and will include, but may not be limited to, pens, paper, thumb drives, binders, etc.

Metabiota will conduct market research and ensure the best value is secured, maintaining quality and technical requirements for all procurement of goods. Metabiota will coordinate directly with CLS and third-country vendors for all necessary shipping requirements, and will work closely with CLS and DTRO to ensure customs clearance requirements are met and goods delivered according to project timelines and CDRL requirements. Metabiota will ensure cost management for all procured supplies and will coordinate directly with CBEP and CLS to support additional requirements for the hands-on training events to include such items as printing of the developed and adapted training materials, training certificates for participants, and translation services, if needed.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project working abroad. DBA insurance will be applied for labor costs incurred overseas. DBA will be applied to the PM, SMEs/Trainers, FLNs, and other contractors, engaged on this effort, for the duration of the program. Metabiota maintains a blanket DBA policy for all personnel and will add the SMEs and FLNs, and other performers meeting DBA requirements, to this policy as they are engaged. A(b)(6) tal compensation will be billed to the project on a monthly basis. A reconciliation of the total DBA will be performed prior to final invoicing to ensure accuracy of the charges, in accordance with total hours worked. Final invoicing will be adjusted, if necessary, to reflect the final DBA allocation numbers.

Subcontracts

Subcontracts will be issued to SMEs, FLNs, and/or their home organization(s) as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the labor or materials budgets.

Travel

Travel is requested to support the Program Manager, SME, and qualified Ugandan trainers to Kampala, Uganda to implement training efforts for project participants (Phase Three, Part Two). The travel budget represents the estimated amount required; travel on the AEP contract is cost reimbursable.

All Metabiota personnel slated to travel are current with regard to ISOPREP, SERE, and AT/FP trainings, as required by CBEP. Additionally, the SME's leveraged for this effort are Kenyan Nationals and therefore do not require the aforementioned travel trainings/documents.

Our travel budget assumes training will be held in Kampala over the course of two weeks, including one day before or after for in-person coordination, as described in Phase Three, Part Two of this proposal. If, through discussion with the Ugandan stakeholders, an alternative schedule is created or an alterative location is desired, travel costs may be impacted accordingly.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to implement revisions (identified in TD-10) to the Walter Reed Army Institute of Research (WRAIR) Epidemiology Short Course curriculum as this material will be transformed into an adapted One Health Epidemiology Short Course, tailored for South Africa in accordance with SOW, Section 4.4, Task 1, 3, and 4.

In a follow-on to TD-10, where the Metabiota team identified the edits and revisions necessary to update the WRAIR Epidemiology short course, TD-23 requests Metabiota to now execute those edits and revisions and develop a comprehensive One Health Epidemiology (OHE) short course. The short course is intended for health professionals in South Africa who require knowledge of OHE, but are not able or eligible to be part of the Centers for Disease Control and Prevention's Field Epidemiology Training Program (FETP). The short course shall include a One Health introductory module with two tracks – (1) One basic level track for professionals who are completely new to the OHE concept and need comprehensive tutorials on basic skills, and (2) One advanced level track for professionals who are more knowledgeable about OHE but require more in-depth training. Each track shall have two disease case studies involving zoonotic diseases of security concern which directly affect South Africa. Both the basic level and advanced tracks shall touch upon the same two diseases, but at different levels of detail appropriate for the intended track participants. Metabiota shall propose the two most appropriate zoonotic diseases based on relevance to South African partners and the region, and alignment with the needs identified in the Landscape Analysis conducted by Metabiota under TD-10 during the February 2016 interviews of stakeholders in Pretoria and Johannesburg. Thorough justification for the two suggested diseases shall be included in the proposal in response to this TD. DTRA CBEP will ultimately determine the two diseases to be included. The updated OHE short course curriculum shall include all of the identified changes from the Landscape Analysis. Over 1305 business hours, it is assumed that it will take 0.15 FTE of an SME II and 0.1 FTE of a Trainer I to adapt the curriculum.

In addition to updating the OHE short course curriculum, Metabiota shall develop a Train the Trainer (ToT) module to be delivered to the selected South African trainers of the OHE short course. The ToT module shall be able to be conducted over a 2-3 day ToT session. This TD does not include implementation or delivery of the ToT module or either OHE short course track and is for the development of materials only. Over 1305 business hours, it is assumed that it will take 0.1 FTE of an SME II and 0.15 FTE of a Trainer I to adapt the curriculum.

The final deliverable (CDRL A003) is the complete and updated short course curriculum, which is comprised of the basic level track, the advanced level track, and the ToT module. Metabiota shall conduct an in-person review of the curriculum and the status of updates twice – once at 30% complete (CDRL A001), and again at 60% complete (CDRL A002). These in-person reviews will provide DTRA CBEP with the ability to review the status of the curriculum updates and make comments or requests to shape the direction of the updates. DTRA CBEP will give Metabiota its comments no sooner than 2 weeks (10 business days) after the in-person review.

Throughout the curriculum update process, Metabiota shall continue coordinating with DTRA CBEP's South Africa engagement Country Manager on a weekly basis. Metabiota shall continue to coordinate with CDC-South Africa, the United States Department of Agriculture, and South African stakeholders on an as-needed basis via electronic and phone communications. No travel shall be required.

The period of performance for this effort will be from 3/21/16 to 5/15/16. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $110,000 is requested by 3/15/16. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

This revision extends the Period of Performance (PoP) for TD-024 from 30 June 2016 to 31 July 2015. This PoP extension is to provide enough time to continue developing a Film Narrative of Epigenetics and Genomics of Infectious Diseases in the Middle East, South Asia and CBEP collaborations in the CENTCOM Region and route through DTRA PAO office. In addition, contractor shall add closed caption features to the film narrative and all subsequent copies via various media types develop under this TD not to exceed $2,000. Metabiota should coordinate directly with the Technical POCs identified below. No additional changes to the previously approved proposal are required at this time.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The purpose of this revision is to increase the TD ceiling to account for current cost overruns and additional labor hours required to satisfy the remaining original agreed upon requirements outlined in TD-021RevB. Required in this TD revision is your proposed budget increase, basis of estimate (BOE) for the increase and the justification for each hour of increase to satisfy the remaining requirements. An update to labor hours and dollars expended to date on CLIN 1002 is also required, to include each labor category. Please note justifications need to be quantifiable to most extent possible. These items are requested NLT COB 25 Oct 2016.

Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

No further changes to the previously approved proposal are required at this time.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	REV C TOTAL
1002	LABOR	$807,912
1003	MATERIALS	$24,057
1004	ODCs	$4,220
1005	TRAVEL	$2,941
TOTAL		**$839,129**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Program Manager
Rev B Hours: 845
Rev C Hours: 938

An additional 93 hours are being required for Program Managers (b)(6) and (b)(6) to support the implementation and completion of TD-21. Hours estimated for (b)(6) under Rev B totaled 365 and for (b)(6) 80. However, due to unanticipated costs in August, September, and October for the completion of the gap analysis (b)(6) hours increased to 413, creating a variance of 48 hours of additional labor to complete the analysis. The increase in (b)(6) hours are for conducting the initial gap analysis required for presentation at the NBMC on 7-8 September utilizing an older version of the NBERP received from the State Department. Due to the timeframe required to complete the analysis (b)(6) and team utilized the older version of the NBERP to execute the draft analysis, as well as a Google translated version of the new version received by the Iraqi stakeholders. Utilization of the Google translated version of the NBERP resulted in increased efforts due to the challenges faced with the program's translation capabilities and ensuring the accuracy of the document. In addition, once the professionally translated version was received on 30 September (b)(6) and team cross walked the documents to ensure accuracy in the overall analysis. The final analysis is on schedule to be delivered to CBEP in November.

Additional hours required for (b)(6) total 45 hours. The increase in hours is required for unanticipated efforts for program implementation in the last 3 ½ months of the program. The major factor contributing to (b)(6) increase in level of effort (LOE) is the management of the subcontractor URC in execution of in-country requirements for procurement, and preparation for the Hands-On-Training (HOT). In addition, US-based procurement requirements to support the HOT, as well as procuring reference materials for the ongoing remote training, required additional labor over what was originally anticipated. Since the materials required for the HOT were purchased in country and the materials required for the trainer demonstrations were procured in the US, it took (b)(6) and team additional labor hours to ensure that (1) the materials were equivalent based on market availability in country, and (2) that what was procured by the URC team was technically sufficient to support the training. Where materials were unavailable, or were not identical to materials secured in the US, the team made adjustments to both delivery of the training, as well as materials purchased. This required additional coordination efforts with URC, US-based vendors, and the trainers to ensure successful execution of the HOT.

Subject Matter Expert (SME) 1
Rev B Hours: 2119

Rev C Hours: 2344
An additional 222 hours are being required for SME 1's to support implementation and completion of the TD-21. The additional hours required are for (b)(6) he hours required support project coordination by (b)(6) ecution of the gap analysis by (b)(6) and execution of the epidemiology training by (b)(6) and (b)(6)

Under Rev B, hours required fo (b)(6) were 218 to support material development and review for the BS&S. However, due to her inclusion in conduction of the gap analysis and participation in the HOT during the August – November timeframe, an additional 111 hours are required for (b)(6) hours increased in the months of August and September in direct support of conducting the gap analysis. Originally, it was not intended for her participation, however, due to her background and unanticipated efforts required to complete the analysis, (b)(6) was brought in by the team to assist in conducting the gap analysis, presenting at the NBMC, and cross walking the analysis once the professional version was received. In addition, (b)(6) s continued to provide assistance in finalizing the analysis, which includes building out tables and graphs to support findings in the narrative.

Under Rev B, hours required for (b)(6) were 700 to support overall project coordination. However, due to her efforts in supporting the revision of epidemiology training materials, procurement, and coordination of the HOT (b)(6) hours have increased to 779, requiring an additional 79 hours on the project (b)(6) additional efforts focused on supporting formatting changes for the epidemiology materials, ensuring completion of comments trackers, and coordinating with the teams for on-time submission and follow up of receipt of approved PAO materials. In addition, efforts required to assist in procurement and coordination of the HOT, as well as completion of all activities supporting this effort were in excess of what was originally anticipated.

Under Rev B, hours required for (b)(6) were anticipated at 405.5 each. However, due to unforeseen efforts required for training material development and adaptation, execution of the gap analysis, and efforts in execution of the remote and HOT trainings an additional 209 hours are required. Efforts for both SMEs increased due to the development of all training materials presented in this course, and the multiple rounds of comments trackers and iterations of the materials to ensure formatting met DTRA standards. At the onset of the project it was not clear as to the requirements for formatting of the developed materials, and as the internal process at DTRA was finalized and communicated to the team, it took additional efforts to complete all materials and ensure PAO approval. In addition, hours increased for both team members in order to support the remote training for Cohort I, due to a family emergency that required (b)(6) (SME II) to travel to Yemen for personal needs. The SME I and RDA trainers stepped in to conduct training modules on behalf of (b)(6) during this timeframe. In addition, (b)(6) egan supporting the routine updates of loading video recordings and materials to the LMS site, which increased her labor over what was anticipated. Original projections for management of the site did not account for the intensity of management of materials required on the LMS platform. As well (b)(6) as pulled into the gap analysis in mid-August to provide input from an epidemiology perspective. Originally, we did not anticipate this need, as we believed efforts to conduct the analysis would be required from the BS&S personnel, only. However, this changed once we initiated review and execution of the gap analysis and realized that our team did not include this expertise, which was required for input and completion of the final product.

*Please note in Rev B, (b)(6) re included as SME 1s, however, due to a rate reduction received by URC in October 2016 for these personnel, they have been transitioned to RDAs to provide a cost savings to the Government.

Subject Matter Expert (SME) 2
Rev B Hours: 1449
Rev C Hours: 1434
Additional labor hours are not being requested for SME 2's at this time. Overall, efforts for SME 2's has decreased, which is a direct result of (b)(6) eave during the month of August.

Fnreign Local National (FLN) 3
Rev B Hours: 540
Rev C Hours: 604
Under Rev B, hours required for the FLN team were 540 total hours. However, due to unanticipated efforts in the field to support project implementation and procurement of materials and supplies, efforts have increased to 604 total hours, requiring an additional 64 hours of effort provided by (b)(6) dditional hours for (b)(6) are required to support the in-country procurement of supplies. (b)(6) hours in Rev B totaled 80, however, due to difficulties in procuring local materials, an additional 64 hours are required, bringing his total LOE to 144. The duration of time required to identify and secure the necessary training materials for the HOT was greater than the team had anticipated, requiring additional efforts on (b)(6) rt to ensure all materials were procured and transferred to CPHL on time for the training. Additional hours are not required for the remaining FLN trainers supporting this effort.

Research and Data Analyst (RDA)
Rev B Hours: 906
Rev C Hours: 1643
Under Rev B, hours required for the RDA's totaled 906, however due to unforeseen labor requirements, an additional 737 hours are being requested to support RDA efforts performed by (b)(6) (b)(6) (b)(6) hours increased from 110 originally intended to provide administrative support to the BS&S project team, to 589 to support concurrent activities on the project resulting in an increase in 479 hours. Once the gap analysis was underway in August, it became clear that the BS&S team did not have sufficient bandwidth to complete the remote BS&S training beginning on 18 September, prepare for the HOT, and conduct the gap analysis concurrently. As (b)(6) ad prior knowledge and experience working with the LMS Moodle platform, her efforts increased to support the build out and daily maintenance of the BS&S LMS site, participation in the BS&S remote training through the online

hosting of the classes, administrative tracking of homework and attendance, as well as the formatting of developed materials to meet the PAO standards for approval. The efforts of (b)(6) allowed the BS&S trainers to focus on the gap analysis, conduct online courses, and develop materials required for the HOT.

(b)(6) hours increased from 361.5 in Rev B to 395 in Rev C, requiring an additional 33.5 hours of effort. This additional effort was required to support the revisions required for the PAO approval of epidemiology training materials due to the multiple iterations of changes required, above what was originally anticipated on the project, as well as remote training coverage for (b)(6) during her absence.

(b)(6) hours increased from 150 in Rev B to 200 in Rev C, requiring an additional 50 hours of effort to support increased support in the months of August and September to secure the CPHL venue for the HOT, as well as holding routine communications with the participants to ensure training standards were met and maximum CME credits received by the MoH for participation in the training. It was not originally anticipated by the team, th(b)(6) ould be necessary for communications to this level of effort with participants prior to the implementation of the BS&S training, or that it would require an increased level of effort to secure the site for the training in October at the CPHL.

The additional hours required for efforts provided by (b)(6) URC are required to support in-country and US-based operations on the project that were not anticipated until actual implementation of their activities began in August. Originally (b)(6) had an estimated 30 hours on the project and (b)(6) an estimated 20. However, it became clear following onboarding of URC as a subcontractor in August that additional hours were required for overall in-country coordination to include procurement efforts, facilitation of communications with the trainers, and preparation for the HOT, as well as intensive oversight b(b)(6) as URC's manager for this effort. In order to complete all activities,(b)(6) quires a total of 136 hours an(b)(6) total of 69 hours. His additional efforts directly support the procurement of all in-country materials wit(b)(6) which required efforts outside of what was originally planned due to the changing in-country conditions and market availability of supplies. In additio(b)(6) orked with US-based trainers to cross walk materials and ensure they lined up, to the best of his abilities, for implementation of the HOT according to what was available in the local market and acceptable for the technical requirements of course implementation. The difficulties faced in securing the necessary materials exceeded the team's expectations when it was originally confirmed that all materials could be procured in country back in July. As well (b)(6) ll attend all 5 days of the HOT to ensure coordination with CLS, trainers, and the project team for the duration of the event. Originally, his attendance was not anticipated for all 5 days, due to in-country support provided by CLS, and well as the local trainers, however, it was determined necessary by the project team to provide support to the trainers during the event to ensure all materials were available for the practicum modules, as well as to communicate directly with the project team, should there be any issues that arise during the event.(b)(6) increase in hours are required to support routine project coordination necessitating additional efforts due to the challenges faced on the ground with procurement, and additional communications with her team to secure materials and execute the remote courses being held from August – October, and the HOT course scheduled in October – November.

10. FUNDING AUTHORIZED THIS TD REV:

Comments (use this space for additional information)

1. CLS contract team is requested to identify, secure and provide the training venue in Jinja district of Ugnada for the event during 7-11 December 2015 – this is the most urgent request as the venue needs to go on the Letter of invitation to be sent out to the training participants.
2. CLS contract team is requested to provide per diem meal allowances to trainees and trainers per DTRA approval before 12:00 noon of each training date.
3. CLS contract team is requested to provide trainees and listed trainers with ground transportation reimbursement for costs going to and from the venue per DTRA approval (CDC Uganda identified amount is $40 each-way)..
4. CLS contract team is requested to provide or ensure that the venue will offer flip charts, markers, notebooks and pens provided as complimentary
5. CLS contract team is requested to provide or ensure that the venue possesses a backup generator. air conditioner, and clock in the meeting room.
6. CLS contract team is requested to ensure that the venue possess the number of power outlets and extension courds in training room adequate to support the listed participants.
7. CLS contract team is requested to secure and provide a meeting room for ~8 persons for early morning meetings (8:00am – 8:45am)
8. CLS contract team is requested to provide space to store 5 cargo trunks and boxes that hold the training manuals (in case the main training area is not big enough).
9. Printing of manuals. Student Version = 35 copies and instructor version = 10 copies
10. CLS contract team is requested to communicate on all arrangements with the following CDC Uganda POCs:
    - (b)(6) (b)(6) email: (b)(6)
    - nai (b)(6) and
    - email (b)(6)

Justification for Travel

Each traveler on the team must provide justification for why they need to travel. The justification must highlight how the trip will be impacted if the traveler is not physically present. Use additional space as necessary.

Each of these participants' respective positions in their districts requires that they attend the training in order to improve early detection and preparedness activities including timely outbreak investigation and response in their districts. This will assist Uganda MoH to meet the IHR requirements and improve the country's capacity for disease surveillance and outbreak response

(b)(6)

Attached is the CLS form for One Health Epidemiology Uganda – Training Module 2 of cohort 9 under TD –013. This CLS form is being submitted for the dates of December 6th – 11th to support epidemiology training in Jinja Uganda.

We kindly ask for your approval to engage the CLS contract team to identify and secure the training venue in Jinja district of Uganda and communicate this information back to CDC Uganda to ensure the Letters of invitation go out for training participation.

Very Respectfully,

(b)(6)

Metabiota, Inc.

Metabiota has an approved Technical Directive (TD-017) to provide a grantsmanship mentor. The NTE value on that Directive is $150,000. It calls for two one-person one-week trips to Tbilisi, Georgia with additional work time to be performed in the US.

Please let us know if you have additional questions.

Subject: RE: TD-016: Georgia GIS SME Support

(b)(6)

Apologies, this was meant to get out to you early last week. After reviewing the Forms A and talking to the project teams, including the original GIS SME on the three CBR projects, I realized that we needed to revise the proposal for TD-016. The requirements as originally outlined do not appear capture the depth of the GIS SME activities required, and the proposed labor mix also appears to be incorrect based on discussions with our candidates for the position. As a result, we have revised the proposal (changes are highlighted in yellow) to remove some SME2 hours (GIS
mentorship) and replace them with RDA hours (intended for technicians to assist Georgians with complex GIS

analysis beyond their level of capability).

Please note, the proposed number of hours shown is what fits into the previously proposed budget but is still significantly short of what was proposed by the GIS SME team. That said, we are planning to contain costs on this project by issuing a FFPLOE contract to our subcontractor assuming DTRA is OK with the altered labor mix.

If you require a signed PDF version, please let us know and we will provide you with one.

Best regards,

(b)(6)

Metabiota, Inc.

RE: HDTRA1-14-C-0104 Technical Direction **009 for continued implementation of Biosafety and Biosecurity training in South Africa.**

Dear (b)(6)

Metabiota, Inc. (Metabiota) is pleased to present the attached proposal in response to the above referenced Letter of Technical Direction sent by DTRA on **June 13, 2015**

For the effort described, Metabiota estimates the Rough Order of Magnitude (ROM) to be **$335,607** for a **Period of Performance of May 16, 2015-May 25, 2016.** The detailed budget is included. This proposal remains valid until September 30, 2015.

Please feel free to contact (b)(6) with questions or concerns at (b)(6)

Sincerely,

(b)(6)

Metabiota's Technical and Cost Proposal

"Biosafety and Biosecurity Training with South Africa's National Health Laboratory Services."

Executive Summary

In response to Defense Threat Reduction Agency's Cooperative Biological Engagement Program (DTRA CBEP) regional leadership tasking via the Academic Engagement Partnership (AEP) contract vehicle, and through collaboration with the South Africa's National Health Laboratory Services' (NHLS), Metabiota, Inc. seeks to support the DTRA CBEP mission through the conduction of country-specific, high-value training programs to increase the effectiveness of NHLS biosafety and biosecurity (BS&S) activities. These proposed efforts will focus on delivering tailored support for increased BS&S awareness, equipment assurance of proper functionality, and ensured laboratory staff protection.

Through this activity, Metabiota will engage with NHLS in order to direct technical support in the development and implementation of BS&S initiatives. Established through legislation in 2001 to connect public health system laboratories, NHLS is the largest diagnostic pathology service in South Africa. Laboratory and related public health services are provided by the NHLS to over 80% of the population through a national network of laboratories in all nine provinces, employing over 6,700 people. NHLS activities comprise diagnostic laboratory services, research, teaching and training, and production of sera for snake antivenin, reagents, and media. Its specialized divisions include the National Institute for Communicable Diseases, National Institute for Occupational Health, National Cancer Registry and Antivenin Unit.

This document outlines the approach that Metabiota will employ to accomplish the requirement. In short, Metabiota intends to:

1. Facilitate the completion and dissemination of a standardized BS&S training video materials for laboratory personnel throughout the NHLS network laboratories;
2. Expand the in-country Overseas Humanitarian Assistance Shared Information System (OHASIS) capabilities by supporting the development of a new module for increased quality assurance and quality control procedures for monitoring laboratory equipment certifications and maintenance; and
3. Facilitate the development of a Fit Testing respiratory protection-training program to be disseminated via Safety, Health, and Education (SHE) Officers.

Project Overview

Background

Emerging infectious diseases (EIDs) are a challenge for medical and public health infrastructures and pose a significant threat to security and stability across the globe. To manage these threats, DTRA CBEP aims to reduce potential impacts of biological threats by enhancing biological safety and security, awareness of biological risks, and knowledge related to biological pathogens globally.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

To do so, DTRA CBEP works collaboratively with partner nations, other USG agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health; promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. In AFRICOM, specifically, DTRA CBEP seeks to secure and consolidate select agents and enhancing BS&S standards in order to strengthen the region's ability to detect, diagnose, survey, and report emerging and re-emerging diseases of international security concern.

In response to DTRA CBEP AFRICOM regional leadership tasking, and through collaboration with the NHLS, Metabiota seeks to support the DTRA CBEP mission through the conduction of country-specific, high-value training programs to increase the effectiveness of NHLS' BS&S activities. These proposed efforts will focus on delivering tailored support for increased BS&S awareness, equipment assurance of proper functionality, and ensured laboratory staff protection.

As comprehensive employee BS&S training programs can mitigate potential EID risks by aiming to prevent exposures to healthcare workers and laboratory personnel, this collaborative training will support the DTRA CBEP mission of improving global health security with the inclusion specialized capacity-building efforts.

Metabiota's field experience and decades of expertise allows us to be well positioned to support the implementation of all of the associated activities, as well as scientific engagement in AFRICOM's area of responsibility.

Goals and Objectives

This activity aims to provide NHLS with continuous quality assurance oversight and to mitigate potential risks to healthcare workers and laboratory personnel exposed to EIDs by conducting training to improve biological safety in NHLS's laboratory network thereby managing the risk of accidental or intentional release of EID causative agents. The delivery of these requirements will cultivate continued learning throughout the NHLS network of laboratories and further expand in-country monitoring and quality improvement activities.

To achieve this purpose, Metabiota and their collaborative partners will:

1. Complete and distribute a standardized BS&S video training courses;
2. Expand in-country OHASIS capabilities by developing new IT modules allowing for comprehensive equipment maintenance requirement monitoring;
3. Develop and conduct a training-of-trainer (TOT) program for the conduction of Fit Testing Respiratory Protection Training Program to be disseminated via SHE Officers.

To accomplish these goals DTRA CBEP will engage Metabiota to administer the BS&S Training in South Africa in collaboration with NHLS.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Impact

Through the implementation of the BS&S training in South Africa facilitated by Metabiota, DTRA CBEP will be able to:

- Develop and enhance EID BS&S systems and build regional capabilities;
- Ensure safe EID collection and handling practices supporting the implementation of international standards of BS&S;
- Provide quality assurance oversight to regional public healthcare system personnel;
- Support public health capacity building in the region and foster scientific research and collaboration through the development and implementation of basic research activities.

This activity will provide a measurable and achievable result in building scientific capacity in South Africa, contributing to the promotion of a global network of research collaborations, and the development of a sustainable infrastructure for advancing scientific research, including the early detection of emergent threats.

Training engagements are critical to capacity building efforts in host countries and supporting the early detection and response to emerging threats, thus safeguarding the world from infectious disease threats.

Risk Management

In order to maintain our course of action and guarantee trainings that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix found below. Identifying and acknowledging the risks associated with not implementing this training, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost						
In Country Travel Arrangements	Significant in-country travel is required for these projects, and our estimates may be under the true number.	4	4	**Medium-High**	Consult often with NHLS and have them cost estimate with actual travel costs before arrangements have been booked.	Medium
Schedule						
Material Procurement	Various items will be purchased in the USA and shipped to NHLS in South Africa while some items will be purchased locally. There may be some confusion and delays over which items to ship and which to purchase locally in RSA.	4	3	Medium	Engage a local logistics organization to provide in-country support with rapid turn-around and solid track record in supporting USG operations. Consult with NHLS in enough time to establish USA versus SRA purchases to allow for enough time to procure items to keep the projects on schedule.	(b)(4); (b)(6)

Receiving Deliverables on Schedule from NHLS	NHLS is a large organization with a highly centralized authority structure that serves as a bottleneck for decision-making, thus the timely preparation and delivery of deliverables may be affected.	4	4	(b)(4); (b)(6)	Maintain frequent communication and consultations with NHLS to ascertain partner progress in meeting completion of the deliverables and work to de-escalate decision-making needs.	Med
Performance						(b)(4); (b)(6)
Writing of SOPs for Fit Testing to coincide with delivery of Portacounters into RSA.	NHLS may not have developed SOPs for its Fit Testing Objective by the time Portacounters arrive in RSA from the USA.	4	3	**Med-High**	Coordinate NHLS development of Fit Testing SOPs with timeline of purchasing Portacounters and shipping them to RSA. Provide assistance to development of Fit Testing SOPs as needed.	

Implementation Plan

Introduction

Metabiota will employ its existing organizational leadership to interface, as needed, with the Regional Science Manager and Regional Program Manager to direct the operational and administrative support required ensuring implementation of the BS&S training. Our Program Manager will oversee the training programs with the support of a subject matter expert, travel coordinator, grants manager, trainers, and research and data analysts, to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Communications Protocols

To accomplish event implementation, Metabiota will maintain open lines of communication and will use a phased approach of engagement, maintaining project tracking and scheduled deliverables. This phased approach will be coordinated directly with the NHLS Program Manager, Trainer, Research and Data Analyst, and SME collaborators to ensure the event is implemented according to DTRA CBEP requirements, in the assigned timeframes, and supportive of the DTRA CBEP mission. In addition, Metabiota will maintain routine communication with DTRA CBEP to ensure they have full visibility on the training engagement and development activities, status and process of execution.

Technical Approach

Phases of Technical Approach

Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following phases are required for this project:

Phase 1: Biosafety & Biosecurity Training Video Distribution
Phase 2: Monitoring of Equipment Maintenance Enhancement (OHASIS)
Phase 3: Respirator Fit Testing of Employees

Phase 1 – Biosafety & Biosecurity Training Video Distribution (1 July – 31 December)

Objective: Complete the development a professionally produced video and related materials or a ToT program to standardize and introduce laboratory safety-related information.

Process: Metabiota, in coordination with DTRA CBEP and NHLS, is completing a professionally produced video and related materials (*e.g.*, standard operating procedures (SOPs)) for a ToT program to standardize and introduce laboratory safety-related information. In continued support of this effort, Metabiota and NHLS will procure the necessary equipment and consumable required for distributing these training videos to laboratory personnel, visitors, security personnel, and contract maintenance workers.

Under the direction of NHLS SHE Officers, laboratory personnel will be trained to oversee delivery of introductory video trainings and associated SOPs to personnel within their home-based facility. There are no labor or travel costs associated with dissemination of training materials. The only costs associated with the completion of this objective are associated with procurement of equipment and consumables required for distributing the completed videos. Training videos will be rolled out via Apple Air tablet computers to academic institutions and regional centers, whereas DVDs will be provided to more rural facilities within the network. Metabiota had not previously budgeted for procurement of these materials, as it was assumed that CLS would manage this activity. Moving forward, Metabiota will procure all tablets and DVD's for this objective and leverage the CLS Single Shipper mechanism to ensure materials are shipped to the Republic of South Africa in compliance with all export/import regulations.

Deliverables:

- Deliverable 1: Submission of training materials and post-action report for the conduction of laboratory personnel training to oversee the distribution and delivery of BS&S video trainings and associated SOPs to personnel.

Phase 2 – Monitoring of Equipment Maintenance Enhancement (OHASIS) (1 Oct 2015 – 30 April 2016)

Objective: Ensure all BS&S associated equipment is properly calibrated, functioning, and maintained.

Process: To manage potential risks due to human error and paper-based record keeping as well as provide increased oversight, Metabiota will develop a module for the enhancement of OHASIS, an online health monitoring system that is currently used by all facilities within the

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

NHLS network to record and investigate incidents, record employee health, note vaccinations given, and document trainings completed. Metabiota will additionally coordinate with the NHLS to develop and distribute an online e-learning training and manual for the SHE Officers.

The enhancement module is intended to allow for laboratories to monitor the maintenance requirements of equipment so as to ensure proper functionality through the existing OHASIS program, thereby improving BS&S. Additionally, this module will provide reports on laboratory equipment including, biological safety cabinets, autoclaves, centrifuges, fume hoods, and other local exhaust ventilation systems.

The enhancement module will be piloted in three laboratories over the course of four to five weeks. Metabiota will communicate, troubleshoot, and share developments with the Canadian developers, in line with current agreements.

Deliverables:

- Deliverable 1: Rollout of enhanced equipment maintenance module for OHASIS
- Deliverable 2: Development and conduction online e-learning training and a training manual for SHE Officers

Phase 3 – Respirator Fit Testing of Employees (1 July 2015 – 30 April 2016)

Objective: Develop and initiate a Master Trainer ToT Fit Testing Program to ensure proper fit of PPE and optimize biosafety for all laboratory personnel. This program will include initial scale up and Master-level training of NHLS staff. As a result, the NHLS will have personnel capable of conducting internal ToT events, which will allow for them to reach the estimated 3,000 laboratory staff in need of Fit Testing.

Process: To manage risks associated with aerosol exposures in the laboratory setting, Metabiota will develop a Master Trainer ToT Fit Testing Program with the NHLS. This training will use specialized Fit Test equipment to identify the appropriate respirator for a given person. To enable the NHLS to reach the estimated 268 locations and 3,000 staff in need of Fit Testing, many of whom are in rural areas, Metabiota will develop Fit Test SOPs, map initial scale up plan, develop Trainer and Master Trainer selection criteria, and conduct initial Fit Test trainings for a select starting cohort of NHLS staff.

Deliverables:

- Deliverable 1: Submission of training scale-up plan, training materials, and post-action reports for the conduction of the Master Trainer ToT Fit Testing Program
- Deliverable 2: Submission of Trainer and Master Trainer cohort list, training timeline for scale-up completion for fit testing all 3,000 NHLS employees, and post-action reports.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Management Approach

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the Program Manager, Research and Data Analyst, Travel Coordinator and a team of Research Collaborators and Subject Matter Experts that will be tasked with specific assignments to support the development and implementation of the training based on their administrative and scientific expertise. This team of experts will ensure the overall project management and tasks associated with the training are met at every level using best practices and that only the highest level of scientific rigor and expertise is applied to this effort.

Initiation

Prior to initiating any action, Metabiota and DTRA CBEP will secure a clear understanding of the objectives and mission of this undertaking, and make sure all stakeholders agree to it. Following authorization to proceed by DTRA CBEP, Metabiota will move into the planning and execution of the trainings and IT enhancement activities.

Execution

The core project management team will maintain oversight and implementation of the project at all times and will ensure timely execution of the training events and tracking objectives to ensure the project remains on schedule and within budget. The project will be managed according to the phased implementation plan and will be course-corrected as needed to ensure project goals are met. The following tools will be used to guarantee the project schedule will be maintained:

Project Administration:

1. Weekly team meetings and conference calls will be held to internally review the project achievements, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Coordinator and will include the PM, Research and Data Analysts, SMEs and AEP leadership, as needed, based on the requirements and stage of implementation.
2. Metabiota will conduct routine communication with DTRA CBEP regional leadership and in-country collaborators to provide routine status updates and ensure project implementation.

Project Reporting:

1. Weekly status reports will be provided by the PM to senior Metabiota leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course-correction as needed to ensure training goals are met.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Monitoring and Controlling

1. Routine risk assessment will be performed internally among the Metabiota project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with DTRA CBEP regional leadership to ensure the project remains on track and is implemented according to standard.
3. Routine oversight and coordination will be performed to ensure NHLS is performing in-country logistical requirements to ensure successful execution of the project phases. Monitoring will include both administrative and fiscal oversight.

Timeline

Phase	Q3 2015			Q4 2015			Q1 2016			Q2 2016		
	July	Aug	Sept	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	June
Phase 1: BS&S Training Video Distribution												
Phase 2: Monitoring of Equipment Maintenance Enhancement (OHASIS)												
Phase 3: Respirator Fit Testing of Employees												

Completion

Metabiota will drive the project to completion in a timely manner by maintaining a focused project schedule with routine meetings and communication with DTRA CBEP regional leadership. This will allow for continued coordination, while maintaining targeted objectives. As the activity progresses, Metabiota will provide all required deliverables and after action reports to allow for lessons learned and continuation of solid execution and implementation of activities. Metabiota believes that the experience and management it will bring to this project, in collaboration with DTRA CBEP will guarantee success.

Cost Management

The Metabiota team and all partners will maintain an acute focus on cost management to ensure that the training is delivered at a reasonable cost to the government. Our team will provide full oversight of NHLS to ensure accurate and responsive financial reporting and will facilitate cost savings to the Government wherever possible. Metabiota will follow procurement regulations ensuring the best price is received under the time constraints using all means available.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Budget Narrative

Period of Performance
The Period of Performance for this effort is 16 May 2015 – 15 May 2016.

Labor
Costs for direct labor to support this activity is required for the following personnel:

- Metabiota Program Manager (b)(6) will oversee the execution of program objectives towards the completion of DTRA CBEP goals at the regional level, and will lead communication with DTRA CBEP for this activity. (b)(6) will do so by maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. (b)(6) will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables erstwhile ensuring the program remains within scope, budget, and timeline.
- Metabiota Trainer I: (b)(6) will ensure the execution of project objectives towards the completion of DTRA CBEP goals at the project level. (b)(6) (b)(6) will do so by managing stakeholder and subcontractor coordination and project execution, with a focus on project milestone achievement and stakeholder buy-in development and maintenance. (b)(6) will regularly communicate project status with (b)(6) and will assist him in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. (b)(6) will also assist (b)(6) in ensuring all project requirements and deliverables are fulfilled while concurrently ensuring the project remains within scope, budget, and timeline.
- NHLS Grants Manager: (b)(6) will act as the Project Manager for each of the three proposed requirements, overseeing the design and implementation of all project activities. (b)(6) is currently the National Manager for the Safety Health and Environment Program for the National Health Laboratory Service. (b)(6) has over 33 years experience in working in environmental health law enforcement including audits and evaluations, noise control, pollution control, waste management, public relations, occupational health and safety policy formulation, audit tool development and health project development and management.
- NHLS Subject Matter Expert I: (b)(6) Information Manager, also supports work for the National Institute for Occupational Health (NIOH), a division of NHLS will be providing thirteen (13) years of experience in OHS research, data management, data cleaning, data extraction, information management and information technology management. (b)(6) is experienced in electronic records management, development of patient information systems, electronic patient records, occupational health information systems. In addition (b)(6) has expertise in software development life cycle, user interface and user experience development and is the lead developer and project manager for the OHASIS information system project. Alongside

(b)(6) will provide guidance and support on the IT infrastructure configuration and management for the OHASIS module development.

- NHLS Trainer I: (b)(6) is the National Deputy Manager for the Safety Health and Environment program for NHLS, where she manages and coordinates the functions and duties of five (5) qualified SHE Officers, develops and implements a Health & Safety (H & S) program for the NHLS according to international best practice and in compliance with the Occupational Health and Safety (OHS) Act and the relevant regulations, advises line management and staff on the application of relevant OHS policies and procedures to ensure compliance to legislation. Additionally, (b)(6) collates data from all OHS Audits conducted in the NHLS, generate reports and communicate results to Laboratory, Business and Executive managers. (b)(6) will provide leadership and support for the development and implementation of the BS&S video project, as well as the Fit testing training efforts.
- NHLS Research and Data Analysts (3 personnel):
  - (b)(6) is a registered Occupational Hygienist with the Southern Institute for Occupational Hygiene (ROH-SAIOH), currently working for the National Institute for Occupational Health (NIOH), a division of NHLS. (b)(6) s responsible for conducting risk assessments and occupational hygiene surveys including illumination, noise, ventilation, hazardous chemical substances, ergonomics, environmental pollution (land, water and air) and waste management in a wide range of industries. Presently, (b)(6) is involved in teaching and research in respirator fit testing, facial anthropometry and designing effective respirator protection programs. (b)(6) will act in this capacity in support for the Fit Testing project, under the leadership of (b)(6) and (b)(6)
  - (b)(6) s the Finance and Administration Manager for NHLS and has been with the organization for 15 years. He holds a national diploma in Cost Accounting and has worked as a Financial Manager for two business units within NHLS (Northern and Central) as well as two institutes within NHLS (NICD and NIOH).
  - (b)(6) as worked with NHLS as Senior Bookkeeper for 11 years and has a total of 22 years experience working within corporate financial environments. He holds a degree in Business Communications and the major aspects of his duties include project coordination, budgeting and management accounting, event planning and co-ordination. Both (b)(6) will be assisting (b)(6) in project coordination, integration of new efforts with existing records (including the integration of the OHASIS module) and the scheduling and planning of training events.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Materials

Materials and supplies are required to support training efforts, project activities, information dissemination, fit testing requirements, and general administrative costs. Materials will include:

- Tablet Computers, BS&S ToT program, the SHE officers will require twenty-five (25) tablet computers (Apple iPad Air) for dissemination to the identified NHLS locations. Spread throughout South Africa are nine (9) academic sites that will receive tablets (one per site), which serve as referral centres and have more than one laboratory on site. In addition, there are four (4) Regional Offices that require a total of eight (8) tablets; two (2) tablets per Regional Office, as these offices all have Administration facilities as well as laboratories. The three (3) institutes are situated on two different sites where two of the institutes share a common reception area, thus a provision is made for two (2) per site for a total of four (4) tablets. The Corporate head office has the largest number of visitors and also does a lot of training, therefore the allocation of four (4) tablets is proposed. Training on the use of the tablets, as well as the process through which to offer and administer video training will be provided at the identified facilities by experienced SHE Officers on a one on one basis with the people identified by the facility manager as being responsible for administering the video training material. It is intended that the academic centres be issued the tablet computers.
- Training video DVDs, any facilities that will not receive tablets, videos will be placed on DVD and delivered to the identified laboratories and centres by internal mail at the expense of the NHLS by the SHE Department. Any instruction on the use of the DVDs would be by means of SOPs.
- PortaCount Fit Tester, Fit testing requirement. NHLS will require the following supplies: five (5) PortaCount Pro+ Respirator Fit Tester with a 3 year calibration plan (PortaCount Pro+ which includes AC adapter with Universal Plug Set, 8026 Particle Generator, alcohol cartridge, alcohol fill capsule, storage cap, two zero check filters, Model 8016 alcohol supplies, 3/16 and 1/4 inch hose adapters, two spare alcohol wicks, 100 sampling probes, insertional probe, neck strap, carrying case, FitPro Test software CD, Flash memory drive (1GB), USB cable, operation and service manual and two-year warranty); seven (7) Fit Test Probe Kits (1kit includes 500 probes, 500 Pushnuts); six-thousand (6000) 3M or Kimberly Clark N95 respirators; six-thousand (6,000) respirator adaptors; and five (5) boxes of isopropyl alcohol (16x30ml bottles).

Metabiota will make every effort to procure required materials based on best value (cost, quality, and longevity). Metabiota anticipates that CLS will manage shipping, and all related costs (e.g., export compliance), of items procured CONUS to the Republic of South Africa. Metabiota will coordinate with CLS contractors through DTRA CBEP to ensure this process is executed in an effective and efficient manner.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Other Direct Costs
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for NHLS personnel for the period of performance for this engagement. Metabiota personnel performing on this project are already insured.

