Viewpoint: Eat 1,500 strawberries in one sitting—and pesticides still won’t harm you

Julie Gunlock | Independent Women's Forum | August 29, 2019

Can you identify which of the following is NOT true about pesticides?

- A: Pesticides are extremely dangerous to humans.
- B: Organic produce is grown using pesticides.
- C: Your child would have to eat 1,500 strawberries to reach the EPA's allowable limit of pesticide residue on fruit.
- ...

Both organic and conventionally grown food (which are nutritionally equal) are produced using pesticides, but this doesn't mean you or your children are in danger. Under the Food Quality Protection Act (FQPA), EPA must ensure that all pesticides used on food in the United States meet strict safety standards.

...

Just how [minuscule] are those pesticide residues? A child would have to eat 1,500 servings of strawberries to reach the safe level of exposure. Of course, a child's stomach can't hold that many strawberries so three or four conventionally grown (and cheaper) strawberries is not a health risk. In fact, eating a strawberry—organic or conventional—is good for children!

The GLP featured this original article or report from a publishing partner or curated excerpt to reflect the diversity of news, opinion and analysis of science innovation to stimulate constructive discourse and inform policy debates. We as a nonprofit do not take ideological positions on issues. The views represent those of the individual authors. We welcome diverse perspectives, and encourage submissions. Selected excerpts, videos, photographs and graphics are posted under [Fair Use guidelines](#).

The GLP Needs Your Help

The biotechnology revolution in biomedicine, farming, and gene drives to eradicate pests has yielded enormous benefits, but future success is not assured. It is easier than ever for advocacy groups to spread disinformation on pressing science issues or for corporations to 'capture' innovation for its own benefit. To inform the public about what's really going on, we present the facts and challenge those who don't. We can't do this without your help. Please support us – a donation of as little as \$10 a month helps support our vital myth-challenging efforts.
