Dear George, as the world is dealing with the highly transmissible SARS-2 delta variant, I have never forgotten what you said to ASF on the phone call in early Feb 2020. You said although we don't know much about the new coronavirus one thing you do know is the new virus 'adapted human host well'. I remember it. Now your early observation has proven to be true. Each variant emerges as highly transmissible virus, first was alpha, then alpha becomes delta and transmission goes up and widely spread. I have to tell you this. Hope you remember that conversation. Good day! And take care.