Subcontracts
A Subcontract will be issued to NHLS to support their labor requirements on this engagement, as well as materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel is requested to support NHLS project personnel to facilitate implementation and conduct training activities in this effort. The proposed projects require domestic (South Africa) travel for test site introduction of the OHASIS pilot modules, and for the Fit testing training. The travel estimates in the budget reflect averaged costs for airfare, lodging, and meals to multiple different locations in South Africa for travel by NHLS project personnel. Metabiota does not anticipate any international travel of its USA staff to South Africa.

Conclusion
Metabiota is committed to supporting our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP AFRICOM in the implementation of the Biosafety and Biosecurity Training with the National Health Laboratory Services in South Africa. Metabiota will ensure, through strong project management and risk mitigation that the training will be executed in an efficient and timely manner delivering a top quality course geared to support enhanced biosurveillance and biosafety efforts in the region.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Appendix A- Team Metabiota Overview

Metabiota, Inc. is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota currently supports a number of the Defense Threat Reduction Agency Cooperative Biological Engagement Program (DTRA CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. In these roles Metabiota provides support to U.S. Government (USG) Partners in reducing the risk of biological threats worldwide through a collaborative and agile approach to biological risk management.

In coordination with DTRA CBEP regional leadership and in-country partners, Metabiota has built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact DTRA CBEP objectives.

Through this activity, Metabiota will engage South Africa's National Health Laboratory Services (NHLS) in order to direct technical support in the development and implementation of the biosafety and biosecurity (BS&S) initiatives. Established through legislation in 2001 to connect public health system laboratories, NHLS is the largest diagnostic pathology service in South Africa. Laboratory and related public health services are provided by the NHLS to over 80% of the population through a national network of laboratories in all nine provinces, employing over 6,700 people. NHLS activities comprise diagnostic laboratory services, research, teaching and training, and production of sera for snake antivenin, reagents, and media. Its specialized divisions include the National Institute for Communicable Diseases, National Institute for Occupational Health, National Cancer Registry and Antivenin Unit.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Executive Summary

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) team responsible for the United States African Command (USAFRICOM) is tasked with a mission of scientific study, experimentation, and training directed toward advancing or increasing knowledge and understanding of worldwide basic research standards to enhance capabilities and mitigate threats. In support of this effort, the CBEP AFRICOM team has identified the requirement for a multidisciplinary training event supporting 1) identification of clinical signs and symptoms associated with viral hemorrhagic fever (VHF) and 2) safely donning and doffing personal protective equipment (PPE) when managing especially dangerous pathogens, including causative agents of VHF in Cameroon. This engagement will support the preparedness and capabilities of clinical professionals operating in Cameroon to, ultimately, bolster biosafety and biosecurity (BS&S) in the clinical setting and to mitigate the threat of spreading causative agents of potentially dangerous diseases.

Detailed herein, the Metabiota team endeavors to fulfill this requirement through execution of five program elements, including 1) Project Initiation and Coordination; 2) Assessment of Historical Training Activities; 3) Adaptation of Training Materials; and 4) Training Implementation. Through the development of coherent training methodologies that are driven by on-the-ground experience and decades of expertise, as well as follow on engagements and deliverables, Metabiota is well-positioned to support training activities and scientific engagement in the USAFRICOM's region of responsibility.

Background

The U.S. Department of Defense (DoD) initiated the CBEP through DTRA in order to: secure and consolidate select agents; enhance Biosafety and Biosecurity (BS&S) standards; and strengthen the USAFRICOM region's ability to detect, diagnose, survey, and report emerging and re-emerging diseases of international security concern and that CBEP accomplishes these objectives in accordance with the World Health Organization (WHO) International Health Regulations (IHR) and World Organization for Animal Health (OIE) guidelines. The team further recognizes that to achieve its mission, CBEP works collaboratively with partner nations, U.S. Government (USG) agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health, promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. Through the AEP Program, Metabiota aims to support the CBEP mission of reducing the potential impact of biological threats through enhanced biological safety and security, awareness of biological risks, and knowledge related to biological pathogens.

In support of this approach, the Metabiota team intends to administer a high-value training to support strategic CBEP objectives by increasing regional collaboration on topics critical to biological threat reduction, and enhancing the regional capacity to perform biorisk management and mitigate the threat of infectious disease events. The teams on-the-ground experience and decades of expertise makes us well-positioned to support the implementation of this workshop and all associated activities.

Purpose

Through AEP Technical Direction 001, DTRA CBEP AFRICOM Regional leadership tasked the Metabiota team with developing and implementing Personal Protective Equipment (PPE) Donning and Doffing Biosafety Training and Viral Hemorrhagic Fever (VHF) Clinical Recognition Training for Cameroon. The PPE Donning and Doffing Biosafety and VHF Clinical Recognition trainings are being developed for the purpose of training representatives from the Cameroon Ministry of Defense (MoD). The training cohort has tentatively identified 26 individuals for this training: one director of military health, four chief medical doctors, one program officer, and 20 nurses. Following completion of training, it is anticipated that these representatives will be able to provide this training to others in their respective fields (e.g., Training of Trainers approach). Moreover, all trainees will be evaluated for PPE donning/doffing proficiency as part of this training event. To accomplish this purpose, DTRA CBEP, through the AEP, will engage Metabiota and its network of Subject Matter Experts (SMEs), qualified trainers, scientific mentors and in-country expertise to implement these trainings, which will lead to effective capacity-building within Cameroon.

Objectives

Through the implementation of the PPE Donning and Doffing Biosafety and VHF Clinical Recognition trainings facilitated by Metabiota, MoD of Cameroon will be able to:

- Safely don and doff PPE to ensure overall safety to personnel and the environment when working with potentially dangerous pathogens;
- Understand and recognize clinical symptoms of VHF and take the necessary actions to mitigate risk of spreading disease (e.g., manage necessary PPE);
- Employ biorisk management best practices and principles based on internationally acceptable guidelines and standards, particularly with respect to enhancing the capacity to account for and safeguard pathogens of concern; and
- Conduct effective disease surveillance, detection, reporting, and response to rapidly diagnose bioterrorism and outbreaks.

Threat Reduction Outcomes

Training engagements are critical to capacity building efforts in host countries and supporting the early detection and response to emerging threats, thus safeguarding the world from infectious disease threats. Without completion of the training engagement, the region is subject to the following identified risks:

- Incomplete country and regional coverage for safely responding to VHF and, subsequently, mitigating the spread of disease;
- Increased security threats due to improper handling of pathogens of security concern; and
- Limited understanding of pathogens of concern circulating in the region.

The completion of the training will mitigate the identified risk factors by:

- Improving disease management through augmented BS&S practices when identifying and managing VHFs and other diseases of security concern;

- Implementing and improving biorisk management best practices and principles based on internationally acceptable guidelines and standards (enhancing the capacity to account for, safeguard, and secure pathogens of concern); and
- Increasing scientific capabilities through research collaboration and fostering an environment of scientific partnership.

Risk Management

In order to maintain course action and guarantee a training that will reduce regional risk and forward CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed below:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
				Cost		
Technical Direction NTE Ceiling	The current budget with travel, management, procurement, and execution will exceed the ceiling for the technical direction	5	4	(b)(4); (b)(6)	Metabiota will monitor costs and work diligently to seek out the lowest costs possible for procurement and travel, as well as mitigate extended labor hours during events	**Med-High**
				Schedule		
30-day Review Period for Modified Presentations	If DTRA takes the full 30 day review period and requests modifications, a 2nd revision/review cycle may delay training implementation	2	3	Medium	Metabiota will schedule training to commence no fewer than 60 days after submitting draft presentations for DTRA review, and will continue planning for the training throughout the review period	(b)(4); (b)(6)
Emergent outbreak situations	If there is significant lag between procurement and training, an emergent outbreak could force the use of equipment and materials slated for the trainings.	1	4	Medium	Metabiota will work with DTRA and MoD to reschedule training event	
				Performance		
Ability to collaborate with MoD in Cameroon	A memorandum of stakeholder participation is required in order to collaborate with MoD	2	4	Medium	Metabiota team based in Yaoundé can help facilitate acquisition of memoranda	
Logistics Coordination	All equipment, trainers, facilities, and trainees must be available simultaneously to successfully execute training.	4	4	(b)(4); (b)(6)	Metabiota will engage a known, local logistics organization to provide in-country support with rapid turn-around and solid track record in supporting USG operations, and will work closely with CLS/single shipper as needed	
Appropriate-ness of training for MoD	Without knowing the trainee list and their backgrounds, training	2	3		Metabiota team based in Yaoundé will communicate with MoD stakeholders to	

participants	may be either partially redundant or partially ineffective due to lack of prerequisite knowledge				inform modifications to training materials	(b)(4); (b)(6)

Identifying and acknowledging the risks associated with not implementing this training, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Management Approach

Introduction

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager and Country Manager, as needed to direct the operational and administrative support required to ensure implementation of the PPE Donning and Doffing Biosafety and VHF Clinical Recognition trainings. Our Program Manager will oversee administrative and operational functions, with the support of a project manager, travel coordinator, SMEs, trainers, and mentors to ensure that all aspects of cost, schedule, and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the Program Manager, Project Coordinator, Travel Coordinator, and SMEs that will be tasked with specific assignments to support the development and implementation of training based on their administrative and scientific expertise. This team of experts will ensure the overall project management and tasks associated with the training are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

(b)(4); (b)(6)

Initiation

Following guidance from CBEP AFRICOM leadership, and by working with experienced, local subcontractors based in Yaoundé, Cameroon, the Metabiota team will endeavor to understand the scale and scope of historical trainings (*e.g.*, VHF, BS&S, PPE) by holding a stakeholders meeting with MoD personnel. Information garnered from this meeting may help to identify those topics and training approaches, which may potentially guide the modification of existing DTRA training presentations. Upon approval of the modified training presentations by DTRA, Metabiota will move into the planning and execution of the training.

Planning and Design

Metabiota will identify the required qualified trainers to facilitate the training from its cadre of experts and will engage the trainers to evaluate and make necessary modifications to the existing training presentations provided by DTRA, and by referencing gleaned from the landscape report. Metabiota anticipates a quick turnaround for final documents, which will result in successful execution of the events.

The Metabiota team will coordinate with both DTRA CBEP and key Cameroonian stakeholders to initiate efforts in a collaborative and forward moving process. Metabiota will endeavor to ensure that Training Event Plans (TEPs) and Cable Clearance Requests (CCRs) are initiated and completed in a timely fashion, and that Training Trip Reports (TTRs) are submitted efficiently. Metabiota will provide the necessary materials to key stakeholders to ensure that the participants are identified and trained according to their regional requirements. Metabiota will maintain frequent communication with regional and country leads during all phases of planning and implementation to ensure continued smooth operations and engagement.

In addition to modifying the presentations, Metabiota will work with Cooperative Threat Reduction (CTR) Logistics Support (CLS) contractors to determine in-country logistical needs to facilitate the training events to include travel and transportation, procurement of materials and supplies, conference arrangements, and other operational requirements necessary to ensure proper execution. To ensure local logistics are successfully managed, Metabiota may engage local expertise at the very early phases of planning to facilitate all in-country needs. Metabiota will maintain communication with regional and country leads during all phases of planning, and implementation to ensure smooth operations and successful engagement.

Execution

The core project management team will maintain oversight and implementation of the project at all times and will ensure rapid execution of the training event, tracking objectives to ensure the project stays on schedule to complete the training exercises. The project will be managed according to the phased implementation plan and will be course corrected, as needed to ensure target end-goals are reached. The following tools will be used to guarantee the project schedule will be maintained:

Project Administration:

1. Weekly team meetings and conference calls will be held to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Coordinator and will include the PM and AEP leadership, as needed based on the requirements and stage of implementation.
2. Routine calls and communication via email will be held between CBEP country leadership and Metabiota to provide routine status updates and ensure training implementation.

Project Reporting:

1. Weekly status reports will be provided by the PM to senior Metabiota leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction, as needed to ensure training goals are met.

Monitoring and Controlling

1. Routine risk assessment will be performed internally among the Metabiota project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with CBEP regional leadership to ensure the project remains on track and is implemented according to standard.
3. Routine oversight and coordination will be performed to ensure subcontractors are meeting contract requirements to ensure successful planning and execution of the training. Monitoring will include both administrative and fiscal oversight.

Completion

Maintaining a focused project schedule with routine meetings and communication with CBEP regional leadership allowing for continued coordination, while maintaining targeted objectives, Metabiota will drive the project to completion by mid-December with the execution of the one-week training event and subsequent post-training proficiency testing events. Following completion of the training, review, final validation, and a back-and-forth dialogue with CBEP regional leadership, Metabiota will provide required training trip report deliverables and after action reports to allow for lessons learned and continuation of solid execution and implementation of activities. Metabiota believes that the experience and management it will bring to this project, in collaboration with CBEP will guarantee success.

Technical Approach

Introduction

Metabiota will, in coordination with DTRA CBEP AFRICOM, provide PPE Donning and Doffing Biosafety Training and VHF Clinical Recognition Training in Yaoundé, Cameroon. Metabiota shall utilize existing DTRA Donning and Doffing of PPE and VHF Clinical Recognition training presentations. To ensure effective dissemination of information, Metabiota shall engage project stakeholders to identify in-country training needs. Leveraging this information, Metabiota will tailor DTRA CBEP provided training materials to ensure all materials are relevant and current for the needs of MoD in Cameroon.

Phase 1: Project Initiation and Coordination

As outlined in the Planning and Design section (above), Metabiota will leverage a Program Management team to maintain all administrative and operations functions associated with implementing this training event, as they pertain to cost, schedule, and performance. Additionally, this Team will identify and secure the necessary technical support (*e.g.*, SMEs, trainers, mentors) needed to ensure adaptation and delivery of training materials is accurate and suited to the needs of the trainees and MoD of Cameroon.

Phase 2: Modification of Training Materials

While the training materials provided are technically correct in the subject material presented (PPE donning and doffing; introduction to viral hemorrhagic fevers), Metabiota believes that the materials are incomplete and, moreover, their use as is could be detrimental to the Cameroonian trainees for multiple reasons. For example, the VHF materials have an emphasis on Crimean-Congo Hemorrhagic Fever (CCHF), as opposed to more relevant and severe pathogens, such as filoviruses (*e.g.*, Ebola and Marburg), which have emerged in neighboring countries. Tailoring materials to include more geographically relevant diseases and to a format which has been previously employed by Cameroon will promote institutionalization of the training materials and subject matter. Additionally, training PPE donning and doffing without placing it in a larger biorisk mitigation context may actually lead to unsafe practices. Specifically, the materials were designed to be employed in a newly built high-containment Central Reference Laboratory, which may not directly correlate to use in existing Cameroonian facilities. Moreover, the materials do not appropriately address additional components of donning and doffing practices, including decontamination, establishment and use of isolation and quarantine zones. Updating all training materials to be culturally aware and geographically relevant will bolster overall training success.

The team will collaboratively seek to understand 1) if any similar training events have been implemented, including lessons learned, 2) current needs of the stakeholders, 3) relevant information to bolster acceptance of training, 4) any perceived gaps in training, which may impact understanding/receipt of information presented as part of this training. This information will be used to guide potential modifications to the existing DTRA presentations for PPE Donning and Doffing Biosafety Training and VHF Clinical Recognition Training. To obtain this information, a meeting in Yaoundé will take place during the week of 13-17 July, the Metabiota Cameroon team, a DTRA representative, and invited MoD representatives will discuss and determine if there are any existing trainings similar to the PPE Donning and Doffing and VHF Clinical Recognition trainings. This meeting is subject to DTRA and MoD availability, and in the event that any party is unable to attend the meeting, Metabiota will attempt to gather the necessary information through other means. The team will also evaluate the existing DTRA presentations for differences and compatibilities with Cameroonian laboratory infrastructures, practices, and PPE. All of this information will be compared and contrasted against the DTRA presentations, so that the presentations may be modified to maximize the benefit to the Cameroonian training participants.

It is anticipated that any modifications to the training materials will be completed within a two-week period. At this time, Metabiota will submit the updated presentations to DTRA. The presentations will then undergo the required 30-day review by DTRA; the approved, finalized

presentations will be returned to Metabiota and training implementation dates will be finalized. Additionally, Metabiota will coordinate between administrative, technical, and in-country teams to identify an agenda that meets the needs of the training participants.

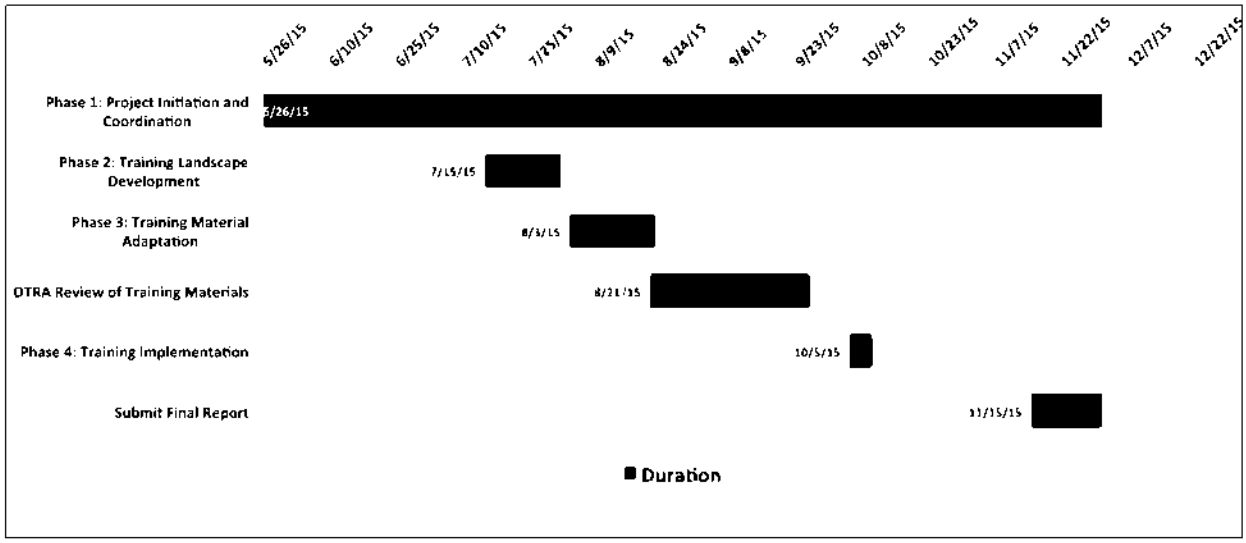
Deliverables:

- Deliverable #1: Modified DTRA Training Presentations (potential)
- Deliverable #2: Training Agenda and Schedule

Phase 3: Coordination and Implementation of Training

After submitting the modified presentations to DTRA for their review, the team will begin to coordinate with CLS contractors for the training to take place in Yaoundé, Cameroon in October 2015. If requested, the Metabiota team will serve as a resource for CLS to provide recommendations pertinent to training implementation, including training venue, as well as hotel(s) for the trainers, trainees, and administrators. Metabiota will complete the required CLS form to ensure that local transportation, per diem, and other logistics are taken care of for trainees.

The current assumption is that the availability of trainees is limited, and thus the training will be organized such that it takes place over the span of three days. Metabiota regards this as the minimum amount of time required to conduct the requested training. If, as a result of the information gathering in phase 2, it is determined that the logistics of transporting trainees to Yaoundé will permit, the duration of the training may be extended an additional day. Activities for the week will be outlined in the final agenda and schedule (Deliverable #2).



Deliverables:

- Deliverable #3: Training Report

Communications Protocols

Metabiota will maintain open communications with international collaborators necessary for implementing the training, to include regional partners facilitating the training engagement and logistics. In addition, Metabiota will maintain routine communication with CBEP to ensure they have full visibility on the training engagement, status and process of execution.

Timeline

Cost Management

The Metabiota team and all partners will maintain an intense focus on cost management to ensure that the training is delivered at a reasonable cost to the government. Our team will ensure accurate and responsive financial reporting and will facilitate cost savings to the Government wherever possible. Metabiota will follow procurement regulations ensuring the best price is received under the time constraints using all means available.

Budget Narrative

The Metabiota AEP contract vehicle has been changed to a Time & Materials (T&M) contract in the option year (16 May 2015 – 15 May 2016).

Period of Performance

The Period of Performance for this effort is May 16, 2015 to November 30, 2015.

Labor

Costs for direct labor to support this activity is required for the following personnel:

Metabiota Program Manager – Labor for the PM is estimated at 10% effort from June through November. The Metabiota PM will oversee the planning and execution of all program objectives towards the completion of DTRA CBEP goals at both the regional level and specifically for this project. The PM will do so by participating in proposal development and maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables while ensuring the program

remains within scope, budget, and timeline. The PM will lead communication with DTRA CBEP for this activity.

As some of our proposed Trainers are independent consultants or subcontractors through Global Viral and Mosaic, the Metabiota PM is also responsible for ensuring that all personnel adhere to operational requirements imposed by DoD or DTRA CBEP standard operating procedures. As these Trainers also are largely unfamiliar with DoD contracting, the Metabiota PM will assist the Trainers and/or their organizations with adhering to DoD contracting requirements, to include DCMA and DCAA compliance, developing Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the training event. The Metabiota PM will provide continuing management oversight over the subcontractors and independent consultants throughout the span of the project.

The Metabiota PM will lead coordination between the information-gathering team in Cameroon and the training planning team. This coordination will be to ensure that key information relevant to the adaptation of training materials and planning of the training event is captured and accounted for in a timely manner. The PM will oversee training event planning and execution taking into account information gathered and the needs of all stakeholders. Lastly, the PM will ensure all required project closeout activities occur in a timely fashion.

Metabiota Training Manager (Trainer III, one person) Labor for the Training Manager is estimated at 1 hour per week from June through November. The Trainer III will assist in coordinating, planning, and executing the training, to include assisting in management of deliverables and tracking of project requirements. The Metabiota Training Manager also participates in proposal development. Minimal hours are budgeted for every DTRA CBEP funded training effort to support this position. In this regard, Metabiota ensures consistency and accuracy associated with the development of all required training materials and training preparations.

Metabiota Training Coordinator (Trainer II, one person) Labor for the Training Coordinator is estimated at 15% effort from June through November. The Metabiota Training Coordinator will aid the PM in the planning and execution of project objectives, as well as participating in proposal development. The Trainer II will provide remote support for coordinating and running the meeting with Ministry of Defense (1/2 day meeting). The Trainer II will support training material adaptation by facilitating communications with the Metabiota Cameroon team as well as leveraging their own expertise to ensure that the correct questions are being asked of the Cameroon Ministry of Defense. The Trainer II will also assist the PM in establishing subcontracts with Global Viral, Mosaic, and the independent consultants to include SOW and budget development. Please note that this individual will not travel to Cameroon or participate in any training implementation.

The Trainer II will facilitate and participate in communications with the information-gathering team in Cameroon. This communication will be to ensure that key information relevant to the adaptation of training materials and planning of the training event is captured and accounted for in a timely manner. The Trainer II will drive training event planning and execution taking into

account information gathered and the needs of all stakeholders in conjunction with the PM and Training Manager. Lastly, the Trainer II will assist the PM with all required project closeout activities.

Metabiota Scientific Mentor (Two people) – Labor for the Scientific Mentors are estimated at 40 hours for training material adaptation (one person), and 42 hours for training implementation (one person, bilingual French and English). The Metabiota Scientific Mentors will leverage their comprehensive VHF and PPE knowledge to lead the adaptation and delivery of training materials, as discussed in the technical approach (Phase 2, p.9). The Scientific Mentors will use their expertise to tailor the training materials to provide as comprehensive, culturally aware, geographically relevant, and safe training event. To effectively achieve this task, the Scientific Mentors will compile and collate information obtained from the Metabiota team in Cameroon pertaining to both the Ministry of Defense's previous trainings and Cameroon's cultural norms. The bilingual Scientific Mentor will be part of the team implementing in-country training, to include set-up, training, and post-training reporting.

Metabiota, Global Viral, and Mosaic Trainers I & II – These two labor categories are being used to provide paybanding based on the nationality and home locations of the individuals identified. Metabiota is proposing the use of four trainers in total (one Metabiota Scientific Mentor, two Metabiota Trainer I, and one Mosaic Trainer II) to support the actual training event, ultimately ensuring an effective trainer:trainee ratio. However, some personnel will be used solely to provide support to activities leading up to the actual training event. All trainers for the October training event are fluently bilingual (English and French) and are considered VHF subject matter experts. These trainers will engage Ministry of Defense trainees over the course of a week in large and small format settings to implement lecture and practical activities associated with project objectives. Each of the trainers for the actual training event have the same training responsibilities are will work as a cohesive unit to ensure trainees are properly educated to safely operate in hazardous environments. Using Anglophone and Francophone trainers will ensure that dissemination of technical information is not lost or in any way altered through a translator.

Metabiota Trainers I (two individuals): Labor for the Metabiota Trainers I is estimated at 42 hours per trainer and budgeted for training implementation and, to a limited extent, may be used to review the final translation of all training materials for technical accuracy. It is anticipated that the Metabiota Trainers I (in addition to a scientific mentor) will be used to aid in conducting the in-country training, to include set-up, training, and post-training reporting. Metabiota Trainers I will coordinate with the Scientific Mentor and Mosaic Trainer II prior to the training event to ensure that the training is delivered in a cohesive manner. Metabiota Trainers I will provide feedback and support to the PM in drafting deliverables such as the training trip report and final project summary report.

Global Viral (GV) Trainer II (one person): Labor for the GV Trainer II is estimated at 40 hours over all phases of contracting, project implementation, and project closeout. Originally billed as a Subject Matter Expert II (same pay scale as Trainer II), the GV Trainer II will provide remote support for coordinating and running the meeting with Ministry of Defense (1/2 day meeting). The GV Trainer II will use his knowledge of Cameroon and pre-

existing relationships to facilitate gathering information that will be used to tailor the training materials and provide support, as needed, to set up and facilitate the training event. The GV Trainer II will also be responsible for working with the Metabiota PM to understand the implications of DoD and DTRA CBEP regulations on the work to be performed by GV, as well as reaching an agreement on the SOW and budget for the GV subcontract. The GV Trainer II will serve as a reachback resource for the CLS contractor should they require advice towards any logistical arrangements in Cameroon. The GV Trainer II will also provide feedback and support to Metabiota in drafting deliverables as needed.

Global Viral Trainer I (one person): Labor for the GV Trainer I is estimated at 68 hours over all phases of contracting and project implementation, with the majority of the time spent in the information gathering phase of the project and a smaller but still important role leading up to actual training event. The GV Trainer I will provide on-the-ground support for coordinating and running the meeting with Ministry of Defense (1/2 day meeting). Accomplishing this will include conducting regular communications with Ministry of Defense to establish a time and place for the meeting, working with the Metabiota PM, Training Coordinator, Scientific Mentor, and Mosaic Trainer II to develop a list of key information that should be obtained, and communicating with Ministry of Defense and other Cameroon stakeholders to acquire relevant information. Information gathered will be communicated back to the Metabiota team to support training material adaptation and training event planning. The GV Trainer I will assist all stakeholders, including Cameroonian participants, as an on-the-ground liaison for this training event, as well to serve as a reachback resource for the CLS contractor should they require advice towards any logistical arrangements in Cameroon associated with execution of the training event. The GV Trainer I will not serve as an actual trainer for the training event. The GV Trainer I will also provide Metabiota with feedback on his work during the information gathering phase and run-up to the training event, in order to support drafting of deliverables such as the final project summary report.

Mosaic Trainer II (one person): Labor for the Mosaic Trainer II is estimated at 84 hours over all phases of the work, with 42 hours allotted for training implementation, and the remainder of the time allotted for contracting and information gathering. The Mosaic Trainer II will provide on-the-ground support for coordinating and running the meeting with Ministry of Defense (1/2 day meeting). Accomplishing this will include conducting regular communications with Ministry of Defense to establish a time and place for the meeting, working with the Metabiota PM, Training Coordinator, Scientific Mentor, and GV Trainer I to develop a list of key information that should be obtained, and communicating with Ministry of Defense and other Cameroon stakeholders to acquire relevant information. Information gathered will be communicated back to the Metabiota team to support training material adaptation and training event planning. After the CLS contractor translates the adapted training materials, Mosaic Trainer II will provide a final review of the translated materials to ensure no technical knowledge was lost during the translation process. The Mosaic Trainer II will serve as a reachback resource for the CLS contractor should they require advice towards any logistical arrangements in Cameroon. The Mosaic Trainer II will also be responsible for working with the Metabiota PM to understand the implications of

DoD and DTRA CBEP regulations on the work to be performed by Mosaic, as well as reaching an agreement on the SOW and budget for the Mosaic subcontract. It is anticipated that the Mosaic Trainer will be leveraged as one of the trainers at the in-country training event, to include set-up, training, and post-training reporting. Mosaic Trainer II will coordinate with the Scientific Mentor and Metabiota Trainers I prior to the training event to ensure that the training is delivered in a cohesive manner. Mosaic Trainer II will also provide feedback and support to Metabiota in drafting deliverables such as the training trip report and final project summary report, as needed.

Additional costs for direct labor supporting the Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 Program Management Office.

Materials

Materials and supplies will be provided by DTRA to support training efforts, to include training materials and PPE.

DTRA Translation Services will be utilized to translate developed materials and provide interpretation services during the training events. Our trainers and subject matter experts, all Francophones, will review final drafts to ensure effective translation of technical information by performing translation of training materials. It is not anticipated that simultaneous translation services will be required during training implementation, as trainees and trainers are all Francophones.

Conference Services are required, as a venue is needed for the training events to house a total of 26 participants, 2-3 trainers, and additional Metabiota and CBEP personnel attending the event. Conference services will include on-site catering to facilitate completion of the training within an efficient timeframe. As some meals will be provided, the per diem rates for all attending will be reduced accordingly. A request will be submitted to CLS to support the aforementioned efforts.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for trainers during the period of performance for this engagement. Metabiota personnel performing on this project are currently insured.

Subcontracts

Subcontracts will be issued to Global Viral and ETS Mosaic for time provided by their trainers and subject matter experts, administrative and operations support, as well as materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested to support the following project stakeholders: Scientific Mentor and two trainers to facilitate implementation and conduct training activities for this effort (tentatively October 2015). Metabiota's Scientific Mentor will be traveling from the Washington, D.C. area to Yaoundé, Cameroon. Trainers will be traveling from France and/or W. Africa to Yaoundé, Cameroon. All travelers will be coordinated to support implementation of the aforementioned training event (7 to 8 days for each traveler: 2 days travel to Yaoundé, 3-4 days for the training, 2 days return travel). The proposed travel budget represents estimates based on the longest required trip.

All travel logistics associated with movement of trainees will be managed via CLS.

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP AFRICOM in the implementation of the Personal Protective Equipment Donning and Doffing Biosafety Training and Viral Hemorrhagic Fever Clinical Recognition Training in Cameroon. Metabiota will ensure, through strong project management and risk mitigation that the training will be executed in an efficient and timely manner delivering a top quality course geared to support enhanced biosurveillance and biosafety efforts in the region.

Team Metabiota Overview

Metabiota, Inc., is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota has executed scientific objectives on a number of Department of Defense contracts, and understands the Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) mission is to safeguard the United States and its allies from weapons of mass destruction (WMD) including chemical, biological, radiological, nuclear, and high-yield explosives (CBRNE) by providing capabilities to reduce, eliminate, and counter the WMD threat and mitigate its effects. The Company recognizes that DTRA's Cooperative Threat Reduction (CTR) Program is a critical component of the U.S. Government's (USG) approach to threat reduction, which promotes collaboration with international and non-governmental partners in order to advance regional engagement and multilateral cooperation while developing locally appropriate, sustainable programs. Through the Academic Engagement Partnership (AEP) Program, Metabiota aims to support CTRs CBEP mission of reducing the potential

impact of biological threats through enhanced biological safety and security, awareness of biological risks, and knowledge related to biological pathogens.

To ensure a successful event, Metabiota, in coordination with DTRA CBEP regional leadership and in country partners, have built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact CBEP objectives.

Metabiota will team with their non-profit "sister company" Global Viral (GV), which maintains an office and staff in Yaoundé, Cameroon. Since 2008 Global Viral has been enabling global communities to develop and manage their own challenges through scientific capacity development and education and research projects in scientific advancement and public health. GV currently provides support for global policy leaders with a network of expertise in global infectious disease threats. GV has been providing specialized research and leadership providing new insights into the diversity of human pathogens and the biological and behavioral emergence of novel pathogens. In addition GV provides experience in supporting research laboratories and field sites. GV has developed relationships with the local government, NGOs, and medical providers in Cameroon, which will be leveraged to ensure effective navigation of the local landscape and implementation of the training course. (globalviral.org)

Metabiota will also team with another frequent and long-time partner in Cameroon, ETS Mosaic ("ETS" is the Cameroonian equivalent for company in English). Mosaic has provided technical assistance for research, project management and capacity building in central Africa since 2010. Mosaic has provided services within awards from USAID, UCDavis, DoD GEIS and private foundations in collaboration with governments, universities, companies and international organizations. Subject: HDTRA1-14-C-0104 Technical Direction for the Implementation of an Epigenetics and Genomics of Infectious Diseases Workshop in the Middle East South Asia Region.

Dear (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to administer a two-day workshop in the Fall of 2015 on Epigenetics and Genomics of Infectious Diseases in the Middle East South Asia Region in accordance with SOW Section 4.3, Task 5. The workshop will include plenary talks, topic-focused sessions, poster sessions, and training sessions. The plenary talks will highlight recent advances in epigenetics, genetics, and the technologies and skills needed to study epigenetics. The topic-focused sessions will provide opportunities for participants to learn about specific areas of research, such as epigenetic regulation of host immune system genes by bacterial toxins. The poster sessions will allow scientists to identify prospective partners for research cooperation. Finally, the training sessions will describe processes of initiating and maintaining international scientific collaboration, grant writing, and risk analysis. A proposal and estimated budget not to exceed $500,000 for implementing this requirement is requested by 02 June 15.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with DTRA CBEP Points of Contacts listed below.

Subject: HDTRA1-14-C-0104 Technical Direction for the Implementation of Distance Learning on the Basics of Passive Surveillance for Animal Diseases in Iraq, with a Special Emphasis on Recognition of High Consequence Pathogens.

Dea (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to administer an eighteen-month distance learning course covering the Basics of Passive Surveillance for Animal Diseases in Iraq, with a Special Emphasis on Recognition of High Consequence Pathogens in accordance with SOW Section 4.3, Task 3. The course will build disease diagnosis expertise among a core group of veterinarians, from the field, from public health, and from the laboratory, using a combination of in-person trainings and weekly web-based modules. The program will entail didactic, interactive, and case-based materials to work through the basic concepts of disease pathogenesis, the development of lessons, the significance of lessons in terms of disease, and how these lessons relate to the clinical disease in an animal. Both endemic and high consequence pathogens will be covered to help participants distinguish key aspects that differentiate them, and to help participants appreciate the most appropriate samples to ensure accurate diagnosis. A proposal and estimated budget not to exceed $400,000 for implementing this requirement is requested by June 10, 2015.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with DTRA CBEP Points of Contacts listed below.

Metabiota
(b)(6)
Director
1 Sutter STE 600
San Francisco, CA 94104-4923

Subject: HDTRA1-14-C-0104 Technical Direction for Nipah Research Activity Project (RAP)

Dear (b)(6)

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to provide a research collaborator or collaborators to assist scientists from the Research Institute of Tropical Medicine (RITM) in the Philippines in executing a preliminary study on paramyxoviruses in accordance with SOW section 4.3, Tasks 5 & 6.

This requirement is derived from discussions held during the bat-borne surveillance training event conducted in Singapore in May 2014. Specifically, henipaviruses and potentially related strains in Province Sultan Kudarat are to be the focus of the study. Research collaborators will, in conjunction with scientists at RITM, develop a detailed research plan (including budget) for preliminary surveillance studies of bats in province Sultan Kudarat. The research plan and budget must be submitted for review by DTRA CBEP prior to the initiation of any experimental work. The technical proposal should include comprehensive descriptions of the procedures planned, including field, laboratory, and data analytics, as well as a discussion of biosafety and biosecurity risks and mitigations. Additionally, the Protocol Risk Assessment Tool should be completed and submitted simultaneously. The project should address the following objectives:

1. Identify the reservoir and putative host range for Nipah or related viruses in the Philippines
2. Examine the seroprevalence of Nipah or related viruses in bats, peridomestic animals and humans in the Philippines
3. Understand the risk factors for cross species transmission, including which animals may be amplifying reservoirs

The project should also adhere to CBEP engagement parameters including the but not limited to the requirement for MOUs and/or MTAs with partner country institutions/ministries, and the desire to enhance partner country capabilities in a sustainable manner.

Research collaborators should be accomplished scientists with significant experience in safe and ethical capture of bats for the molecular biosurveillance of bat-borne parasites to include Nipah and Hendra. Research collaborators should have access to and use validated methods and

Defense Threat Reduction Agency
8725 John J. Kingman Drive MSC 6201
Fort Belvoir, VA 22060-6201

protocols for PCR testing of samples suspected to contain henipaviruses. Research collaborators should have access to and relationships with well-regarded facilities known to have safely and successfully conducted research on Nipah and Hendra and that are capable of safely and securely storing strains of those and related viruses.

The research work proposed should not exceed 12 months and $200,000. A proposal and estimated budget for implementing these requirements is requested by June 19, 2015. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

Nothing in this letter shall constitute a contractual direction or affect the current negotiated cost, price or schedule contained in the contract. If the contractor believes there is an impact, the contractor must disregard that portion of the communication and immediately contact the contracting officer for direction.

Metabiota shall proceed with all coordination necessary to implement this task and communicate as needed with the DTRA CBEP Points of Contact listed below.

Executive Summary

In response to Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) regional leadership tasking via the Academic Engagement Partnership (AEP) contract vehicle, Technical Direction 010, Metabiota, Inc. seeks to support the DTRA CBEP mission through the conduction of a tailored review and, if found necessary, modification of existing One Health Epidemiology (OHE) Walter Read Army Institute of Research (WRAIR) Training Modules One and Two for key stakeholders in the Republic of South Africa (SA).

Through this activity, Metabiota will engage with key South African stakeholders including the Centers for Disease Control and Prevention – South Africa (CDC-SA), U.S. Department of Agriculture – South Africa (USDA-SA), and South Africa. This task will allow for the development of modified training materials, based on existing OHE materials developed by epidemiologists from the Walter Reed Army Institute of Research (WRAIR), to ensure that successive trainings will meet the specific training objectives and requirements of South Africa. Current OHE training materials cover basic epidemiology (Module One) and outbreak investigations (Module Two). These modules introduce basic concepts of epidemiology, statistics, outbreak investigation, surveillance, One Health, and clinical recognition of pathogens with bioterror potential.

These proposed efforts will focus on enhancing South African capacity to conduct OHE trainings, thereby enhancing the capacity to conduct disease prevention, detection, surveillance and response activities. Moreover, this activity will concurrently facilitate cooperative scientific engagement amongst key stakeholders in South Africa in support of the DTRA CBEP mission.

This document outlines the approach that Metabiota will employ to accomplish the requirement. In short, Metabiota intends to:

1. Conduct a comprehensive review of existing OHE WRAIR training materials, a landscape review of current status and understanding of South African training requirements and objectives, and coordinate revision or addition discussions.
2. Develop final revision recommendations of existing OHE materials.
3. Identify OHE training material approval requirements for South Africa and provide scientific and technical support for the facilitation of host country approval.

Project Overview

Background

Over the past few decades, we have experienced a dramatic increase in the rate of emergence and re-emergence of infectious diseases. On average, one new virus emerges every 19 months, most often with origins in animal populations. The threat of emerging pathogens affecting humans worldwide continues to increase; and underscores the need for effective, integrated human and animal disease surveillance, reporting, diagnostics and response capabilities.

To manage these risks, DTRA CBEP aims to reduce potential impacts of biological threats by enhancing biological safety and security (BS&S), awareness of biological risks, and knowledge

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

related to biological pathogens globally. To do so, DTRA CBEP works collaboratively with partner nations, other USG agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health; promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. In AFRICOM, specifically, DTRA CBEP seeks to enhance One Health Epidemiology capabilities and develop and maintain local and regional operational and training capacity in order to sustainably manage the threat of infectious disease events.

In support of this approach, Metabiota intends to administer a high-value review and revision process with key South African stakeholders in order to support strategic DTRA CBEP objectives by increasing local and regional capacity to conduct OHE trainings through collaboration on topics critical to biological threat reduction, and enhancing the regional capacity to for biorisk management thereby managing the threat of infectious disease events. The teams on-the-ground experience and decades of expertise makes Metabiota well positioned to support the implementation of this activity, as well as scientific engagement in the AFRICOM's area of responsibility.

