From your conversation with Matt Frieman

Matt Frieman February 18th at 1:25 PM

Interesting this week. Ralph said that his chimeras were locked up my C3PO approval process. Adolfo and Peter lost their minds and started pushing Stemmy about what this means and why these were blocked, etc. Stemmy gave no clear answer and said they are looking into it. Requests were made on sharing protocols etc, and they said that the CEIRS do this already. Working on a way for Coronas to do it. I mentioned it would be great to all share freely but was essentially told, I thought that this is what the calls were for. Clearly they dont realize that there there is data going to be generated that isnt going to be shared by many of these damn groups.

From your conversation with Matt Frieman

Matt Frieman February 18th at 2:25 PM

I talked to Ralph for a long time last night, He sounds beat. His ACE2 mice are breeding up but not ready for anyone to have. He said he sat in Fauci's office talking about the outbreak and chimeras. Clearly he is in other kinds of meetings than what we are invited to! I joked about his link link to WIV, he wasnt very amused. He said that Zhi's paper was not approved by the Chinese govt and that she may be arrested for it. Thats not a good look for anyone. So we just go ahead and keep our heads down and get this virus working. Will see where we get!

Did you ask about the GFP virus?

Now you can also read all those Corona papers I am saying I cant review!

He came back saying that his IBC is working on the SOPs with them.
I want to say "Sara tweeting out a picture of her giving a high-5 to another scientist in the BSL3, both wearing an N95 mask is not a promising start to Penn's COVID19 response."

Too much?

They would be great. What do I need to do?

Ralph sending his but the lab guy said he thinks it's unstable

Are you all using the old SARS1 Leader primers for SARS2? All working fine, right?

We have to push back on this ADE results. I am tired of dealing with it. The models are biased towards that response so they can get a paper. I bet if you did the same expt but for Flu you would see the same thing.

Timothy Sheahan March 29th at 12:43 PM

I know. All these people saying that we don't know much about coronavirus biology is odd. Like it's all relative but do you think tht Perlman, Baric, Denison would agree with that? Bamford. Come on.

yup

Matt Frieman

March 30th at 9:26 AM

"Hi Matthew, We just reached Dr. Baric. It sounded like he'd not like us to sell his donations, which we never did in the past and will not do in the future. Therefore, unless there are any further changes, we now only offer our proprietary hACE-2 available for shipping in June for our US customers. I'm happy to provide the genotype report and other information for this strain. Please kindly let me know. Thank you. Best regards,
Yulei

Someone is going to a rock breaking camp soon!

For leader primer in your replication qPCR assays, you are just using the old SARS Leader primer and then an E reverse, like normal, right?

Or M reverse? Have you piloted which is working better?
