Really nice paper.... My comments are included. There are a couple places where I read the sentences several times and I just can't gather what the underlying message is. See comments. I suspect the sentences are OK (save for a possible math error)- but the implications need to be expounded on a bit for the non-epidemiologist.

Dan

I have put in some suggested edits to the Mandel/Mink glyphosate epi critical review study - mostly in the intro section. If you have the time I would appreciate your review.

Donna