Goals and Objectives

This activity aims to facilitate approval of OHE training materials by the relevant stakeholders in the government of South Africa. Metabiota will provide DTRA CBEP partners in South Africa with support to properly orient existing OHE training materials to best fit their country-specific objectives and requirements as well as understand the necessary steps for host country approval of the OHE trainings. The delivery of these requirements will cultivate OHE knowledge and in-country capacity expansion in South Africa and allow for further opportunities for national and regional engagements.

To achieve this purpose, Metabiota and their collaborative partners will:

- Identify and collaborate with key South Africa stakeholders to develop a communication plan for the OHE training material review
- Conduct a comprehensive SME review of existing OHE training materials to provide technical support to the South African stakeholders
- Conduct a training landscape review describing the training objectives and requirements of South Africa
- Develop recommendations for revision or additions to existing OHE training materials based on identified South African training needs
- Provide scientific and program management support to facilitate host country approval of OHE training
- Develop a proposed training event plan based on specific training needs and requirements for South Africa. (i.e. type and number of trainees, etc.)

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Impact

Through the implementation of a Metabiota facilitated review of existing OHE training materials with key South Africa stakeholders, and the identification of South African requirements for host-county OHE training approvals, DTRA CBEP will have:

- Enhanced South Africa's capacity to conduct OHE trainings, thereby enhancing their national and regional capacity to conduct disease prevention, detection, surveillance and response activities for pathogens with bioterror potential.
- Facilitated cooperative scientific engagement amongst key stakeholders in South Africa and enhancing their networks for collaborative research and disease detection and control activities.

This activity will provide a measurable and achievable result in the coordination of approval for OHE training materials while promoting a collaborative network with key local stakeholders in South Africa.

Risk Management

In order to maintain course action and guarantee trainings that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown on the next page as Table 1. Identifying and acknowledging the risks associated with not implementing this training, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Schedule and Performance						
Technical Engagement/Input	Key South African stakeholders not engaged in the process and do not provide review comments and feedback in timely manner	5	3	Med-High	Metabiota will work closely with CBEP to identify and engage the most appropriate coordination points of contact for each key stakeholder	Med
Communication	Effective, informative, and ongoing communication with key SA stakeholders to allow for coordination of efforts and meet the deliverables	4	4	(b)(4); (b)(6)	Metabiota will hold regularly scheduled conference calls with key SA stakeholders and CBEP to encourage ongoing discussion throughout all phases of this effort	Med
Fluidity in Process and Coordi	Identifying the necessary tasks to facilitate host country approval will be an iterative process, and the overal objective must be maintained through the multiple iterations	5	5	Med	Metabiota will discuss goals and objectives for each iteration of the review and revision process to ensure that overall objective is met	(b)(4); (b)(6)

Implementation Plan

Introduction

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager and Regional Program Manager, and Country Manager to direct the operational and administrative support required to ensure implementation of OHE RSA. Our Program Manager will oversee these activities, with the support of Research and Data Analyst, Project Coordinator, stakeholder collaborators and SMEs to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Communications Protocols

Metabiota will maintain open communications with international collaborators necessary for implementing the training, to include local and regional stakeholders. In addition, Metabiota will maintain routine communication with DTRA CBEP to ensure they have full visibility on the training engagement, status and process of execution.

Technical Approach

Phases of Technical Approach

Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following phases are required for this project:

Phase 1: Initiation and Coordination
- *Subtask 1: Identification of Stakeholders*
- *Subtask 2: Requirements Review*

Phase 2: Training Materials and Landscape Review
Phase 3: Host Country Approval Facilitation Support

Phase 1 – Initiation and Coordination (July 1 – August 31, 2015)

Subtask 1: Identification of Stakeholders

Objective: Identify all relevant stakeholders necessary for training material approval and develop and establish a working communications plan for coordination of project efforts.

Process: Metabiota, in coordination with DTRA CBEP, will identify POCs with key in-country stakeholders including, but not limited to, the Centers for Disease Control and Prevention – South Africa (CDC-SA), U.S. Department of Agriculture – South Africa (USDA-SA), and key entities within the government of South Africa including but not limited to the Department of Agriculture, Forestry and Fisheries (DAFF), National Department of Health (NDOH), and National Institute for Communicable Diseases (NICD).

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Subtask 2: Requirements Review
Objective: Understand South Africa approval requirements and processes.

Process: In coordination with key in-country stakeholders, Metabiota will determine what processes are required to secure host country approval of training materials. During this time, the lead Metabiota SME will conduct a comprehensive review of the existing OHE training materials to enable them to provide the South African stakeholders with technical support during the materials review process. Based upon their initial assessment of SA needs and training materials, the lead SME may require additional SME resources. As coordination proceeds, Metabiota will solicit an opinion from key SA stakeholders as to the suitability of the current training materials for South African training needs and determine whether they currently meet the standards for approval.

Deliverables:

- Deliverable 1: Submission of key stakeholder POC list and communication plan.
- Deliverable 2: Submission of South African host country approval requirements and process report.
- Deliverable 3: Submission of SME OHE review report.

Phase 2 – Training Landscape Development (September 1-December 31, 2015)
Objective: Develop an understanding of South African training objectives and requirements and identify potential revisions or additions to existing OHE materials.

Process: Metabiota will coordinate with stakeholder POCs to develop an understanding of South Africa's training objectives and requirements for the conduction of OHE trainings and for the host-country approval of OHE training materials. Metabiota SME's will provide stakeholders with an overview of the existing OHE training materials and preliminary recommendations for areas of review. Based on stakeholder input, Metabiota will develop a training landscape review.

Deliverables:

- Deliverable 1: Submission of the landscape review report.

Phase 3 – Host Country Approval Facilitation Support (September 1-December 31, 2015)
Objective: Identify revisions or additions to OHE training materials, and provide support to South African stakeholders in obtaining host country approval of OHE trainings and training materials.

Process: Metabiota will provide recommendations for revisions or additions to the existing training material based on inputs gathered from key stakeholders in previous stages. Metabiota SME's will engage, facilitate, and support SA stakeholders in their efforts to make any modifications necessary for host country approval. During this time, Metabiota SMEs and Program Management will coordinate with SA stakeholders to ensure proper technical and

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

program management support is provided to facilitate the host country approval process. Near the end of this phase, Metabiota will convene an in-country working group meeting with SA stakeholders to facilitate any final modifications to the material. At this time, if the SA environment allows for it, Metabiota will develop an OHE training plan with the SA stakeholders.

Deliverables:

- Deliverable 1: Submission of OHE training material revision or addition recommendations.
- Deliverable 2: Provide monthly updates on OHE training material host country approval.
- Deliverable 3: Submission of post-action report and OHE training plan recommendations.

The below table describes the detailed technical approach that Metabiota will take to complete this effort and provide the required deliverables. The following table (Timeline) describes the anticipated timeline of each phase.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Technical Approach

Program Element	Program Tasks	Resources Required	Key Milestones and Deliverables	Projected Timeline
Phase 1.1: Coordination	• Develop list of SA and USG stakeholders necessary for training material approval • Develop communication plan for coordinating with all relevant stakeholders	• SME III Epidemiology • Program Manager (PM) • Project Coordinator (PC)	1. Establish communication with key stakeholders 2. Communication Plan	Months 1-2
Phase 1.2: Requirements Review	• Develop understanding of requirements and process for training material approval • Conduct comprehensive review of existing OIE training materials • Gather initial assessment by SA stakeholders of status of training materials.	• SME III – Epidemiology • SME III/Trainer III (as needed) • Program Manager (PM) • Project Coordinator (PC)	1. Documented process for approval of materials 2. Complete review of existing OIE training materials	Months 1-2
Phase 2: Training Landscape Development	• Coordinate with key stakeholders to understand SA training objectives and requirements: based on input from key stakeholders develop training landscape review • Provide overview of existing OIE training materials; coordinate with key stakeholders to understand SA concerns with training materials and why	• SME III Epidemiology • SME III/Trainer III (as needed) • PM • PC	1. Obtain clear understanding of SA training objectives and requirements 2. Training Landscape Review	Months 3-6
Phase 3: Facilitation of Host Country Approval	• Develop recommendations in conjunction with SA stakeholders for revision of materials or additional content. • Provide scientific/technical and program management support to facilitate host country approval of OIE training	• SME III Epidemiology • SME III/Trainer III (as needed) • PM • PC	• Recommendations for OIE training materials revisions or additions • Facilitate SA approval for OIE training materials • Post-action report and OIE training plan	Months 3-6

This material shall not be disclosed outside the U.S Government and shall not be duplicated, used or disclosed in a whole or in part for any purpose other than to evaluate this material. If, however, a contract is awarded to this offeror as a result of- or in connection with- the submission of this material, the U.S Government shall have the right to duplicate, use or disclose the data to the extent provided in the resulting contract. This restriction does not limit the U.S Government's right to use information contained in this material if it is obtained from another source without restriction.

Timeline

Phase	Q3 2015			Q4 2015		
	July	Aug	Sept	Oct	Nov	Dec
Phase 1: Initiation and Coordination						
Phase 2: Training Landscape Development						
Phase 3: Host Country Approval Facilitation Support						

Management Approach

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the Program Manager, Trainer, and Subject Matter Experts based on their administrative and scientific expertise. This team of experts will ensure the overall project management and tasks associated with this effort are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

Initiation

Prior to initiating any action, Metabiota and DTRA CBEP will secure a clear understanding of the objectives and mission of this undertaking, and make sure all stakeholders agree to it. Following authorization to proceed by DTRA CBEP, Metabiota will move into the planning and execution of the community outreach and regional workshop activities.

Execution

The core project management team will maintain oversight and implementation of the project at all times and will ensure rapid execution of this effort, tracking objectives to ensure the project stays on schedule to finalize the adapted training materials. The project will be managed according to the phased implementation plan and will be course corrected, as needed to ensure target end-goals are reached. The following tools will be used to guarantee the project schedule will be maintained:

Project Administration

1. Weekly team meetings and conference calls will be held to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Coordinator, and will include the Regional Program Manager, Training Coordinator,

This material shall not be disclosed outside the U.S Government and shall not be duplicated, used or disclosed in a whole or in part for any purpose other than to evaluate this material. If, however, a contract is awarded to this offeror as a result of- or in connection with- the submission of this material, the U.S Government shall have the right to duplicate, use or disclose the data to the extent provided in the resulting contract. This restriction does not limit the U.S Government's right to use information contained in this material if it is obtained from another source without restriction.

SMEs, and AEP leadership, as needed based on the requirements and stage of implementation.
2. Routine calls and communication will be held with DTRA CBEP regional leadership and Metabiota to provide routine status updates and ensure project implementation expectations are met.

Project Reporting

1. Weekly status reports will be provided by the Program Manager to senior Metabiota leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction, as needed to ensure project goals are met.

Monitoring and Controlling:

1. Routine risk assessment will be performed internally among the Metabiota project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with DTRA CBEP regional leadership to ensure the project remains on track and is implemented according to standard.
3. Routine oversight and coordination will be performed to ensure stakeholders are performing in-country requirements to ensure successful execution of this activity. Monitoring will include both administrative and fiscal oversight when appropriate.

Completion

Metabiota will drive the project to completion in a timely manner by maintaining a focused project schedule with routine meetings and communication with DTRA CBEP regional leadership. This will allow for continued coordination, while maintaining targeted objectives. As the activity progresses, Metabiota will provide all required deliverables and after action reports to allow for lessons learned and continuation of solid execution and implementation of activities. Metabiota believes that the experience and management it will bring to this project, in collaboration with DTRA CBEP will guarantee success.

Cost Management

The Metabiota team and all collaborators will maintain an acute focus on cost management to ensure that project deliverables are met at a reasonable cost. Metabiota will provide full oversight of all partners to ensure accurate and responsive financial reporting and will facilitate cost savings to the Government wherever possible. Metabiota will follow procurement regulations ensuring the best price is received under the time constraints using all means available.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Budget Narrative

Period of Performance

The Period of Performance for this effort is May 16, 2015 to December 31, 2015.

Labor

Costs for direct labor to support this activity is required for the following personnel:

- Metabiota Program Manager: The Metabiota PM will oversee the execution of program objectives towards the completion of DTRA CBEP goals at the regional level, and will lead communication with DTRA CBEP for this activity. The PM will do so by maintaining oversight of stakeholder coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. The PM will ensure Metabiota and other potential DTRA CBEP subcontractors meet all project requirements and deliverables erstwhile ensuring the program remains within scope, budget, and timeline.
- Metabiota Project Coordinator (Trainer I): The Metabiota PC will ensure the execution of project objectives towards the completion of DTRA CBEP goals at the project level. The PC will do so by managing stakeholder coordination and project execution, with a focus on project milestone achievement and stakeholder buy-in development and maintenance. The PC will regularly communicate project status with the Metabiota PM, and will assist the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. The PC will also assist the PM in ensuring all project requirements and deliverables are fulfilled while concurrently ensuring the project remains within scope, budget, and timeline.
- Metabiota SME III – Epidemiologist to assist in the coordination with DTRA CBEP and key SA stakeholders, to obtain understanding of training objectives and requirements in SA, conduct comprehensive review of existing materials, assist in development of training landscape review, provide recommendations for revisions of existing material or for additional material content, and provide necessary scientific/technical support to facilitate approval of OHE training in SA.
- As needed, Metabiota SME III or Trainer III – Based on communications with key stakeholders and the training objectives or requirements identified in SA, the expertise of either a clinician or the Metabiota Training Coordinator will be engaged for this activity to assist in conducting comprehensive review of existing materials, assist in development of training landscape review, and provide recommendations for training strategies or revisions and additions to training material. The hours budgeted for these two positions assume a scenario where stakeholders indicate a significant need for additional external expertise in assessing materials and training landscape, and facilitating host country approval of materials.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials

Materials and supplies are required to support project activities including stakeholder outreach and coordination, training material production, and host country approval facilitation. Materials will include:

- Office Supplies
- Printing Services
- International Communication

Costs include shipping and customs clearance fees.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. Metabiota personnel performing on this project are already insured.

Travel

Funds are requested for three Metabiota staff to travel to South Africa to facilitate final modifications to training materials. Metabiota staff will support project implementation, coordinate stakeholders, and provide technical support for obtaining host country OHE training approval to the key South African stakeholders.

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP AFRICOM in the implementation of Review and tailor of WRAIR OHE Modules One and Two training materials. Metabiota will ensure, through strong project management and risk mitigation that the training will be executed in an efficient and timely manner delivering a top quality course geared to support enhanced biosurveillance and biosafety efforts in the region.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Appendix A - Team Metabiota Overview

Metabiota is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota currently supports a number of Defense Threat Reduction Agency`s Cooperative Biological Engagement Program (DTRA CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. Metabiota's mission aligns well with CBEP and the entire Metabiota team is focused on supporting our USG Partners in reducing the risk of biological threats worldwide, and employs a collaborative and agile approach to biological risk reduction.

To ensure a successful event, Metabiota, in coordination with DTRA CBEP regional leadership and in country partners have built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact DTRA CBEP objectives.

Executive Summary

In response to Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) regional leadership tasking via the Academic Engagement Partnership (AEP) contract vehicle, Technical Direction 011, Metabiota, Inc. seeks to support the DTRA CBEP mission by conducting awareness-raising and knowledge enhancement activities regarding African Swine Fever (ASF) in Ukraine as part of a broader regional ASF engagement effort between Ukraine, Armenia, Georgia, and Kazakhstan. These proposed efforts would focus on development and enhancement of disease prevention, detection, surveillance and response capacity within Ukraine, while concurrently facilitating cooperative research and scientific engagement in the greater region in support of the DTRA CBEP mission.

Through this activity, Metabiota will engage with SAFOSO AG, a Swiss consulting company with expertise in veterinary health-related capacity building and training efforts, Ukrainian subject matter experts (SME), and other local and regional stakeholders in order to direct technical support in the development and implementation of public awareness initiatives, including risk assessments and mitigation strategies to reduce the threat of ASF in domestic and wild swine populations.

This document outlines the approach that Metabiota will employ to accomplish the requirement. In short, Metabiota intends to:

1. Facilitate the rollout and observe an independent outreach teaching exercises program conducted by Ukrainian SMEs for laymen that have regular contact with swine populations in order for them to recognize clinical and epidemiological patterns of ASF.
2. Support the expansion of in-country understanding of common sources and routes of ASF exposure, preventative measures, economic impacts of ASF, how to recognize symptoms, and how to respond to suspected cases.
3. Support Ukrainian stakeholder engagement with regional research scientists and other biological risk management stakeholders through cooperative pursuits and enhancing host-nation capacity to conduct disease surveillance and response.

Project Overview

Background

Especially dangerous pathogens in agriculture are a challenge for animal health and food security infrastructures and pose a significant threat to security and economic stability across the globe. To manage these threats, DTRA CBEP aims to reduce potential impacts of agricultural biological threats by enhancing biological safety and security (BS&S), awareness of biological risks, and knowledge related to biological pathogens globally.

To do so, DTRA CBEP works collaboratively with partner nations, other USG agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health; promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

secure facilities in a sustainable manner. In Eastern Europe and Central Asia, specifically, DTRA CBEP seeks to increase regional collaboration on topics critical to biological threat reduction and enhance the regional capacity to perform biorisk management and mitigate the threat of infectious disease events.

Since emerging in the region, many ASF cases have occurred in pig farms along shared boundaries. Although surveillance of wild boars and commercial pigs for ASF is ongoing, reemergence and spread of the disease remains a threat to commercial swine populations through interactions of wild boar with domestic swine raised within small private farms or backyards, uncontrolled movement of domestic pigs and, swill feeding. As Former Soviet Union (Eastern European - EE) countries serve as geographical land barriers between the Russian Federation, where ASF is endemic, and Western Europe and Asia, raising awareness among swine farmers, veterinarians, and other key personnel is an integral component in preventing the spread of this disease.

TAP-4 was originally developed under the Biological Threat Reduction Integrating Contract (BTRIC) mechanism in 2013. However, this funding mechanism, including all ongoing research efforts, ceased February 2014. In an effort to complete the final TAP-4 stages and meet previously identified goals and objectives, DTRA CBEP tasked Metabiota with implementing TAP-4 in Ukraine to raise awareness and enhance local ASF knowledge, and to aid the establishment and standardization of a regional alliance between several DTRA CBEP EE partner countries.

In support of this approach, Metabiota intends to provide administrative and technical support for the rollout of an independent outreach teaching exercise program conducted by Ukrainian SMEs, in addition to supporting a regional workshop designed to increase collaboration on topics critical to biological threat reduction, and enhancing the regional capacity to perform biorisk management and mitigate the threat of infectious disease events. The teams on-the-ground experience and decades of expertise makes us well positioned to support the implementation of these and associated activities, as well as scientific engagement in Ukraine and the other engaged countries.

Goals and Objectives

This activity aims to provide DTRA CBEP partners in Ukraine with support to manage the risk of further spread of ASF within its and its regional counterparts' borders. The delivery of these requirements will cultivate continued knowledge enhancement throughout Ukraine and expanded in country and regional disease surveillance and control capacities.

To achieve this purpose, Metabiota and their collaborative partners will:

- Identify and educate those persons who work with swine to recognize clinical and epidemiological patterns of ASF including farmers, hunters, and wild fauna management as well as those engaged in the commercial pork supply chain; Engage project collaborators from Armenia, Georgia, Kazakhstan, and Ukraine, who

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

will collaboratively develop strategies for enhancing ASF public awareness in their respective countries;
- Employ a Regional Joint ASF Working Group that will oversee development and implementation of project objectives;
- Foster fellowship between project participants through achievement of a common goal that illuminates shared interests, concerns, and challenges, providing a basis upon which to increase the capacity for future collaborative pursuits.

Impact

Through the implementation of Metabiota-facilitated ASF trainings in Ukraine and the establishment of a regional ASF alliance between CBEP EE partner countries, DTRA CBEP will have:
- Developed and enhanced disease surveillance systems targeting pathogens of security concern (ASF) and built upon regional detection and response capabilities;
- Supported collaborative awareness efforts in the region and foster collaborative scientific research by providing funding and infrastructure to key stakeholders.

This activity will provide a measurable and achievable result in raising awareness of ASF among DTRA CBEP EE partner countries and facilitating efforts in Ukraine to formally educate those who play a pivotal role in the prevention of ASF. Moreover, this activity will concurrently promote a sub-regional network of strategic collaborators and developing a sustainable infrastructure for advancing scientific research, including early detection of emergent threats.

Risk Management

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Schedule						
Project Coordination	Each regional workshop requires coordination of several entities in a timely fashion in order to have a successful event.	3	3	Medium	Establish and hold regular calls with all stakeholders, as final workshop dates grow nearer.	(b)(4); (b)(6)
Performance						
Political Instability	Ukraine's current political situation may lead to risks of being unable to safely complete in-country work, especially in eastern Ukraine.	4	4	(b)(4); (b)(6)	Metabiota has in-country personnel knowledgeable of the operating environment, and will coordinate closely with trainees to focus on safer areas of the country.	Med

Implementation Plan

Introduction

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager and Regional Program Manager, and Country Manager to direct the operational and administrative support required to ensure implementation of ASF Community Awareness Trainings and Regional Collaboration. Our Program Manager will oversee these activities, with the support of both CONUS and OCONUS Metabiota staff to ensure that all

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Communications Protocols

Metabiota will maintain open communications with international collaborators necessary for implementing the training, to include regional partners facilitating the training engagement and logistics. In addition, Metabiota will maintain routine communication with CBEP to ensure they have full visibility on the training engagement, status and process of execution.

Technical Approach

As this project is an ongoing effort, the technical approach outlined below covers only the highlights of the activities to be conducted for the portion of the project's period of performance that lies in the Metabiota AEP Option Year (16 May 2015 onward). A full description of project activities can be found in the previously approved Form A.

Phases of Technical Approach

Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following phases are required for this project:

Phase 1: Regional Meeting #3: Training Workshop 2, Lviv, Ukraine
Phase 2: Independent Outreach Teaching Exercises Rollout and Observation
Phase 3: Regional Meeting #4, Summary Workshop, Tbilisi, Georgia
Phase 4: Summary Report Development

Phase 1 – Regional Meeting #3: Training Workshop 2; Lviv, Ukraine, May 18 – 22
Objective: Build on the accomplishments from Regional Meeting #1 (Kick Off Meeting: Yerevan, Armenia) and #2 (Training Workshop 1: Almaty, Kazakhstan) to continue adaptation of materials for country specific distribution.

Process: Metabiota, in coordination with DTRA CBEP and CLS, will provide Ukrainian SMEs with support to participate in a collaborative workshop with representatives from the other countries involved, conducted and observed by SAFOSO under the direction of Metabiota contractual agreements. The second training workshop will build off of the first training workshop, and, include adaptation of materials for country specific distribution, define the approach for education and distribution based on country specific infrastructure and policy. It will also include discussions lead by each country on current diagnostics and response procedures (if any) and potential improvements). The benefits to including all stakeholders in this training stage is to get an understanding of the strengths and weaknesses of implementation in each country and lessons that may be applied to country specific approaches.

Deliverables:

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

- Deliverable 1: Adapted materials and a strategy for SME Training-of-Trainer (ToT) training to be conducted in each country.

Phase 2 – Independent Outreach Teaching Exercises (June 29 – early November)
Objective: Facilitate technical support and observation of an outreach teaching exercise program conducted by Ukrainian SMEs for laymen that have regular contact with swine populations in order for them to recognize clinical and epidemiological patterns of ASF.

Process: Metabiota, in coordination with DTRA CBEP, will provide four Ukrainian SMEs with support to participate in a ToT program, conducted and observed by SAFOSO under the direction of Metabiota contractual agreements. At the conclusion of these ToT activities, Ukrainian SMEs will initiate community outreach teaching exercises, targeting known ASF risk areas, by identifying and educating those persons who work with swine to recognize clinical and epidemiological patterns of ASF including farmers, hunters, and wild fauna management as well as those engaged in the commercial pork supply chain.

During Regional Meeting #2 (Almaty, Kazakhstan), it was determined that Oblast-level veterinarians would be the optimal recipients for the initial ToT event, which will take place in Kiev, Ukraine and under the supervision of SAFOSO. Oblast Veterinarians will be educated on: signs and symptoms of ASF, diagnostics, reporting, epidemiology, and economic impact. Additionally, Oblast Veterinarians will be provided fliers and posters, which have been tailored for use in Ukraine, to take back to their respective oblasts. The aforementioned materials will then be incorporated into the day-to-day activities of the Oblast Veterinarians, which include regular visits to villages, small farms, as well as oversight of hunting activities.

Deliverables:

- Deliverable 1: Submission of community outreach target audience criteria, location justifications, and participant lists for each of the 12 trainings (500 training participants max).
- Deliverable 2: Submission of training materials, evaluations, and post-action reports for the conduction of 12 outreach-teaching exercises.

Phase 3 – Regional Meeting #4 Summary Workshop; Tbilisi, Georgia, November 2015
Objective: Support Ukrainian stakeholder engagement with regional research scientists and other biological risk management stakeholders through cooperative pursuits and enhancing host-nation capacity to conduct disease surveillance and response, including ASF-specific public awareness programs.

Process: Metabiota, in coordination with DTRA CBEP, will provide four Ukrainian SMEs with support to participate in a three-day summary workshop, taking place in Tbilisi, Georgia. Under the guidance of SAFOSO, the Ukrainian SMEs will present their work, experiences, and shared lessons learned with their regional counterparts implementing sister DTRA CBEP-supported ASF risk management programs.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Through this workshop, Metabiota aims to support the establishment of a Regional Joint ASF Working Group that will oversee the development and implementation of project objectives. Moreover, Metabiota aims to foster fellowship between various DTRA CBEP project participants through the achievement of a common goal that illuminates shared interests, concerns, and challenges, providing a basis upon which to increase the capacity for future collaborative pursuits.

Deliverables:

- Deliverable 1: Submission of participant lists, indicating role and presentation topics, for the Regional Workshop (#4).
- Deliverable 2: Submission of workshop presentation materials, evaluations, and post-action reports for all travelers.

Phase 4 – Summary Report Development (November 2015 – February 2016)
Objective: Capture processes developed, lessons learned, and overall status of ASF in Ukraine.

Process: The Metabiota team, including SAFOSO, will work jointly with the teams from the sister projects to develop final reports capturing lessons learned and the current status of ASF in Ukraine. These reports may be submitted for publication, in order to pass on the knowledge learned to other countries that may be dealing with ASF, or be presented at an international meeting attended by project collaborators and members of the Regional Joint ASF Working Group.

Deliverables:

- Final report detailing overall processes and lessons learned, possibly for submission to a peer-reviewed journal.
- Progress report on status of ASF in project countries, for presentation internationally.

Management Approach

Project Team Structure

Metabiota's project team will include the AEP program leadership, the Program Manager, Project Coordinator, Travel Coordinator and a team of Research Collaborators and Subject Matter Experts that will be tasked with specific assignments to support the development and implementation of this activity based on their administrative and scientific expertise. This team of experts will ensure the overall project management and tasks associated with the training are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

Subcontract – SAFOSO

In order to effectively disseminate information and raise public awareness within the scope of this project, Metabiota is seeking support from the larger, European-driven ASF prevention effort known as "Targeted research effort on African swine fever" (ASFORCE). ASFORCE is a consortium of 17 laboratories and organizations from Western Europe and the Russian

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Federation (RF), which was established to combat the spread of ASF and improve ASF research in the region. Within ASFORCE, SAFOSO has conducted multiple ASF workshops to raise ASF awareness within the RF. By leveraging those trainers used in ASFORCE to raise awareness in the EE states, and particularly Ukraine, the use of SAFOSO to conduct this activity may provide information and networking expansion opportunities between the EE states and their Western European counterparts on ASF topics.

Initiation

Prior to initiating any action. Metabiota and DTRA CBEP will secure a clear understanding of the objectives and mission of this undertaking, and make sure all stakeholders agree to it. Following authorization to proceed by DTRA CBEP, Metabiota will move into the planning and execution of the community outreach and regional workshop activities.

Execution

The core project management team will maintain oversight and implementation of the project at all times and will ensure rapid execution of all phases, tracking objectives to ensure the project stays on schedule and within budget to complete this activity. The project will be managed according to the phased implementation plan and will be course corrected, as needed to ensure target end-goals are reached. The following tools will be used to guarantee the project schedule will be maintained:

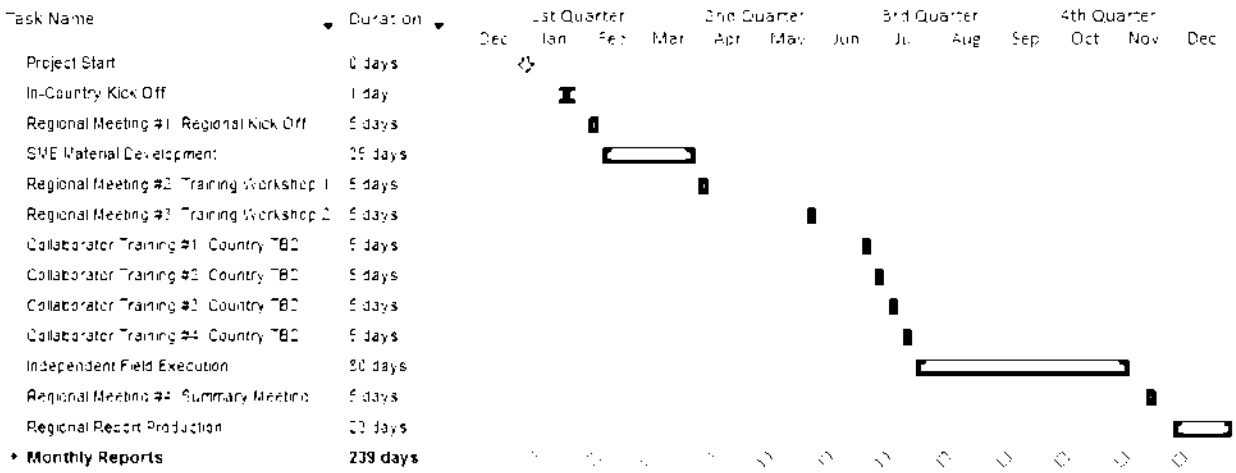
Project Administration:

1. Weekly team meetings and conference calls will be held to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Coordinator and will include the Program Manager, Training Coordinator, and AEP leadership, as needed based on the requirements and stage of implementation.
2. Routine calls and communication via email will be held with DTRA CBEP regional leadership and Metabiota to provide routine status updates and ensure training implementation.

Project Reporting:

1. Weekly status reports will be provided by the Program Manager to senior Metabiota leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction, as needed to ensure training goals are met.

Monitoring and Controlling



1. Routine risk assessment will be performed internally among the Metabiota project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with DTRA CBEP regional leadership to ensure the project remains on track and is implemented according to standard.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

3. Routine oversight and coordination will be performed to ensure SAFOSO is performing all necessary requirements to ensure successful execution of the training. Monitoring will include both administrative and fiscal oversight.

Timeline

The original TAP-4 timeline under the BTRIC mechanism can be found below. As this activity has consistently stayed true to this original schedule, Metabiota will complete Phase 1-4 of this activity as originally planned, beginning with Phase 1- Regional Meeting #3. Phase 2 - In-Country ToT will take the scheduling place of Collaborator Training #1 in the anticipated schedule.

Completion

Metabiota will drive the project to completion in a timely manner by maintaining a focused project schedule with routine meetings and communication with DTRA CBEP regional leadership. This will allow for continued coordination, while maintaining targeted objectives. As the activity progresses, Metabiota will provide all required deliverables and after action reports to allow for lessons learned and continuation of solid execution and implementation of activities. Metabiota believes that the experience and management it will bring to this project, in collaboration with DTRA CBEP will guarantee success.

Cost Management

The Metabiota team and all partners will maintain an acute focus on cost management to ensure that this activity is delivered at a reasonable cost to the government. Our team will provide full oversight of SAFOSO to ensure accurate and responsive financial reporting and will facilitate cost savings wherever possible. Metabiota will follow procurement regulations ensuring the best value is obtained under the time constraints using all means available.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Budget Narrative

Period of Performance

The Period of Performance for this effort is May 16, 2015 to January 31, 2015.

Labor

Costs for direct labor to support this activity is required for the following personnel:

- Metabiota Program Manager: (b)(6) will oversee and execute the project to include management of deliverables, logistics, procurement, tracking of project requirements, and implementation. The program manager will also be responsible for final decision making, coordinating with and reaching consensus with representatives of the sister programs in Armenia, Georgia, and Kazakhstan, and assisting with the drafting of the final deliverable reports.
- Metabiota Trainer I: (b)(6) will assist in coordinating project activities, to include assisting in management of deliverables, logistics, procurement, tracking of project requirements, deliverables and logistics. Trainer I will also aid in coordination with representatives of the sister programs in Armenia, Georgia, and Kazakhstan, and assisting with the drafting of the final deliverable reports.
- SAFOSO Trainer III: (b)(6) will conduct ToT training and observational activities and Regional Workshop oversight, and assist with the drafting of the final deliverable reports.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials

Significant materials and supplies are not anticipated to be required for this effort. However, we are budgeting for a small quantity of office supplies in case last-minute printing of agendas, training materials, or workshop materials is required to successfully execute and support in-country project activities.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for SAFOSO staff for the period of performance for this engagement. Metabiota personnel performing on this project are already insured.

Subcontracts

A Subcontract will be issued to SAFOSO for time provided by their Trainers, as well as materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Travel is requested to support all SAFOSO Trainers to facilitate project implementation and conduct training and supportive activities in this effort.

Travel is also requested for Metabiota Program Manager and Trainer I to travel to Tbilisi, Georgia, to participate in the Regional Summary Workshop.

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP's mission in Ukraine in the implementation of Community Outreach to Support Understanding of African Swine Fever (ASF) Ecology and Epidemiology in Eastern Europe (EE): Training and Implementation for Methods and Strategies for Control and Prevention (Ukraine TO4 TAP4. Metabiota will ensure, through strong project management and risk mitigation, that the training will be executed in an efficient and timely manner delivering a top quality program geared to support enhanced biosurveillance and biosafety efforts in the region.

Appendix A - Team Metabiota Overview

Metabiota is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota currently supports a number of Defense Threat Reduction Agency's Cooperative Biological Engagement Program (DTRA CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. Metabiota's mission aligns well with DTRA CBEP and the entire Metabiota team is focused on supporting our USG Partners in reducing the risk of biological threats worldwide, and employs a collaborative and agile approach to biological risk reduction.

To ensure a successful event, Metabiota, in coordination with DTRA CBEP regional leadership and in country partners have built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact DTRA CBEP objectives.

RE: Metabiota Proposal TD011 Ukraine TADT Activity Project 4 (TAP-4)
AEP DTRA Contract No. HDTRA1-14-C-0104

Dear (b)(6)

Metabiota, Inc. (Metabiota) presents the attached proposal in response to the Letter of Technical sent by DTRA on June 29, 2015 for continued implementation of the TADR research project.

Metabiota intends to engage Safoso as a Subcontractor in support of this initiative.

For the effort described, Metabiota estimates the Revised Rough Order of Magnitude (ROM) to be **$131,069.00** for a Period of Performance of May 16, 2015 to January 31, 2016. The detailed budget is included. This proposal shall remain valid for six (6) months from the date of this letter.

Please feel free to contact (b)(6) with questions or concerns at
(b)(6)

Sincerely,

(b)(6)
Contracts Manager

RE: Metabiota Proposal TD012 continued implementation of research activity project UP-2 (Ukraine Project 2).
AEP DTRA Contract No. HDTRA1-14-C-0104

Dear (b)(6)

Metabiota, Inc. (Metabiota) presents the attached proposal in response to the Letter of Technical sent by DTRA on June 29, 2015.

Metabiota intends to engage Kansas State University, CRDF Global and, potentially, the University of Florida as Subcontractors in support of this initiative.

For the effort described, Metabiota estimates the Revised Rough Order of Magnitude (ROM) to be **$813,079** for a Period of Performance of May 16, 2015 to May 15, 2016. The detailed budget is included.

Please feel free to contact (b)(6) with questions or concerns at (b)(6)

Sincerely,

(b)(6)

Executive Summary

In response to Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) regional leadership tasking via the Academic Engagement Partnership (AEP) contract vehicle, Technical Direction 012, Metabiota, Inc. seeks to support the DTRA CBEP mission through the conduction of research to identify the current distribution of especially dangerous pathogens (*F. tularensis* and *B. anthracis*) throughout regions of Ukraine, which is a critical step in mitigating risk of exposure to the aforementioned causative agents. This research effort will help improve disease detection and reporting measures in the Ukrainian human and animal health sectors in support of the DTRA CBEP mission.

This document outlines the approach that Metabiota will employ to accomplish the requirement. In short, Metabiota intends to:

1) Develop a historical GIS-based analyses of tularemia (UCDC) and anthrax (SSCIBSM) data sets, including pathogen passports, field collection records, and field responses (nationwide).
2) Conduct active surveillance for *Francisella tularensis* in ticks and small mammal host populations, with the integration of appropriate culture and PCR-based analyses for detection of the pathogen.
3) Conduct surveillance of livestock herds and environmental sampling for *Bacillus anthracis*, with the integration of appropriate PCR-based detection assays.
4) Develop advanced spatial analyses using GIS and remote sensing approaches to define the geographic distributions of the pathogens and landscape dynamics that effect those distributions.

Project Overview

Introduction

Especially dangerous pathogens (EDPs), including those found naturally in the environment, are a challenge for public health and security infrastructures and pose a significant threat to security and economic stability across the globe. To manage these threats, DTRA CBEP aims to reduce potential impacts of biological threats by enhancing biological safety and security (BS&S), awareness of biological risks, and knowledge related to biological pathogens globally.

To do so, DTRA CBEP works collaboratively with partner nations, other USG agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health; promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. In EUCOM, specifically, DTRA CBEP seeks to

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

increase the understanding of natural incidences of pathogens of security concern in Ukraine in an effort to better manage the threat the threat of infectious disease events.

UP-2: Incorporating GIS, Remote Sensing, and Laboratory Diagnostics into Human and Veterinary Disease Surveillance for Tularemia and Anthrax in Ukraine was originally developed and implemented under the Biological Threat Reduction Integrating Contract (BTRIC) mechanism in 2011. However, this funding mechanism, including all ongoing research efforts, ceased February 2014. In an effort to complete the original research objectives, DTRA CBEP Ukraine leadership tasked Metabiota with implementing the remainder of UP-2 under the AEP program. Through this activity, Metabiota will conduct high-value research that will support strategic DTRA CBEP objectives by increasing regional collaboration on topics critical to biological threat reduction and enhancing the regional capacity to perform biorisk management and mitigate the threat of infectious disease events.

Goals and Objectives

This activity aims to develop both explanatory and predictive, spatially-explicit models to explore the geography and ecology of EDPs, specifically *Francisella tularensis*, the causative agent of tularemia, and *Bacillus anthracis*, the causative agent of anthrax, across Ukraine. Metabiota will do so by using historical data to explore the distribution, seasonality, and ecology of zoonosis at the national scale, while active surveillance and field efforts will concentrate on local scale patterns of land cover change in relation to disease agent, host, and/or vector distributions.

To achieve these purposes, Metabiota will divide this activity into four specific objective categories to learn from the history of these zoonosis while also proactively managing any future threats. These goals are organized to provide long-term, sustainable teams across UP institutes to maintain this and future efforts. Metabiota and their collaborators will:

1) Develop a historical GIS-based analyses of tularemia (UCDC) and anthrax (SSCIBSM) data sets, including pathogen passports, field collection records, and field responses (nationwide).
2) Conduct active surveillance for *Francisella tularensis* in ticks and small mammal host populations, with the integration of appropriate culture and PCR-based analyses for detection of the pathogen.
3) Conduct surveillance of livestock herds and environmental sampling for *Bacillus anthracis*, with the integration of appropriate PCR-based detection assays.
4) Develop advanced spatial analyses using GIS and remote sensing approaches to define the geographic distributions of the pathogens and landscape dynamics that effect those distributions.

Threat Reduction Outcomes

This research will provide valuable insight into the distribution, causative agents, and threat level of tularemia and anthrax in Ukraine. This will not only be beneficial to Ukraine, but can

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

be used in the global network of research collaborations and for advancing scientific research, including the early detection of emergent disease threats. Research is critical to capacity building and supports early detection and response to emerging threats, thus safeguarding the world from infectious disease threats. Scientists working on UP-2 will be trained in molecular diagnostic techniques, which will improve time of detection and, potentially, enable earlier treatment. Additionally, these learned skills could be applied to a variety of non-programmatic and more common diseases that are currently circulating in Ukraine. Early identification and response will mitigate potential loss of human and animal life and associated economic burdens. Increased biosafety acumen when working with pathogens, particularly EDPs, is a cornerstone of CBEP engagement. As part of this effort, laboratory personnel will be trained to properly implement biosafety protocols, including donning and doffing personal protective equipment (PPE), as required by the agent in question. Participants will be trained in modern field approaches to rodent and tick collection, reservoir identification, and diagnostic analyses. All engaged personnel will be trained to follow internationally recognized reporting measures (e.g., IHR).

Furthermore, as part of the project implementation process, project stakeholders will provide regular updates to DTRA via Contract Data Requirement Lists (CDRLs). Information presented within these reports will help all stakeholders (e.g., USG and host country ministries) understand potential areas of future engagement to further bolster the host countries capabilities.

Through the implementation of Metabiota-facilitated tularemia and anthrax research, DTRA CBEP will have:

- Developed predictive models for the incidence of tularemia and anthrax;
- Improved and enhanced disease detection, reporting and response systems across Ukraine;
- Assisted the adoption and use of safe handling techniques during collection and analysis of samples to include proper handling, transport, and storage of samples;
- Increased scientific capabilities of Ukrainian partners through research collaboration and by fostering an environment of scientific partnership.

Implementation Overview

Metabiota anticipates UP-2 implementation to closely reflect the process successfully completed the first two years of the project under the BTRIC mechanism, which resulted in nine scientific manuscripts published or in review. Importantly, members of the original development and implementation teams have been secured to continue this engagement. In securing the original research team, Metabiota has ensured that all institutional knowledge of UP-2 remains intact, including those relationships with Ukrainian scientists, which took years to foster. Notably, some UP-2 implementing partners currently lie outside of Metabiota AEP authority, including the BTRIC, Walter Reed Army Institute of Research (WRAIR), and

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

University of Florida (UF). The management approach below includes descriptions of how these parties will be managed.

The experimental approach remains consistent with the approach outlined in the Form A that was approved under the BTRIC and the approach documented in the Technical Proposal submitted under the base year of the AEP contract. Project collaborators have identified high priority tasks and strategies for moving forward, which are outlined in the technical approach below.

Management Approach

Project Team Structure

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager and Country Manager as needed to direct the operational and administrative support required implement the research project. Our Program Manager will oversee research efforts with the support of a Project Coordinator, Travel Coordinator, Research Collaborators and Subject Matter Experts to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Currently, only Kansas State University (KSU) is contracted directly through Metabiota AEP. (b)(6) at WRAIR are to be funded via a MIPR with DTRA CBEP. University of Florida (UF) is funded through the Penn State University (PSU) AEP vehicle. However, we are proposing to bring UF's Research Collaborators into the Metabiota AEP in October 2015 after their current funding via the PSU AEP expires.

This team of experts will ensure the overall project management and tasks associated with the project are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

Communications Protocols

Metabiota will maintain open communications with both American and Ukrainian collaborators necessary for implementing the project, including any and all partners facilitating logistics for this effort such as DTRO-K (Defense Threat Reduction Office-Kyiv) and Contractor Logistics Support (CLS). In addition, Metabiota will maintain routine communication with DTRA CBEP to ensure they have full visibility on the research project's effort, status, and process of execution.

Execution

The core project management team will maintain oversight and implementation of the project at all times and will ensure rapid execution of research, tracking objectives to ensure the project stays on schedule to complete the training exercises. The project will be managed according to

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

the phased implementation plan and will be course corrected, as needed to ensure target end-goals are reached. The following tools will be used to guarantee the project schedule will be maintained:

Project Administration:

1. Conference calls will be held twice each month to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Metabiota and will include the Program Manager, Project Coordinator, Travel Coordinator, Research Collaborators, AEP leadership, and Metabiota BTRIC Ukraine personnel as needed based on the requirements and stage of implementation.
2. Routine calls and communication will be held with DTRA CBEP regional leadership and Metabiota to provide routine status updates and ensure successful implementation.
3. Metabiota will sit in the lead position of this project from an administrative standpoint. While we recognize that it is an unconventional arrangement to have a private company lead scientific collaborators from US academic institutions, a US government agency, and foreign government agencies, this structure successfully implemented the first two years of this project.

Project Reporting:

1. Weekly status reports will be provided by the Program Manager to senior Metabiota leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction, as needed to ensure training goals are met.

Monitoring and Controlling

1. Routine risk assessments will be performed internally among the Metabiota project management team to ensure the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine oversight and coordination will be performed to ensure all relevant parties (including DTRO-K, BTRIC Ukraine, and CLS) are performing in-country logistical requirements to ensure successful execution of the training. Monitoring will include both administrative and fiscal oversight.
3. Routine communications will be maintained with DTRA CBEP regional leadership to ensure the project remains on track and is implemented according to standard.

Completion

Metabiota will drive the project to completion by 15 May 2016 by maintaining a focused project schedule with routine meetings and communication with DTRA CBEP regional leadership to allow for continued coordination, while maintaining targeted objectives. As the activity progresses, Metabiota will provide all required deliverables and after action reports to allow for lessons learned and continuation of activity implementation. Metabiota believes that

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

the experience and management it will bring to this project, in collaboration with DTRA CBEP, will guarantee success.

Technical Approach

Key portions of the proposal are highlighted below. Specific technical details on the work to be performed are listed in the attached Form A. Task numbers referenced herein correspond to those from the approved Form A.

Tularemia Project

Project collaborators have identified 3 high priority tasks and strategies for execution:

Priority 1: Task 2.3 PCR and Culture Diagnostics for *Francisella tularensis*
Priority 2: Task 4.3 Remote Sensing
Priority 3: Task 2.1 Survey Methods for Mammals

Priority 1: Task 2.3 PCR and Culture Diagnostics for Francisella tularensis

All samples collected in the field (1,245 rodents and 5,546 ticks) were transported to UCDC for culture and PCR-based diagnostics of *F. tularensis*. Approximately, 60% of samples have been tested using classical and/or modern diagnostic techniques. Results have been varied, with no positive cultures identified, but with several positive PCR results [redacted] will travel to UCDC, review the technology and hardware, and implement the collaboratively developed standard operating procedures and safety protocols for the work required. As part of this task, field samples will be analyzed for *F. tularensis*.

UCDC and US personnel are well suited and qualified for the diagnostic work, and the bulk of exposure phase in this study is to biovar B, where risk of infection is less. BSL 2+ (BSC) conditions and protocols will be maintained throughout the project, with the option to work in BSL-3 if a *F. tularensis* isolate is confirmed by bacteriological and PCR tests.

Metabiota's project team will employ a two-pronged strategy of both real-time and conventional PCR for diagnostic work in the *F. tularensis* portion of UP-2, using extracted DNA from both animal blood and culture positive plates at UCDC. First, initial screens will be conducted using real-time PCR assays, unlabeled oligonucleotide primers, and published primer sequences that are proven for the agents. Second, we will use primers for conventional PCR that are highly specific for *F. tularensis* and use this assay to regularly test random selections from the library of strains cataloged in UP-2 field efforts. The conventional PCR assay will detect genetic loci not targeted by the real-time assays and provide QC via direct comparison with the selected real-time PCR assays. This conventional PCR assay will provide a sub-type by PCR of either biovar A (subspecies *tularensis*) or B (subspecies *holarctica*). If feasible, DNA aliquots from PCR-confirmed positives and potential near-neighbors may be sent to the US for further confirmatory validation. The presence of biovar A is not suspected but, if found would indicate a more serious human public health risk and warrant further attention.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Priority 2: Task 4.3 Remote Sensing

Because the distribution of tularemia is affected by both land use and land cover (LULC), development of remotely sensed LULC maps is a major component of the UP-2 project. Prior to suspension of the project, the first phase of land cover mapping was nearly complete. This first phase consisted of mapping LULC at 30m spatial resolution using remotely sensed data from the LANDSAT TM\ETM+ sensor series. The classification scheme used was largely based on the European Environmental Administration (EEA) CORINE classification scheme. It was chosen for the following two reasons: 1) it uses hierarchical, generalized classes that can be decomposed into more detailed land use and land cover categories based on available information, and 2) it is compatible with the EEA EUNIS habitat/biotope mapping scheme, allowing project researchers to more directly relate land cover to the habitat of potential tularemia hosts.

At the time of project suspension, CORINE level 1 and 3 maps had been completed, but not validated. The EUNIS habitat map had not been completed. The three major remote sensing tasks for the restarted project will therefore be; convert the CORINE classes to EUNIS categories based on the Level 3 LULC maps. 2) validate the level 1 and 3 CORINE maps and the EUNIS map by field survey. and 3) provide these maps along with a quantitative assessment of their accuracy to the modeling component of activity, using an existing but currently inactive web based geodatabase.

Conversion of the CORINE map to EUNIS categories is a straightforward process, which will be done using the guidelines outlined in Moss and Davis, 2002. The resulting product will be a 30m-resolution habitat/biotope product. The final step in the process will be to relate these "generic" habitat types to the habitat preferences of small mammals in the study area in order to categorize each biotope as potential habitat for specific tularemia hosts. This will be done using a rule-based decision tree classifier, trained using the existing trapping data. Validation of all mapped products will be done via field survey. A stratified random sample of validation sites will be generated for the study site using sampling software tools available in Arc-GIS. These sites will then be visited during the autumn field survey. Each site will be described, photographed, and its land cover and habitat type assessed. For sites where accessibility is difficult, the assessment will be done at a distance using a distal surveying technique developed by the Remote Sensing Research Lab at Kansas State University and used successfully at other field sites (Koch et al., 2007). Once the survey is collected. it will be compared to the LULC maps using standard metrics for evaluating map accuracy (Khorram et al, 2004).

High-risk sites (HRS) will be identified in the region by applying previously described methods (Glass et al., 2000). Results from the local field surveys and laboratory analyses that detect *F. tularensis* in small mammals generate a spectral signature of HRS by establishing the relationship between the likelihood of a location yielding infected small mammals and the environmental conditions measured by remote sensing data. Depending on the outcome of

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

laboratory testing, alternative models can be developed. Outcome measures of sites yielding either infected animals or not (binary), abundance of infected animals (counts,) or the population density of infected animals (rates) can be used as the outcome to be measured in this design.

Environmental predictors of the outcome are derived from remote sensing data and use the ground truth data obtained during field sampling for final interpretation. Environmental inputs from remote sensing can use the original data, such as reflectance intensities in various portions of the electromagnetic spectrum, land use/land cover classifications or more traditional data products interpreted from the remote sensing data, such as band ratios to identify vegetation greenness, moisture, soil minerals, or drainage patterns.

Once a classifier of *F. tularensis* in mammal populations is identified for the region, a follow-up validation survey is required to confirm the robustness of the results. Predictions of other sites that are likely to have mammals with *F. tularensis* are derived from the remote sensing data and are one of the outputs of the analysis (e.g. see Figures 7 and 8). A final field season will be devoted to randomly selecting and surveying a sufficient number of new locations (40-50 sites as in previous years) to determine if the probability of infection in local mammal populations matches that predicted from the model.

Priority 3: Task 2.1 Survey Methods for Mammals

The original UP-2 effort conducted small mammal collections under protocols approved by the Institutional Animal Care and Use Committee (IACUC) of Johns Hopkins University (JHU) and secondarily approved by the U.S. Army's Medical Research and Materiel Command's Animal Care and Use Review Office (ACURO). These approvals have expired in the intervening time period. The original collaborator from JHU has moved to the University of Florida – Gainesville (UF), the home institution of some of the other project collaborators. They are in the process of seeking new IACUC approval through UF. Importantly, no small mammal collection events will take place until approved IACUC and ACURO protocols are in place.

Currently we are anticipating one field expedition in autumn 2015, but may try to execute an additional trip in spring 2016. Historically, during weeklong sampling trips, we have covered five sites early in the week and another set of five sites later in the week. This covers 10 locations during a weeklong trip with an additional day or two for ancillary collections at some sites. During an optional second week of sampling, the sampling scheme will be repeated at 10 new locations. In total, this method has resulted in sampling at ~20 sites during each 2-week spring survey and 20 sites during each 2-week autumn survey. All mammal collections have been mapped with PDA-GIS handheld device and stored for integration into the master GIS stored at UCDC.

Specimens from collected animals will be processed according to protocols for *F. tularensis* detection and frozen tissues and blood samples will be deposited in appropriate transport and

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

storage liquid and go to UCDC. These materials will be accessioned to UCDC. Results of pathogen detection in individual animals will be linked with the capture records to identify the species that are commonly infected, where they occur relative to geographic location and habitat characteristics as well as their demographic characteristics (e.g. sex bias, age bias, season of capture, etc.).

Vector surveillance efforts will focus primarily on ticks, with some secondary effort to collect ectoparasites from small mammals surveyed during the project. All tick sampling will accompany mammal collections and occur at each mammal-sampling site. Tick sampling is accomplished by two means: flagging/dragging, and collections from animal hosts (Ginsberg and Ewing, 1989). Collection locations will be mapped using handheld GPS devices. Pertinent ecological and environmental data (e.g. vegetative cover, temperature, elevation, slope, aspect, etc.) will be collected for each of the sampling locations in all oblasts and their associated rayons. All data will be downloaded into a database and analyzed using appropriate software, such as ArcGIS.

Anthrax Project

Project collaborators have identified 4 high priority tasks and strategies for execution:

Priority 1: Task 4.2 Ecological Niche Modeling
Priority 2: Subtask 3.1.1 Sampling of Blood from Animals without Clinical Symptoms
Priority 3: Task 3.1 Sampling at Places of Contemporary and Recent (2-5 years) Anthrax Outbreaks
Priority 4: Task 3.2 Laboratory Analyses

Priority 1: Task 4.2 Ecological Niche Modeling

This study will develop both "ecological niche models" and "distributional models". Ecological niche models are those that develop predicted geographic distributions of a target species' ecological niche. Ecological niche modeling has been shown to be useful in several disease studies (Blackburn et al 2007).

We also will employ the Genetic Algorithm for Rule-Set Production (GARP). GARP is a genetic algorithm that evolves ecological niche models iteratively through training and testing. The outcomes are rule sets, in the form of logic strings, which describe the relationships between the point locality data (outbreak localities) and environmental data layers (Blackburn et al., 2007).

In addition, this study will employ a number of distributional modeling approaches to identify areas of potential disease presence. Distributional models follow a more classical approach to modeling and identifying areas of greatest likelihood for the existing distribution of point localities to occur (Rogers, 2006). There are important academic differences in ecological niche and distributional modeling assumptions and predictions, and the exercises will provide

modeling experience to UP-2 personnel that will train scientists in academic discussions on modeling approaches.

A large number of environmental data layers that represent global data coverage have successfully been employed in other disease modeling projects. These include raster coverage data sets of soil type, vegetation indices, climatic and precipitation parameters (including several biologically important derivatives of climate and precipitation), elevation, livestock densities, and human population. These data sets are available at several resolutions ranging from 250 m x 250 m to 8 km x 8 km. The UP-2 GIS efforts will leverage these environmental data sets to develop ecological models and spatial analyses to better understand the geographic distribution and transmission cycles of these EDPs.

While the majority of remote sensing proposed in UP-2 will be dedicated to the study of tularemia, we will use the Tasseled Cap (Kauth-Thomas) Transformation (TCAP) on Landsat 5 data for our field sampling sites. Elsewhere, we have successfully identified local-scale conditions on the landscape where soil minerals and organic material are concentrated by topography and hydrology. These identifiable areas have discrete remote sensing signatures that may link outbreak conditions to specific locations on the landscape. We will perform a preliminary TCAP analysis of satellite data specific to the field sampling for anthrax in UP-2.

Site access to veterinary laboratories for foreign scientists has, at times, been challenging. To ensure overall success of this requirement, it is imperative that Drs. Blackburn and Goodin work closely with Institute of Veterinary Medicine (IVM) personnel. Should site access issues persist, IVM personnel will travel to the UF's SEER and KSU's Remote sensing laboratories for additional training with Drs. Blackburn and Goodin, respectively.

Priority 2: Subtask 3.1.1 Sampling of Blood from Animals without Clinical Symptoms
Blood will be taken from wild boars through ongoing wildlife sampling for swine fever in Ukraine (outside the scope of this project). Blood samples will be drawn aseptically into sterile tubes containing Na-EDTA. To date, veterinary personnel in UP-2 have up to 1000 serum samples from the past several years. These samples are available for UP-2 to test and map at the rayon level. This work will expand the Bagamian et al. 2014 work on wild boar anthrax testing.

Priority 3: Task 3.1 Sampling at Places of Contemporary and Recent (2–5 years) Anthrax Outbreaks
If time and schedule permits, we will initiate two 10-day field trips to areas with anthrax outbreaks documented in the last two to five years. When active anthrax outbreaks are reported, the UP-2 field team from IVM will travel to the site, map the outbreak with GPS units, collect samples from dead animals and blood from any living members of the affected herds. We will also initiate soil and environmental sampling efforts in these areas to test for the presence of spores in the area. These sampling trips will focus on recent historical outbreak data and local

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

veterinary knowledge. We will initiate a laboratory inspection and review for biosafety and quality control in the first quarter of this project.

Environmental samples will be taken in sterile bags. Soil at the place of the outbreak will be taken from the depths of 4 cm as well as from the surface of the ground. Grass at the place of the outbreak will be taken near the ground surface or with roots. These materials will be tested for the presence of *B. anthracis* using PCR.

Priority 4: Task 3.2 Laboratory Analyses
For PCR analyses, either the commercially available kit or in-house developed methodologies will be used. In-house primers are designed to perform multiplex PCR using electrophoresis. The in-house methodology comprises the module for total DNA extraction from different types of pathological samples as well as from environmental samples as well as the module for amplification of pX01 and pX02 plasmid markers and 1 chromosomal marker. Additionally, up to 7 chromosomal markers (VNTR locus and gene *sap)* and several markers from both plasmids (*cap*, total *pA* gene) will be amplified and monitored. The set of primers amplifying these markers ensures reliable *B. anthracis* detection and its differentiation from antracoides. DNA aliquots from extraction preparations from new field samples may also be sent to the US for confirmatory molecular diagnostics.

Risk Management

In order to maintain course action and guarantee trainings that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown on the next page as Table 1. Identifying and acknowledging the risks associated with not implementing this training, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Schedule						
Project Coordination	UP-2 involves a significant number of parties on both the US and Ukrainian sides, putting implementation activities at risk of delay or cancellation.	5	3	Medium	Establish and hold regular calls with all stakeholders and identify multiple possible implementation dates. Identify critical components as early as possible and redirect efforts when it becomes clear targeted implementation dates will not be achievable.	(b)(4); (b)(6)
Performance						
Political Instability	Ukraine's current political situation may lead to risks of being unable to safely complete in-country work.	3	5	(b)(4); (b)(6)	Metabiota has in-country personnel knowledgeable of the operating environment, and will coordinate closely with DTRO-K and all other	

				(b)(4); (b)(6)	relevam parties to operate as safely as possible.	(b)(4); (b)(6)
Procurement of perishable supplies	Some consumables necessary for the implementation of this project must be procured in the US, and shipped via single shipper.	5	4		Work with CLS on streamlining procurement and continue seeking options to procure supplies in country.	Medium
Loss of key research collaborators	Two key research collaborators are only funded through September via PSU AEP.	4	5		Issue a subcontract to UF research collaborators to work via Metabiota AEP.	(b)(4); (b)(6)

Cost Management

The Metabiota team and all partners will maintain an acute focus on cost management to ensure that the training is delivered at a reasonable cost to the government. Our team will provide full oversight to ensure accurate and responsive financial reporting and will facilitate cost savings to wherever possible. Metabiota will follow procurement regulations ensuring the best value is obtained under the time constraints using all means available.

Budget Narrative

Period of Performance

The Period of Performance for this effort is May 16, 2015 to May 15, 2016.

Labor

Costs for direct labor to support this activity is required for the following personnel:

- Metabiota Program Manager: (b)(6) will oversee implementation of the research project to include management of deliverables, logistics, procurement, and tracking of project requirements. The Program Manager will lead coordination activities between US-based research collaborators, DTRA, and the Ukrainian collaborators.
- Metabiota Project Coordinator (Trainer I): to assist in coordinating project activities, to include assisting in management of deliverables, logistics, procurement, tracking of project requirements, deliverables and logistics. The Project Coordinator will assist the Program Manager in the coordination of all Research Collaborators.
- Kansas State University Research Collaborator (Subject Matter Expert III, (b)(6) (b)(6) and Research and Data Analyst (graduate student to be appointed): to execute remote sensing-related tasks and integrate these data with ecological niche modeling and laboratory analyses.
- University of Florida Research Collaborators (Subject Matter Experts III (b)(6) and (b)(6) and Research and Data Analysts, 2 graduate students to be appointed), to execute animal sampling, GIS mapping, and ecological niche modeling-

related tasks and integration with remote sensing and laboratory analyses. These individuals are currently funded through September 2015 via the PSU AEP vehicle. Metabiota AEP is proposing to add these individuals in October 2015 to maintain operational continuity.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials

The detailed list of materials and supplies that are needed to carry out proposed research, their quantity, unit cost and corresponding catalog number are indicated in the project budget. The unit cost is estimated on the basis of the price that the manufacture or vendor provided at their websites. If the specific item's price is unavailable in open sources, the cost is budgeted as an average quote from local vendors. All materials and supplies are defined by the following categories at the corresponding organization. It is expected that CLS will manage shipment of supplies procured CONUS.

Materials & Supplies for Laboratories at UCDC. Within the framework of the project it is expected to obtain up to 3.000 samples (both tick pools and rodent's organs) for testing by PCR and bacteriology. Provided costs are required to support research materials, supplies and consumables needed to carry out laboratory analysis at UCDC. Such supplies include, Personal Protection Equipment (PPE) needed to provide biosafety standards (relates to tasks 2.1, 2.2, and 2.3), reagents and supplies for DNA extraction and PCR (relates to task 2.3), reagents and supplies for bacteriological culture (task 2.3), general laboratory and office supplies ((i.e., copier paper, writing tools, binding supplies, copier supplies, postage, toners cartridge, other miscellaneous supplies, etc.) that will be used by staff to carry out daily activities on the project and relates to all tasks.

Materials & Supplies for Laboratory at VOLC. Provided costs are required for research materials, supplies and consumables needed to carry out sample processing at VOLC (Tasks 2.1, 2.2). Such supplies include items like PPE, dissection tools, disinfectants, vials and tubes, general laboratory supplies that are needed for sample processing, storage, and disposal of used materials.

Materials & Supplies for Tularemia field efforts. Provided costs are required for research materials, supplies and consumables needed to carry out field collection efforts. Such supplies include items for setting up field activity, collecting samples, clean up, and miscellaneous (drinking water, first aid kits, Insect repellent, etc.). Additionally, a request was made to upgrade the tires for the TADR Response Vehicle (TRV) that was provided to Volyn Oblast Laboratory Center by B&V during implementation of the DTRA Program in Ukraine. This vehicle was equipped to meet the needs of the field team and was used during previous

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

collection events. It is planned to use this vehicle for the project, however new tires are required to provide safe transportation.

Materials & Supplies for IVM Laboratories. 1000 boar serum and 300 field samples will be provided for testing. Provided costs are required for research materials, supplies and consumables needed to carry out anthrax efforts in the proposed research (tasks 3.1 and 3.2). These supplies will include PPE, needed to provide biosafety standards; sample handling, storage, and dispensing; reagents and supplies for PCR, ELISA, and bacteriology; and other laboratory supplies that that will be used by staff to carry out daily activities.

Materials & Supplies for anthrax field efforts. Provided costs are required for research materials, supplies and consumables needed to carry out the proposed research and include item for safety sample collection, transportation, and storage, as well provide BS&S standards.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all subcontractors for the period of performance of this project. Metabiota personnel performing on this project are already insured.

CRDF Global is an independent nonprofit organization that promotes international science collaborations and full-service grant administration. Metabiota will engage CRDF Global for disbursement of funds to Ukrainian project recipients as well as grant payments to institutions participating in the UP-2 project. CRDF will provide Metabiota with transparent monitoring and detailed reporting of the grant payments.

Subcontracts

A subcontract will be issued to Kansas State University for time provided by their staff, as well as computer licenses they will procure in support of this effort. Assuming Metabiota assumes support in October 2015 of the research collaborators from the University of Florida, a subcontract will also be issued to University of Florida for time provided by their staff. Costs are captured under the appropriate labor categories in CLIN 1002 and licenses in CLIN 1003 of the budget.

Travel

International travel is requested to support research partners to facilitate project implementation and conduct training and supportive activities in this effort. We anticipate sending Kansas State University Research Collaborator to Volyn, Ukraine during autumn 2015 to perform remote sensing and ground truthing activities. The proposed project also requires local travel of Ukrainian participants to Volyn to conduct field sampling, remote sensing, and ground truthing research activities in autumn 2015.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Assuming Metabiota assumes support in October 2015 of the research collaborators from the University of Florida, we are also budgeting for two (2) one-week trips to collaborate with laboratories at UCDC and IVM, and one (1) one-week trip for an additional field sampling expedition in spring 2016.

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP in the implementation of the UP-2: Incorporating GIS, Remote Sensing, and Laboratory Diagnostics into Human and Veterinary Disease Surveillance for Tularemia and Anthrax in Ukraine. Metabiota will ensure, through strong project management and risk management that the activity will be executed in an efficient and timely manner delivering a top quality research project geared to support enhanced biosurveillance and biosafety efforts in the region.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Team Metabiota Overview

Metabiota is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota currently supports a number of Defense Threat Reduction Agency Cooperative Biological Engagement Program (DTRA CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. Metabiota`s mission aligns well with DTRA CBEP, and the entire Metabiota team is focused on supporting our USG Partners in reducing the risk of biological threats worldwide, and employs a collaborative and agile approach to biological risk reduction.

To ensure successful project implementation, Metabiota, in coordination with DTRA CBEP regional leadership and in country partners have built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact DTRA CBEP objectives.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Executive Summary

In response to Defense Threat Reduction Agency's Cooperative Biological Engagement Program (DTRA CBEP) regional leadership tasking via the Academic Engagement Partnership (AEP) contract vehicle, and through collaboration with the South Africa's National Health Laboratory Services' (NHLS), Metabiota, Inc. seeks to support the DTRA CBEP mission through the conduction of country-specific, high-value training programs to increase the effectiveness of NHLS biosafety and biosecurity (BS&S) activities. These proposed efforts will focus on delivering tailored support for increased BS&S awareness, equipment assurance of proper functionality, and ensured laboratory staff protection.

Through this activity, Metabiota will engage with NHLS in order to direct technical support in the development and implementation of BS&S initiatives. Established through legislation in 2001 to connect public health system laboratories, NHLS is the largest diagnostic pathology service in South Africa. Laboratory and related public health services are provided by the NHLS to over 80% of the population through a national network of laboratories in all nine provinces, employing over 6,700 people. NHLS activities comprise diagnostic laboratory services, research, teaching and training, and production of sera for snake antivenin, reagents, and media. Its specialized divisions include the National Institute for Communicable Diseases, National Institute for Occupational Health, National Cancer Registry and Antivenin Unit.

This document outlines the approach that Metabiota will employ to accomplish the requirement. In short, Metabiota intends to:

1. Facilitate the completion and dissemination of a standardized BS&S training video materials for laboratory personnel throughout the NHLS network laboratories;
2. Expand the in-country Overseas Humanitarian Assistance Shared Information System (OHASIS) capabilities by supporting the development of a new module for increased quality assurance and quality control procedures for monitoring laboratory equipment certifications and maintenance; and
3. Facilitate the development of a Fit Testing respiratory protection-training program to be disseminated via Safety, Health, and Education (SHE) Officers.

Project Overview

Background

Emerging infectious diseases (EIDs) are a challenge for medical and public health infrastructures and pose a significant threat to security and stability across the globe. To manage these threats, DTRA CBEP aims to reduce potential impacts of biological threats by enhancing biological safety and security, awareness of biological risks, and knowledge related to biological pathogens globally.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

To do so, DTRA CBEP works collaboratively with partner nations, other USG agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health; promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. In AFRICOM, specifically, DTRA CBEP seeks to secure and consolidate select agents and enhancing BS&S standards in order to strengthen the region's ability to detect, diagnose, survey, and report emerging and re-emerging diseases of international security concern.

In response to DTRA CBEP AFRICOM regional leadership tasking, and through collaboration with the NHLS, Metabiota seeks to support the DTRA CBEP mission through the conduction of country-specific, high-value training programs to increase the effectiveness of NHLS' BS&S activities. These proposed efforts will focus on delivering tailored support for increased BS&S awareness, equipment assurance of proper functionality, and ensured laboratory staff protection.

As comprehensive employee BS&S training programs can mitigate potential EID risks by aiming to prevent exposures to healthcare workers and laboratory personnel, this collaborative training will support the DTRA CBEP mission of improving global health security with the inclusion specialized capacity-building efforts.

Metabiota's field experience and decades of expertise allows us to be well positioned to support the implementation of all of the associated activities, as well as scientific engagement in AFRICOM's area of responsibility.

Goals and Objectives

This activity aims to provide NHLS with continuous quality assurance oversight and to mitigate potential risks to healthcare workers and laboratory personnel exposed to EIDs by conducting training to improve biological safety in NHLS's laboratory network thereby managing the risk of accidental or intentional release of EID causative agents. The delivery of these requirements will cultivate continued learning throughout the NHLS network of laboratories and further expand in-country monitoring and quality improvement activities.

To achieve this purpose, Metabiota and their collaborative partners will:

1. Complete and distribute a standardized BS&S video training courses;
2. Expand in-country OHASIS capabilities by developing new IT modules allowing for comprehensive equipment maintenance requirement monitoring;
3. Develop and conduct a training-of-trainer (TOT) program for the conduction of Fit Testing Respiratory Protection Training Program to be disseminated via SHE Officers.

To accomplish these goals DTRA CBEP will engage Metabiota to administer the BS&S Training in South Africa in collaboration with NHLS.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Impact

Through the implementation of the BS&S training in South Africa facilitated by Metabiota, DTRA CBEP will be able to:

- Develop and enhance EID BS&S systems and build regional capabilities;
- Ensure safe EID collection and handling practices supporting the implementation of international standards of BS&S;
- Provide quality assurance oversight to regional public healthcare system personnel;
- Support public health capacity building in the region and foster scientific research and collaboration through the development and implementation of basic research activities.

This activity will provide a measurable and achievable result in building scientific capacity in South Africa, contributing to the promotion of a global network of research collaborations, and the development of a sustainable infrastructure for advancing scientific research, including the early detection of emergent threats.

Training engagements are critical to capacity building efforts in host countries and supporting the early detection and response to emerging threats, thus safeguarding the world from infectious disease threats.

Risk Management

In order to maintain our course of action and guarantee trainings that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix found below. Identifying and acknowledging the risks associated with not implementing this training, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost						
In Country Travel Arrangements	Significant in-country travel is required for these projects, and our estimates may be under the true number.	4	4	**Medium-High**	Consult often with NHLS and have them cost estimate with actual travel costs before arrangements have been booked.	Medium
Schedule						
Material Procurement	Various items will be purchased in the USA and shipped to NHLS in South Africa while some items will be purchased locally. There may be some confusion and delays over which items to ship and which to purchase locally in RSA.	4	3	Medium	Engage a local logistics organization to provide in-country support with rapid turn-around and solid track record in supporting USG operations. Consult with NHLS in enough time to establish USA versus SRA purchases to allow for enough time to procure items to keep the projects on schedule.	(b)(4); (b)(6)

Receiving Deliverables on Schedule from NHLS	NHLS is a large organization with a highly centralized authority structure that serves as a bottleneck for decision-making, thus the timely preparation and delivery of deliverables may be affected.	4	4	(b)(4); (b)(6)	Maintain frequent communication and consultations with NHLS to ascertain partner progress in meeting completion of the deliverables and work to de-escalate decision-making needs.	Med
Performance						
Writing of SOPs for Fit Testing to coincide with delivery of Portacounters into RSA.	NHLS may not have developed SOPs for its Fit Testing Objective by the time Portacounters arrive in RSA from the USA.	4	3	**Med-High**	Coordinate NHLS development of Fit Testing SOPs with timeline of purchasing Portacounters and shipping them to RSA. Provide assistance to development of Fit Testing SOPs as needed.	(b)(4); (b)(6)

Implementation Plan

Introduction

Metabiota will employ its existing organizational leadership to interface, as needed, with the Regional Science Manager and Regional Program Manager to direct the operational and administrative support required ensuring implementation of the BS&S training. Our Program Manager will oversee the training programs with the support of a subject matter expert, travel coordinator, grants manager, trainers, and research and data analysts, to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Communications Protocols

To accomplish event implementation, Metabiota will maintain open lines of communication and will use a phased approach of engagement, maintaining project tracking and scheduled deliverables. This phased approach will be coordinated directly with the NHLS Program Manager, Trainer, Research and Data Analyst, and SME collaborators to ensure the event is implemented according to DTRA CBEP requirements, in the assigned timeframes, and supportive of the DTRA CBEP mission. In addition, Metabiota will maintain routine communication with DTRA CBEP to ensure they have full visibility on the training engagement and development activities, status and process of execution.

Technical Approach

Phases of Technical Approach

Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project phases and to provide overall feedback and reporting on the proceedings outlining the accomplishment of objectives. The following phases are required for this project:

Phase 1: Biosafety & Biosecurity Training Video Distribution
Phase 2: Monitoring of Equipment Maintenance Enhancement (OHASIS)
Phase 3: Respirator Fit Testing of Employees

Phase 1 – Biosafety & Biosecurity Training Video Distribution (1 July – 31 December)

Objective: Complete the development a professionally produced video and related materials or a ToT program to standardize and introduce laboratory safety-related information.

Process: Metabiota, in coordination with DTRA CBEP and NHLS, is completing a professionally produced video and related materials (*e.g.*, standard operating procedures (SOPs)) for a ToT program to standardize and introduce laboratory safety-related information. In continued support of this effort, Metabiota and NHLS will procure the necessary equipment and consumable required for distributing these training videos to laboratory personnel, visitors, security personnel, and contract maintenance workers.

Under the direction of NHLS SHE Officers, laboratory personnel will be trained to oversee delivery of introductory video trainings and associated SOPs to personnel within their home-based facility. There are no labor or travel costs associated with dissemination of training materials. The only costs associated with the completion of this objective are associated with procurement of equipment and consumables required for distributing the completed videos. Training videos will be rolled out via Apple Air tablet computers to academic institutions and regional centers, whereas DVDs will be provided to more rural facilities within the network. Metabiota had not previously budgeted for procurement of these materials, as it was assumed that CLS would manage this activity. Moving forward, Metabiota will procure all tablets and DVD's for this objective and leverage the CLS Single Shipper mechanism to ensure materials are shipped to the Republic of South Africa in compliance with all export/import regulations.

Deliverables:

- Deliverable 1: Submission of training materials and post-action report for the conduction of laboratory personnel training to oversee the distribution and delivery of BS&S video trainings and associated SOPs to personnel.

Phase 2 – Monitoring of Equipment Maintenance Enhancement (OHASIS) (1 Oct 2015 – 30 April 2016)

Objective: Ensure all BS&S associated equipment is properly calibrated, functioning, and maintained.

Process: To manage potential risks due to human error and paper-based record keeping as well as provide increased oversight, Metabiota will develop a module for the enhancement of OHASIS, an online health monitoring system that is currently used by all facilities within the

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

NHLS network to record and investigate incidents, record employee health, note vaccinations given, and document trainings completed. Metabiota will additionally coordinate with the NHLS to develop and distribute an online e-learning training and manual for the SHE Officers.

The enhancement module is intended to allow for laboratories to monitor the maintenance requirements of equipment so as to ensure proper functionality through the existing OHASIS program, thereby improving BS&S. Additionally, this module will provide reports on laboratory equipment including, biological safety cabinets, autoclaves, centrifuges, fume hoods, and other local exhaust ventilation systems.

The enhancement module will be piloted in three laboratories over the course of four to five weeks. Metabiota will communicate, troubleshoot, and share developments with the Canadian developers, in line with current agreements.

Deliverables:

- Deliverable 1: Rollout of enhanced equipment maintenance module for OHASIS
- Deliverable 2: Development and conduction online e-learning training and a training manual for SHE Officers

Phase 3 – Respirator Fit Testing of Employees (1 July 2015 – 30 April 2016)

Objective: Develop and initiate a Master Trainer ToT Fit Testing Program to ensure proper fit of PPE and optimize biosafety for all laboratory personnel. This program will include initial scale up and Master-level training of NHLS staff. As a result, the NHLS will have personnel capable of conducting internal ToT events, which will allow for them to reach the estimated 3,000 laboratory staff in need of Fit Testing.

Process: To manage risks associated with aerosol exposures in the laboratory setting, Metabiota will develop a Master Trainer ToT Fit Testing Program with the NHLS. This training will use specialized Fit Test equipment to identify the appropriate respirator for a given person. To enable the NHLS to reach the estimated 268 locations and 3,000 staff in need of Fit Testing, many of whom are in rural areas, Metabiota will develop Fit Test SOPs, map initial scale up plan, develop Trainer and Master Trainer selection criteria, and conduct initial Fit Test trainings for a select starting cohort of NHLS staff.

Deliverables:

- Deliverable 1: Submission of training scale-up plan, training materials, and post-action reports for the conduction of the Master Trainer ToT Fit Testing Program
- Deliverable 2: Submission of Trainer and Master Trainer cohort list, training timeline for scale-up completion for fit testing all 3,000 NHLS employees, and post-action reports.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Management Approach

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the Program Manager, Research and Data Analyst, Travel Coordinator and a team of Research Collaborators and Subject Matter Experts that will be tasked with specific assignments to support the development and implementation of the training based on their administrative and scientific expertise. This team of experts will ensure the overall project management and tasks associated with the training are met at every level using best practices and that only the highest level of scientific rigor and expertise is applied to this effort.

Initiation

Prior to initiating any action, Metabiota and DTRA CBEP will secure a clear understanding of the objectives and mission of this undertaking, and make sure all stakeholders agree to it. Following authorization to proceed by DTRA CBEP, Metabiota will move into the planning and execution of the trainings and IT enhancement activities.

Execution

The core project management team will maintain oversight and implementation of the project at all times and will ensure timely execution of the training events and tracking objectives to ensure the project remains on schedule and within budget. The project will be managed according to the phased implementation plan and will be course-corrected as needed to ensure project goals are met. The following tools will be used to guarantee the project schedule will be maintained:

Project Administration:

1. Weekly team meetings and conference calls will be held to internally review the project achievements, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Coordinator and will include the PM, Research and Data Analysts, SMEs and AEP leadership, as needed, based on the requirements and stage of implementation.
2. Metabiota will conduct routine communication with DTRA CBEP regional leadership and in-country collaborators to provide routine status updates and ensure project implementation.

Project Reporting:

1. Weekly status reports will be provided by the PM to senior Metabiota leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course-correction as needed to ensure training goals are met.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Monitoring and Controlling

1. Routine risk assessment will be performed internally among the Metabiota project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with DTRA CBEP regional leadership to ensure the project remains on track and is implemented according to standard.
3. Routine oversight and coordination will be performed to ensure NHLS is performing in-country logistical requirements to ensure successful execution of the project phases. Monitoring will include both administrative and fiscal oversight.

Timeline

Phase	Q3 2015			Q4 2015			Q1 2016			Q2 2016		
	July	Aug	Sept	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	June
Phase 1: BS&S Training Video Distribution												
Phase 2: Monitoring of Equipment Maintenance Enhancement (OHASIS)												
Phase 3: Respirator Fit Testing of Employees												

Completion

Metabiota will drive the project to completion in a timely manner by maintaining a focused project schedule with routine meetings and communication with DTRA CBEP regional leadership. This will allow for continued coordination, while maintaining targeted objectives. As the activity progresses, Metabiota will provide all required deliverables and after action reports to allow for lessons learned and continuation of solid execution and implementation of activities. Metabiota believes that the experience and management it will bring to this project, in collaboration with DTRA CBEP will guarantee success.

Cost Management

The Metabiota team and all partners will maintain an acute focus on cost management to ensure that the training is delivered at a reasonable cost to the government. Our team will provide full oversight of NHLS to ensure accurate and responsive financial reporting and will facilitate cost savings to the Government wherever possible. Metabiota will follow procurement regulations ensuring the best price is received under the time constraints using all means available.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Budget Narrative

Period of Performance
The Period of Performance for this effort is 16 May 2015 – 15 May 2016.

Labor
Costs for direct labor to support this activity is required for the following personnel:

- Metabiota Program Manager [(b)(6)] will oversee the execution of program objectives towards the completion of DTRA CBEP goals at the regional level, and will lead communication with DTRA CBEP for this activity. [(b)(6)] will do so by maintaining oversight of stakeholder and subcontractor coordination and project execution, including anticipating, managing, and communicating projects risks and recommended mitigation strategies to the funder. [(b)(6)] will ensure Metabiota and other DTRA CBEP subcontractors meet all project requirements and deliverables erstwhile ensuring the program remains within scope, budget, and timeline.
- Metabiota Trainer I: [(b)(6)] ll ensure the execution of project objectives towards the completion of DTRA CBEP goals at the project leve [(b)(6)] [(b)(6)] will do so by managing stakeholder and subcontractor coordination and project execution, with a focus on project milestone achievement and stakeholder buy-in development and maintenance. [(b)(6)] will regularly communicate project status with [(b)(6)], and will assist him in anticipating, managing, and communicating project risks and recommended mitigation strategies to the funder. [(b)(6)] will also assist [(b)(6)] n ensuring all project requirements and deliverables are fulfilled while concurrently ensuring the project remains within scope, budget, and timeline.
- NHLS Grants Manager [(b)(6)] ill act as the Project Manager for each of the three proposed requirements, overseeing the design and implementation of all project activities. [(b)(6)] currently the National Manager for the Safety Health and Environment Program for the National Health Laboratory Service. [(b)(6)] has over 33 years experience in working in environmental health law enforcement including audits and evaluations, noise control, pollution control, waste management, public relations, occupational health and safety policy formulation, audit tool development and health project development and management.
- NHLS Subject Matter Expert I [(b)(6)] formation Manager, also supports work for the National Institute for Occupational Health (NIOH), a division of NHLS will be providing thirteen (13) years of experience in OHS research, data management, data cleaning, data extraction, information management and information technology management. [(b)(6)] s experienced in electronic records management, development of patient information systems, electronic patient records, occupational health information systems. In addition, [(b)(6)] has expertise in software development life cycle, user interface and user experience development and is the lead developer and project manager for the OHASIS information system project. Alongside

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

(b)(6) will provide guidance and support on the IT infrastructure configuration and management for the OHASIS module development.

- NHLS Trainer I: (b)(6) is the National Deputy Manager for the Safety Health and Environment program for NHLS, where she manages and coordinates the functions and duties of five (5) qualified SHE Officers, develops and implements a Health & Safety (H & S) program for the NHLS according to international best practice and in compliance with the Occupational Health and Safety (OHS) Act and the relevant regulations, advises line management and staff on the application of relevant OHS policies and procedures to ensure compliance to legislation. Additionally, (b)(6) collates data from all OHS Audits conducted in the NHLS, generate reports and communicate results to Laboratory, Business and Executive managers. (b)(6) will provide leadership and support for the development and implementation of the BS&S video project, as well as the Fit testing training efforts.
- NHLS Research and Data Analysts (3 personnel):
  - (b)(6) is a registered Occupational Hygienist with the Southern Institute for Occupational Hygiene (ROH-SAIOH), currently working for the National Institute for Occupational Health (NIOH), a division of NHLS. (b)(6) is responsible for conducting risk assessments and occupational hygiene surveys including illumination, noise, ventilation, hazardous chemical substances, ergonomics, environmental pollution (land, water and air) and waste management in a wide range of industries. Presently (b)(6) is involved in teaching and research in respirator fit testing, facial anthropometry and designing effective respirator protection programs. (b)(6) will act in this capacity in support for the Fit Testing project, under the leadership of (b)(6) and (b)(6)
  - (b)(6) is the Finance and Administration Manager for NHLS and has been with the organization for 15 years. He holds a national diploma in Cost Accounting and has worked as a Financial Manager for two business units within NHLS (Northern and Central) as well as two institutes within NHLS (NICD and NIOH).
  - (b)(6) has worked with NHLS as Senior Bookkeeper for 11 years and has a total of 22 years experience working within corporate financial environments. He holds a degree in Business Communications and the major aspects of his duties include project coordination, budgeting and management accounting, event planning and co-ordination. Both (b)(6) will be assisting (b)(6) in project coordination, integration of new efforts with existing records (including the integration of the OHASIS module) and the scheduling and planning of training events.

Additional costs for direct labor supporting the AEP Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Materials

Materials and supplies are required to support training efforts, project activities, information dissemination, fit testing requirements, and general administrative costs. Materials will include:

- Tablet Computers, BS&S ToT program, the SHE officers will require twenty-five (25) tablet computers (Apple iPad Air) for dissemination to the identified NHLS locations. Spread throughout South Africa are nine (9) academic sites that will receive tablets (one per site), which serve as referral centres and have more than one laboratory on site. In addition, there are four (4) Regional Offices that require a total of eight (8) tablets; two (2) tablets per Regional Office, as these offices all have Administration facilities as well as laboratories. The three (3) institutes are situated on two different sites where two of the institutes share a common reception area, thus a provision is made for two (2) per site for a total of four (4) tablets. The Corporate head office has the largest number of visitors and also does a lot of training, therefore the allocation of four (4) tablets is proposed. Training on the use of the tablets, as well as the process through which to offer and administer video training will be provided at the identified facilities by experienced SHE Officers on a one on one basis with the people identified by the facility manager as being responsible for administering the video training material. It is intended that the academic centres be issued the tablet computers.
- Training video DVDs, any facilities that will not receive tablets, videos will be placed on DVD and delivered to the identified laboratories and centres by internal mail at the expense of the NHLS by the SHE Department. Any instruction on the use of the DVDs would be by means of SOPs.
- PortaCount Fit Tester, Fit testing requirement. NHLS will require the following supplies: five (5) PortaCount Pro+ Respirator Fit Tester with a 3 year calibration plan (PortaCount Pro+ which includes AC adapter with Universal Plug Set, 8026 Particle Generator, alcohol cartridge, alcohol fill capsule, storage cap, two zero check filters, Model 8016 alcohol supplies, 3/16 and 1/4 inch hose adapters, two spare alcohol wicks, 100 sampling probes, insertional probe, neck strap, carrying case, FitPro Test software CD, Flash memory drive (1GB), USB cable, operation and service manual and two-year warranty); seven (7) Fit Test Probe Kits (1kit includes 500 probes, 500 Pushnuts); six-thousand (6000) 3M or Kimberly Clark N95 respirators; six-thousand (6,000) respirator adaptors; and five (5) boxes of isopropyl alcohol (16x30ml bottles).

Metabiota will make every effort to procure required materials based on best value (cost, quality, and longevity). Metabiota anticipates that CLS will manage shipping, and all related costs (e.g., export compliance), of items procured CONUS to the Republic of South Africa. Metabiota will coordinate with CLS contractors through DTRA CBEP to ensure this process is executed in an effective and efficient manner.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Other Direct Costs
Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for NHLS personnel for the period of performance for this engagement. Metabiota personnel performing on this project are already insured.

Subcontracts
A Subcontract will be issued to NHLS to support their labor requirements on this engagement, as well as materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel
Travel is requested to support NHLS project personnel to facilitate implementation and conduct training activities in this effort. The proposed projects require domestic (South Africa) travel for test site introduction of the OHASIS pilot modules, and for the Fit testing training. The travel estimates in the budget reflect averaged costs for airfare, lodging, and meals to multiple different locations in South Africa for travel by NHLS project personnel. Metabiota does not anticipate any international travel of its USA staff to South Africa.

Conclusion
Metabiota is committed to supporting our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP AFRICOM in the implementation of the Biosafety and Biosecurity Training with the National Health Laboratory Services in South Africa. Metabiota will ensure, through strong project management and risk mitigation that the training will be executed in an efficient and timely manner delivering a top quality course geared to support enhanced biosurveillance and biosafety efforts in the region.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Appendix A- Team Metabiota Overview

Metabiota, Inc. is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota currently supports a number of the Defense Threat Reduction Agency Cooperative Biological Engagement Program (DTRA CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. In these roles Metabiota provides support to U.S. Government (USG) Partners in reducing the risk of biological threats worldwide through a collaborative and agile approach to biological risk management.

In coordination with DTRA CBEP regional leadership and in-country partners, Metabiota has built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact DTRA CBEP objectives.

Through this activity, Metabiota will engage South Africa's National Health Laboratory Services (NHLS) in order to direct technical support in the development and implementation of the biosafety and biosecurity (BS&S) initiatives. Established through legislation in 2001 to connect public health system laboratories, NHLS is the largest diagnostic pathology service in South Africa. Laboratory and related public health services are provided by the NHLS to over 80% of the population through a national network of laboratories in all nine provinces, employing over 6,700 people. NHLS activities comprise diagnostic laboratory services, research, teaching and training, and production of sera for snake antivenin, reagents, and media. Its specialized divisions include the National Institute for Communicable Diseases, National Institute for Occupational Health, National Cancer Registry and Antivenin Unit.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Team Metabiota Overview

Metabiota, Inc. is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, D.C., China, Canada, and Sierra Leone.

Metabiota currently supports a number of Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. Metabiota's mission aligns well with CBEP and the entire Metabiota team is focused on supporting our U.S. Government (USG) Partners in reducing the risk of biological threats worldwide, and employs a collaborative and agile approach to biological risk reduction.

Metabiota has built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGOs) whose respective aims could impact CBEP objectives.

Project Overview

Introduction

Through AEP Technical Direction 003, DTRA CBEP Regional leadership tasked Metabiota with administering a study on the risk of bat-borne virus transmission during an annual bat cull in Nagaland, India in support of biosurveillance activities across the Pacific Region. The study will take place over a 12-month period and will involve researchers and Subject Matter Experts (SMEs) from Metabiota, as well as key partners from Duke NUS and the National Center for Biological Sciences (NCBS) India to examine the virus community of three species of bats in a cave in Nagaland, India and determine the extent of risk of human infection.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Background

Bats are the only flying mammal (of the order Chiroptera), and are one of the most abundant, diverse vertebrates dispersed across all continents except Antarctica. They consist of more than 1100 species across 17 families (Nowak, 1994). Bats face the same threats as other mammals: habitat loss and hunting pressure. Bats host many noteworthy viral pathogens including filoviruses, coronaviruses, and paramyxoviruses, and are implicated as the sources of transferring these viruses to both humans and livestock. Understanding the ecology of reservoir-borne viruses is critical to the prevention of zoonotic epidemics and the global community's ability to implement preventative measures through biosurveillance, detection and response initiatives that mitigate the threat of these viruses causing disease outbreaks on a pandemic scale.

Although India is an exceptionally biodiverse country, relatively little is currently known about bat-borne viruses in the country, and this is especially true within the state of Nagaland, where communities live within close proximity to bats and utilize them as a natural food source. However, the abundance of data from bats in Bangladesh indicates that India is likely home to numerous reservoirs, including those for medically important viruses. Studies have shown that close proximity to bats can lead to cross-species transmission to humans, as was recently witnessed during the Ebola outbreak in West Africa - the index case is suspected to be a young child exposed to bat excreta.

This particular site in India is of critical interest in identifying disease threats within the region, as there is an annual bat harvest where numerous individuals from surrounding villages come together to visit the colony and perform an annual cull, harvesting the bats for food. The cull takes place every October; the bats are smoked out of the cave, caught, slaughtered and preserved or eaten. The close proximity of hunters and food preparation workers to bats provides ample opportunities for exposure to pathogens through respiratory, mucosal or percutaneous routes of infection. Following the bat harvesting participating individuals return to their home villages, providing an ideal dispersal mechanism to aid spread of the disease within the community. It is presumed that bats in this particular region are most likely a reservoir for Nipah virus, based on the virus endemicity in Bangladesh. In addition, one of the three species of bats caught during a previous harvest (*Rousettus leschnaulti*) has been found seropositive to Ebola virus in Bangladesh, indicating the presence of circulating filoviruses. This study will therefore provide greater understanding of the viruses circulating among this bat population and the potential risk to humans, based on understanding behavioral practices that lead to transmission.

The Indian state of Nagaland falls under the Indo-Malayan Region, and is part of a global biodiversity 'hotspot'. Bat diversity in this region is very high (Figure 1). Conversely, the region faces intense hunting pressure as well as habitat degradation and loss. Every year, thousands of cave-dwelling bats and other fruit bats are hunted for consumption during mid-October in villages near Mt. Saramati, at the Indo-Myanmar border (Figure 2, Figure 3). This may have led to a considerable population decline and local extinction over recent years. Such

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

hunting also leads to high intensity contact events between humans and wildlife, perfect conditions for spread of infectious disease.

Figure 1: Bat species richness in Asia

Figure 2: Map with field site in red

Understanding the ecology of reservoir-borne viruses is critical in the prevention of zoonotic epidemics and the global community's ability to implement preventative measures through biosurveillance, detection and response initiatives that mitigate the threat of these viruses causing disease outbreaks on a pandemic scale. This study aims to determine the virus community of three species of bats in a cave in Nagaland, India and determine if there is a risk of human infection. SinCounce very little is known about bat-borne viruses in India and this particular region, this a critical research effort in support of the CBEP mission.

Understanding

The Metabiota team understands that the U.S. Department of Defense (DoD) initiated CBEP through DTRA in order to: secure and consolidate select agents; enhance Biosafety and Biosecurity (BS&S) standards; and strengthen the USPACOM region's ability to detect, diagnose, survey, and report emerging and re-emerging diseases of international security concern and that CBEP accomplishes these objectives in accordance with the World Health Organization (WHO) International Health Regulations (IHR) and World Organization for Animal Health (OIE). The team further recognizes that to achieve its mission, CBEP works collaboratively with partner nations, USG agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health; promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. Through the AEP Program, and implementation of this project. Metabiota aims to support the CBEP mission of reducing the potential impact of biological threats through enhanced biological surveillance, awareness of biological risks, and knowledge related to biological pathogens.

In support of achieving the CBEP mission, Metabiota intends to administer a high-value study that will support strategic CBEP objectives by increasing regional collaboration on topics critical to biological threat reduction, and enhancing the regional capacity to perform

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

biosurveillance activities that reduce the threat of infectious disease events. The team's on-the-ground experience and expertise make us well positioned to support the implementation of this study in the USPACOM's area of responsibility.

Purpose

The purpose of this study is to examine the risks of bat-borne transmission from bat consumption in Nagaland, India. The study will involve screening bats before, during and after the bat harvest to screen for coronaviruses, filoviruses, and paramyxoviruses and analyze the sequence data to understand circulating genotypes and the potential for cross-species transmission thereby building host country capacity to detect, prevent and respond to infectious disease threats, as well as building biosurveillance networks and scientific collaborations across the region, further mitigating infectious disease threats and the potential for outbreaks.

To achieve this purpose, CBEP has identified the need for a 12-month study to determine the virus community of three species of bats in a cave in Nagaland, India, and if there is a risk of human infection due to the animal-human interface existing in this region and facilitated by the annual cull. Identifying the virus community in this colony of bats is critical to understanding the risk posed in this practice, and the preventive measures that can be implemented to support the reduction of risk and infectious disease threats circulating in this region.

This research will promote global health security and threat reduction by supporting fundamental research to decrease the threat of infectious diseases at the animal-human interface, as well as enhancing regional capability for pathogen research and surveillance. The study provides opportunities for research cooperation between U.S. and host country scientists, contributing to a greater understanding of pathogen infection in humans and infectious disease surveillance. This will serve to enhance the host nation's capacity in disease surveillance and response, while adhering to international codes of security and safety to ultimately provide a mechanism for sustained engagement through ongoing surveillance and research activities.

To accomplish this purpose, DTRA CBEP, through AEP has engaged the Metabiota team and its cadre of Subject Matter Experts (SMEs) to administer the study in Nagaland, India in conjunction with Duke NUS and NCBS.

Objectives

Through the implementation of the study on bat-borne virus transmission, facilitated by Metabiota, DTRA CBEP will be able to:

- Determine the virus community in the three species of bats, specifically paramyxoviruses, filoviruses, and coronaviruses and the threat posed by these viruses;
- Examine if detectable virus prevalence increases after an anthropogenic stress event;
- Improve molecular virus diagnostics and epidemiology study systems;
- Support long-term surveillance in both wildlife and humans surrounding the use of bushmeat in India;

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

- Support the development of disease reporting, surveillance and response systems regionally, thereby reducing global threat;
- Support regional scientists through capacity building efforts and scientific collaboration.

Threat Reduction Outcomes

The study will provide a measurable and achievable result in building scientific capacity in the region while promoting a global network of biosurveillance, detection and response, including the early detection of emergent threats.

Advancing research knowledge through the completion of relevant scientific studies is critical to capacity building efforts in host countries and supporting the early detection and response to emerging threats, thus safeguarding the world from infectious disease threats. Without completion of this study, the region is subject to the following identified risks:

- Reduced regional biosurveillance capability and characterization of novel infectious disease outbreaks;
- Increased security threats due to practices potentially leading to disease transmission;
- Increased security threats due to improper handling, storage, and transport of pathogens of security concern;
- Decreased communication and scientific engagement among host-country scientists and the global scientific community, which can provide reachback support and capacity building to strengthen the host country's ability to detect and respond to disease threats;
- Reduced risk management capacity.

The completion of the training will mitigate the identified risk factors by:

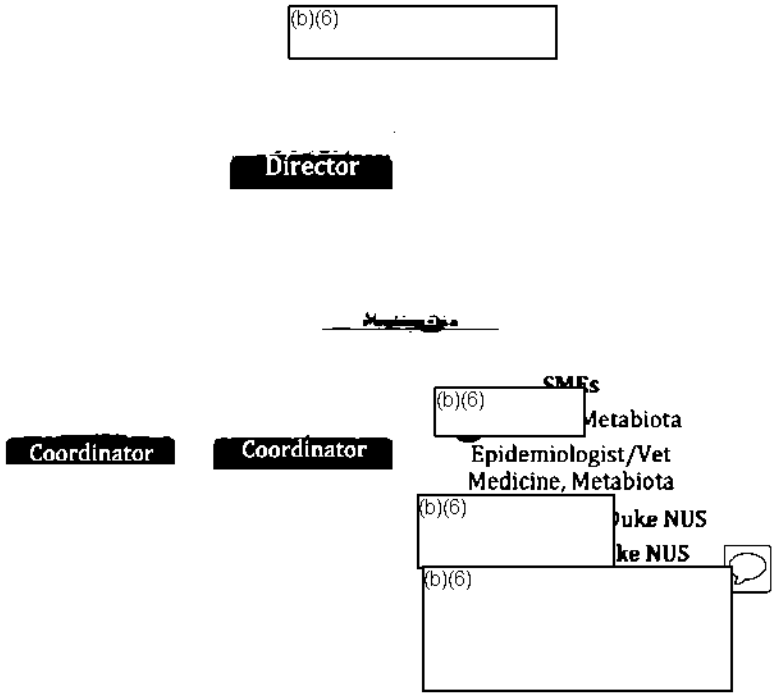
- Improving and enhancing disease detection, reporting and response systems across the region;
- Implementing and improving biorisk management best practices and principles based on internationally acceptable guidelines and standards (enhancing the capacity to account for, safeguard, and secure pathogens of concern);
- Increasing biosafety measures in regional biosurveillance activities;
- Increasing scientific capabilities through research collaboration and fostering an environment of scientific partnership;
- Enhancing research infrastructure including BSL safety levels and best practices.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Risk Management

Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Logistical						
Costs to Exceed NTE	Realistic costs for implementing the study currently exceed NTE price.	4	4	**Med-High**	Metabiota will work to mitigate costs by choosing low-cost travel and procurement options.	Med
Materials Unavailable In Country	Materials and supplies that cannot be procured in country must be bought abroad and shipped through CLS, incurring extra cost, requiring extra lead time, and presenting further logistical challenges.	3	4	**Med-High**	Metabiota will work to purchase all materials/supplies possible in country, and will procure the rest from cost-effective sources to be shipped through CLS, or will have CLS procure and ship items according to approval.	(b)(4); (b)(6)
Team Coordination	Coordinating multiple teams from the US, Singapore, and India presents logistical and cost challenges.	3	3	**Med-High**	Metabiota will work with in-country and international partners to handle logistical challenges as they arise.	
Extension of PoP	Research analysis timeframe has been reduced from the projected 9 months to 6 months to account for contract PoP.	3	3	**Med-High**	Metabiota will work with collaborators to ensure deliverables are met in the allowable PoP and will coordinate with SMEs to maximize results on the project.	
Travel						
Program Startup Travel	India is a new area of operation, so travel to the region will be critical for oversight in the new program.	3	3	**Med-High**	Metabiota will work with in-country partners to secure the best rates for travel and logistics.	Med
Short Suspense Travel	Travel will need to begin in a relatively short period of time and several trips will be necessary to ensure study implementation, so this increases cost.	3	3	**Med-High**	Metabiota will start the travel logistics as soon as possible and will seek out the lowest feasible travel costs.	(b)(4); (b)(6)

This material shall not be disclosed outside the U.S Government and shall not be duplicated, used or disclosed in a whole or in part for any purpose other than to evaluate this material. If, however, a contract is awarded to this offeror as a result of- or in connection with- the submission of this material, the U.S Government shall have the right to duplicate, use or disclose the data to the extent provided in the resulting contract. This restriction does not limit the U.S Government's right to use information contained in this material if it is obtained from another source without restriction.



Management Approach

Introduction

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager and Country Manager as needed to direct the operational and administrative support required, ensuring implementation of the bat-borne virus transmission study. Our Program Manager (b)(6) will oversee study implementation with the support of a project coordinator, travel coordinator, and subject matter experts to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the Program Manager, project coordinator, travel coordinator and a team of SMEs that will be tasked with specific assignments to support the development and implementation of the study based on their administrative and scientific expertise. This team of experts will ensure the overall project management and tasks associated with the workshop are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

This material shall not be disclosed outside the U.S Government and shall not be duplicated, used or disclosed in a whole or in part for any purpose other than to evaluate this material. If, however, a contract is awarded to this offeror as a result of- or in connection with- the submission of this material, the U.S Government shall have the right to duplicate, use or disclose the data to the extent provided in the resulting contract. This restriction does not limit the U.S Government's right to use information contained in this material if it is obtained from another source without restriction.

Initiation

Following guidance from CBEP USPACOM leadership, and working collaboratively with SMEs from Duke NUS as well as local collaborators from NCBS, Metabiota will initiate a project kickoff meeting held at Duke NUS in Singapore with all key collaborators. The kickoff meeting will involve discussions surrounding the objectives, ethical clearance, timeline, deliverables, staff coordination, sample storage, cold chain issues, sample screening, and data analysis required to implement this study. Duke NUS researchers will demonstrate their team's standard operating procedures and will provide initial training for NCBS collaborators on sample collection, to include collection of bat excreta, trapping and sampling of bats, and bat necropsy. This kickoff meeting and the associated short training will ensure that study protocols are understood and can be implemented along with project review and logistical management of conducting the sampling and analysis throughout the remainder of the project. Prior to initiating any action, Metabiota's team and CBEP will secure a clear understanding of the objectives and mission of this undertaking, and ensure sure buy-in from all stakeholders. Following initiation of the study, to include implementation of all contractual requirements, Metabiota will move into the planning and execution phases of the study.

Planning and design

Completion of this task requires a 12-month study involving three sampling events over a three-month period followed by nine months of sample analysis and deep sequencing conducted by NCBS and Duke NUS. The three sampling events will occur between the months of September and November to establish the following. 1) a baseline prior to the cull. 2) during the annual cull, 3) following the cull to determine if there is increased circulation of viruses brought on by the stress of the cull. NCBS researchers have previously visited the identified cave in Nagaland. India, and have developed relationships with community members, giving them direct access to the research site. This relationship will greatly facilitate the trapping and sampling of bats, as building trust with the local community is one of the key components to successfully implementing research activities. The study-specific training provided to NCBS researchers by Duke-NUS SMEs at the kickoff meeting in Singapore will facilitate the successful execution of the sampling events to include implementation of safe and secure sample collection, sample transport, and sample storage to ensure the highest likelihood of detecting viral RNA. Following sample collection over the intended sampling period, samples will be processed at NCBS.

To accomplish the research goals of the study and due to the duration required to complete all activities, Metabiota intends to hold the kickoff meeting in August, following engagement of Duke NUS and NCBS to implement the research and secure study approval. This will ensure strong coordination, oversight and implementation of the study in a collaborative framework. Following the kickoff meeting, Metabiota and Duke NUS project personnel will travel to India in support of the initial sampling event and engage with host country partners at NCBS, ensuring strong regional ties and securing the project management efforts and logistical coordination required on the ground. For procurement and shipping of materials that cannot be purchased in country, Metabiota will utilize the services of CLS for logistical needs.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Execution

The core project management team will maintain oversight and implementation of the study at all times and will ensure successful execution of the research, tracking implementation to ensure the study stays on schedule to meet the deliverable requirements within the study timeframe. The study will be managed according to the steps required to implement the research and will be course corrected as needed to ensure target end goals are reached. The following tools will be used to guarantee that the project schedule will be maintained:

Project Administration:

1. Weekly team meetings and conference calls will be held to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Team and will include the PM, Project Coordinator, SMEs and AEP leadership as needed based on the requirements and stage of implementation.
2. Routine calls and communication via email will be held with CBEP regional leadership, in-country collaborators, external SMEs, and Metabiota to provide routine status updates and ensure study implementation.

Project Reporting:

1. Weekly status reports will be provided by the PM to senior MB leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction as needed, to ensure that project goals are met.

Monitoring and Controlling

1. Routine risk assessment will be performed internally among the MB project management team to guarantee that the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with CBEP regional leadership to ensure that the project remains on track and is implemented according to existing standards.
3. Routine communication, to include monthly Skype meetings with the project teams and monthly reporting requirements implemented with teams in Singapore and India, will be maintained to ensure that the study is progressing and to troubleshoot any challenges faced in the field. Metabiota will maintain oversight and coordination of the study to ensure Duke NUS and NCBS are maintaining technical, administrative and fiscal requirements to ensure successful execution of the workshop.

Completion

Maintaining a focused project schedule with routine meetings and communication with CBEP regional leadership and partners, and allowing for continued coordination while maintaining targeted objectives, Metabiota will complete the sampling portion of this project between September and November 2015. The remaining six months will be utilized for screening samples for the presence of viral RNA, antibodies, and preparing samples for Next-Generation Sequencing. Dedicating two technicians to process the samples along with SME and programmatic oversight will ensure that we meet the project objectives by May 2016. Metabiota

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

believes that the experience and management it will bring to this project, in collaboration with regional SMEs and CBEP, will guarantee success.

Technical Approach

Introduction

To accomplish the study, Metabiota will maintain open lines of communication and will follow the study design and required research protocols developed, reviewed and approved by study SMEs and the appropriate ethical review boards prior to implementation. Metabiota will implement the proposed research activities according to schedule to ensure that CBEP requirements are met, in the assigned timeframe, supporting solid scientific engagement within the region and resulting in risk mitigation and scientific collaboration to further develop and enhance biosafety and surveillance efforts on an international plane.

This will be facilitated through the study implementation as follows: The identified cave site will be intensively sampled for the presence of known select agents that are naturally harbored in bats and that have caused mortality in humans. Samples have been collected from this site for the past two years by NCBS researchers, and these samples are available for screening and will provide background data. Research teams will visit the site three times to collect bat excreta, urine, oral swabs, anal swabs, blood, sera, and tissues (kidney, spleen, lung, intestine) from harvested bats. The first visit will be 4-6 weeks before the bat harvest to ascertain the baseline level of prevalence, the second trip will be during the harvest, and the third trip will be 4-6 weeks after the harvest. Samples will be given a unique identification number and this will be tagged to the sample type and organism type so that there will be shared identification markers between data categories. This will enable researchers to maintain sample fidelity and ensure a known location for each original sample, extracted nucleic acid, and PCR product. All original samples will be kept in a secured, locked freezer, and sample information will only be made available to the project team members following appropriate in-country and ethical guidelines for sample storage and analysis. Samples will be screened by PCR with family-specific primers, sera will be screened using a Luminex assay, and samples will also be screened with next-generation sequencing approaches to capture the maximum divergent virus lineages. This will allow researchers to know which viruses are circulating in the bats and how much risk there is for the bat hunters, and their community. This approach is geared towards achieving the following objectives:

1. Determine the virus community in the three species of bats, specifically paramyxoviruses, filoviruses, and coronaviruses;
2. Examine if detectable virus prevalence increases after an anthropogenic stress event;
3. Improve molecular virus diagnostics and epidemiology study systems;
4. Develop long-term surveillance in both wildlife and humans surrounding use of bushmeat in India.

Implementation of this approach will result in:

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

- Determination of the specific criteria for molecular study for selected pathogens in India. Testing will include isolate identification with CSIRO-validated methods and protocols for PCR;
- Performance of phylogenetic analysis for select agents, specifically filoviruses (Ebola virus), paramyxoviruses (Nipah virus), and coronaviruses (SARS-CoV), and prevalent genotypes and relatedness to pathogenic variants will be determined;
- Control measures and biorisk assessment will be determined for human activities regarding bat hunting and consumption;
- Samples will be maintained at TIFR-NCBS for future research and enhanced virus characterization.

Communications Protocols

Metabiota will maintain open communications with international collaborators necessary for implementing the study, to include monthly project calls and routine email communication with the teams implementing and coordinating research activities. In addition, Metabiota will maintain routine communication with CBEP regional leadership to ensure they have full visibility on the project, status and process of execution.

Phases of Technical Approach

Metabiota will use a phased technical approach to manage all tasks required for successful implementation of the project and to provide overall feedback and reporting on the project route to success. The following phases are required for this project:

Phase 1: Hold a project kickoff meeting in Singapore with research and administrative teams.

Objective and Process: Metabiota will coordinate with Duke NUS and NCBS to schedule and facilitate a project kickoff meeting outlining the objectives of the study, logistical coordination required toward implementation, review of protocols and on-site training for NCBS field researchers in preparation for sampling and implementation.

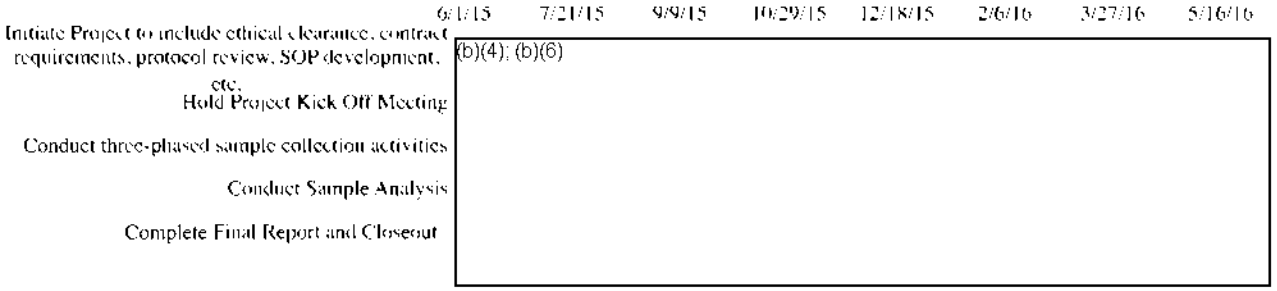
Deliverable: Initiation of research activities, study-specific training on protocols and safe handling, and sampling techniques required for project execution. Establishment of project guidelines, objectives and, deliverables.

Phase 2: Implement three-month sampling of bat colony at identified cave site.

Objective and Process: Metabiota will work with Duke NUS and NCBS to collect bat samples in 4-6 week intervals surrounding the annual bat cull. Samples will be collected by a team of 4 local ecologists and will be overseen by Duke NUS-trained researchers. All samples will be transported back to NCBS for sample processing and analysis following safe handling and proper cold chain methods of transport.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Deliverable: Collected samples from harvested bats transported back to NCBS for further processing.



Phase 3: Sample screening and analysis.

Objective and Process: Screen samples using family-specific PCR primers, Luminex assays, and next-generation sequencing approaches to capture the maximum divergent virus lineages to identify which viruses are circulating in the bats.

Deliverable: Final report showing findings from the study that can be used to produce policies that will minimize the exposure of bat-borne viruses during the collection and processing of bat catches as a food source, further reducing infectious disease threats.

To accomplish the above phases, Metabiota will work with Duke NUS and NCBS to initiate and implement the 12-month research activity resulting in increased biosurveillance and security measures and a greater scientific understanding of the ecology of reservoir-borne viruses and their transmission to prevent zoonotic epidemics and build the global community`s ability to implement preventative measures through biosurveillance, detection and response initiatives that mitigate the threat of these viruses causing disease outbreaks on a pandemic scale.

Timeline

Metabiota Key Personnel

(b)(6) Deputy Director

Mr. (b)(6) the Deputy Director of the Academic Engagement Partnership (AEP) Program and an Internationally Certified Emergency Manager (CEM®) with 14 years of experience leading, managing, and consulting on the full spectrum of Counter Weapons of Mass Destruction (CWMD) operations and Chemical/Biological Defense programs, as well as research and development in support of joint task forces, special operations forces, other government agencies, and the Department of Defense on the strategic, operations, and tactical leve (b)(6) is a driven leader with a proven track record of building value with partners through the identification of capability gaps, and the development and validation of effective solutions to the unique challenges faced when dealing with Chemical. Biological, Radiological, Nuclear, and Explosive (CBRNE) threats. In addition, he is well versed at risk analysis and management, strategic planning, policy analysis and political engagement.

(b)(6) ogram Manager

is the Southeast Asia and Middle East Regional Program Manager of the Academic Engagement Partnership (AEP) Program with over eight years experience as a global health project/program manager, with a focus in SE Asia regional activities, having lived and worked in Cambodia for four years supporting DoD efforts in the region. Since joining Metabiota in 2010, she has managed DTRA CBEP engagements in West and Central Africa, to include Ebola response efforts, as well as spending three years as the Program Manager on projects funded by USAID, AFHSC GEIS. BEP, NIH, USAMRIID, and HJF spanning all regions of Metabiota engagement.

(b)(6) bject Matter Expert

joined Metabiota in March, and will be engaged as a Subject Matter Expert for this effort supporting programmatic and logistical requirements. She joins the team following completion of an MBA with experience in project controls, coordination, strong writing and editing skills and will bring a business approach to the project, keeping track of all deliverables, scheduling, and facilitating coordination with both internal and external stakeholders. In addition to her business expertise, (b)(6) worked as a Data Technician and Interviewer for NIH/CDC sponsored studies, while completing her undergraduate work at Duke.

(b)(6) – Subject Matter Expert

(b)(6) received his BS in Entomology and Zoology from the University of Wisconsin at Madison and his PhD in Parasitology with a focus on vector borne infectious diseases from Department

of Tropical Medicine at Tulane University. He was the laboratory manager for a large mosquito control company and his doctoral research focused on the transmission cycles of arboviruses between birds and mosquitoes, especially regarding the relative contribution of these individuals towards viral amplification and dampening. As a Senior Research Fellow at Duke-NUS, his current work focuses on the ecology and evolution of novel and reemerging infectious diseases in different animal populations in Singapore. His aim is to understand how ecological and climatological variables impact the presence or absence of host, ectoparasites, and parasites in different habitats and if there is exchange or isolation of genes. His primary interest is on the viral ecology in the bats of Singapore. He also is the insectary manager and works on arbovirus dynamics in mosquitoes.

(b)(6) – Subject Matter Expert

(b)(6) primary training was in ecology and evolution at The University of Melbourne. He obtained his PhD at The University of Hong Kong in 2003, where he also undertook his post-doctoral training in the Department of Microbiology (b)(6) s an authority on the evolutionary aspects of influenza virus biology, especially at the human-animal interface; he has provided seminal studies on H5N1 viruses as well as the pandemic viruses of 1918, 1957, 1968 and 2009. In 2007, (b)(6) was awarded a 7-year Career Development Award to continue his work on influenza as part of the NIAID/NIH Centers of Excellence for Influenza Research and Surveillance. His research in the Laboratory of Virus Evolution integrates ideas from a number of different fields including evolutionary genetics, virology, ecology, and infectious disease epidemiology. His research is directed at efforts to better understand viral disease ecosystems in Asia, specifically the animal-human interface, and to support rational implementation of disease control and intervention strategies. He conducts human and animal disease surveillance, isolates and characterizes pathogens (genetic and phenotypic), and generates hypotheses that to test in the lab. He is primarily interested in the roles played by mutation, natural selection, recombination/reassortment and host immune response on virus diversity within an individual, during transmission within a population and during inter-species transmission between hosts.

(b)(6) Ph.D. – Subject Matter Expert

(b)(6) received his PhD from The University of Hong Kong on microbial ecology and evolution. His post-doctoral studies have described the origins, spread, ecology and evolution of avian and swine influenza viruses, including the 2009 swine-origin H1N1 pandemic virus. His studies have led to the proposal that bats are natural reservoirs for both Astroviruses and Coronaviruses. He is currently an Assistant Professor in the Signature Program of Emerging Infectious Diseases at the Duke-NUS Graduate Medical School Singapore. His current research encompasses concepts and recent methodological advances from evolutionary genomics, molecular virology and epidemiology to address the mechanisms and factors that shape virus evolution. He is primarily interested in the animal-human interphase of RNA viruses, including disease surveillance, modeling virus transmission and evolution at the genomic scale

(computational), and modeling virus evolution and host responses *in vivo* using animal models (laboratory based).

Cost Management

The Metabiota team and all partners will maintain an acute focus on cost management to ensure that the study is delivered at a reasonable cost to the Government. Our team will provide full oversight of Duke NUS and NCBS to ensure accurate and responsive financial reporting and will facilitate cost savings to the Government wherever possible. Metabiota will follow all procurement and travel regulations, ensuring the best price is secured while maintaining product integrity.

Budget Narrative

Period of Performance

The Period of Performance for this effort is June 1, 2015 to May 15, 2016.

Labor

Costs for direct labor to support this activity is required for the following personnel:

Metabiota Program Manager, (b)(6), to oversee and execute the project to include management of deliverables, logistics, management of project personnel, tracking of project requirements, and implementation.

Metabiota Subject Matter Expert (SME) (b)(6), to provide overall expertise in project coordination in direct support of the program manager, to include tracking of deliverables, project schedules, sub-contracted SMEs, and local collaborators facilitating execution of the research project. She will assist in coordination of the research project until an identified SME can be hired to support coordination of this effort through the duration of the project at .5 FTE. (b)(6) will provide the necessary support to ensure project kickoff and execution and a smooth transition with the new hire to facilitate this engagement. Once they are onboard she will maintain visibility across the program and provide support at a lower LOE.

Metabiota Subject Matter Expert (SME), TBD, will be engaged to provide expertise and project coordination at 50% LOE to ensure overall execution in direct report to the Program Manager. This individual will coordinate the day-to-day activities required to implement the research and ensure communication is maintained across collaborating institutions, to include submission of deliverables and routine project updates. This individual will assist in financial tracking of the project to ensure it stays in budget and will provide general project administrative support to the team.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Metabiota SME II, will be engaged to provide scientific and technical support to the project, integrating with both Duke NUS and NCBS researchers to ensure scientific rigor and oversight is maintained throughout the duration of the study.

Duke NUS Research and Data Analyst will be engaged to support the laboratory testing and bat trapping in conjunction with the NCBS team in supporting this research. This individual will assist in training NCBS field teams, trapping bats, field collection and processing of samples and setting up diagnostic assays. They will perform basic laboratory techniques to include nucleic acid extraction, PCR, and basic sequence analysis.

NCBS Researcher (b)(6) is a PhD student who will collect the bat samples in conjunction with a team of local ecologists, transport the samples to NCBS, and process and screens the samples for evidence of coronaviruses, filoviruses, and henipaviruses. In addition, he will prepare the laboratory and field reports and will process all data and analysis with support from senior researchers working on this project.

Additional costs for direct labor supporting the Deputy Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

In addition, labor costs are not being requested for SMEs from Duke NUS and NCBS to include (b)(6) who will be providing research collaboration to include supporting evolutionary analysis of NGS and Sanger sequence data, and research activities.

Materials

Materials and supplies are required to support the implementation of research activities for this project. Materials include bat trapping equipment, field supplies for sample dissection and collection, and laboratory materials to include extraction kits, PCR reagents, Elisa plates, and sequencing costs required for technical implementation. CLS will procure and ship all identified supplies that will not be purchased in country, or directly by Duke NUS to support laboratory and field training operations at the laboratory in Singapore.

Publication costs are requested to support the submission of abstracts and other publications generated from this research activity. All documents will be pre-approved by the PAO.

Communication costs and video conferencing are requested to support routine communication with project personnel based internationally, as well as during international travel to India and Singapore in support of project implementation.

Internet and cloud-based document management costs are requested to support routine communications and management of project files in support of this engagement.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

NCBS will provide research services to implement this study. Research services will include trapping, sample collection, transport and analysis at NCBS, India.

NCBS will provide ecology services to support bat trapping, handling and sampling. Services will be provided for a three-month period during which sample collection will be ongoing. They will not be engaged for the remainder of the project.

Other Direct Costs

Per contract guidelines Defense Base Act (DBA) insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for Duke NUS and NCBS personnel for the period of performance for this engagement. In addition, DBA insurance will be secured for Metabiota personnel traveling to Singapore and India in support of this activity.

SOS Insurance is required for Metabiota personnel traveling to Singapore and India to support this research activity, ensuring they are covered for emergency and evacuation services if necessary.

Subcontracts

A Subcontract will be issued to Duke NUS and NCBS to support their labor requirements on this engagement, as well as in-country materials required for support of this project. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested for Metabiota and NCBS personnel to travel to Singapore to conduct the project kickoff meeting with Duke NUS at the start of this engagement to support protocol review, logistical requirements, contract implementation, project-specific training, ensuring the study is outlined and established with all teams prior to initiation of sampling and research activities.

Travel is also requested to support Metabiota and Duke NUS personnel to travel to Bangalore and Dimapur, India to support project implementation with NCBS researchers to include laboratory and field oversight during the first events, with a follow up by the Duke NUS researcher to ensure the study is moving forward smoothly and according to protocol. Travel support for Duke NUS personnel not requesting labor costs, will be covered by CLS. In addition, travel is required for NCBS researchers to travel from Bangalore to Dimapur to implement sampling activities at the bat cave.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Travel is requested for (b)(6) to travel from California to DC in support of overall program management and meetings with AEP and CBEP regional leadership to effectively manage the research activity through in-person meetings and coordinated efforts.

Conclusion

Emerging infectious diseases (EIDs) are a challenge for medical and public health infrastructure across the globe. These pathogens are predicted primarily to be of zoonotic origin. Interspecies zoonotic RNA viruses are the primary etiological agent in emerging infectious diseases, and wildlife is the natural reservoir for known and unknown infectious zoonotic pathogens. Bats animals appear to be the putative source for medically important viruses including rabies, the MERS- and SARS-coronaviruses, Nipah virus, and Hendra virus; exposure of incidental hosts such as humans to coronaviruses or paramyxoviruses can progress to infection causing high levels of morbidity and mortality. The economic costs of these infections number in the billions of dollars, including the burden of morbidity and mortality along with lost tourism dollars. For example, the SARS outbreak alone was estimated to cost over $50 billion, demonstrating the need for proactive surveillance.

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP PACOM in the implementation of the study. Metabiota will ensure, through strong project management and risk mitigation, that the research will be executed in an efficient and timely manner, delivering a top quality study designed to support enhanced biosurveillance and biosafety efforts in the region.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Executive Summary

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) has tasked Metabiota, Inc. through the Academic Engagement Partnership (AEP) contract vehicle with developing and delivering an eighteen (18) month course to teach the basics of passive surveillance for animal diseases to a cohort of Iraqi veterinarians. The purpose of the course is to train Iraqi veterinary workers (including field, laboratory, and public health sectors) in the basics of passive biosurveillance and disease diagnosis. This document outlines the approach that Metabiota will employ to accomplish the requirement. In short, Metabiota intends to develop curriculum for and deliver a training course that uses both online instruction and three in-person events to enhance the ability of Iraqi animal health workers to safely and securely diagnose animal diseases through pathological observations, with an emphasis on differential diagnosis against high-consequence pathogens.

Project Overview

Introduction

Through AEP Technical Direction 005, DTRA CBEP has tasked the Metabiota team with administering an eighteen (18) month distance-learning course covering passive surveillance for animal disease in Iraq. DTRA has asked for this course to work through the basic concepts of disease pathogenesis, the development of lesions, the significance of lesions in terms of disease, and how these lesions relate to the clinical disease in an animal. Both endemic and high consequence pathogens are to be covered to help participants distinguish key aspects that differentiate them, and to help participants appreciate the most appropriate samples to ensure accurate diagnosis.

Background

The Metabiota team understands that the US Department of Defense (DoD) initiated CBEP through DTRA in order to reduce the threat of biological outbreaks. The team further recognizes that to achieve its mission, DTRA CBEP works collaboratively with partner nations, U.S. Government (USG) agencies, and the international community to enhance disease surveillance capabilities; develop human resource expertise in public and animal health, promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. Through the AEP Program, Metabiota aims to support the CBEP mission by using our broad expertise and deep networks to develop and implement solutions to address the requirements put forth by DTRA.

In support of this requirement, the Metabiota team intends to develop and administer a comprehensive course that will support strategic DTRA CBEP objectives by enhancing Iraq's capacity to identify and mitigate the threat of infectious disease events in animals while increasing engagement with Iraqi animal health workers and scientists. The team's on-the-ground experience and decades of expertise makes us well positioned to support the implementation of this course and all of the associated activities.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Purpose

Recurring civil strife in Iraq has disrupted capacity for adequate surveillance and diagnosis for many diseases in animals. Currently, Iraqi animal health professionals, both in the field and in the laboratory, are insufficiently prepared to consider all relevant differential diagnoses. As a result, passive surveillance is very deficient, and a disease surfacing in the field is likely to be unrecognized or misdiagnosed. When these diseases are high consequence pathogens, it puts many more animals and often humans at risk.

To address this concern, DTRA CBEP has identified the need for an 18-month course on the basic pathogenesis of disease, with an emphasis on high consequence pathogens. It will be held for approximately 30 key. English-speaking animal health workers to enable them to more quickly recognize an incursion or outbreak of important pathogens. This engagement will enhance Iraq's capacity in disease surveillance and response, while adhering to international codes of security and safety to ultimately provide a mechanism for sustained engagement.

The goal of this training is to strengthen the initial comprehensive consideration of disease, applying pathogenesis training to allow animal health workers to increase efficiency and accuracy of disease diagnosis, especially for high consequence pathogens.

Objectives

We will build disease diagnosis expertise among a selected cohort of Iraqi veterinarians. At the end of the course, the participants should be able to:

- Delineate the pathogenesis of basic pathologic processes;
- Use problem-solving skills to explain how clinical signs might be related to the basic disease process occurring in the animal;
- Explain key clinical and pathologic features of high consequence pathogens;
- Comprehend basic epidemiological concepts and how they integrate with daily veterinary practices to include but not limited to recording and reporting of data to measure disease prevalence and risk factors; and
- Comprehend biosafety, biosecurity, and biorisk management concepts and how they can integrate with daily veterinary practices.

Threat Reduction Outcomes

Successful completion of this course will address the DTRA CBEP threat reduction mission in several ways:

- The selected Iraqi veterinarian cohort will be capable of earlier and more accurate detection of all diseases, with an emphasis on high-consequence pathogens, so that these agents can be properly controlled and secured.
- Basic epidemiological concepts will be introduced, laying the foundation for improved disease reporting.
- Basic biosafety, biosecurity, and biorisk management concepts will be introduced, reducing the risk of animal and zoonotic disease outbreaks.
- A sub-cohort of Iraqi veterinarians capable of training additional personnel will be established.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Management Approach

Introduction

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager and Country Manager as needed to direct the operational and administrative support required to implement the training curriculum. Our Program Manager will oversee the administration of the curriculum, with the support of a Project Coordinator, Travel Coordinator, and Qualified Trainers to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the Program Manager, Project Coordinator, Travel Coordinator and the Qualified Trainers and Subject Matter Experts that will be tasked with specific assignments to support the development and implementation of the course based on their administrative and scientific expertise. This team includes experts at the University of Georgia (UGA) and the Jordan University of Science and Technology (JUST). This team of experts will ensure the overall project management and tasks associated with the training are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

Initiation

Following authorization to proceed by DTRA, the Metabiota team will coordinate initial meetings to secure a clear understanding of the objectives and mission of this undertaking, and make sure all stakeholders agree to it. As this project will involve coordination with foreign entities, Metabiota will also seek to develop a communications protocol for stakeholders, to be approved by DTRA.

Execution

The core project management team will maintain oversight of the project at all times and will ensure successful execution of the curriculum, tracking objectives to ensure the project stays on schedule. The project will be managed according to the proposed plan and will be course corrected as needed to ensure target end-goals are reached. The following tools will be used to guarantee the project schedule will be maintained:

Project Administration:

1. Weekly team meetings and conference calls will be held to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Coordinator and will include relevant stakeholders as needed based on the requirements and stage of implementation.
2. Routine calls and communication via email will be held with CBEP regional leadership and Metabiota to provide status updates and ensure training implementation.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Project Reporting:

1. Weekly status reports will be provided by the Program Manager to senior Metabiota leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction, as needed to ensure training goals are met.

Completion of this task will occur in three phases – curriculum development, logistics planning, and course implementation. As the proposed course is 18 months long, these phases may overlap. Metabiota will maintain management oversight during all phases to ensure that all DTRA requirements and deadlines for submission of documents and review of materials are met.

For the curriculum development phase, Metabiota will identify the required Qualified Trainers and Subject Matter Experts needed to complete curriculum development from its cadre of experts. We will engage the trainers to develop a comprehensive curriculum, which will take into account regional sensitivities and religious requirements to ensure the course is conducted in alignment with regional practices.

For the pre-implementation logistics phase, Metabiota will coordinate with all relevant parties, including DTRA, A&AS, all subcontractors on this effort, CLS, and the trainees to ensure that communications remain clear and that planning proceeds smoothly. We will maintain oversight of procurements and all required documentation in order to ensure smooth implementation.

For the implementation of the course, Metabiota will task the appropriate stakeholders with executing the requirements. Metabiota will maintain communication with regional and country leads during implementation to ensure smooth operations and successful engagement.

Monitoring and Controlling

1. Routine risk assessment will be performed internally among the Metabiota project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with CBEP regional leadership to ensure the project remains on track and is implemented according to standard.
3. Routine oversight and coordination will be performed to ensure our teaming partners are performing all necessary requirements to ensure successful execution of the course. Monitoring will include both administrative and fiscal oversight.

Completion

Metabiota will drive the project to completion in a timely manner by maintaining a focused project schedule with routine meetings and communication with CBEP regional leadership. This will allow for continued coordination, while maintaining targeted objectives. As the course progresses, Metabiota will provide all required deliverables and after action reports to allow for lessons learned and continuation of solid execution and implementation of activities. Metabiota

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

believes that the experience and management it will bring to this project, in collaboration with CBEP will guarantee success.

Technical Approach

Introduction

To address DTRA's requirements, the Metabiota team will build disease diagnosis expertise among a core group of Iraqi veterinarians, from the field, from public health, and from the laboratory, using a combination of in-person trainings and weekly web-based modules.

The program will entail didactic, interactive, and case-based materials to work through the basic concepts of disease pathogenesis, the development of lesions, the significance of lesions in terms of disease, and how these lesions relate to the clinical disease in an animal. Both endemic and high consequence pathogens will be covered to help participants distinguish key aspects that differentiate them, and to help participants appreciate the most appropriate samples to ensure accurate diagnosis. Additionally, we will introduce the cohort to the fundamental concepts of epidemiology, biosafety, biosecurity, and biorisk management, especially as applied to daily veterinary practices.

Phases of Technical Approach

Phase 1: Development of curriculum and teaching materials
Phase 2: Pre-implementation course logistics
Phase 3: Implementation of the course

There will be three phases to the technical approach. Phase one will be initiated immediately following technical direction and will involve coordination of Metabiota and UGA qualified trainers and subject matter experts to develop the curriculum and teaching materials. Phase Two will be the coordination of pre-implementation course logistics, to include the identification of Iraqi participants, procurement of materials and supplies, and logistics planning for in-person trainings. Phase Three will be the actual implementation of the course, including both the in-person trainings and the delivery of instruction via the web portal.

Phase 1 – Development of curriculum and teaching materials (15 June – ongoing)

Objective: Develop curriculum and teaching materials to address course objectives.

Process: Metabiota, in coordination with UGA, will develop the curriculum and teaching materials. This will also include submission of materials to DTRA for review, revision, and approval. Metabiota will adhere to all CBEP deadlines if possible, acknowledging that if DTRA has a specific date in mind for the initiation of training that it may not be possible to adhere to all deadlines. Additionally, it may be necessary to submit teaching materials on a rolling basis, as the Metabiota team expects that there may be a significant quantity of materials to be reviewed given the extended nature of the proposed course. If a rolling submission is deemed to

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

be necessary, Metabiota will attempt to divide the materials into logical sets to facilitate ease of review and logistics planning. After approval, the Metabiota team will ensure course materials are in a format appropriate for web delivery and will work with the course portal provider to upload materials.

Metabiota will combine our expertise in epidemiology, biorisk management, and public health with the veterinary expertise of UGA to develop a course that closely aligns with the DTRA CBEP mission of reducing biological threats through improved biosurveillance, biosafety, and biosecurity.

Deliverables: Submission of draft and final teaching materials.

Phase 2 – Pre-implementation course logistics (15 June – ongoing, as needed)

Objective: Identify an appropriate cohort of Iraqi veterinarians, procure materials, and arrange all necessary logistics for course kickoff.

Process: Metabiota and UGA will engage DTRA, and through DTRA, Iraq's Ministry of Agriculture, to identify a cohort of Iraqi veterinarians to participate in this course. In addition, Metabiota will work with trainers and local collaborators to ensure initiation and implementation of all requirements leading up to each training event, to include procurement, travel, transport, and coordination of the event.

Deliverables:

- Deliverable #1: List of Iraqi veterinarians.
- Deliverable #2: Final materials list. Engage CLS or JUST as needed for procurement support.
- Deliverable #3: Work with local and international vendors to procure supplies and have them shipped or delivered to training location in Irbid, Jordan.
- Deliverable #4: Work with DTRA and CLS to arrange logistics for Iraqi participants. Ensure all arrangements are made in advance to support training engagements.
- Deliverable #5: Training event plans for each of the in-person training events.

Phase 3 – Implementation of the course (October 2015 – April 2017)

Objective: Implement the course, including three in-person training events.

Process: Metabiota will engage UGA to establish the course website, and UGA's expert trainer will be the primary instructor for delivery and grading of all teaching materials. The three in-person training events will be held at JUST with instruction from UGA and Metabiota trainers. Personnel from JUST will be engaged to provide additional expertise and logistics support. Metabiota personnel will oversee UGA and JUST personnel on the ground to ensure all training activities are executed.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Deliverables:

- Deliverable #1: Establish and verify functional course portal and conduct online courses.
- Deliverables #2-4: Execute in-person training events at beginning, middle, and end of course.
- Deliverable #5: Provide training trip reports upon completion of training events according to CBEP guidelines.

Training Overview

The training, both in-person and distance delivered, will create improved overall passive animal health surveillance, and a more rapid assessment and diagnosis in the case of high consequence pathogens. The end result will be increased efficiency and accuracy of the overall surveillance for diseases of animals, including the control and securing of high consequence pathogens. A tentative timeline of the coursework is as follows, with brief description of each of the segments below:

Timeline of course

Activity/month	1	2-7	8	9-17	18
Group training					
WEB MODULES General Pathology Basic concepts for all body system		Basic Pathologic Processes: Circulatory — Cell Injury → Inflammatory			
WEB MODULES Systemic pathology – Basic concepts applied to each body system				Systemic Pathology: Cardiovascular → Reproductive → Digestive → Urinary→ Skeletal → Respiratory → Nervous	
Applied problem solving – case-based Q&A		Weekly case assignment, presented over the internet			
Submission of cases		One case per month to be submitted by small groups			
Train-the-trainer modules, learning about education		Optional modules, one per month, on adult learning and effective presentation skills			

- ***Group trainings (3):*** At an initial 5-day session, participants will gather for in-depth instruction on biosafety, biosecurity, and procedures for necropsy. A mid-course training will cover pathogenesis in more detail, using General Pathology concepts learned during the previous six months. There will be continuing emphasis on basic epidemiology, biosecurity, biosafety, and high consequence pathogens. At the end, there will be a course to review all aspects of pathogenesis and diagnosis/control of the high consequence pathogens. Also at this third training, selected trainers will be utilized for much of the information delivery, creating an effective bridge to Iraqi-centric, and therefore sustainable, training.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

- ***Web modules***: Over the course of 18 months, there will be lessons delivered over the internet on basic concepts in pathology and pathogenesis, beginning with general pathology and progressing through the body systems. These web lessons will have multiple embedded self-quizzes, and will be reinforced by written notes and narrated PowerPoint's, all available by downloading from the web lesson.
- ***Applied Problem Solving***: A weekly case-based problem-solving assignment, relevant to the week's course material, will be presented on the internet. Participants will have to work through the presented case, and answer questions based on the knowledge gained during the week. Participants will have to submit their answers for evaluation, and will receive feedback on their answers. For those without fluency in English, they will have the option of submitting in Arabic.
- ***Submission of cases by participants***: Once per month, participants, organized into geographically proximate groups, will be required to submit a case from their work, complete with signalment, photographs, and tentative morphologic diagnoses. The best of these will be posted for everyone to see, so that participants are able to work together and also view other groups' efforts.
- ***Train-the-trainer modules***: Optional modules for those who desire more information on effective learning methodologies, one per month. Those completing/excelling in these modules will be the participants selected for training of others at the final workshop.

Risk Management

In order to maintain course action and guarantee trainings that will reduce regional risk and forward CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the Risk Management Matrix shown on the next page as Table 1. Identifying and acknowledging the risks associated with not implementing this training, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
			Cost			
Technical Direction NTE Ceiling	The current budget with travel, management, procurement, and execution will exceed the ceiling for the technical direction	5	4	(b)(4); (b)(6)	Metabiota will monitor costs and work diligently to seek out the lowest costs possible for procurement and travel, as well as mitigate extended labor hours during events	**Med-High**
			Schedule			
Period of Performance	The requirement is for an 18-month course but the Metabiota AEP contract is only through May 2016.	5	5	(b)(4); (b)(6)	Request confirmation from DTRA contracting that activities will be permitted to extend beyond the current contract POP.	**Med-High**
Acquisition of materials	Procurement of materials in US for shipment to Jordan and Iraq may incur delays.	4	4		Engage JUST to assist with procurements.	(b)(4); (b)(6)
			Performance			
Security environment / Logistics coordination	Iraq's current political situation and security environment may impact the ability of trainees to attend in-person trainings, and may also impact telecommunications access for distance learning.	4	5	(b)(4); (b)(6)	Work with DTRA to monitor security environment and mitigate security concerns; provide trainee cohort with mobile internet access.	Med
Identification of appropriate trainees	For the course to achieve desired threat reduction outcomes, the appropriate trainee cohort must be identified.	3	4	Med	Metabiota team will work with DTRA and in-country POC at Ministry of Agriculture to identify a diverse cohort of capable trainees.	(b)(4); (b)(6)
Course completion rates	Attendance in distance-learning courses is often spotty	3	3	Med	Use in-person trainings and internet access as rewards for adherence to schedules	

Table 1. Risk Management Matrix for implementation of distance learning course for passive surveillance for animal diseases in Iraq.

Cost Management

The Metabiota team and all partners will maintain an acute focus on cost management to ensure that the training is delivered at a reasonable cost to the Government. Our team will provide full oversight of UGA and JUST to ensure accurate and responsive financial reporting and will facilitate cost savings to the Government wherever possible. Metabiota will follow procurement

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

regulations ensuring the best price is received under the time constraints using all means available.

Budget Narrative

Period of Performance

The Period of Performance for this effort is June 1, 2015 to April 30, 2017. The training curriculum is 18 months; however, it is anticipated that training will not begin until 1 October 2015 due to time associated with proposal development and project initiation activities.

Labor

Costs for direct labor to support this activity is required for the following personnel:

Metabiota Program Manager – Oversee and execute the training to include management of deliverables, logistics, procurement, tracking of project requirements, and implementation.

Metabiota Project Coordinator – Assist in coordinating the course development and execution, to include assisting in management of deliverables, logistics, and procurement, tracking of project requirements, deliverables and logistics.

Metabiota Subject Matter Expert – Incorporate basic epidemiology concepts into the curriculum and assist in delivering draft and finalized teaching materials.

Metabiota Qualified Trainer – Incorporate biosafety, biosecurity, and biorisk management concepts into the curriculum, assist in delivering draft and finalized teaching materials, and to implement the biorisk management portion of the curriculum at the in-person training events.

UGA Qualified Trainer – Develop veterinary pathology curriculum, assist in delivering draft and finalized teaching materials, deliver in-person trainings, and implement the distance-learning portion of the course.

JUST Qualified Trainer – Assist in delivering in-person trainings, and assist with regional adaptation of materials as needed.

Additional costs for direct labor supporting the Deputy Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials

Materials and supplies are required to support teaching efforts, to include textbooks, necropsy kits, slaughtered animals for practice necropsies, USB internet devices, and prepaid internet

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

access cards. Every effort will be made to secure the required materials at the lowest cost, either by engaging JUST to assist with local procurement, or by using CLS to ship materials from the US.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for all Metabiota and subcontractor personnel who will attend the in-person trainings, including those trainers coming from UGA and JUST, for the period of performance for this engagement.

Subcontracts

A subcontract will be issued to UGA and JUST for time provided by their trainers, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

At the request of DTRA, travel is required for the Program Manager and Project Coordinator to travel to Irbid, Jordan to oversee the implementation of the training.

Travel is requested to support all Qualified Trainers to facilitate implementation and conduct training activities in this effort. Trainers will be traveling from Athens, Georgia (UGA) and Washington, D.C. (Metabiota) to Irbid, Jordan.

Travel is requested to support all Iraqi veterinarians to attend on-site training at JUST (Irbid, Jordan). All travel logistics for Iraqi participants, including airfare, ground transportation, lodging, per diems, etc., will be requested via generation and submission of a CLS form.

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP CENTCOM in the implementation of Distance Learning on the Basics of Passive Surveillance for Animal Diseases in Iraq. Metabiota will ensure, through strong project management and risk mitigation that the training will be executed in an efficient and timely manner delivering a top quality course geared to support enhanced biosurveillance and biosafety efforts in the region.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Appendix A – Team Metabiota Overview

Metabiota, Inc. is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota currently supports a number of Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. Metabiota's mission aligns well with CBEP and the entire Metabiota team is focused on supporting our U.S. Government (USG) Partners in reducing the risk of biological threats worldwide, and employs a collaborative and agile approach to biological risk reduction.

To ensure a successful event, Metabiota, in coordination with CBEP regional leadership and in country partners have built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact DTRA CBEP objectives.

Metabiota will be leveraging the expertise and infrastructure of the University of Georgia (UGA) and the Jordan University of Science and Technology (JUST). The University of Georgia's College of Veterinary Medicine is one of the premier veterinary schools in the United States. UGA has a distance-learning platform, which will be adapted for this course; previously it has been successfully deployed for a limited training of Afghan veterinarians. The Jordan University of Science and Technology is regarded as one of the top educational institutions in Jordan and its Transboundary Animal Diseases Laboratory is supported as a regional center of excellence. JUST will provide a facility for the in-person component of the course, and will also provide additional veterinary and Arabic language expertise.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

RE: HDTRA1-14-C-0104 Technical Direction for the Study of the Risk of Bat-borne Virus Transmission from the Annual Bat Cull in Nagaland, India

Dear (b)(6)

Metabiota, Inc. (Metabiota) is pleased to present the attached proposal in response to the above referenced Letter of Technical sent by DTRA on May 26, 2015.

Metabiota intends to engage Duke NUS and The National Center for Biological Sciences for Implementation and completion of this training.

For the effort described, Metabiota estimates the Rough Order of Magnitude (ROM) to be **689,178** for a Period of Performance of June 01, 2015 to May 16, 2016. The detail budget is included. This proposal remains valid until September 30, 2015.

Please feel free to contact (b)(6) h questions or concerns at
(b)(6)

Sincerely,

(b)(6)

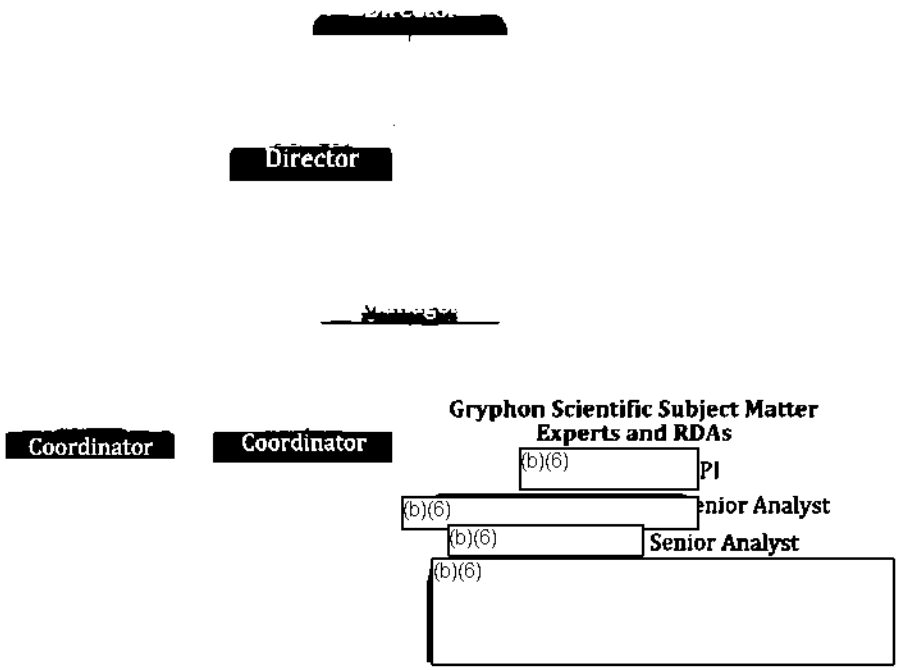
Metabiota Inc.
Contract No: HDTRA1-14-C-0104
TD: 0004

Content: Updated Budget Narrative Supporting TD 0004 "DTRA/CBEP Implementation of an Epigenetics and Genomics of Infectious Diseases Workshop in the Middle East South Asia Region"

Budget Narrative

Period of Performance



The Period of Performance for this effort is June 1, 2015 to November 30, 2015.

Labor

Metabiota will employ its existing organizational leadership to interface with the Regional Science Manager, and Regional Program Manager, as needed to direct the operational and administrative support required to ensure implementation of the Epigenetics and Genomics Workshop. Our Program Manager, (b)(4); (b)(6) will oversee workshop administration, with the support of a project coordinator, travel coordinator, and subject matter experts to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the Program Manager, Project Coordinator, Travel Coordinator and a team of Subject Matter Experts that will be tasked with specific assignments to support the development and implementation of the workshop based on their administrative and scientific expertise. This team of experts will ensure the overall project management and tasks associated with the workshop are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

This material shall not be disclosed outside the U.S Government and shall not be duplicated, used or disclosed in a whole or in part for any purpose other than to evaluate this material. If, however, a contract is awarded to this offeror as a result of- or in connection with- the submission of this material, the U.S Government shall have the right to duplicate, use or disclose the data to the extent provided in the resulting contract. This restriction does not limit the U.S Government's right to use information contained in this material if it is obtained from another source without restriction.

Costs for direct labor to support this activity is required for the following personnel:

Metabiota Program Manager, (b)(6)
LOE: 300 Hours
(b)(6) will be engaged on this project to achieve the overall operational objectives required to implement the workshop. She will be directly responsible for the management of the project completing the following tasks: overseeing project personnel in the execution of requirements and implementing the workshop, managing project deliverables, including submission of requirements to CBEP, tracking project requirements, interacting and reporting to CBEP personnel providing project visibility and coordination, financial monitoring, coordination and management of Gryphon Scientific personnel, and coordination with RSS to ensure deliverables are met and workshop is implemented. She will ensure overall logistical management of the event, and make sure the project is on track and completed within scope and budget. She will travel to Jordan in support of the workshop to provide on the ground coordination with CLS, Gryphon, and RSS to ensure smooth implementation of the event.

Research and Data Analysts

Metabiota Project Coordinator, (b)(6)
LOE: 396 Hours
(b)(6) will be engaged on this project as the day-to-day coordinator for this effort reporting directly to the Program Manager. She will ensure the project stays on schedule by routinely tracking project phases and ensuring CBEP deadlines are being met in support of the

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government.

Program Manager, (b)(6) will assist in coordination of the workshop, to include assisting in management of deliverables, logistics, and tracking of project requirements. She will coordinate completion and submission of CBEP CDRLs to include travel requirements, technical documents for PAO approval, and coordinate conference and participant information for submission and logistical coordination with CLS. She will communicate routinely with Gryphon Scientific personnel to ensure the project is being implemented according to the timeline and requirements. (b)(6) will participate in weekly calls with RSS, Gryphon and Metabiota team members, providing agendas, minutes, and scheduling follow up calls and tasks, as required. She will travel to Jordan in support of the workshop to provide on the ground coordination with CLS, Gryphon, and RSS to ensure smooth implementation of the event.

Gryphon Junior Analyst, (b)(6)
LOE: 115 Hours
(b)(6) will be engaged on this project as a Junior Analyst providing coordination and technical support to the Gryphon Senior Scientific team. Jacqueline will assist in the development of the workshop abstract book. She will assist the PI with the scientific advisory group and their reviews of submitted abstracts and travel applications. (b)(6) will copyedit all deliverables before they are finalized.

Gryphon Contract Administrator, (b)(6)
LOE: 95 Hours
The contract administrator will be engaged to support completion of the Metabiota and Gryphon subcontract governing this work. They will be involved in preparing a Memorandum of Understanding with RSS to support this engagement. In addition, they will work with the PI to ensure submission of all required financial and narrative progress reports required for the project, to include labor reporting requirements and other assigned CDRLs.

Subject Matter Experts

Gryphon Principal Investigator (b)(6)
Subject Matter Expert III
LOE: 500 Hours
(b)(6) will be responsible for overseeing the project and it's implementation as the leading expert from Gryphon Scientific, coordinating directly with Metabiota and RSS. She will manage all administrative and technical requirements for Gryphon to include, the project budget and ensuring successful completion of all project activities. She will be the primary point of contact for Gryphon and will work with the Gryphon Scientific financial staff to ensure all reporting requirements are completed on time. She will work with Metabiota, the scientific advisory group, and the RSS working group, to help develop the agenda for the scientific workshop, oversee the development of the workshop abstract book, and completion of the after action report. (b)(6) has a doctorate in genetics and molecular biology, conducted research on HIV and smallpox vaccines in mice and non-human primates.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government.

Gryphon Senior Analyst, (b)(6)
Subject Matter Expert I
LOE: 400 Hours

(b)(6) will be engaged on this project as a Senior Analyst and will work directly with (b)(6) to develop the abstract submission process, carry out the abstracts review and selection process, and oversee coordination of the logistics for the workshop in coordination with Metabiota and RSS personnel, including all necessary activities for the preparation and completion of the abstract book. She will assist in preparing the after action report and any publications that are generated by Gryphon from this event. (b)(6) is a biologist with experience conducting scientific peer review and planning scientific workshops.

Gryphon Senior Analyst, (b)(6)
Subject Matter Expert I
LOE: 225 Hours

(b)(6) will be engaged on this project as a Senior Analyst and will work directly with (b)(6) and (b)(6) develop the abstract submission process, carry out the abstracts review and selection process, and oversee coordination of the logistics for the workshop in coordination with Metabiota and RSS personnel, including all necessary activities for the preparation and completion of the abstract book. He will oversee implementation of the workshop website and will assist in preparing the after action report and any publications that are generated by Gryphon from this event. (b)(6) is a biologist with experience conducting scientific peer review and planning scientific workshops.

Additional costs for direct labor supporting the Deputy Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Materials

Materials and supplies are required to support costs for designing the workshop abstract book, which will be distributed at the workshop containing all abstracts of the presenters and participants. Once completed the abstract book will be submitted to CBEP for approval and sent to CLS for printing and shipping to the workshop.

A workshop website will be developed and maintained to provide information on and facilitate requirements in support of the workshop. The website will provide a forum for conference information, to include the agenda, schedule, abstract and poster submission requirements, selection process, and other key information necessary to effectively communicate conference information to the scientific community.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA insurance will be secured for Gryphon personnel for the period of performance for this engagement. In addition, DBA insurance will be secured for Metabiota and Gryphon personnel traveling to Amman, Jordan in support of workshop coordination and implementation.

SOS Insurance is required for Metabiota personnel traveling to Amman, Jordan to support workshop coordination, and implementation to ensure they are covered for emergency and evacuation services while in country.

Subcontracts

A Subcontract will be issued to Gryphon Scientific to support their labor requirements on this engagement, as well as materials they will produce in support of this effort. Material costs included are for the publication design of the abstract book, and the website. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested fo(b)(6) Program Manager and Gautham Venugopalan, Gryphon Senior Analyst to travel to Amman, Jordan to conduct a scoping visit prior to conducting the workshop. The scoping visit is critical for meeting with RSS key personnel supporting this engagement to include members of the scientific board, and to ensure in-country logistical support services being provided by CLS in support of this event are captured and clearly communicated to support implementation, and to ensure all facility and hosting requirements are in place to facilitate this event.

Travel is requested to support Metabiota and Gryphon project personnel to Amman, Jordan to facilitate implementation of the workshop to include, hosting the event, overseeing engagement with the participants, and conducting of the plenary and scientific sessions. In addition, this time is required to oversee and support all logistical needs supporting the workshop in conjunction with RSS.

It is estimated that a total of 65 regional participants from throughout the Middle East will be selected to attend this event, as well as up to 35 speakers required for implementation of the plenary, and scientific sessions required for this event. With the volume of travel required on this engagement, and in accordance with the contract, Metabiota did not request travel funding in support of this, as it is planned that all this travel would be routed to CLS. Additional conference support requirements to facilitate participant attendance to include abstract and poster submission requirements, and translation services may be required by CLS to facilitate the overall engagement and implementation of the workshop.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government.

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP CENTCOM in the implementation of the DTRA/CBEP Implementation of an Epigenetics and Genomics of Infectious Diseases Workshop in the Middle East South Asia Region. Metabiota will ensure, through strong project management and risk mitigation that the training will be executed in an efficient and timely manner delivering a top quality course geared to support enhanced biosurveillance and biosafety efforts in the region.

Key Personnel

(b)(6) - Deputy Director

(b)(6) is the Deputy Director of the Academic Engagement Partnership (AEP) Program and an Internationally Certified Emergency Manager (CEM®) with 14 years of experience leading, managing, and consulting on the full spectrum of Counter Weapons of Mass Destruction (CWMD) operations and Chemical Biological Defense programs, as well as research and development in support of joint task forces, special operations forces, other government agencies, and the Department of Defense on the strategic, operations, and tactical leve(b)(6) a driven leader with a proven track record of building value with partners through the identification of capability gaps, and the development and validation of effective solutions to the unique challenges faced when dealing with Chemical, Biological, Radiological, Nuclear, and Explosive (CBRNE) threats. In addition, he is well versed at risk analysis and management, strategic planning, policy analysis and political engagement.

(b)(6) - Program Manager

(b)(6) is the Southeast Asia and Middle East Regional Program Manager of the Academic Engagement Partnership (AEP) Program with over eight years experience as a global health project/program manager, with a focus in SE Asia regional activities, having lived and worked in Cambodia for four years supporting DoD efforts in the region. Since joining Metabiota in 2010, she has managed DTRA CBEP engagements in West and Central Africa, to include Ebola response efforts, as well as spending three years as the Program Manager on projects funded by USAID, AFHSC GEIS, BEP, NIH, USAMRIID, and HJF spanning all regions of Metabiota engagement.

(b)(6) - Research and Data Analyst

(b)(6) joined Metabiota in May after completing her MPA in International Management. She has five years experience working in international development, ranging in scope from a macro-level international development bank to micro-level grass roots development work. She worked

for two and a half years in rural Mozambique doing public health project management with the US Peace Corps, local community health clinics, and international donors.

(b)(6) – Subject Matter Expert III

joined Gryphon Scientific in 2015. Her focus areas are biotechnology, security, health security, and science policy. (b)(6) work addresses biological and chemical defense issues through active involvement of the scientific and security communities, international science engagement, and evaluation of multidisciplinary science and technologies. She has experience in: evaluating policy initiatives and produced policy and program option papers; developing educational case studies through which scientists can learn about how to analyze risk in their own research; designing and administering table top exercises to promote greater knowledge of how risks and threats are addressed in the scientific and law enforcement communities and to identify potential gaps in the system; and conducting technology evaluations in which she developed risk and benefit scenarios and risk assessment frameworks. She has developed innovative programs to promote trust and communication between the FBI and the academic science community in the United States, and to encourage cooperation between U.S. and Middle Eastern and North African scientists. In 2012 (b)(6) worked with the Presidential Commission for the Study of Bioethical Issues for seven months. There, she was the staff lead on the Commission's evaluation of the ethical issues associated with pediatric medical countermeasures research. Immediately prior to joining Gryphon Scientific (b)(6) spent nine years at the American Association for the Advancement of Science Center for Science, Technology and Security Policy. (b)(6) conducted her post-doctoral research at the Emory Vaccine Center where she conducted pre-clinical research and development of HIV and smallpox vaccines. (b)(6) received her Ph.D. in genetics and molecular biology at Emory University and B.S. in molecular genetics at The Ohio State University.

(b)(6) – Subject Matter Expert I

(b)(6) joins Gryphon Scientific as a Senior Analyst after completing a Science and Technology Policy Fellowship with the American Association for the Advancement of Science (AAAS) at the Department of Health and Human Services. At HHS (b)(6) worked in the Office of the Assistant Secretary for Preparedness and Response in the Division of International Health Security. Teresa led projects with international partners and coordinated with U.S. agencies to support multilateral initiatives designed to enhance domestic and international health security. As a fellow, she oversaw a cooperative agreement with the Gorgas Memorial Institute in Panama to enhance its diagnostic capacity for pandemic influenza and biological threat agents. Teresa completed a postdoctoral fellowship at Stanford University, where she studied the involvement of microRNAs in translation control and mRNA turnover during Hepatitis C virus infection. Her research was supported by a Ruth L. Kirschstein fellowship from NIH. Teresa holds a PhD from the University of Wisconsin-Madison in Cellular and Molecular Biology. As a graduate student, she revealed the molecular details of a long range interaction within Hepatitis B viral RNA crucial for viral replication. She received her Bachelor's degree in Chemistry and Biology from the College of St. Benedict/St. John's

RE: HDTRA1-14-C-0104 Technical Direction for the Implementation of Distance Learning on the Basics of Passive Surveillance for Animal Diseases in Iraq, with a Special Emphasis on Recognition of High Consequence Pathogens

Dea (b)(6)

Metabiota, Inc. (Metabiota) is pleased to present the attached proposal in response to the above referenced Letter of Technical sent by DTRA on May 26, 2015.

Metabiota intends to engage The University of Georgia Research Foundation Inc. to assist with Implementation and completion of this training.

For the effort described, Metabiota estimates the Rough Order of Magnitude (ROM) to be **440,156** for a Period of Performance of June 01, 2015 to April 30, 2017. The detail budget is included. This proposal remains valid until September 30, 2015.

Please feel free to contad (b)(6) with questions or concerns at
(b)(6)

Sincerely,

(b)(6)

Training Reinforcement: Mentoring and Physical Improvement to Improve Care and Notification Process

Assessments Before and After Training

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Executive Summary

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) has tasked Metabiota, Inc. through the Academic Engagement Partnership (AEP) contract vehicle with developing and delivering clinician training in Uganda. These events support accurate and rapid identification of infectious disease agents, which is an integral component of the disease reporting process and paramount for mitigation of epidemics. This initiative will support the preparedness and capabilities of clinical professionals operating in Uganda to reduce the threat of spreading causative agents of potentially dangerous diseases.

Detailed herein, the Metabiota team endeavors to fulfill this requirement through execution of continued training implementation of health practitioners in Uganda. Through the implementation of coherent training methodologies that are driven by on-the-ground experience and decades of expertise, as well as follow on engagements and deliverables, Metabiota is well positioned to support training activities and scientific engagement in the USAFRICOM's region of responsibility.

Project Overview

Introduction

Through AEP Technical Direction TD-008, DTRA CBEP tasked the Metabiota team to execute Clinician Training in Uganda. The overarching goal of the work outlined in this proposal is to bolster existing public health capacity in the region. The trainings outlined below will serve to improve the host countries abilities to detect, diagnose and report events with the potential to cause public health emergencies of international concern (PHEIC), especially those associated with U.S. Select Agents and Toxins, in accordance with World Health Organization (WHO) International Health Regulations 2005 (IHR 2005) and WHO African Regional Office (AFRO) / U.S. Centers for Disease Control (CDC) Integrated Disease Surveillance and Response (IDSR) systems.

District-level hospital workers require training in infectious disease detection and diagnosis in order to provide early notification of a potential PHEIC. District hospitals provide a substantial proportion of the initial emergency care and ongoing inpatient management of patients with infectious diseases. Strengthening the capacity of district clinicians to perform a differential diagnosis, and to use appropriate and available laboratory tests, will improve early reporting of diseases and, potentially, mitigate the risk of an epidemic.

Background

The Metabiota team understands that the US Department of Defense (DoD) initiated CBEP through DTRA in order to reduce the threat of biological outbreaks. The team further recognizes that to achieve its mission, CBEP works collaboratively with partner nations, U.S. Government agencies, and the international community to enhance disease surveillance

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

capabilities; develop human resource expertise in public and animal health, promote safe and secure laboratory and field work environments; and consolidate pathogens of security concern into a minimal number of safe and secure facilities in a sustainable manner. Through the Academic Engagement Partnership (AEP) Program, Metabiota aims to support the CBEP mission of reducing the potential impact of biological threats through enhanced biological safety and security, awareness of biological risks, and knowledge related to biological pathogens.

In support of this approach, the Metabiota team, along with its partners, intends to administer high-value trainings that will support strategic CBEP objectives by strengthening the region's capacity to diagnose and detect diseases; thereby enhancing local management and mitigation of infectious disease events. The team's on-the-ground experience and decades of expertise makes us well positioned to support the implementation of these trainings and all of the associated activities, as well as scientific engagement in the AFRICOM's area of responsibility.

Purpose

The purpose of the Clinician Training requirement is to enhance the ability of Ugandan clinician's and health workers to recognize key diseases early, report them according to district and national protocols, and rapidly use laboratory support, as available, to confirm possible diagnoses. It is expected that this will help improve the timeliness of identification of unusual diseases and, ultimately, enable more rapid and better responses to disease outbreaks. Targeted training materials supported by on-site clinical mentoring, will assist in disease identification and reporting.

To accomplish this purpose, DTRA CBEP, through the AEP contract, will engage Metabiota and it's cadre of Subject Matter Experts (SMEs), Qualified Trainers (QTs), as well as project partners the IMAI/IMCI Alliance and Walimu, to implement the clinician training events in Uganda.

Objective

Metabiota will implement training activities in Uganda to bolster clinical capabilities for responding to and providing care for patients exposed to especially dangerous pathogens (EDP). Ensuring proper protocols are employed to manage potentially infected patients will ultimately mitigate the threat of further disease transmission. Investing in preventative clinical care capabilities will, ultimately, save lives and prevent potentially catastrophic economic outcomes, which can be associated with epidemics.

The project, initially approved in February 2015, included several objectives that have been completed (e.g., Objectives 1-3). This included adaptation of generic training materials and conducting gap analyses. All training materials previously provided to DTRA have been PAO approved, and have served as the foundation for implementation of training activities in Uganda (Objective 4).

Generic training materials provided via **Objective 1** serve as the foundation for training in all countries to be trained. However, it is recognized that each country may have unique needs

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

related to endemic threats and their respective health care systems. **Objective 2** requires a gap analysis be performed, which will characterize the existing health care infrastructure and identify endemic threats, including pathogens on the U.S. Select Agent list and those of concern to overall public health. Leveraging this information, a country-specific adaptation (**Objective 3**) of the WHO AFRO/CDC IDSR, which fulfills IHR requirements for disease reporting, will be developed and, ultimately, implemented (**Objective 4**).

Threat Reduction Outcomes

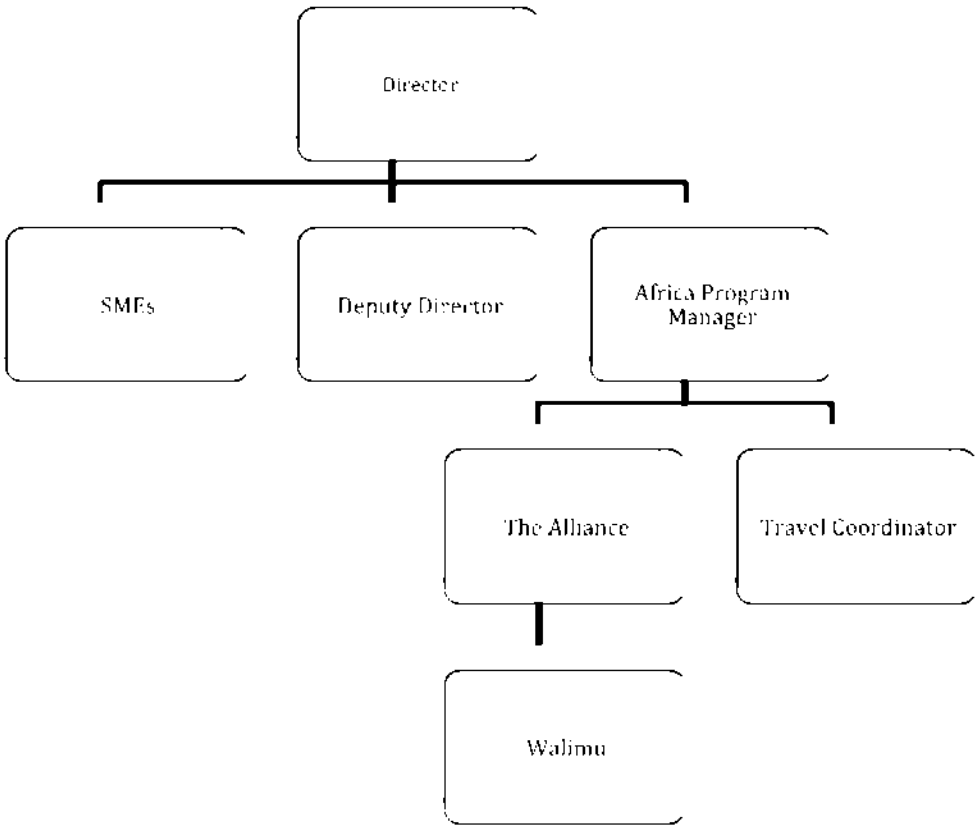
The proposed project seeks to improve health care infrastructure within Uganda. Specifically, the clinician training program will train in-country health workers to recognize, respond to, and report pathogens, which could cause epidemics and result in significant financial burden. Early identification and response will mitigate potential loss of human life and economic burden.

In addition to improving response to general diseases of concern to the host country, these trainings will provide information relevant to preparedness and response to potential VHF (Viral Hemorrhagic Fever) exposure, including Ebola, Lassa fever, and Marburg viruses, all of which are EDPs (Especially Dangerous Pathogens).

Increased biosafety acumen when working with pathogens, particularly EDPs such as VHFs, is a cornerstone of CBEP engagement. As part of the VHF training, health workers will be trained to properly implement biosafety protocols, including dawning and doffing personal protective equipment (PPE), as required by the agent in question. All engaged countries will be trained to follow internationally recognized reporting measures. In addition, as part of the materials adaptation process, gap analyses of the host countries health care system, including previously implemented trainings, will be performed. The gap analyses will be presented as reports, and information presented within them will help all stakeholders (e.g., USG and host country ministries) understand potential areas of future engagement to further bolster the host countries capabilities.

Management Approach

Introduction



Metabiota will continue to employ its existing organizational leadership to interface with the Regional Science Manager, and Country Manager, as needed to direct the operational and administrative support required to ensure successful and timely execution of all Clinician Training events in Africa. Our Program Manager will maintain oversight of training execution, with the support of a travel coordinator, Research Collaborators and Subject Matter Experts to ensure that all aspects of cost, schedule and performance are monitored and reported to the AEP Contracting Officer Representative (COR) and AEP Program Leadership.

Project Team Structure

Metabiota's project team dedicated to completing this task will include the Metabiota AEP program leadership, the Program Manager, Project Coordinator, Travel Coordinator and the Teams Research Collaborators and Subject Matter Experts that will be tasked with specific

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

assignments to support the development and implementation of training events based on their administrative and scientific expertise. This team includes experts from the Alliance and in-country implementer, Walimu. The Alliance and Walimu will utilize their in-country expertise and engagement with local stakeholders to ensure successful training events. Our team of experts will maintain the overall project management and tasks associated with the training are met at every level using best practices, and that only the highest level of scientific rigor and expertise is applied to this effort.

Execution

The project management team will continue to maintain oversight and implementation of the project at all times and will ensure rapid execution of all training events, tracking objectives to ensure the project stays on schedule to complete the training exercises. The project will be managed according to the continual implementation plan and will be course corrected, as needed, to ensure target end-goals are reached. The following tools will be used to guarantee the project schedule will be maintained:

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Project Administration:

1. Weekly team meetings and conference calls will continue to be held to internally review the project achievements, accomplishments, barriers or challenges, and address any changes or updates that are required. The meetings will be scheduled and maintained by the Project Coordinator and will include the PM, SME, Scientific Mentor and AEP leadership, as needed based on the requirements and stage of implementation.
2. Routine calls and communication via email will continue with CBEP regional leadership and Metabiota to provide routine status updates and ensure training implementation.

Project Reporting:

1. Weekly status reports will continue to be provided by the PM to senior Metabiota leadership to maintain routine tracking and status updates on the project, and provide space for risk mitigation and internal course correction, as needed to ensure training goals are met.

Monitoring and Controlling

1. Routine risk assessment will continue to be performed internally among the Metabiota project management team to guarantee the project stays on track. This will be accomplished through the implementation of the project administration and reporting mechanisms.
2. Routine communications will be maintained with CBEP regional leadership to ensure the project remains on track and is implemented according to standard.
3. Routine oversight and coordination will be maintained to ensure CLS is performing in-country logistical requirements, when necessary, to ensure successful execution of the training.

Completion

Maintaining a focused project schedule with routine meetings and communication with CBEP regional leadership allowing for continued coordination, while maintaining targeted objectives, Metabiota will drive the project to completion through the determined project end-date. Metabiota will provide the required deliverables of clinician training trip reports. Metabiota believes that the experience and management it will bring to this project, in collaboration with CBEP will guarantee success.

Technical Approach

Introduction

To facilitate effective training of health workers in Metabiota, and its partners the Alliance and Walimu, will employ the IMAI training materials, which are comprised of the following: 1) WHO IMAI District Clinician Manual (DCM), 2) pocket guidebook, and 3) Quick Check wall charts. The intended purpose of these materials is three-fold: to improve district hospital clinical management and surveillance of key notifiable diseases by the involvement and preparation of clinical teams for disease recognition; implement sustainable practices for case management of

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

severely ill patients; and to ensure that proper reporting procedures are in place, which align with international standards (IHR).

Of particular importance, the training materials include the new WHO IMAI DCM, which outlines and provides reference for 1) triage training, 2) emergency treatments, 3) management of severely ill patients of any etiology, and 4) the clinician's role in surveillance of diseases with epidemic potential (called the Quick Check+ training curriculum). On-site clinical mentoring and quality improvement activities, as well as ongoing monitoring and on-site evaluations will further support training.

In addition to providing a simplified algorithm for emergency triage, assessment and treatment, and the ongoing management of severely ill adolescent and adult patients, the evidence-based WHO manual integrates the identification of notifiable, epidemic-prone diseases within a case management approach based on support for clinical reasoning using differential diagnosis. The manual's differential diagnosis tables include the important notifiable diseases with case definitions and a chapter on disease reporting, which lists all IDSR notifiable diseases and indicates the section of the IMAI DCM where they can be found. The disease-specific sections focus primarily on case definition, diagnosis based on clinical and laboratory features, guidance for specific empirical treatment(s) and supportive care, assessment of response to treatment, and instructions on when to report. Importantly, the IMAI septic shock guidelines have been incorporated into the viral haemorrhagic fever (VHF) pocket guides, which will be used in VHF epidemic-prone areas of East and West Africa.

Derived from the IMAI DCM product is a participatory training course, Quick Check+, which addresses emergency triage and treatments for adults. This course trains the clinical teams to support the triage, emergency management, and infection prevention and control of severely ill adolescent and adult patients, who present with severe acute respiratory infections, VHFs, or other communicable diseases. The short disease surveillance course and reporting training module, used within the clinical training course, has the advantage of effectively engaging busy clinicians and hospital managers for disease reporting and has been very well received in this context. Training all relevant cadres (nurses, managers, and auxiliary staff, in addition to district clinicians such as medical doctors, general practitioners or other senior clinical cadres) within the district hospital helps ensure implementation after training utilizing the following:

- Engaging hospital managers who are key in planning and supporting the budget and organization requirements for improved care and reporting
- Recognizing the important role of senior clinical nurses in providing care during most hours of the day
- Supporting the role of auxiliaries in their contacts with patients, triage, and community linkages

The interventions will be implemented through the following mechanisms:

- Provision of country-adapted guidelines (country-adapted versions of the WHO IMAI DCM and Hospital Care for Children) to participating healthcare workers;

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

- In-service training;
- Mentoring/quality improvement interventions on a regular basis after training, with mentors able to address both pediatric and adult care, infection control, and disease surveillance issues.

The approach encompasses a combination of two training activities for the participatory Quick Check+ training for clinical teams: a four-hospital clinical team training and in-hospital training for the entire clinical staff in a single hospital. Importantly, integration of these trainings will be done in a manner that will not overwhelm recipients and in a way that will be sustainable by health care systems within respective countries. In addition to implementation of trainings a follow-up mentoring schedule will be determined based on the needs of a given country.

Training Implementation

Since the initiation of this effort in early 2015, eleven training events and mentoring visits have occurred that include regional trainings of up to 4 hospital teams, and Train-the-Trainer activities. The average training has encompassed 33 participants and has been comprised of clinicians, nurses, and hospital administrators. Regions within Uganda that have hosted these trainings include Hoima Regional Referral Hospital, Mubende Regional Referral Hospital, and Kiboga General Hospital.

An additional 25 training events utilizing the IMAI Quick Check+ materials have been scheduled throughout Phase 1 (11 events) and Phase 2 (14 events) periods of performance (Table 1), encompassing Regional, In-hospital, and Train the Trainer (TOT) activities. Many of the Regional trainings run concurrently encompassing a pre-defined Region One and Region Two cohort of participants.

The Regional and In-Hospital courses will be conducted in several classrooms for managers, district clinicians, nurses and auxiliaries, with the clinical team from each hospital. Practical sessions will include putting on personal protection equipment, case scenarios with expert patient-trainers, and facilitation skills. During the initial training event, potential future trainers will be identified based upon their test scores and competency in the practical sessions. These participants will receive Train the Trainer instruction during a unique training event. The overall goal of the TOT training is to increase the pool of competent hospital and regional facilitators in which the Quick Check+ course may be independently provided, thus improving the region's capacity for disease detection and treatment.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Table 1. Updated Training Schedule

Phase	Start Date	End Date	Activity (ToT, Regional, or In-Hospital)	Region	Number of Hospitals to assess/train	Location	Facilities
1	20-May-15	23-May-15	ToT	Arua	NA	Arua RRH	NA
1	25-May-15	29-May-15	Regional	Arua	5 hospitals	Arua RRH	Arua; Kuluva Church of Uganda; Holy Family Hospital Nyapea; Angal St. Luke's; Nebbi
1	8-Jun-15	12-Jun-15	Regional	Arua	4 hospitals	Arua RRH	St Joseph's Maracha; Yumbe; Moyo; Adjumani
1	6-Jul-15	10-Jul-15	In-hospital	Rwenzori	1 hospital	Fort Portal RRH	Fort Portal RRH
1	23-Jul-15	25-Jul-15	ToT	Kabale	NA	Kabale RRH	NA
1	27-Jul-15	31-Jul-15	Regional	Kabale	4 hospitals	Kabale RRH	Kabale RRH; Rugarama; Kambuga; Bwindi
1	27-Jul-15	31-Jul-15	Regional	Kabale	4 hospitals	Kabale RRH	Kisoro; Mutolere; Kisiiza; Nyakibale
1	6-Aug-15	8-Aug-15	ToT	Mbarara	NA	Mbarara RRH	NA
1	10-Aug-15	14-Aug-15	Regional	Mbarara	5 hospitals	Mbarara RRH	Mbarara RRH; Ibanda; Itojo; Ishaka Adventist; Mayanja Memorial
1	10-Aug-15	14-Aug-15	Regional	Mbarara	4 hospitals	Mbarara RRH	Comboni; Kitagata; Ruharo Mission; Rushere Community
1	27-Aug-15	29-Aug-15	ToT	Gulu	NA	Gulu RRH	NA
2	31-Aug-15	4-Sep-15	Regional	Gulu	4 hospitals	Gulu RRH	Gulu RRH; Kalongo; Lacor; Gulu Military
2	31-Aug-15	4-Sep-15	Regional	Gulu	3 hospitals, 1 HC IVs	Gulu RRH	Kitgum; St. Joseph's; Anaka
2	24-Sep-15	26-Sep-15	ToT	Masaka	NA	Masaka RRH	NA
2	28-Sep-15	2-Oct-15	Regional	Masaka	4 hospitals	Masaka RRH	Masaka RRH; Villa Maria; Lyantonde; Kitovu
2	28-Sep-15	2-Oct-15	Regional	Masaka	2 hospitals, 2 HC IVs	Masaka RRH	Rakai; Kalizo; Kalangala HC IV; Ntuusi HC IV
2	22-Oct-15	24-Oct-15	ToT	Lira	NA	Lira RRH	NA
2	26-Oct	30-Oct	Regional	Lira	4 Hospitals	Lira RRH	Lira RRH; Amai; Apac; Aber
2	26-Oct	30-Oct	Regional	Lira	4 HC IVs	Lira RRH	Amach HC IV; Dokolo HC IV; Aboke HC IV; Orum HC IV
2	9-Nov	13-Nov	In-hospital	Kabale	1 hospital	Kabale RRH	Kabale RRH
2	26-Nov	28-Nov	ToT	Kampala	NA	Naguru RRH	NA
2	30-Nov	4-Dec	Regional	Kampala	5 hospitals	Naguru RRH	Kayunga; Nkokonjeru; Nkozi; Bombo
2	30-Nov	4-Dec	Regional	Kampala	5 hospitals	Naguru RRH	Naggalama; Nakaseke; Nakasongola; Entebbe
2	11-Jan	15-Jan	In-hospital	Mbarara	1 hospital	Mbarara RRH	Mbarara RRH
2	1-Feb	5-Feb	In-hospital	Gulu	1 hospital	Gulu RRH	Gulu RRH

Communications Protocols

Metabiota will maintain open communications with international collaborators necessary for implementing the training, to include regional partners facilitating the training engagement and logistics. In addition, Metabiota will maintain routine communication with CBEP to ensure they have full visibility on the training engagement, status and process of execution.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Risk Management

In order to maintain course action and guarantee trainings that will reduce regional risk and forward CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed below:

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
Cost						
Technical Direction NTE Ceiling	The current budget with events, travel, management, procurement, and execution will exceed the ceiling for the technical direction	5	4	(b)(4); (b)(6)	Metabiota will monitor costs and work diligently to seek out the lowest costs possible for procurement and travel, as well as mitigate extended labor hours during events	**Med-High**
Inadequate funds to meet end-state program objectives	Per the LOTD, Metabiota is only to propose activities through August. The Alliance has developed a comprehensive training schedule to ensure information is effectively dissiminated and institutionalized	4	4		A subsequent budget has been proposed, allowing the Alliance to continue trainings through February. Approval of this budget would allow for additional trainings and post training mentoring/evaluations to occur.	Med
Schedule						
Submission of CCRs and TEPs	The CCR deadline is 45 days prior to travel and the TEP deadline is 60 days prior	2	5	**Med-High**	Team shall adhere to all State Department travel safety guidelines for each region.	(b)(4); (b)(6)
Project Coordination	Team dispersed over several time zones engaged in execution of training and mentoring events. Many events occurring per month.	3	4	**Med-High**	Hold routine calls with regional and country leadership, and collaborators, as needed to understand and implement technical requirements and ensure communication across the training events. Continually capture lessons learned to build upon effective communications.	
Performance						

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Safety and Security	Regions of Africa are considered a high threat for terrorism. Crime is a consistent threat.	3	5	**Med-High**	Team shall adhere to all State Department travel safety guidelines for each region.	Med
Logistics Coordination	There are a lot of moving pieces to get all equipment, trainers, facilities, and trainees in position to execute training on the required timeline	3	4	**Med-High**	Communicate with CLS frequently to ensure in-country support is achieved, with local vendors.	(b)(4); (b)(6)
Unified Goals	Ministries of Health and Regional CDC and other NGOs differ in independent objectives and scope.	4	3	Med	Metabiota will engage all local Ministries and Organizations as groups and individually, to ensure communication and unification of objectives	
Participant Engagement	Several cultural differences exist in Africa that impacts their ability to engage. These differences include: expected remunerations, levels of accommodations, and gender disparities.	3	3	Med	Metabiota will research each country and region that activities will occur to determine presence of cultural uniquenesses, and strategies to overcome potential obstacles to participant attendance.	

Identifying and acknowledging the risks associated with not implementing this training, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the Risk Management Matrix (above).

Cost Management

The Metabiota team and all partners will maintain an intense focus on cost management to ensure that the training is delivered at a reasonable cost to the government. Our team will ensure accurate and responsive financial reporting and will facilitate cost savings to the Government wherever possible. Metabiota will follow procurement regulations ensuring the best price is received under the time constraints using all means available.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Budget Narrative

Period of Performance

The technical narrative captures activities required to effectively bolster capabilities of clinical personnel working in hospitals throughout Uganda. A period of performance has been proposed, which exceeds guidelines presented in AEP Letter of Technical Direction – 008 (TD-008). To this end, Metabiota has provided two budgets: 1) Captures activities defined by TD-008 (ending 31 August 2015) and 2) Optimal period of performance to accomplish end-state objectives (ending 28 February 2016)

Labor

The labor budget is focused on overall program management, material enhancements, training, mentoring and monitoring after training in an effort to expand improvements in case recognition, reporting, clinical care and infection control to more hospitals.

The Alliance brings a wealth of clinician training experience, which is specialized for working in the developing world. Given the relative newness of this organization and considering their origins were based out of non-governmental organizations, the Alliance will require assistance navigating aspects of coordination with the Prime contractor (Metabiota) and the Client (DTRA), including program management, scheduling of training activities, and Contract Data Requirements Lists (CDRL; Training Event Plans, Training Activity Reports, Monthly Progress Reports, etc.). To this end, Metabiota is proposing a program management team, consisting of Program and Training Managers, to continue supporting the Alliance with implementation of objectives in Uganda, as outlined within this scope of work.

Costs for direct labor to support this activity is required for the following personnel:

Program Manager(s): All aspects of program operations and administration, material adaptation, management of training, and implementation will be overseen by the Program Managers (PM) for Metabiota and the Alliance. The PM's will manage cost, schedule and performance of the program, including all required DTRA CBEP deliverables. In addition, PM's will manage all proposed activities with the Metabiota SMEs and the Alliance and its partner "Walimu". The PM's will work with Metabiota leadership and financial divisions to support the program's execution, and ensure that deliverables meet quality standards and requirements. The PM's will also develop best practices to improve program performance, and mine and coordinate resources to overall benefit this program.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

SME III, II and I: In preparation for training delivery and implementation in Africa, Metabiota SME's will work closely with (b)(6) nd her team, which include a cache of physicians with decades of experience operating within Africa, on collaborations and engagements with the MoH of Uganda. Periodically, Metabiota SMEs will also travel with the Alliance to Uganda for strategic planning activities and to participate in clinician training events. Our collective team of SME's will engage with the in-country subcontractors, "Walimu", for further competency building. Using their in-depth scientific and medical expertise, our SME's will review and provide input to training reports and materials.

Scientific Mentor: Assistance with overseeing the training events, mentoring local nationals, and providing recommendations for additional material content will be guided by the Scientific Mentor. As a leader in their field, the Scientific Mentor will support collaborations between groups both regionally and internationally. On mentoring visits, the Scientific Mentor will work with hospital staff and administrators to identify barriers to reporting notifiable conditions and to improve triage of severely ill patients and their effective case management.

Research and Data Analyst: Support of the programs' research, data entry and analysis will be provided by the Research and Data Analyst (RDA). The RDA will also support material and deliverable production and submissions. Organization of program documents, and archiving of materials will be an important responsibility of the RDA. The RDA will also assist in the management of internal and stakeholder meetings and execution.

Additional costs for direct labor supporting the Deputy Director and Travel Coordinator are not required, as they are already included in the FFP CLIN 1001 – Program Management Office.

Collectively, the aforementioned personnel will coordinate efforts to support the following activities:

Training and Mentoring After Training

A substantial number of training courses will be carried out using several approaches to training – a training for clinical teams from district hospitals (usually at the regional hospital), in-hospital training for larger hospitals. Several facilitator ToT short courses would be conducted for 3 days prior to clinical team training.

Training Reinforcement: Mentoring and Physical Improvement to Improve Care and Notification Process

Facilitators on mentoring visits will work with hospital staff and administrators to identify barriers to reporting notifiable conditions and to improve triage of severely ill patients and their effective case management. Examples of physical improvement which fit within a modest budget include adding signs and trolleys to improve patient flow in the emergency area, physical modifications to isolate infectious patients and locate severely ill patients near the nursing station, adding secured blood pressure cuffs and thermometers to identify severely ill

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

patients, and tools such as clipboards and notice boards to ensure records are retained and organized for accurate reporting. Clinical training facilitators and Alliance staff will deliver the package of hospital improvements and ensure staff are capable of conducting case notification through the Uganda DHIS 2 health management information system.

Assessments Before and After Training

Facility assessments use a standardized questionnaire and surveyor observations, which complement the WHO/USAID SARA-H hospital assessment (which lacks questions on adult emergency triage and management of adult severely ill patients). In addition, an on-site clinical observer with data entry capacity will conduct case observation and observe success in reporting notifiable diseases and improving case management at the hospital before and after the training. Data will be collected on low-end smartphones and reported through Commcare, a tool used by the WHO, Brac, PATH and Partners in Health among others and supported by USAID and the UN and Gates Foundations, among others. The data is analyzed using the DHIS 2 software, a health management information system used by the MoH in Uganda.

The Alliance is committed to capacitating national staff and supporting their substantial role during in-country project management, as well as, utilizing them as a source of subject matter expertise and clinical facilitation and mentoring.

Materials

Communications

Cost for international cell phone services and data plans, airtime for project staff, laptop modems for country team laptops required to establish a reliable and stable Internet connection for reporting and other online needs, to include maintaining communication in remote areas.

Printing

Printing of all necessary training materials will be managed by Walimu and the Alliance.

Office and Medical Training Materials

These materials, supplies, and minor equipment will be used for implementing training, as well as programmatic coordination between management in the US and Kampala, Uganda. Minor office supplies include computer equipment such as laptops, docking stations, large screens, printers, scanner, photocopier, and software.

Each trained clinical team is provided with a pulse oximeter for individual clinical use/further training of other clinicians in hospital and a hospital-grade pulse oximeter with replaceable probes. No single piece of equipment exceeds $5,000.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Training Event Logistics

Conference Services are required, as a venue is needed for practicum section of the training events to house participants, trainers, and additional Metabiota and CBEP personnel attending the event. Conference services will include on-site catering to facilitate completion of the training within an efficient timeframe.

To date, the Alliance managed all training costs, including venue, food, per diem, transportation (for facilitators and participants), training supplies, projectors, communication costs, and all printing needs as well as their shipment and clearance into country and delivery to the training venues, as allowed in the originally approved proposal. Metabiota will transition the training logistics costs to CLS for scheduled August trainings, as well as all Phase 2 trainings, if approved/awarded. However, June and July training events have been scheduled and approved, making the involvement of CLS challenging due to an extremely short suspense.

Shipping costs

All materials procured within the US will be shipped to Uganda via CLS' Single Shipper mechanism. Shipping costs for movement of training materials and supplies generated or procured in Uganda have been budgeted and will be managed by Metabiota, the Alliance, and Walimu.

Other Direct Costs

Per contract guidelines DBA insurance is required for all personnel engaged on the AEP project. DBA costs were based (b)(6) he total compensation for all personnel when operating in Uganda.

Subcontracts

A Subcontract will be issued to the Alliance for time provided by their Trainers, as well as materials and supplies they will procure in support of this effort. Costs are captured under the appropriate labor categories in CLIN 1002 and materials in CLIN 1003 of the budget.

Travel

Travel is requested for Metabiota and Alliance personnel to travel to and within Uganda to continue implementation of clinician training activities. Personnel will be providing programmatic, administrative, operational, and technical oversight (as described in the Labor Section of this narrative) to ensure trainings are implemented efficiently. Prior to execution of travel, a cost estimate will be provided to the AEP COR for review and approval.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Metabiota will submit CLS forms requesting travel logistics support when, and if, it is required for project participants (e.g., Trainees).

Conclusion

Metabiota is committed to support our customers and partners in achieving their objectives. Our global reach, enduring relationships with key partners in public health, and core mission of providing actionable infectious disease intelligence to make a positive impact on global health security will ensure success for DTRA CBEP AFRICOM in the implementation of the Africa Clinician Training. Metabiota will ensure, through strong project management and risk mitigation that the training will be executed in an efficient and timely manner delivering a top quality course geared to support enhanced biosurveillance and biosafety efforts in the region.

Team Metabiota Overview

Metabiota is the pioneer in comprehensive risk analytics that improve the world's resilience to epidemics. Built on a strong foundation of epidemiology and international field science, including a worldwide network of on-the-ground experts, Metabiota delivers actionable, data-driven insights that help countries, governments and corporations manage and mitigate infectious diseases. With a strategic global presence and sustained partnerships, Metabiota's agile approach is helping the world track, transfer and terminate the risk associated with epidemic threats. The company's international footprint includes operations in 20 countries and offices in San Francisco, Washington, China, Canada, and Sierra Leone.

Metabiota currently supports a number of Cooperative Biological Engagement Program (CBEP) initiatives, including the Academic Engagement Partnership (AEP) Program, the Biological Threat Reduction Integrating Contract (BTRIC) in Ukraine, and grants in Tanzania to perform research activities. Metabiota's mission aligns well with CBEP and the entire Metabiota team is focused on supporting our USG Partners in reducing the risk of biological threats worldwide, and employs a collaborative and agile approach to biological risk reduction.

To ensure a successful event, Metabiota, in coordination with CBEP regional leadership and in country partners have built a team that brings unparalleled scientific expertise and unique access across the international infectious disease prevention, preparedness and response community. This enables us to be an incredible resource for actionable infectious disease intelligence, through the development of analysis methodologies that capture salient data relating to human and animal pathogens of concern, organic national and regional public health capacity, engagement priorities and constraints for the USG, regional and international public health organizations, and non-governmental organizations (NGO) whose respective aims could impact CBEP objectives.

Metabiota will continue to engage the Alliance for implementation of the aforementioned objectives. The Alliance is a US based non-profit non-governmental organization (NGO), which includes institutions and individuals involved in the development, country adaptation,

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

and implementation of the IMAI training materials, which aim to improve disease recognition, case management of severely ill patients, and reporting of notifiable diseases in coordination with WHO standards and regulations. The Alliance works closely with WHO headquarters, AFRO and the WHO in country offices, allowing for quick in roads and rapid implementation to most developing nations, including countries in East and West Africa. The Alliance already has an established footprint in Uganda and has support from the clinical services staff in the Ugandan Ministry of Health (MoH).

The Alliance includes Walimu, a US and Ugandan based NGO, which is currently supporting the implementation of training in Uganda. Walimu is a non-profit organization made up of physicians from Uganda and the US, working to improve medical are in Uganda. Their vision to empower Ugandan health officers to address local problems in innovative ways, which will lead to the transformation of medical training and patient care to meet international standards of excellence. As a collaborator with the Alliance, Walimu serves as a bridge to Alliance-related activities and their execution in clinical services.

The information contained herein is Metabiota PROPRIETARY information and may include Metabiota CONFIDENTIAL information and shall not be disclosed outside of the U.S. Government, as per the statement found on the cover page.

Table 2 – Summary of Program Elements

Program Element	Program Tasks	Resources Required	Key Milestones and Deliverables	Projected Timeline
Continued Coordination	• Continue overall coordination with CBEP • Coordinate with the Inter-Agency Health Team at the US Embassy, Kampala, and any other relevant stakeholders Ongoing coordination with CBEP and Inter-Agency Health team prior to, during and after each training	• Program Manager • SME III • SME I • Research and Data Analyst	• Submission of CCRs • Obtain confirmation from CBEP, and other key stakeholders on proposed training dates • Submission of TEPs and TTRs	Ongoing 3-6 months prior to each training event
Plan Training Event	• Procure materials • Coordinate logistics (facilities, materials, participants) based on guidance from CBEP and Inter-Agency Health Team • Coordinate travel for trainers and trainees as required • Develop of training event plan	• Scientific Mentor • Program Manager • SME I • SME II • SME III	• Confirmation of logistics for trainers and trainees • Submission of finalized training event plans prior to implementation of each training.	1-3 months prior to each training event
Training Implementation	• Ensure trainers are equipped with all necessary materials to conduct trainings • Trainers travel to designated training site • Conduct training based on the finalized training event plan • Trainers return from training event	• Scientific Mentor • Program Manager • SME I • SME II • SME III	• Regional, initial, and ToT (Train the Trainer) training implemented • Submission of final training report	Training Event
Post-Training Visits	• Conduct mentorship visits by designated in-country mentors/trainers • Conduct follow-up site assessments/post-training visits	• Program Manager • SME III • Research and Data Analyst	• Confirm receipt of follow-up site assessment/post-training visit plan	1-3 months after each training event

TECHNICAL DIRECTIVE (TD)

1. CONTRACT NUMBER	2. CONTRACTOR	3a.TD NUMBER	3b.REV
HDTRA1-14-C-0104	METABIOTA	22	

4. TD TITLE	5. TOTAL TD ESTIMATE
Iraq Field Epidemiology Training Program (FETP) Support	HOURS: **5,750** DOLLARS: **$761,026**

CONTRACING OFFICER REPRESENTATIVE	7. CONTRACTOR POC
NAME: DR (b)(6) (b)(6)	NAME: (b)(6)
PHONE (b)(6) EMAI (b)(6)	PHONE: EMAIL: (b)(6)

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):
The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota in accordance with SOW. Section 4.1 Task 1, 4.3 Task 3, and 4.4 Task 4.

CBEP CENTCOM requests the implementation of the following projects in support of the Iraqi Field Epidemiology Training Program (FETP):

1. Integrated Biosafety and Security and Epidemiology Enhancement
This activity will enhance existing Iraqi capacities for the conduction of field epidemiology, standardization and implementation of biosafety and biosecurity practices, interdisciplinary biological incidence response, and improvement of high level stakeholder buy-in for continued interagency collaboration on topics related to natural or suspect biological incidences. This activity will be conducted through a 4-phase approach consisting of the following: Metabiota will coordinate with Iraqi FETP management (b)(6) to identify up to 15 candidate "core" participants. These candidates will be shared with the CBEP Technical POC for review and approval. Phase 1 will include identifying "core" participants and conducting a 12 week remote/online mentorship and in-depth training program. Phase 1 Training program will include topics such as general security awareness, developing and maintaining a culture of safety and security, laboratory biosafety and biosecurity practices, biorisk management standard operating procedure (SOP) and plan development, personal protective equipment, one health and field epidemiology, passive and active disease surveillance, personnel qualification, suitability and reliability, area decon and biological emergency response, and effective communication and risk management. Phase 2 will consist of a 1 week in-country hands-on training course. Phase 3 will consist of an online 1 week introduction, training, and familiarization and review of the Iraq National Biological Emergency Response Plan (NBERP) with the core team plus 10-15 members of the emergency response, law enforcement, and security agencies. Phase 4 will include the development of a gap analysis report conducted by the top core and interagency team performers to communicate findings and establish buy-in from high-level stakeholders to ensure their continued support of interagency network development and cooperation. Additionally, this task will not require any travel by the contractor. The estimated labor categories that are needed to support this effort are: Program Manager (PM), Subject Matter Expert (SME) Level I, SME Level II, and Foreign Local National (FLN) support. The total estimated labor hours for this effort are 4,550 and the estimated cost for this effort is $580,154.00.

2. Epidemiology Training
This activity will enhance existing Iraqi capacities for the execution of field epidemiology. This activity will identify up to 15 participants from various Iraqi agencies to complete a 6 week remote/online mentorship and training program. Metabiota will coordinate with Iraqi FETP management (b)(6) (b)(6) to identify candidate "core" participants. These candidates will be shared with the CBEP Technical POC for review and approval. Training program will include topics such as developing and maintaining a field epidemiology cohort, effective communication and interagency coordination, and risk management. Additionally, this task will not require any travel by the contractor. The estimated labor categories that are needed to support this effort are: PM, SME Level I, SME Level II, and FLN support. The total estimated labor hours for this effort are 1,200 and the estimated cost for this effort is $180,872.00.

CLS will provide logistics support as needed, and will be closely coordinated with the CBEP Technical Point of Contact.

The period of performance for this effort will be from 22 February 2016 to 15 May 2016. Your technical approach, proposed budget and basis of estimate for implementing this requirement is not to exceed $761,026 and is requested by 19 February 2016. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Proposal Development & Initiation (Task 1):
Metabiota developed a project plan and implementation strategy that aligns with narrative from Box 8. It is anticipated that the plan for TD-022 is considered a living document and it is expected that revisions to the plan will be necessary following stakeholder meetings. During proposal development, Metabiota expects to use Program Manager (PM) and Project Coordinator (PC, billed as a Subject Matter Expert 1)) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.
Key assumptions:

1. The Iraqi participants identified for all phases are capable of speaking, reading, and writing English, including technical concepts.
2. DTRA CBEP can and will assist in coordination and socialization with Iraq ministries and US Embassy, and will participate in the identification of appropriate Iraqi participants for all phases.
3. Metabiota assumes that the learning management system (LMS) does not need to meet DoD information security standards.
4. DTRA CBEP, through CLS or another party, can facilitate transport of Iraqi participants to a single, secure location for hands on training. (and gap analysis workshop?)
5. DTRA CBEP or other USG entity will bear the cost of providing security for said location(s) and all participants during that time period.
6. Metabiota-engaged FLNs will be able to access said location(s) during the appropriate times necessary to implement work.
7. Metabiota personnel providing guidance and support will **not** be the primary drafters of the gap analysis document.
8. Iraqi participants will have reliable access to the internet, with enough bandwidth to support videoconferencing.

Project Coordination (Task 1)
The Metabiota PM and PC will coordinate with th(b)(6) EVP Science Integration and the functional group leads for Biorisk Management, Epidemiology, and Veterinary Science to identify the appropriate SMEs in epidemiology and biosafety and biosecurity (BS&S) to develop and augment materials, and deliver a high quality and sustainable engagement in coordination with CBEP CENTCOM.

From the information provided in Box 8, Metabiota assumes that some type of field epidemiology training is already in existence in Iraq. In order to effectively ensure that our training materials align with existing efforts, the Metabiota PM and PC will, upon approval of the TD, engage(b)(6) and other relevant stakeholders, including DTRA CBEP, for additional information including existing training materials in both epidemiology and BS&S. The Metabiota PM, PC, and SMEs will participate in regular project communications with all stakeholders to ensure mutual understanding of goals, actions, and status. The Metabiota PM, PC, and SMEs will also participate in separate discussions wit(b)(6) identify core participants.

The Metabiota PM and PC will work with the SMEs to ensure that all necessary documentation required prior to initiating tasks such as training is completed correctly and submitted on time, including Training Event Plan (CDRL A014) and CTR CLS Form (CDRL A016). Additionally, that all associated reports, including Monthly Reports (CDRL A001), Training Trip Report (CDRL A006), Post-Training Assessment (CDRL A015) are filed on time. The Metabiota Travel Coordinator will coordinate with the project team to ensure that transportation and lodging arrangements are secured for FLNs if needed. The Metabiota PM and PC will work with the project teams to ensure any need for translation, interpretation, or other logistical requirements are adequately anticipated and communicated to CLS via the CBEP Technical Point of Contact.

Training Material Development and Adaptation (Task 4)
Metabiota will reuse existing training materials from EIS, FETP, and other widely recognized training programs as much as possible. However, based on inputs from(b)(6) and given the need to conduct this training remotely, Metabiota expects to use SMEs to adapt training materials and case studies for effective remote delivery and to specifically address the environment in Iraq. Metabiota SMEs will develop new materials including slide presentations, videos, interactive quizzes, etc. to effectively leverage the online learning environment. Metabiota will also develop, as appropriate, pre-tests and post-tests for monitoring and evaluation purposes. Training materials, after development and adaptation, will be delivered to DTRA CBEP for technical review and Public Affairs approval. Several of Metabiota's personnel are EIS graduates and we expect to leverage their efforts for the epidemiology-related work. Metabiota personnel and those of our partners also have extensive BS&S and biorisk management experience, and we will leverage those personnel for the BS&S-related work.

Coordination for Training Material Translation (Task 1)
Translation of training materials, if determined to be necessary, will be handled via CLS per contractual direction. Metabiota PM and PC will deliver training materials and CLS form(s) to the CBEP Technical Point of Contact for appropriate routing.

Learning Management System Implementation
Metabiota will utilize a learning management system for the delivery of course materials. Metabiota FLNs will familiarize themselves with the LMS in order to be able to provide adequate locally-based support to the training participants. Metabiota SMEs, aided by the PC and FLNs, will create courses and upload training materials.

Remote Epidemiology and BS&S Training (Task 3)
Metabiota SMEs will execute 6-week training modules on epidemiology and BS&S. Metabiota expects each week to consist of 1-2 lecture sessions conducted via internet videoconferencing which will be recorded for those participants unable to participate live. These will be augmented by the online materials. Metabiota SMEs will be available for virtual "office hours" and to answer written communications from participants. Metabiota SMEs will also grade any assignments and provide feedback to the participants on their performance. FLNs will be used to facilitate any minor logistical needs during this period.

Hands-on Course (Task 3)
Metabiota SMEs and FLNs will execute a one-week hands-on course for the core participant group. This hands-on course will be designed to emphasize the key points of the remote epidemiology and BS&S trainings especially those which would benefit from practical exercises such as PPE donning and doffing. Metabiota expects to leverage CLS to provide the venue, simultaneous interpretation, and any other logistical needs.

NBERP Familiarization and Review (Task 4)
Metabiota SMEs will coordinate with in-country stakeholders including Iraqi institutions such as the National Biorisk Management Committee (NBMC), the Ministry of the Interior, and the Ministry of Health to conduct an initial review of the National Biological Emergency Response Plan (NBERP). Metabiota SMEs and in-country facilitators will then conduct a virtual introduction to the NBERP to familiarize key participants, consisting of the selected core team and 10-15 members of the emergency response, law enforcement, and security agencies of Iraq, with the NBERP process and more specifically, their role within that process over a span of one week. To do so, Metabiota SMEs will coordinate with the in-country stakeholders to identify key roles and responsibilities within the NBERP and overarching structure prior to participant outreach.

NBERP Gap Analysis and Virtual Workshop (Task 4)
The Metabiota team will coordinate with and provide guidance to the key participants familiarized above in conducting a gap assessment of the suitability and feasibility of the National Biological Emergency Response Plan (NBERP). Participants will be engaged throughout a three-week span and arranged into virtual working groups appropriate to their roles and responsibilities. Metabiota SMEs will monitor the Iraqi participants in the process, leading working groups and keeping the overall gap assessment on task and on schedule. At the end of the time period, Metabiota will facilitate a 5-day workshop for the participants to finalize the gap assessment facilitated by an in-country implementing partner and CLS. The gap assessment will be a baseline for future work developing injects and other materials needed for a tabletop training exercise (TTX) testing the NBERP. As a result of the gap assessment, Metabiota will provide technical support and guidance in coordination with key Iraqi stakeholders to recommend changes and enhancements to the existing policies.

Epidemiology Training #2 (Task 1, Task 3, Task 4)
The Metabiota PM, PC, and SMEs will participate in discussions with(b)(6) o identify a second cohort of participants for the epidemiology module of the remote training. The Metabiota SMEs will further modify epidemiology training materials taking into consideration that the second cohort of participants will not be afforded the chance to participate in a hands-on course to reinforce their knowledge and skills. After the materials have been modified and uploaded to the LMS and the participants identified, the Metabiota SMEs will execute the 6-week training module.

Project Closeout (Task 1)
Metabiota PM, PC, and SMEs will all contribute inputs to a final report documenting the projects. The report will include lessons learned and an after-action report detailing enhancements that could be made should this type of project be repeated, either in Iraq or in other CBEP-engaged countries. Training records will also be provided to DTRA CBEP. Additionally, at the end of the period of performance, the LMS will be transitioned to DTRA

CBEP for their use and maintenance.

Monitoring and Evaluation
As part of the remote trainings and the hands-on course, Metabiota intends to administer tests to evaluate knowledge and skill levels both prior to and immediately following trainings. However, Metabiota recognizes that post-tests occurring during the period of performance will only measure short term retention. As an additional value to the client, Metabiota intends to develop and provide to CBEP post-tests which can be conducted at six month, 1 year, and 2 year intervals after training completion. Metabiota will administer the evaluations if requested by CBEP.

Risk Management:
In order to maintain our course of action and guarantee project implementation that will reduce regional risk and forward DTRA CBEP's mission, Metabiota must overcome the obstacles included (but not limited to) those listed in the attached Risk Management Matrix. Identifying and acknowledging the risks associated with not implementing this activity, as well as capturing the risks associated with conducting and completing it, to include contingency planning and course correction measures will lead to overall regional risk reduction, as outlined in the attached Risk Management Matrix. (Risk Management Matrix: Attachment A)

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$309,821
1003	MATERIALS	$29,089
1004	ODCs	$2,593
1005	TRAVEL	$0

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES.)

Labor
Costs for direct labor to support this activity is required for the following personnel:

All phases:
Task 1 - Project Coordination: Metabiota will provide consistent and cohesive technical and administrative leadership, direction, program management, implementation oversight, and coordination of all project activities.

Metabiota Program Manager (PM): The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of DTRA CBEP goals at the country and regional level in direct support of this activity and the CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the SME I to ensure all day-to-day activities for the project are completed on time, and to the quality required by CBEP.

Metabiota Project Coordinator: A SME I will act as a Project Coordinator (PC) throughout the planning and execution of project objectives. The PC will lead the planning and execution of CBEP objectives towards the completion of project goals by participating in proposal development and leading stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will manage the SMEs, to include leading regular coordination calls with the SMEs and participating in regular communications between the trainees.

To ensure the project in managed according to CBEP standards, the PM and PC will be responsible for the following:
Initiation and Program Integration: The PM, with PC support, will assist in the development of the project proposal to include the project timeline, and identification and integration of project requirements, deliverables, subcontractors, SMEs, and trainers to ensure project success. Upon acceptance of the proposal, the PM will hold a kick-off meeting with team members and partners to review the project plan and schedule, establish routine communication to support project implementation, initiate education on the contract requirements, and begin project implementation. Routine communication with all stakeholders will ensure that all deliverables, including required CDRLs, are met and submitted according to the project schedule and contract requirements.

The PM and PC will work closely with (b)(6) identify and select appropriate participants for the training course, ensuring they meet standards for inclusion, and are vetted according to CBEP protocols. In addition, the PM and PC will coordinate all aspects of training implementation, to include identification and appropriate engagement of FLNs, to include a Training Coordinator to support in-country training, act as the day-to-day manager of identified FLNs, and interface regularly with project personnel to ensure that in-country training requirements are met. The PM will ensure that FLNs are contracted with, engaged according to contract and project requirements, and have the background and skills necessary to support training implementation. FLNs are being billed at the CENTCOM FLN III rate due to the difficulty of finding personnel and hazard of working in Iraq

The PM will ensure that all project personnel (Metabiota and subcontractors) adhere to DoD and DTRA CBEP standard operating procedures and operational requirements to include overseeing the development of Statements of Work (SOW) and appropriate budgets under the T&M mechanism, the acquisition of Defense Base Act insurance, and any other requirements which may be applicable to the work.
Communications Management: To support routine communication on the project critical to successful execution of the project, the PM and PC will establish bi-weekly project calls with all key stakeholders, to include the CBEP POC, subcontractors, in-country FLNs, SMEs, and others identified as critical to support this training during key phases identified in the project proposal. This will serve to ensure understanding of project requirements and to identify project risk at the forefront, in order to implement mitigation strategies throughout the project lifecycle, ensuring overall success. The PM will also lead communication efforts with DTRA CBEP for this activity, guaranteeing that all aspects of the project are being managed in direct coordination and communication with key team members. The PC will provide support to the PM by coordinating day-to-day activities and maintaining and scheduling routine communications, ensuring that stakeholders are provided routine visibility on the project through in-person and virtual meetings, calls, weekly reports, and updates.
Time and Cost Management: The PM and PC will ensure time and cost management and routine receipt of project reports, invoices, and other needs to support project efforts. The PM and PC will also ensure that all project deliverables are submitted on time and to the quality required for this engagement. This will include coordination, development and submission of the following contract CDRLs associated with this project: CDRL A001 Monthly Report, A006 Training Trip Report, A011 Transfer of Materials, A014 Training Event Plan, A015 Post Training Assessment, A016 CTR logistics form, and A017 Meeting Agenda and Report. All CDRLs will be developed and submitted according to the contract requirements, and assigned timelines.

Stakeholder Management: The PM will oversee the identification, development and execution of subcontracting requirements for this project. This will include identifying the necessary subcontractors, developing the subcontractor package jointly with the Metabiota contracts office, educating identified subcontractors on T&M contract requirements, and ensuring invoicing and deliverables meet contract standards. The PM will oversee all work performed by the subcontractor throughout the project and will close out the subcontract following completion of work performed in support of this effort. The PM will participate in identifying necessary subcontractors/ ndependent consultants, and initiate their engagement through contract development and execution.

Procurement and Logistics Management: The PM and PC will coordinate with CLS for all travel, logistics, translation, and training requirements in country. Utilizing CDRL A016 the CTR logistics form, PM will submit all requirements directly to CBEP and once approved, PC will coordinate directly with CLS team members to ensure all shipping and logistics requirements are met according to timeline PC will work jointly with CLS personnel to develop and submit required BOMs, and move supplies through the customs clearance process in conjunction with the DTRO. PM/PC will coordinate all logistics requirements with CLS and, once approved by CBEP, will remain in direct communication with CLS team members to ensure on-the-ground logistics are executed according to project scope and requirements.

Quality Management: The Project Coordination team will work closely with Metabiota SMEs to ensure that all training materials and deliverables submitted and utilized on the project meet CBEP's requirements. In addition, SMEs will be responsible for QA/QCing training materials and working directly with engaged FLNs to ensure the training is performed at FETP international standards. All work of internal SMEs, FLNs, and partners will undergo peer review by Metabiota functional group leaders to ensure high quality is maintained.

Human Resources Management: To further build out the project team, the PM and PC will work closely with Metabiota's scientific bench to identify and integrate internal SMEs to this project. The PM will oversee and coordinate their efforts on the project in support of adapting and developing training materials remotely executing the training course and providing M&E to ensure information learned is retained and applied at home organizations. The PM will ensure that SMEs are coordinating directly with other project team members, performing required duties, and PM will track overall LOE according to budget and project requirements for all team personnel.

Close out: The PM and PC will oversee project closeout to include wrap-up of training, finalization of deliverables, final reports, and transfer of materials. The PM will also ensure the conclusion of subcontracts and other employment agreements.

Task 4 - Subject Matter Experts (SMEs). Metabiota will provide ongoing technical support and expertise through the use of SMEs, to include the development and evaluation of training methods and materials, and to support the implementation of trainings. Metabiota SMEs engaged for this effort will provide expertise and input on the development and revision of existing training materials. They will take part in identifying and engaging trainees in conjunction with the project coordination team (b)(6) nd the CBEP CM, and ensuring that the cohort selected includes a cross-section of agencies critical to this engagement with the basic skills necessary to successfully complete and implement training components at home institutions. SMEs will implement the training courses and will work in partnership with FLN trainers to administer the courses, provide QA/QC of all materials, engage trainees in capacity building and scientific discussions supporting training concepts and implementation, and assist in the development of a gap analysis report. SMEs on this effort will be performing the functions of both SMEs and Qualified Trainers (QTs). In line with government guidance, the SMEs will be billing at the SME I or SME II labor rate, which is the equivalent cost of QT I and IIs. Metabiota has identified internal SMEs that will be a part of this effort. Metabiota will subcontract Watermark Risk Management International, LLC for additional SME support on this effort. Additionally, Research and Data Analyst (RDA) hours have been allotted to assist SMEs in development and adaptation of training materials and course delivery.

Reachback programmatic support to include finance, accounting, and contracts, will be provided as part of CLIN 1001 (FFP) and will not be separately invoiced.

Materials

Training Materials: Epidemiology textbooks will be procured and distributed to trainers and participants to support the Field Epidemiology Training Program (FETP). This will include supporting the 6-week field epidemiology training course, as well as epidemiology components of the Integrated BS&S and Epidemiology Enhancement course. Risk Management Texts and other published training materials identified by SMEs will be procured and distributed to trainers and participants to support required components of the training courses. All textbooks and published materials will be in English, and will be procured by Metabiota and shipped via CLS or a third-country shipper per contract requirements. If materials can be secured and provided to the trainers/trainees online, shipping will not be required. Metabiota will endeavor to use the LMS for all course materials, ensuring cost savings to the government where possible. SMEs will be engaged to determine the appropriate textbooks and training materials required to meet course needs.

Personal protective equipment such as Tyvek suits, gloves, goggles, booties, and N95 respirators will be procured for training purposes. Additionally, consumables and other paraphernalia such as chlorine plastic wash basins, buckets, disinfectant sprayers and anti-fog spray will also be procured.

USB internet devices and internet access cards will be procured and provided to trainers/trainees in-country to ensure they have access to a stable internet connection during all remote training sessions. USB internet devices will be procured and tested in-country to avoid shipping charges and to ensure they are operational on the ground. USB internet devices and access cards will be monitored by the FLNs to ensure they are used for training purposes only and are maintained according to equipment/material guidelines for the duration of the course.

General office supplies will be procured to support in-country training activities and routine project needs for the execution of the training courses. Office supplies will be procured locally and will include, but may not be limited to, pens, paper, thumb drives, binders, etc.

Metabiota will conduct market research and ensure the best price is secured maintaining quality and technical requirements for all procurement of goods. Metabiota will coordinate directly with CLS and third-country vendors for all shipping requirements, and will work closely with CLS and DTRO to ensure customs clearance requirements are met and goods delivered according to project timelines and CDRL requirements. Metabiota will ensure cost management for all procured supplies and will coordinate directly with CBEP and CLS to support additional requirements for the hands-on training events to include such items as printing of the developed and adapted training materials, training certificates for participants, and translation services, if needed.

Other Direct Costs

Per contract guidelines, DBA insurance is required for all personnel engaged on the AEP project working abroad. DBA insurance will be applied for labor costs incurred overseas. As no travel is authorized for this project, DBA will only be applied to FLNs, or other contractors, engaged on this effort, for the duration of the program. Metabiota maintains a blanket DBA policy for all personnel and will add the FLNs, and other performers meeting DBA requirements, to this policy as they are engaged. A (b)(6) f their total compensation will be billed to the project on a monthly

basis. A reconciliation of the total DBA will be performed prior to final invo cing to ensure accuracy of the charges, in accordance with total hours worked. Final invoicing will be adjusted, if necessary, to reflect the final DBA allocation numbers.

Subcontracts

Subcontracts will be issued to SMEs, FLNs, and/or their home organization(s) as needed for the labor necessary for this effort, as well as any materials and supplies they will procure in support of this effort. Costs are captured under the labor or materials budgets.

Travel

Travel is not requested to support this effort according to the project scope. as all requirements will be executed remotely, and will rely on FLNs for in-person training needs. Metabiota assumes that we will be able to identify a FLN in all locations in Iraq where trainees are identified.

8. DESCRIPTION OF TD (NOT TO EXCEED 1 PAGE):

The Defense Threat Reduction Agency (DTRA) Cooperative Biological Engagement Program (CBEP) grants technical direction to Metabiota to develop a Film Narrative of Epigenetics and Genomics of Infectious Diseases in the Middle East, South Asia and CBEP collaborations in the CENTOM Region in accordance with SOW section 4.3, Task 3.

Metabiota shall develop a 2-5-minute film narrative of the Middle East and South Asia Conference on Epigenetics and Genomics of Infectious Diseases, which was held at the Royal Scientific Society (RSS) on March 7-8, 2016 in Amman, Jordan. The visual narrative (2-5 minutes) objectives are to document the Jordan conference and describe other science initiatives and the outcomes of CBEP's engagements in the Middle East and South Asia. Metabiota shall develop the specific script in coordination with CBEP CENTCOM regional managers. The footage and interviews that Metabiota has from the conference can be utilized for the visual narrative. The visual narrative should be completed by June 30 2016. Total costs for the narrative shall not exceed $60,000.

Deliverables:

- A short film narrative of 2-5 minutes on 3 DVDs. Final film must go through Public Affairs Office (PAO) approval at DTRA.

The period of performance for this effort will be from May 1 to June 30 2016. Your technical approach, proposed budget, and basis of estimate for implementing this requirement, not to exceed $60,000.00 is requested by 19 April. Please note that the current Metabiota contract does not allow for logistical support services, such as translation, shipping & customs clearance, conference services, etc. These requirements will be coordinated through CLS and the in-country DTRO (as appropriate) by the CBEP POCs below.

9a. PROPOSED SOLUTION (NOT TO EXCEED 2 PAGES):

Phase 1: Proposal Development & Initiation (Task 1)

Metabiota developed a project plan and implementation strategy that aligns with the narrative from Box 8. It is anticipated that the plan for TD-24 is considered a living document, and it is expected that revisions to the plan may be necessary following stakeholder meetings. During proposal development, Metabiota will use Program Manager (PM) and Project Coordinator (PC, billed as a Subject Matter Expert 1) time to identify the best path forward, required deliverables, and any other programmatic requirements which can reasonably be expected to be a part of this project.

Metabiota assumes the following:

1. The PoP assigned to this project will allow enough time for PAO approval of the final video. However, if PAO approval extends beyond the project timeframe, Metabiota will work with AEP regional leadership and the COR to adjust the PoP or allow for final approval of the video outside of the project timeframe, as appropriate and within contractual compliance;
2. Production services required for this project will be complete within 3 weeks allowing enough time for PAO approval of the final video. Should services required extend past this timeframe, Metabiota will work with the CBEP CENTCOM regional leads (and COR, if necessary) to adjust the schedule accordingly;
3. Box 8 of TD-24 states that this project will be completed in accordance with section 4.3, Task 3, which refers to Qualified Trainers (QTs). Based on the requirements, Metabiota has replaced Qualified Trainers with Task 4- Subject Matter Experts. Metabiota assumes this will be acceptable in the execution of the project and engagement of SMEs for this effort.

Project Coordination (Task 1)

The Project team will be led by an experienced Program Manager (PM (b)(6) nd supported by a highly effective Project Coordinator (PC (b)(6) MPA, to cover Task 1 – Project Coordination. The PM and PC were selected for this project, because they implemented TD-07 the Middle East South Asia Epigenetics and Genomics of Infectious Disease Conference and have the historical knowledge to effectively and efficiently manage the requirements identified for TD-24. In addition, Metabiota will engag (b)(6) PhD, from Gryphon Scientific LLC to assist in narrative development as a SME under Task 4 (b)(6) s the PI and senior er on TD-07, working closely with (b)(6) (b)(6)

Note: The Metabiota PM confirms subcontractor knowledge of the contractual requirements prior to TD approval.

Phase 2: Preparation (Task 1)

Upon TD approval, the PM will establish routine communications with project team members and CBEP to initiate project implementation. The PM will hold a kick-off meeting within 5 days of approval, with participation from the AEP PMO, project team members and key CBEP stakeholders to review project requirements and ensure a mutual understanding of project goals and objectives is realized. The PM, with assistance from the PC, will identify and engage the videography firm required to execute production of the video. The PM will lead coordination and integration of the project team with CBEP stakeholders to develop the narrative and complete the film.

The project team will ensure that all necessary documentation required prior to initiating tasks is completed correctly and submitted on time, including CTR CLS Form (CDRL A016) and the Monthly Reports (CDRL A001). The project team will work closely with CBEP regional leads, A&AS support staff, and CLS to ensure that all logistics requirements are coordinated and implemented according to the project schedule and contractual

requirements. The Metabiota Travel Coordinator will coordinate with the project team to assist in the request of travel requirements supporting this effort and will ensure that travel arrangements are secured, immediately following approval by the COR, and in line with the project schedule and execution requirements.

Sub-Phase 2.1: Film Narrative Development and Adaptation (Tasks 1.4)

Metabiota will select and engage a videography firm to produce the film, following sourcing of an appropriate vendor for this engagement. The project team will engage the CBEP regional leads to ensure the technical requirements are clearly determined and will select a service provider at best cost to the government, meeting the requirements identified. Upon engagement of the videography firm, Metabiota will transfer the existing, unedited video footage and interviews collected during the Middle East and South Asia Conference on Epigenetics and Genomics of Infectious Diseases, held at the Royal Scientific Society (RSS) from 7-8 March 2016 to the firm in order to produce the film. The unedited video footage, interviews, and photographs captured during this event will provide the raw material to effectively and relevantly document the Jordan conference and describe other science initiatives and the outcomes of CBEP's engagements in the Middle East and South Asia. The Metabiota team will work directly with CBEP regional leads and the videography firm to determine the narrative and produce the film.

Sub-Phase 2.2: Coordination for Material Shipment (Task 1)

Shipment of materials and final edited film, if deemed necessary, will be handled via CLS. The project team will deliver the final edited and PAO approved film utilizing the appropriate CLS forms (CDRL A0016 and associated forms) to the CBEP team for appropriate routing, adhering to contract timelines and deliverable schedule. The Metabiota team will work closely with CBEP, A&AS, and CLS staff members to coordinate and execute any logistical requirements, as needed.

Phase 3: Implementation (Tasks 1.4)

The Metabiota Project Team will develop and create a 2-5 minute film narrative of the Middle East and South Asia Conference on Epigenetics and Genomics of Infectious Diseases, held at the Royal Scientific Society (RSS) on March 7-8, 2016 in Amman, Jordan. The film will be produced in the English language and may include visual frames of speakers on stage, panning of audience, and snapshots of the discussion panels, poster session, and participants asking questions and engaging with speakers. The film may also include short interviews with conference organizers, Scientific Advisory Board members, speakers, presenters, and attendees concerning the importance, relevancy, and benefits of the conference, among other topics. The film will be produced utilizing the technical expertise of the film editors, Metabiota team, and CBEP regional leads to showcase the conference and highlight the scientific initiatives and engagements stemming from this event and CBEP efforts in the region. Suitable background music will be included, as well as sub-titles, if deemed necessary. Metabiota will ensure that the film is adjusted/edited according to guidelines received from CBEP, and other key stakeholders. CLS will be engaged to provide logistical support (CDRL A0016), should it be required for this effort. In addition, Metabiota will ensure PAO approval of the film, and will coordinate with the technical team to address any necessary changes prior to completion and final delivery of the product.

To support implementation efforts, the Metabiota PM will travel to Washington DC for meetings with CBEP regional leads and the project team to develop the narrative and review the video footage. The PM will participate in working sessions, brainstorming, and technical development of the film narrative during scheduled in person meetings to ensure execution of the narrative and completion of the project. In addition, the PM will meet with the videography firm to review performance and completion of tasks associated with this project.

Phase 4: Project Closeout (Task 1)

The project team will close out all activities associated with this project, to include final reporting, invoicing, and submission of all relevant CDRLs according to the outlined schedule. In addition, the project team will contribute to lessons learned conversations with CBEP detailing enhancements that could be made should this type of project be repeated, as necessary and requested by CBEP regional leads. Finally, unedited and edited film, and other relevant materials will be provided to CBEP.

9b. BUDGET (USE EMBEDDED TABS FOR BUDGET BREAKDOWN):

CLIN	DESCRIPTION	TOTAL
1002	LABOR	$36,810
1003	MATERIALS	$10,695
1004	ODCs	$0
1005	TRAVEL	$2,373
TOTAL		**$49,877.97**

9c. TD SOLUTION BASIS OF ESTIMATE – DESCRIPTION (NOT TO EXCEED 2 PAGES):

Labor

Costs for direct labor to support this activity is required for the following personnel:

Metabiota Program Manager (PM): The Metabiota PM will provide direct oversight of the planning and execution of the program, ensuring all objectives are met in accordance with the project SOW maintaining scope, budget, and timeline. The PM will ensure completion of CBEP goals in direct support of this activity and the CBEP mission throughout the lifecycle of the project, and will ensure project close out. To guarantee that all requirements are met, the PM will manage the SME 1 to ensure day-to-day activities for the project are completed on time, and to the quality required by CBEP. The PM will participate in routine conference calls and other forms of communication with CBEP regional leads and SMEs to ensure project execution. The PM will oversee the subcontractors on this effort, to include the services provided by the videography company in execution of the film. The PM will ensure all contract CDRLs are met and delivered according to the project timeline, and contract requirements.
LOE: 80 hours

Metabiota Project Coordinator: A SME 1 will act as a Project Coordinator (PC) throughout the planning, execution and close out of project objectives and activities. The PC will support the planning and execution of CBEP objectives towards the completion of project goals by participating in proposal development, stakeholder and subcontractor coordination and project execution, including assisting the PM in anticipating, managing, and communicating project risks and recommended mitigation strategies to CBEP and other stakeholders. The PC will regularly communicate the project status with the PM. The PC will participate in routine project communications, to include leading regular coordination calls with the project team, CBEP, the videography company, and other key stakeholders.
LOE: 60 hours

SME 3 (b)(6) rom Gryphon Scientific will be engaged to support technical development of the film narrative for this project. Having coordinated the MESA Epigenetics and Genomics of Infectious Disease Conference with the Metabiota team, she is critical in ensuring the conference message is received and communicated through the film (b)(6) will work directly with Metabiota and CBEP to develop the narrative, review the footage, and provide subject matter expertise to the team and the production services in development and execution of the film. Should edits or revisions be required following CBEP and PAO guidelines (b)(6) ll participate in editing and refining the narrative to be delivered in the

final product. (b)(6) will be responsible for all monthly reporting and deliverables assigned to the Gryphon subcontract by Metabiota in execution of this project.
LOE: 80 hours

Reachback programmatic support to include finance, accounting, and contracts, will be provided as part of CLIN 1001 (FFP) and will not be separately invoiced.

Materials
Training Materials: Two (2) external hard drives will be procured to store the photos, raw video footage, and the final edited video.

Production Services: Metabiota will engage a videography firm to produce the short video for this effort. This will include identification of sound bites, completion of film transcripts, editing, and production of the video.

Metabiota will conduct market research and ensure the best price is secured, maintaining quality and technical requirements for all procurement of goods. Metabiota will coordinate directly with CLS for all shipping requirements, and will ensure cost management for all procured supplies, as necessary to complete the scope of this effort.

Subcontracts
The subcontract with Gryphon Scientific will be modified to include labor hours and materials required for implementation of this project. Costs are captured under the labor and materials budgets.

Travel
Travel costs will be cost reimbursable and provide best cost to the government following JTR regulations. Travel is requested for the PM to meet with the project team, Gryphon SME, CBEP, the videography company, and other key stakeholders to support the execution of Phase 3, and ensure development of the film narrative and completion of the project. The PM will travel to Washington DC to take part in in person meetings, brainstorming activities, narrative development and review of film footage and sound bites developed by the videography company supporting this project.

COR/ J3CTB Program Manager

Instructions: Government to complete Blocks 1-8, 10-12, 14-16. Contractor to complete Blocks 9 and 13 only.

1. Contract Number
2. Contractor – Full Company Name
3. Technical Directive Number
4. Technical Directive Title
5. Total Estimated Technical Directive - Hours and Dollars
6. Contracting Officer Representative – Contact details
7. Contractor Point of Contact – Details
8. Description of the Technical Directive Government Provided
9. Solution:
    a. Proposed Solution: Contractor's proposed solution (including approach, schedule, and risk analysis) for TD. Not to exceed 3 pages.
    b. Budget: Contractor enter proposed quantity(ies) for TD completion.
    c. Technical Directive Solution Basis of Estimate Description: Contractor complete the BOE for proposed solution to TD. Not to exceed 3 pages.
10. Funding Authorized this TD: Identifies information for billing purposes
11. Funds Authorized
    a. Funds Authorized for this TD Revision Exclusively
    b. Funds Authorized inclusive of all Revisions, Cummulative Total
12. Period of Performance
    a. Current
    b. TD Rev POP
13. Contractor: Sign & Date
14. Region for Technical Directive
15. Technical Points of Contact
16. Contracting Officer Representative Approval: Sign & Date

Company: Metabiota Inc.
Contract No: HDTRA1-14-C-0104
TD No: 022 - Iraq Field Epidemiology Training (FETP) Support
Date: 19 February 2016

Attachment A: Risk Management Matrix

Risk Factor	Description	Likelihood	Severity	Risk Rating	Mitigation	Residual Risk
				Cost		
Material Procurement	It is unclear what training material may be required and available in-country for implementation and execution of the trainings and workshop. If materials are not available in country, it may be necessary to use CLS for single shipper, VAT coverage, etc	4	4	(b)(4); (b)(6)	Collaborate with in-country partner, SMEs and FLNs to identify which materials will be required as soon as possible; engage local collaborators to provide in-country support; engage with CLS and A&AS to procure, secure country clearance, and ship any materials not locally available	Med
Material Procurement	Since this effort will require extensive levels of virtual communication and the extent of internet access of FLNs and participants is unknown, phone and internet costs may vary	5	4		Engage with in-country partners and FLNs to provide stable internet connection at the best price to ensure access to virtual training, and routine communication for the duration of the project.	Med
Cost Management	Implementing partners (FLNs, in-country partners) may lack the appropriate financial systems to capture, track, monitor and report on acceptable expenditures under a T&M "C" Type contract, but they are critical to project implementation	4	4	Med-High	Metabiota will train our implementing partners in T&M contract requirements and provide standard forms and FAQ to implementers that are overseen and managed by our PM/PC. Our PM/PC with reachback to our PMO will provide oversight and management of all partners for the duration of the project, ensuring contract guidelines are maintained	Low
				Schedule		
End of AEP POP	Current AEP POP expires 15 May 2016. There is not enough time to accomplish all goals of this technical direction in that time frame	5	5	(b)(4); (b)(6)	finish activities and develop project schedule for full duration of planned activities	(b)(4); (b)(6)
Volume of training materials	The quantity of training materials projected for 12 weeks of remote training may require significant time for technical review and public affairs approval, forcing delay of the start of training	5	3	Med-High	Metabiota SMEs will submit training materials on a rolling basis and front load development of materials that require significant revisions. Metabiota PM/PC will coordinate directly with A&AS and CLS staff to ensure materials are submitted according to schedule and are tracked appropriately	Med
On time delivery of CTR CLS form (CDRL A016)	The CTR CLS deadline is 60 days prior to training event and is contingent on receipt of final participant list, complete BoM, logistics requirements, etc	5	3	Med-High	Will engage in-country partner, SMEs and FLNs to quickly identify all travel, translation, translation and training requirements and ensure successful submission. PM/PC will coordinate with A&AS and CLS team members to track and manage all requirements according to contract and project guidelines	Med
Training Event Plan Submission (CDRL A014)	The TEP submission deadline is 60 days prior to training event, and is contingent on submission, translation, PAO approval, etc	5	3	Med-High	Submit CBEP required deliverables for the training engagement immediately upon receipt of approved proposal to ensure successful implementation	Med
Monthly report (CDRL A011)	Contingent on accurate tracking and submission of reports and hours by FLNs	4	3	Med-High	Will train FLNs and SMEs on required format and deadlines for monthly CDRLs and ensure deliverable is met	Low
Training Trip Report (CDRL A005)	The TTR submission deadline is 10 days following completion of the training event.	5	3	Med	PM will work with SMEs, and FLNs to complete the TTR following training wrap up and ensure it is submitted according to project schedule	Low
Transfer of Materials (CDRL A011)	Required for procured materials that will be transferred to host country partner 45 days in advance of transfer. Implementation contingent on procurement and materials identified for transfer, as well as host country partner identification	2	3	Med-High	Metabiota PC will develop BOM with in country partners and will track inventory for the project. Will work with PM to develop Transfer of Materials agreement according to host country agreements and requirements for submission and signature by CBEP, MB, and host country partners. Will identify appropriate partners for material transfer and will ensure inventory is tracked and maintained as part of project requirements	Low
Post Training Assessment (CDRL A015)	In conjunction with CBEP POC and partners complete the assigned post training assessment form and submit according to schedule	2	4	Med-High	CBEP to ensure the deliverable meets their requirements. Metabiota will ensure M&E for training follow up is completed and reports sent to CBEP for their use and evaluation. PM will coordinate with CBEP POC to ensure deliverable is identified in	Low
Meeting Agenda and Report (CDRL A017)	Required for CBEP scheduled meetings to ensure agenda and minutes are captured for project record	2	1	Low	Metabiota PC will work with the Project Controls Analyst and ensure that meeting agendas and reports are developed and submitted to CBEP in accordance with scheduled meetings and requirements for submission	Low
Monitoring & Evaluation tests	Distribution and collection of pre-tests and post-tests for monitoring and evaluation purposes will be contingent on FLNs	3	3	Med	Will collaborate on specific metrics with CBEP POCs. Metabiota SMEs will monitor the training and workshop processes to ensure completion	Low
Project Integration	Virtual management, and project coordination in a conflict area may pose challenges in effective exchange of pertinent data, and implementation of requirements.	2		(b)(4); (b)(6)	The PM will act as the single POC for this effort, and will integrate project teams with support of the PC to ensure CDRLs are developed and met within project timeframes. PMO and SME technical internal to Metabiota will support this effort and ensure direct support is met at all levels.	Low

Time Management	There are several activities which will require a significant amount of tracking, monitoring and effective communication with a diverse array of stakeholders, including: establish agreements with in country institutions; achieve customs clearance for outside procurements; develop and process CLS forms for participant support and shipping; Acquire Leahy Amendment clearance for trainees; receive PAO approval and training team review of new training materials; etc.	5	4	(b)(4); (b)(6)	he PM and PC will ensure all project deliverables and CDRLs are ubmitted, implemented, and tracked according to the project neline. PM and PC will communicate routinely with all akeholders to ensure project schedule is adhered to and will otify CBEP and other key stakeholders immediately, should elays outside of project control be met, and corrective action ecessary. The project team will work closely with CBEP, A&AS, d CLS teams to ensure requirements are understood, met, and elivered according to timeframe. The PMO and scientific bench, terial to MB will support project and technical requirements on e project ensuring all materials are QAQC'd and continuing M&E implemented on the program to manage requirements to the ality; expectations by the client ill have effective change management process for delays out of eam Metabiota and CBEP control.	Med
Performance						
Event Execution	Remote monitoring and execution of training events and workshop by PM, PC and SMEs will prohibit ability for hands-on corrections.	5	5	(b)(4); (b)(6)	Will work with FLNs and in-country implementing partners to complete scheduling and coordination requirements in advance, and anticipate and mitigate any potential challenges. Maximize the use of new technologies which facilitate remote engagement in real time.	Med
Trainee Attendance	Reliance on CLS to coordinate all in country attendee transportation to centralized point for training events - Security of country may impact transportation and risk associated with coordinated events	4	3	Med-High	Will coordinate with CLS in-country partner, US Embassy in Iraq, and CBEP POCs to secure the safe transportation and mitigate potential risks for training event attendees.	Med
Training Material Development	Training materials that cover the full range of activities have not been developed for Iraq implementation and integrated for a cohesive delivery	4	4	Med-High	Metabiota will reuse existing training materials from EIS, FETP, and other widely recognized training programs as much as possible, and SMEs will adapt training materials and case studies for effective remote delivery and local relevancy	Low
Logistical Coordination	Remote coordination for venue selection, materials procurement, translation and interpretation services and implementation of practical exercises for the hands-on course is required	4	3	Med-High	Will utilize CLS for logistical support and local logistical organization for the venue facilities, simultaneous interpretation services, and other in-country logistical requirements. Will utilize FLNs for practical exercises.	Low
Accurate Gap Analysis of the National Biological Emergency Response Plan	Metabiota FLNs will provide guiding support but will not be the primary drafters of the NBERP Gap Analysis, the gap assessment is contingent upon workshop participants	3	3	Med-High	SMEs will monitor and lead workshop remotely to keep the assessment on track. Upon completion, Metabiota will coordinate with key Iraqi stakeholders to make critical changes to the NBERP and ensure continued buy-in and support from high-level stakeholders	Low

Travel Authorization Form

TRIP #	09.21.2015 KZ AEP
Project/Phase #	AEP, TD002
Purpose:	Travel to Almaty, KZ for preparation and implementation of Sample Collection and Diagnostics Training on Middle East Respiratory Syndrome (MERS-CoV) in Camels and Bats in Kazakhstan, 7-11 December 2015
SOW / Task	Implement the MERS-CoV training event
Desired Outcome	Provide coordination, oversight and execution of TEP 1304 sample collection and diagnostics training event, meeting project requirements.
Dates, Location	Almaty, KZ - Gollogly - 30 November-12 December; Mendenhall/Linster - 02-12 December; Smith/Wang - 05-12 December 2015
Traveler:	NAME / POSITION: 1. (b)(6) SEA PM; 2. (b)(6) Trainer, Duke NUS; 3. (b)(6), Trainer, Duke NUS; 4. (b)(6) Trainer, Duke NUS; 5. (b)(6) Trainer, Duke NUS
Lodging to be Arranged by:	Metabiota
Contract:	AEP, HDTRA1-14-C-0104

FLIGHT AND TRAIN TICKETS

From:	To:	Airfare Cost	Booking Fee				Total
Gollogly - LAX	Almaty, KZ	$ 1,681.01	$ 43.00				$ 1,724.01
Mendenhall - Singapore	Almaty, KZ	$ 1,737.17	$ 43.00				$ 1,780.17
Linster - Singapore	Almaty, KZ	$ 1,737.17	$ 43.00				$ 1,780.17
Smith - Singapore	Almaty, KZ	$ 1,737.17	$ 43.00				$ 1,780.17
Wang Singapore	Almaty, KZ	$ 1,737.17	$ 43.00				$ 1,780.17
Sub-Total:							**$ 8,844.69**

Lodging & Meals and Incidental Travel Expenses (M&IE)

Location	Lodging No of Nights	Estimated Lodging Costs Per Day	M&IE Days	M&IE Rate	Subtotal		Total
Smith (5 full days, 2 trave days)	7	$ 217.00	7	$ 99.00	$ 2,162.50		$ 2,162.50
Wang (5 full days, 2 travel days)	7	$ 217.00	7	$ 99.00	$ 2,163.49		$ 2,163.49
Mendenhall (9 full days, 2 travel days)	10	$ 217.00	11	$ 99.00	$ 3,209.50		$ 3,209.50
Linster (9 full days, 2 travel days)	10	$ 217.00	11	$ 99.00	$ 3,209.50		$ 3,209.50
Gollogly (11 full days, 2 travel days)	11	$ 217.00	13	$ 99.00	$ 3,624.50		$ 3,624.50
Sub-Total:							**$ 14,369.49**

Other Travel Expenses - ground transportation, fees, insurance etc.

Expense Type	Qty	Rate					Total
Smith/Wang/Mendenhall/Linster - ground transportation to/from Singapore airport	8	$ 50.00					$ 400.00
Smith/Wang/Mendenhall/Linster - ground transportation to/from Almaty airport	4	$ 40.00					$ 160.00
Wang - visa expenses	1	$ 160.00					$ 160.00
Duke NUS - daily ground transport in KZ	9	$ 50.00					$ 450.00
Gollogly - transportation from/to Almaty airport	2	$ 40.00					$ 80.00

Gollogly - daily ground transport in KZ	11	$ 50.00					$ 550.00
Gollogly - transport to/from US airport	2	$ 100.00					$ 200.00
Sub-Total:							$ 2,000.00

TOTAL ESTIMATED TRIP COSTS

							TOTAL
TOTAL ESTIMATED TRIP COST							$ 25,214.18

Traveler Justification

The team is traveling to Almaty, Kazakhstan, to implement a 5-day sample collection and diagnostics training event for local researchers on Middle East Respiratory Syndrome (MERS-CoV) in camels and bats. This is a follow-on training to the event held from 29 June – 03 July 2015, which covered safe handling and field sampling activities in camel and bat populations around Almaty. This training will focus on establishing diagnostics for serology and antigenic material utilizing the samples collected during the June event. Team members consist of four Qualified Trainers from Duke National University Singapore (Duke NUS) required to conduct the training event, and one Program Manager from Metabiota Inc., who will be responsible for coordination and oversight of the event. The training event will be held from 7-11 December 2015. (b)(6) (arriving 1 and 2 Dec, respectively) will arrive earlier than other team members, (b)(6) (arriving 5 Dec), in order to optimize reagents at the laboratory, conduct 'dry-runs' prior to training kick-off, and ensure all materials/supplies are in place and ready for training kick-off on Monday, 7 December. All team members will depart on 12 December following close of the training event.

(b)(6) **Program Manager, Metabiota Inc.**

(b)(6) is responsible for the coordination and implementation of this event. (b)(6) will coordinate all event logistics required for execution of the 5-day training event. She will meet and liaise with local collaborators from MVI to coordinate logistical, technical, and administrative requirements for the training, to include training set-up, local procurement activities, oversight and coordination of the Duke NUS trainers during the event, to include pre-coordination meetings, laboratory set-up and training runs prior to training kick-off. (b)(6) will also coordinate with the local CLS logistics team responsible for participant travel, transport, translation and interpretation services to ensure all requirements are met to successfully implement the training.

(b)(6) **Trainer Director, Duke-NUS**

(b)(6) will direct all technical aspects of the laboratory training event as the Lead Trainer from Duke NUS. (b)(6) will lead key training sessions addressing bat and camel diagnostics for MERS-CoV. (b)(6) is responsible for designing the training event and syllabus, and will ensure his team successfully implements the event following safe laboratory practices. (b)(6) will not only coordinate the event ensuring delivery of all technical information, but will also be a presenter during the event and will be responsible for implementing the practicum portion of the training in the MVI laboratory. He will coordinate directly with (b)(6) and the local partners to implement this training event.

(b)(6) **Trainer, Duke-NUS**

(b)(6) is one of the Trainers taking part in this event as part of the Duke NUS team, and will be responsible for delivering classroom presentations, and taking part in laboratory diagnostics training as a senior researcher and project lead for Duke NUS. (b)(6) will present materials on pathogen evolution, molecular evolution, sequence alignment algorithms, best-fit evolutionary models, and phylogenetic tree reconstruction. He will also provide subject matter expertise on bat sampling and diagnostics in direct support of this event.

(b)(6) **Trainer, Duke-NUS**

(b)(6) is one of the Trainers taking part in this event as part of the Duke NUS team. He is responsible for optimizing and setting up the laboratory assays being used in the practicum portion of this event, and will provide hands-on training to the participants in sample testing, analysis, safe handling, following laboratory protocols and best practices. He will also provide presentations during the classroom portion of this event on laboratory processes and diagnostics of MERS-CoV, to include safe handling and transport, serology, molecular virology, and sequencing. (b)(6) will also assist in preparations of event logistics by setting up laboratory assays, and processes for the training event in coordination with MVI technical staff.

(b)(6) **Trainer, Duke-NUS**

(b)(6) is one of the Trainers taking part in this event as part of the Duke NUS team. He is a senior researcher and scientist at Duke NUS and will engage in both the laboratory and classroom portion of this event speaking to clinical pathology, current surveillance practices, ongoing research activities into the disease, and viral sequencing, providing key insights and subject matter expertise to understanding MERS-CoV. He will take part in collaborative discussions and working sessions with the trainees, providing valuable scientific collaboration and engagement from a cross-regional perspective.

Metabiota's Technical and Cost Proposal
